

1/4-Inch Every Day

iQPUMP[®]
Intelligent Pump Controller

Farms can't rely on uncontrollable weather to deliver the precise amount of precipitation they need for their crops. In fact, one of our customers requires exactly 1/4-inch of water on their crops every day. Too much or too little and crops will be damaged.

That's why they rely on the iQpump from Yaskawa to give them complete control over their water management.
