Title: SI-P3 & SI-P3/V Conformance to PROFIdrive		

Application Note

SI-P3 & SI-P3/V conformance to PROFIdrive

TABLE(S)

Introduction

PROFIdrive is a standardized method, within the Profibus-DP protocol of accessing and controlling a drive. It allows for the replacement of a drive that conforms to the PROFIdrive profile with any other conforming drive regardless of manufacturer. The PROFIdrive profile describes a number of drive classes providing a set of standards for each drive class. The SI-P3 and SI-P3/V communication options conform to portions of PROFIdrive. The SI-P3 and SI-P3/V are a Class 1 (standard drive/option) so the critical portions to support are the control and set point words (standard telegram 1) and the fault diagnostics.

This document is specific to drive profile class one (Standard Drive) and the Yaskawa SI-P3 series PROFIBUS-DP interface.

Drive parameter F6-32 must be set to 0 (PPO type) to enable communications listed below.

Refer to ***Yaskawa AC Drive 1000-Series PROFIBUS-DP Technical Manual***, (SIEP C730600 42) or (SIEP C730600 23) for additional information on the SI-P3 series.

Refer to ***Adding SI-P3 to PROFINET Using Siemens Step 7 Software***, (AN.AFD.27) for an example of adding a Yaskawa AC Drive with the SI-P3 interface to a PROFINET network.
