Always the Right Move

SINGULAR CONTROL™

One Choice for All

Controlling a robot arm, a servo axis, a VFD drive or a custom robotic mechanism is all the same task for an MP3300iec machine controller. It uses familiar IEC61131-3 and PLCopen programming to operate them all, and will even allow you to substitute one motion device for another without reprogramming.

Looking for motion control that can change and grow as readily as your machines do? Move to the MP3300iec by contacting your Yaskawa representative.
