Case Study

Municipal Pumping Application

Highlights:

- Qty 42 Drives with Bypass
- 30hp – 350hp, 460V, NEMA 1
- Application: Lift stations, Booster Pumps

Site Brief: The Hampton Roads sanitation district, serves Virginia's tidewater region. During the design phase, the need for a reliable, trouble-free variable frequency drive to meet the demands of municipal pumping applications became the primary concern.

Yaskawa's reputation for providing just such a drive was well known and became the drive of choice. The district standardized on the Yaskawa Variable frequency drives and has experienced negligible operation interruptions as a result of their choice.
