

YASKAWA

GA501 DRIVE

TECHNICAL REFERENCE

COMPACT ETHERNET TYPE

CATALOG CODE:

GA51Uxxxxxx

CAPACITIES:

Single-Phase 200 V Class: 1/6 to 5 HP

Three-Phase 200 V Class: 1/6 to 30 HP

Three-Phase 400 V Class: 1/2 to 40 HP

Typical Problems	282
The Parameter Settings Will Not Change.....	282
The Motor Does Not Rotate after You Enter a Run Command	283
The Motor Rotates in the Opposite Direction from the Run Command	284
The Motor Rotates in Only One Direction.....	284
The Motor Is Too Hot	284
The Correct Auto-Tuning Mode Is Not Available	285
The Motor Stalls during Acceleration or Accel/Decel Time Is Too Long	285
The Drive Frequency Reference Is Different than the Controller Frequency Reference Command	285
The Motor Speed Is Not Stable When Using a PM Motor	286
There Is Too Much Motor Oscillation and the Rotation Is Irregular.....	286
Deceleration Takes Longer Than Expected When Dynamic Braking Is Enabled	286
There Is Audible Noise from the Drive or Motor Cables when You Energize the Drive.....	287
The Ground Fault Circuit Interrupter (GFCI) Trips During Run	287
Motor Rotation Causes Unexpected Audible Noise from Connected Machinery	287
Motor Rotation Causes Oscillation or Hunting	287
PID Output Fault.....	288
The Starting Torque Is Not Sufficient	288
The Motor Rotates after the Drive Output Is Shut Off	288
The Output Frequency Is Lower Than the Frequency Reference.....	288
The Motor Will Not Restart after a Loss of Power	289
The motor base frequency is exceeded, and the output voltage exceeds the motor rated voltage.....	289

Preface and General Precautions

This chapter gives information about important safety precautions for the use of this product. Failure to obey these precautions can cause serious injury or death, or damage to the product or related devices and systems. Yaskawa must not be held responsible for any injury or equipment damage as a result of the failure to observe these precautions and instructions.

i.1	Receiving	14
i.2	Using the Product Safely	15
i.3	Warranty Information	19

i.1 Receiving

These instructions contain the information necessary to use the product correctly. Read and understand the safety information and precautions before you start to use the product.

◆ Glossary

Phrase	Definition
AOLV/PM	Advanced Open Loop Vector Control for Permanent Magnet Motors
Drive	YASKAWA AC Drive GA501
EDM	External Device Monitor
EZOLV	EZ Open Loop Vector Control
HD	Heavy Duty
IPM motor	Interior Permanent Magnet Synchronous Motor
MFAI	Multi-Function Analog Input
MFDI	Multi-Function Digital Input
MFDO	Multi-Function Digital Output
ND	Normal Duty
OLV	Open Loop Vector Control
OLV/PM	Open Loop Vector Control for Permanent Magnet Motors
PM motor	Permanent Magnet Synchronous Motor (generic name for IPM motors and SPM motors)
SIL	Safety Integrity Level
SPM motor	Surface Permanent Magnet Synchronous Motor
V/f	V/f Control

◆ About Registered Trademarks

- BACnet is a trademark of the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE).
- Ethernet is a registered trademark of FUJIFILM Business Innovation Corp.
- EtherCAT is a registered trademark of Beckhoff Automation GmbH.
- EtherNet/IP is a registered trademark of Open DeviceNet Vendor Association, Inc. (ODVA).
- MECHATROLINK-4 is registered a trademark of MECHATROLINK Members Association (MMA).
- Modbus is a registered trademark of Schneider Electric SA.
- PROFINET is a registered trademark of PROFIBUS International.
- Other company names and product names in this document are trademarks or registered trademarks of the respective companies.

i.2 Using the Product Safely

◆ Explanation of Signal Words

Read and understand this manual before you install, operate, or do maintenance on the drive. Install the drive as specified by this manual and local codes.

The symbols in this section identify safety messages in this manual. If you do not obey these safety messages, the hazards can cause serious injury, death, or damage to the products and related equipment and systems.

These identifier words categorize and emphasize important safety precautions in these instructions.

DANGER

This signal word identifies a hazard that will cause serious injury or death if you do not prevent it.

WARNING

This signal word identifies a hazard that can cause death or serious injuries if you do not prevent it.

CAUTION

This signal word identifies a hazard that can cause minor or moderate injuries if you do not prevent it.

NOTICE

This signal word identifies a property damage message that is not related to personal injury.

◆ Section Safety

- Some figures in the instructions include options and drives without covers or safety shields to more clearly show the inside of the drive. Replace covers and shields before operation. Use options and drives only as specified by the instructions.
- The figures in this manual are examples only. All figures do not apply to all products included in this manual.
- Yaskawa can change the products, specifications, and content of the instructions without notice to make the product and/or the instructions better.
- If you damage or lose these instructions, contact Yaskawa or your nearest sales representative and tell them the document number to order new copies.

DANGER

Do not ignore the safety messages in this manual.

If you ignore the safety messages in this manual, it will cause serious injury or death. The manufacturer is not responsible for injuries or damage to equipment.

Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

Do not remove covers or touch circuit boards while the drive is energized.

If you touch the internal components of an energized drive, it will cause death or serious injury from electrical shock.

WARNING

Fire Hazard

Install branch circuit protection as specified by the local standards and procedures in this manual. The drive is suitable for circuits that supply not more than 31,000 RMS symmetrical amperes, 240 Vac maximum (200 V Class), 480 Vac maximum (400 V Class) when being protected by branch circuit protection devices specified in the manual.

Incorrect branch circuit short circuit protection can cause death or serious injury from fire.

Electrical Shock Hazard

Do not make changes that are not given in this manual and do not make modifications to the drive.

If you make changes or modifications to the drive, it can cause death or serious injury from electrical shock. Changes not given in this manual and modifications to the drive will cause damage to the drive, and will void the warranty. Yaskawa is not responsible for modifications to the product made by the user.

Only let authorized personnel install, wire, maintain, examine, replace parts, and repair the drive.

If personnel are not approved, it can cause death or serious injury from electrical shock or fire.

After the drive blows a fuse or trips a GFCI, do not immediately energize the drive or operate peripheral devices. Wait for the time specified on the warning label at a minimum and make sure that all indicators are OFF. Then check the wiring and peripheral device ratings to find the cause of the problem. If you do not know the cause of the problem, contact Yaskawa before you energize the drive or peripheral devices.

If you do not fix the problem before you operate the drive or peripheral devices, it can cause serious injury or death.

Use an insulated drive motor or a vector-duty motor with reinforced insulation and windings applicable for use with an AC drive.

If you use a different type of motor, it can create a short circuit or ground fault from insulation deterioration, and can cause an electrical shock.

Sudden Movement Hazard

After you wire the drive and set parameters, test the system to make sure that the drive operates safely.

If you use the system without test run, sudden movement of the machine can cause death or serious injury.

⚠ WARNING

Make sure that the setting values for virtual input and output function parameters are correct before you do a test run. Virtual input and output function settings and actual input and output terminal settings can be different.

If function settings are incorrect, sudden movement of the machine can cause death or serious injury.

Remove all personnel and objects from the area around the drive, motor, and machine before you energize the drive. Make sure that there is protection for the drive cover, motor coupling, shaft keys, and machine.

If personnel is too close to the drive or you operate the drive without sufficient parts, sudden movement of the machine can cause death or serious injury.

When you use DriveWorksEZ for advanced drive programming, make sure that you examine the I/O signals and internal sequence with the engineer who made the DriveWorksEZ program before operation.

When you use DriveWorksEZ to make custom programming, the drive I/O terminal functions change from factory settings and the drive will not operate as written in this manual. If you do not check the input/output signals of the drive and internal sequence, sudden movement of the machine can cause death or serious injury.

Crush Hazard

Before you move the drive, make sure that all of the screws on the drive are as tight as possible. Hold the drive by the body or heatsink to carry the drive. Do not hold the drive by the keypad or front cover.

If you move the drive while the screws are loose, it can cause covers to fall, and if you hold the keypad or drive front cover to move the drive, the drive can fall and cause injury.

Damage to Equipment

Do not apply incorrect voltage to the main circuit of the drive. Operate the drive in the specified range of the input voltage on the drive nameplate.

Voltagages that are higher than the permitted nameplate tolerance can cause damage to the drive.

NOTICE**Damage to Equipment**

Use an insulated drive motor or a vector-duty motor with reinforced insulation and windings applicable for use with an AC drive.

If you do not use these motors, insulation deterioration can cause short circuits and ground faults and damage to the drive.

When you touch the drive and circuit boards, make sure that you observe correct electrostatic discharge (ESD) procedures.

If you do not follow procedures, it can cause ESD damage to the drive circuitry.

Do not do a withstand voltage test or use a megohmmeter or megger insulation tester on the drive.

These tests can cause damage to the drive.

Do not operate a drive or connected equipment that has damaged or missing parts.

You can cause damage to the drive and connected equipment.

Do not use steam or other disinfectants to fumigate wood for packaging the drive. Use alternative methods, for example heat treatment, before you package the components.

Gas from wood packaging fumigated with halogen disinfectants, for example fluorine, chlorine, bromine, iodine or DOP gas (phthalic acid ester), can cause damage to the drive.

◆ Warning Label Content and Location

The drive warning label is in the location shown in Figure i.1. Use the drive as specified by this information.

⚠

WARNING

Risk of electric shock.

⚡

Read manual before installing. Wait 5 minutes for capacitor discharge after removing power and opening the manual switch between the drive and motor.

⚠

AVERTISSEMENT

Risque de choc électrique.

⚡

Lire le manuel avant l'installation. Attendez 5 minutes après avoir coupé l'alimentation et déconnecte la protection entre le driver et le moteur, pour permettre la décharge des condensateurs.

i.3 Warranty Information

◆ Exclusion of Liability

- This product is not designed and manufactured for use in life-support machines or systems.
- Contact a Yaskawa representative or your Yaskawa sales representative if you are considering the application of this product for special purposes, such as machines or systems used for passenger cars, medicine, airplanes and aerospace, nuclear power, electric power, or undersea relaying.

WARNING

Sudden Movement Hazard

When you install this product in these systems or equipment, install correct safety devices depending on the application:

- **Machines or systems used for passenger cars, medicine, airplanes and aerospace, nuclear power, electric power, or undersea relaying that lead to fatal accidents or the loss of human life by the failure of this product.**
- **Machines or systems where failure of this product could result in death or fatal accidents.**
- **Machines or systems where there is a possibility of serious or personal injury by the failure of this product.**

If you do not install safety mechanisms correctly depending on the application, sudden movement of machines or systems can cause death or serious injury.

Receiving

This chapter gives information about the different drive models and features, and how to examine the drive when you receive it.

1.1	Section Safety	22
1.2	Catalog Code and Nameplate Check.....	23
1.3	Features and Advantages of Control Methods	26

1.1 Section Safety

DANGER

Do not ignore the safety messages in this manual.

If you ignore the safety messages in this manual, it will cause serious injury or death. The manufacturer is not responsible for injuries or damage to equipment.

1.2 Catalog Code and Nameplate Check

Please examine these items after you received the drive:

- Examine the drive for damage or missing parts. Immediately contact the shipping company if the drive is damaged. The Yaskawa warranty does not cover damage from shipping.
- Examine the catalog code in the “C/C” section of the drive nameplate to make sure that you received the correct model.
- If you received a product different than what you ordered or your product has a defect, contact Yaskawa or your nearest sales representative.

◆ Nameplate

A - Hardware revision	G - Drive software version and Communication software version
B - Weight	H - Serial number
C - Enclosure protection design	I - Lot number
D - The address of the head office of Yaskawa Electric Corporation	J - Output specifications
E - Accreditation standards	K - Input specifications
F - Surrounding air temperature	L - Catalog code

Figure 1.1 Nameplate Information Example

◆ How to Read the Catalog Code

Use the information in [Figure 1.2](#) and [Table 1.1](#) to read the drive catalog code.

1.2 Catalog Code and Nameplate Check

Figure 1.2 Drive Catalog Code

Table 1.1 Catalog Code Details

No.	Description
1	Product series
2	Region code • B: China • C: Europe • T: Asia (Singapore) • U: Americas
3	Input power supply voltage • B: Single-Phase AC 200 V Class • 2: Three-Phase AC 200 V Class • 4: Three-Phase AC 400 V Class
4	Rated output current <i>*/</i>
5	EMC noise filter • A: No internal EMC filter
6	Enclosure protection design • B: IP20/UL Open Type • N: IP20/UL Open Type with DIN Rail attachment
7	Environmental specification • A: Standard • S: Vibration-resistant

*1 Refer to [Rated Output Current on page 24](#) for more information about the rated output current.

■ Rated Output Current

[Table 1.2](#), [Table 1.3](#), and [Table 1.4](#) give the rated output current values.

Note:

- Rated output current values are applicable for drives that operate at standard specifications.
- Derate the output current in applications that:
 - Increase the carrier frequency
 - Have high surrounding air temperature
 - Install drives side-by-side.
- Use *C6-01 [Normal / Heavy Duty Selection]* to select Normal Duty rating (ND) or Heavy Duty rating (HD).

Table 1.2 Single-Phase AC 200 V Class

Model	Heavy Duty Rating (HD) [C6-01 = 0]		Normal Duty Rating (ND) [C6-01 = 1] (Default)	
	Maximum Applicable Motor Output kW (HP)	Rated Output Current A	Maximum Applicable Motor Output kW (HP)	Rated Output Current A
B001	0.1 (1/6)	0.8	0.2 (1/6)	1.2
B002	0.2 (1/4)	1.6	0.4 (1/4)	1.9

1.3 Features and Advantages of Control Methods

This drive has 5 available control methods from which you can select for different applications. [Table 1.5](#), [Table 1.6](#), and [Table 1.7](#) give information about the features of each control method.

Table 1.5 Features and Advantages of V/f Control

Control Method Selection	Open Loop V/f Control (V/f)	Notes
Controlled Motor	Induction Motor	-
Parameter Settings	A1-02 = 0	-
Basic Control	V/f	-
Main Applications	- General-purpose variable speed control - Applications in which more than one motor are connected to one drive	-
Maximum Output Frequency	590 Hz	-
Speed Control Range	1:40	This is the range of variable control. When you connect and operate motors in this mode, think about the increase in motor temperature.
Starting Torque	150% / 3 Hz	This is the motor torque that the drive can supply at low speed during start-up and the related output frequency (rotation speed). You must think about drive capacity when a large quantity of torque is necessary at low speed.
Auto-Tuning ^{*1}	Rotational and Line-to-Line Resistance (usually not necessary)	Automatically tunes electrical motor parameters.
Torque Limits	No	Controls maximum motor torque to prevent damage to machines and loads.
Speed Search ^{*1}	Yes	Immediately estimates (or detects) motor speed and direction when coasting to a stop to quickly start-up the drive without stopping the motor.
Automatic Energy-saving Control ^{*1}	Yes	Automatically adjusts the voltage that the drive applies to the motor to maximize motor efficiency for small and large loads.
High Slip Braking (HSB) ^{*1}	Yes	Increases motor loss to let the motor decelerate faster than usual without a braking resistor. Motor characteristics have an effect on this function.
Feed Forward Control	No	Compensates effects of the system inertia to increase the speed precision when the load changes.
KEB Ride-Thru Function ^{*1}	Yes	Quickly and safely stops the motor during power loss and automatically starts operation at the previous speed when the drive applies power again without coasting the motor.
Overexcitation Deceleration ^{*1}	Yes	Sets the V/f higher than the setting value during deceleration to increase motor loss and decrease deceleration time.
Overvoltage Suppression Function ^{*1}	Yes	Adjusts speed during regeneration to prevent overvoltage.

^{*1} Note these points when you use this function:

- When you can decouple the motor and machine for a test run, use Rotational Auto-Tuning. You must make adjustments to the control in the range where there is no vibration in the machine after Rotational Auto-Tuning.
- Motor loss increases during overexcitation braking and high-slip braking. Use a maximum braking frequency of 5% ED and a maximum braking time of 90 seconds. After you start high-slip braking, you cannot restart the motor until it stops. Use overexcitation braking to decelerate over a shorter time at a pre-determined speed.

Table 1.6 Features and Advantages of OLV Control

Control Method Selection	Open Loop Vector (OLV)	Notes
Controlled Motor	Induction Motor	-
Parameter Settings	A1-02 = 2 (Default)	-
Basic Control	Open Loop Current Vector Control	-
Main Applications	- General-purpose variable speed control - Applications in which high performance is necessary without machine encoders	-
Maximum Output Frequency	590 Hz	-

Control Method Selection	Open Loop Vector (OLV)	Notes
Controlled Motor	Induction Motor	-
Speed Control Range	1:100	This is the range of variable control. When you connect and operate motors in this mode, think about the increase in motor temperature.
Starting Torque	150% / 1 Hz ^{*1}	This is the motor torque that the drive can supply at low speed during start-up and the related output frequency (rotation speed). You must think about drive capacity when a large quantity of torque is necessary at low speed.
Auto-Tuning ^{*2}	Rotational, Stationary, and Line-to-Line Resistance	Automatically tunes electrical motor parameters.
Torque Limits ^{*2}	Yes	Controls maximum motor torque to prevent damage to machines and loads.
Speed Search ^{*2}	Yes	Immediately estimates (or detects) motor speed and direction when coasting to a stop to quickly start-up the drive without stopping the motor.
Automatic Energy-saving Control ^{*2}	Yes	Automatically adjusts the voltage that the drive applies to the motor to maximize motor efficiency for small and large loads.
High Slip Braking (HSB) Activate	No	Increases motor loss to let the motor decelerate faster than usual without a braking resistor. Motor characteristics have an effect on this function.
Feed Forward Control	No	Compensates effects of the system inertia to increase the speed precision when the load changes.
KEB Ride-Thru Function ^{*2}	Yes	Quickly and safely stops the motor during power loss and automatically starts operation at the previous speed when the drive applies power again without coasting the motor.
Overexcitation Deceleration ^{*2}	Yes	Sets the V/f higher than the setting value during deceleration to increase motor loss and decrease deceleration time.
Overvoltage Suppression Function ^{*2}	Yes	Adjusts speed during regeneration to prevent overvoltage.

*1 Select the drive capacity accordingly.

*2 Note these points when you use this function:

- When you can decouple the motor and machine for a test run, use Rotational Auto-Tuning. You must make adjustments to the control in the range where there is no vibration in the machine after Rotational Auto-Tuning.
- For vector control, use a 1:1 drive to motor ratio. You cannot use vector control when more than one motor is connected to one drive. Select a drive capacity so that the motor rated current is 50% to 100% of the drive rated current. If the carrier frequency is too high, the drive rated current is derated.
- Motor loss increases during overexcitation braking and high-slip braking. Use a maximum braking frequency of 5% ED and a maximum braking time of 90 seconds. After you start high-slip braking, you cannot restart the motor until it stops. Use overexcitation braking to decelerate over a shorter time at a pre-determined speed.
- Acceleration and deceleration have priority over torque limits in Open Loop Vector Control during acceleration and deceleration (soft start changes). The drive will not operate until the speed is at the minimum frequency or the reverse direction of motor rotation when the motor speed decreases because of torque limits during constant speed control. Set L7-07 = 1 [Torque Limit during Accel/Decel = Proportional & Integral control] to enable torque limits during acceleration/deceleration (for winding applications).

Table 1.7 Features and Advantages of OLV/PM, AOLV/PM, and EZOLV Control

Control Method Selection	PM Open Loop Vector Control (OLV/PM)	PM Advanced Open Loop Vector (AOLV/PM)	EZ Open Loop Vector Control (EZOLV)	Notes
Controlled Motor	PM motor		Induction Motors/PM Motors/SynRM (Synchronous Reluctance Motors)	-
Parameter Settings	A1-02 = 5	A1-02 = 6	A1-02 = 8	-
Basic Control	PM Open Loop Vector Control (no speed controller)	PM Open Loop Current Vector Control (with speed controller)	Open Loop Current Vector Control	-
Main Applications	• General-purpose variable speed control for PM motors • Applications in which a high level of responsiveness and accurate speed control are not necessary.	• General-purpose variable speed control for IPM motors • Applications in which high-precision speed control and torque limits are necessary.	Low-speed torque applications Example: Fans and pumps	-
Maximum Output Frequency	590 Hz	270 Hz	120 Hz	-
Speed Control Range	1:10	1:10 1:100 ^{*1} ^{*2} ^{*3}	1:10	This is the range of variable control. When you connect and operate motors in this mode, think about the increase in motor temperature.

1.3 Features and Advantages of Control Methods

Control Method Selection	PM Open Loop Vector Control (OLV/PM)	PM Advanced Open Loop Vector (AOLV/PM)	EZ Open Loop Vector Control (EZOLV)	Notes
Controlled Motor	PM motor		Induction Motors/PM Motors/ SynRM (Synchronous Reluctance Motors)	-
Starting Torque	100% / 5% speed	100% / 5% speed 100% / 0 min ⁻¹ *1	100% / 10% speed	This is the motor torque that the drive can supply at low speed during start-up and the related output frequency (rotation speed). You must think about drive capacity when a large quantity of torque is necessary at low speed.
Auto-Tuning *4	Stationary, Stator Resistance, Rotational	Stationary, Stator Resistance, Rotational	Line-to-Line Resistance	Automatically tunes electrical motor parameters.
Torque Limits *4	No	Yes	Yes	Controls maximum motor torque to prevent damage to machines and loads.
Speed Search *4	Yes	Yes	Yes (Although NOT operation in the reverse direction of the Run command)	Immediately estimates (or detects) motor speed and direction when coasting to a stop to quickly start-up the drive without stopping the motor.
Automatic Energy-saving Control *4	No	Yes (IPM motors only)	Yes	Automatically adjusts the voltage that the drive applies to the motor to maximize motor efficiency for small and large loads.
High Slip Braking (HSB) Activate	No (induction motor-specific function)	No (induction motor-specific function)	No	Increases motor loss to let the motor decelerate faster than usual without a braking resistor. Motor characteristics have an effect on this function.
Feed Forward Control *4	No	Yes	No	Compensates effects of the system inertia to increase the speed precision when the load changes.
KEB Ride-Thru Function *4	Yes	Yes	Yes	Quickly and safely stops the motor during power loss and automatically starts operation at the previous speed when the drive applies power again without coasting the motor.
Overexcitation Deceleration	No (induction motor-specific function)	No (induction motor-specific function)	No	Sets the V/f higher than the setting value during deceleration to increase motor loss and decrease deceleration time.
Overvoltage Suppression Function *4	Yes	Yes	Yes	Adjusts speed during regeneration to prevent overvoltage.

*1 Enabled when $n8-57 = 1$ [HFI Overlap Selection = Enabled].

*2 Rotational Auto-Tuning is necessary.

*3 Contact Yaskawa or your nearest sales representative to drive non-Yaskawa PM motors (SSR1 series standard specifications).

*4 Note these points when you use this function:

- When you can decouple the motor and machine for a test run, use Rotational Auto-Tuning. You must make adjustments to the control in the range where there is no vibration in the machine after Rotational Auto-Tuning.
- For vector control, use a 1:1 drive to motor ratio. You cannot use vector control when more than one motor is connected to one drive. Select a drive capacity so that the motor rated current is 50% to 100% of the drive rated current. If the carrier frequency is too high, the drive rated current is derated.

Mechanical Installation

This chapter gives information about the correct environment and clearances to install the drive.

2.2	Installation Environment	31
2.3	Installation Position and Clearances	33
2.4	Attach the Drive to the DIN Rail (B001 to B018, 2002 to 2021, 4001 to 4012)	36
2.5	Moving the Drive.....	37
2.6	Drive Models and Drive Watt Loss	38
2.7	Removing/Reattaching Covers	42
2.8	Remove and Reattach the Keypad.....	44
2.9	Install the Keypad in a Control Panel or Another Device	45

2.1 Section Safety

WARNING

Fire Hazard

Attach the drive to metal or other noncombustible material. Do not put flammable or combustible materials on the drive and do not install the drive near flammable or combustible materials.

If you put flammable or combustible materials on the drive or install the drive near flammable or combustible materials, it can cause death or serious injury from fire.

When you install the drive in an enclosure, use a cooling fan or cooler to decrease the temperature around the drive. Make sure that the intake air temperature to the drive is 50 °C (122 °F) or less for IP20/UL Open Type drives, and 40 °C (104 °F) or less for IP20/UL Type 1 drives.

If the air temperature to the drive is too hot, it can overheat the drive and cause death or serious injury from fire.

When you install the drive, temporarily cover the top of the drive with cloth or paper to prevent metal shavings from the drill, wire scraps, oil, water, or other unwanted objects from entering the drive. Remove the temporary cover before you operate the drive.

Unwanted objects inside of the drive can cause death or serious injury from fire and damage to the drive.

Before you use an explosion-proof motor, you must get explosion-proof certification for the combination of the motor and drive. Install the drive in a safe area isolated from explosive environments because the drive is not explosion-proof.

If you install the drive in a dangerous environment, it can cause an explosion or a fire.

Electrical Shock Hazard

Only let authorized personnel install, wire, maintain, examine, replace parts, and repair the drive.

If personnel are not approved, it can cause death or serious injury from electrical shock or fire.

Do not make changes that are not given in this manual and do not make modifications to the drive.

If you make changes or modifications to the drive, it can cause death or serious injury from electrical shock.

Changes not given in this manual and modifications to the drive will cause damage to the drive, and will void the warranty. Yaskawa is not responsible for modifications to the product made by the user.

Crush Hazard

Before you move the drive, make sure that all of the screws on the drive are as tight as possible. Hold the drive by the body or heatsink to carry the drive. Do not hold the drive by the keypad or front cover.

If you move the drive while the screws are loose, it can cause covers to fall, and if you hold the keypad or drive front cover to move the drive, the drive can fall and cause injury.

NOTICE

Install vibration-proof rubber on the base of the motor or use the frequency jump function in the drive to prevent specific frequencies that vibrate the motor.

Motor or system resonant vibration can occur in fixed speed machines that are converted to variable speed. Too much vibration can cause damage to equipment.

Do not lift the drive with the covers removed.

If the drive does not have covers, you can easily cause damage to the internal parts of the drive.

Damage to Equipment

When you touch the drive and circuit boards, make sure that you observe correct electrostatic discharge (ESD) procedures.

If you do not follow procedures, it can cause ESD damage to the drive circuitry.

2.2 Installation Environment

The installation environment is important for the lifespan of the product and to make sure that the drive performance is correct. Make sure that the installation environment aligns with these specifications.

Environment	Conditions
Area of Use	Indoors
Power Supply	Overvoltage Category III (IEC60664)
Surrounding Air Temperature	IP20/UL Open Type: -10 °C to +50 °C (14 °F to 122 °F) - When you install the drive in an enclosure, use a cooling fan or air conditioner to keep the internal air temperature in the permitted range. - Do not let the drive freeze.
Humidity	95%RH or less Do not let condensation form on the drive.
Storage Temperature	-20 °C to +70 °C (-4 °F to +158 °F) (short-term temperature during transportation)
Surrounding Area	Pollution degree 2 or less (IEC 60664-1) Install the drive in an area without: - Oil mist, corrosive or flammable gas, or dust - Metal powder, oil, water, or other unwanted materials - Radioactive or flammable materials. - Harmful gas or fluids - Salt - Direct sunlight Keep wood and other flammable materials away from the drive.
Altitude	1000 m (3281 ft) Maximum Note: Derate the output current by 1% for each 100 m (328 ft) to install the drive in altitudes between 1000 m to 4000 m (3281 ft to 13123 ft). It is not necessary to derate the rated voltage in these conditions: - Installing the drive at 2000 m (6562 ft) or lower - Installing the drive between 2000 m to 4000 m (6562 ft to 13123 ft) and grounding the neutral point on the power supply. Contact Yaskawa or your nearest sales representative if you will not ground the neutral point.
Vibration ^{*1}	Drive with DIN rail bracket - Vibration 10 Hz to 20 Hz: 0.4 G 20 Hz to 55 Hz: 0.2 G - Shock 4 G/11 ms Drive without DIN rail bracket - Vibration 10 Hz to 20 Hz: 1.0 G 20 Hz to 55 Hz: 0.6 G - Shock 4 G/11 ms
Installation Orientation	Install the drive vertically or horizontally for sufficient airflow to cool the drive.

*1 This drive passed the vibration test with a logarithmic sweep as specified by EN 60068-2-6 and JIS C60068-2-6. If the internal components of the drive vibrate too much, it can cause damage to the drive even when the vibration frequency is in the specification. If the drive components vibrate, improve the installation environment to decrease vibration.

- Put the motor on a rubber pad to decrease vibration.
- Reinforce the structure of the installation.

⚠ WARNING Fire Hazard

When you install the drive, temporarily cover the top of the drive with cloth or paper to prevent metal shavings from the drill, wire scraps, oil, water, or other unwanted objects from entering the drive.

Remove the temporary cover before you operate the drive.

Unwanted objects inside of the drive can cause death or serious injury from fire and damage to the drive.

⚠ WARNING Sudden Movement Hazard

Do not use the Normally Closed (N.C.) relay output terminal in areas with high vibration or shock. If the drive gets too much vibration or shock, the N.C. relay output terminal can open for a short time. If the N.C. relay output terminal opens, the machine can start suddenly and can cause death or serious injury.

NOTICE

Do not put drive peripheral devices, transformers, or other electronics near the drive. Shield the drive from electrical interference if components must be near the drive. Components near the drive can cause incorrect drive operation from electrical interference.

2.3 Installation Position and Clearances

Install the drive as shown in [Figure 2.1](#) for sufficient airflow to cool the drive.

Figure 2.1 Installation Orientation

◆ Install Single Drive

Use the clearances specified in [Figure 2.2](#) to install the drive. Make sure that there is sufficient space for wiring and airflow.

Figure 2.2 Installation Clearances for One Drive

◆ Install the Drive Horizontally

When you install drives horizontally, set $L8-12 = 40$ [Ambient Temperature Setting = 40 °C] and $L8-35 = 1$ [Installation Method Selection = Side-by-Side Mounting]. Use the clearances specified in [Figure 2.4](#) and [Figure 2.5](#) to install the drive. Make sure that there is sufficient space for wiring and airflow. To install the drive models B001 - B012, 2001 - 2021, and 4001 - 4012 horizontally, install an external cooling fan. Refer to [Table 2.1](#) for more information about the external cooling fan.

A - Airflow direction

Figure 2.3 Airflow Direction of Horizontal installation

Figure 2.4 Installation Clearances for Horizontal Installation: B001 - B012, 2001 - 2021, and 4001 - 4012

Figure 2.5 Installation Clearances for Horizontal Installation: B018, 2030 - 2082, and 4018 - 4060

Table 2.1 Specifications of External Cooling Fan for Horizontal (Floor) Installation

Model	Airflow (m ³ /min)	Static Pressure (Pa)
B001 - B004 2001 - 2006	0.18 minimum	63.7 minimum
B006 - B012 2010 - 2021 4001 - 4012	1.11 minimum	244 minimum
B018 2030 - 2082 4018 - 4060	External cooling fan is not necessary	

◆ Install Drives Side-by-Side

When you install drives side-by-side, set to $L8-35 = 1$ [Installation Method Selection = Side-by-Side Mounting].

Refer to [Derating Depending on Surrounding Air Temperature on page 329](#) and set derating depending on surrounding air temperature.

**Figure 2.6 Installation Clearances for More than One Drive (Side-by-Side)**

Note:

Align the tops of drives that have different dimensions to help when you replace cooling fans.

2.4 Attach the Drive to the DIN Rail (B001 to B018, 2002 to 2021, 4001 to 4012)

Put the hook of the attachment on the DIN rail and push the drive until the hook clicks into place on the DIN rail.

Figure 2.7 Attach the Drive to the DIN Rail

2.5 Moving the Drive

When you move and install this product, make sure that you obey local laws and regulations.

⚠ WARNING Crush Hazard

Before you move the drive, make sure that all of the screws on the drive are as tight as possible. Hold the drive by the body or heatsink to carry the drive. Do not hold the drive by the keypad or front cover.

If you move the drive while the screws are loose, it can cause covers to fall, and if you hold the keypad or drive front cover to move the drive, the drive can fall and cause injury.

2.6 Drive Models and Drive Watt Loss

Model	Ref.
BxxxA	38
2xxxA	38
4xxxA	40

◆ Single-Phase 200 V Class

Table 2.2 Drive Watt Loss (HD, Fc = 2 kHz)

Model	The rated output current A	Carrier Frequency kHz	Interior Unit Loss W	Cooling Fin Loss W	Total Loss W
B001	0.8	2	7	4	11
B002	1.6	2	10	7	17
B004	3	2	13	13	26
B006	5	2	17	23	40
B010	8	2	30	37	67
B012	11	2	40	48	88
B018	17.6	2	49	72	121

Table 2.3 Drive Watt Loss (HD, Fc = Default Setting)

Model	The rated output current A	Carrier Frequency kHz	Interior Unit Loss W	Cooling Fin Loss W	Total Loss W
B001	0.8	10	8	5	13
B002	1.6	10	10	9	19
B004	3	10	14	16	30
B006	5	10	18	28	46

2.7 Removing/Reattaching Covers

⚠ DANGER Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

◆ Remove the Front Cover

1. Use a slotted screwdriver to unlock the front cover of the drive.
Use a slotted screwdriver with a tip width of 2.5 mm (0.1 in) or less and a thickness of 0.4 mm (0.02 in) or less.

A - Front cover lock

Figure 2.8 Unlocking

2. Pull down, then pull away from the drive to remove the front cover.

Figure 2.9 Remove the Front Cover

◆ Reattach the Front Cover

1. Reverse the steps to reattach the cover.

Note:

Make sure that you do not pinch wires or signal lines between the front cover and the drive before you reattach the cover.

Figure 2.10 Reattach the Front Cover

2. Use a slotted screwdriver to lock the front cover of the drive.
Use a slotted screwdriver with a tip width of 2.5 mm (0.1 in) or less and a thickness of 0.4 mm (0.02 in) or less.

A - Front cover lock

Figure 2.11 Locking the Front Cover

2.8 Remove and Reattach the Keypad

◆ Remove the Keypad

Remove the front cover.

Push on the tab on the right side of the keypad, then pull the keypad forward to remove it from the drive.

Figure 2.12 Remove the Keypad

◆ Reattach the Keypad

Push in the keypad from the front until the hooks click into place.

Figure 2.13 Reattach the Keypad

Attach the front cover.

2.9 Install the Keypad in a Control Panel or Another Device

◆ Operate the Keypad from a Remote Location

You can remove the keypad from the drive and connect it to a remote control extension cable 3 m (9.8 ft) long to make operation easier when you cannot access the drive. It is not necessary to open or close the panel door to operate a drive that is in a control panel. To order optional accessories, contact Yaskawa or your nearest sales representative.

Name	Option Model	Intended Use
Keypad Remote Cable	UWR0051: 1 m (3.3 ft) UWR0052: 3 m (9.8 ft)	To connect the keypad and drive. This option is an RJ-45, 8-pin straight-through UTP CAT5e cable.
Installation Support Set A	900-192-933-001	To attach the keypad to the control panel. This option uses screws.
Installation Support Set B	900-192-933-002	To attach the keypad to the control panel. This option uses nut clamps. Use this option when there are weld studs in the control panel.
Keypad Panel Mounting Kit	ZPBA-GA500	To install the GA501 standard keypad to a control panel.

Electrical Installation

This chapter gives how to wire the control circuit terminals, motor, and power supply of the drive.

3.1 Section Safety

DANGER

Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

Do not remove covers or touch circuit boards while the drive is energized.

If you touch the internal components of an energized drive, it will cause death or serious injury from electrical shock.

WARNING

Fire Hazard

Tighten all terminal screws to the correct tightening torque shown in this manual.

If connections are too loose or too tight, it can cause incorrect operation or damage to the terminal block. Overheated connections can cause death or serious injury from fire.

Tighten terminal screws at an angle in the specified range shown in this manual.

If you tighten the screws at an angle not in the specified range, you can have loose connections that can cause damage to the terminal block or start a fire and cause death or serious injury.

When you install a braking resistor, braking resistor unit, or braking unit to the drive, wire the components as specified by the wiring diagrams.

Incorrect wiring can cause death or serious injury from fire or damage to the components.

When you install the drive, temporarily cover the top of the drive with cloth or paper to prevent metal shavings from the drill, wire scraps, oil, water, or other unwanted objects from entering the drive. Remove the temporary cover before you operate the drive.

Unwanted objects inside of the drive can cause death or serious injury from fire and damage to the drive.

Electrical Shock Hazard

Reattach the covers and safety shields before you operate the drive. Do not operate the drive with covers removed. Use the drive only as specified in this manual.

Some figures in this manual include drives without covers or safety shields to more clearly show the inside of the drive. If you operate the drive without covers and safety shields, it can cause death or serious injury from electrical shock.

When there is a DC component in the protective earthing conductor, the drive can cause a residual current. When a residual current operated protective or monitoring device prevents direct or indirect contact, always use a type B Ground Fault Circuit Interrupter (GFCI) as specified by IEC/EN 60755.

If you do not use the correct GFCI, it can cause serious injury or death.

Do not wear loose clothing and make sure that you remove all metal objects, for example watches or rings, when you wire, examine, and repair the drive.

Loose clothing can catch on the drive and jewelry can conduct electricity and cause death or serious injury from electrical shock.

⚠ WARNING

Only let authorized personnel install, wire, maintain, examine, replace parts, and repair the drive.

If personnel are not approved, it can cause death or serious injury from electrical shock or fire.

Do not make changes that are not given in this manual and do not make modifications to the drive.

If you make changes or modifications to the drive, it can cause death or serious injury from electrical shock.

Changes not given in this manual and modifications to the drive will cause damage to the drive, and will void the warranty. Yaskawa is not responsible for modifications to the product made by the user.

Damage to Equipment

Do not apply incorrect voltage to the main circuit of the drive. Operate the drive in the specified range of the input voltage on the drive nameplate.

Voltages that are higher than the permitted nameplate tolerance can cause damage to the drive.

NOTICE**Damage to Equipment**

When you touch the drive and circuit boards, make sure that you observe correct electrostatic discharge (ESD) procedures.

If you do not follow procedures, it can cause ESD damage to the drive circuitry.

Select a motor that is compatible with the load torque and speed range. When 100% continuous torque is necessary at low speed, use an inverter-duty motor or vector-duty motor. When you use a standard fan-cooled motor, decrease the motor torque in the low-speed range.

If you operate a standard fan-cooled motor at low speed and high torque, it will decrease the cooling effects and can cause heat damage.

Obey the speed range specification of the motor as specified by the manufacturer. When you must operate the motor outside of its specifications, contact the motor manufacturer.

If you continuously operate oil-lubricated motors outside of the manufacturer specifications, it can cause damage to the motor bearings.

When the input voltage is 440 V or higher or the wiring distance is longer than 100 m (328 ft), make sure that the motor insulation voltage is sufficient or use an inverter-duty motor or vector-duty motor with reinforced insulation.

Motor winding and insulation failure can occur.

Before you connect a dynamic braking option to the drive, make sure that qualified personnel read and obey the Braking Unit and Braking Resistor Unit Installation Manual (TOBPC72060001).

If you do not read and obey the manual or if personnel are not qualified, it can cause damage to the drive and braking circuit.

Make sure that all connections are correct after you install the drive and connect peripheral devices.

Incorrect connections can cause damage to the drive.

Note:

- Torque characteristics are different than when you operate the motor directly from line power. Make sure that you understand the load torque characteristics for the application.
- The rated input current of submersible motors is higher than the rated input current of standard motors. Carefully select the correct drive capacity. When the distance between the motor and drive is long, use a wire that can connect the motor to the drive without a reduction in motor torque.
- Do not use unshielded wire for control wiring. Use shielded, twisted-pair wires and ground the shield to the ground terminal of the drive. Unshielded wire can cause electrical interference and unsatisfactory system performance.

3.2 Electrical Installation

⚠ DANGER Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

⚠ WARNING Electrical Shock Hazard

Before you energize the drive, make sure that the electrical connections are correct and safe and that all covers are correctly installed. When the drive power is already ON, disconnect input power to the drive and output from the drive to the motor, and wait for a minimum time specified on the drive warning label. When all indicators are OFF, remove the covers and measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, remove the terminal cover and do the work on wiring, circuit board, and other parts. Use terminals for their intended function only. Incorrect wiring or ground connections, and incorrect repair of protective covers can cause death or serious injury from electrical shock.

⚠ WARNING Electrical Shock Hazard

Use the terminals for the drive only for their intended purpose. Refer to the technical manual for more information about the I/O terminals.

Wiring and grounding incorrectly or modifying the cover may damage the equipment or cause injury.

◆ Standard Connection Diagram

Wire the drive as specified by [Figure 3.1](#).

⚠ WARNING Sudden Movement Hazard

Set the MFDI parameters before you close control circuit switches.

Incorrect Run/Stop circuit sequence settings can cause serious injury or death from moving equipment.

⚠ WARNING Sudden Movement Hazard

Check the I/O signals and the external sequences for the drive before you set the Application Preset function.

When you set the Application Preset function ($A1-06 \neq 0$), it changes the I/O terminal functions for the drive and it can cause equipment to operate unusually. This can cause serious injury or death.

NOTICE Fire Hazard

Install sufficient branch circuit short circuit protection as specified by applicable codes and this manual. The drive is suitable for circuits that supply not more than 31,000 RMS symmetrical amperes, 240 Vac maximum (200 V Class), 480 Vac maximum (400 V Class).

Incorrect branch circuit short circuit protection can cause serious injury or death.

NOTICE

When the input voltage is 440 V or higher or the wiring distance is longer than 100 m (328 ft), make sure that the motor insulation voltage is sufficient or use an inverter-duty motor or vector-duty motor with reinforced insulation.

Motor winding and insulation failure can occur.

Note:

Do not connect the AC control circuit ground to the drive enclosure. Failure to obey can cause incorrect control circuit operation.

Figure 3.1 Standard Drive Connection Diagram

- *1 Set the wiring sequence to de-energize the drive with the MFDO. If the drive outputs a fault during fault restart when you use the fault restart function, set L5-02 = 1 [Fault Contact at Restart Select = Always Active] to de-energize the drive. Be careful when you use a cut-off sequence. The default setting for L5-02 is 0 [Active Only when Not Restarting].
- *2 When you install a DC link choke, you must remove the jumper between terminals +1 and +2.
- *3 When you use a regenerative converter or regenerative unit, set L8-55 = 0 [Internal DB Transistor Protection = Disable]. If L8-55 = 1 [Protection Enabled], the drive will detect rF [Braking Resistor Fault].
- *4 When you use a regenerative converter, regenerative unit, braking resistor, or braking resistor unit, set L3-04 = 0 [Stall Prevention during Decel = Disabled]. If L3-04 = 1 [General Purpose], the drive could possibly not stop in the specified deceleration time.
- *5 When you use an ERF-type braking resistor, set L8-01 = 1 [3% ERF DB Resistor Protection = Enabled] and set a wiring sequence to de-energize the drive with the MFDO.
- *6 Cooling fan wiring is not necessary for self-cooling motors.

3.2 Electrical Installation

- *7 Connect peripheral options to terminals -, +1, +2, B1, and B2.

⚠ WARNING Fire Hazard

Connect the factory-recommended devices or circuits specified in the drive catalog to drive terminals B1, B2, -, +1, and +2. Do not connect AC power supply lines to these terminals.
Incorrect wiring can cause death or serious injury from fire and damage to the drive.

*8

⚠ WARNING Electrical Shock Hazard

When you connect the shield wire of the control circuit wiring to the protective ground terminal, do not connect the protective ground wire.
If you connect the shield wire and the protective ground wire to the protective grounding terminal, it may not comply with the technical standards and local safety regulations and can cause serious injury or death.

- *9 The maximum output current capacity for terminal +V on the control circuit is 20 mA.

NOTICE Damage to Equipment

Do not install a jumper between terminals +V and AC.
A closed circuit between these terminals will cause damage to the drive.

- *10 Do not ground the control circuit terminals AC or connect them to the drive chassis.

NOTICE

Do not ground the AC control circuit terminals and only connect the AC terminals as specified by the product instructions.
If you connect the AC terminals incorrectly, it can cause damage to the drive.

- *11 Use only Sourcing Mode for Safe Disable input.

- *12 Disconnect the wire jumpers between H1 and HC and H2 and HC to use the Safe Disable input.

3.3 Main Circuit Wiring

This section gives information about the functions, specifications, and procedures necessary to safely and correctly wire the main circuit in the drive.

NOTICE Damage to Equipment

Do not energize and de-energize the drive more frequently than one time each 30 minutes. If you frequently energize and de-energize the drive, it can cause drive failure.

Note:

Soldered wire connections can become loose over time and cause unsatisfactory drive performance.

◆ Motor and Main Circuit Connections

⚠ WARNING Electrical Shock Hazard

Do not connect terminals R/L1, S/L2, T/L3, L/L1, N/L2, U/T1, V/T2, W/T3, -, +1, +2, B1, or B2 to the ground terminal.

If you connect these terminals to earth ground, it can cause damage to the drive or serious injury or death.

Note:

The locations of terminals are different for different drive models.

A - DC bus terminal	D - Three-Phase Motor
B - Connect to the drive ground terminal.	E - Use terminals R/L1, S/L2, and T/L3 for three-phase power supply input. Use terminals L/L1 and N/L2 for single-phase power supply input.
C - Ground the motor case.	F - Input Protection (Fuses or Circuit Breakers)

Figure 3.2 Wiring the Main Circuit and Motor

◆ Configuration of Main Circuit Terminal Block

Use [Table 3.1](#) to find the correct main circuit terminal block figure for your drive.

Table 3.1 Configuration of Main Circuit Terminal Block

Model	Figure

◆ Main Circuit Terminal Functions

Refer to [Table 3.2](#) for the functions of drive main circuit terminals.

Table 3.2 Main Circuit Terminal Functions

Terminal	Name			Function
Model	B001 - B018	2001 - 2082		
		4001 - 4060		
R/L1	-	Main circuit power supply input		To connect a commercial power supply.
S/L2				
T/L3				
L/L1	Main circuit power supply input	-		
N/L2				
U/T1	Drive output	Drive output		To connect a motor.
V/T2				
W/T3				
-	DC power input	DC power input	-	+1 and +2: To connect a DC link choke. Note: Remove the jumper between terminals +1 and +2 to connect a DC link choke.
+1			DC link choke connection	
+2		-		
B1	Braking resistor connection			To connect a braking resistor or braking resistor unit.
B2				
	Ground Wiring			To ground the drive. 200 V: D class grounding (ground to 100 Ω or less) 400 V: C class grounding (ground to 10 Ω or less)

◆ Wire Selection

Select the correct wires for main circuit wiring.

Refer to [Main Circuit Wire Gauges and Tightening Torques on page 158](#) for wire gauges and tightening torques as specified by European standards.

Refer to [Main Circuit Wire Gauges and Tightening Torques on page 175](#) for wire gauges and tightening torques as specified by UL standards.

■ Wire Gauge and Torque Specifications for UL Listing

Note:

- The recommended wire gauges are based on drive continuous current ratings with 75 °C (167 °F) 600 V class 2 heat-resistant indoor PVC wire. Assume these conditions:
 - Surrounding air temperature: 40 °C (104 °F) maximum
 - Wiring distance: 100 m (3281 ft) maximum
 - Normal Duty rated current value
- Use terminals +1, +2, -, B1, and B2 to connect peripheral options, for example a DC reactor or a braking resistor. Do not connect other items to these terminals.
- Refer to the instruction manual for each device for recommended wire gauges to connect peripheral devices or options to terminals +1, +2, -, B1, and B2. Contact Yaskawa or your nearest sales representative if the recommended wire gauges for the peripheral devices or options are out of the range of the applicable gauges for the drive.
- When you use crimp ferrules on the wire ends, contact Yaskawa or your nearest sales representative.

Single-Phase 200 V Class

◆ Main Circuit Terminal and Motor Wiring

This section outlines the various steps, precautions, and checkpoints for wiring the main circuit terminals and motor terminals.

⚠ WARNING Fire Hazard

Do not connect main power supply wiring to drive motor terminals U/T1, V/T2, and W/T3. Connect main power supply wiring to main circuit input terminals R/L1, S/L2, and T/L3. Incorrect wiring can cause serious injury or death from fire.

⚠ WARNING Sudden Movement Hazard

Make sure that you align the phase order for the drive and motor when you connect the motor to drive output terminals U/T1, V/T2, and W/T3. If the phase order is incorrect, it can cause the motor to run in reverse. If function settings are incorrect, sudden movement of the machine can cause death or serious injury.

NOTICE

Do not connect phase-advancing capacitors, LC/RC noise filters, or leakage breakers (GFCI) to the motor circuit. If you connect these devices to the output circuits, it can cause damage to the drive and connected equipment.

■ Cable Length Between Drive and Motor

When the wiring between the drive and the motor is too long, voltage drop along the motor cable can decrease motor torque, usually at low frequency output. If you connect motors in parallel with long motor cable, this is also a problem. Drive output current increases when the leakage current from the cable increases. An increase in leakage current can cause overcurrent and decrease the precision of the current detection.

Use the values in [Table 3.3](#) to adjust the drive carrier frequency. For systems that have 100 m (328 ft) or longer motor wiring, if you use metal conduits or isolated cables for each phase, it will increase stray capacitance.

Table 3.3 Carrier Frequency against Cable Length Between Drive and Motor

Wiring Distance Between the Drive and Motor	50 m (164 ft) Maximum	100 m (328 ft) Maximum	More than 100 m (328 ft)
Carrier Frequency	15 kHz or less	5 kHz or less	2 kHz or less

Note:

- To set the carrier frequency in a drive that is operating more than one motor, calculate the cable length as the total distance of wiring to all connected motors.
- If the length of the wire between the drive and an induction motor is longer than 100 m (328 ft), set $A1-02 = 0[V/f]$.
- The maximum cable length between the drive and a PM motor is 100 m (328 ft).
- If the cable length between the drive and the motor is too long when $A1-02 = 6 [AOLV/PM]$ or $8 [EZOLV]$, change the setting to $A1-02 = 5 [OLV/PM]$.
- When you connect to a PM motor, it can be necessary to adjust the overcurrent detection. Refer to [L8-27: Overcurrent Detection Gain on page 701](#) for more information.

■ Ground Wiring

Follow the precautions to wire the ground for one drive or a series of drives.

⚠ WARNING Electrical Shock Hazard

Use a ground wire that complies with technical standards on electrical equipment and use the minimum length of ground wire. Incorrect equipment grounding can cause serious injury or death from dangerous electrical potentials on the equipment chassis.

⚠ WARNING Electrical Shock Hazard

Correctly ground the ground terminals. Obey federal and local electrical wiring codes for correct grounding methods. The maximum grounding resistance is

- 200 V class: ground to 100 Ω or less
- 400 V class: ground to 10 Ω or less

If you touch electrical equipment that is not grounded, it can cause serious injury or death.

Note:

- Only use the drive grounding wire to ground the drive. Do not share the ground wire with other devices such as welding machines or large-current electrical equipment. Incorrect equipment grounding can cause drive or equipment malfunction from electrical interference.
- To connect more than one drive to the same grounding circuit, follow the instructions in the instruction manual. Incorrect equipment grounding can cause drive or equipment malfunction from electrical interference.

When you connect more than one drive, refer to [Figure 3.14](#). Do not loop the grounding wire.

Figure 3.14 Wiring More than One Drive

■ Wiring the Main Circuit Terminal Block

⚠ WARNING Electrical Shock Hazard

Before you wire the main circuit terminals, make sure that MCCB and MC are OFF. If you touch electrical equipment when MCCB and MC are ON, it can cause serious injury or death.

■ Main Circuit Configuration

The figures in this section show the different schematics of the drive main circuit. The connections change when the drive capacity changes. The DC power supply for the main circuit also supplies power to the control circuit.

⚠ WARNING Fire Hazard

Connect a braking resistor to drive terminals B1 and B2. Do not connect a braking resistor to terminals +1 or -. If you connect a braking resistor to terminals +1 or -, it can cause death or serious injury from fire and damage to the drive and braking circuit.

NOTICE

Do not use the negative DC bus terminal “-” as a ground terminal. This terminal is at high DC voltage potential. Incorrect wiring connections can cause damage to the drive.

Model	Figure
B001 - B004	Figure 3.15
B006 - B018	Figure 3.16
2001 - 2004, 4001 - 4004	Figure 3.17
2006 - 2082, 4005 - 4060	Figure 3.18

Figure 3.15 Drive Main Circuit Configuration (B001 - B004)

Figure 3.16 Drive Main Circuit Configuration (B006 - B018)

Figure 3.17 Drive Main Circuit Configuration (2001 - 2004, 4001 - 4004)

Figure 3.18 Drive Main Circuit Configuration (2006 - 2082, 4005 - 4060)

3.4 Main Circuit Terminal Block Wiring Procedure

⚠ DANGER Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

◆ Wire to the Main Circuit Terminal Block

Wire to the main circuit terminal block correctly as specified by the instructions in the manual.

Read these instructions before wiring the terminal block.

■ Notes on Wiring the Main Circuit Terminal Block

Read these notes before you wire the main circuit terminal block.

⚠ WARNING Fire Hazard

Refer to “Main Circuit Wire Gauges and Tightening Torques” in this manual to select the correct wires. Remove the insulation from the connection wires to the wire stripping lengths shown in the manual.

If you pinch the insulation in the wire terminals, false-contact can overheat the terminals when you energize the drive and cause death or serious injury from fire.

⚠ WARNING Fire Hazard

Do not use bent or crushed wires. Remove the damaged end of the wire before you use it. Incorrect connections can cause death or serious injury from fire.

⚠ WARNING Fire Hazard

If you use stranded wire, make sure that all of the wire strands are in the connection. Also, do not twist the stranded wire too much.

Short circuits between terminals from stranded wire that is not in the connection or connections that are twisted too much can cause death or serious injury from fire.

NOTICE

If you use power tools to tighten the terminal screws, use a low speed setting (300 min⁻¹ (r/min) to 400 min⁻¹ (r/min)).

High speeds can cause damage to the terminal screws.

- Use UL-Listed, vinyl-coated insulated copper wires for operation with a continuous maximum permitted temperature of 75 °C at 600 V.
- Remove all unwanted objects that are near the terminal block connections.
- Remove the insulation from the connection wires to the wire stripping lengths shown in the manual.
- Do not solder stranded wire. Soldered wire connections can become loose over time and cause unsatisfactory drive performance.
- Put the wire all the way into the terminal block. Remove the insulation from the wire to the recommended wire stripping length to fit the wire with insulation in the plastic housing.
- Use a torque driver, torque ratchet, or torque wrench for the screws. A slotted driver or a hex tool will be necessary to wire the screw clamp terminal. Use applicable tools as specified by the recommended conditions in the product manual.
- Users can purchase wiring tools from Yaskawa. Contact Yaskawa or your nearest sales representative for more information.

- Wire gauges on the drive you are replacing may not match the wire gauge ranges on your new drive. Contact Yaskawa or your nearest sales representative for more information about the connection procedures.
- Do not tighten the terminal screws at an angle of 5 degrees or more. Failure to obey can cause damage to the terminal screws.
If you damage a terminal screw, contact Yaskawa or your nearest sales representative.

Figure 3.19 Permitted Angle

- Put the bit all the way into the hex socket to tighten the hex socket cap screw.
- When you tighten slotted screws, hold the straight-edge screwdriver perpendicularly to the screw. Make sure that you align the end of the straight-edge screwdriver with the screw groove.

Figure 3.20 Tightening Slotted Screws

- After you connect the wires to the terminal block, lightly pull on the wires to make sure that they do not come out of the terminals.
- Do not let strain on the wiring cause damage. Use a strain relief near the wiring to release the tension. Refer to [Figure 3.21](#) for an example.

A - Cable clamp

Figure 3.21 Strain Relief Example

Table 3.4 Recommended Wiring Tools

Screw Size	Screw Shape	Wire Gauge	Adapter	Bit		Torque Driver Model (Tightening Torque)	Torque Wrench (Tightening Torque)
				Model	Manufacturer		
M3		-	Bit	SF-BIT-SL 0,5X3,0-70	PHOENIX CONTACT	TSD-M 1,2NM (0.3 - 1.2 N·m (2.7 - 10.6 lbf·in))	-
M4		-	Bit	SF-BIT-SL 1,0X4,0-70	PHOENIX CONTACT	TSD-M 3NM (1.2 - 3.0 N·m (10.6 - 26.6 lbf·in))	-
M5 ^{*/}		≤ 25 mm ² (AWG 10)	Bit	SF-BIT-SL 1,2X6,5-70	PHOENIX CONTACT	TSD-M 3NM (1.2 - 3.0 N·m (10.6 - 26.6 lbf·in))	-
		≥ 30 mm ² (AWG 8)				-	4.1 - 4.5 N·m (36.3 - 39.8 lbf·in) ^{*/2} ^{*/3}

3.4 Main Circuit Terminal Block Wiring Procedure

Screw Size	Screw Shape	Wire Gauge	Adapter	Bit		Torque Driver Model (Tightening Torque)	Torque Wrench (Tightening Torque)
				Model	Manufacturer		
M6	 (WAF: 5 mm)	-	Bit	SF-BIT-HEX 5-50	PHOENIX CONTACT	-	5 - 9 N·m (44.3 - 79.7 lbf·in) *2 *3

- *1 When you wire drive models 2042, 2056, 4031, 4038, 4044, and 4060, select the correct tools for the wire gauge.
- *2 Use 6.35 mm (0.25 in) bit socket holder.
- *3 Use a torque wrench that can apply this torque measurement range.

■ Remove IP20 Terminal Protective Cover

These drives have IP20 terminal protective covers. Remove the covers for the application.

Model	Terminal R/L1, S/L2, T/L3	Terminal -
2042 4031, 4038	-	x
2056, 2070, 2082 4044, 4060	x	x

1. Put a slotted screwdriver blade into the slit to push the hook of the IP20 terminal protective cover.

Figure 3.22 Put the Screwdriver Blade into the Slit

2. Push up the screwdriver to release the IP20 terminal protective cover.

Figure 3.23 Release IP20 terminal protective cover

3. Remove IP20 terminal protective cover.

Figure 3.24 Remove IP20 Terminal Protective Cover

■ Main Circuit Terminal Block Wiring Procedure

When terminals R/L1, S/L2, T/L3, and terminal - have IP20 terminal protective covers, remove the cover on the terminal where you will wire.

1. Put wires with prepared ends into the main circuit terminal block.
Look through the opening in the drive case to make sure that you correctly installed the wires into the terminal block.

⚠ WARNING Fire Hazard

Remove the insulation from the connection wires to the wire stripping lengths shown in the manual. Make sure that all of the wire strands are in the connection.

If wire stripping length is too short, it can pinch the covering into the terminal block. If wire stripping length is too long, it can close the circuit. Incorrect stripping lengths can cause serious injury or death from fire.

Figure 3.25 Install the Electrical Wire

Note:

There is a jumper between terminals +1 and +2. Remove the jumper, then wire to terminals +1 and +2.

2. Tighten the screws to the specified torque.

Figure 3.26 Tighten Terminal Block Screws

3.5 Control Circuit Wiring

This section gives information about how to correctly wire the control circuit.

◆ Control Circuit Connection Diagram

Wire the drive control circuit as shown in Figure 3.27.

Figure 3.27 Control Circuit Connection Diagram

*1

⚠ WARNING Electrical Shock Hazard

When you connect the shield wire of the control circuit wiring to the protective ground terminal, do not connect the protective ground wire.

If you connect the shield wire and the protective ground wire to the protective grounding terminal, it may not comply with the technical standards and local safety regulations and can cause serious injury or death.

*2

The maximum output current capacity for terminal +V on the control circuit is 20 mA.

NOTICE Damage to Equipment

Do not install a jumper between terminals +V and AC.

A closed circuit between these terminals will cause damage to the drive.

*3

Do not ground the control circuit terminals AC or connect them to the drive chassis.

NOTICE

Do not ground the AC control circuit terminals and only connect the AC terminals as specified by the product instructions.

If you connect the AC terminals incorrectly, it can cause damage to the drive.

3.5 Control Circuit Wiring

- *4 Use only Sourcing Mode for Safe Disable input.
- *5 Disconnect the wire jumpers between H1 and HC and H2 and HC to use the Safe Disable input.

◆ Control Circuit Terminal Block Functions

Hx-xx parameters set functions for the multi-function input and output terminals.

⚠ WARNING Sudden Movement Hazard

Correctly wire and test all control circuits to make sure that the control circuits operate correctly. If you use a drive that has incorrect control circuit wiring or operation, it can cause death or serious injury.

⚠ WARNING Sudden Movement Hazard

Check the I/O signals and the external sequences for the drive before you set the Application Preset function.

When you set the Application Preset function ($A1-06 \neq 0$), it changes the I/O terminal functions for the drive and it can cause equipment to operate unusually. This can cause serious injury or death.

NOTICE Damage to Equipment

Do not energize and de-energize the drive more frequently than one time each 30 minutes. If you frequently energize and de-energize the drive, it can cause drive failure.

■ Input Terminals

Refer to [Table 3.5](#) for a list of input terminals and functions.

Table 3.5 Multi-function Input Terminals

Type	Terminal	Name (Default)	Function (Signal Level)
MFDI	S1	MFDI selection 1 (ON: Forward run, OFF: Stop)	- Photocoupler 24 V, 6 mA Note: - To set the MFDI power supply (Sinking/Sourcing Mode), use the DIP switch S3. - When you set DIP switch S3, remove the keypad. Refer to 44 for details.
	S2	MFDI selection 2 (ON: Reverse run OFF: Stop)	
	SC	MFDI selection common	
	SP	MFDI power supply +24 Vdc	
Safe Disable Input	H1	Safe Disable input 1	Remove the jumper between terminals H1-HC and H2-HC to use the Safe Disable input. 24 V, 6 mA - ON: Normal operation - OFF: Coasting motor - Internal impedance 4.7 kΩ - OFF Minimum OFF time of 3 ms.
	H2	Safe Disable input 2	
	HC	Safe Disable function common	
Master Frequency Reference	+V	Power supply for frequency setting	10.5 V (allowable current 20 mA maximum)
	A1	MFAI1 (Master frequency reference)	Voltage input Use <i>H3-01 [Terminal A1 Signal Level Select]</i> to select the signal level. 0V to 10 V/100% (input impedance:20kΩ)
	AC	Frequency reference common	0 V

■ Output Terminals

Refer to [Table 3.6](#) for a list of Output terminals and functions.

⚠ WARNING Sudden Movement Hazard

Do not use the Normally Closed (N.C.) relay output terminal in areas with high vibration or shock. If the drive gets too much vibration or shock, the N.C. relay output terminal can open for a short time. If the N.C. relay output terminal opens, the machine can start suddenly and can cause death or serious injury.

Table 3.6 Control Circuit Output Terminals

Type	Terminal	Name (Default)	Function (Signal Level)
Digital Outputs	MA	N.O. output (Fault)	- Relay output 30 Vdc, 10 mA to 1 A 250 Vac, 10 mA to 1 A - Minimum load: 5 V, 10 mA (Reference value)
	MB	N.C. output (Fault)	
	MC	Digital output common	

■ Communication Connector

Connectors CN1A and CN1B are connection points for Ethernet network communication cables. These ports accept customer-supplied male 8-way Ethernet modular RJ45 connectors.

Table 3.7 Male 8-way Ethernet Modular Connector (Customer-Supplied)

Connector	Pin	Description
	1 (Pair 2)	Transmit data (TXD) +
	2 (Pair 2)	Transmit data (TXD) -
	3 (Pair 3)	Receive data (RXD) +
	4 (Pair 1)	Not used
	5 (Pair 1)	Not used
	6 (Pair 3)	Receive data (RXD) -
	7 (Pair 4)	Not used
	8 (Pair 4)	Not used

◆ Control Circuit Terminal and Connector Configuration

The control circuit terminals and connectors are in the positions shown in [Figure 3.28](#).

A - Terminal block (TB1-2)
B - Terminal block (TB1-1)
C - Terminal block (TB2)
D - Connector (CN1B)
E - Connector (CN1A)

Figure 3.28 Control Circuit Terminal and Connector Arrangement

■ Control Circuit Wire Gauges and Tightening Torques

Use the tables in this section to select the correct wires. Use shielded wire to wire the control circuit terminal block. Use crimp ferrules on the wire ends to make the wiring procedure easier and more reliable.

Table 3.8 Control Circuit Wire Gauges and Tightening Torques

Terminal Block	Terminal	Screw Size	Tightening Torque N·m (lbf·in)	Bare Wire		Crimp Ferrule	
				Recomm. Gauge mm² (AWG)	Applicable Gauge mm² (AWG)	Recomm. Gauge mm² (AWG)	Applicable Gauge mm² (AWG)
TB1-1	S1, S2, SC, SP	-	-	0.75 (18)	• Stranded wire 0.25 - 1.0 (24 - 17) • Solid wire 0.25 - 1.5 (24 - 16)	0.5 (20)	0.25 - 0.5 (24 - 20)
TB1-2	AC, A1,+V, H1, H2, HC	-	-		• Stranded wire 0.25 - 1.5 (24 - 16) • Solid wire 0.25 - 1.5 (24 - 16)		0.25 - 1.0 (24 - 17)
TB2	MA, MB, MC	M3	0.5 - 0.6 (4.4 - 5.3)				

Crimp Ferrules

Attach an insulated sleeve when you use crimp ferrules. Refer to [Table 3.9](#) for the recommended external dimensions and model numbers of crimp ferrules.

Use the CRIMPFOX 6, a crimping tool made by PHOENIX CONTACT.

Figure 3.29 External Dimensions of Crimp Ferrules

Table 3.9 Crimp Ferrule Models and Sizes

Terminal Block	Wire Gauge mm ² (AWG)	Model	L (mm)	L1 (mm)	φd1 (mm)	φd2 (mm)
TB1-1 TB1-2	0.25 (24)	AI 0.25-8 YE	12.5	8	0.8	2.0
	0.34 (22)	AI 0.34-8 TQ	12.5	8	0.8	2.0
	0.5 (20)	AI 0.5-8 WH AI 0.5-8 OG	14	8	1.1	2.5
TB2	0.25 (24)	AI 0.25-6 YE AI 0.25-6 BU	10.5	6.0	0.8	2.0
	0.34 (22)	AI 0.34-6 TQ	10.5	6.0	0.8	2.0
	0.5 (20)	AI 0.5-6 WH AI 0.5-6 OG	12.0	6.0	1.1	2.5
	0.75 (18)	AI 0.75-6 GY AI 0.75-6 WH	12.0	6.0	1.3	2.8
	1.0 (17)	AI 1-6 RD AI 1-6 YE	12.0	6.0	1.5	3.0

◆ Wiring the Control Circuit Terminal

⚠ DANGER Electrical Shock Hazard

Do not remove covers or touch circuit boards while the drive is energized.

If you touch the internal components of an energized drive, it will cause death or serious injury from electrical shock.

NOTICE

Do not let wire shields touch other signal lines or equipment. Insulate the wire shields with electrical tape or shrink tubing.

If you do not insulate the wire shields, it can cause a short circuit and damage the drive.

Note:

- Use a Class 2 power supply to connect external power to the control terminals. If the power supply for peripheral devices is incorrect, it can cause a decrease in drive performance.
- Connect the shield of shielded cable to the applicable ground terminal. Incorrect equipment grounding can cause drive or equipment malfunction from electrical interference.
- Isolate wiring for contact output terminals MA, MB, MC from other control circuit wiring. Incorrect wiring procedures can cause the drive and connected equipment to malfunction and cause the drive to trip.
- Isolate control circuit wiring from main circuit wiring (terminals R/L1, S/L2, T/L3, L/L1, N/L2, B1, B2, U/T1, V/T2, W/T3, -, +1, +2) and other high-power wiring. If control circuit wiring is adjacent to main circuit wiring, it can cause incorrect operation of the drive and equipment from electrical interference.

Wire the grounding terminal and main circuit terminals, then wire the control circuit terminals.

1. Remove the front cover from the drive.

Note:

Remove the keypad to set DIP switch S3.

Figure 3.30 Remove the Front Cover

2. Refer to the figure and wire the control circuit.

Use a slotted screwdriver with a blade width of 2.5 mm (0.1 in) or less and thickness of 0.4 mm (0.01 in) or less.

⚠ WARNING Fire Hazard

Tighten all terminal screws to the correct tightening torque shown in this manual. If connections are too loose or too tight, it can cause incorrect operation or damage to the terminal block. Overheated connections can cause death or serious injury from fire.

Note:

- Use shielded, twisted-pair wires and ground the shield to the ground terminal of the drive. Incorrect equipment grounding can cause drive or equipment malfunction from electrical interference.
- Do not use control circuit wiring that is longer than 50 m (164 ft) to supply the analog frequency reference from a remote source. If the control circuit wiring is too long, it can cause unsatisfactory system performance.

- A - Loosen the screws and put the wire into the opening on the terminal block.**
- B - Wire with a crimp ferrule attached, or unsoldered wire with the core wires lightly twisted.**
- C - Blade thickness of 0.4 mm (0.01 in) or less**

- D - Blade width of 2.5 mm (0.1 in) or less**
- E - When you do not use crimp ferrules, remove approximately 5.5 mm (0.21 in) of the covering at the end of the wire.**
- F - Pull back the shielding and lightly twist the end with your fingers to make sure that the ends do not fray.**

Figure 3.31 Wiring Procedure for the Control Circuit

Note:

- It is easier to wire TB2 first, then TB1-2, then TB1-1.
- Do not solder the core wire. Soldered wiring connections can become loose and cause the drive to malfunction.
- Refer to [Figure 3.32](#) for information to prepare terminal ends of the shielded wire.
- Prepare the wire ends of shielded twisted-pair wires as shown in [Figure 3.32](#) to use an analog frequency reference from an external frequency setting potentiometer to set the frequency. Connect the shield to the ground terminal (⊕) of the drive.

- A - Connect the shield to the ground terminal of the drive.**

B - Sheath
- C - Insulate with electrical tape or shrink tubing.**

Figure 3.32 Prepare the Ends of Shielded Wire

3. Install the front cover.
- When you set DIP switch S3, attach the keypad before you attach the front cover.
- Make sure that you do not pinch wires or signal lines between the front cover and the drive before you reattach the cover.

Figure 3.33 Install the Front Cover

◆ Switches on the Terminal Board

The terminal board has switches to adapt the drive I/Os to the external control signals as shown in [Figure 3.34](#). Set the switches to select the functions for each terminal.

- A - DIP switch S3**
- B - DIP switch S1**

Figure 3.34 Locations of Switches

Table 3.10 I/O Terminals and Switches Functions

Switch	Terminal	Function	Default
DIP switch S1	-	Sets the communication protocol.	OFF: Protocol unset (All OFF)
DIP switch S3	-	Sets the Sinking Mode/Sourcing Mode	OFF: SINK

3.6 Control I/O Connections

This section gives information about the settings for the MFDI (terminals S1, S2) signals.

◆ Set Sinking Mode/Sourcing Mode

Set DIP switch S3 to set the sinking mode/sourcing mode for the MFDI terminals. The default setting for the drive is sinking mode.

Setting	Mode
SINK (Default)	Sinking Mode (NPN)
SOURCE	Sourcing Mode (PNP)

Figure 3.35 DIP Switch S3

■ Transistor Input Signal Using 0 V Common/Sink Mode

When the input signal for digital inputs is NPN transistors (0 V common/sinking mode), set DIP switch S3 to SINK and use the internal 24 V power supply.

Figure 3.36 Sinking Mode: NPN Transistor (0 V Common)

■ Transistor Input Signal Using +24 V Common/Source Mode

When the input signal for digital inputs is PNP transistors (+24 V common/sourcing mode), set DIP switch S3 to SOURCE and use an external 24 V power supply.

Figure 3.37 Source Mode: PNP Transistor (+24 V Common)

3.7 Set Communication Protocol

Refer to [Figure 3.38](#) and [Table 3.11](#) and set DIP switch S1 for your communication protocol.

Note:
Remove the front cover to set DIP switch S1.

A - DIP switch S1

Figure 3.38 DIP Switch S1 Location

Table 3.11 Supported Communication Protocols and DIP Switch Settings

Communication Protocol	DIP Switch S1 Setting	Communication Protocol	DIP Switch S1 Setting
ModbusTCP/IP		PROFINET	
EtherNet/IP		BACnet/IP	
EtherCAT		MECHATROLINK-4	

3.8 Connect the Drive to a PC

The drive has a mini-B type USB port.

You can use a USB cable (USB 2.0, type: A - mini-B) to connect the drive to a type-A USB port on a PC. After you connect the drive to the PC, you can use Yaskawa DriveWizard software to monitor drive performance and manage parameter settings.

Figure 3.39 Connect to a PC (USB)

Yaskawa recommends that you use a USB cable with connectors connected with shielded wires.

Figure 3.40 Recommended USB Cable

3.9 External Interlock

For applications that will have unwanted effects on the system if the drive stops, make an interlock between MFDO terminals set to $H2-xx = E$ [MFDO Function Selection = Fault].

◆ Interlock Circuit Example

Refer to Figure 3.41 for an example of how two drives that run one application use the Fault output signals to interlock with the controller.

Figure 3.41 Interlock Circuit Example

3.10 Braking Resistor Installation

A braking resistor or braking resistor unit (dynamic braking option) helps stop the motor quickly and smoothly when there is high load inertia. If you try to decelerate a motor in less time than usual for a coast to stop, the motor will rotate faster than the synchronous speed that aligns with the set frequency. This will cause the motor to become an induction generator. The inertia energy of the motor and regenerate to the drive and charge the drive DC bus capacitor and increase the voltage. If the voltage is more than the overvoltage level, an *ov* [Overvoltage] will occur. To prevent these overvoltage faults, a dynamic braking option is necessary.

⚠ WARNING

Set **L3-04 = 0** [Stall Prevention during Decel = Disabled] when you operate the drive with:

- a regenerative converter
- regenerative unit
- braking resistor
- braking resistor unit.

If you set the parameter incorrectly, the drive can decelerate for too long and cause serious injury or death.

NOTICE Damage to Equipment

Before you connect a dynamic braking option to the drive, make sure that qualified personnel read and obey the Braking Unit and Braking Resistor Unit Installation Manual (TOBPC72060001).

If you do not read and obey the manual or if personnel are not qualified, it can cause damage to the drive and braking circuit.

Note:

- Select the correct braking circuit size to dissipate the power that is necessary to decelerate the load in the correct time. Before you run the drive, make sure that the braking circuit can dissipate the energy for the set deceleration time.
- To install a dynamic braking option, set **L8-01 = 0** [3% ERF DB Resistor Protection = Disabled].

⚠ WARNING Fire Hazard

Connect a braking resistor to drive terminals B1 and B2. Do not connect a braking resistor to terminals +1 or -.

If you connect a braking resistor to terminals +1 or -, it can cause death or serious injury from fire and damage to the drive and braking circuit.

NOTICE

Connect braking resistors to the drive as shown in the connection diagram examples.

If you wire the braking circuits incorrectly, it can cause damage to the drive or equipment.

To connect a Yaskawa ERF series braking resistor to the drive, set **L8-01 = 1** [Enabled].

To use a non-ERF-type braking resistor, connect a thermal overload relay between the drive and the braking resistor and set a circuit to turn OFF the drive power at the trip contacts of the thermal overload relay.

◆ Install a Braking Resistor: ERF-Type

Connect the braking resistor to drive models B001 to B018, 2001 to 2021, and 4001 to 4012 as shown in [Figure 3.42](#).

When you use a braking resistor, set **L8-01 = 1** [3% ERF DB Resistor Protection = Enabled] and set one of the MFDO parameters **H2-01 to H2-03 = D** [MFDO Function Selection = Braking Resistor Fault]. Use a sequence to turn OFF the power with a MFDO.

Figure 3.42 Install an ERF-Type Braking Resistor

◆ Install a Braking Resistor Unit: LKEB-Type

Connect the braking resistor unit as shown in Figure 3.43. To install a braking resistor unit, set $L8-01 = 0$ [3% ERF DB Resistor Protection = Disabled].

This product has a built-in braking transistor.

To prevent overheating the braking resistor unit, set a sequence to de-energize the drive at the trip contacts of the thermal overload relay.

Figure 3.43 Install a Braking Resistor Unit: LKEB-Type

◆ Dynamic Braking Option Overload Protection

To prevent overheating the dynamic braking option, set a sequence to de-energize the drive at the trip contacts of the thermal overload relay.

Figure 3.44 Power Supply Interrupt for Overheat Protection Example

⚠ WARNING Fire Hazard

When you use a braking unit, use a thermal relay on the braking resistors and set a fault contact output for the braking resistor unit to disconnect drive main power through an input contactor. Incorrect braking circuit protection can cause the resistors to become too hot and cause serious injury or death.

3.11 Drive Wiring Protection

◆ Installing a Ground Fault Circuit Interrupter (GFCI)

When the drive output switches at high speeds, it causes high frequency leakage current. To prevent electrical shock and fires caused by ground fault protection that is not sufficient, install a GFCI.

Use a high frequency GFCI at the power input side of the drive and make sure that each drive has a minimum cumulative sensitivity amperage of 30 mA. The specialized breaker detects only the leakage current from frequency bands that are dangerous to humans.

If a device does not have protection against high frequencies, high frequency leakage currents can cause the device to malfunction. If you have a malfunction on a device that is not protected, decrease the carrier frequency of the drive, switch to a better breaker, or use a GFCI with a minimum cumulative sensitivity amperage of 200 mA for each drive.

These conditions can have an effect on leakage current:

- Drive capacity
- Carrier frequency
- Wiring distance and types of motor cables
- EMI/RFI filter

To prevent damage and injury to personnel and drives, use a high-frequency GFCI that is rated for AC and DC power supplies.

Note:

Yaskawa recommends these GFCIs, which are designed to operate with high frequencies:

- Mitsubishi Electric Corporation, NV series
- Schneider Electric, NS series

You can use a molded-case circuit breaker (MCCB) as a replacement for a GFCI that is upstream in the power supply system.

◆ Installing a Molded-Case Circuit Breaker (MCCB) or Ground Fault Circuit Interrupter (GFCI)

Install a molded-case circuit breaker (MCCB) or a ground fault circuit interrupter (GFCI) for line protection between the power supply and main circuit power supply input terminals R/L1, S/L2, and T/L3. The MCCB or GFCI gives overload protection and also prevents damage to the main circuit and the devices that are wired to the main circuit.

Use the information in this section to select the correct MCCB or GFCI and to safely connect the device.

- The capacity of the MCCB or GFCI must be 1.5 to 2 times the rated output current of the drive. Use an MCCB or GFCI as an alternative to overheat protection (150% for one minute at the rated output current) to prevent drive faults.
- When you connect more than one drive or the drive and other device to an MCCB or GFCI, refer to [Figure 3.45](#), use a magnetic contactor (MC), and set a sequence that de-energizes the drive when it outputs errors.

A - Power Supply

B - Drive

Figure 3.45 Connect an MCCB

⚠ WARNING Electrical Shock Hazard

Use an MCCB, GFCI, or Magnetic Contactor (MC) to de-energize the drive before you wire the main circuit terminal.

If the main circuit terminal is energized during wiring, it will cause serious injury or death.

3.12 Dynamic Braking Option, Motor Protection

◆ Install an Electromagnetic Contactor (MC) at the Input Side of the Drive

You can use an MC as an alternative to a molded case circuit breaker (MCCB) when:

- The protective functions of the drive have been triggered
- An emergency stop occurred, and the sequence de-energizes the drive.

If an MC on the input side of the drive (primary side) stops the drive, regenerative braking will not operate, and the drive will coast to stop.

NOTICE Damage to Equipment

Do not energize and de-energize the drive more frequently than one time each 30 minutes. If you frequently energize and de-energize the drive, it can cause drive failure.

NOTICE

When you connect electromagnetic switches or magnetic contactors to the output motor circuits, make sure that you sequence them correctly.

If the output motor circuit sequence is incorrect, it can cause damage to the drive.

Note:

- When machinery must not restart after recovery from a momentary power loss that occurred during run, install an MC at the input side of the drive and set a sequence that does not automatically set the Run command to ON after recovery of power.
- When it is necessary to stop momentary power loss, for example to maintain a circuit that has momentary power loss, use a delayed-release MC.
- Use an MC (magnetic contactor) to make sure that you can fully remove power to the drive when necessary. Wire the MC to open when a fault output terminal is triggered.

■ Protect the Braking Resistor/Braking Resistor Unit

Use an MC on the input side (primary side) to prevent damage to the braking resistor/braking resistor unit.

▲ WARNING Fire Hazard

When you use a braking unit, use a thermal relay on the braking resistors and set a fault contact output for the braking resistor unit to disconnect drive main power through an input contactor. Incorrect braking circuit protection can cause the resistors to become too hot and cause serious injury or death.

◆ Installing a Thermal Overload Relay on the Drive Output

A thermal overload relay disconnects the power line to the motor during a motor overload condition to prevent damage to the motor.

Install a thermal overload relay between the drive and motor in these conditions:

- When you operate more than one motor with one drive
- When you operate the motor directly from the power line with a power line bypass

When you operate one motor with one drive, it is not necessary to install a thermal overload relay. The drive has electronic motor overload protection in the drive software.

Note:

- When you install a thermal overload relay, set parameter $L1-01 = 0$ [*Motor Overload (oL1) Protection = Disabled*].
- Set up a sequence that will trip an external fault (coast to stop) for the contacts of the thermal overload relay.

■ General Precautions When Using Thermal Overload Relays

When you use a motor thermal overload relay on the drive output to prevent nuisance trips and overheating of the motor at low speeds, be sure to think about these application precautions:

- Operation of a low speed motor

- When you operate more than one motor with one drive
- Length of the motor cables
- Nuisance tripping because of high drive carrier frequency

Operation of a Low Speed Motor

Usually, you use thermal overload relays on general-purpose motors (standard motors). When a drive drives a general-purpose motor, the motor current is approximately 5% to 10% more than with a commercial power supply. When a motor with a shaft-driven fan operates at low speeds, the cooling capacity decreases. This can cause the motor to overheat when the load current is in the motor rated value. Enable the electronic thermal protection in the drive when possible to prevent this problem.

The electronic thermal overload function uses the relation between the speed and heat characteristics in the variable speed control range to simulate the cooling ability of general-purpose motors and forced-vented motors to prevent damage to the motor.

When You Operate More than One Motor with One Drive

To disable the overload protection function of the electronic thermal protector of the drive, set $LI-01 = 0$ [*Motor Overload (oLI) Protection = Disabled*].

Note:

If you operate more than one motor from one drive, you cannot use the electronic thermal protection of the drive.

Length of the Motor Cables

If you use long motor cables with a high carrier frequency, the increased leakage current can cause nuisance tripping of the thermal relay. To prevent this, decrease the carrier frequency or increase the tripping level of the thermal overload relay.

Nuisance Tripping Because of High Drive Carrier Frequency

High carrier frequency PWM drives make current waveforms that can increase the temperature in overload relays. It may be necessary to increase the trip level setting when encountering nuisance triggering of the relay.

⚠ WARNING Fire Hazard

Before you increase the detection level of the thermal relay, make sure that a secondary problem is not the cause of the overload. Make sure that you know the local codes for electrical wiring, then adjust the electrothermal settings.

Incorrect thermal relay adjustment and incorrect wiring can cause serious injury or death.

3.13 Improve the Power Factor

◆ Connect an AC Reactor or a DC Link Choke

AC reactors and DC link chokes decrease surges in current and improve the power factor on the input side of the drive.

Connect an AC reactor or a DC link choke the input side (primary side) in these conditions:

- To decrease harmonic current or improve the power factor of the power supply
- When there is switching of phase advancing capacitor
- With a large capacity power supply transformer (600 kVA or more).

Note:

- You can use an AC reactor and DC link choke together.
- When you connect a thyristor converter (for example, a DC drive) to the same power supply system, use an AC reactor.
- The main circuit terminal block for the drive, and the terminal blocks for the AC reactor and DC Link Choke come in different shapes. The drive has a European-style terminal block, and the AC reactor and DC Link Choke have a circular terminal block. Correctly prepare the ends of the wiring.
- Ground the AC reactor and DC Link Choke (option) on the back of the mounting base. Remove all paint from the mounting surface of the control panel.

■ Connect an AC Reactor

Note:

When you connect an AC reactor to the output side (secondary side) of the driver, set $C6-02 = 1$ [Carrier Frequency Selection = 2.0 kHz].

Figure 3.46 AC Reactor Connection Example

■ Connect a DC Link Choke

When you install a DC link choke, remove the jumper between terminals +1 and +2. If you will not use a DC link choke, do not remove the jumper. Refer to Figure 3.47 for an example of how to wire the DC link choke.

Figure 3.47 DC Link Choke Connection Example

Note:

You cannot connect a DC link choke to drive models B001 to B018.

3.14 Prevent Switching Surge

◆ Connect a Surge Protective Device

A surge protective device decreases the surge voltage generated when you switch an inductive load near the drive. Inductive loads include:

- Magnetic contactors
- Electromagnetic relays
- Magnetic valves
- Solenoids
- Magnetic brakes.

Always use a surge protective device or diode with inductive loads.

Note:

Do not connect a surge protective device to the drive output side.

3.15 Decrease Noise

Note:

The main circuit terminal block for the drive and the terminal block for the noise filter come in different shapes. The drive has a European-style terminal block and the noise filter has a circular terminal block. Correctly prepare the ends of the wiring.

◆ Connect a Noise Filter to the Input Side (Primary Side)

High-speed switching makes noise in the drive output. This noise flows from the drive to the power supply, and can have an effect on other equipment. Install a noise filter to the input side of the drive to decrease the quantity of noise that flows to the power supply. A noise filter will also stop noise from entering the drive from the power supply.

- Use a noise filter specially designed for drives.
- Install the noise filter as close as possible to the drive.

A - Power Supply

B - Input side (primary side) noise filter

C - Drive

D - Other controller

Figure 3.48 Example of Connecting the Noise Filter on the Input Side (Primary Side)

Note:

The input side (primary side) noise filter model is RTEN-5xxx.

◆ Connect a Noise Filter to the Output Side (Secondary Side)

A noise filter on the output side of the drive decreases inductive noise and radio frequency interference.

Figure 3.49 shows an example of noise filter wiring.

NOTICE

Do not connect phase-advancing capacitors, LC/RC noise filters, or leakage breakers (GFCI) to the motor circuit.

If you connect these devices to the output circuits, it can cause damage to the drive and connected equipment.

A - Power supply

B - Drive

C - Noise filter on output side (secondary side)

D - Motor

Figure 3.49 Example of Connecting the Noise Filter on the Output Side (Secondary Side)

Note:**Glossary**• **Radio frequency interference:**

Electromagnetic waves radiated from the drive and cables make noise through the full radio bandwidth that can have an effect on nearby devices.

• **Inductive noise:**

The noise from electromagnetic induction can have an effect on the signal line and can cause the controller to malfunction.

■ Prevent Inductive Noise

In addition to installing a noise filter, you can also run all wiring through a grounded metal conduit to decrease inductive noise occurring at the output side. Put the cables a minimum of 30 cm (11.8 in) away from the signal line to prevent induced noise. Ground the cables to metal conduits.

Figure 3.50 Prevent Inductive Noise

■ Decrease Radio Frequency Interference

The drive, input lines, and output lines generate radio frequency interference. Use noise filters on input and output sides and install the drive in a steel box to decrease radio frequency interference.

Note:

Keep the cable between the drive and motor as short as possible.

Figure 3.51 Decrease Radio Frequency Interference

3.16 Factory-Recommended Branch Circuit Protection for UL Listing

⚠ WARNING Electrical Shock Hazard

After the input protective device trips, do not immediately energize the drive or operate peripheral devices. Wait for the time specified on the warning label at a minimum and make sure that all indicators are OFF. Then check the wiring and peripheral device ratings to find the cause of the problem. If you do not know the cause of the problem, contact Yaskawa before you energize the drive or peripheral devices.

If you do not fix the problem before you operate the drive or peripheral devices, it can cause serious injury or death.

◆ UL Compliance

Install one of the types of short circuit protection devices in *Short Circuit Protection for Single-Phase 200 V Class Models on page 98*, *Short Circuit Protection for 3-Phase 200 V Class Models on page 100*, and *Short Circuit Protection for 3-Phase 400 V Class Models on page 103* to comply with UL61800-5-1. Yaskawa recommends connecting semiconductor protective type fuses, but *Short Circuit Protection for Single-Phase 200 V Class Models on page 98*, *Short Circuit Protection for 3-Phase 200 V Class Models on page 100*, and *Short Circuit Protection for 3-Phase 400 V Class Models on page 103* also show alternative short circuit protection devices.

Where a minimum enclosure volume is specified, you must mount the drive in a suitable protected enclosure with a minimum specified enclosure volume, as shown in the selection tables.

◆ Electric Code Compliance

The user must provide short circuit protection to protect input branch circuits as specified by the National Electric Code (NEC), the Canadian Electric Code, Part 1 (CEC), and local codes.

■ Molded Case Circuit Breaker (MCCB) Ratings

- Any UL listed MCCB is approved. Current limiting type MCCBs are an alternate and generally recommended over the non-current limiting type.
- The maximum MCCB rating is 200% of the Normal Duty VFD full load output amp (FLA) rating.
- For the MCCB (current limiting type) an equivalent listed current limiting type MCCB is able to be used where the peak let-through current and I^2t of the equivalent MCCB is not greater than the specified MCCB.

■ Non-Semiconductor Fuse Ratings

- Class J, T, or CC fuses shall be sized at maximum 175% of drive FLA, and GA501 models with suffix B (Open Type) shall be installed in an enclosure with a minimum volume.
- Class T fuses are fast acting (non-time delay) only.

■ Short Circuit Current Ratings (SCCR)

The drive is suitable for use on a circuit capable of delivering not more than 100 kA RMS symmetrical amperes, 240 V or 480 V maximum, when protected by devices specified in the selection tables.

- 200 V Class models: Use the protection specified in this document to prepare the drive for use on a circuit capable of delivering not more than 100,000 RMS symmetrical amps and not more than 240 Vac.
- 400 V Class models: Use the protection specified in this document to prepare the drive for use on a circuit capable of delivering not more than 100,000 RMS symmetrical amps and not more than 480 Vac.

■ Short Circuit Protection for Single-Phase 200 V Class Models

4044	FWH-200B	31	100	2240
4060	FWH-200B	31	100	2240

*1 Fuses must be installed in the same enclosure as the drive.

Non-Semiconductor Fuse Ratings

- Maximum Class J, T, or CC fuse rating is 175% of the Normal Duty drive full load output amp (FLA) rating. Install the IP00/UL Open Type drive into an enclosure with a minimum enclosure volume shown in [Table 3.21](#).
- Class T fuses are fast acting (non-time delay) only.

Table 3.21 Non-Semiconductor Fuse Ratings: Three-Phase 400 V Class

Drive Catalog Code GA51U	Class CC, J or T Time Delay Fuse for 31 kA or 100 kA SCCR				Class RK1 or RK5 Time Delay Fuse for 31 kA SCCR

Molded Case Circuit Breaker (MCCB) Ratings

- Any UL listed MCCB is approved. Current limiting type MCCBs are an alternate and generally recommended over the non-current limiting type.
- Maximum MCCB rating is 200% of the Normal Duty drive full load output amp (FLA) rating.
- For the MCCB (current limiting type) an equivalent listed current limiting type MCCB is able to be used where the peak let-through current and I^2t of the equivalent MCCB is not greater than the specified MCCB.

Type E Manual Self Protected Combination Motor Controller (CMC) Ratings

- CMCs are UL Listed for 208 V or 240 V Wye or Delta and 480Y/277V. CMCs are not UL Listed for 480 V Delta, corner ground or high impedance networks.
- A Schneider Electric GV2GH7 insulating barrier is necessary for GV2P devices. A GV3G66 insulating barrier and GVAM11 auxiliary contact/indicator are necessary for GV3P devices.

3.17 Wiring Checklist

Wire the drive, examine these items, then do a test run.

Table 3.24 Power Supply Voltage

Checked	No.	Item to Check
	1	The power supply voltage must be in the input voltage specification range of the drive.

Table 3.25 Main Circuit Wiring

Checked	No.	Item to Check
	1	- Put the power supply through a molded-case circuit breaker (MCCB) before it gets to the drive input. - Connect an applicable MCCB.
	2	Correctly wire the power supply to drive terminals R/L1, S/L2, and T/L3, or L/L1 and N/L2.
	3	Correctly wire the drive and motor together. The motor lines and drive output terminals U/T1, V/T2, and W/T3 must align to make the correct phase order. Note: If the phase order is incorrect, the drive will rotate in the opposite direction.
	4	Use 600 V heat resistant indoor PVC wire for the power supply and motor lines. Note: Wire gauge recommendations assume use of 600 V class 2 heat-resistant indoor PVC wire.
	5	Use the correct wire gauges for the main circuit. Note: - When the wiring distance between the drive and the motor is long, use this formula for the voltage drop in the wire: $\text{Motor rated voltage (V)} \times 0.02 \geq \sqrt{3} \times \text{wire resistance } (\Omega/\text{km}) \times \text{wiring distance (m)} \times \text{motor rated current (A)} \times 10^{-3}$ - When the cable between the drive and motor is longer than 50 m (164 ft), use parameter C6-02 [Carrier Frequency Selection] to decrease the carrier frequency.
	6	Correctly ground the drive.
	7	Tighten the main circuit and grounding terminal screws of the drive to a correct tightening torque.
	8	When operating more than one motor from one drive, set up overload protection circuits.  A - Power Supply C - oL1, oL2: Thermal overload relay B - Drive Note: Set H1-02 = 25 [Terminal S2 Function Selection = External Fault (NC-Always-Coast)].
	9	When you use a braking resistor or a braking resistor unit, install an electromagnetic contactor (MC). Correctly install the resistor and make sure that overload protection uses the MC to shut off the power supply.
	10	Make sure you did not install phase advancing capacitors, input noise filters, or ELCBs, GFCIs, RCM/RCDs on the output side of the drive.

Table 3.26 Control Circuit Wiring

Checked	No.	Item to Check
	1	Use twisted-pair cables for all drive control circuit wiring.
	2	Ground the shields of shielded wiring to the ground terminal  .
	3	Correctly install any options.
	4	Examine the drive for other wiring errors. Only use a multimeter to check wiring.
	5	Tighten the control circuit terminal screws of the drive to a correct tightening torque.
	6	Pick up all wire clippings.

Checked	No.	Item to Check
	7	Make sure that none of the wires on the terminal block touch other terminals or connections.
	8	Make sure that you isolate the control circuit wiring from main circuit wiring in the control panel or in a duct.
	9	Make sure that control circuit wiring is not longer than 50 m (164 ft).
	10	Make sure that Safe Disable input wiring is not longer than 30 m (98 ft).

3.18 Motor Application Precautions

◆ Precautions for Existing Standard Motors

■ Low-Speed Range

When a drive operates a standard motor, it will lose more power compared to operating the motor with a commercial power supply. In the low speed range, the temperature of the motor increases quickly because the motor cannot decrease its temperature when the speed decreases. In these conditions, decrease the load torque of the motor in the low-speed range. Figure 3.52 shows the permitted load characteristics for a Yaskawa standard motor. When 100% continuous torque is necessary at low speeds, use a motor designed to operate with a drive.

Figure 3.52 Permitted Load Characteristics for a Yaskawa Standard Motors

■ Insulation Withstand Voltage

Consider motor voltage tolerance levels and motor insulation in applications with an input voltage of over 440 V or particularly long wiring distances. Use an insulated drive motor.

⚠ WARNING Electrical Shock Hazard

Use an insulated drive motor or a vector-duty motor with reinforced insulation and windings applicable for use with an AC drive.

If you use a different type of motor, it can create a short circuit or ground fault from insulation deterioration, and can cause an electrical shock.

NOTICE Damage to Equipment

Use an insulated drive motor or a vector-duty motor with reinforced insulation and windings applicable for use with an AC drive.

If you do not use these motors, insulation deterioration can cause short circuits and ground faults and damage to the drive.

■ High-Speed Operation

If you operate a motor more than its rated speed, you can have problems with the motor bearing durability and dynamic balance of the machine. Contact the motor or machine manufacturer.

■ Torque Characteristics

When you operate a motor with a drive, the torque characteristics are different than when you operate the motor directly from line power. Make sure that you know about the load torque characteristics for your application.

■ Vibration

Vibrations could occur in the these conditions:

- Resonance with the natural frequency of machinery
Use caution if you add a variable-speed drive to applications that operate the motor from line power at a constant speed. If resonance occurs, install shock-absorbing rubber around the base of the motor and enable the Jump frequency control.
- The motor is not balanced
Use caution if the motor speed is more than the rated motor speed.
- Subsynchronous resonance
Subsynchronous resonance can occur with long motor shafts and in applications such as turbines, blowers, and fans with high inertia loads.

■ Audible Noise

The audible noise of the motor changes when the carrier frequency setting changes. When you use a high carrier frequency, audible noise from the motor is equivalent to the motor noise generated when you operate from line power. If you operate at speeds that are more than the rated rotation speed, the unwanted motor noise increases.

◆ Precaution When You Use IE3 Premium Efficiency Motors

IE3 motors have different motor characteristics from IE1 and other motors. Set the parameters as specified by the motor characteristics. If you have a momentary power loss, and the drive detects *oC* [*Overcurrent*] or *ov* [*Overvoltage*] during speed search after it restores power, set these parameters:

- *b3-03* [*Speed Search Deceleration Time*] = default value $\times 2$
- *L2-03* [*Minimum Baseblock Time*] = default value $\times 2$
- *L2-04* [*Powerloss V/f Recovery Ramp Time*] = default value $\times 2$

◆ Precautions for PM Motors

- Contact Yaskawa or your nearest sales representative to use a non-Yaskawa PM motor.
- You cannot operate a PM motor from a commercial power supply. If you must operate from a commercial power supply, use an induction motor.
- You cannot operate more than one PM motor from one drive. Use an induction motor and a variable-speed control drive.
- In OLV/PM, the motor can operate in the reverse direction for 1/2 turn (electrical angle) at start up.
- The quantity of generated starting torque changes when the control method and motor type change. Verify the starting torque, permitted load characteristics, impact load tolerance, and speed control range before you set up the motor with the drive. Contact Yaskawa or your nearest sales representative to use a motor that does not meet these specifications.
- In OLV/PM control, braking torque is always 125% or less when operating between 20% and 100% speed. A braking resistor unit will not change the value. Braking torque is 50% or less when operating at 20% speed or less.
- When you use a holding brake in OLV/PM control, release the brake before you start the motor. Failure to set the correct timing can cause a decrease in speed. Do not use these configurations in applications with heavy loads, for example conveyors or elevators.
- To restart a coasting motor that is rotating faster than 120 Hz, first use the Short Circuit Braking function to stop the motor. A special braking resistor unit is necessary for Short Circuit Braking. Contact Yaskawa or your nearest sales representative for more information.
To restart a coasting motor that is rotating slower than 120 Hz, use the Speed Search function.
If the motor cable is long, use Short Circuit Braking to stop the motor.

Note:

The Short Circuit Braking function uses the drive to forcefully cause a short across the motor wires to stop the motor before it has time to coast to a stop.

- You can also use EZOLV to operate synchronous reluctance motors (SynRM). Contact Yaskawa or your nearest sales representative for more information.
- If *oC* [*Overcurrent*], *STPo* [*Motor Step-Out Detected*], or *LSo* [*Low Speed Motor Step-Out*] occur during restart, try Speed Search again and use the Short Circuit Braking function when you start to adjust the motor.

◆ Precautions for Specialized Motors

■ Pole Change Motors

The rated current of pole change motors is different than standard motors. Check the maximum current of the motor before you select a drive. Always stop the motor before you switch between the number of motor poles. If you change the number of poles while the motor is rotating, the overvoltage from regeneration or the overcurrent protection circuitry will make the motor coast to stop.

■ Submersible Motors

The rated current of a submersible motor is more than the rated current of a standard motor. Use a sufficiently large motor cable that will not let voltage drop decrease the maximum torque level.

■ Explosion-Proof Motors

You must test the motor and the drive together for explosion-proof certification. You must also test existing installations of explosion-proof motors. The drive is not designed for explosion-proof areas. Install the drive in a safe location.

The encoder used with pressure-resistant explosion-proof motors is intrinsically safe. When wiring between the drive and encoder, always connect through a specialized pulse coupler.

■ Geared Motors

The continuous speed range is different for different lubricating methods and manufacturers. For oil lubrication, continuous operation in the low-speed range can cause burnout. Contact the manufacturer for more information about applications where operating at more than the rated frequency is necessary.

■ Single-Phase Motors

Variable speed drives are not designed to operate with single-phase motors. The drive is for use with three-phase motors only. If you use capacitors to start the motor, it can cause a high frequency current to flow to the capacitors and can damage the capacitors. A split-phase start or a repulsion start can burn out the starter coils because the internal centrifugal switch is not activated.

■ Motors with Brakes

If you use a drive to operate a motor that has a brake connected to the output side, low voltage levels can cause the brake to possibly not release at start. Use a motor with a brake that has a dedicated source of power for the brake. Connect the brake power supply to the power supply side of the drive. Motors with built-in brakes make noise when operating at low speeds.

◆ Notes on the Power Transmission Mechanism

For power transmission machinery that uses oil to lubricate gearboxes, transmissions, or reduction gears, make sure that you use precaution if you operate the machinery continuously at low speed. Oil does not lubricate the system as well at low speeds. If you operate at frequencies higher than the rated frequency, it can cause problems with the power transmission mechanism. These problems include audible noise, decreased service life, and decreased durability.

4.1 Section Safety

DANGER

Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

Do not remove covers or touch circuit boards while the drive is energized.

If you touch the internal components of an energized drive, it will cause death or serious injury from electrical shock.

WARNING

Electrical Shock Hazard

Reattach the covers and safety shields before you operate the drive. Do not operate the drive with covers removed. Use the drive only as specified in this manual.

Some figures in this manual include drives without covers or safety shields to more clearly show the inside of the drive. If you operate the drive without covers and safety shields, it can cause death or serious injury from electrical shock.

4.2 Overview of Keypad Components and Functions

Figure 4.1 Keypad

Table 4.1 Keypad Components and Functions

Symbol	Name	Function
A	USB Terminal Pass-through	Pass-through point to connect a USB cable to the drive to use the DriveWizard PC tool or the DriveWizard Mobile App to program the drive. Uses a USB cable (USB standard 2.0, type A - mini-B) to connect the drive to a PC, Android smartphone, or tablet.
B	RUN Key 	Starts the drive in LOCAL Mode. Starts the operation in Auto-Tuning Mode. Note: Before you use the keypad to operate the motor, push  on the keypad to set the drive to LOCAL Mode.
C	STOP Key 	Stops drive operation. Note: Uses a stop-priority circuit. Push  to stop the motor. This will also apply when a Run command (REMOTE Mode) is active at an external Run command source. To disable  priority, set $o2-02 = 0$ [STOP Key Function Selection = Disabled].
D	LO/RE LED 	Illuminated: The keypad controls the Run command (LOCAL Mode). OFF: The control circuit terminal or serial transmission device controls the Run command (REMOTE Mode). Flashing: The value of U5-92 [Keypad Button Status Monitor] changed. Note: • LOCAL: Use the keypad to operate the drive. Use the keypad to enter Run/Stop commands and the frequency reference command. • REMOTE: Use the control circuit terminal or serial transmission to operate the drive. Use the frequency reference source entered in b1-01 and the Run command source selected in b1-02.
E	ALM/ERR LED 	Illuminated: The drive detects a fault. OFF: There are no drive faults or alarms. Flashing: • Alarm • Operation Errors • An Auto-Tuning error Note: The LED will illuminate to identify a fault if the drive detects a fault and an alarm at the same time.
F	READY LED 	Illuminated: The drive is operating or is ready for operation. OFF: • The drive detects a fault. • There is no fault and the drive received a Run command, but the drive cannot run. For example, in Programming Mode. Flashing: The drive is in <i>Sto</i> [Safe Torque OFF] condition. Flashing quickly: The voltage of the main circuit power supply is not in the drive nameplate specifications, and the external 24 V power supply is providing the only power to the drive.

4.2 Overview of Keypad Components and Functions

Symbol	Name	Function
G	RUN LED 	Illuminated: The drive is in normal operation. OFF: The drive is stopped. Flashing: - The drive is decelerating to stop. - The drive received a Run command with a frequency reference of 0 Hz, but the drive is not set for zero speed control Flashing quickly: - The drive received a Run command from the MFDI terminals while in LOCAL Mode and it switched to REMOTE Mode. - The drive received a Run command from the MFDI terminals when the drive is not in Drive Mode. - The drive received a Fast Stop command. - The safety function shut off the drive output. - You pushed  on the keypad while the drive is operating in REMOTE Mode. - The drive is energized with an active Run command and $b1-17 = 0$ [Run Command at Power Up = Disregard Existing RUN Command].
H	Left Arrow Key 	Moves the cursor to the left.
	Up Arrow Key/Down Arrow Key 	- Moves to a different screen. - Selects parameter numbers and increments or decrements setting values.
	Right Arrow Key (RESET) 	- Moves the cursor to the right. - Resets the drive to clear a fault.
	ENTER Key 	- Enters parameter values and settings. - Selects each mode, parameter, and set value.
I	ESC Key 	- Goes back to the previous screen. - Push and hold to go back to the frequency reference screen (the initial screen).
J	LED Display	Shows parameters, errors, and other data.
K	LO/RE Selection Key 	Switches drive control for the Run command and frequency reference between the keypad (LOCAL) and an external source (REMOTE). Note: - The LOCAL/REMOTE Selection Key continuously stays enabled after the drive stops in Drive Mode. If the application must not switch from REMOTE to LOCAL because it will have a negative effect on system performance, set $o2-01 = 0$ [LO/RE Key Function Selection = Disabled] to disable . - The drive will not switch between LOCAL and REMOTE when it is receiving a Run command from an external source.
L	REV LED 	Illuminated: The drive received a Reverse run command.
M	DWEZ LED 	Illuminated: The drive is In DriveWorksEZ operation.
N	RJ-45 Connector	Connects to the drive. Use an RJ-45 8-pin straight UTP CAT5e extension cable to install the keypad in a different location than the drive.

⚠ WARNING Sudden Movement Hazard

If you change the control source when $b1-07 = 1$ [LOCAL/REMOTE Run Selection = Accept Existing RUN Command], the drive can start suddenly. Before you change the control source, remove all personnel from the area around the drive, motor, and load. Sudden starts can cause serious injury or death.

⚠ WARNING Sudden Movement Hazard

Do not create a host controller program or DriveWorksEZ program that starts/stops the drive based on U5-92 [Keypad Button Status Monitor]. If you do not correctly set the program, it can cause incorrect operation and death or serious injury from sudden movement of the machine.

Drive models GA51Axxxxxxxx-xxxxLx ship from the factory with a blank cover instead of a keypad. To set parameters on these models, reattach the keypad or connect an engineering tool to one of the connection ports shown in Figure 4.2.

Figure 4.2 Blank Cover

Table 4.2 Blank Cover Components and Functions

Letter	Name	Function
A	USB Terminal Pass-through	Pass-through point to connect a USB cable to the drive to use the DriveWizard PC tool or the DriveWizard Mobile App to program the drive. Uses a USB cable (USB standard 2.0, type A - mini-B) to connect the drive to a PC, Android smartphone, or tablet.
B	RJ-45 Connector Pass-through	Connects to the drive. Use an RJ-45 8-pin straight UTP CAT5e extension cable to use the keypad option to program the drive.

◆ Indicator Flashing Statuses

Refer to Figure 4.3 for the difference between “flashing” and “flashing quickly”.

Figure 4.3 About indicator flashing statuses

Figure 4.4 Relation between RUN indicator and Drive Operation

◆ Keypad Mode and Menu Displays

Figure 4.5 Keypad Functions and Display Levels

4.3 Set up the Drive with General-Purpose Setup Mode

Drive parameters are in letter groups from A to U. Setup Mode **SRUP** contains only the most frequently used parameters to help you set up the drive more easily.

Figure 4.6 Parameters in General-Purpose Setup Mode

Table 4.3 shows the parameters available in Setup Mode. To access parameters not shown in the Setup Mode, use the **PAR** menu.

Table 4.3 Parameters in General-Purpose Setup Mode

User Parameter	Parameter	Name

A2-23	E2-11	Motor Rated Power

4.3 Set up the Drive with General-Purpose Setup Mode

User Parameter	Parameter	Name
A2-25	L1-01	Motor Overload (oL1) Protection
A2-26	L3-04	Stall Prevention during Decel

Note:

- When you change *A1-02 [Control Mode Selection]*, the settings of some parameters automatically change.
- This manual also shows parameters that are not in Setup Mode. Use **PAR** to set the parameters not shown in the Setup Mode.
- Display parameters change when the *A1-06 [Application Preset]* setting changes.

4.4 Drive Mode and Programming Mode

The keypad display of this drive has two modes: Drive Mode and Programming Mode.

- **Drive Mode**
Use this mode to operate the drive. These operations are available:
 - Monitor operation statuses (for example, output frequency, output current, and output voltage)
 - Set the parameters that you can change while the drive is operating (for example, *d1-01 to d1-17*). Refer to [Parameter Details on page 467](#) for more information.
- **Programming Mode**
Parameter Setting Mode These operations are available:
 - Examine and set the parameters that are not at default settings (Verify Mode)
 - See and set the basic parameters necessary for the drive operation (Setup Mode)
 - See and set all parameters (Parameter Setting Mode)
 - Automatically set motor parameters (Auto-Tuning Mode)

[Table 4.4](#) gives information about the functions you can access when you push  / .

Note:

Set *b1-08 [Run Command Select in PRG Mode]* to accept or reject the Run command from an external source when in Programming Mode.

- Set *b1-08 = 0 [Disregard RUN while Programming]* to reject the Run command from an external source while in Programming Mode.
- Set *b1-08 = 1 [Accept RUN while Programming]* to accept the Run command from an external source while in Programming Mode.
- Set *b1-08 = 2 [Allow Programming Only at Stop]* to prevent changes from Drive Mode to Programming Mode.

Table 4.4 Overview of the Modes

Mode	LED Display	Description	Description	Ref.
Drive Mode (Operation of the motor and monitoring of operation status)		Frequency reference display	You can set and monitor frequency references. Note: You can change what is shown on the keypad when you energize the drive. Use <i>o1-02 [Monitor Selection at Power-up]</i> to set the items. When <i>A1-02 = 6 [Control Method Selection = AOLV/PM]</i> , the display unit is %. 100% = Maximum Output Frequency	-
		Monitor display	The keypad shows <i>Ux-xx [Monitor]</i> .	-
		Output voltage display	You can monitor the output voltage reference. Set <i>o1-01 [User Monitor Selection]</i> to change the item shown on this screen.	337
		Output current display	You can monitor the output current.	-
		Output frequency display	You can monitor the frequency output from the drive.	-
		Forward/reverse selection	<i>For</i> : Motor rotates in forward direction <i>rev</i> : Motor rotates in reverse direction Note: For applications where the motor must not rotate in reverse direction (for example, for fans and pumps), you can use <i>b1-04 [Reverse Operation Selection]</i> to prevent reverse rotation. How to set reverse operation <i>rev</i> 	-
Programming Mode (Parameter Settings)		Auto-Tuning Mode	The drive automatically calculates and sets the motor parameters.	136 137 139
		Parameter Setting Mode	You can see and set all parameters.	122
		Setup Mode	Shows and sets basic parameters necessary for drive operation. Note: The parameters shown in the Setup Mode are different for different <i>A1-06 [Application Preset]</i> settings.	121 135
		Verify Menu	Lists all parameters that are not at their default settings.	122

◆ Drive Mode

These operations are available in Drive Mode:

- Operate and stop the drive
- Show the drive status monitors (for example, frequency reference, output frequency, output current, and output voltage)
- Show the alarm content
- Show the alarm history

Note:

To operate the drive, select Drive Mode. You can switch to other modes when the drive stops, but the drive must be in Drive Mode to start operation.

These steps show how to set the frequency reference source to LOCAL (keypad) and change the frequency reference from 0 Hz to 6 Hz.

Figure 4.7 Frequency Reference Setting in Drive Mode

Note:

To prevent an incorrect setting, after you enter the frequency reference, you must push the ENTER key to change the frequency reference. Set o2-05 = 1 [Home Mode Freq Ref Entry Mode = Immediate / MOP-style] to change the frequency reference value without pushing the ENTER key.

◆ Programming Mode

In Programming Mode, you can set parameters or do Auto-Tuning. This mode has 4 sub-modes for different programming requirements:

- Verify Menu: Use this mode to examine and set the parameters that are not at default settings.
- Setup Mode: Use this mode to see and set the minimum parameters necessary for drive operation. Refer to [Verify and Set the Changed Parameters \(Verify Menu\) on page 122](#) for more information.
- Parameter Setting Mode: Use this mode to see and set all parameters.
- Auto-Tuning Mode: Use this mode to automatically set the motor parameters necessary for each control method.

■ Setup Mode

In Setup Mode, you can see and set the minimum parameters necessary for drive operation. Refer to [Figure 4.8](#) for an example.

Note:

1. Refer to [Set up the Drive with General-Purpose Setup Mode on page 117](#) and [Automatic Parameter Settings Optimized for Specific Applications \(Application Presets\) on page 135](#) for more information about Setup mode parameters.
2. Push **APPL** and **J** to continue to the application selection screen. When you change the setting, it will optimize the parameter for the application. The default setting is 0 [General-purpose].
3. To go back to the initial screen, push **ESC**. To change another parameter in Setup Mode, push **^** or **v**.

Change b1-01 [Frequency Reference Selection 1] from 1 [Analog Input] to 0 [Keypad].

Figure 4.8 Key operation examples in Setup Mode

◆ Change Parameter Settings

Show the frequency reference screen in advance.

Note:

Push and hold **ESC** to go back to the frequency reference screen from any screen.

Use these steps to change *C1-01 [Acceleration Time 1]* from 1.0 s (default) to 2.0 s.

Figure 4.9 Key Operation Examples for Parameter Settings

◆ Verify and Set the Changed Parameters (Verify Menu)

Show the frequency reference screen.

Note:

Push and hold **ESC** to return to frequency reference screen from any screen.

Use Verify mode to view all parameters that are not at default settings. This is very useful when you replace a drive.

When there are no changes to parameter settings, the display shows *n0nE*. This lets you quickly access and re-edit changed parameters. Figure 4.10 shows the procedure.

Note:

The drive will only display *A1-02 [Control Method Selection]*, *A1-xx, A2-01 to A2-32 [User Parameter 1 to User Parameter 32]*, and *E5-01 [PM Motor Code Selection]*.

Figure 4.10 Verify and Set the Changed Parameters

◆ How to Switch between LOCAL and REMOTE

LOCAL mode lets you use the keypad to input Run commands. REMOTE mode lets you use other sources than the keypad to input Run commands.

⚠ WARNING Sudden Movement Hazard

If you change the control source when *b1-07 = 1 [LOCAL/REMOTE Run Selection = Accept Existing RUN Command]*, the drive can start suddenly. Before you change the control source, remove all personnel from the area around the drive, motor, and load. Sudden starts can cause serious injury or death.

You can use  or MFDI functions (LOCAL/REMOTE Selection) to switch between LOCAL and REMOTE.

Note:

1.  illuminates while the drive is in LOCAL Mode.
2. While you are entering a Run command, you cannot switch between LOCAL and REMOTE.

■ Use the LO/RE Selection Key on the Keypad to Switch between LOCAL and REMOTE

Each time you push , the mode switches between LOCAL and REMOTE. The LED illuminates in LOCAL Mode.

Figure 4.11 Use the LO/RE Selection Key to Switch between LOCAL and REMOTE

■ Use MFDI Terminals (S1, S2, DI3 to DI7) to Switch between LOCAL and REMOTE

When you set $H1-xx = 1$ [*MFDI Function Selection = LOCAL/REMOTE Selection*], you can activate/deactivate the terminal to switch between LOCAL and REMOTE. Set $H1-xx = 1$ to disable the LO/RE key on the keypad. For information about the MFDI functions, refer to the list in [H1: Digital Inputs on page 597](#).

4.5 Start-up Procedures

This section gives the basic steps necessary to start up the drive.

Use the flowcharts in this section to find the most applicable start-up method for your application.

This section gives information about only the most basic settings.

Note:

Refer to the *A1-06* section to use an Application Preset to set up the drive.

◆ Flowchart A: Connect and Run the Motor with Minimal Setting Changes

Flowchart A shows a basic start-up sequence to connect and run a motor with a minimum of setting changes. Settings can change when the application changes.

Use the drive default parameter settings for basic applications where high precision is not necessary.

Figure 4.12 Basic Steps before Startup

◆ Sub-Chart A-1: Induction Motor Auto-Tuning and Test Run Procedure

Figure 4.13 Induction Motor Auto-Tuning and Test Run Procedure

◆ Sub-Chart A-2: PM Motor Auto-Tuning and Test Run Procedure

Sub-Chart A-2 gives the basic steps to start up the drive for a PM motor.

⚠ WARNING Sudden Movement Hazard

After you wire the drive and set parameters, test the system to make sure that the drive operates safely.

If you use the system without test run, sudden movement of the machine can cause death or serious injury.

Figure 4.14 PM Motor Auto-Tuning and Test Run Procedure

*1 For Yaskawa PM motors (SMRD, SMRA-series, or SSR1-series), set *E5-01 (Motor Code)*. For PM motors from a different manufacturer, set *E5-01 = FFFF*.

◆ Sub-Chart A-3: EZ Open Loop Vector Control Test Run Procedure

Sub-Chart A-3 gives the setup procedure to run a PM motor in EZ Open Loop Vector Control.

Figure 4.15 Procedure for Test Run of EZ Open Loop Vector Control Method

4.6 Items to Check before Starting Up the Drive

◆ Check before You Energize the Drive

Check the items in [Table 4.5](#) before you energize the drive.

Table 4.5 Items to Check before You Energize the Drive

Items to Check	Description
Input Power Supply Voltage	The voltage of the input power supply must be: Single-phase 200 V class: single-phase 200 Vac to 240 Vac 50/60 Hz, 270 Vdc to 340 Vdc Three-phase 200 V class: three-phase 200 Vac to 240 Vac 50/60 Hz, 270 Vdc to 340 Vdc Three-phase 400 V class: three-phase 380 Vac to 480 Vac 50/60 Hz, 513 Vdc to 679 Vdc
	Correctly wire power supply input terminals R/L1, S/L2, and T/L3, or L and N.
	Correctly ground the drive and motor.
Connection between Drive Output Terminals and Motor Terminals	Make sure that you connected drive output terminals U/T1, V/T2, and W/T3 in the correct sequence to align with motor terminals U, V, and W and tighten the screws to a correct tightening torque.
Control Circuit Terminal Wiring	Make sure that you connected the drive control circuit terminals in the correct sequence to align with devices and switches and tighten the screws to a correct tightening torque.
Control Circuit Terminal Status	Turn OFF the inputs from all devices and switches connected to the drive control circuit terminals.
Connection between Machinery and Motor	Disengage all couplings and belts that connect the motor and machinery.

◆ Check after You Energize the Drive

Check the items in [Table 4.6](#) after you energize the drive. The keypad display is different depending on drive status.

Table 4.6 Display Status after You Energize the Drive

Status	Display	Description
During Usual Operation		The LED display shows the frequency reference.
When the Drive Detects a Fault		The display is different for different faults. Refer to "Troubleshooting" to remove the cause of the fault. The ALM/ERR LED will illuminate.

4.7 Keypad Operation

Note:

Make sure that you use a keypad that has a flash number of 1004 or later. Keypads that have a flash number of 1003 or earlier will not show characters correctly.

◆ Digital character mapping table

The LED keypad shows the digital characters as shown in [Table 4.7](#)

Table 4.7 Digital character mapping table

Characters	LED Display	Characters	LED Display	Characters	LED Display	Characters	LED Display
0	0	9	9	I	i	R	r
1	1	A	A	J	j	S	s
2	2	B	b	K	k	T	t
3	3	C	c	L	l	U	u
4	4	D	d	M	m*1	V	v
5	5	E	e	N	n	W	w*1
6	6	F	f	O	o	X	No indication
7	7	G	g	P	p	Y	y
8	8	H	h	Q	q	Z	No indication

*1 Shown across two digits.

◆ Show the Monitor

Show the frequency reference screen.

Note:

Push and hold **ESC** to return to frequency reference screen from any screen.

Use these steps to monitor parameter settings.

Figure 4.16 How to Monitor the Parameter Setting Values

◆ Check Modified Parameters

Show the frequency reference screen.

Note:

Push and hold **ESC** to return to frequency reference screen from any screen.

Use Verify mode to view all parameters that are not at default settings. This is very useful when you replace a drive. This lets you quickly access and re-edit changed parameters.

Note:

The drive will only display *A1-02 [Control Method Selection]*, *A1-xx*, *A2-01 to A2-32 [User Parameter 1 to User Parameter 32]*, and *E5-01 [PM Motor Code Selection]*.

Figure 4.17 How to Examine the Changed Parameters

◆ Set and View Necessary Parameters

Show the frequency reference screen.

Note:

Push and hold **ESC** to return to frequency reference screen from any screen.

The setup mode shows the parameters set in *A2-01 to A2-32 [User Parameter 1 to User Parameter 32]*. This lets you quickly access and change these parameters.

Note:

Setup mode always shows **APPL** (*A1-06 [Application Preset]*) at the top of the list. When you change the setting, the settings for *A2-01 to A2-32* change.

Figure 4.18 View and Set the Necessary Parameters

Continue to change the parameters or press and hold **ESC** to go back to the frequency reference screen.

◆ Change Parameter Settings

Show the frequency reference screen in advance.

Note:

Push and hold **ESC** to go back to the frequency reference screen from any screen.

This example shows how to change *C1-01 [Acceleration Time 1]*. Set the parameter to the necessary value.

Figure 4.19 How to Change the Parameter Setting

Continue to change parameters or push and hold **ESC** to go back to the frequency reference screen.

◆ Save a Backup of Parameters

Show the frequency reference screen.

Note:

Push and hold **ESC** to return to the frequency reference screen from any screen.

Use these steps to save a backup of the drive parameters to the keypad.

Backups of the parameter settings can save time when you set parameters after you replace a drive. When you set up more than one drive, you can copy the parameter settings from a drive that completed a test run to the other drives.

Note:

- Stop the motor before you back up parameters.
- While the drive makes a backup, it will not accept Run commands.
- Set *o3-02* = 0 [*Copy Allowed Selection = Disabled*] to protect the parameters saved in the keypad.

Figure 4.20 How to Save Backed-up Parameters

Push and hold **ESC** to go back to the frequency reference screen.

◆ Write Backed-up Parameters to the Drive

Show the frequency reference screen in advance.

Note:

Push and hold **ESC** to go back to the frequency reference screen from any screen.

Use these steps to write the parameters backed up in the keypad into a different drive.

Note:

- Make sure that you stop the drive before you restore the backed-up parameters.
- The drive does not accept Run commands while it is restoring parameters.

Figure 4.21 Writing backed up parameters

Push and hold **ESC** to go back to the frequency reference screen.

◆ Verify Keypad Parameters and Drive Parameters

Show the frequency reference screen in advance.

Note:

Push and hold **ESC** to go back to the frequency reference screen from any screen.

This procedure verifies that the parameter setting values that were backed up in the keypad agree with the parameter setting values in the drive.

Note:

- Make sure that you stop the drive before you examine parameters.
- The drive does not accept Run commands while it is restoring parameters.

Figure 4.22 Verify Keypad Parameters and Drive Parameters

Push and hold **ESC** to go back to the frequency reference screen.

◆ Delete Parameters Backed Up to the Keypad

Show the frequency reference screen in advance.

Note:

Push and hold **ESC** to go back to the frequency reference screen from any screen.

Use these steps to erase the parameters backed up in the keypad.

Figure 4.23 How to Erase the Backed-up Parameters

Push and hold **ESC** to go back to the frequency reference screen.

4.8 Automatic Parameter Settings Optimized for Specific Applications (Application Presets)

Show the frequency reference screen.

Note:

Press and hold **ESC** to return to the frequency reference screen from any screen.

Use this procedure to set an application preset.

The drive has application presets to set the necessary parameters for different applications to their best values. Use **urF4** to find parameters that were changed automatically by the application preset function in *A1-06*.

Note:

Before you set *A1-06*, make sure that you set *A1-03* = 2220 [*Initialize Parameters* = 2-Wire Initialization] to initialize parameters.

Figure 4.24 Automatic Parameter Settings

Press and hold **ESC** to go back to the frequency reference screen.

Note:

- You cannot directly set parameter *A1-06*. To set an application preset, first set *A1-03* = 2220 to initialize parameters, then set this parameter. If initializing all parameters will cause a problem, do not change the settings.
- When the drive applies the *A1-06* setting, it will also reset the parameters automatically registered to *A2-17* to *A2-32* [*User Parameters 17 to 32*] when *A2-33* = 1 [*User Parameter Auto Selection* = Enabled: Auto Save Recent Params].

4.9 Auto-Tuning

Auto-Tuning uses motor characteristics to automatically set drive parameters for vector control. Think about the type of motor, drive control method, and the motor installation environment and select the best Auto-Tuning method.

⚠ WARNING Injury to Personnel

Rotational Auto-Tuning rotates the motor at 50% or more of the motor rated frequency. Make sure that there are no issues related to safety in the area around the drive and motor. Increased motor frequency can cause serious injury or death.

◆ Auto-Tuning for Induction Motors

This section gives information about Auto-Tuning for induction motors. Set motor parameters *E1-xx* and *E2-xx* (or, for motor 2, *E3-xx* and *E4-xx*) for Auto-Tuning.

Note:

Do Stationary Auto-Tuning if you cannot do Rotational Auto-Tuning. There can be large differences between the measured results and the motor characteristics when Auto-Tuning is complete. Examine the parameters for the measured motor characteristics after you do Stationary Auto-Tuning.

Table 4.8 Auto-Tuning Mode Selection

Method	Parameter Settings	Application Conditions and Benefits	Applicable Control Method (A1-02 Setting)	
			V/f (0)	OLV (2)
Rotational Auto-Tuning	T1-01 = 0	- When you can decouple the motor and load the motor can rotate freely while Auto-Tuning. - When operating motors that have fixed output characteristics. - When it is necessary to use motors that have high-precision control. - When you cannot decouple the motor and load, but the motor load is less than 30%.	x	x
Stationary Auto-Tuning 1	T1-01 = 1	- When you cannot decouple the motor and load. - When the motor load is more than 30%. - When the information from the motor test report or motor nameplate is not available. With Stationary Auto-Tuning, the energized drive stays stopped for approximately 1 minute. During this time, the drive automatically measures the necessary motor parameters. - When you operate the motor with less than 30% load after Auto-Tuning. Set <i>T1-12</i> = 1 [Test Mode Selection = Yes] to do a test run after Auto-Tuning.	-	x
Stationary Line-Line Resistance	T1-01 = 2	- After Auto-Tuning, the wiring distance between the drive and motor changed by 50 m or more. - When the wiring distance is 50 m or more in the V/f Control mode. - When the motor output and drive capacity are different.	x	x

■ Input Data for Induction Motor Auto-Tuning

To do Auto-Tuning, input data for the items in [Table 4.9](#) that have an "x". Before you start Auto-Tuning, prepare the motor test report or record the information from the motor nameplate as a reference.

Table 4.9 Input Data for Induction Motor Auto-Tuning

Input Data	Parameter	Unit	Auto-Tuning Mode (T1-01 Setting)		
			Rotational Auto-Tuning (0)	Stationary Auto-Tuning 1 (1)	Stationary Line-Line Resistance (2)
Motor Rated Power	T1-02	HP	x	x	x
Motor Rated Voltage	T1-03	V	x	x	-
Motor Rated Current	T1-04	A	x	x	x
Motor Base Frequency	T1-05	Hz	x	x	-

Input Data	Parameter	Unit	Auto-Tuning Mode (T1-01 Setting)		
			Rotational Auto-Tuning (0)	Stationary Auto-Tuning 1 (1)	Stationary Line-Line Resistance (2)
Number of Motor Poles	T1-06	-	x	x	-
Motor Base Speed	T1-07	min ⁻¹	x	x	-
Motor No-Load Current	T1-09	A	-	x	-
Motor Rated Slip Frequency	T1-10	Hz	-	x ^{*1}	-
Motor Iron Loss	T1-11	W	x ^{*2}	-	-
Test Mode Selection ^{*3}	T1-12	-	-	x ^{*4}	-
No-Load Voltage	T1-13	V	x ^{*5}	x ^{*5}	-

*1 Shows 0 Hz as the default value. If you do not know the Motor Rated Slip Frequency, keep the setting at 0 Hz.

*2 Input this value when $A1-02 = 0$ [Control Method Selection = V/f].

*3 If $T1-12 = 1$ [Test Mode Selection = Yes], when you run the motor in Drive Mode for the first time after Auto-Tuning, the drive will automatically set $E2-02$ [Motor Rated Slip] and $E2-03$ [Motor No-Load Current].

*4 Input this value when $T1-10$ [Motor Rated Slip Frequency] = 0 Hz.

*5 Set the same value to No-Load Voltage as $T1-03$ [Motor Rated Voltage] to get the same characteristics using Yaskawa 1000-Series drives or other legacy models.

◆ Auto-Tuning for PM Motors

This section gives information about Auto-Tuning for PM motors. Auto-Tuning sets motor parameters $E1-xx$ and $E5-xx$.

Table 4.10 Auto-Tuning for PM Motors

Mode	Parameter Settings	Application Conditions and Benefits	Applicable Control Method (A1-02 Setting)	
			OLV/PM (5)	AOLV/PM (6)
Manual Entry w/ Motor Data Sheet	T2-01 = 0	- When the information from the motor test report or motor nameplate is available. - Rotational/Stationary Auto-Tuning that energizes the motor is not done. Manually input the necessary motor parameters.	x	x
PM Stationary Auto-Tuning	T2-01 = 1	When the information from the motor test report or motor nameplate is not available. Note: With Stationary Auto-Tuning, the energized drive stays stopped for approximately 1 minute. During this time, the drive automatically measures the necessary motor parameters.	x	x
PM Stationary Auto-Tuning for Stator Resistance	T2-01 = 2	- After Auto-Tuning, the wiring distance between the drive and motor changed by 50 m (164 ft) or more. - When the motor output and drive capacity are different.	x	x
Rotational (Ld, Lq, R, back-EMF)	T2-01 = 4	- When the information from the motor test report or motor nameplate is not available. - When you can decouple the motor and load and the motor can rotate freely while Auto-Tuning. - Values measured during Auto-Tuning are automatically set to the motor parameters.	x	x
High Frequency Injection	T2-01 = 5	- Automatically sets the control parameters that are necessary to set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] or $n8-57 = 1$ [HFI Overlap Selection = Enabled]. - Applicable to IPM motors only. - Do Auto-Tuning with the motor connected to the drive. Note: When you set $n8-35 = 1$ or $n8-57 = 1$, do High Frequency Injection Auto-Tuning. Set the data on the motor nameplate to the drive before you do High Frequency Injection Auto-Tuning. In High Frequency Injection Auto-Tuning, the drive energizes the stopped motor and automatically adjusts the parameters.	x	x

■ Input Data for PM Motor Auto-Tuning

To do Auto-Tuning, input data for the items in [Table 4.11](#) and [Table 4.12](#) that have an "x". Before you start Auto-Tuning, prepare the motor test report or record the information from the motor nameplate as a reference.

Table 4.11 Input Data for PM Motor Auto-Tuning

Input Data	Parameter	Unit	Auto-Tuning Mode (T2-01 Setting)					
			Manual Entry w/ Motor Data Sheet (0)			PM Stationary Auto-Tuning (1)		PM Stationary Auto- Tuning for Stator Resistance (2)
Control Method Selection	A1-02	-	5, 6	5	6	5	6	5, 6
PM Motor Code Selection	T2-02	-	Motor code of Yaskawa motor ^{*1}	FFFF ^{*2}	FFFF ^{*2}	-	-	-
PM Motor Type	T2-03	-	-	-	-	x	x	-
PM Motor Rated Power	T2-04	kW	-	x	x	x	x	-
PM Motor Rated Voltage	T2-05	V	-	x	x	x	x	-
PM Motor Rated Current	T2-06	A	-	x	x	x	x	x
PM Motor Base Frequency	T2-07	Hz	-	x	-	x	-	-
Number of PM Motor Poles	T2-08	-	-	x	x	x	x	-
PM Motor Base Speed	T2-09	min ⁻¹	-	-	x	-	x	-
PM Motor Stator Resistance	T2-10	Ω	x	x	x	-	-	-
PM Motor d-Axis Inductance	T2-11	mH	x	x	x	-	-	-
PM Motor q-Axis Inductance	T2-12	mH	x	x	x	-	-	-
Back-EMF Units Selection	T2-13	-	x	x	x	-	-	-
Back-EMF Voltage Constant (K _e)	T2-14	^{*3}	x	x	x	-	-	-
Pull-In Current Level	T2-15	%	-	-	-	x	x	-

*1 Set the motor code for a Yaskawa PM motor.

*2 Set the motor code to FFFF for a PM motor from a different manufacturer.

*3 Changes when the value set in T2-13 changes.

Table 4.12 Input Data for PM Motor Auto-Tuning

Input Data	Parameter	Unit	Auto-Tuning Mode (T2-01 Setting)		
			Rotational (Ld, Lq, R, back-EMF) (4)		High Frequency Injection (5)
Control Method Selection	A1-02	-	5	6	5, 6
PM Motor Code Selection	T2-02	-	-	-	-
PM Motor Type	T2-03	-	x	x	-
PM Motor Rated Power	T2-04	kW	x	x	-
PM Motor Rated Voltage	T2-05	V	x	x	-
PM Motor Rated Current	T2-06	A	x	x	-
PM Motor Base Frequency	T2-07	Hz	x	-	-
Number of PM Motor Poles	T2-08	-	x	x	-
PM Motor Base Speed	T2-09	min ⁻¹	-	x	-
Pull-In Current Level	T2-15	%	x	x	-

◆ Auto-Tuning in EZ Open Loop Vector Control Method

This section gives information about the Auto-Tuning mode for EZ Open Loop Vector Control. Auto-Tuning will set the *E9-xx* parameters.

Table 4.13 EZ Tuning Mode Selection

Mode	Parameter Settings	Application Conditions and Benefits	Applicable Control Method (A1-02 Setting)
Motor Parameter Setting	T4-01 = 0	- Applicable when driving an induction motor or a PM motor - Suitable for derating torque applications, for example fans and pumps.	EZOLV (8)
Line-to-Line Resistance	T4-01 = 1	- After Auto-Tuning, the wiring distance between the drive and motor changed by 50 m or more. - When the motor output and drive capacity are different.	EZOLV (8)

■ Auto-Tuning Input Data in EZ Open Loop Vector Control Method

To do Auto-Tuning, input data for the items in [Table 4.14](#) that have an "x". Before you start Auto-Tuning, prepare the motor test report or record the information from the motor nameplate as a reference.

Table 4.14 Auto-Tuning Input Data in EZ Open Loop Vector Control Method

Input Data	Parameter	Unit	Auto-Tuning Mode (T4-01 Setting)	
			Motor Parameter Setting (0)	Line-to-Line Resistance (1)
Motor Type Selection	T4-02	-	x	-
Motor Max Revolutions	T4-03	min ⁻¹	x	-
Motor Rated Revolutions	T4-04	min ⁻¹	x	-
Motor Rated Frequency	T4-05	Hz	x	-
Motor Rated Voltage	T4-06	V	x	-
Motor Rated Current (FLA)	T4-07	A	x	x
PM Motor Rated Power (kW)	T4-08	kW	x	x
Number of Motor Poles	T4-09	-	x	-

◆ ASR and Inertia Tuning

To increase drive responsiveness and prevent hunting, use Auto-Tuning to automatically adjust the control-related parameters.

These types of Auto-Tuning are available for the control system:

- Deceleration Rate Tuning
- KEB Tuning

Note:

If you do Control Tuning, you cannot set *H1-xx* = 16 [Motor 2 Selection]. Do not do Control Tuning for applications that switch between motor 1 and motor 2.

Table 4.15 Control Loop Tuning Selection

Mode	Parameter Settings	Application Conditions and Benefits	Applicable Control Methods (A1-02 Settings)				
			V/f (0)	OLV (2)	OLV/PM (5)	AOLV/PM (6)	EZOLV (8)
Deceleration Rate Tuning	T3-00 = 2	To automatically adjust the deceleration rate to prevent an <i>ov</i> [Overvoltage] fault.	x	x	x	x	x
KEB Tuning	T3-00 = 3	- To automatically adjust parameter settings to prevent an <i>ov</i> [Overvoltage] fault with the KEB Ride-Thru function. - When <i>L3-11</i> = 1 [Overvoltage Suppression Select = Enabled].	x	x	x	x	x

■ Deceleration Rate Tuning

Deceleration Rate Tuning automatically sets the deceleration rate to prevent an *ov* [Overvoltage] fault during motor deceleration. Set *C1-11* [Accel/Decel Time Switchover Freq] first to automatically set parameters *C1-02* [Deceleration Time 1] (high speed range) and *C1-08* [Deceleration Time 4] (low speed range).

■ KEB Tuning

KEB Tuning automatically sets parameters used for the KEB Ride-Thru function and for the overvoltage suppression function.

Control Tuning automatically sets the parameters in [Table 4.16](#) to the best values.

Table 4.16 Parameters set in Control Tuning

Parameters Automatically Set	Deceleration Rate Tuning	KEB Tuning
C1-02 [Deceleration Time 1]	x	-
C1-08 [Deceleration Time 4]	x ^{*1}	-
C1-09 [Fast Stop Time]	-	x ^{*2}
L2-06 [Kinetic Energy Backup Decel Time]	-	x ^{*3}
L3-25 [Load Inertia Ratio]	-	x

*1 The drive automatically sets *C1-08* [Deceleration Time 4] only when *C1-11* [Accel/Decel Time Switchover Freq] $\neq 0$.

*2 When *L2-29* = 0 [Kinetic Energy Backup Method = Single Drive KEB Ride-Thru 1], the drive will automatically adjust *C1-09* [Fast Stop Time] and will not adjust *L2-06* [Kinetic Energy Backup Decel Time]. If you must not change the Fast Stop time, do not do KEB Tuning.

*3 When *L2-29* = 1, 2, or 3 [Kinetic Energy Backup Method = Single Drive KEB Ride-Thru 2, System KEB Ride-Thru 1, or System KEB Ride-Thru 2], the drive will automatically adjust *L2-06* [Kinetic Energy Backup Decel Time].

◆ Precautions before Auto-Tuning

Examine the topics in this section before you start Auto-Tuning.

■ Prepare for Basic Auto-Tuning

- You must input data from the motor nameplate or motor test report to do Auto-Tuning. Make sure that this data is available before you do Auto-Tuning.
- For best performance, make sure that the drive input supply voltage is equal to or more than the motor rated voltage.

Note:

Better performance is possible when you use a motor with a rated voltage that is less than the input supply voltage (by 20 V for 200 V class models or by 40 V for 400 V class models). This is very important when you operate the motor at more than 90% of base speed, where high torque precision is necessary. If the input power supply is equal to the motor rated voltage, the drive output voltage will not be sufficient and performance will decrease.

- Push  on the keypad to cancel Auto-Tuning.
- If a Safe Disable input signal is input to the drive during Auto-Tuning, Auto-Tuning measurements will not complete successfully. If this occurs, cancel the Auto-Tuning, then do it again.
- [Table 4.17](#) shows the status of multi-function input/output terminals during Auto-Tuning.

Table 4.17 Status of Input/Output Terminals during Auto-Tuning

Auto-Tuning Type	Mode		Parameter	Multi-Function Input	Multi-Function Output ^{*1}
Induction Motor Auto-Tuning	Rotational	Rotational Auto-Tuning	T1-01 = 0	Disabled	Functions the same as during usual operation.
	Stationary	Stationary Auto-Tuning 1	T1-01 = 1	Disabled	Keeps the status at the start of Auto-Tuning.
		Line-to-Line Resistance	T1-01 = 2	Disabled	Keeps the status at the start of Auto-Tuning.
PM Motor Auto-Tuning	Rotational	PM Rotational Auto-tuning	T2-01 = 4	Disabled	Functions the same as during usual operation.
	Stationary	PM Motor Parameter Settings	T2-01 = 0	Disabled	Keeps the status at the start of Auto-Tuning.
		PM Stationary Auto-Tuning	T2-01 = 1	Disabled	Keeps the status at the start of Auto-Tuning.
		PM Stationary Auto-Tuning for Stator Resistance	T2-01 = 2	Disabled	Keeps the status at the start of Auto-Tuning.
		High Frequency Injection	T2-01 = 5	Disabled	Keeps the status at the start of Auto-Tuning.
EZ Tuning	Stationary	Motor Parameter Setting	T4-01 = 0	Disabled	Keeps the status at the start of Auto-Tuning.
		Line-to-Line Resistance	T4-01 = 1	Disabled	Keeps the status at the start of Auto-Tuning.
ASR and Inertia Tuning	Rotational	Deceleration Rate Tuning	T3-00 = 2	Disabled	Functions the same as during usual operation.
		KEB Tuning	T3-00 = 3	Disabled	Functions the same as during usual operation.

*1 When you set a terminal to H2-xx = E [MFDO Function Selection = Fault], it will function the same as during usual operation.

⚠ WARNING Electrical Shock Hazard

During Auto-Tuning, the motor will receive high voltage when the motor is stopped. Do not touch the motor until Auto-Tuning is complete.
If you touch a motor that is energized, it can cause serious injury or death.

⚠ WARNING Sudden Movement Hazard

Before you do Rotational Auto-Tuning, disconnect the load from the motor.
The load can move suddenly and cause serious injury or death.

⚠ WARNING Crush Hazard

Wire a sequence that will not let a multi-function output terminal open the holding brake during Stationary Auto-Tuning.
If the holding brake is open during Stationary Auto-Tuning, it can cause serious injury or death.

⚠ WARNING Injury to Personnel

Rotational Auto-Tuning rotates the motor at 50% or more of the motor rated frequency. Make sure that there are no issues related to safety in the area around the drive and motor.
Increased motor frequency can cause serious injury or death.

■ Precautions before Rotational Auto-Tuning

⚠ WARNING Electrical Shock Hazard

During Auto-Tuning, the motor will receive high voltage when the motor is stopped. Do not touch the motor until Auto-Tuning is complete.
If you touch a motor that is energized, it can cause serious injury or death.

- Before you do Rotational Auto-Tuning to prevent drive malfunction, uncouple the motor from the load. If you do Rotational Auto-Tuning with the motor connected to a load that is more than 30% of the motor duty rating, the drive will not correctly calculate the motor parameters and the motor can operate incorrectly.
- When the load is 30% or less of the motor duty rating, you can do Auto-Tuning with the motor connected to a load.

- Make sure that the motor magnetic brake is released.
- Make sure that external force from the machine will not cause the motor to rotate.

■ Precautions before Stationary Auto-Tuning

- Make sure that the motor magnetic brake is not open.
- Make sure that external force from the machine will not cause the motor to rotate.

⚠ WARNING Electrical Shock Hazard

During Auto-Tuning, the motor will receive high voltage when the motor is stopped. Do not touch the motor until Auto-Tuning is complete.

If you touch a motor that is energized, it can cause serious injury or death.

■ Automatically Set E2-02 [Motor Rated Slip] and E2-03 [Motor No-Load Current]

If $T1-12 = 1$ [Test Mode Selection = Yes] when selecting Stationary Auto-Tuning, the drive will automatically set motor parameters *E2-02 [Motor Rated Slip]* and *E2-03 [Motor No-Load Current]* after Auto-Tuning is complete when you use the motor for the first time in Drive Mode.

After Stationary Auto-Tuning is complete, use this procedure to do the operation in test mode:

1. Check the *E2-02* and *E2-03* values on the “Modified Parameters/Fault Log” screen or the “Parameters” screen.
2. Operate the motor in Drive Mode with these conditions:
 - Make sure that you connect all wiring between the drive and motor
 - Make sure that a mechanical brake on the motor shaft is not locked
 - The maximum motor load must be 30% of the rated load.
 - Keep a constant speed of 30% of *E1-06 [Base Frequency]* (default value = maximum frequency) or more for 1 second or longer.
3. After the motor stops, examine the values of *E2-02* and *E2-03* again in the Verify Menu or Parameter Setting Mode.
4. Make sure that the input data is correct.
When the settings in *E2-02* and *E2-03* are different than in step 1, the drive set the values automatically.

■ Precautions before Stationary Auto-Tuning for Line-to-Line Resistance and Stator Resistance Auto-Tuning

In V/f control, when the motor cable is 50 meters (164 feet) or longer, do Stationary Auto-Tuning for Line-to-Line Resistance.

⚠ WARNING Electrical Shock Hazard

During Auto-Tuning, the motor will receive high voltage when the motor is stopped. Do not touch the motor until Auto-Tuning is complete.

If you touch a motor that is energized, it can cause serious injury or death.

■ Precautions before Using Deceleration Rate Tuning and KEB Tuning

Before Deceleration Rate Tuning or KEB Tuning, check these items:

Note:

- Do not do Deceleration Rate Tuning if you use a braking resistor unit or a regenerative converter.
- Do Deceleration Rate Tuning and KEB Tuning with the load attached to the motor.
- Do not do Deceleration Rate Tuning or KEB Tuning for these applications:
In Deceleration Rate Tuning and KEB Tuning, the drive will automatically rotate the motor forward and accelerate and decelerate the motor again and again.
 - On a machine that does not let the motor rotate forward
 - In applications with a small range of operation (trolleys and other such applications that can only move linearly)
 - Applications where sudden acceleration and sudden deceleration are not applicable.
- To do KEB Tuning with the external main circuit capacitors connected to the drive, set *L3-26 [Additional DC Bus Capacitors]* then do KEB Tuning.
- Do not do KEB Tuning or Deceleration Rate Tuning if the drive is set to use *H1-xx = 16 [MF DI Function Select = Motor 2 Selection]*. Failure to obey can cause an *ov [Overvoltage]* fault.

4.10 Test Run

After you set the basic parameters and do Auto-Tuning, do a test run.

⚠ WARNING Sudden Movement Hazard

After you wire the drive and set parameters, test the system to make sure that the drive operates safely.

If you use the system without test run, sudden movement of the machine can cause death or serious injury.

◆ No-Load Test Run

Before connecting the motor to the machine, make sure that you check the operation status of the motor.

■ Precautions before Operation

Before rotating the motor, check these items:

- Check for safety issues near the drive, motor, and machine.
- Make sure that all emergency stop circuits and machine safety mechanisms are operating correctly.

■ Items to Check before Operation

Check these items before operation:

- Is the motor rotating in the forward direction?
- Is the motor rotating smoothly (no unusual sounds or unusual vibrations)?
- Does the motor accelerate/decelerate smoothly?

◆ Do a No-Load Test Run

Do these steps for a no-load test run:

1. Energize the drive, or push **ESC** to show the frequency reference screen.
2. Push **LO/RE** to illuminate the LOCAL/REMOTE LED.
3. Use **▲** / **▼** / **◀** / **▶** to set $d1-01 = 6.00$ [Frequency Reference 1 = 6.00 Hz], then push **↵**.
4. Push **▶RUN**.
The RUN indicator illuminates, and the motor runs at 6.00 Hz in the forward direction.
5. Make sure that the motor is rotating in the correct direction and that the drive does not show a fault.
If the drive detects a fault, remove the cause.

A - Forward Rotation of Motor (Counter Clockwise Direction as Seen from Load Shaft)

6. Push **▲** to increase the frequency reference value.
Change the setting value in increments of 10 Hz if necessary and examine the response.
Ex.: 6 Hz → 20 Hz → 30 Hz → 40 Hz → 50 Hz → 60 Hz
7. Each time you increase the setting value, use $U1-03$ [Output Current] to check the drive output current.
When the output current of the drive is not more than the motor rated current, the status is correct.
8. Make sure that the motor rotates correctly, then push **◻STOP**.
The RUN LED flashes and goes off when the motor stops completely.

◆ Actual-Load Test Run

Test the operation without a load, then connect the motor and machine to do a test run.

■ Precautions before Operation

Before rotating the motor, check these items:

- Check for safety issues near the drive, motor, and machine.
- Make sure that all emergency stop circuits and machine safety mechanisms are operating correctly.
- Make sure that the motor is fully stopped.
- Connect the motor with the machine.
Make sure that there are no loose installation screws and that the motor load shafts and machine junctions are correctly secured.
- Keep the keypad near you to push  immediately if there is unusual or incorrect operation.

■ Items to Check before Operation

- Make sure that the direction of the machine operation is correct (The motor must rotate in the correct direction).
- Make sure that the motor accelerates and decelerates smoothly.

◆ Do an Actual-Load Test Run

Note:

During a test run, make sure that *U1-03 [Output Current]* is not too high.

Connect the motor and machine, then do the test run with the same procedure that you used for the no-load test run.

1. Energize the drive, or push  to show the frequency reference screen.
2. Use  /  /  /  to set *d1-01* = 6.00 [*Frequency Reference 1* = 6.00 Hz], then push .
3. Push  to illuminate the LOCAL/REMOTE LED.
4. Push .
The RUN indicator illuminates, and the motor runs at 6.00 Hz in the forward direction.
5. Make sure that the motor is rotating in the correct direction and that the drive does not show a fault.
If the drive detects a fault, remove the cause.
6. Push  to increase the frequency reference value.
Change the setting value in increments of 10 Hz if necessary and examine the response.
Ex.: 6 Hz → 20 Hz → 30 Hz → 40 Hz → 50 Hz → 60 Hz
7. Each time you increase the setting value, use *U1-03 [Output Current]* to check the drive output current.
When the output current of the drive is not more than the motor rated current, the status is correct.
8. Make sure that the motor rotates correctly, then push .
The RUN LED flashes and goes off when the motor stops completely.
9. Change the frequency reference and direction of motor rotation, and make sure that there are no unusual sounds or vibrations.
10. If the control function causes hunting or oscillation errors, adjust the settings to stop the errors.

4.11 Fine Tuning during Test Runs (Adjust the Control Function)

This section gives information about the adjustment procedures to stop hunting or oscillation errors caused by the control function during a test run. Adjust the applicable parameters as specified by your control method and drive status.

- [V/f Control on page 146](#)
- [Open Loop Vector Control for PM Motors on page 149](#)
- [Advanced Open Loop Vector Control Method for PM Motors on page 150](#)
- [EZ Open Loop Vector Control Method on page 150](#)

Note:

This section only lists frequently adjusted parameters. If you must adjust parameters that have a higher degree of precision, contact Yaskawa.

◆ V/f Control

Table 4.18 Parameters for Fine Tuning the Drive (A1-02 = 0 [V/f])

Issue	Parameter Number	Possible Solutions	Default	Recommended Setting
Hunting or oscillation at mid-range speeds (10 Hz to 40 Hz)	n1-02 [Hunting Prevention Gain Setting]	• If torque is not sufficient with heavy loads, decrease the setting value. • If hunting or oscillation occur with light loads, increase the setting value. • If hunting occurs with a low-inductance motor, for example a motor with a larger frame size or a high-frequency motor, lower the setting value. Set n1-01 = 1 [Hunting Prevention Selection = Enabled].	1.00	0.10 - 2.00
• The volume of the motor excitation sound is too high. • Hunting or oscillation at low speeds (10 Hz or lower), or at mid-range speeds (10 Hz to 40 Hz)	C6-02 [Carrier Frequency Selection]	• If the volume of the motor excitation sound is too high, increase the carrier frequency. • If hunting or oscillation occur at low or mid-range speeds, decrease the carrier frequency.	1 (2 kHz) *1	1 to upper limit value
• Unsatisfactory motor torque and speed response • Hunting or oscillation	C4-02 [Torque Compensation Delay Time]	• If torque or speed response are slow, decrease the setting value. • If hunting or oscillation occur, increase the setting value.	200 ms *2	100 ms to 1000 ms
• Torque at low speeds (10 Hz or lower) is not sufficient. • Hunting or oscillation	C4-01 [Torque Compensation Gain]	• If torque at low speeds (10 Hz or lower) is not sufficient, increase the setting value. • If hunting or oscillation occur with light loads, decrease the setting value.	1.00	0.50 - 1.50
• If you use the drive with an IE3 high efficiency motor, the current that is more than the motor rated current will flow and trip at overload. Hunting or oscillation.	C4-01 [Torque Compensation Gain]	Decrease the setting value in these conditions: • Drive trips at overload. • Hunting or oscillation.	1.00	0.00 - 1.00
• Torque at low speeds (10 Hz or lower) is not sufficient. • Large initial vibration at start up.	• E1-08 [Mid Point A Voltage] • E1-10 [Minimum Output Voltage]	• If torque at low speeds (10 Hz or lower) is not sufficient, increase the setting value. • If there is large initial vibration at start up, decrease the setting value	• E1-08: 16.0 V *3 • E1-10: 12.0 V *3	Default setting +/- 5 V *4
Speed precision is unsatisfactory.	C3-01 [Slip Compensation Gain]	Set E2-01 [Motor Rated Current], E2-02 [Motor Rated Slip], and E2-03 [Motor No-Load Current], then adjust C3-01.	0.0 (no slip compensation)	0.5 - 1.5

*1 The default setting changes when the settings for C6-01 [Normal / Heavy Duty Selection] and o2-04 [Drive Model (KVA) Selection] change.

*2 The default setting changes when the settings for A1-02 [Control Method Selection] and o2-04 change.

*3 The default setting changes when the settings for A1-02 and E1-03 [V/f Pattern Selection] change.

*4 Recommended settings are for 200 V class drives. Multiply the voltage by 2 for 400 V class drives.

■ Precaution When You Use IE3 Premium Efficiency Motors

IE3 motors have different motor characteristics from IE1 and other motors. Set the parameters as specified by the motor characteristics. If you have a momentary power loss, and the drive detects *oC* [Overcurrent] or *ov* [Overvoltage] during speed search after it restores power, set these parameters:

- *b3-03* [Speed Search Deceleration Time] = default value $\times 2$
- *L2-03* [Minimum Baseblock Time] = default value $\times 2$
- *L2-04* [Powerloss V/f Recovery Ramp Time] = default value $\times 2$

◆ Open Loop Vector Control Method

In Open Loop Vector Control, keep *C4-01* [Torque Compensation Gain] at its default setting (1.00).

If you cannot get speed precision during regeneration in Open Loop Vector Control, set *C3-04* = 1 [Slip Compensation at Regen = Enabled Above 6 Hz].

Table 4.19 Parameters for Fine Tuning the Drive (A1-02 = 2 [OLV])

Issue	Parameter Number	Possible Solutions	Default	Recommended Setting
• Unsatisfactory motor torque and speed response • Hunting or oscillation at mid-range speeds (10 Hz to 40 Hz)	<i>n2-01</i> [Automatic Freq Regulator Gain]	• To increase the speed of torque or speed response, decrease the setting value in 0.05-unit increments. • If hunting or oscillation occur, decrease the setting value in 0.05-unit increments.	1.00	0.50 to 2.00
	<i>n2-02</i> [Automatic Freq Regulator Time 1]	• To increase the speed of torque or speed response, decrease the setting value in 10 ms increments and examine the response. • If hunting or oscillation occur or if the load inertia is too much, increase the setting value in 50 ms increments and examine the response. Note: Make sure that this parameter setting is: $n2-02 \leq n2-03$ [Automatic Freq Regulator Time 2]. When you adjust <i>n2-02</i>, you must also increase the <i>C4-02</i> [Torque Compensation Delay Time] value by the same ratio.	50 ms	50 ms to 2000 ms
<i>ov</i> [Overvoltage] occurs when the drive stops accelerating, starts to decelerate, or when there are large changes in the load.	<i>n2-03</i> [Automatic Freq Regulator Time 2]	• If <i>ov</i> occurs, increase the setting value in 50 ms increments and examine the response. • If the response is not sufficient, decrease the setting value in 10 ms increments and examine the response. Note: Make sure that this parameter setting is: $n2-02$ [Automatic Freq Regulator Time 1] $\leq n2-03$. When you adjust <i>n2-03</i>, you must also increase the <i>C4-06</i> [Motor 2 Torque Comp Delay Time] value by the same ratio.	750 ms	750 ms to 2000 ms
	<i>C4-06</i> [Motor 2 Torque Comp Delay Time]	• If <i>ov</i> occurs, increase the setting value in 10 ms increments and examine the response. • If the response is not sufficient, decrease the setting value in 2 ms increments and examine the response. Note: Make sure that this parameter setting is: $C4-02$ [Torque Compensation Delay Time] $\leq C4-06$. When you adjust <i>C4-06</i>, you must also increase the <i>n2-03</i> [Automatic Freq Regulator Time 2] value by the same ratio.	150 ms	150 ms to 750 ms

4.11 Fine Tuning during Test Runs (Adjust the Control Function)

Issue	Parameter Number	Possible Solutions	Default	Recommended Setting
- Unsatisfactory motor torque and speed response - Hunting or oscillation	C4-02 [Torque Compensation Delay Time]	- If torque or speed response are slow, decrease the setting value in 2 ms increments. - If hunting or oscillation occur, increase the setting value in 10 ms increments. Note: Make sure that this parameter setting is: $C4-02 \leq C4-06$ [Motor 2 Torque Comp Delay Time]. When you adjust C4-02, you must also increase the n2-02 [Automatic Freq Regulator Time 1] value by the same ratio.	20 ms ^{*1}	20 ms - 100 ms ^{*1}
- Speed response is slow. - Speed is not stable.	C3-02 [Slip Compensation Delay Time]	- If speed response is slow, decrease the setting value in 10 ms increments. - If speed is not stable, increase the value in 10 ms increments.	200 ms ^{*1}	100 ms to 500 ms
Speed precision is unsatisfactory.	C3-01 [Slip Compensation Gain]	- If speed is too slow, increase the setting value in 0.1 unit increments. - If speed is too fast, decrease the setting value in 0.1 unit increments.	1.0 ^{*2}	0.5 to 1.5
- The volume of the motor excitation sound is too high. - Hunting or oscillation at low speeds (10 Hz or lower)	C6-02 [Carrier Frequency Selection]	- If the volume of the motor excitation sound is too high, increase the carrier frequency. - If hunting or oscillation occur at low speeds, decrease the carrier frequency.	7 (Swing PWM1) ^{*3}	0 to upper limit value
- Torque at low speeds (10 Hz or lower) is not sufficient. speed response is slow. - Speed response is slow. - Large initial vibration at start up.	- E1-08 [Mid Point A Voltage] - E1-10 [Minimum Output Voltage]	- If torque or speed response are slow, increase the setting value. - If there is large initial vibration at start up, decrease the setting value Note: If you set the value too high, the drive can output a large torque reference although the load is light.	- E1-08: 12.0 V ^{*2} - E1-10: 2.5 V ^{*2}	Default setting +/- 2 V ^{*4}

*1 The default setting changes when the settings for A1-02 [Control Method Selection] and o2-04 [Drive Model (KVA) Selection] change.

*2 The default setting changes when the settings for A1-02 [Control Method Selection] and E1-03 [V/f Pattern Selection] change.

*3 The default setting changes when the settings for C6-01 [Normal / Heavy Duty Selection] and o2-04 change.

*4 Recommended settings are for 200 V class drives. Multiply the voltage by 2 for 400 V class drives.

■ Precaution When You Use IE3 Premium Efficiency Motors

IE3 motors have different motor characteristics from IE1 and other motors. Set the parameters as specified by the motor characteristics. If you have a momentary power loss, and the drive detects oC [Overcurrent] or ov [Overvoltage] during speed search after it restores power, set these parameters:

- b3-03 [Speed Search Deceleration Time] = default value × 2
- L2-03 [Minimum Baseblock Time] = default value × 2
- L2-04 [Powerloss V/f Recovery Ramp Time] = default value × 2

◆ Open Loop Vector Control for PM Motors

Table 4.20 Parameters for Fine Tuning the Drive (A1-02 = 5 [OLV/PM])

Issue	Parameter Number	Possible Solutions	Default	Recommended Setting
Unsatisfactory motor performance	E1-xx parameters, E5-xx parameters	- Check the settings for E1-06, E1-04 [Base Frequency, Maximum Output Frequency]. - Check the E5-xx and make sure that you set all motor data correctly. Note: Do not set E5-05 [PM Motor Resistance (ohms/phase)] to a line-to-line resistance value. - Do Auto-Tuning.	-	-
Unsatisfactory motor torque and speed response	n8-55 [Motor to Load Inertia Ratio]	Adjust to align the load inertia ratio of the motor and machine.	0	Near the load inertia ratio.
	n8-45 [Speed Feedback Detection Gain]	Decrease the setting value in increments of 0.05.	0.80	-
	C4-01 [Torque Compensation Gain]	Adjust the setting value. Note: If you set this value too high, it can cause overcompensation and motor oscillation.	0.00	1.00
- Oscillation when the motor starts. - Motor stalls.	n8-51 [Pull-in Current @ Accel/Decel]	Increase the setting value in increments of 5%.	50%	-
	- b2-02 [DC Injection Braking Current] - b2-03 [DC Inject Braking Time at Start]	Use DC Injection Braking at start. Note: This can cause the motor to rotate in reverse for approximately 1/8 of a turn at start.	- b2-02: 50% - b2-03: 0.00 s	- b2-02: Adjust as necessary. - b2-03: 0.5 s
	n8-55 [Motor to Load Inertia Ratio]	Increase the setting value. Note: When you operate a single motor or with a minimum quantity of inertia, if you set this value too high, it can cause motor oscillation.	0	Near the load inertia ratio.
There is too much current during deceleration.	n8-79 [Pull-in Current at Deceleration]	Set $n8-79 < n8-51$.	50% Note: When $n8-79 = 0$, the drive will apply the $n8-51$ setting to the pull-in current during deceleration.	Decrease in increments of 5%.
Stalling or oscillation occurs when you apply the load during constant speed	n8-47 [Pull-in Current Comp Filter Time]	Decrease the setting value in increments of 0.2 s.	5.0 s	-
	n8-48 [Pull-in/Light Load Id Current]	Increase the setting value in increments of 5%.	30%	-
	n8-55 [Motor to Load Inertia Ratio]	Increase the setting value. Note: When you operate a single motor or with a minimum quantity of inertia, if you set this value too high, it can cause motor oscillation.	0	Near the load inertia ratio.
Hunting or oscillation	n8-45 [Speed Feedback Detection Gain]	Increase the setting value in increments of 0.05.	0.80	-
The drive detects STPo [Motor Step-Out Detected] fault when the load is not too high.	- E5-09 [PM Back-EMF Vpeak (mV/(rad/s))] - E5-24 [PM Back-EMF L-L Vrms (mV/rpm)]	- Adjust the setting value. - Examine the motor code on the motor nameplate or the data sheet, then set correct values for E5-09 or E5-24.	*1	- Yaskawa motor Set the motor code from the motor nameplate. - Motor from another manufacturer Set the values from the test report.
The drive detected stalling or STPo [Motor Step-Out Detected] at high speed and maximum output voltage.	n8-62 [Output Voltage Limit Level]	Set to a value lower than the actual input voltage.	200.0 V 400.0 V	-

*1 The default setting changes when the settings for E5-01 [Motor Code Selection] and o2-04 [Drive Model (KVA) Selection] change.

◆ Advanced Open Loop Vector Control Method for PM Motors

Table 4.21 Parameters for Fine Tuning the Drive (A1-02 = 6 [AOLV/PM])

Issue	Parameter Number	Possible Solutions	Default	Recommended Setting
- Unsatisfactory motor torque and speed response - Hunting or oscillation	- High speed C5-01 [ASR Proportional Gain 1] - Low speed C5-03 [ASR Proportional Gain 2]	- If torque or speed response are slow, increase the setting value in increments of 5.00. - If hunting or oscillation occur, decrease the setting value.	10.00	5.00 to 30.00 ^{*1}
	- High speed C5-02 [ASR Integral Time 1] - Low speed C5-04 [ASR Integral Time 2]	- If torque or speed response are slow, decrease the setting value. - If hunting or oscillation occur, increase the setting value.	0.500 s	0.300 s to 1.000 s ^{*1}
The drive cannot find ASR proportional gain or integral time for low speed or high speed.	C5-07 [ASR Gain Switchover Frequency]	Change the ASR proportional gain and ASR integral time to conform to the output frequency.	0.0%	0.0% to maximum rotation speed
Hunting or oscillation	C5-06 [ASR Delay Time]	If the rigidity of the machine is unsatisfactory and vibration is possible, increase the setting value in increments of 0.010.	0.016 s	0.016 s to 0.035 s ^{*1}
Step-out	E1-xx parameters, E5-xx parameters	Refer to the motor nameplate or test report and set E1-xx or E5-xx correctly.	-	-

*1 The best values for a no-load operation are different than the best values for actual loading operation.

◆ EZ Open Loop Vector Control Method

Table 4.22 Parameters for Fine Tuning the Drive (A1-02 = 8 [EZOLV])

Issue	Parameter Number	Possible Solutions	Default	Recommended Setting
- Unsatisfactory motor torque and speed response - Hunting or oscillation	- High speed C5-01 [ASR Proportional Gain 1] - Low speed C5-03 [ASR Proportional Gain 2]	- If torque or speed response are slow, increase the setting value in increments of 5.00. - If hunting or oscillation occur, decrease the setting value.	10.00	10.00 to 50.00 ^{*1}
	- High speed C5-02 [ASR Integral Time 1] - Low speed C5-04 [ASR Integral Time 2]	- If torque or speed response are slow, decrease the setting value. - If hunting or oscillation occur, increase the setting value.	0.500 s	0.300 s to 1.000 s ^{*1}
The drive cannot find ASR proportional gain or integral time for low speed or high speed.	C5-07 [ASR Gain Switchover Frequency]	Change the ASR proportional gain and ASR integral time to conform to the output frequency.	0.0%	0.0% to maximum rotation speed
Hunting or oscillation	C5-06 [ASR Delay Time]	If the rigidity of the machine is unsatisfactory and vibration is possible, increase the setting value in increments of 0.010.	0.004 s	0.004 s to 0.020 s ^{*1}
Step-out	E9-xx parameters	Refer to the motor nameplate or test report and set E9-xx correctly.	-	-
Oscillation when the motor starts.	n8-51 [Accel / Decel Pull-In Current]	Increase the setting value.	80%	Increase in increments of 5%.
Motor stalls.	L7-01 to L7-04 [Torque Limit]	Increase the setting value.	200%	Increase in increments of 10%.

*1 The best values for a no-load operation are different than the best values for actual loading operation.

4.12 Test Run Checklist

Examine the items in this checklist and check each item before a test run.

Checked	No.	Description
	1	Correctly install and wire the drive as specified by this manual.
	2	Energize the drive.
	3	Set the voltage for the power supply in <i>E1-01 [Input AC Supply Voltage]</i> .

Check the applicable items as specified by your control method.

Table 4.23 V/f [A1-02 = 0]

Checked	No.	Description
	4	Select the best V/f pattern for your application and motor characteristics. Example: For a motor with a rated frequency of 60 Hz, set <i>E1-03 = 1 [V/f Pattern Selection = Const Trq, 60Hz base, 60Hz max]</i> as a standard V/f pattern.

Table 4.24 OLV [A1-02 = 2]

Checked	No.	Description
	5	Decouple motor shafts and machines.
	6	Refer to the information on the motor nameplate and set this data correctly: • Motor rated power (kW) to <i>T1-02</i> • Motor rated voltage (V) to <i>T1-03</i> • Motor rated current (A) to <i>T1-04</i> • Motor base frequency (Hz) to <i>T1-05</i> • Number of motor poles to <i>T1-06</i> • Motor base speed (min⁻¹) to <i>T1-07</i>
	7	Do Rotational Auto-Tuning.

Table 4.25 OLV/PM [A1-02 = 5]

Checked	No.	Description
	8	Set <i>E5-01 to E5-24 [PM Motor Settings]</i> according to manufacturer data, or do Rotational Auto-Tuning

Table 4.26 AOLV/PM [A1-02 = 6]

Checked	No.	Description
	9	Set <i>E5-01 to E5-24 [PM Motor Settings]</i> according to manufacturer data, or do Rotational Auto-Tuning
	10	Set <i>C5-01 [ASR Proportional Gain 1]</i> and <i>C5-02 [ASR Integral Time 1]</i> .

Checked	No.	Description
	11	Make sure that the keypad shows READY LED before you start to operate the motor.
	12	To give the Run command and frequency reference from the keypad, push LO/RE to set to LOCAL Mode (when in LOCAL Mode, the LO/RE LED illuminates).
	13	If the motor rotates in the opposite direction during test run, switch two of the motor cables (U/T1, V/T2, W/T3).
	14	Set Heavy Duty or Normal Duty Mode with <i>C6-01 [Normal / Heavy Duty Selection]</i> to conform to the load condition.
	15	Set <i>E2-01 [Motor Rated Current (FLA)]</i> and <i>L1-01 [Motor Overload (oL1) Protection]</i> correctly for motor thermal protection.
	16	Set the drive for REMOTE Mode when the control circuit terminals supply the Run command and frequency reference (in REMOTE Mode, the LO/RE LED turns OFF).

4.12 Test Run Checklist

Checked	No.	Description
	17	When you use terminal A1 for the frequency reference: • Set $H3-01 = 0, 4$ [Terminal A1 Signal Level Select = 0 to 10 V (Lower Limit at 0), -10 to +10V (Bipolar Reference)]. • Set $H3-02 = 0$ [Terminal A1 Function Selection = Frequency Reference].
	18	Make sure that the frequency reference gets to the necessary minimum and maximum values. If drive operation is incorrect, make these adjustments: • Gain Adjustment Set the maximum voltage and current values, then adjust the analog input gain until the frequency reference is at the necessary value. – For terminal A1 input: $H3-03$ • Bias adjustment Set the maximum voltage and current values, then adjust the analog input gain until the frequency reference is at the necessary value. – For terminal A1 input: $H3-04$

Standards Compliance

This chapter gives information about how to make the machines and devices that use this product comply with European standards and UL standards.

5.1	Section Safety	154
5.2	European Standards.....	156
5.3	UL and CSA Standards	173
5.4	China RoHS Compliance	197
5.5	对应中国RoHS指令	198
5.6	Safe Disable Input	199

5.1 Section Safety

DANGER

Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

Do not remove covers or touch circuit boards while the drive is energized.

If you touch the internal components of an energized drive, it will cause death or serious injury from electrical shock.

WARNING

Fire Hazard

Always ground the motor-side grounding terminal.

If you do not ground the equipment correctly, it can cause death or serious injury from fire or electrical shock when you touch the motor case.

Tighten all terminal screws to the correct tightening torque shown in this manual.

If connections are too loose or too tight, it can cause incorrect operation or damage to the terminal block. Overheated connections can cause death or serious injury from fire.

Tighten terminal screws at an angle in the specified range shown in this manual.

If you tighten the screws at an angle not in the specified range, you can have loose connections that can cause damage to the terminal block or start a fire and cause death or serious injury.

Attach the drive to metal or other noncombustible material. Do not put flammable or combustible materials on the drive and do not install the drive near flammable or combustible materials.

If you put flammable or combustible materials on the drive or install the drive near flammable or combustible materials, it can cause death or serious injury from fire.

Electrical Shock Hazard

Reattach the covers and safety shields before you operate the drive. Do not operate the drive with covers removed. Use the drive only as specified in this manual.

Some figures in this manual include drives without covers or safety shields to more clearly show the inside of the drive. If you operate the drive without covers and safety shields, it can cause death or serious injury from electrical shock.

Only let authorized personnel install, wire, maintain, examine, replace parts, and repair the drive.

If personnel are not approved, it can cause death or serious injury from electrical shock or fire.

Do not wear loose clothing and make sure that you remove all metal objects, for example watches or rings, when you wire, examine, and repair the drive.

Loose clothing can catch on the drive and jewelry can conduct electricity and cause death or serious injury from electrical shock.

⚠ WARNING

Do not make changes that are not given in this manual and do not make modifications to the drive.

If you make changes or modifications to the drive, it can cause death or serious injury from electrical shock. Changes not given in this manual and modifications to the drive will cause damage to the drive, and will void the warranty. Yaskawa is not responsible for modifications to the product made by the user.

After the drive blows a fuse or trips a GFCI, do not immediately energize the drive or operate peripheral devices. Wait for the time specified on the warning label at a minimum and make sure that all indicators are OFF. Then check the wiring and peripheral device ratings to find the cause of the problem. If you do not know the cause of the problem, contact Yaskawa before you energize the drive or peripheral devices.

If you do not fix the problem before you operate the drive or peripheral devices, it can cause serious injury or death.

Sudden Movement Hazard

Do not install or remove the motor while the drive is outputting voltage.

If you install or remove the motor while the drive is outputting voltage, the motor can rotate suddenly and can cause death or serious injury.

Crush Hazard

Wear eye protection before you maintain and inspect the drive, or replace parts.

If you do not wear eye protection, it can cause serious injury from flying objects.

Damage to Equipment

Do not apply incorrect voltage to the main circuit of the drive. Operate the drive in the specified range of the input voltage on the drive nameplate.

Voltages that are higher than the permitted nameplate tolerance can cause damage to the drive.

NOTICE**Damage to Equipment**

When you touch the drive and circuit boards, make sure that you observe correct electrostatic discharge (ESD) procedures.

If you do not follow procedures, it can cause ESD damage to the drive circuitry.

Before you connect a dynamic braking option to the drive, make sure that qualified personnel read and obey the Braking Unit and Braking Resistor Unit Installation Manual (TOBPC72060001).

If you do not read and obey the manual or if personnel are not qualified, it can cause damage to the drive and braking circuit.

Make sure that all connections are correct after you install the drive and connect peripheral devices.

Incorrect connections can cause damage to the drive.

Note:

Do not use unshielded cable for control wiring. Use shielded, twisted-pair wires and ground the shield to the ground terminal of the drive. Unshielded wire can cause electrical interference and unsatisfactory system performance.

5.2 European Standards

Figure 5.1 CE Mark

The CE Mark identifies that the product meets environmental and safety standards in the European Union. Products manufactured, sold, or imported in the European Union must display the CE Mark.

European Union standards include standards for electrical appliances (Low Voltage Directive), standards for electrical noise (EMC Directive), and standards for machinery (Machinery Directive).

This product displays the CE Mark in accordance with the Low Voltage Directive, the EMC Directive, and the Machinery Directive.

Table 5.1 Harmonized Standards

European Directive	Harmonized Standard
CE Low Voltage Directive Compliance 2014/35/EU	EN 61800-5-1 ^{*1}
EMC Directive 2014/30/EU	EN 61800-3 ^{*1}
Machinery Directive 2006/42/EC	• EN ISO 13849-1:2015 (PL e (Cat.III)) • EN 62061 (SILCL3) ^{*1} • EN 61800-5-2 ^{*1}

^{*1} Refer to “EU Declaration of Conformity” for the year of the Designated Standards.

The customer must display the CE Mark on the final device containing this product. Customers must verify that the final device complies with EU standards.

◆ CE Low Voltage Directive Compliance

It has been confirmed that this product complies with the CE Low Voltage Directive by conducting a test according to EN 61800-5-1.

The following conditions must be satisfied for machines and devices incorporating this product to comply with the CE Low Voltage Directive.

■ Area of Use

Install this product in a location with Overvoltage Category III and pollution degree 2 or less as specified in IEC/CE 60664.

■ Guarding Against Debris

When you install IP20/UL Open type drives, use an enclosure that does not let unwanted material enter the drive from above or below.

■ Electrical Installation

Refer to [Figure 5.2](#), , for an example of a drive that is wired to comply with the CE Low Voltage Directive.

⚠ WARNING Risk of Electric Shock and Fire Hazard

In applications in which, in the event of a ground fault, the short-circuit current cannot reach the value that the upstream overcurrent protective device needs to open within the time specified in IEC 61800-5-1, the additional use of a residual current device (RCD) is required. The Variable Speed Drive (VSD) can feed both alternating current (AC) and direct current (DC) into the Protective Earth conductor (PE). Therefore, not all commercially available RCDs are suitable. If an RCD is used for protection against electric shock, only a type B RCD is allowed for 3-phase VSD applications. For single phase VSD applications use RCD type A, B or F. In the moment of power on, VSDs generate a high leakage current to ground. Therefore, the use of 300 mA RCDs is recommended if the application allows it. Failure to follow the recommendation means that the RCD cannot provide the intended protection.

Overcurrent protection devices that do not trigger or trigger too late can cause serious injury or death.

Figure 5.2 Wiring Diagram for CE Low Voltage Directive Compliance

*1 Set L8-05 = 1 [Output Phase Loss Protect Select = Enabled] or set the wiring sequence to prevent input phase loss.

*2 Use terminals B1, B2, -, +1, and +2 to connect options to the drive.

⚠ WARNING Fire Hazard

Connect the factory-recommended devices or circuits specified in the drive catalog to drive terminals B1, B2, -, +1, and +2. Do not connect AC power supply lines to these terminals. Incorrect wiring can cause death or serious injury from fire and damage to the drive.

*3 To protect the circuit, the main circuit is separate from the surface case that can touch the main circuit.

*4 The control circuit is a Safety Extra-Low Voltage circuit. Use reinforced insulation to separate this circuit from other circuits. Make sure that you connect the Safety Extra-Low Voltage as specified.

*5 Reinforced insulation separates the output terminals from other circuits. You can also connect circuits that are not Safety Extra-Low Voltage circuits when the drive output is 250 Vac 1 A maximum or 30 VDC 1 A maximum.

⚠ WARNING Electrical Shock Hazard

When you connect the shield wire of the control circuit wiring to the protective ground terminal, do not connect the protective ground wire. If you connect the shield wire and the protective ground wire to the protective grounding terminal, it may not comply with the technical standards and local safety regulations and can cause serious injury or death.

■ Main Circuit Wire Gauges and Tightening Torques

⚠ WARNING Fire Hazard

Connect the factory-recommended devices or circuits specified in the drive catalog to drive terminals B1, B2, -, +1, and +2. Do not connect AC power supply lines to these terminals. Incorrect wiring can cause death or serious injury from fire and damage to the drive.

⚠ WARNING Electrical Shock Hazard

Make sure that the protective ground wire complies with technical standards and local safety regulations. The EN 61800-5-1 standard specifies that users must wire the power supply to automatically turn off when the protective ground wire disconnects. If you turn on the internal EMC filter, the leakage current of the drive will be more than 3.5 mA. You can also connect a protective ground wire that has a minimum cross-sectional area of 10 mm² (copper wire). If you do not obey the standards and regulations, it can cause serious injury or death.

Note:

- The recommended wire gauges are based on drive continuous current ratings with 75 °C (167 °F) 600 V class 2 heat-resistant indoor PVC wire. Assume these conditions:
 - Surrounding air temperature: 40 °C (104 °F) maximum
 - Wiring distance: 100 m (3281 ft) maximum
 - Normal Duty rated current value
- Refer to the instruction manual for each device for recommended wire gauges to connect peripheral devices or options to terminals +1, +2, -, B1, and B2. Contact Yaskawa or your nearest sales representative if the recommended wire gauges for the peripheral devices or options are out of the range of the applicable gauges for the drive.
- When you use crimp ferrules on the wire ends, contact Yaskawa or your nearest sales representative.

Wire Selection Precautions

Think about line voltage drop before selecting wire gauges. Select wire gauges that drop the voltage by 2% or less of the rated voltage. Increase the wire gauge and the cable length when the risk of voltage drops increases. Calculate line voltage drop with this formula:

Line voltage drop (V) = $\sqrt{3} \times \text{wire resistance } (\Omega/\text{km}) \times \text{wiring distance (m)} \times \text{motor rated current (A)} \times 10^{-3}$.

Precautions during Wiring

- Refer to “Yaskawa AC Drive Option Braking Unit, Braking Resistor Unit Instruction Manual (TOBPC72060001)” for information about wire gauges and tightening torques to connect braking resistor units.
- Use terminals +1 and - to connect a regenerative converter or regenerative unit.

⚠ WARNING Fire Hazard

Connect a braking resistor to drive terminals B1 and B2. Do not connect a braking resistor to terminals +1 or -.

If you connect a braking resistor to terminals +1 or -, it can cause death or serious injury from fire and damage to the drive and braking circuit.

Screw Shape

These tables use icons in [Table 5.2](#) to show the shapes of the screw heads.

*1 Remove insulation from the ends of wires to expose the length of wire shown.

■ Connect a Fuse to the Input Side (Primary Side)

The drive circuit protection must comply with EN 61800-5-1 for protection against a short circuit in the internal circuitry. Connect semiconductor fuses on the input side for branch circuit protection.

Refer to [Short Circuit Protection for Single-Phase 200 V Class Models on page 166](#), [Short Circuit Protection for 3-Phase 200 V Class Models on page 166](#), and [Short Circuit Protection for 3-Phase 400 V Class Models on page 167](#) for more information about recommended fuses.

⚠ WARNING Electrical Shock Hazard

After the drive blows a fuse or trips a GFCI, do not immediately energize the drive or operate peripheral devices. Wait for the time specified on the warning label at a minimum and make sure that all indicators are OFF. Then check the wiring and peripheral device ratings to find the cause of the problem. If you do not know the cause of the problem, contact Yaskawa before you energize the drive or peripheral devices.

If you do not fix the problem before you operate the drive or peripheral devices, it can cause serious injury or death.

■ CE Standards Compliance for DC Power Supply Input

To comply with CE Standards, install a fuse for the DC power supply input.

Figure 5.3 shows a wiring example for a DC power supply that has two drives connected in parallel.

Figure 5.3 Wiring Example for DC Power Supply Input

⚠ WARNING Electrical Shock Hazard
Do not ground the main circuit bus.
Incorrect wiring can cause serious injury or death.

Note:

- Install a fuse for each drive when operating more than one drive. If one fuse blows, replace all fuses.
- Install the external filter (system) to comply with the EMC Directive.

Refer to Table 5.6, Table 5.7, and Table 5.8 for the recommended fuses.

◆ EMC Directive

Install external EMC filters to the drive input side to comply with the EMC Directive.

■ Installing the External EMC Noise Filter

Drive models BxxxA, 2xxxA, and 4xxxA must align with the conditions in this section to comply with EN 61800-3.

Connect an EMC noise filter that complies with European standards as specified by Yaskawa to the input side (primary side). Refer to [External EMC Noise Filter Selection on page 171](#) to select the correct EMC noise filter.

Use this procedure to install an EMC noise filter to make equipment and devices added to the drive comply with the EMC Directive.

1. Install the drive and EMC noise filter on the same grounded metal plate.
2. Wire the drive and motor.

3. Ground the wire shielding on the drive side and motor side.

Figure 5.4 Wiring the Drive and Motor

Note:

- Use a braided shield cable for the drive and motor wiring or put the wires through a metal conduit.
- Keep the wire as short as possible. The maximum wiring length between the drive and motor is:
 – BxxxA, 2xxxA, 4xxxA: 10 m (32.8 ft)
- Keep the grounding wire as short as possible.

4. Use a cable clamp to ground the motor cable to the metal plate.

Note:

Make sure that the protective ground wire complies with technical specifications or local safety standards.

Figure 5.5 Ground the Shield

 B - Enclosure panel
 C - Metal plate
 D - Drive
 E - Ground the shield.

F - Motor
 G - Motor cable (Braided shield cable: 10 m (32.8 ft) maximum)
 H - Cable clamp
 I - Grounding wire
 J - EMC noise filter

Figure 5.6 EMC Noise Filter and Drive Installation Procedure

5. Connect the DC link choke to decrease harmonic distortion.

Refer to [DC Link Chokes on page 172](#) to select a DC link choke.

Note:

- To comply with EN 61000-3-2 on drive models 2001 to 2006, and 4001 to 4004, install a DC link choke.
- The terminal block for the drive main circuit and the terminal block for the DC link choke have different shapes. The drive has a European-style terminal block, and the DC link choke has a round terminal block. Correctly prepare the ends of the wiring.

■ Ground Wiring

⚠ DANGER Electrical Shock Hazard

Do not remove covers or touch circuit boards while the drive is energized.

If you touch the internal components of an energized drive, it will cause death or serious injury from electrical shock.

■ External EMC Noise Filter Selection

4060	RTEN-5100	1	TDK

*1 When you install an external EMC noise filter, change the terminals or use the junction terminal.

■ DC Link Chokes

To comply with EN 61000-3-2 drive models 2001 to 2006, and 4001 to 4004, install a DC link choke when you use an external EMC filter. Refer to [Table 5.12](#) to select a DC link choke.

Table 5.12 DC Link Chokes for Harmonic Suppression

Drive Model	DC Link Choke
	Rating
2001 - 2006	5.4 A, 8 mV
4001 - 4004	3.2 A, 28 mV

5.3 UL and CSA Standards

Figure 5.7 UL/cUL Mark

The UL/cUL Mark identifies that this product conforms to rigid safety standards. This mark appears on products in the United States and Canada. It shows UL approval, which identifies that the product complies with safety standards after careful inspection and assessment. You must use UL Listed or UL Recognized parts for all primary components that are built into electrical equipment that has UL approval.

This product has been tested in accordance with UL standard UL61800-5-1, and has been verified to be in compliance with UL standards.

Machines and devices integrated with this product must satisfy the following conditions for compliance with UL standards:

◆ Area of Use

Install this product in a location with Overvoltage Category III and pollution degree 2 or less as specified in UL61800-5-1.

■ Surrounding Air Temperature Setting

Maintain the surrounding air temperature within the following ranges according to the enclosure type.

- IP20/UL Open Type: -10 °C to +50 °C (14 °F to 122 °F)

◆ Wire the Main Circuit Terminal Block

Wire the main circuit terminal block correctly as specified by the instructions in the manual.

To select the correct wire gauge, refer to [Main Circuit Wire Gauges and Tightening Torques on page 175](#).

■ Notes on Wiring the Main Circuit Terminal Block

Read these notes before you wire the main circuit terminal block.

⚠ WARNING Fire Hazard

Refer to “Main Circuit Wire Gauges and Tightening Torques” in this manual to select the correct wires. Remove the insulation from the connection wires to the wire stripping lengths shown in the manual.

If you pinch the insulation in the wire terminals, false-contact can overheat the terminals when you energize the drive and cause death or serious injury from fire.

⚠ WARNING Fire Hazard

Do not use bent or crushed wires. Remove the damaged end of the wire before you use it. Incorrect connections can cause death or serious injury from fire.

⚠ WARNING Fire Hazard

If you use stranded wire, make sure that all of the wire strands are in the connection. Also, do not twist the stranded wire too much.

Short circuits between terminals from stranded wire that is not in the connection or connections that are twisted too much can cause death or serious injury from fire.

NOTICE

If you use power tools to tighten the terminal screws, use a low speed setting (300 min⁻¹ (r/min) to 400 min⁻¹ (r/min)).

High speeds can cause damage to the terminal screws.

- Use UL-Listed, vinyl-coated insulated copper wires for operation with a continuous maximum permitted temperature of 75 °C at 600 V.
 - Remove all unwanted objects that are near the terminal block connections.
 - Remove the insulation from the connection wires to the wire stripping lengths shown in the manual.
 - Do not solder stranded wire. Soldered wire connections can become loose over time and cause unsatisfactory drive performance.
 - Put the wire all the way into the terminal block. Remove the insulation from the wire to the recommended wire stripping length to fit the wire with insulation in the plastic housing.
 - Use a torque driver, torque ratchet, or torque wrench for the screws. A slotted driver or a hex tool will be necessary to wire the screw clamp terminal. Use applicable tools as specified by the recommended conditions in the product manual.
 - Users can purchase wiring tools from Yaskawa. Contact Yaskawa or your nearest sales representative for more information.
 - Wire gauges on the drive you are replacing may not match the wire gauge ranges on your new drive. Contact Yaskawa or your nearest sales representative for more information about the connection procedures.
 - Do not tighten the terminal screws at an angle of 5 degrees or more. Failure to obey can cause damage to the terminal screws.
- If you damage a terminal screw, contact Yaskawa or your nearest sales representative.

Figure 5.8 Permitted Angle

- Put the bit all the way into the hex socket to tighten the hex socket cap screw.
- When you tighten slotted screws, hold the straight-edge screwdriver perpendicularly to the screw. Make sure that you align the end of the straight-edge screwdriver with the screw groove.

Figure 5.9 Tightening Slotted Screws

- After you connect the wires to the terminal block, lightly pull on the wires to make sure that they do not come out of the terminals.
- Do not let strain on the wiring cause damage. Use a strain relief near the wiring to release the tension. Refer to [Figure 5.10](#) for an example.

A - Cable clamp

Figure 5.10 Strain Relief Example

Table 5.13 Recommended Wiring Tools

Screw Size	Screw Shape	Wire Gauge	Adapter	Bit		Torque Driver Model (Tightening Torque)	Torque Wrench (Tightening Torque)
				Model	Manufacturer		
M3		-	Bit	SF-BIT-SL 0,5X3,0-70	PHOENIX CONTACT	TSD-M 1,2NM (0.3 - 1.2 N·m (2.7 - 10.6 lbf·in))	-
M4		-	Bit	SF-BIT-SL 1,0X4,0-70	PHOENIX CONTACT	TSD-M 3NM (1.2 - 3.0 N·m (10.6 - 26.6 lbf·in))	-
M5 *1		≤ 25 mm ² (AWG 10)	Bit	SF-BIT-SL 1,2X6,5-70	PHOENIX CONTACT	TSD-M 3NM (1.2 - 3.0 N·m (10.6 - 26.6 lbf·in))	-
		≥ 30 mm ² (AWG 8)				-	4.1 - 4.5 N·m (36.3 - 39.8 lbf·in) *2 *3
M6	 (WAF: 5 mm)	-	Bit	SF-BIT-HEX 5-50	PHOENIX CONTACT	-	5 - 9 N·m (44.3 - 79.7 lbf·in) *2 *3

*1 When you wire drive models 2042, 2056, 4031, 4038, 4044, and 4060, select the correct tools for the wire gauge.

*2 Use 6.35 mm (0.25 in) bit socket holder.

*3 Use a torque wrench that can apply this torque measurement range.

■ Main Circuit Wire Gauges and Tightening Torques

Refer to [Single-Phase 200 V Class on page 176](#), [Three-Phase 200 V Class on page 178](#), and [Three-Phase 400 V Class on page 181](#) for the recommended wire gauges and tightening torques of the main circuit terminals.

Comply with local standards for correct wire gauges in the region where you will use the drive.

⚠ WARNING Fire Hazard

Connect the factory-recommended devices or circuits specified in the drive catalog to drive terminals B1, B2, -, +1, and +2. Do not connect AC power supply lines to these terminals. Incorrect wiring can cause death or serious injury from fire and damage to the drive.

Note:

- The recommended wire gauges are based on drive continuous current ratings with 75 °C (167 °F) 600 V class 2 heat-resistant indoor PVC wire. Assume these conditions:
 - Surrounding air temperature: 40 °C (104 °F) maximum
 - Wiring distance: 100 m (3281 ft) maximum
 - Normal Duty rated current value
- Refer to the instruction manual for each device for recommended wire gauges to connect peripheral devices or options to terminals +1, +2, -, B1, and B2. Contact Yaskawa or your nearest sales representative if the recommended wire gauges for the peripheral devices or options are out of the range of the applicable gauges for the drive.
- When you use crimp ferrules on the wire ends, contact Yaskawa or your nearest sales representative.

Wire Selection Precautions

Think about line voltage drop before selecting wire gauges. Select wire gauges that drop the voltage by 2% or less of the rated voltage. Increase the wire gauge and the cable length when the risk of voltage drops increases. Calculate line voltage drop with this formula:

Line voltage drop (V) = $\sqrt{3} \times \text{wire resistance } (\Omega/\text{km}) \times \text{wiring distance (m)} \times \text{motor rated current (A)} \times 10^{-3}$.

Precautions during Wiring

- Refer to “Yaskawa AC Drive Option Braking Unit, Braking Resistor Unit Instruction Manual (TOBPC72060001)” for information about wire gauges and tightening torques to connect braking resistor units.
- Use terminals +1 and - to connect a regenerative converter or regenerative unit.

⚠ WARNING Fire Hazard

Connect a braking resistor to drive terminals B1 and B2. Do not connect a braking resistor to terminals +1 or -.

If you connect a braking resistor to terminals +1 or -, it can cause death or serious injury from fire and damage to the drive and braking circuit.

Screw Shape

These tables use icons in [Table 5.14](#) to show the shapes of the screw heads.

Table 5.14 Icons to Identify Screw Shapes

*1 Remove insulation from the ends of wires to expose the length of wire shown.

■ Factory-Recommended Branch Circuit Protection for UL Listing

Install one of the types of short circuit protection devices in *Short Circuit Protection for Single-Phase 200 V Class Models on page 184*, *Short Circuit Protection for 3-Phase 200 V Class Models on page 186*, and *Short Circuit Protection for 3-Phase 400 V Class Models on page 188* to comply with UL61800-5-1. Yaskawa recommends connecting semiconductor protective type fuses, but *Short Circuit Protection for Single-Phase 200 V Class Models on page 184*, *Short Circuit Protection for 3-Phase 200 V Class Models on page 186*, and *Short Circuit Protection for 3-Phase 400 V Class Models on page 188* also show alternative short circuit protection devices.

When you use MCCBs, RK1, or RK5 fuses, you must mount the drive in a ventilated enclosure according to the minimum enclosure volume specified in *Short Circuit Protection for Single-Phase 200 V Class Models on page 184*, *Short Circuit Protection for 3-Phase 200 V Class Models on page 186*, and *Short Circuit Protection for 3-Phase 400 V Class Models on page 188*.

Molded Case Circuit Breaker (MCCB) Ratings

- Maximum MCCB rating is 200% of the Normal Duty drive full load output amp (FLA) rating.
- When you use MCCBs, install the drive into a ventilated enclosure with a minimum enclosure volume.

Note:

When you use MCCBs, current limiting type are recommended, but not required.

Non-Semiconductor Fuse Ratings

- Maximum CC, J, T, RK1 or RK5 fuse rating is 175% of the Normal Duty drive full load output amp (FLA) rating.

Short Circuit Current Ratings (SCCR)

The drive is suitable for use on a circuit capable of delivering not more than 100 kA RMS symmetrical amperes, 240 V or 480 V maximum, when protected by devices specified in [Short Circuit Protection for Single-Phase 200 V Class Models on page 184](#), [Short Circuit Protection for 3-Phase 200 V Class Models on page 186](#) and [Short Circuit Protection for 3-Phase 400 V Class Models on page 188](#).

- 200 V Class models: Use the protection specified in this document to prepare the drive for use on a circuit capable of delivering not more than 100,000 RMS symmetrical amps and not more than 240 Vac.
- 400 V Class models: Use the protection specified in this document to prepare the drive for use on a circuit capable of delivering not more than 100,000 RMS symmetrical amps and not more than 480 Vac.

◆ Electric Code Compliance

The user must provide short circuit protection to protect input branch circuits as specified by the National Electric Code (NEC), the Canadian Electric Code, Part 1 (CEC), and local codes.

■ Short Circuit Protection for Single-Phase 200 V Class Models**Semiconductor Fuse Ratings**

Yaskawa recommends connecting semiconductor protective type fuses.

Table 5.15 Semiconductor Fuse Ratings: Single-Phase 200 V Class

Molded Case Circuit Breaker (MCCB) Ratings

- Any UL listed MCCB is approved. Current limiting type MCCBs are an alternate and generally recommended over the non-current limiting type.
- Maximum MCCB rating is 200% of the Normal Duty drive full load output amp (FLA) rating.
- For the MCCB (current limiting type) an equivalent listed current limiting type MCCB is able to be used where the peak let-through current and I^2t of the equivalent MCCB is not greater than the specified MCCB.

Molded Case Circuit Breaker (MCCB) Ratings

- Any UL listed MCCB is approved. Current limiting type MCCBs are an alternate and generally recommended over the non-current limiting type.
- Maximum MCCB rating is 200% of the Normal Duty drive full load output amp (FLA) rating.
- For the MCCB (current limiting type) an equivalent listed current limiting type MCCB is able to be used where the peak let-through current and I^2t of the equivalent MCCB is not greater than the specified MCCB.

Type E Manual Self Protected Combination Motor Controller (CMC) Ratings

- CMCs are UL Listed for 208 V or 240 V Wye or Delta and 480Y/277V. CMCs are not UL Listed for 480 V Delta, corner ground or high impedance networks.
- A Schneider Electric GV2GH7 insulating barrier is necessary for GV2P devices. A GV3G66 insulating barrier and GVAM11 auxiliary contact/indicator are necessary for GV3P devices.

◆ Low Voltage Wiring for Control Circuit Terminals

You must provide low voltage wiring as specified by the National Electric Code (NEC), the Canadian Electric Code, Part I (CEC), and local codes. Yaskawa recommends the NEC class 1 circuit conductor. Use the UL approved class 2 power supply for external power supply.

Table 5.27 Control Circuit Terminal Power Supplies

Input/Output	Terminals	Power Supply Specifications
Digital input	S1, S2, SC, SP	Uses the LVLC power supply in the drive. Use the UL Listed class 2 power supply for external power supply.
Analog input	A1, AC, +V	Uses the LVLC power supply in the drive. Use the UL Listed class 2 power supply for external power supply.
Safe disable input	H1, H2, HC	Uses the LVLC power supply in the drive. Use the UL Listed class 2 power supply for external power supply.

◆ CSA Standards

■ CSA for Industrial Control Equipment

This drive is CSA certified as Industrial Control Equipment Class 321116.

Figure 5.11 CSA Mark

■ CSA for Elevator Equipment

This drive is CSA certified as Elevator Equipment Class CS241101.

CSA B44.1 /
ASME A17.5

Figure 5.12 CSA B44.1-19/ASME A17.5-2019 Mark

◆ Drive Motor Overload and Overheat Protection

The drive motor overload and overheat protection function complies with the National Electric Code (NEC) and the Canadian Electric Code, Part I (CEC).

Set the Motor Rated Current and *L1-01 through L1-04 [Motor Overload Protection Select]* correctly to enable motor overload and overheat protection.

Refer to the control method and set the motor rated current with *E2-01 [Motor Rated Current (FLA)]*, *E5-03 [PM Motor Rated Current (FLA)]*, or *E9-06 [Motor Rated Current (FLA)]*.

■ E2-01: Motor Rated Current (FLA)

No. (Hex.)	Name	Description	Default (Range)
E2-01 (030E)	Motor Rated Current (FLA)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated current in amps.	Determined by o2-04, C6-01 (10% to 200% of the drive rated current)

Note:

- If $E2-01 < E2-03$ [Motor No-Load Current], the drive will detect $oPE02$ [Parameter Range Setting Error].
- When the drive model changes, the display units for this parameter also change.
 - 0.01 A: B001 to B018, 2001 to 2042, 4001 to 4023
 - 0.1 A: 2056 to 2082, 4031 to 4060

The value set for $E2-01$ becomes the reference value for motor protection and the torque limit. Enter the motor rated current written on the motor nameplate. Auto-Tuning the drive will automatically set $E2-01$ to the value input for $T1-04$ [Motor Rated Current].

■ E5-03: Motor Rated Current (FLA)

No. (Hex.)	Name	Description	Default (Range)
E5-03 (032B)	Motor Rated Current (FLA)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor rated current (FLA).	Determined by $o2-04$, C6-01 (10% to 200% of the drive rated current)

Note:

- When the drive model changes, the display units for this parameter also change.
- 0.01 A: B001 - B018, 2001 - 2042, 4001 - 4023
 - 0.1 A: 2056 - 2082, 4031 - 4060

The drive automatically sets $E5-03$ to the value input for $T2-06$ [PM Motor Rated Current] after you do these types of Auto-Tuning:

- PM Motor Parameter Settings
- PM Stationary Auto-Tuning
- PM Stationary Tuning for Stator Resistance
- PM Rotational Auto-Tuning

■ E9-06: Motor Rated Current (FLA)

No. (Hex.)	Name	Description	Default (Range)
E9-06 (11E9)	Motor Rated Current (FLA)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated current in amps.	Determined by E9-01 and $o2-04$ (10% to 200% of the drive rated current)

Note:

- When the drive model changes, the display units for this parameter also change.
- 0.01 A: B001 to B018, 2001 to 2042, 4001 to 4023
 - 0.1 A: 2056 to 2082, 4031 to 4060

The setting value of $E9-06$ is the reference value for motor protection. Enter the motor rated current written on the motor nameplate. Auto-Tuning the drive will automatically set $E9-06$ to the value input for $T4-07$ [Motor Rated Current].

■ L1-01: Motor Overload (oL1) Protection

No. (Hex.)	Name	Description	Default (Range)
L1-01 (0480)	Motor Overload (oL1) Protection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor overload protection with electronic thermal protectors.	Determined by A1-02 (0 - 6)

This parameter enables and disables the motor overload protection with electronic thermal protectors.

The cooling capability of the motor changes when the speed control range of the motor changes. Use an electronic thermal protector that aligns with the permitted load characteristics of the motor to select motor protection.

The electronic thermal protector of the drive uses these items to calculate motor overload tolerance and supply overload protection for the motor:

- Output current
- Output frequency

- Motor thermal characteristics
- Time characteristics

If the drive detects motor overload, the drive will trigger an *oL1* [Motor Overload] and stop drive output.

Set *H2-01 = 1F* [Term *MA/MB-MC Function Selection = Motor Overload Alarm (oL1)*] to set a motor overload alarm. If the motor overload level is more than 90% of the *oL1* detection level, the output terminal activates and triggers an overload alarm.

0 : Disabled

Disable motor protection when motor overload protection is not necessary or when the drive is operating more than one motor.

Refer to [Figure 5.13](#) for an example of the circuit configuration to connect more than one motor to one drive.

Figure 5.13 Protection Circuit Configuration to Connect More than One Motor to One Drive

NOTICE

When you connect more than one motor to one drive or when the motor amp rating is higher than the drive amp rating, set *L1-01 = 0* [Motor Overload (*oL1*) Protection = Disabled] and install thermal overload relays for each motor. The electronic thermal protection of the drive will not function and it can cause damage to the motor.

1 : Variable Torque

Use this setting for general-purpose motors with a 60 Hz base frequency.

The overload tolerance decreases as motor speed decreases because the cooling fan speed decreases and the ability of the motor to cool decreases in the low speed range.

The overload tolerance characteristics of the motor change the trigger point for the electronic thermal protector. This provides motor overheat protection from low speed to high speed across the full speed range.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to operate with commercial line power. Operate at a 60 Hz base frequency to maximize the motor cooling ability.	If the motor operates at frequencies less than 60 Hz, the drive will detect <i>oL1</i> . The drive triggers a fault relay output and the motor coasts to stop.

2 : Constant Torque 10:1 Speed Range

Use this setting for drive-dedicated motors with a speed range for constant torque of 1:10.

5.3 UL and CSA Standards

The speed control for this motor is 10% to 100% when at 100% load. Operating slower than 10% speed at 100% load will cause motor overload.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to withstand increased temperatures during continuous operation in the low speed range (10% base frequency).	The motor operates continuously at 10% to 100% base frequency. Operating slower than 10% speed at 100% load will cause motor overload.

3 : Constant Torque 100:1 SpeedRange

Use this setting for vector motors with a speed range for constant torque of 1:100.

The speed control for this motor is 1% to 100% when at 100% load. Operating slower than 1% speed at 100% load will cause motor overload.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to withstand increased temperatures during continuous operation in the low speed range (1% base frequency).	The motor operates continuously at 1% to 100% base frequency. Operating slower than 1% speed at 100% load will cause motor overload.

4 : PM Variable Torque

Use this setting for PM motors with derated torque characteristics.

The overload tolerance decreases as motor speed decreases because the cooling fan speed decreases and the ability of the motor to cool decreases in the low speed range.

The overload tolerance characteristics of the motor change the trigger point for the electronic thermal protector. This provides motor overheat protection from low speed to high speed across the full speed range.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to withstand increased temperatures during continuous operation at rated speed and rated torque.	If the motor operates continuously at lower speed than rated rotation speed at more than 100% torque, the drive will detect <i>o.l.l.</i> The drive triggers a fault relay output and the motor coasts to stop.

5 : PM Constant Torque

Use this setting with a PM motor for constant torque that has a speed range for constant torque of 1:500.

The speed control for this motor is 0.2% to 100% when at 100% load. Operating slower than 0.2% speed at 100% load will cause motor overload.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to withstand increased temperatures during continuous operation in the low speed range (0.2% base frequency).	The motor operates continuously at 0.2% to 100% rated speed. Operating slower than 0.2% speed at 100% load will cause motor overload.

6 : Variable Torque (50Hz)

Use this setting for general-purpose motors with a 50 Hz base frequency.

The overload tolerance decreases as motor speed decreases because the cooling fan speed decreases and the ability of the motor to cool decreases in the low speed range.

The overload tolerance characteristics of the motor change the trigger point for the electronic thermal protector. This provides motor overheat protection from low speed to high speed across the full speed range.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to operate with commercial line power. Operate at a 50 Hz base frequency to maximize the motor cooling ability.	If the motor operates at frequencies less than commercial line power, the drive will detect <i>oLL</i>. The drive triggers a fault relay output and the motor coasts to stop.

■ L1-02: Motor Overload Protection Time

No. (Hex.)	Name	Description	Default (Range)
L1-02 (0481)	Motor Overload Protection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the operation time for the electronic thermal protector of the drive to prevent damage to the motor. Usually it is not necessary to change this setting.	1.0 min (0.1 - 5.0 min)

Set the overload tolerance time to the length of time that the motor can operate at 150% load from continuous operation at 100% load.

When the motor operates at 150% load continuously for one minute after continuous operation at 100% load (hot start), the default setting triggers the electronic thermal protector.

Figure 5.14 shows an example of the electronic thermal protector operation time. Motor overload protection operates in the range between a cold start and a hot start.

This example shows a general-purpose motor operating at the base frequency with *L1-02* set to 1.0 min.

- Cold start
Shows the motor protection operation time characteristics when the overload occurs immediately after starting operation from a complete stop.
- Hot start

Shows the motor protection operation time characteristics when overload occurs from continuous operation below the motor rated current.

Figure 5.14 Protection Operation Time for a General-purpose Motor at Rated Output Frequency

■ L1-03: Motor Thermistor oH Alarm Select

No. (Hex.)	Name	Description	Default (Range)
L1-03 (0482)	Motor Thermistor oH Alarm Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive operation when the PTC input signal entered into the drive is at the <i>oH3 [Motor Overheat Alarm]</i> detection level.	3 (0 - 3)

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

2 : Fast Stop

The drive stops the motor in the deceleration time set in *C1-09 [Fast Stop Time]*. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

3 : Alarm Only

The keypad shows *oH3* and the drive continues operation. The output terminal set for *Alarm [H2-01 to H2-03 = 10]* activates.

■ L1-04: Motor Thermistor oH Fault Select

No. (Hex.)	Name	Description	Default (Range)
L1-04 (0483)	Motor Thermistor oH Fault Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive operation when the PTC input signal to the drive is at the <i>oH4 [Motor Overheat Fault (PTC Input)]</i> detection level.	1 (0 - 2)

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

2 : Fast Stop

The drive stops the motor in the deceleration time set in *C1-09 [Fast Stop Time]*. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

5.4 China RoHS Compliance

Figure 5.15 China RoHS Mark

This section follows the Chinese law “Management Method for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products” and related regulations and standards.

The number inside of the RoHS mark shows the environment friendly use period (in years) for electrical and electronic products that are made or sold in China, or imported to China. The date of manufacture of the electrical and electronic product is the starting date of the environment friendly use period of the product.

The environment friendly use period of this product is 15 years. This period is not the product warranty period.

◆ Information on Hazardous Substances in This Product

Table 5.28 shows the details on hazardous substances contained in this product.

Table 5.28 Contents of Hazardous Substances in This Product

Parts Name	Hazardous Substances									
	Lead (Pb)	Mercury (Hg)	Cadmium (Cd)	Hexavalent Chromium (Cr(VI))	Polybrominated Biphenyls (PBBs)	Polybrominated Diphenyl Ethers (PBDEs)	Dibutyl Phthalate (DBP)	Diisobutyl Phthalate (DIBP)	Butyl Benzyl Phthalate (BBP)	Bis (2-ethylhexyl) Phthalate (DEHP)
Circuit Board	×	○	○	○	○	○	○	○	○	○
Electronic Parts	×	○	○	○	○	○	○	○	○	○
Brass Screw	×	○	○	○	○	○	○	○	○	○
Aluminum Die Casting	×	○	○	○	○	○	○	○	○	○

This table has been prepared in accordance with the provisions outlined in SJ/T 11364.

○: Indicates that said hazardous substance contained in all of the homogeneous materials for this part is below or equal to the limit requirement of GB 26572.

×: Indicates that said hazardous substance contained in at least one of the homogeneous materials used for this part is above the limit requirement of GB 26572.

Note:

This product complies with EU RoHS directives. In this table, "×" indicates that hazardous substances that are exempt from EU RoHS directives are contained.

5.5 对应中国RoHS指令

图 5.16 中国RoHS标志

本资料根据中国《电器电子产品有害物质限制使用管理办法》等相关法律法规及标准制定。
本产品的环保使用期限为15年。该年限表示在中国生产销售以及进口的电器电子产品的环保使用期限（年限）。
电器电子产品的环保使用期限从生产日期算起。但需要注意的是环保使用期限并非产品的质量保证期限。

◆ 本产品中含有有害物质的信息

本产品中所含有害物质的详细信息如表 5.29所示。

表 5.29 本产品中有害物质的名称及含量

部件名称	有害物质									
	铅 (Pb)	汞 (Hg)	镉 (Cd)	六价铬 (Cr (VI))	多溴联苯 (PBBs)	多溴二苯醚 (PBDEs)	邻苯二甲酸二 正丁酯 (DBP)	邻苯二甲酸二 异丁酯 (DIBP)	邻苯二甲酸丁 苄酯 (BBP)	邻苯二甲酸二 (2-乙基) 己 酯 (DEHP)
实装基板	×	○	○	○	○	○	○	○	○	○
电子元件	×	○	○	○	○	○	○	○	○	○
黄铜螺钉	×	○	○	○	○	○	○	○	○	○
铝压铸	×	○	○	○	○	○	○	○	○	○
本表格依据SJ/T 11364的规定编制。 ○:表示该有害物质在该部件所有均质材料中的含量均在GB 26572规定的限量要求以下。 ×:表示该有害物质至少在该部件的某一均质材料中的含量超出GB 26572规定的限量要求。 (注) 本产品符合欧盟RoHS指令。上表中的“×”表示含有欧盟RoHS指令豁免的有害物质。										

5.6 Safe Disable Input

This section gives precautions to support the Safe Disable input. Contact Yaskawa for more information.

The safety function complies with the standards shown in [Table 5.30](#).

Table 5.30 Applied Safety Standards and Unified Standards

Safety Standards	Unified Standards
Functional Safety	IEC/EN 61508-1,2 (SIL3) EN IEC 62061 (SIL3) EN 61800-5-2 (SIL3)
Machine Safety	EN ISO 13849-1:2015 (Cat.3, PL e)
EMC	IEC/EN 61800-3 IEC/EN 61326-3-1 IEC/EN 61000-6-7
LVD	EN 61800-5-1

Note:

SIL = Safety Integrity Level.

◆ Safe Disable Specifications

The Safe Disable input provides the stop function that complies with “Safe Torque Off” as specified by IEC/EN61800-5-2. The Safe Disable input meets the requirements of ISO/EN ISO 13849-1 and IEC/EN 61508. It also has a safety status monitor to detect safety circuit errors.

When you install the drive as a component in a system, you must make sure that the system complies with the applicable safety standards.

Refer to [Table 5.31](#) for safety function specifications.

Table 5.31 Safe Disable Specifications

Item		Description	
Input/Output		- Input: 2 Safe Disable input (H1, H2) Signal ON level: 18 Vdc to 28 Vdc Signal OFF level: -4 Vdc to +4 Vdc - Output: 1 MFDO safety monitor output for external device monitor (EDM)	
Response time from when the input opens to when the drive output stops		3 ms or less	
Response time from when the H1 and H2 terminal inputs open to when the EDM signal operates		30 ms or less	
Mission time ^{*1}		20 years	10 years
Failure probability	PFD	5.51E ⁻⁵	2.76E ⁻⁵
	PFH	3.39E ⁻⁹	3.36E ⁻⁹
Performance level		e	
HFT (hardware fault tolerance)		N = 1	
Type of subsystem		Type B	
MTTF _D		High (861 years)	
DCavg		Medium (90.71%)	

^{*1} Parameter used for the statistical calculation required by functional safety standards and this is not linked to the warranty / guarantee period.

Note:

EDM = External Device Monitoring

PFD = Probability of Failure on Demand

PFH = Probability of Dangerous Failure per Hour

◆ Notes**⚠ DANGER Electrical Shock Hazard**

You cannot depend on the Safe Disable function to prevent electrical shock. Disconnect all power to the drive and wait for the time specified on the warning label before you remove covers. Check the drive for dangerous voltages before servicing or repair work.

If you do work on the drive when it is energized and there is no cover over the electronic circuits, it can cause serious injury or death.

⚠ DANGER Sudden Movement Hazard

When you use the Safe Disable function in the safety system of a machine, do a full risk assessment for the system to make sure that all parts of the system comply with applicable safety standards.

Incorrect application of the Safe Disable function can cause serious injury or death.

⚠ DANGER Sudden Movement Hazard

If the output circuit of the drive is damaged and the Safe Disable function turns OFF the drive output to a permanent magnet (PM) motor, the motor can rotate 180 electrical degrees. Prevent damage to equipment and injury to personnel during this condition.

Sudden motor movement can cause serious injury or death. It is possible for current to flow through the motor winding in these conditions.

⚠ WARNING Sudden Movement Hazard

Although the Safe Disable function is in operation, gravity or other external forces in the vertical axis can move the motor.

Incorrect application of the Safe Disable function can cause serious injury or death.

⚠ WARNING Sudden Movement Hazard

Do not use the drive output signals to control external holding brakes or dynamic brakes for functional safety. Use a system that conforms to the functional safety requirements.

Incorrect application of the Safe Disable function can cause serious injury or death. Systems that use drive output signals (including EDM) for safety are not safe because drive output signals are not safety components.

⚠ WARNING Sudden Movement Hazard

Connect the Safe Disable inputs to the devices as specified by the safety requirements.

If you connect the Safe Disable inputs incorrectly, it can cause serious injury or death.

⚠ WARNING Sudden Movement Hazard

To use the Safe Disable inputs, remove the jumpers between terminals H1-HC and H2-HC.

If the Safe Disable circuit does not work correctly, it can cause serious injury or death.

⚠ WARNING Sudden Movement Hazard

When you clear the Safe Disable input, make sure that the Safe Disable Monitor output operates correctly as the specification for Safe Disable function.

If the Safe Disable circuit does not operate correctly, it can cause serious injury or death.

⚠ WARNING Sudden Movement Hazard

Regularly examine the Safe Disable input and all other safety features.

A system that does not operate correctly can cause serious injury or death.

⚠ WARNING Sudden Movement Hazard

Only let approved personnel who know about the drive, instruction manual, and safety standards wire, examine, and maintain the Safe Disable input.

If personnel are not approved, it can cause serious injury or death.

⚠ WARNING Sudden Movement Hazard

Only use the Safe Disable Monitor (multi-function output terminal set to the EDM function) to monitor the Safe Disable status or to find a malfunction in the Safe Disable inputs. The monitor output is not a safety output.

If you use the Safe Disable Monitor incorrectly, it can cause death or serious injury.

Note:

- When you use a drive with a built in safety function, you must replace it 10 years after first use.
- Safe Disable input wiring should not exceed 30 m (98 ft).
- A maximum of 3 ms will elapse from when terminals H1 or H2 shut off until the drive switches to the “Safe Torque Off” status. Set the OFF status for terminals H1 and H2 to hold for at least 3 ms. The drive may not be able to switch to the “Safe Torque Off” status if terminals H1 and H2 are only open for less than 3 ms.

◆ Using the Safe Disable Function**■ Safe Disable Circuit**

The Safe Disable circuit has two isolated channels (terminals H1 and H2) that stop the output transistors. The input can use the internal power supply of the drive.

Set the EDM function to one of the MFDO terminals [$H2-xx = 21$ or 121] to monitor the status of the Safe Disable function. This is the “Safe Disable monitor output function”.

Figure 5.17 Safe Disable Function Wiring Example

■ Connect Safe Disable Input Contacts to Multiple Drives**To Use the Drive Internal Power Supply**

Figure 5.18 shows an example of how to connect Safe Disable contacts.

From the terminals HC-SC of drive 1, supply the power for the Safe Disable function for the applicable drives. These conditions limit the number of units to connect:

- Internal power supply capacity

- Safety switch

Figure 5.18 Connection Example to Use the Internal Power Supply

To Use 24 V External Power Supply

Figure 5.19 shows an example of how to connect Safe Disable contacts. These conditions limit the number of units to connect:

- External power supply capacity
- Number of MFDIs used
- Supply current to the external sensors

Figure 5.19 Connection Example to Use 24 V External Power Supply

Number of Possible Drives to Connect

Power Supply	Digital Inputs	24 V Output	Number of Drives
Internal power supply (Drive 1)	Yes (2-channel input)	Yes ^{*1}	3
		No	16
	No	Yes ^{*1}	4
		No	17
External power supply	-	-	Different for different external power supply capacities ^{*2}

^{*1} This is when you use a maximum of 150 mA.

^{*2} 24 V, 12 mA is necessary for each drive.

Use this formula to calculate the number of units to connect:

$$n = (I_{o_{max}} - I_{MFDI} \times n_{MFDI} - I_{sensor}) / I_{safety}$$

- n: Number of units to connect
- $I_{o_{max}}$: Maximum current that the power supply can supply (204 mA for the internal power supply)
- I_{MFDI} : Current consumed per MFDI (6 mA)
- n_{MFDI} : Maximum number of MFDIs that can be activated at the same time (maximum of 2-channel)
- I_{sensor} : Current externally supplied for sensor power supply (maximum of 150 mA)
- I_{safety} : Current consumed by Safe Disable terminals H1 and H2 (12 mA)

Note:

Round the values to the first decimal place.

■ Enabling and Disabling the Drive Output (“Safe Torque Off”)

Refer to [Figure 5.20](#) for an example of drive operation when the drive changes from “Safe Torque Off” status to usual operation.

Figure 5.20 Safe Disable Operation

Switching from Usual Operation to “Safe Torque Off”

Turn OFF (open) safety input terminal H1 or H2 to enable the Safe Disable function. When the Safe Disable function is enabled while the motor is operating, the drive output and motor torque turn off and the motor always coasts to stop. The *b1-03 [Stopping Method Selection]* setting does not have an effect on the stopping method.

The “Safe Torque Off” status is only possible with the Safe Disable function. Clear the Run command to stop the drive. Turning off drive output (a baseblock condition) ≠ “Safe Torque Off”.

Note:

- When it is necessary to ramp to stop the motor, do not turn off terminals H1 and H2 until the motor fully stops. This will prevent the motor from coasting to stop during usual operation.
- A maximum of 3 ms will elapse from when terminals H1 or H2 shut off until the drive switches to the “Safe Torque Off” status. Set the OFF status for terminals H1 and H2 to hold for at least 3 ms. The drive may not be able to switch to the “Safe Torque Off” status if terminals H1 and H2 are only open for less than 3 ms.

Going from “Safe Torque Off” to Usual Operation

The safety input will only release when there is no Run command.

- **During Stop**
When the Safe Disable function is triggered during stop, close the circuit between terminals H1-HC and H2-HC to disable “Safe Torque Off”. Enter the Run command after the drive stops correctly.
- **During Run**
If you trigger the Safe Disable function during run, clear the Run command, then close the circuit between terminals H1-HC and H2-HC to disable “Safe Torque Off”. Enter the Stop command, then enter the Run command when terminals H1 and H2 are activated.

■ Safe Disable Monitor Output Function and Keypad Display

Refer to [Table 5.32](#) for information about the relation between the input channel status, Safety monitor output status, and drive output status.

Table 5.32 Safe Disable Input and External Device Monitor (EDM) Terminal Status

Input Channel Status		Safety Monitor Output Status		Drive Output Status	Keypad Display	READY LED	Register 0020H	
Input 1 (H1-HC)	Input 2 (H2-HC)	MFDO Terminal (H2-xx = 21)	MFDO Terminal (H2-xx = 121)				bit C	bit D
ON (Close the circuit)	ON (Close the circuit)	OFF	ON	Baseblock (Drive ready)	Normally displayed	READY: Illuminated	0	0
OFF (Open)	ON (Close the circuit)	OFF	ON	Safety status (STo)	SToF (Flashing)	ALM/ERR: Flashing	1	0
ON (Close the circuit)	OFF (Open)	OFF	ON	Safety status (STo)	SToF (Flashing)	ALM/ERR: Flashing	1	0
OFF (Open)	OFF (Open)	ON	OFF	Safety status (STo)	STo (Flashing)	READY: Flashing	0	1

Safety Function Status Monitor

The drive Safety monitor output sends a feedback signal about the status of the Safety function. The Safety monitor output is one of the possible settings available for the MFDO terminals. If there is damage to the Safe Disable circuit, a controller (PLC or safety relay) must read this signal as an input signal to hold the “Safe Torque Off” status. This will help verify the condition of the safety circuit. Refer to the manual for the safety device for more information about the Safety function.

It is possible to switch polarity of the Safety monitor output signal with the MFDO function settings. Refer to [Table 5.32](#) for setting instructions.

Keypad Display

If the two input channels are OFF (Open), the keypad will flash *STo* [Safe Torque OFF].

If there is damage to the Safe disable circuit or the drive, the keypad will flash *SToF* [Safe Torque OFF Hardware] when one input channel is OFF (Open), and the other is ON (Short circuit). When you use the Safe disable circuit correctly, the keypad will not show *SToF*.

If there is damage to the drive, the keypad will show *SCF* [Safety Circuit Fault] when the drive detects a fault in the Safe disable circuit. Refer to the chapter on Troubleshooting for more information.

■ Validating the Safe Disable Function

After you replace parts or do maintenance on the drive, complete all necessary wiring to start the drive, then follow these steps to test the Safe Disable input. Keep a record of the test results.

Note:

This validation should be performed at least once every three months in order to guarantee the specification values of the safety parameters.

1. When the two input channels are OFF (Open), make sure that the keypad flashes *STo* [Safe Torque OFF], and make sure that the motor is not running.
2. Monitor the ON/OFF status of the input channels and make sure that MFDO set to the EDM function operates as shown in [Table 5.32](#).

If one or more of the these items are true, the ON/OFF status of the MFDO may not display correctly on the keypad.

- Incorrect parameter settings.
- A problem with an external device.
- The external wiring has a short circuit or is disconnected.
- There is damage to the device.

Find the cause and repair the problem to correctly display the status.

3. Make sure that the EDM signal operates during usual operation as shown in [Table 5.32](#).

Network Communications

6.1	Section Safety	208
6.2	Ethernet Communications	209
6.3	Communications Data Table	211

6.1 Section Safety

DANGER

Do not ignore the safety messages in this manual.

If you ignore the safety messages in this manual, it will cause serious injury or death. The manufacturer is not responsible for injuries or damage to equipment.

6.2 Ethernet Communications

You can control and monitor the drive from a PLC through Ethernet communications network. The drive has a built-in Ethernet communication interface as standard.

◆ Communication LED States

Use LED label A when you use EtherCAT. Use LED label B when you use Modbus TCP/IP, EtherNet/IP, PROFINET, BACnet/IP, or MECHATROLINK-4.

A - EtherCAT

**B - ModbusTCP/IP, EtherNet/IP,
PROFINET, BACnet/IP,
MECHATROLINK-4**

Figure 6.1 Communication LED Labels

Wait 2 seconds minimum for the power-up diagnostic process to complete before you verify the LED states. [Table 6.1](#) shows the operating status of the communication LEDs after the power-up diagnostic LED sequence is complete.

Table 6.1 Communication Status LED

LED Name	Indication	ModbusTCP/IP	EtherNet/IP	PROFINET	BACnet/IP	MECHATROLINK-4	EtherCAT
MS (Module Status)	Green/Red	✓	✓	✓	✓	✓	-
NS (Network Status)	Green/Red	✓	✓	✓	✓	✓	-
RUN	Green/Red	-	-	-	-	-	✓
L/A IN (Link Activity IN)	Green	-	-	-	-	-	✓
L/A OUT (Link Activity OUT)	Green	-	-	-	-	-	✓
ERR	Red	-	-	-	-	-	✓

The LEDs on connectors CN1A and CN1B indicate the status of the physical link.

Table 6.2 Operating State LED

LED Name	Indication		Operating State
	Color	State	
10/100	-	OFF	10 Mbps is established
	Green	ON	100 Mbps is established
LINK/ACT	-	OFF	Link is not established
	Green	ON	Link is established
	Green	Flashing	Link is established and there is network activity

◆ Set Communication Protocol

Refer to Figure 6.2 and Table 6.3 and set DIP switch S1 for your communication protocol.

Note:
Remove the front cover to set DIP switch S1.

A - DIP switch S1

Figure 6.2 DIP Switch S1 Location

Table 6.3 Supported Communication Protocols and DIP Switch Settings

Communication Protocol	DIP Switch S1 Setting	Communication Protocol	DIP Switch S1 Setting
ModbusTCP/IP		PROFINET	
EtherNet/IP		BACnet/IP	
EtherCAT		MECHATROLINK-4	

6.3 Communications Data Table

The communication data types are command data, monitor data, and broadcast message. [Command Data on page 211](#), [Monitor Data on page 212](#) show the communications data.

Refer to the Parameter List for parameter communications registers.

◆ Command Data

You can read and write command data.

Note:

Set the reserved bit to 0. Do not write the data in the reserved register or the monitor register.

Table 6.4 Modbus Communications Command Data

Register No. (Hex.)	Description	
0000	Reserved	
0001	Run command, multi-function input command	
	bit 0	1: Forward run, 0: Stop
	bit 1	1: Reverse run, 0: Stop
	bit 2	External fault 1: EF0 [Ethernet External Fault]
	bit 3	Fault Reset 1: Reset command
	bit 4	Multi-function input 1 When the multi-function input command is $H1-01 = 40$ [Forward Run Command (2-Wire Seq)], bit 4 is "NetRef." Note: When you switch the bit ON as NetRef, the frequency reference source changes to Ethernet communications.
	bit 5	Multi-function input 2 When the multi-function input command is $H1-02 = 41$ [Reverse Run Command (2-Wire Seq)], bit 5 is "NetCtrl." Note: When you switch the bit ON as NetCtrl, the Run Command source changes to Ethernet communications.
	bit 6	Multi-function input 3
	bit 7	Multi-function input 4
	bit 8	Multi-function input 5
	bit 9	Multi-function input 6
	bit A	Multi-function input 7
	bit B - F	Reserved
0002	Frequency Reference	$01-03$ [Frequency Display Unit Selection] (unsigned) sets the units.
0003	Output voltage gain	Units: 0.1% Setting range: 20 (2.0%) to 2000 (200.0%), the default value at energize: 1000 (100.0%) Note: When you set $H3-xx = 41$ [MFAI Function Selection = V/f Out Gain], this command data is disabled.
0004	Torque limit (0.1% signed)	
0005	Torque compensation (0.1% signed)	
0006	PID setpoint (0.01% signed)	
0007 - 0008	Reserved	
0009	MFDO setting	
	bit 0	MFDO (terminal MA/MB-MC) 1: ON, 0: OFF
	bit 1	Ethernet DO1
	bit 2	Ethernet DO2
	bit 3 - F	Reserved

6.3 Communications Data Table

Register No. (Hex.)	Description	
000A - 000E	Reserved	
000F	Command selection setting	
	bit 0	Reserved
	bit 1	Input for the PID setpoint 1: Enables target values from Modbus
	bit 2	Torque Limit Input 1: Enables setting values from Modbus
	bit 3	Torque Compensation Input 1: Enables setting values from Modbus
	bit 4	Reserved
	bit 5	PID feedback from the Modbus 1: Enables PID feedback (15FF (Hex.)) from Modbus
	bit 6 - F	Reserved
0010 - 001F	Reserved	
15C0	bit 0	Extended multi-function input command 1
	bit 1	Extended multi-function input command 2
	bit 2	Extended multi-function input command 3
	bit 3 - F	Reserved
3004	Time Setting Setting range: 0000 to 2359 (decimal), the default value at energize: 0000 Set the hour and the minute in HHMM format. • HH: 00 to 23 (decimal) • MM: 00 to 59 (decimal)	
3005	Year and Day Setting Setting range: 1600 to 9906 (decimal), the default value at energize: 1600 Set the year and the day of the week in YYDW format. • YY: the last two digits of the year from 16 to 99 (decimal) • DW: the day of the week – Sunday: 00 – Monday: 01 – Tuesday: 02 – Wednesday: 03 – Thursday: 04 – Friday: 05 – Saturday: 06	
3006	Date Setting Setting range: 101 to 1231 (decimal), the default value at energize: 101 Set the month and the date in MMDD format. • MM: 01 to 12 (decimal) • DD: 01 to 31 (decimal)	
3007	Set the Date Information Setting range: 0 to 8 (decimal), the default value at energize: 8 Set the values specified in 3004H to 3006H as the date and time. • Command Data: 1 • Response Data: 0 (normal), 8 (fault)	

◆ Monitor Data

You can only read monitor data.

Table 6.5 Monitor Data for Modbus Communication

Register No. (Hex.)	Description	
0020	Drive Status 1	
	bit 0	During Run 1: During run, 0: During stop
	bit 1	During Reverse 1: During reverse, 0: Forward run
	bit 2	Drive ready 1: Ready, 0: Not ready
	bit 3	Fault 1: Fault
	bit 4	Data Setting Error 1: oPExx error
	bit 5	MFDO (terminal MA/MB-MC) 1: ON, 0: OFF
	bit 6	Ethernet DO1 1: ON, 0: OFF
	bit 7	Ethernet DO2 1: ON, 0: OFF
	bit 8 - B	Reserved
	bit C	SToF [Safe Torque OFF Hardware] 1: One of Safe Disable input 1 (terminal H1-HC) and Safe Disable input 2 (terminal H2-HC) is OFF (open) and the other is ON (closed)
	bit D	STo [Safe Torque OFF] 1: Both Safe Disable input 1 (terminal H1-HC) and Safe Disable input 2 (terminal H2-HC) are OFF (open)
	bit E	ComRef status 1: Enabled
	bit F	ComCtrl status 1: Enabled
0021	Fault Description 1	
	bit 0	oC [Overcurrent], GF [Ground Fault]
	bit 1	ov [Overvoltage]
	bit 2	oL2 [Drive Overload]
	bit 3	oH1 [Heatsink Overheat], oH2 [External Overheat (H1-XX=B)]
	bit 4	rH [Braking Resistor Overheat], rr [Dynamic Braking Transistor Fault]
	bit 5	Reserved
	bit 6	FbL [PID Feedback Loss], FbH [Excessive PID Feedback]
	bit 7	EF0 [Ethernet External Fault], EF1 to EF7 [External Fault]
	bit 8	CPFxx [Hardware Fault] Note: Includes oFx.
	bit 9	oL1 [Motor Overload], oL3, oL4 [Overtorque Detection 1/2], UL3, UL4 [Undertorque Detection 1/2]
	bit A	PGo [Encoder (PG) Feedback Loss], oS [Overspeed], dEv [Speed Deviation]
	bit B	During Uv [Undervoltage] detection
	bit C	Uv1 [DC Bus Undervoltage], Uv2 [Control Power Undervoltage], Uv3 [Soft Charge Answerback Fault]
	bit D	LF [Output Phase Loss], PF [Input Phase Loss]
	bit E	CE [USB Communication Error], bUS [Ethernet Communication Error]
	bit F	Reserved

6.3 Communications Data Table

Register No. (Hex.)	Description	
0022	Fault Contents	
	bit 0	1: During data writing, during motor switching
	bit 1	Reserved
	bit 2	
	bit 3	1: Upper/Lower Limit Fault
	bit 4	1: Data Integrity Fault
	bit 5	1: During EEPROM writing
	bit 6	0: EEPROM writing 1: Change data only on the RAM Note: Enabled when <i>H5-17 = 1</i> [ENTER Command Response @CPU BUSY = Write to RAM Only].
	bit 7 - F	Reserved
0023	U1-01 [Frequency Reference] Note: <i>o1-03</i> [Frequency Display Unit Selection] sets the units.	
0024	U1-02 [Output Frequency] Note: <i>o1-03</i> [Frequency Display Unit Selection] sets the units.	
0025	U1-06 [Output Voltage Ref] (units: 0.1 V) Note: Use <i>H5-10</i> [Modbus Register 0025H Unit Sel] to change the setting unit.	
0026	U1-03 [Output Current] (units: 0.1 A)	
0027	U1-08 [Output Power]	
0028	U1-09 [Torque Reference]	
0029	Fault Description 2	
	bit 0	Reserved
	bit 1	GF [Ground Fault]
	bit 2	PF [Input Phase Loss]
	bit 3	LF [Output Phase Loss]
	bit 4	rH [Braking Resistor Overheat]
	bit 5	Reserved
	bit 6	oH4 [Motor Overheat Fault (PTC Input)]
	bit 7 - F	Reserved

Register No. (Hex.)	Description	
002A	Minor Fault Description 1	
	bit 0 - 1	Reserved
	bit 2	EF [FWD/REV Run Command Input Error]
	bit 3	bb [Baseblock]
	bit 4	oL3 [Overtorque 1]
	bit 5	oH [Heatsink Overheat]
	bit 6	ov [Overvoltage]
	bit 7	Uv [Undervoltage]
	bit 8	Reserved
	bit 9	CE [USB Communication Error]
	bit A	bUS [Ethernet Communication Error]
	bit B	UL3/UL4 [Undertorque Detection 1/2]
	bit C	oH3 [Motor Overheat (PTC Input)]
	bit D	FbL [PID Feedback Loss], FbH [Excessive PID Feedback]
	bit E	Reserved
	bit F	CALL [Serial Comm Transmission Error]
002B	U1-10 [Digital Input Status]	
	bit 0	1: Control circuit terminal S1 ON
	bit 1	1: Control circuit terminal S2 ON
	bit 2	1: Ethernet DI3 ON
	bit 3	1: Ethernet DI4 ON
	bit 4	1: Ethernet DI5 ON
	bit 5	1: Ethernet DI6 ON
	bit 6	1: Ethernet DI7 ON
	bit 7 - F	Reserved

6.3 Communications Data Table

Register No. (Hex.)	Description	
002C	Drive Status 2	
	bit 0	During Run 1: During Run
	bit 1	During zero speed 1: During zero speed
	bit 2	Speed agreement 1: During agreement
	bit 3	User-defined speed agreement 1: During agreement
	bit 4	Frequency Detection 1 1: Output frequency $\leq$ L4-01
	bit 5	Frequency Detection 2 1: Output frequency $\geq$ L4-01
	bit 6	Drive ready 1: Run ready
	bit 7	During low voltage detection 1: During detection
	bit 8	During Baseblock 1: Drive output during baseblock
	bit 9	Frequency reference mode 1: No Ethernet, 0: Ethernet
	bit A	Run command mode 1: No Ethernet, 0: Ethernet
	bit B	During overtorque/undertorque 1, 2 detection
	bit C	Frequency reference loss 1: Loss
	bit D	Executing Auto-Restart 1: Restart Enabled
	bit E	Fault 1: Fault generated
	bit F	Modbus communications timeout 1: At Timeout
002D	U1-11 [Digital Output Status]	
	bit 0	MFDO (terminal MA/MB-MC) 1: ON, 0: OFF
	bit 1	Ethernet DO1 1: ON, 0: OFF
	bit 2	Ethernet DO2 1: ON, 0: OFF
	bit 3 - F	Reserved
002E	Reserved	
002F	Frequency reference bias (Up 2/Down 2 function) (Units: 0.1%)	
0030	Reserved	
0031	U1-07 [DC Bus Voltage] (unit: 1 V)	
0032	U1-09 [Torque Reference] (unit: 1%)	
0033	Reserved	
0034	Product Code 1 (2-character ASCII code), GA501 = "0A"	
0035	Product Code 2 (2-character ASCII code), GA501 = "5E"	
0036 - 0037	Reserved	
0038	PID Feedback: Unsigned, input is equivalent to 100%/maximum output frequency (Units: 0.1%)	

Register No. (Hex.)	Description	
0039	PID Input: Signed, $\pm 100\%$ / $\pm$ maximum output frequency (Units: 0.1%)	
003A	PID Output: Signed, $\pm 100\%$ / $\pm$ maximum output frequency (Units: 0.1%)	
003B - 003C	Reserved	
003D	Communications error description Note: The drive saves the description of the communications error until you reset the fault.	
	bit 0	CRC Error
	bit 1	Data Length Error
	bit 2	Reserved
	bit 3	Parity Error
	bit 4	Overrun Error
	bit 5	Framing Error
	bit 6	Timeout
	bit 7 - F	Reserved
003E	Output frequency	Units: min^{-1} or r/min Note: Set E2-04, E4-04, E5-04, E9-08 [Motor Pole Count].
003F		0.01% units
0040 - 004A	Used with U1-xx [Operation Status Monitors]. Refer to U Monitor for more information.	
004B	U1-12 [Drive Status]	
	bit 0	1: During Run
	bit 1	1: During zero speed
	bit 2	1: During reverse
	bit 3	1: During reset signal input
	bit 4	1: During speed agreement
	bit 5	1: Drive operation ready
	bit 6	1: Minor Fault
	bit 7	1: Fault
	bit 8	1: oPExx [Operation Error] generation
	bit 9	1: Recovery from momentary power loss, 0: Power recovery
	bit A	1: Motor 2 Selection
	bit B	Reserved
	bit E	ComRef status/ NetRef status
	bit F	ComCtrl status/ NetCtrl status
004C - 007E	Use with U1-xx, U4-xx, U5-xx, U6-xx [Monitors]. Refer to U Monitor for more information.	
007F	Minor fault code (Refer to "Minor fault description" for more information about the minor fault codes.)	
0080 - 0097	Use with U2-xx, U3-xx [Monitors]. Refer to "U Monitor" for more information, and refer to "Fault Trace/Fault History Descriptions" for more information about register values.	
0098 - 0099	U4-01 [Cumulative Ope Time] Example: When U4-01 [Cumulative Ope Time = 12345], 0098 (Hex.) = 1234 and 0099 (Hex.) = 5.	
009A - 009B	U4-03 [Cooling Fan Ope Time] Example: When U4-03 [Cooling Fan Ope Time = 12345], 009A (Hex.) = 1234 and 009B (Hex.) = 5.	
009C - 00AA	Reserved	

6.3 Communications Data Table

Register No. (Hex.)	Description	
00AB	Drive rated current Note: The unit of display is different for different models. B001 - B018, 2001 - 2042, and 4001 - 4023: 0.01 A 2056 - 2082, 4031 - 4060: 0.1 A	
00AC	U1-05 [Motor Speed]	Units: min^{-1} or r/min Note: Set E2-04, E4-04, E5-04, E9-08 [Motor Pole Count].
00AD		Units: 0.01%
00AE, 00AF	Reserved	
00B0	Selected Protocol	The drive stores communication protocol codes in the register. EtherCAT = 1001 (Hex.) Modbus TCP/IP = 1005 (Hex.) EtherNet/IP = 1006 (Hex.) PROFINET = 1006 (Hex.) BACnet/IP = 100C (Hex.) MECHATROLINK-4 = 100E (Hex.)
00B1 - 00B4	Reserved	
00B5	U1-16 [SFS Output Frequency]	Units: min^{-1} or r/min Note: Set E2-04, E4-04, E5-04, E9-08 [Motor Pole Count].
00B6		Units: 0.01%
00B7	Frequency reference monitor	Units: min^{-1} or r/min Note: Set E2-04, E4-04, E5-04, E9-08 [Motor Pole Count].
00B8		Units: 0.01%
00B9 - 00BE	Reserved	
00BF	Operation error number xx of oPExx is displayed.	
00C0	Fault Description 3	
	bit 0	Reserved
	bit 1	Uv1 [DC Bus Undervoltage]
	bit 2	Uv2 [Control Power Undervoltage]
	bit 3	Uv3 [Soft Charge Answerback Fault]
	bit 4	SC [Short Circuit/IGBT Failure]
	bit 5	GF [Ground Fault]
	bit 6	oC [Overcurrent]
	bit 7	ov [Overvoltage]
	bit 8	oH [Heatsink Overheat]
	bit 9	oH1 [Heatsink Overheat]
	bit A	oL1 [Motor Overload]
	bit B	oL2 [Drive Overload]
	bit C	oL3 [Overtorque Detection 1]
	bit D	oL4 [Overtorque Detection 2]
	bit E	rr [Dynamic Braking Transistor Fault]
	bit F	rH [Braking Resistor Overheat]

Register No. (Hex.)	Description	
00C1	Fault Description 4	
	bit 0	EF3 [External Flt(Ethernet Input DI3)]
	bit 1	EF4 [External Flt(Ethernet Input DI4)]
	bit 2	EF5 [External Flt(Ethernet Input DI5)]

7.1 Section Safety

DANGER

Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

Do not remove covers or touch circuit boards while the drive is energized.

If you touch the internal components of an energized drive, it will cause death or serious injury from electrical shock.

WARNING

Fire Hazard

Always ground the motor-side grounding terminal.

If you do not ground the equipment correctly, it can cause death or serious injury from fire or electrical shock when you touch the motor case.

Tighten all terminal screws to the correct tightening torque shown in this manual.

If connections are too loose or too tight, it can cause incorrect operation or damage to the terminal block. Overheated connections can cause death or serious injury from fire.

Tighten terminal screws at an angle in the specified range shown in this manual.

If you tighten the screws at an angle not in the specified range, you can have loose connections that can cause damage to the terminal block or start a fire and cause death or serious injury.

Attach the drive to metal or other noncombustible material. Do not put flammable or combustible materials on the drive and do not install the drive near flammable or combustible materials.

If you put flammable or combustible materials on the drive or install the drive near flammable or combustible materials, it can cause death or serious injury from fire.

Electrical Shock Hazard

Reattach the covers and safety shields before you operate the drive. Do not operate the drive with covers removed. Use the drive only as specified in this manual.

Some figures in this manual include drives without covers or safety shields to more clearly show the inside of the drive. If you operate the drive without covers and safety shields, it can cause death or serious injury from electrical shock.

After the drive blows a fuse or trips a GFCI, do not immediately energize the drive or operate peripheral devices. Wait for the time specified on the warning label at a minimum and make sure that all indicators are OFF. Then check the wiring and peripheral device ratings to find the cause of the problem. If you do not know the cause of the problem, contact Yaskawa before you energize the drive or peripheral devices.

If you do not fix the problem before you operate the drive or peripheral devices, it can cause serious injury or death.

Only let authorized personnel install, wire, maintain, examine, replace parts, and repair the drive.

If personnel are not approved, it can cause death or serious injury from electrical shock or fire.

⚠ WARNING

Do not wear loose clothing and make sure that you remove all metal objects, for example watches or rings, when you wire, examine, and repair the drive.

Loose clothing can catch on the drive and jewelry can conduct electricity and cause death or serious injury from electrical shock.

Do not make changes that are not given in this manual and do not make modifications to the drive.

If you make changes or modifications to the drive, it can cause death or serious injury from electrical shock. Changes not given in this manual and modifications to the drive will cause damage to the drive, and will void the warranty. Yaskawa is not responsible for modifications to the product made by the user.

Sudden Movement Hazard

Do not install or remove the motor while the drive is outputting voltage.

If you install or remove the motor while the drive is outputting voltage, the motor can rotate suddenly and can cause death or serious injury.

Crush Hazard

Wear eye protection before you maintain and inspect the drive, or replace parts.

If you do not wear eye protection, it can cause serious injury from flying objects.

Use a crane or hoist to move large drives when necessary.

If you try to move a large drive without a crane or hoist, it can cause serious injury or death.

Damage to Equipment

Do not apply incorrect voltage to the main circuit of the drive. Operate the drive in the specified range of the input voltage on the drive nameplate.

Voltages that are higher than the permitted nameplate tolerance can cause damage to the drive.

NOTICE**Damage to Equipment**

When you touch the drive and circuit boards, make sure that you observe correct electrostatic discharge (ESD) procedures.

If you do not follow procedures, it can cause ESD damage to the drive circuitry.

Make sure that all connections are correct after you install the drive and connect peripheral devices.

Incorrect connections can cause damage to the drive.

Note:

Do not use unshielded wire for control wiring. Use shielded, twisted-pair wires and ground the shield to the ground terminal of the drive. Unshielded wire can cause electrical interference and unsatisfactory system performance.

7.2 Types of Faults, Minor Faults, Alarms, and Errors

If the drive or motor do not operate correctly, check the drive keypad for a code or message.

If problems occur that are not identified in this manual, contact the nearest Yaskawa representative with this information:

- Drive model
- Drive software version
- Date of purchase
- Description of the problem (for example failure conditions and modified parameters)

Table 7.1 contains descriptions of the different types of faults, minor faults, alarms, and errors that can occur during drive operation.

Table 7.1 Types of Faults, Minor Faults, Alarms, and Errors

Type	Drive Response
Fault	When the drive detects a fault, it will cause these conditions: • The keypad shows the fault code, and ALM/ERR stays illuminated. • The drive shuts off output, and the motor coasts to a stop. Some faults let the user select a motor stopping method. • The terminal set to <i>H2-01 to H2-03 = E [MFDO Function Selection = Fault]</i> will activate. The drive will not operate until you clear the fault with a Fault Reset and the drive goes back to usual status.
Minor Faults/Alarms	When the drive detects a minor fault or an alarm, it will cause these conditions: • The keypad shows the alarm code, and ALM/ERR flashes. • The drive will continue to operate the motor. Some alarms let you select a motor stopping method. • If the drive detects a minor fault and sets a corresponding bit, the terminal set to <i>H2-01 to H2-03 = 10 [Alarm]</i> will activate. If you do not set parameters <i>H2-01 to H2-03</i>, the drive will not trigger Ethernet DO if it detects a minor fault. • The drive will not output a minor fault signal if it detects an alarm. It is not necessary to do Fault Reset.
Operation Errors	An error occurs when parameter settings do not agree or a parameter combination is incorrect. The drive will not operate until you set the parameters correctly. When the drive detects an operation error, these conditions will result: • The keypad shows the error code. • Multi-function outputs do not output an alarm signal. Find the parameters that caused the error and correct the settings.
Auto-Tuning Error	An error occurs during Auto-Tuning. When the drive detects an operation error, it will cause these conditions: • The keypad shows the error code. • Multi-function outputs do not output an alarm signal. • The motor coasts to stop. Remove the cause of the error and do Auto-Tuning again.
Copy Function Error	An error occurs when you use the keypad for a backup, restore, or verify operation. When the drive detects a copy function error, it will cause these conditions: • The keypad shows the error code. • Multi-function outputs do not output an alarm signal. Push a key on the keypad to clear the error. Remove the cause of the error and try the backup, restore, or verify operation again.

7.3 List of Fault, Minor Fault, Alarm, and Error Codes

Table 7.2 shows the possible fault, minor fault, alarm, and error codes.

The display codes are in alphabetical order. Search the table for the code shown on the keypad, and identify its causes and possible solutions.

Note:

The number in parentheses adjacent to the code in the table identifies the fault code or minor fault code (hex. number) that was read during Modbus communications.

Example: AEr (0032)

Table 7.2 List of Fault, Minor Fault, Alarm, and Error Codes

Display (Hex.)	Name	ALM LED	Type	Ref.
AEr (0032)	Station Address Setting Error	Flashing	Alarm	260
bAT (0085)	Keypad Battery Low Voltage	Flashing	Alarm	260
bAT (0402)	Keypad Battery Low Voltage	Illuminated	Fault	238
bb (0008)	Baseblock	Flashing	Alarm	260
bCE (008A)	Bluetooth Communication Error	Flashing	Alarm	260
bCE (0416)	Bluetooth Communication Fault	Illuminated	Fault	238
boL (0045)	Braking Transistor Overload	Flashing	Alarm	260
boL (004F)	Braking Transistor Overload Fault	Illuminated	Fault	238
bUS (0015)	Ethernet Communication Error	Flashing	Alarm	260
bUS (0022)	Ethernet Communication Error	Illuminated	Fault	238
bUSy	Busy	-	Not an alarm.	261
CALL (001D)	Serial Comm Transmission Error	Flashing	Alarm	261
CE (0014)	USB Communication Error	Flashing	Alarm	261
CE (0021)	USB Communication Error	Illuminated	Fault	238
CF (0025)	Control Fault	Illuminated	Fault	239
CoF (0046)	Current Offset Fault	Illuminated	Fault	239
CP1 (0087)	Comparator 1 Limit Fault	Flashing	Alarm	261
CP1 (0414)	Comparator 1 Limit Fault	Illuminated	Fault	239
CP2 (0088)	Comparator 2 Limit Fault	Flashing	Alarm	261
CP2 (0415)	Comparator 2 Limit Fault	Illuminated	Fault	239
CPEr	Control Mode Mismatch	-	Backup Function Runtime Error	278
CPF00	Control Circuit Error	Illuminated	Fault	240
CPF01	Control Circuit Error	Illuminated	Fault	240
CPF02, CPF03 (0083, 0084)	Control Circuit Error	Illuminated	Fault	240, 240
CPF06 (0087)	Control Circuit Error (EEPROM Memory Data Error)	Illuminated	Fault	240
CPF08 (0089)	Terminal Board Connection Error	Illuminated	Fault	240
CPF11 - CPF14 (008C - 008F)	Control Circuit Error	Illuminated	Fault	240 - 241
CPF16 - CPF24 (0091 - 0099)	Control Circuit Error	Illuminated	Fault	241 - 242
CPF38 (00A7)	EEPROM Memory Data Error	Illuminated	Fault	242
CPyE	Error Writing Data	-	Backup Function Runtime Error	278
CrST	Remove RUN Command to Reset	Flashing	Not an alarm.	261
CSEr	Control Mode Mismatch	-	Backup Function Runtime Error	278
CyC (0033)	MECHATROLINK CommCycleSettingErr	Flashing	Alarm	262
CyPo (0029)	Cycle Power to Accept Changes	Flashing	Alarm	262

7.3 List of Fault, Minor Fault, Alarm, and Error Codes

Display (Hex.)	Name	ALM LED	Type	Ref.
dCE1 (041A)	Communication Error1	Illuminated	Fault	242
dCE2 (041B)	Communication Error2	Illuminated	Fault	242
dEv (0011)	Speed Deviation	Flashing	Alarm	262
dEv (0019)	Speed Deviation	Illuminated	Fault	242
dFPS	Drive Model Mismatch	-	Backup Function Runtime Error	278
dnE (002A)	Drive Disabled	Flashing	Alarm	262
dv7 (005B)	Polarity Judge Timeout	Illuminated	Fault	243
dWA2 (004A)	DriveWorksEZ Alarm 2	Flashing	Alarm	262
dWA3 (004B)	DriveWorksEZ Alarm 3	Flashing	Alarm	262
dWAL (0049)	DriveWorksEZ Alarm	Flashing	Alarm	262
dWF1 (004A)	EEPROM Memory DWEZ Data Error	Illuminated	Fault	243
dWF2 (004B)	DriveWorksEZ Fault 2	Illuminated	Fault	243
dWF3 (004C)	DriveWorksEZ Fault 3	Illuminated	Fault	243
dWFL (0049)	DriveWorksEZ Fault	Illuminated	Fault	243
E5 (0031)	MECHATROLINK Watchdog Timer Err	Flashing	Alarm	262
E5 (0039)	MECHATROLINK Watchdog Timer Err	Illuminated	Fault	243
EF (0007)	FWD/REV Run Command Input Error	Flashing	Alarm	262
EF0 (001A)	Ethernet External Fault	Flashing	Alarm	263
EF0 (0027)	Ethernet External Fault	Illuminated	Fault	243
EF1 (0042)	External Fault (Terminal S1)	Illuminated	Fault	243
EF1 (0039)	External Fault (Terminal S1)	Flashing	Alarm	263

vFyE	Parameters do not Match	-	Backup Function Runtime Error	279

7.4 Fault

This section gives information about some of the causes and possible solutions of faults. You must use the Fault Reset operation to remove the fault before you can operate the drive. Use the information in this table to remove the cause of the fault.

Code	Name	Causes	Possible Solutions
bAT	Keypad Battery Low Voltage	The keypad battery voltage is low.	Replace the keypad battery.
Note: Use o4-24 [bAT Detection Selection] to enable/disable bAT detection.			
Code	Name	Causes	Possible Solutions
bCE	Bluetooth Communication Fault	The smartphone or tablet with DriveWizard Mobile installed is too far from the keypad.	Use the smartphone or tablet 10 m (32.8 ft) or nearer to the keypad. Note: bCE can occur when the smartphone or tablet is 10 m (32.8 ft) or nearer to the keypad depending on the specifications of the smartphone or tablet.
		Radio waves from a different device are causing interference with communications between the smartphone or tablet and keypad.	Make sure that no device around the keypad uses the same radio bandwidth (2400 MHz to 2480 MHz), and prevent radio interference.
Note: - The drive detects this error when you use the Bluetooth LCD keypad and operate the drive with a smartphone or tablet. - Do a Fault Reset to clear the fault. - Set the stopping method for this fault in o2-27 [bCE Detection Selection].			
Code	Name	Causes	Possible Solutions
boL	BrakingTransistor Overload Fault	The duty cycle of the braking transistor is high (the regeneration power or repetition frequency is high).	- Install a regenerative converter. - Increase the deceleration time.
		You enabled the protective function for the braking transistor when you have a regenerative converter.	Set L8-55 = 0 [Internal DB TransistorProtection Selection = Disable].
		The braking transistor in the drive is broken.	Replace the drive.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
bUS	Ethernet Communication Error	The drive did not receive a signal from the controller.	Correct wiring errors.
		The communications cable wiring is incorrect.	
		There is a short-circuit in the communications cable or the communications cable is not connected.	- Repair short circuits and connect cables. - Replace the defective communications cable.
		Electrical interference caused a communication data error.	- Examine the control circuit lines, main circuit lines, and ground wiring, and decrease the effects of electrical interference. - Make sure that a magnetic contactor is not the source of the electrical interference, then use a Surge Protective Device if necessary. - Use only the recommended cables or other shielded line. Ground the shield on the controller side or the drive input power side. - Separate the communication wiring from drive power lines, and install a noise filter to the input side of the power supply for communication. - Decrease the effects of electrical interference from the controller.
		CN1A or CN1B ports on the drive is damaged.	If the fault continues and the wiring is correct, replace the drive control circuit boards. Contact Yaskawa or your nearest sales representative for more information.
Note: - The drive detects this error if the Run command or frequency reference is assigned to Ethernet. - Do a Fault Reset to clear the fault. - If the drive detects this error, the drive will operate the motor as specified by the stopping method set in F6-01 [Communication Error Selection].			
Code	Name	Causes	Possible Solutions
CE	USB Communication Error	The communications cable wiring is incorrect.	Correct wiring errors.
		There is a short circuit in the communications cable or the communications cable is not connected.	- Repair short circuits and connect cables. - Replace the defective communications cable.

Code	Name	Causes	Possible Solutions
		Electrical interference caused a communication data error.	- Examine the control circuit lines, main circuit lines, and ground wiring, and decrease the effects of electrical interference. - Make sure that a magnetic contactor is not the source of the electrical interference, then use a Surge Protective Device if necessary. - Use only the recommended cables or other shielded line. Ground the shield on the controller side or the drive input power side. - Separate the communication wiring from drive power lines, and install a noise filter to the input side of the power supply for communication. - Decrease the effects of electrical interference from the controller.
Note: - The drive detects this fault if it does not correctly receive control data for 2.0 s. - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
CF	Control Fault	Motor parameters are set incorrectly	Correctly set the motor parameters and do Auto-Tuning again.
		The torque limit setting is too low.	Adjust <i>L7-01</i> to <i>L7-04</i> [Torque Limit].
		The load inertia is too large.	- Adjust <i>C1-02</i>, <i>C1-04</i>, <i>C1-06</i>, and <i>C1-08</i> [Deceleration Times]. - Set the frequency reference to the minimum output frequency, and stop the Run command when the drive stops deceleration.
		The drive is trying to ramp to stop a machine that cannot do ramp to stop or on a machine for which deceleration is not necessary.	Correctly set <i>b1-03</i> [Stopping Method Selection].
		The motor and drive are connected incorrectly.	Correct wiring errors.
		Line-to-line Resistance Tuning is not done.	Do Stationary Auto-Tuning for Line-to-Line Resistance.
		The drive received a Run command while the motor was coasting.	- Examine the sequence and input the Run command after the motor fully stops. - Set <i>b3-01</i> = 1 [Speed Search at Start Selection = Enabled].
Note: - The drive detects this error if the torque reference is more than the torque limit for 3 seconds or longer while the drive ramps to stop. - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
CoF	Current Offset Fault	The drive starts operation while the induced voltage stays in the motor (during coasting to a stop or after fast deceleration).	- Make a sequence that does not restart operation when induced voltage stays in the motor. - Set <i>b3-01</i> = 1 [Speed Search at Start Selection = Enabled]. - Use <i>Speed Search from Fmax</i> or <i>Fref</i> [<i>H1-xx</i> = 61, 62] to do a speed search through one of the external terminals. Note: When controlling the PM motor, External Speed Search commands 1 and 2 operate the same.
		A drive hardware problem occurred.	- Do a Fault Reset to clear the fault or de-energize the drive. - If the fault stays, replace the drive.
Code	Name	Causes	Possible Solutions
CP1	Comparator 1 Limit Error	The monitor value set in <i>H2-20</i> [Comparator 1 Monitor Selection] was in the range of <i>H2-21</i> [Comparator 1 Lower Limit] and <i>H2-22</i> [Comparator 1 Upper Limit].	Examine the monitor value and remove the cause of the fault.
Note: - The drive detects this error when <i>H2-01</i> to <i>H2-03</i> = 66 [MFDO Function Selection = Comparator1]. - Do a Fault Reset to clear the fault. - Set the stopping method for this fault in <i>H2-33</i> [Comparator1 Protection Selection].			
Code	Name	Causes	Possible Solutions
CP2	Comparator 2 Limit Error	The monitor value set in <i>H2-26</i> [Comparator 2 Monitor Selection] was outside the range of <i>H2-27</i> [Comparator 2 Lower Limit] and <i>H2-28</i> [Comparator 2 Upper Limit].	Examine the monitor value and remove the cause of the fault.
Note: - The drive detects this error when <i>H2-01</i> to <i>H2-03</i> = 67 [MFDO Function Selection = Comparator2]. - Do a Fault Reset to clear the fault. - Set the stopping method for this fault in <i>H2-35</i> [Comparator2 Protection Selection].			

7.4 Fault

Code	Name	Causes	Possible Solutions
CPF00	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF01	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF02	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF03	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF06	Control Circuit Error (EEPROM memory Data Error)	The drive power supply was de-energized while the drive entered a parameter Write command.	Set <i>A1-03 = 2220</i> [<i>Initialize Parameters = 2-Wire Initialization</i>] and initialize the drive.
		An EEPROM peripheral circuit error occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about how to replace the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this error if there is an error in the data written to the drive EEPROM. - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF08	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF11	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF12	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			

Code	Name	Causes	Possible Solutions
CPF13	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF14	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF16	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF17	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF18	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF19	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF20	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF21	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			

7.4 Fault

Code	Name	Causes	Possible Solutions
CPF22	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF23	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF24	Control Circuit Error (Drive Unit Signal Fault)	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
CPF25	Terminal Board not Connected	The terminal board is not correctly connected to the drive.	- De-energize the drive. - Correctly connect the terminal board to the drive. - Re-energize the drive.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
CPF38	Control Circuit Error	A drive hardware problem occurred.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
dCE1	Communication Error1	A drive hardware problem occurred temporarily due to noise.	- Remove the cause of the noise. - If the fault stays, replace the control board or the drive.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
dCE2	Communication Error2	A drive hardware problem occurred temporarily due to noise.	- Remove the cause of the noise. - If the fault stays, replace the control board or the drive.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
dEv	Speed Deviation	The load is too heavy.	Decrease the load.
		Acceleration and deceleration times are set too short.	Increase the values set in <i>CI-01</i> to <i>CI-08</i> [<i>Acceleration/Deceleration Time</i>].
		The <i>dEv</i> detection level settings are incorrect.	Adjust <i>F1-10</i> [<i>Speed Deviation Detection Level</i>] and <i>F1-11</i> [<i>Speed Deviation Detect DelayTime</i>].
		The load is locked up.	Examine the machine.
		The holding brake is stopping the motor.	Release the holding brake.
Note: - The drive detects this error if the difference between the detected speed and the speed reference is more than the setting of <i>F1-10</i> for longer than <i>F1-11</i>. - Do a Fault Reset to clear the fault. - If the drive detects this error, the drive will operate the motor as specified by the stopping method set in <i>F1-04</i> [<i>Speed Deviation Detection Select</i>].			

Code	Name	Causes	Possible Solutions
dv7	Polarity Judge Timeout	There is a disconnection in the motor coil winding.	Measure the motor line-to-line resistance and replace the motor if a coil is disconnected.
		The screws on the drive output terminals are loose.	Tighten the terminal screws to the correct tightening torque.
Note: - The drive detects this error if it cannot detect polarity in a pre-set length of time. - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
dWF1	EEPROM Memory DWEZ Data Error	There is an error in the EEPROM peripheral circuit.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
		There is a problem with the EEPROM data.	Set <i>A1-03 = 2220 [Initialize Parameters = 2-Wire Initialization]</i> to initialize the drive, then upload the DriveWorksEZ project to the drive again.
Note: - The drive detects this error if there is an error in the DriveWorksEZ program that was saved to EEPROM. - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
dWF2	DriveWorksEZ Fault 2	There was a fault in the DriveWorksEZ program.	Examine the DriveWorksEZ program and remove the cause of the fault. This is not a drive fault.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
dWF3	DriveWorksEZ Fault 3	There was a fault in the DriveWorksEZ program.	Examine the DriveWorksEZ program and remove the cause of the fault. This is not a drive fault.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
dWFL	DriveWorksEZ Fault	There was a fault in the DriveWorksEZ program.	Examine the DriveWorksEZ program and remove the cause of the fault. This is not a drive fault.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
E5	MECHATROLINK Watchdog Timer Err	The drive detected a watchdog circuit exception while it received data from the controller.	Examine the MECHATROLINK cable connection. If this error occurs frequently, examine the wiring and decrease the effects of electrical interference as specified by these manuals: - MECHATROLINK-4 Installation Guide (MECHATROLINK Members Association, manual number MMATDEP011) - MECHATROLINK-4 Installation Manual (MECHATROLINK Members Association, publication number MMATDEP018)
Note: - Do a Fault Reset to clear the fault. - If the drive detects this fault, it will operate the motor as specified by the stop method set in <i>F6-25 [MECHATROLINK Watchdog Error Sel]</i>.			
Code	Name	Causes	Possible Solutions
EF0	Ethernet External Fault	The drive received an external fault from the controller.	- Find the device that caused the external fault and remove the cause. - Clear the external fault input from the controller.
		A programming error occurred on the controller side.	Examine the operation of the controller program.
Note: - The drive detects this fault if the alarm function on the external device side is operating. - Do a Fault Reset to clear the fault. - If the drive detects this fault, it will operate the motor as specified by the stop method set in <i>F6-03 [Comm External Fault (EF0) Select]</i>.			
Code	Name	Causes	Possible Solutions
EF1	External Fault (Terminal S1)	MFDI terminal S1 caused an external fault through an external device.	- Find the device that caused the external fault and remove the cause. - Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to MFDI terminal S1.
		<i>External Fault [H1-01 = 20 to 2B]</i> is set to MFDI terminal S1, but the terminal is not in use.	Correctly set the MFDI.
Note: Do a Fault Reset to clear the fault.			

7.4 Fault

Code	Name	Causes	Possible Solutions
EF2	External Fault (Terminal S2)	MFDI terminal S2 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to MFDI terminal S2.
		External Fault [H1-02 = 20 to 2B] is set to MFDI terminal S2, but the terminal is not in use.	Correctly set the MFDI.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
EF3	External Flt(Ethernet Input DI3)	Ethernet DI3 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to Ethernet DI3.
		External Fault [H1-03 = 20 to 2B] is set to Ethernet DI3, but the Ethernet is not in use.	Correctly set the MFDI.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
EF4	External Flt(Ethernet Input DI4)	Ethernet DI4 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to Ethernet DI4.
		External Fault [H1-04 = 20 to 2B] is set to Ethernet DI4, but the terminal is not in use.	Correctly set the MFDI.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
EF5	External Flt(Ethernet Input DI5)	Ethernet DI5 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to Ethernet DI5.
		External Fault [H1-05 = 20 to 2B] is set to Ethernet DI5, but the terminal is not in use.	Correctly set the MFDI.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
EF6	External Flt(Ethernet Input DI6)	Ethernet DI6 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to Ethernet DI6.
		External Fault [H1-06 = 20 to 2B] is set to Ethernet DI6, but the terminal is not in use.	Correctly set the MFDI.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
EF7	External Flt(Ethernet Input DI7)	Ethernet DI7 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to Ethernet DI7.
		External Fault [H1-07 = 20 to 2B] is set to Ethernet DI7, but the terminal is not in use.	Correctly set the MFDI.
Note: Do a Fault Reset to clear the fault.			

Code	Name	Causes	Possible Solutions
Err	EEPROM Write Error	There was a problem with the EEPROM hardware.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. Contact Yaskawa or your nearest sales representative to replace the board.
		Electrical interference corrupted the data while it was writing to the EEPROM of the drive.	- Push ENTER Key. - Set the parameters again.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
FbH	Excessive PID Feedback	The <i>FbH</i> detection level is set incorrectly.	Adjust <i>b5-36 [PID High Feedback Detection Lvl]</i> and <i>b5-37 [PID High Feedback Detection Time]</i> .
		There is a problem with the PID feedback wiring.	Correct errors with the PID control wiring.
		The feedback sensor is not operating correctly.	Examine the sensors on the control device side.
		A fault occurred in the feedback input circuit of the drive.	Replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this fault if the PID feedback input is more than the level set in <i>b5-36</i> for longer than <i>b5-37</i>. - Do a Fault Reset to clear the fault. - If the drive detects this fault, it will operate the motor as specified by the stop method set in <i>b5-12 [Feedback Loss Detection Select]</i>.			
Code	Name	Causes	Possible Solutions
FbL	PID Feedback Loss	The <i>FbL</i> detection level is set incorrectly.	Adjust <i>b5-13 [PID Feedback Loss Detection Lvl]</i> and <i>b5-14 [PID Feedback Loss Detection Time]</i> .
		There is a problem with the PID feedback wiring.	Correct errors with the PID control wiring.
		The feedback sensor is not operating correctly.	Examine the sensors on the control device side.
		A fault occurred in the feedback input circuit of the drive.	Replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this fault if the PID feedback input is more than the level set in <i>b5-13</i> for longer than <i>b5-14</i>. - Do a Fault Reset to clear the fault. - If the drive detects this fault, it will operate the motor as specified by the stop method set in <i>b5-12 [Feedback Loss Detection Select]</i>.			
Code	Name	Causes	Possible Solutions
GF	Ground Fault	Overheating caused damage to the motor or the motor insulation is not satisfactory.	Measure the motor insulation resistance, and replace the motor if there is electrical conduction or unserviceable insulation.
		The motor main circuit cable is contacting ground to make a short circuit.	- Examine the motor main circuit cable for damage, and repair short circuits. - Measure the resistance between the motor main circuit cable and the ground terminal. If there is electrical conduction, replace the cable.
		An increase in the stray capacitance of the cable and the ground terminal caused an increase in the leakage current.	- If the wiring length of the cable is more than 100 m, decrease the carrier frequency. - Decrease the stray capacitance.
		There was a problem with the drive hardware.	Replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this fault if a current short to ground was more than 50% of rated current on the output side of the drive. - Do a Fault Reset to clear the fault. <i>L5-08 [Fault Reset Enable Select Grp2]</i> disables the Auto Restart function.			
Code	Name	Causes	Possible Solutions
LF	Output Phase Loss	The motor main circuit cable is disconnected.	Connect motor main circuit cable wiring. Correct wiring errors in the main circuit drive input power.
		There is a disconnection in the motor coil winding.	If a coil is disconnected, measure the motor Line-to-Line Resistance and replace the motor.
		The screws on the drive output terminals are loose.	Tighten the terminal screws to the correct tightening torque.
		The rated output current of the motor is less than 5% of the drive rated current.	Examine the drive capacity or the motor output to be applied.
		You are trying to use a single-phase motor.	The drive cannot operate a single-phase motor.

7.4 Fault

Code	Name	Causes	Possible Solutions
		The output transistor in the drive is damaged.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this fault if phase loss occurs on the output side of the drive. - Do a Fault Reset to clear the fault. - Set <i>L8-07 [Output Phase Loss Protection Sel]</i> to enable and disable <i>LF</i> detection.			
Code	Name	Causes	Possible Solutions
LF2	Output Current Imbalance	Phase loss occurred in the wiring on the output side of the drive.	Examine for wiring errors or disconnected wires on the output side of the drive, and repair problems.
		The output terminal screws of the drive are loose.	Tighten the terminal screws to the correct tightening torque.
		There is not balance between the three phases of the PM motor impedance.	- Measure the Line-to-Line Resistance for each motor phase and make sure that resistance is equal in the three phases, and that all wires are connected correctly. - Replace the motor.
		The drive output circuit is broken.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this fault if there is not balance between the three phases of the output current from the PM motor. - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
LSo	Low Speed Motor Step-Out	The motor code set incorrectly.	- Set <i>E5-01 [PM Motor Code Selection]</i> correctly as specified by the motor. - For specialized motors, refer to the motor test report and set <i>E5-xx</i> correctly.
		The load is too large.	- Decrease the load. - Replace the drive and motor with larger capacity models.
		An external force on the load side caused the motor to move at start.	Find and repair problems on the load side that cause the motor to rotate from the load side.
		The drive incorrectly detected the motor magnetic pole position.	- Set <i>b3-01 = 1 [Speed Search at Start Selection = Enabled]</i>. - If the value for <i>U6-57 [PolePolarityDeterVal]</i> is lower than 819, increase the value set in <i>n8-84 [Polarity Detection Current]</i>. Consult the motor manufacturer for information about maximum setting values.
		The setting of <i>n8-84 [Polarity Detection Current]</i> is too low.	Increase the n8-84 setting from the default. Consult the motor manufacturer for information about maximum setting values.
		Incorrect values set in <i>L8-93 [Low Speed Pull-out DetectionTime]</i> , <i>L8-94 [Low Speed Pull-out Detect Level]</i> , and <i>L8-95 [Low Speed Pull-out Amount]</i> .	Increase the values set in <i>L8-93</i> to <i>L8-95</i> .
		The drive incorrectly detected the motor magnetic pole position.	If you are using an IPM motor, do High Frequency Injection Auto-Tuning.
Note: - The drive detects this fault if it detects step-out while running at low speed. - Do a Fault Reset to clear the fault. <i>LSo</i> is a protective function that stops the motor and stops the reverse run if a motor without a motor code incorrectly detects the initial polarity. To quickly detect motor reversal, decrease the values set in <i>L8-93</i> to <i>L8-95</i> to a range in which the drive does not malfunction.			
Code	Name	Causes	Possible Solutions
oC	Overcurrent	The load is too heavy.	- Measure the current flowing into the motor. - Replace the drive with a larger capacity model if the current value is more than the drive rated current. - Decrease the load or replace with a larger drive to prevent sudden changes in the current level.
		Overheating caused damage to the motor or the motor insulation is not satisfactory.	Measure the motor insulation resistance, and replace the motor if there is electrical conduction or unserviceable insulation.
		The motor main circuit cable is contacting ground to make a short circuit.	- Examine the motor main circuit cable for damage, and repair short circuits. - Measure the resistance between the motor main circuit cable and the ground terminal. If there is electrical conduction, replace the cable.
		A short circuit or ground fault on the drive output side caused damage to the output transistor of the drive.	- Make sure that there is not a short circuit in terminal B1 and terminals U/T1, V/T2, and W/T3. Make sure that there is not a short circuit in terminals - and terminals U/T1, V/T2, and W/T3. - If there is a short circuit, contact Yaskawa or your nearest sales representative.

Code	Name	Causes	Possible Solutions
		The acceleration time is too short.	- Calculate the torque necessary during acceleration related to the load inertia and the specified acceleration time. - Increase the values set in <i>C1-01</i>, <i>C1-03</i>, <i>C1-05</i>, or <i>C1-07</i> [Acceleration Times] to get the necessary torque. - Increase the values set in <i>C2-01</i> to <i>C2-04</i> [S-Curve Characteristics] to get the necessary torque. - Replace the drive with a larger capacity model.
		The drive is trying to operate a specialized motor or a motor that is larger than the maximum applicable motor output of the drive.	- Examine the motor nameplate, the motor, and the drive to make sure that the drive rated current is larger than the motor rated current. - Replace the drive with a larger capacity model.
		A magnetic contactor was switched at the output.	Set the operation sequence to not turn ON or OFF the magnetic contactor while the drive is outputting voltage.
		The V/f pattern settings are incorrect.	- Examine the ratios between the V/f pattern frequency and voltage. Decrease the voltage if it is too high compared to the frequency. - Adjust <i>E1-04</i> to <i>E1-10</i> [V/f Pattern Parameters]. For motor 2, adjust <i>E3-04</i> to <i>E3-10</i>.
		The torque compensation gain is too large.	Decrease the value set in <i>C4-01</i> [Torque Compensation Gain] to make sure that the motor does not stall.
		Electrical interference caused a problem.	Examine the control circuit lines, main circuit lines, and ground wiring, and decrease the effects of electrical interference.
		The gain during overexcitation operation is too large.	- Find the time when the fault occurs. - If the fault occurs at the same time as overexcitation operation, decrease the value set in <i>n3-13</i> [OverexcitationBraking (OEB) Gain] and consider the motor flux saturation.
		The drive received a Run command while the motor was coasting.	- Examine the sequence and input the Run command after the motor fully stops. - Set <i>b3-01</i> = 1 [Speed Search at Start Selection = Enabled] or set <i>H1-xx</i> = 61, 62 [Speed Search from Fmax or Fref] to input speed search commands from the MFDI terminals.
		In PM Control Methods, the setting of the motor code is incorrect.	- Enter the correct motor code to <i>E5-01</i> [PM Motor Code Selection] as specified by the PM motor. - For specialized motors, refer to the motor test report and set <i>E5-xx</i> [PM Motor Settings] correctly.
		If the drive detects the fault at start or in the low speed range (10% or less) and <i>n8-57</i> = 1 [HFI Overlap Selection = Enabled] for PM Control methods, the high frequency injection gain is too high.	- Set <i>E5-xx</i> [PM Motor Parameters] correctly or do Rotational Auto-Tuning. - Decrease the value of <i>n8-41</i> [HFI P Gain] in 0.5-unit increments. Note: Set <i>n8-41</i> > 0.0 for IPM motors.
		The control method is set incorrectly for the motor.	Set <i>A1-02</i> [Control Method Selection] correctly.
		The motor main circuit cable is too long.	- Replace the drive with a larger capacity model. - Decrease <i>C6-02</i> [Carrier Frequency]. Or set <i>C6-02</i> = B.
		Speed search does not complete at start when you set <i>A1-02</i> = 8 [EZ Vector Control] and use an induction motor.	When <i>E9-01</i> = 0 [Motor Type Selection = Induction (IM)], set <i>b3-24</i> = 2 [Speed Search Method Selection = Current Detection Speed Search].
		An overcurrent occurred during overexcitation deceleration.	- Decrease the value set in <i>n3-13</i> [OverexcitationBraking (OEB) Gain]. - Decrease the value set in <i>n3-21</i> [HSB Current Suppression Level].
When you use an IE3 premium efficiency motor.	Use these values to adjust the parameters. <i>b3-03</i> [Speed Search Deceleration Time] = default value × 2 <i>L2-03</i> [Minimum Baseblock Time] = default value × 2 <i>L2-04</i> [Powerloss V/f Recovery Ramp Time] = default value × 2		
Note: - This fault occurs if the drive sensors detect a drive output current more than the specified overcurrent detection level. - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oC2	Overcurrent2	When <i>A1-02</i> = 5, 6, 8 [Control Method Selection = OLV/PM, AOLV/PM, or EZOLV], the output current is more than the value set in <i>L8-27</i> [Overcurrent Detection Gain].	Correct the value set in <i>L8-27</i> .
Note: - This fault occurs if the drive sensors detect a drive output current more than the specified overcurrent detection level. - Do a Fault Reset to clear the fault.			

7.4 Fault

Code	Name	Causes	Possible Solutions
oFA00	Ethernet Not Compatible	The fieldbus network connected to connector CN1A or CN1B is not compatible.	Connect a correct fieldbus network.
Note: - Do a Fault Reset to clear the fault. - Fault trace is not available for these faults.			
Code	Name	Causes	Possible Solutions
oFA01	Ethernet Fault/Connection Error	You changed the fieldbus network connected to connector CN1A, CN1B during operation.	- De-energize the drive. - Set DIP Switch S1 correctly.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA03	Diagnostic Error	A fault occurred in the connector connected to CN1A or CN1B.	- De-energize the drive. - Make sure that the connector is correctly connected to the connector. - Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA04	Flash Write Mode	A fault occurred in the connector connected to CN1A or CN1B.	- De-energize the drive. - Make sure that the connector is correctly connected to the connector. - Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA05	Ethernet A/D Error	A fault occurred in the connector connected to CN1A or CN1B.	- De-energize the drive. - Make sure that the connector is correctly connected to the connector. - Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA06	Ethernet Communication Error	A fault occurred in the connector connected to CN1A or CN1B.	- De-energize the drive. - Make sure that the connector is correctly connected to the connector. - Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA10	Ethernet RAM Error	A fault occurred in the connector connected to CN1A or CN1B.	- De-energize the drive. - Make sure that the connector is correctly connected to the connector. - Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA11	Ethernet Ope Mode Error	A fault occurred in the connector connected to CN1A or CN1B.	- De-energize the drive. - Make sure that the connector is correctly connected to the connector. - Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			

Code	Name	Causes	Possible Solutions
oFA12	Drive Receive CRC Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA13	Drive Receive Frame Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA14	Drive Receive Abort Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA15	Ethernet Receive CRC Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA16	Ethernet Receive Frame Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA17	Ethernet Receive Abort Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA30	COM ID Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA31	Type Code Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			

7.4 Fault

Code	Name	Causes	Possible Solutions
oFA32	SUM Check Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA33	Ethernet Receive Time Over	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA34	Ethernet Time Over	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA35	Drive Receive Time Over 1	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA36	CI Check Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA37	Drive Receive Time Over 2	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA38	Control Reference Error	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA39	Drive Receive Time Over 3	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			

Code	Name	Causes	Possible Solutions
oFA40	CtrlResSel 1Err	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA41	Drive Receive Time Over 4	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA42	CtrlResSel 2Err	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oFA43	Drive Receive Time Over 5	A fault occurred in the connector connected to CN1A or CN1B.	1. De-energize the drive. 2. Make sure that the connector is correctly connected to the connector. 3. Re-energize the drive. If the problem continues, replace RJ45 communication cables.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oH	Heatsink Overheat	The surrounding air temperature is high and the heatsink temperature of the drive is more than the value set in <i>L8-02 [Overheat Alarm Level]</i> .	• Measure the surrounding air temperature. • Increase the airflow in the control panel. • Install a cooling device (cooling fan or air conditioner) to lower the surrounding air temperature. • Remove objects near the drive that are producing too much heat.
		The load is too heavy.	• Measure the output current. • Decrease the load. • Decrease the value set in <i>C6-02 [Carrier Frequency Selection]</i>.
		The internal cooling fan of the drive stopped.	1. Use the procedures in this manual to replace the cooling fan. 2. Set <i>o4-03 = 0 [Fan Operation Time Setting = 0 h]</i>.
Note: • The drive detects this fault if the heatsink temperature of the drive is more than the value set in <i>L8-02</i>. • Do a Fault Reset to clear the fault. • If the drive detects this fault, it will operate the motor as specified by the Stopping Method set in <i>L8-03 [Overheat Pre-Alarm Selection]</i>.			
Code	Name	Causes	Possible Solutions
oH1	Heatsink Overheat	The surrounding air temperature is high and the heatsink temperature of the drive is more than the <i>oH1</i> detection level.	• Measure the surrounding air temperature. • Increase the airflow in the control panel. • Install a cooling device (cooling fan or air conditioner) to lower the surrounding air temperature. • Remove objects near the drive that are producing too much heat.
		The load is too heavy.	• Measure the output current. • Decrease the load. • Decrease the value set in <i>C6-02 [Carrier Frequency Selection]</i>.
Note: • The drive detects this fault if the heatsink temperature of the drive is more than the <i>oH1</i> detection level. <i>o2-04 [Drive Model (KVA) Selection]</i> determines the <i>oH1</i> detection level. • Do a Fault Reset to clear the fault. • <i>L5-08 [Fault Reset Enable Select Grp2]</i> disables the Auto Restart function.			

7.4 Fault

Code	Name	Causes	Possible Solutions
oH3	Motor Overheat (PTC Input)	The thermistor wiring that detects motor temperature is defective.	Correct wiring errors.
		A fault occurred on the machine. Example: The machine is locked.	Examine the machine and remove the cause of the fault
		The motor has overheated.	- Check the load level, acceleration/deceleration time, and motor start/stop frequency (cycle time). - Decrease the load. - Increase the values set in <i>C1-01</i> to <i>C1-08</i> [<i>Acceleration/Deceleration Times</i>]. - Set <i>E2-01</i> [<i>Motor Rated Current (FLA)</i>] correctly to the value specified by the motor nameplate. - Make sure that the motor cooling system is operating correctly, and repair or replace it if it is damaged. - Adjust <i>E1-04</i> to <i>E1-10</i> [<i>V/f Pattern Parameters</i>]. For motor 2, adjust <i>E3-04</i> to <i>E3-10</i>. Decrease the values set in <i>E1-08</i> [<i>Mid Point A Voltage</i>] and <i>E1-10</i> [<i>Minimum Output Voltage</i>]. Note: If the values set in <i>E1-08</i> and <i>E1-10</i> are too low, the overload tolerance will decrease at low speeds.
Note: - When <i>H3-02</i> = <i>E</i> [<i>MFAI Function Select</i> = <i>Motor Temperature (PTC Input)</i>], the drive detects this fault if the motor overheat signal input from analog input terminal A1 is more than the alarm detection level. - Do a Fault Reset to clear the fault. - If the drive detects this fault, it will operate the motor as specified by the Stopping Method set in <i>L1-03</i> [<i>Motor Thermistor oH Alarm Select</i>].			
Code	Name	Causes	Possible Solutions
oH4	Motor Overheat Fault (PTC Input)	The motor has overheated.	- Check the load level, acceleration/deceleration time, and motor start/stop frequency (cycle time). - Decrease the load. - Increase the values set in <i>C1-01</i> to <i>C1-08</i> [<i>Acceleration/Deceleration Times</i>]. - Set <i>E2-01</i> [<i>Motor Rated Current (FLA)</i>] correctly to the value specified by the motor nameplate. - Make sure that the motor cooling system is operating correctly, and repair or replace it if it is damaged. - Adjust <i>E1-04</i> to <i>E1-10</i> [<i>V/f Pattern Parameters</i>]. For motor 2, adjust <i>E3-04</i> to <i>E3-10</i>. Decrease the values set in <i>E1-08</i> [<i>Mid Point A Voltage</i>] and <i>E1-10</i> [<i>Minimum Output Voltage</i>]. Note: If the values set in <i>E1-08</i> and <i>E1-10</i> are too low, the overload tolerance will decrease at low speeds.
Note: - The drive detects this fault if the motor overheat signal in analog input terminal A1 is more than the Fault detection level. (If <i>H3-02</i> = <i>E</i> [<i>Terminal A1 Function Select</i> = <i>Motor Temperature (PTC Input)</i>].) - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oL1	Motor Overload	The load is too large.	Decrease the load. Note: Reset <i>oL1</i> when <i>U4-16</i> [<i>Motor oL1 Level</i>] < 100.
		The acceleration/deceleration times or cycle times are too short.	- Examine the acceleration/deceleration times and the motor start/stop frequencies (cycle times). - Increase the values set in <i>C1-01</i> to <i>C1-08</i> [<i>Acceleration/Deceleration Times</i>].
		Overload occurred while running at low speed.	- Decrease the load when running at low speed. - Increase the motor speed. - If the motor is run frequently at low speeds, replace the motor with a larger motor or use a drive-dedicated motor. Note: For general-purpose motors, overload can occur while running at low speed when operating at below the rated current.
		<i>L1-01</i> [<i>Motor Overload (oL1) Protection</i>] is set incorrectly.	Set <i>L1-01</i> in as specified by the motor qualities for a drive-dedicated motor.
		The V/f pattern does not fit the motor qualities.	- Examine the ratios between the V/f pattern frequency and voltage. Decrease the voltage if it is too high compared to the frequency. - Adjust <i>E1-04</i> to <i>E1-10</i> [<i>V/f Pattern Parameters</i>]. For motor 2, adjust <i>E3-04</i> to <i>E3-10</i>. Decrease the values set in <i>E1-08</i> [<i>Mid Point A Voltage</i>] and <i>E1-10</i> [<i>Minimum Output Voltage</i>]. Note: If the values set in <i>E1-08</i> and <i>E1-10</i> are too low, the overload tolerance will decrease at low speeds.

Code	Name	Causes	Possible Solutions
		<i>E1-06 [Base Frequency]</i> is set incorrectly.	Set <i>E1-06</i> to the rated frequency shown on the motor nameplate.
		One drive is operating more than one motor.	Set <i>L1-01</i> = 0 [<i>Motor Overload (oL1) Protection</i> = <i>Disabled</i>], connect thermal overload relay to each motor to prevent damage to the motor.
		The electronic thermal protector qualities and the motor overload properties do not match.	- Examine the motor qualities and set <i>L1-01 [Motor Overload (oL1) Protection]</i> correctly. - Connect a thermal overload relay to the motor.
		The electronic thermal protector is operating at an incorrect level.	Set <i>E2-01 [Motor Rated Current (FLA)]</i> correctly to the value specified by the motor nameplate.
		There is increased motor loss from overexcitation operation.	- Lower the value set in <i>n3-13 [OverexcitationBraking (OEB) Gain]</i>. - Set <i>L3-04</i> ≠ 4 [<i>Stall Prevention during Decel</i> ≠ <i>Overexcitation/High Flux</i>]. - Set <i>n3-23</i> = 0 [<i>Overexcitation Braking Operation</i> = <i>Disabled</i>].
		The speed search-related parameters are set incorrectly.	- Examine the settings for all speed search related parameters. - Adjust <i>b3-03 [Speed Search Deceleration Time]</i>. - Set <i>b3-24</i> = 1 [<i>Speed Search Method Selection</i> = <i>Speed Estimation</i>] after Auto-Tuning.
		Phase loss in the input power supply is causing the output current to change.	Make sure that there is no phase loss, and repair problems.
		The motor main circuit cable is too long.	- Replace the drive with a larger capacity model. - Decrease <i>C6-02 [Carrier Frequency]</i>. Or set <i>C6-02</i> = <i>B</i>.
Note: - The drive detects this fault if the electronic thermal protector of the drive started the motor overload protection. - Do a Fault Reset to clear the fault. <i>L5-07 [Fault Reset Enable Select Grp1]</i> disables the Auto Restart function.			
Code	Name	Causes	Possible Solutions
oL2	Drive Overload	The load is too large.	Decrease the load.
		The acceleration/deceleration times or cycle times are too short.	- Examine the acceleration/deceleration times and the motor start/stop frequencies (cycle times). - Increase the values set in <i>C1-01</i> to <i>C1-08 [Acceleration/Deceleration Times]</i>.
		The V/f pattern does not fit the motor qualities.	- Examine the ratios between the V/f pattern frequency and voltage. Decrease the voltage if it is too high compared to the frequency. - Adjust <i>E1-04</i> to <i>E1-10 [V/f Pattern Parameters]</i>. Decrease the values set in <i>E1-08 [Mid Point A Voltage]</i> and <i>E1-10 [Minimum Output Voltage]</i>. For motor 2, adjust <i>E3-04</i> to <i>E3-10</i>. Note: If the values set in <i>E1-08</i> and <i>E1-10</i> are too low, the overload tolerance will decrease at low speeds.
		The drive capacity is too small.	Replace the drive with a larger capacity model.
		Overload occurred while running at low speed.	- Decrease the load when running at low speed. - Replace the drive with a larger capacity model. - Decrease the value set in <i>C6-02 [Carrier Frequency Selection]</i>.
		The torque compensation gain is too large.	Decrease the value set in <i>C4-01 [Torque Compensation Gain]</i> to make sure that the motor does not stall.
		The speed search-related parameters are set incorrectly.	- Examine the settings for all speed search-related parameters. - Adjust <i>b3-03 [Speed Search Deceleration Time]</i>. - Set <i>b3-24</i> = 1 [<i>Speed Search Method Selection</i> = <i>Speed Estimation</i>] after Auto-Tuning.
		Phase loss in the input power supply is causing the output current to change.	- Correct errors with the wiring for main circuit drive input power. - Make sure that there is no phase loss, and repair problems.
		Overload occurred during overexcitation deceleration.	- Decrease the value set in <i>n3-13 [OverexcitationBraking (OEB) Gain]</i>. - Decrease the value set in <i>n3-21 [HSB Current Suppression Level]</i>.
		Note: - The drive detects this fault if the electronic thermal protector of the drive started the drive overload protection. - Do a Fault Reset to clear the fault. <i>L5-07 [Fault Reset Enable Select Grp1]</i> disables the Auto Restart function.	

7.4 Fault

Code	Name	Causes	Possible Solutions
oL3	Overtorque Detection 1	A fault occurred on the machine. Example: The machine is locked.	Examine the machine and remove the cause of the fault.
		The parameters are incorrect for the load.	Adjust L6-02 [Torque Detection Level 1] and L6-03 [Torque Detection Time 1] settings.
Note: - The drive detects this fault if the drive output current is more than the level set in L6-02 for longer than L6-03. - Do a Fault Reset to clear the fault. - If the drive detects this fault, it will operate the motor as specified by the Stopping Method set in L6-01 [Torque Detection Selection 1]. - L5-07 [Fault Reset Enable Select Grp1] disables the Auto Restart function.			
Code	Name	Causes	Possible Solutions
oL4	Overtorque Detection 2	A fault occurred on the machine. Example: The machine is locked.	Examine the machine and remove the cause of the fault.
		The parameters are incorrect for the load.	Adjust L6-05 [Torque Detection Level 2] and L6-06 [Torque Detection Time 2] settings.
Note: - The drive detects this fault if the drive output current is more than the level set in L6-05 for longer than L6-06. - Do a Fault Reset to clear the fault. - If the drive detects this fault, it will operate the motor as specified by the Stopping Method set in L6-04 [Torque Detection Selection 2]. - L5-07 [Fault Reset Enable Select Grp1] disables the Auto Restart function.			
Code	Name	Causes	Possible Solutions
oL5	Mechanical Weakening Detection 1	The drive detected overtorque as specified by the conditions for mechanical weakening detection set in L6-08 [Mechanical Fatigue Detect Select].	Do a deterioration diagnostic test on the machine side.
Note: - Do a Fault Reset to clear the fault. - If the drive detects this fault, it will operate the motor as specified by the Stopping Method set in L6-08.			
Code	Name	Causes	Possible Solutions
oL7	High Slip Braking Overload	The load inertia is too large.	- Decrease deceleration times in C1-02, C1-04, C1-06, and C1-08 [Deceleration Times] for applications that do not use High Slip Braking. - Use a braking resistor to decrease the deceleration time.
		An external force on the load side rotated the motor.	
		Something is preventing deceleration on the load side.	
		The value set in n3-04 [HSB Overload Time] is too small.	- Increase the value set in n3-04. - Connect a thermal overload relay to the motor, and set n3-04 = 1200 s (maximum value).
Note: - The drive detects this fault if the output frequency is constant for longer than n3-04. - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oPr	Keypad Connection Fault	The keypad is not securely connected to the connector on the drive.	Examine the connection between the keypad and the drive.
		The connection cable between the drive and the keypad is disconnected.	- Remove the keypad and then reconnect it. - Replace the cable if damaged.
Note: - The drive detects this fault if these conditions are correct: - o2-06 = 1 [Keypad Disconnect Detection = Enabled]. - b1-02 = 0 [Run Command Selection 1 = Keypad], or the drive is operating in LOCAL Mode with the keypad. - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
oS	Overspeed	There is overshoot.	Decrease C5-01 [ASR Proportional Gain 1] and increase C5-02 [ASR Integral Time 1].
		The oS detection level is set incorrectly.	Adjust F1-08 [Overspeed Detection Level] and F1-09 [Overspeed Detection Delay Time].
		If the drive detects the fault at start or in the low speed range (10% or less) and n8-57 = 1 [HFI Overlap Selection = Enabled] for PM Control methods, the high frequency injection gain is too high.	- Set E5-xx [PM Motor Parameters] correctly or do Rotational Auto-Tuning. - Decrease the value of n8-41 [HFI P Gain] in 0.5 unit increments. Note: Set n8-41 > 0.0 for IPM motors.
Note: - The drive detects this fault if the motor speed is more than the value set in F1-08 for longer than F1-09. - Do a Fault Reset to clear the fault.			

Code	Name	Causes	Possible Solutions
ov	Overvoltage	The deceleration time is too short and too much regenerative energy is flowing back into the drive.	• Increase the values set in <i>C1-02</i>, <i>C1-04</i>, <i>C1-06</i>, or <i>C1-08</i> [<i>Deceleration Times</i>]. • Connect a dynamic braking option to the drive. • Perform Deceleration Rate Tuning.
		The acceleration time is too short.	• Make sure that sudden drive acceleration does not cause the fault. • Increase the values set in <i>C1-01</i>, <i>C1-03</i>, <i>C1-05</i>, or <i>C1-07</i> [<i>Acceleration Times</i>]. • Increase the value set in <i>C2-02</i> [<i>S-Curve Time @ End of Accel</i>]. • Set <i>L3-11</i> = 1 [<i>Overvoltage Suppression Select</i> = Enabled].
		The braking load is too large.	Connect a dynamic braking option to the drive.
		There are surge voltages in the input power supply.	Connect a DC link choke to the drive. Note: If you turn the phase advancing capacitors ON and OFF and use thyristor converters in the same power supply system, there can be surge voltages that irregularly increase the input voltage.
		The drive output cable or motor is shorted to ground (the current short to ground is charging the main circuit capacitor of the drive through the power supply).	1. Examine the motor main circuit cable, terminals, and motor terminal box, and then remove ground faults. 2. Re-energize the drive.
		If the drive detects <i>ov</i> in these conditions, the speed search-related parameters are incorrect: • During speed search • During momentary power loss recovery • When the drive starts again automatically • When you use an IE3 premium efficiency motor	• Examine the settings for all speed search related parameters. • Set <i>b3-19</i> ≠ 0 [<i>Speed Search Restart Attempts</i> ≠ 0 times]. • Adjust <i>b3-03</i> [<i>Speed Search Deceleration Time</i>]. • Do Stationary Auto-Tuning for Line-to-Line Resistance and then set <i>b3-24</i> = 1 [<i>Speed Search Method Selection</i> = <i>Speed Estimation</i>]. • Use these values to adjust the parameters. • <i>b3-03</i> [<i>Speed Search Deceleration Time</i>] = default value × 2 • <i>L2-03</i> [<i>Minimum Baseblock Time</i>] = default value × 2 • <i>L2-04</i> [<i>Powerloss V/f Recovery Ramp Time</i>] = default value × 2
		The power supply voltage is too high.	Decrease the power supply voltage to match the drive rated voltage.
		The braking resistor or braking resistor unit wiring is incorrect.	Correct wiring errors in the connection to the braking resistor or braking resistor unit.
		Electrical interference caused a drive malfunction.	• Examine the control circuit lines, main circuit lines, and ground wiring, and decrease the effects of electrical interference. • Make sure that a magnetic contactor is not the source of the electrical interference, then use a Surge Protective Device if necessary.
		The load inertia is set incorrectly.	• Examine the load inertia settings with KEB, overvoltage suppression, or stall prevention during deceleration. • Adjust <i>L3-25</i> [<i>Load Inertia Ratio</i>] to match the qualities of the machine.
		The Short Circuit Braking function used in OLV/PM control method.	Connect a braking resistor to the drive.
		There is motor hunting.	• Adjust <i>n1-02</i> [<i>Hunting Prevention Gain Setting</i>]. • Adjust <i>n2-02</i> [<i>Automatic Freq Regulator Time 1</i>] and <i>n2-03</i> [<i>Automatic Freq Regulator Time 2</i>]. • Adjust <i>n8-45</i> [<i>Speed Feedback Detection Gain</i>] and <i>n8-47</i> [<i>Pull-in Current Comp Filter Time</i>].
		Speed search does not complete at start when you set <i>A1-02</i> = 8 [<i>EZ Vector Control</i>] and use an induction motor.	When <i>E9-01</i> = 0 [<i>Motor Type Selection</i> = <i>Induction (IM)</i>], set <i>b3-24</i> = 2 [<i>Speed Search Method Selection</i> = <i>Current Detection Speed Search</i>].
Note: • The drive detects this error if the DC bus voltage is more than the <i>ov</i> detection level while the drive is running. • Do a Fault Reset to clear the fault. • For 200 V class drives, the detection level of <i>ov</i> is approximately 410 V. For 400 V class drives, the detection level is approximately 820 V. • <i>L5-08</i> [<i>Fault Reset Enable Select Grp2</i>] disables the Auto Restart function.			
Code	Name	Causes	Possible Solutions
PE1	PLC Faults	The drive detected a fault.	Refer to the manual for each communication protocol in use.
Note: Do a Fault Reset to clear the fault.			

7.4 Fault

Code	Name	Causes	Possible Solutions
PE2	PLC Faults	The communication option detected a fault.	Refer to the manual for each communication protocol in use.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
PF	Input Phase Loss	There is a phase loss in the drive input power.	Correct errors with the wiring for main circuit drive input power.
		There is loose wiring in the drive input power terminals.	Tighten the terminal screws to the correct tightening torque.
		The drive input power voltage is changing too much.	- Examine the input power for problems. - Make the drive input power stable. - If the input power supply is good, examine the magnetic contactor on the main circuit side for problems.
		There is unsatisfactory balance between voltage phases.	- Examine the input power for problems. - Make the drive input power stable. - Set $L8-05 = 0$ [Input Phase Loss Protection Sel = Disabled].
		The main circuit capacitors have become unserviceable.	- Examine the capacitor maintenance time in monitor $U4-05$ [Capacitor Maintenance]. If $U4-05$ is more than 90%, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative. - If drive input power is correct and the fault stays, replace the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this error if the DC bus voltage changes irregularly without regeneration. - Do a Fault Reset to clear the fault. - Use $L8-05$ to enable and disable PF detection.			
Code	Name	Causes	Possible Solutions
PGo	Encoder (PG) Feedback Loss	The holding brake is stopping the motor.	Release the holding brake.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
PSE	Protocol Set Error	- The DIP switch S1 is at the default setting. - There is no protocol assigned.	Make sure that the power to the drive is OFF and the CHARGE LED light is OFF before you use the DIP switch S1 on the drive to set the protocol.
Code	Name	Causes	Possible Solutions
rF	Braking Resistor Fault	The resistance of the dynamic braking option connected to the drive is too low.	Use a dynamic braking option that fits the model and duty rating of the drive.
		A regenerative converter or regenerative unit is connected to the drive.	Set $L8-55 = 0$ [Internal DB Transistor Protection = Disable].
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
rH	Braking Resistor Overheat	The deceleration time is too short and excessive regenerative energy is flowing back into the drive.	- Check the load level, deceleration time, and speed. - Decrease the load. - Increase the values set in $C1-02$, $C1-04$, $C1-06$, or $C1-08$ [Deceleration Times]. - Use a dynamic braking option that lets you use more power.
		The duty cycle is too high.	Examine the duty cycle. Note: When $L8-01 = 1$ [3% ERF DB Resistor Protection = Enabled], the maximum braking duty cycle is 3%.
		The braking load is too heavy.	- Calculate the braking load and braking power again, and decrease the braking load. - Use a braking resistor that improves braking power.
		The braking resistor is not sufficient.	Use the braking resistor specifications to select a sufficient braking resistor.
Note: - The drive detects this error if the braking resistor overheat protective function is active. - The magnitude of the braking load causes the braking resistor overheat alarm, NOT the surface temperature. If the duty cycle is higher than the braking resistor rating, the drive will show the alarm. - Do a Fault Reset to clear the fault. - Parameter $L8-01$ enables and disables rH detection.			

Code	Name	Causes	Possible Solutions
rr	Dynamic Braking Transistor Fault	The drive control circuit is damaged.	- Re-energize the drive. - If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
		There is a malfunction in the internal braking transistor of the drive.	
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
SC	Short Circuit/IGBT Failure	Overheating caused damage to the motor or the motor insulation is not satisfactory.	Measure the motor insulation resistance, and replace the motor if there is electrical conduction or unserviceable insulation.
		The motor main circuit cable is contacting ground to make a short circuit.	- Examine the motor main circuit cable for damage, and repair short circuits. - Measure the resistance between the motor main circuit cable and the ground terminal. If there is electrical conduction, replace the cable.
		A short circuit or ground fault on the drive output side caused damage to the output transistor of the drive.	- Make sure that there is not a short circuit in terminal B1 and terminals U/T1, V/T2, and W/T3. Make sure that there is not a short circuit in terminals - and terminals U/T1, V/T2, and W/T3. - If there is a short circuit, contact Yaskawa or your nearest sales representative.
		When $A1-02 = 5, 6$ [Control Method Selection = <i>OLV/PM</i> or <i>AOLV/PM</i>], the output current is more than the value set in <i>L8-27</i> [Overcurrent Detection Gain].	Set <i>L8-27</i> correctly.
Note: - The drive detects this error if there is a short circuit or ground fault on the drive output side, or an IGBT failure. - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
SCF	Safety Circuit Fault	The safety circuit is broken.	Replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
SEr	Speed Search Retries Exceeded	The speed search-related parameters are set incorrectly.	- Decrease <i>b3-10</i> [Speed Estimation Detection Gain]. - Increase <i>b3-17</i> [Speed Est Retry Current Level]. - Increase <i>b3-18</i> [Speed Est Retry Detection Time]. - Do Auto-Tuning again.
		The motor is coasting in the opposite direction of the Run command.	Set <i>b3-14 = 1</i> [Bi-directional Speed Search = Enabled].
Note: - The drive detects this error if the number of speed search restarts is more than <i>b3-19</i> [Speed Search Restart Attempts]. - Do a Fault Reset to clear the fault.			
Code	Name	Causes	Possible Solutions
STPo	Motor Step-Out Detected	The motor code is set incorrectly for PM Control Methods.	- Set <i>E5-01</i> [PM Motor Code Selection] correctly as specified by the motor. - For specialized motors, refer to the motor test report and set <i>E5-xx</i> correctly.
		The load is too large.	- Increase the value set in <i>n8-55</i> [Motor to Load Inertia Ratio]. - Increase the value set in <i>n8-51</i> [Pull-in Current @ Acceleration]. If the drive detects <i>STPo</i> during deceleration when increasing the value set in <i>n8-51</i>, set the value of <i>n8-79</i> [Pull-in Current @ Deceleration] lower than <i>n8-51</i>. - Decrease the load. - Replace the drive and motor with larger capacity models.
		The load inertia is too large.	Increase the value set in <i>n8-55</i> .
		The acceleration/deceleration times are too short.	- Increase the values set in <i>C1-01</i> to <i>C1-08</i> [Acceleration/Deceleration Times]. - Increase the value set in <i>C2-01</i> [S-Curve Time @ Start of Accel].
		Speed response is too slow.	Increase the value set in <i>n8-55</i> .
Note: Do a Fault Reset to clear the fault.			

7.4 Fault

Code	Name	Causes	Possible Solutions
TiM	Keypad Time Not Set	There is a battery in the keypad, but the date and time are not set.	Use the keypad to set the date and time.
Note: - Do a Fault Reset to clear the fault. - Parameter <i>o4-24 [bAT Detection Selection]</i> enables and disables <i>TiM</i> detection.			
Code	Name	Causes	Possible Solutions
UL3	Undertorque Detection 1	A fault occurred on the machine. Example: There is a broken pulley belt.	Examine the machine and remove the cause of the fault.
		The parameters are incorrect for the load.	Adjust <i>L6-02 [Torque Detection Level 1]</i> and <i>L6-03 [Torque Detection Time 1]</i> settings.
Note: - The drive detects this error if the drive output current is less than the level set in <i>L6-02</i> for longer than <i>L6-03</i>. - Do a Fault Reset to clear the fault. - If the drive detects this error, it will operate the motor as specified by the Stopping Method set in <i>L6-01 [Torque Detection Selection 1]</i>.			
Code	Name	Causes	Possible Solutions
UL4	Undertorque Detection 2	A fault occurred on the machine. Example: There is a broken pulley belt.	Examine the machine and remove the cause of the fault.
		The parameters are incorrect for the load.	Adjust <i>L6-05 [Torque Detection Level 2]</i> and <i>L6-06 [Torque Detection Time 2]</i> settings.
Note: - The drive detects this error if the drive output current is less than the level set in <i>L6-05</i> for longer than <i>L6-06</i>. - Do a Fault Reset to clear the fault. - If the drive detects this error, it will operate the motor as specified by the Stopping Method set in <i>L6-04 [Torque Detection Selection 2]</i>.			
Code	Name	Causes	Possible Solutions
UL5	Mechanical Weakening Detection 2	The drive detected undertorque as specified by the conditions for mechanical weakening detection set in <i>L6-08 [Mechanical Fatigue Detect Select]</i> .	Examine the machine for deterioration.
Note: - Do a Fault Reset to clear the fault. - If the drive detects this error, it will operate the motor as specified by the Stopping Method set in <i>L6-08</i>.			
Code	Name	Causes	Possible Solutions
Uv1	DC Bus Undervoltage	There is a phase loss in the drive input power.	Correct errors with the wiring for main circuit drive input power.
		There is loose wiring in the drive input power terminals.	Tighten the terminal screws to the correct tightening torque.
		The drive input power voltage is changing too much.	- Examine the input power for problems. - Make the drive input power stable. - If the input power supply is good, examine the magnetic contactor on the main circuit side for problems.
		There was a loss of power.	Use a better power supply.
		The main circuit capacitors have become unserviceable.	Examine the capacitor maintenance time in monitor <i>U4-05 [Capacitor Maintenance]</i> . If <i>U4-05</i> is more than 90%, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
		The relay or contactor on the soft-charge bypass relay is damaged.	<i>U4-06 [PreChargeRelayMainte]</i> shows the performance life of the soft-charge bypass relay. If <i>U4-06</i> is more than 90%, replace the board or the drive. For information about replacing the board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this error if the DC bus voltage decreases below the level set in <i>L2-05 [Undervoltage Detection Lvl (Uv1)]</i> while the drive is running. - The <i>Uv1</i> detection level is approximately 190 V for a 200 V class drives. The detection level is approximately 380 V for 400 V class drives. The detection level is approximately 350 V when <i>E1-01 [Input AC Supply Voltage]</i> < 400. - Do a Fault Reset to clear the fault. - Fault trace is not available for this fault. <i>L5-08 [Fault Reset Enable Select Grp2]</i> disables the Auto Restart function.			

Code	Name	Causes	Possible Solutions
Uv2	Control Power Undervoltage	The value set in <i>L2-02 [Power Loss Ride Through Time]</i> increased and the momentary power loss recovery unit is not connected to the drive.	Connect the momentary power loss recovery unit to the drive.
		There was a problem with the drive hardware.	• Re-energize the drive. • If the fault stays, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: • The drive detects this error if the control power supply voltage decreases. • Do a Fault Reset to clear the fault. • Fault trace is not available for this fault.			
Code	Name	Causes	Possible Solutions
Uv3	Soft Charge Answerback Fault	There is damage to the relay or contactor on the soft-charge bypass relay.	• Re-energize the drive. • If the fault stays, replace the control board or the drive. • Monitor <i>U4-06 [PreChargeRelayMainte]</i> shows the performance life of the soft-charge bypass relay. If <i>U4-06</i> is more than 90%, replace the board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
		Air inside the drive is too hot.	Decrease the surrounding air temperature of the drive.
Note: • Do a Fault Reset to clear the fault. • Fault trace is not available for these faults.			

7.5 Minor Faults/Alarms

This section gives information about the causes and possible solutions when a minor fault or alarm occurs. Use the information in this table to remove the cause of the minor fault or alarm.

Code	Name	Causes	Possible Solutions
AEr	Station Address Setting Error	The node address for the drive is not in the permitted setting range.	For MECHATROLINK communication, set <i>F6-20 [MECHATROLINK Station Address]</i> correctly.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
bAT	Keypad Battery Low Voltage	The keypad battery voltage is low.	Replace the keypad battery.
Note: • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • <i>Parameter o4-24 [bAT Detection Selection]</i> enables and disables <i>bAT</i> detection.			
Code	Name	Causes	Possible Solutions
bb	Baseblock	An external baseblock command was entered through MFDI terminal S1 and S2, and the drive output stopped as shown by an external baseblock command.	Examine the external sequence and timing of the baseblock command input.
Note: The drive will not output a minor fault signal for this alarm.			
Code	Name	Causes	Possible Solutions
bCE	Bluetooth Communication Error	The smartphone or tablet with DriveWizard Mobile installed is too far from the keypad.	Use the smartphone or tablet 10 m (32.8 ft) or nearer to the keypad. Note: <i>bCE</i> can occur when the smartphone or tablet is 10 m or nearer to the keypad depending on the specifications of the smartphone or tablet.
		Radio waves from a different device are causing interference with the communication between the smartphone or tablet and keypad.	Make sure that no device around the keypad uses the same radio bandwidth (2400 MHz to 2480 MHz), and prevent radio interference.
Note: • The drive detects this error when you operate the drive with a smartphone or tablet with a Bluetooth LCD Keypad. • If the drive detects this error, the terminal assigned to <i>H2-01 to H2-03 = 10 [MFDO Function Select = Alarm]</i> will activate. • <i>Parameter o2-27 [bCE Detection selection]</i> enables and disables <i>bCE</i> detection.			
Code	Name	Causes	Possible Solutions
boL	Braking Transistor Overload	The duty cycle of the braking transistor is high (the regeneration power or repetition frequency is high).	• Install a regenerative converter. • Increase the deceleration time.
		You enabled the protective function for the braking transistor when you have a regenerative converter.	Set <i>L8-55 = 0 [Internal DB TransistorProtection Selection = Disable]</i> .
		The braking transistor in the drive is broken.	Replace the drive.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
bUS	Ethernet Communication Error	The communications cable wiring is incorrect.	Correct wiring errors.
		There is a short-circuit in the communications cable or the communications cable is not connected.	• Repair short circuits and connect cables. • Replace the defective communications cable.
		Electrical interference caused a communication data error.	• Examine the control circuit lines, main circuit lines, and ground wiring, and decrease the effects of electrical interference. • Make sure that a magnetic contactor is not the source of the electrical interference, then use a Surge Protective Device if necessary. • Use only the recommended cables or other shielded line. Ground the shield on the controller side or the drive input power side. • Separate the communication wiring from drive power lines, and install a noise filter to the input side of the power supply for communication. • Decrease the effects of electrical interference from the controller.
		CN1A or CN1B ports on the drive is damaged.	If the fault continues and the wiring is correct, replace the drive control circuit boards. Contact Yaskawa or your nearest sales representative for more information.
Note: • The drive detects this error if the Run command or frequency reference is assigned to Ethernet. • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • If the drive detects this error, it will operate the motor as specified by the stopping method set in <i>F6-01 [Communication Error Selection]</i> .			

Code	Name	Causes	Possible Solutions
bUSy	Busy	You set the drive to use Modbus communications to change parameters, but you used the keypad to change parameters.	Use Modbus communications to enter the enter command, then use the keypad to change the parameter.
		You tried to change a parameter while the drive was changing setting.	Wait until the process is complete.
Code	Name	Causes	Possible Solutions
CALL	Serial Comm Transmission Error	The communications cable wiring is incorrect.	Correct wiring errors.
		There is a short-circuit in the communications cable or the communications cable is not connected.	- Repair the short-circuited or disconnected portion of the cable. - Replace the defective communications cable.
		A programming error occurred on the controller side.	Examine communications at start-up and correct programming errors.
		The communications circuitry is damaged.	- Do a self-diagnostics check. - If the problem continues, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this error if it does not correctly receive control data from the controller when energizing the drive. - If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
CE	USB Communication Error	The communications cable wiring is incorrect.	Correct wiring errors.
		There is a short-circuit in the communications cable or the communications cable is not connected.	- Repair short circuits and connect cables. - Replace the defective communications cable.
		Electrical interference caused a communication data error.	- Examine the control circuit lines, main circuit lines, and ground wiring, and decrease the effects of electrical interference. - Make sure that a magnetic contactor is not the source of the electrical interference, then use a Surge Protective Device if necessary. - Use only the recommended cables or other shielded line. Ground the shield on the controller side or the drive input power side. - Separate the communication wiring from drive power lines, and install a noise filter to the input side of the power supply for communication. - Decrease the effects of electrical interference from the controller.
		The communication protocol is not compatible.	- Examine the values set in <i>H5-xx</i>. - Examine the settings on the controller side and correct the difference in communication conditions.
		The controller software or hardware is causing a communication problem.	Examine the controller and remove the cause of the problem.
Note: - The drive detects this error if it does not correctly receive control data for 2.0 s. - If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
CP1	Comparator 1 Limit Error	The monitor value set in <i>H2-20 [Comparator 1 Monitor Selection]</i> was in the range of <i>H2-21 [Comparator 1 Lower Limit]</i> and <i>H2-22 [Comparator 1 Upper Limit]</i> .	Examine the monitor value and remove the cause of the fault.
Note: - The drive detects this error when the terminal is assigned to <i>H2-01 to H2-03 = 66 [MFDO Function Select = Comparator1]</i>. - If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. - Parameter <i>H2-33 [Comparator1 Protection Selection]</i> enables and disables <i>CP1</i> detection.			
Code	Name	Causes	Possible Solutions
CP2	Comparator 2 Limit Error	The monitor value set in <i>H2-26 [Comparator 2 Monitor Selection]</i> was outside the range of <i>H2-27 [Comparator 2 Lower Limit]</i> and <i>H2-28 [Comparator 2 Upper Limit]</i> .	Examine the monitor value and remove the cause of the fault.
Note: - The drive detects this error when the terminal is assigned to <i>H2-01 to H2-03 = 67 [MFDO Function Select = Comparator2]</i>. - If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. - Parameter <i>H2-35 [Comparator2 Protection Selection]</i> enables and disables <i>CP2</i> detection.			
Code	Name	Causes	Possible Solutions
CrST	Cannot Reset	The drive received a fault reset command when a Run command was active.	Turn off the Run command then de-energize and re-energize the drive.

7.5 Minor Faults/Alarms

Code	Name	Causes	Possible Solutions
CyC	MECHATROLINK CommCycleSettingErr	The communications cycle setting of the controller is not in the permitted range.	Set the communications cycle of the controller in the permitted range.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
CyPo	Cycle Power to Accept Changes	Although <i>F6-15 = 1 [Ethernet Parameters = Reload Now]</i> , the drive does not update the Ethernet parameters.	Re-energize the drive to update the Ethernet parameters.
Code	Name	Causes	Possible Solutions
dEv	Speed Deviation	The load is too large.	Decrease the load.
		The acceleration/deceleration times are too short.	Increase the values set in <i>C1-01 to C1-08 [Acceleration/Deceleration Times]</i> .
		The <i>dEv</i> detection level settings are incorrect.	Adjust <i>F1-10 [Speed Deviation Detection Level]</i> and <i>F1-11 [Speed Deviation Detect DelayTime]</i> .
		The load is locked up.	Examine the machine.
		The holding brake is stopping the motor.	Release the holding brake.
Note: • The drive detects this error if the difference between the detected speed and the speed reference is more than the setting of <i>F1-10</i> for longer than <i>F1-11</i>. • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • If the drive detects this error, it will operate the motor as specified by the stopping method set in <i>F1-04 [Speed Deviation Detection Select]</i>.			
Code	Name	Causes	Possible Solutions
dnE	Drive Disabled	A terminal set for <i>H1-xx = 6A [Drive Enable]</i> turned OFF.	Examine the operation sequence.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
dWA2	DriveWorksEZ Alarm 2	There was an error in the DriveWorksEZ program.	Examine the DriveWorksEZ program and remove the cause of the fault. This is not a drive fault.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
dWA3	DriveWorksEZ Alarm 3	There was an error in the DriveWorksEZ program.	Examine the DriveWorksEZ program and remove the cause of the fault. This is not a drive fault.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
dWAL	DriveWorksEZ Alarm	There was an error in the DriveWorksEZ program.	Examine the DriveWorksEZ program and remove the cause of the fault. This is not a drive fault.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
E5	MECHATROLINK Watchdog Timer Err	The drive detected a watchdog circuit exception while it received data from the controller.	Examine the MECHATROLINK cable connection. If this error occurs frequently, examine the wiring and decrease the effects of electrical interference as specified by these manuals: • MECHATROLINK-4 Installation Guide (MECHATROLINK Members Association, manual number MMATDEP011) • MECHATROLINK-4 Installation Manual (MECHATROLINK Members Association, publication number MMATDEP018)
Note: • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • If the drive detects this error, it will operate the motor as specified by the stopping method set in <i>F6-25 [MECHATROLINK Watchdog Error Sel]</i>.			
Code	Name	Causes	Possible Solutions
EF	FWD/REV Run Command Input Error	A forward command and a reverse command were input at the same time for longer than 0.5 s.	Examine the forward and reverse command sequence and correct the problem.
Note: • If the drive detects <i>EF</i>, the motor will ramp to stop. • If the drive detects this error, the terminal assigned to <i>H2-01 to H2-03 = 10 [MFDO Function Select = Alarm]</i> will be ON.			

Code	Name	Causes	Possible Solutions
EF0	Ethernet External Fault	The drive received an external fault from the controller.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input from the controller.
		A programming error occurred on the controller side.	Examine the operation of the controller program.
Note: • The drive detects this error if the alarm function on the external device side is operating. • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • If the drive detects this error, it will operate the motor as specified by the stopping method set in <i>F6-03 [Comm External Fault (EF0) Select]</i> .			
Code	Name	Causes	Possible Solutions
EF1	External Fault (Terminal S1)	MFDI terminal S1 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to MFDI terminal S1.
		<i>External Fault [H1-01 = 2C to 2F]</i> is set to MFDI terminal S1, but the terminal is not in use.	Correctly set the MFDI.
Note: If the drive detects this error, the terminal assigned to <i>H2-01 to H2-03 = 10 [MFDO Function Select = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
EF2	External Fault (Terminal S2)	MFDI terminal S2 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to MFDI terminal S2.
		<i>External Fault [H1-02 = 2C to 2F]</i> is set to MFDI terminal S2, but the terminal is not in use.	Correctly set the MFDI.
Note: If the drive detects this error, the terminal assigned to <i>H2-01 to H2-03 = 10 [MFDO Function Select = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
EF3	External Flt(Ethernet Input DI3)	Ethernet DI3 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		<i>External Fault [H1-03 = 2C to 2F]</i> is set to Ethernet DI3, but the Ethernet is not in use.	Correctly set the MFDI.
Note: If the drive detects this error, the terminal or ethernet assigned to <i>H2-01 to H2-03 = 10 [MFDO Function Select = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
EF4	External Flt(Ethernet Input DI4)	Ethernet DI4 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to Ethernet DI4.
		<i>External Fault [H1-04 = 2C to 2F]</i> is set to Ethernet DI4, but the terminal is not in use.	Correctly set the MFDI.
Note: If the drive detects this error, the terminal or ethernet assigned to <i>H2-01 to H2-03 = 10 [MFDO Function Select = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
EF5	External Flt(Ethernet Input DI5)	Ethernet DI5 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to Ethernet DI5.
		<i>External Fault [H1-05 = 2C to 2F]</i> is set to Ethernet DI5, but the terminal is not in use.	Correctly set the MFDI.
Note: If the drive detects this error, the terminal or ethernet assigned to <i>H2-01 to H2-03 = 10 [MFDO Function Select = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
EF6	External Flt(Ethernet Input DI6)	Ethernet DI6 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to Ethernet DI6.

7.5 Minor Faults/Alarms

Code	Name	Causes	Possible Solutions
		External Fault [H1-06 = 2C to 2F] is set to Ethernet DI6, but the terminal is not in use.	Correctly set the MFDI.
Note: If the drive detects this error, the terminal or ethernet assigned to H2-01 to H2-03 = 10 [MFDO Function Select = Alarm] will activate.			
Code	Name	Causes	Possible Solutions
EF7	External Flt(Ethernet Input DI7)	Ethernet DI7 caused an external fault through an external device.	1. Find the device that caused the external fault and remove the cause. 2. Clear the external fault input in the MFDI.
		The wiring is incorrect.	Correctly connect the signal line to Ethernet DI7.
		External Fault [H1-07 = 2C to 2F] is set to Ethernet DI7, but the terminal is not in use.	Correctly set the MFDI.
Note: If the drive detects this error, the terminal or ethernet assigned to H2-01 to H2-03 = 10 [MFDO Function Select = Alarm] will activate.			
Code	Name	Causes	Possible Solutions
EP24v	External Power 24V Supply	The voltage of the main circuit power supply decreased, and the 24 V power supply is supplying power to the drive.	- Examine the main circuit power supply. - Turn ON the main circuit power supply to run the drive.
Note: The drive will not output an alarm signal for this alarm.			
Code	Name	Causes	Possible Solutions
FbH	Excessive PID Feedback	The FbH detection level is set incorrectly.	Adjust b5-36 [PID High Feedback Detection Lvl] and b5-37 [PID High Feedback Detection Time].
		There is a problem with the PID feedback wiring.	Correct errors with the PID control wiring.
		The feedback sensor is not operating correctly.	Examine the sensors on the control device side.
		A fault occurred in the feedback input circuit of the drive.	Replace the board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this error if the PID feedback input is more than the level set in b5-36 for longer than b5-37. - If the drive detects this error, the terminal set to H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm] will activate. - If the drive detects this error, it will operate the motor as specified by the stopping method set in b5-12 [Feedback Loss Detection Select].			
Code	Name	Causes	Possible Solutions
FbL	PID Feedback Loss	The FbL detection level is set incorrectly.	Adjust b5-13 [PID Feedback Loss Detection Lvl] and b5-14 [PID Feedback Loss Detection Time].
		There is a problem with the PID feedback wiring.	Correct errors with the PID control wiring.
		The feedback sensor is not operating correctly.	Examine the sensors on the control device side.
		A fault occurred in the feedback input circuit of the drive.	Replace the board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this error if the PID feedback input is lower than the level set in b5-13 for longer than b5-14. - If the drive detects this error, the terminal set to H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm] will activate. - If the drive detects this error, it will operate the motor as specified by the stopping method set in b5-12 [Feedback Loss Detection Select].			
Code	Name	Causes	Possible Solutions
HCA	High Current Alarm	The load is too heavy.	- Decrease the load for applications with repetitive starts and stops. - Replace the drive with a larger capacity model.
		The acceleration time is too short.	- Calculate the torque necessary during acceleration related to the load inertia and the specified acceleration time. - Increase the values set in C1-01, C1-03, C1-05, or C1-07 [Acceleration Times] until you get the necessary torque. - Increase the values set in C2-01 to C2-04 [S-Curve Characteristics] until you get the necessary torque. - Replace the drive with a larger capacity model.
		The drive is trying to operate a specialized motor or a motor that is larger than the maximum applicable motor output of the drive.	- Examine the motor nameplate, the motor, and the drive to make sure that the drive rated current is larger than the motor rated current. - Replace the drive with a larger capacity model.

Code	Name	Causes	Possible Solutions
		The current level temporarily increased because of speed search after a momentary power loss or while trying to Auto Restart.	If speed search or Auto Restart cause an increase in current, the drive can temporarily show this alarm. The time that the drive shows the alarm is short. No more steps are necessary to clear the alarm.
Note: • The drive detects this error if the drive output current is more than the overcurrent alarm level (150% of the rated current). • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
LoG	Log Com Error	There is not a micro SD in the keypad.	Put a micro SD card in the keypad.
		• The drive is connected to USB. • The number of log communication files is more than 1000. • The micro SD card does not have available memory space. • The line number data in a log communication file was changed. • A communication error between the keypad and drive occurred during a log communication.	<i>Set o5-01 = 0 [Log Start/Stop Selection = OFF].</i>
		You used a keypad that does not support short-term data logging and started short-term data logging.	• Use a keypad that supports short-term data logging. • <i>Set o5-00 = 0 [Log Type = Long Term Log].</i> • <i>Set o5-01 = 0 [Log Start/Stop Selection = OFF].</i>
Note: If the drive detects this error, the terminal assigned to <i>H2-01 to H2-03 = 6A [MFDO Function Select = Data Logger Error]</i> will be ON.			
Code	Name	Causes	Possible Solutions
LT-1	Cooling Fan Maintenance Time	The cooling fan is at 90% of its expected performance life.	1. Use the procedures in this manual to replace the cooling fan. 2. <i>Set o4-03 = 0 [Fan Operation Time Setting = 0 h]</i> to reset the cooling fan operation time.
Note: When the estimated performance life is expired, the terminal assigned to <i>H2-01 to H2-03 = 2F [MFDO Function Select = Maintenance Notification]</i> will be ON.			
Code	Name	Causes	Possible Solutions
LT-2	Capacitor Maintenance Time	The capacitors for the main circuit and control circuit are at 90% of expected performance life.	Replace the board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: When the estimated performance life is expired, the terminal assigned to <i>H2-01 to H2-03 = 2F [MFDO Function Select = Maintenance Notification]</i> will be ON.			
Code	Name	Causes	Possible Solutions
LT-3	SoftChargeBypassRelay MainteTime	The soft charge bypass relay is at 90% of its expected performance life.	Replace the board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: When the estimated performance life is expired, the terminal assigned to <i>H2-01 to H2-03 = 2F [MFDO Function Select = Maintenance Notification]</i> will be ON.			
Code	Name	Causes	Possible Solutions
LT-4	IGBT Maintenance Time (50%)	The IGBT is at 50% of its expected performance life.	Check the load, carrier frequency, and output frequency.
Note: When the estimated performance life is expired, the terminal assigned to <i>H2-01 to H2-03 = 2F [MFDO Function Select = Maintenance Notification]</i> will be ON.			
Code	Name	Causes	Possible Solutions
oH	Heatsink Overheat	The surrounding air temperature is high and the heatsink temperature is more than the <i>L8-02 [Overheat Alarm Level]</i> .	• Measure the surrounding air temperature. • Increase the airflow around the drive. • Install a cooling device (cooling fan or air conditioner) to lower the surrounding air temperature. • Remove objects near the drive that are producing too much heat.
		There is not sufficient airflow around the drive.	• Give the drive the correct installation space as shown in the manual. • Make sure that there is sufficient circulation around the control panel. • Examine the drive for dust or other unwanted materials that could clog the cooling fan. • Remove unwanted materials that prevent air circulation.
		The internal cooling fan or fans have stopped.	1. Use the procedures in this manual to replace the cooling fan. 2. <i>Set o4-03 = 0 [Fan Operation Time Setting = 0 h].</i>
Note: • The drive detects this error if the heatsink temperature of the drive is more than <i>L8-02</i>. • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • If the drive detects this error, it will operate the motor as specified by the stopping method set in <i>L8-03 [Overheat Pre-Alarm Selection]</i>.			

7.5 Minor Faults/Alarms

Code	Name	Causes	Possible Solutions
oH2	External Overheat (H1-XX=B)	An external device sent an oH2.	1. Find the external device that output the overheat alarm. 2. Remove the cause of the problem. 3. Clear the <i>Overheat Alarm (oH2) [H1-xx = B]</i> set to MFDI terminals S1, S2, DI3 to DI7.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			
Code	Name	Causes	Possible Solutions
oH3	Motor Overheat (PTC Input)	The thermistor wiring that detects motor temperature is defective.	Correct wiring errors.
		A fault occurred on the machine. Example: The machine is locked.	Examine the machine and remove the cause of the fault
		The motor has overheated.	• Check the load level, acceleration/deceleration time, and motor start/stop frequency (cycle time). • Decrease the load. • Increase the values set in <i>C1-01 to C1-08 [Acceleration/Deceleration Times]</i>. • Set <i>E2-01 [Motor Rated Current (FLA)]</i> correctly to the value specified by the motor nameplate. • Make sure that the motor cooling system is operating correctly, and repair or replace it if it is damaged. • Adjust <i>E1-04 to E1-10 [V/f Pattern Parameters]</i>. For motor 2, adjust <i>E3-04 to E3-10</i>. Decrease the values set in <i>E1-08 [Mid Point A Voltage]</i> and <i>E1-10 [Minimum Output Voltage]</i>. Note: If the values set in <i>E1-08</i> and <i>E1-10</i> are too low, the overload tolerance will decrease at low speeds.
Note: • The drive detects this fault if the motor overheat signal input from analog input terminal A1 is more than the fault detection level. • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • If the drive detects this error, it will operate the motor as specified by the stopping method set in <i>L1-03 [Motor Thermistor oH Alarm Select]</i>.			
Code	Name	Causes	Possible Solutions
oL3	Overtorque 1	A fault occurred on the machine. Example: The machine is locked.	Examine the machine and remove the cause of the fault
		The parameters are incorrect for the load.	Adjust <i>L6-02 [Torque Detection Level 1]</i> and <i>L6-03 [Torque Detection Time 1]</i> .
Note: • The drive detects this fault if the drive output current is more than the level set in <i>L6-02</i> for longer than <i>L6-03</i>. • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • Set the conditions that trigger the minor fault using <i>L6-01 [Torque Detection Selection 1]</i>.			
Code	Name	Causes	Possible Solutions
oL4	Overtorque 2	A fault occurred on the machine. Example: The machine is locked.	Examine the machine and remove the cause of the fault
		The parameters are incorrect for the load.	Adjust <i>L6-05 [Torque Detection Level 2]</i> and <i>L6-06 [Torque Detection Time 2]</i> .
Note: • The drive detects this error if the drive output current is more than the level set in <i>L6-05</i> for longer than <i>L6-06</i>. • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • Set the conditions that trigger the minor fault using <i>L6-04 [Torque Detection Selection 2]</i>.			
Code	Name	Causes	Possible Solutions
oL5	Mechanical Weakening Detection 1	The drive detected overtorque as specified by the conditions for mechanical weakening detection set in <i>L6-08 [Mechanical Fatigue Detect Select]</i> .	Do a deterioration diagnostic test on the machine side.
Note: • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • If the drive detects this error, it will operate the motor as specified by the Stopping Method set in <i>L6-08</i>.			
Code	Name	Causes	Possible Solutions
oS	Overspeed	There is overshoot.	Decrease <i>C5-01 [ASR Proportional Gain 1]</i> and increase <i>C5-02 [ASR Integral Time 1]</i> .
		The oS detection level is set incorrectly.	Adjust <i>F1-08 [Overspeed Detection Level]</i> and <i>F1-09 [Overspeed Detection Delay Time]</i> .
Note: • The drive detects this error if the motor speed is more than the value set in <i>F1-08</i> for longer than <i>F1-09</i>. • If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate. • If the drive detects this error, it will operate the motor as specified by the stopping method set in <i>F1-03 [Overspeed Detection Selection]</i>.			

Code	Name	Causes	Possible Solutions
ov	Overvoltage	There are surge voltages in the input power supply.	Connect a DC link choke to the drive. Note: If you turn the phase advancing capacitors ON and OFF and use thyristor converters in the same power supply system, there can be surge voltages that irregularly increase the input voltage.
		The drive output cable or motor is shorted to ground (the current short to ground is charging the main circuit capacitor of the drive through the power supply).	1. Examine the motor main circuit cable, terminals, and motor terminal box, and then remove ground faults. 2. Re-energize the drive.
		The power supply voltage is too high.	Decrease the power supply voltage to match the drive rated voltage.
		Electrical interference caused a drive malfunction.	- Examine the control circuit lines, main circuit lines, and ground wiring, and decrease the effects of electrical interference. - Make sure that a magnetic contactor is not the source of the electrical interference, then use a Surge Protective Device if necessary. - Set $L5-01 \neq 0$ [Number of Auto-Restart Attempts $\neq 0$ times].
Note: - The drive detects this error if the DC bus voltage is more than the <i>ov</i> detection level when the Run command has not been input (while the drive is stopped). - The <i>ov</i> detection level is approximately 410 V with 200 V class drives. The detection level is approximately 820 V for 400 V class drives. - If the drive detects this error, the terminal set to $H2-01$ to $H2-03 = 10$ [MFDO Function Selection = Alarm] will activate.			
Code	Name	Causes	Possible Solutions
ovEr	Too Many Parameters Changed	You tried to change more than 150 parameters.	Make sure that parameters that do not have an effect on drive operation are at their default settings. Note: - You can change 150 parameters maximum. - If you change parameters that have dependencies, the drive can detect <i>ovEr</i> when the number of changed parameters is fewer than 150.
Code	Name	Causes	Possible Solutions
PASS	Modbus Communication Test	The Modbus communications test is complete.	The <i>PASS</i> display will turn off after communications test mode is cleared.
Code	Name	Causes	Possible Solutions
PF	Input Phase Loss	There is a phase loss in the drive input power.	Correct all wiring errors with the main circuit power supply.
		Loose wiring in the input power terminals.	Tighten the screws to the correct tightening torque.
		The drive input power voltage is changing too much.	- Examine the supply voltage for problems. - Make the drive input power stable.
		Unsatisfactory balance between voltage phases.	- Examine the supply voltage for problems. - Make the drive input power stable. - If the supply voltage is good, examine the magnetic contactor on the main circuit side for problems.
		The main circuit capacitors have become unserviceable.	- Examine the capacitor maintenance time in monitor $U4-05$ [Capacitor Maintenance]. - If $U4-05$ is more than 90%, replace the capacitor. Contact Yaskawa or your nearest sales representative for more information. - Examine the supply voltage for problems. - Re-energize the drive. - If the alarm stays, replace the circuit board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this error if the DC bus voltage changes irregularly without regeneration. - If the drive detects this error, the terminal assigned to $H2-01$ to $H2-03 = 10$ [MFDO Function Select = Alarm] will be ON. - Use $L8-05$ [Input Phase Loss Protection Sel] to enable and disable <i>PF</i> detection.			
Code	Name	Causes	Possible Solutions
PGo	Encoder (PG) Feedback Loss	The encoder cable is disconnected or wired incorrectly.	Examine for wiring errors or disconnected wires in the encoder cable, and repair problems.
		The encoder is not receiving power.	Examine the encoder power supply.
		The holding brake is stopping the motor.	Release the holding brake.
Note: If the drive detects this error, the terminal assigned to $H2-01$ to $H2-03 = 10$ [MFDO Function Select = Alarm] will activate.			

7.5 Minor Faults/Alarms

Code	Name	Causes	Possible Solutions
rUn	Motor Switch during Run	The drive received a <i>Motor 2 Selection</i> [H1-xx = 16] during run.	Make sure that the drive receives the Motor 2 Selection while the drive is stopped.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10</i> [MFDO Function Selection = Alarm] will activate.			
Code	Name	Causes	Possible Solutions
SE	Modbus Test Mode Error	Modbus communications self-diagnostics [H1-xx = 67] was done while the drive was running.	Stop the drive and do Modbus communications self-diagnostics.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10</i> [MFDO Function Selection = Alarm] will activate.			
Code	Name	Causes	Possible Solutions
SToF	Safe Torque OFF Hardware	One of the two terminals H1-HC and H2-HC received the Safe Disable input signal.	- Make sure that the Safe Disable signal is input from an external source to terminals H1-HC or H2-HC. - When the Safe Disable function is not in use, use a jumper to connect terminals H1-HC and H2-HC.
		The Safe Disable input signal is wired incorrectly.	
		There is internal damage to one Safe Disable channel.	Replace the board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10</i> [MFDO Function Selection = Alarm] will activate.			
Code	Name	Causes	Possible Solutions
TiM	Keypad Time Not Set	There is a battery in the keypad, but the date and time are not set.	Set the date and time with the keypad.
Note: - Parameter <i>o4-24</i> [bAT Detection Selection] enables and disables <i>TiM</i> detection. - If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10</i> [MFDO Function Selection = Alarm] will activate.			
Code	Name	Causes	Possible Solutions
TrPC	IGBT Maintenance Time (90%)	The IGBT is at 90% of its expected performance life.	Replace the IGBT or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10</i> [MFDO Function Selection = Alarm] will activate.			
Code	Name	Causes	Possible Solutions
UL3	Undertorque Detection 1	A fault occurred on the machine. Example: There is a broken pulley belt.	Examine the machine and remove the cause of the fault
		The parameters are incorrect for the load.	Adjust <i>L6-02</i> [Torque Detection Level 1] and <i>L6-03</i> [Torque Detection Time 1].
Note: - The drive detects this error if the drive output current is less than the level set in <i>L6-02</i> for longer than <i>L6-03</i>. - If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10</i> [MFDO Function Selection = Alarm] will activate. - Set the conditions that trigger the minor fault using <i>L6-01</i> [Torque Detection Selection 1].			
Code	Name	Causes	Possible Solutions
UL4	Undertorque Detection 2	A fault occurred on the machine. Example: There is a broken pulley belt.	Examine the machine and remove the cause of the fault
		The parameters are incorrect for the load.	Adjust <i>L6-05</i> [Torque Detection Level 2] and <i>L6-06</i> [Torque Detection Time 2].
Note: - The drive detects this error if the drive output current is less than the level set in <i>L6-05</i> for longer than <i>L6-06</i>. - If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10</i> [MFDO Function Selection = Alarm] will activate. - Set the conditions that trigger the minor fault using <i>L6-04</i> [Torque Detection Selection 2].			
Code	Name	Causes	Possible Solutions
UL5	Mechanical Weakening Detection 2	The drive detected undertorque as specified by the conditions for mechanical weakening detection set in <i>L6-08</i> [Mechanical Fatigue Detect Select].	Examine the machine for deterioration.
Note: - If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10</i> [MFDO Function Selection = Alarm] will activate. - If the drive detects this error, it will operate the motor as specified by the Stopping Method set in <i>L6-08</i>.			
Code	Name	Causes	Possible Solutions
Uv	DC Bus Undervoltage	The drive input power voltage is changing too much.	- Use a better power supply voltage to align with the drive rated voltage. - Make the drive input power stable. - If there is not a fault with the input power supply, examine the magnetic contactor on the main circuit side for faults.
		A phase loss occurred in the drive input power.	Correct errors with the wiring for main circuit drive input power.

Code	Name	Causes	Possible Solutions
		There is loose wiring in the drive input power terminals.	Examine for loose screws and tighten them as specified by the tightening torque values in the manual.
		There was a loss of power.	Use a better power supply.
		The main circuit capacitors have deteriorated.	Examine the capacitor maintenance time in monitor <i>U4-05 [CapacitorMaintenance]</i> . If <i>U4-05</i> is more than 90%, replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
		The drive input power transformer is too small and voltage drops when the power is switched on.	- Check for an alarm when a molded-case circuit breaker, Leakage Breaker (ELCB, GFCI, or RCM/RCD) (with overcurrent protective function), or magnetic contactor is ON. - Check the capacity of the drive power supply transformer.
		Air inside the drive is too hot.	Measure the surrounding air temperature of the drive.
		The Charge LED is broken.	Replace the board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Note: - The drive detects this error if one of these conditions is correct when the Run command has not been input (while the drive is stopped). —The DC bus voltage < <i>L2-05 [Undervoltage Detection Lvl (Uv1)]</i>. —The Contactor that prevents inrush current in the drive was opened. —There is low voltage in the control drive input power. - If the drive detects this error, the terminal set to <i>H2-01 to H2-03 = 10 [MFDO Function Selection = Alarm]</i> will activate.			

7.6 Parameter Setting Errors

Parameter setting errors occur when multiple parameter settings do not agree, or when parameter setting values are not correct. Refer to the table in this section, examine the parameter setting that caused the error, and remove the cause of the error. You must first correct the parameter setting errors before you can operate the drive. The drive will not send notification signals for the faults and alarms when these parameter setting errors occur.

Code	Name	Causes	Possible Solutions
oPE01	Drive Capacity Setting Error	The value set in <i>o2-04 [Drive Model (KVA) Selection]</i> does not agree with the drive model.	Set <i>o2-04</i> to the correct value.
Code	Name	Causes	Possible Solutions
oPE02	Parameter Range Setting Error	Parameter settings are not in the applicable setting range.	1. Push  to show <i>UI-18 [oPE Fault Parameter]</i>, and find parameters that are not in the applicable setting range. 2. Correct the parameter settings. Note: If more than one error occurs at the same time, other <i>oPExx</i> errors have priority over <i>oPE02</i>.
		Set $E2-01 \leq E2-03$ [<i>Motor Rated Current (FLA) ≤ Motor No-Load Current</i>].	Make sure that $E2-01 > E2-03$. Note: If it is necessary to set $E2-01 < E2-03$, first lower the value set in <i>E2-03</i>, and then set <i>E2-01</i>.
Code	Name	Causes	Possible Solutions
oPE03	Multi-Function Input Setting Err	The settings for these parameters do not agree: • <i>H1-01 to H1-07 [MFDI S1, S2, DI3 to DI7 Function Selection]</i> • <i>H7-01 to H7-04 [Virtual Multi-Function Inputs 1 to 4]</i>	Correct the parameter settings.
		The settings for MFDIs overlap. Note: This does not include <i>H1-xx = 20 to 2F [MFDI Function Select = External Fault]</i> and <i>[Reserved]</i> .	Set the parameters correctly to prevent MFDI function overlap.
		You did not set these pairs of MFDI functions to Digital Inputs (<i>H1-xx</i> and <i>H7-01 to H7-04</i>) at the same time: • Setting values <i>10 [Up Command]</i> and <i>11 [Down Command]</i> • Setting values <i>75 [Up 2 Command]</i> and <i>76 [Down 2 Command]</i> • Setting values <i>42 [Run Command (2-Wire Sequence 2)]</i> and <i>43 [FWD/REV (2-Wire Sequence 2)]</i>	Set the MFDI pairs.
		You set a minimum of two of these MFDI combinations to Digital Inputs (<i>H1-xx</i> and <i>H7-01 to H7-04</i>) at the same time: • Setting values <i>10 [Up Command]</i> and <i>11 [Down Command]</i> • Setting values <i>75 [Up 2 Command]</i> and <i>76 [Down 2 Command]</i> • Setting value <i>A [Accel/Decel Ramp Hold]</i> • Setting value <i>1E [Reference Sample Hold]</i> • Setting values <i>44 to 46 [Add Offset Frequency 1 to 3 (d7-01 to d7-03)]</i>	Remove the function settings that are not in use.

Code	Name	Causes	Possible Solutions
		You set these commands in Digital Inputs (<i>H1-xx</i> and <i>H7-01</i> to <i>H7-04</i>) at the same time: - Setting values 61 [<i>Speed Search from Fmax</i>] and 62 [<i>Speed Search from Fref</i>] - Setting values 65, 66, 7A, 7B [<i>KEB Ride-Thru 1 or 2 Activate</i>] and 68 [<i>High Slip Braking (HSB) Activate</i>] - Setting values 16 [<i>Motor 2 Selection</i>] and 1A [<i>Accel/Decel Time Selection 2</i>] - Setting values 65, 66 [<i>KEB Ride-Thru 1 Activate</i>] and 7A, 7B [<i>KEB Ride-Thru 2 Activate</i>] - Setting values 40, 41 [<i>Forward RUN (2-Wire), Reverse RUN (2-Wire)</i>] and 42, 43 [<i>Run Command (2-Wire Sequence 2), FWD/REV (2-Wire Sequence 2)</i>] - Setting values 60 [<i>DC Injection Braking Command</i>] and 6A [<i>Drive Enable</i>] - Setting values 16 [<i>Motor 2 Selection</i>] and 75, 76 [<i>Up 2 Command, Down 2 Command</i>]	Remove the function settings that are not in use.
		Settings for N.C. and N.O. input [<i>H1-xx</i>] for these functions were selected at the same time: - Setting value 15 [<i>Fast Stop (N.O.)</i>] - Setting value 17 [<i>Fast Stop (N.C.)</i>]	Remove one of the function settings.
		You entered these settings while <i>H1-xx</i> = 2 [<i>External Reference 1/2 Selection</i>]: <i>b1-15</i> = 3 [<i>Ethernet</i>] or <i>b1-16</i> = 3 [<i>Run Command Selection 2 = Ethernet</i>] - You did not connect fieldbus network to the drive.	Connect fieldbus network to the drive.
		You entered these settings while <i>H1-xx</i> = 2 [<i>External Reference 1/2 Selection</i>]: <i>b1-15</i> = 1 [<i>Analog Input</i>] <i>H3-02</i> ≠ 0 [<i>MFA1 A1 Function Selection ≠ Frequency Reference</i>]	Set <i>H3-02</i> = 0.
		These parameters are set at the same time: <i>H1-xx</i> ≠ 6A [<i>Drive Enable</i>] <i>H2-xx</i> = 38 [<i>Drive Enabled</i>]	Correct the parameter settings.
		These parameters are set at the same time: <i>H1-xx</i> = 75/76 [<i>Up 2 /Down 2 Command</i>] <i>H3-01</i> = 1 [<i>Digital input A1 Signal Level Select = 0 to +10V(Without Limit)</i>]	Remove one of the function settings.
Code	Name	Causes	Possible Solutions
oPE05	Run Cmd/Freq Ref Source Sel Err	The setting to assign the Run command or frequency reference to fieldbus network is incorrect.	Correct the parameter settings.
Code	Name	Causes	Possible Solutions
oPE07	Analog Input Selection Error	The settings for <i>H3-02</i> [<i>MFA1 Function Select</i>] and <i>H7-30</i> [<i>Virtual Analog Input Selection</i>] overlap.	Set <i>H3-02</i> and <i>H7-30</i> correctly to prevent overlap. Note: It is possible to set these functions to multiple analog input terminals at the same time: - Setting value 0 [<i>Frequency Reference</i>] - Setting values <i>F</i> and <i>1F</i> [<i>Not Used</i>]
		These parameters are set at the same time: <i>H3-02</i>, <i>H7-30</i> = <i>B</i> [<i>PID Feedback</i>]	Remove the function settings that are not in use.
		These parameters are set at the same time: <i>H3-02</i>, <i>H7-30</i> = <i>C</i> [<i>PID Setpoint</i>]	
		These parameters are set at the same time: <i>H3-02</i>, <i>H7-30</i> = <i>C</i> <i>b5-18</i> = 1 [<i>PID Setpoint Selection = Enabled</i>]	

7.6 Parameter Setting Errors

Code	Name	Causes	Possible Solutions
oPE08	Parameter Selection Error	A function was set that is not compatible with the control method selected in A1-02 [Control Method Selection].	- Push ENTER Key to show UI-18 [oPE Fault Parameter], and find parameters that are not in the applicable setting range. - Correct the parameter settings. Note: If more than one error occurs at the same time, other oPExx errors have priority over oPE02.
		When A1-02 = 2 [OLV], you used these parameter settings: - n2-02 > n2-03 [Automatic Freq Regulator Time 1 > Automatic Freq Regulator Time 2] - C4-02 > C4-06 [Torque Compensation Delay Time > Motor 2 Torque Comp Delay Time]	- Set n2-02 < n2-03. - Set C4-02 < C4-06.
		When A1-02 = 0 [V/f], you used these parameter settings: H1-xx = 16 [MFDI Function Select = Motor 2 Selection]	Correct the parameter settings. Note: You cannot use Speed Feedback (V/F Control) with the Motor Switch function.
		When A1-02 = 5 [OLV/PM], you set E5-02 to E5-07 [PM Motor Parameters] = 0.	- Set E5-01 [PM Motor Code Selection] correctly as specified by the motor. - For specialized motors, refer to the motor test report and set E5-xx correctly.
		When A1-02 = 5, 6 [OLV/PM, AOLV/PM], you used these parameter settings: - E5-09 = 0.0 [PM Back-EMF Vpeak (mV/(rad/s)) = 0.0 mV/(rad/s)] - E5-24 = 0.0 [PM Back-EMF L-L Vrms (mV/rpm) = 0.0 mV/min⁻¹]	Set E5-09 or E5-24 to the correct value.
		When A1-02 = 5, 6, you set E5-09 ≠ 0 and E5-24 ≠ 0.	Set E5-09 = 0 or E5-24 = 0.
		When A1-02 = 6, you set these parameters: - n8-57 = 0 [HFI Overlap Selection = Disabled] - You set E1-09 [Minimum Output Frequency] < the 5% value of E1-06.	Correct the parameter settings.
		When A1-02 = 6, you set these parameters: - n8-35 = 0 [Initial Pole Detection Method = Pull-in] - n8-57 = 1 [Enabled]	Correct the parameter settings.
		When A1-02 = 6, you set these parameters: - nA-09 = 0 [Stop Condition Selection = Output Frequency] - nA-10 = 0 [Minimum Output Frequency = Disabled]	Correct the parameter settings.
		When A1-02 = 8 [EZOLV], you used these parameter settings: - E9-01 = 1, 2 [Motor Type Selection = Permanent Magnet (PM), Synchronous Reluctance (SynRM)] - b3-24 = 2 [Speed Search Method Selection = Current Detection 2]	When E9-01 = 1 or 2, set b3-24 = 1 [Speed Estimation].
Code	Name	Causes	Possible Solutions
oPE09	PID Control Selection Fault	These parameters are set at the same time: - b5-15 ≠ 0.0 [PID Sleep Function Start Level ≠ 0.0 Hz] - b1-03 = 2, 3 [Stopping Method Selection = DC Injection Braking to Stop, Coast to Stop with Timer]	- Set b5-15 ≠ 0.0. - Set b1-03 = 0, 1 [Ramp to Stop, Coast to Stop].
		These parameters are set at the same time: - b5-01 = 1, 2 [Enabled (Standard), Enabled (D = Feedforward)] - d2-02 ≠ 0.0 [Frequency Reference Lower Limit ≠ 0.0%]	Correct the parameter settings.
		These parameters are set at the same time: - b5-01 = 1, 2 [Enabled (Standard), Enabled (D = Feedforward)] - b5-11 = 1 [PID Output Reverse Selection = Negative Output Accepted]	Correct the parameter settings.

Code	Name	Causes	Possible Solutions
		These parameters are set at the same time: $b5-01 = 3, 4$ [Trim (Fref+PID Out, D = Fdbk), Trim (Fref+PID Out, D = FeedFwd)] $d2-02 \neq 0.0$ has been set.	Correct the parameter settings.
Note: The drive detects this error if the PID control function selection is incorrect. (When $b5-01 = 1$ to 4 [PID Mode Setting = PID Control Enabled])			
Code	Name	Causes	Possible Solutions
oPE10	V/f Data Setting Error	The parameters that set the V/f pattern do not satisfy these conditions: - For motor 1: $E1-09 \leq E1-07 < E1-06 \leq E1-11 \leq E1-04$ [Minimum Output Frequency $\leq$ Mid Point A Frequency $<$ Base Frequency $\leq$ Mid Point B Frequency $\leq$ Maximum Output Frequency] - For motor 2: $E3-09 \leq E3-07 < E3-06 \leq E3-11 \leq E3-04$ [Minimum Output Frequency $\leq$ Mid Point A Frequency $<$ Base Frequency $\leq$ Mid Point B Frequency $\leq$ Maximum Output Frequency]	Set the parameters correctly to satisfy the conditions.
Code	Name	Causes	Possible Solutions
oPE11	Carrier Frequency Setting Error	These parameters are set at the same time: $C6-05 > 6$ [Carrier Freq Proportional Gain > 6] $C6-04 > C6-03$ [Carrier Frequency Lower Limit $>$ Carrier Frequency Upper Limit] Note: When $C6-05 < 7$, $C6-04$ becomes disabled. The drive sets the carrier frequency to the value set to $C6-03$.	Set $C6-02$ to $C6-05$ correctly.
		$C6-02$ to $C6-05$ settings are not in the applicable setting range.	
Code	Name	Causes	Possible Solutions
oPE16	Energy Saving Constants Error	The Energy Saving parameters are not set in the applicable setting range.	Make sure that $E5-xx$ is set correctly as specified by the motor nameplate data.
		These parameters are set at the same time: $L7-42 = 1$ [Current Lim Sel = Enabled] $b8-01 = 2$ [Energy Saving Control Selection = Automatic Optimization]	- Set $L7-42 = 0$ [Disabled]. - Set $b8-01 \neq 2$.
Code	Name	Causes	Possible Solutions
oPE33	Digital Output Selection Error	These two parameters are set at the same time: $H2-60 \neq F$ [Term MA,MB,MC Secondary Function $\neq$ Not Used] $H2-01 = 1xx$ [Term MA,MB,MC Function Selection = Inverse output of xx]	Clear the $H2-01$ to $H2-03 = 1xx$ [Inverse output of xx] settings.
		These two parameters are set at the same time: $H2-63 \neq F$ [Ethernet DO1 Secondary Function $\neq$ Not Used] $H2-02 = 1xx$ [Ethernet DO1 Function Selection = Inverse output of xx]	Note: If you use the function to output logical calculation results ($H2-60$, $H2-63$, $H2-66 \neq F$), you cannot set $H2-01$ to $H2-03 = 1xx$.
		These two parameters are set at the same time: $H2-66 \neq F$ [Ethernet DO2 Secondary Function $\neq$ Not Used] $H2-03 = 1xx$ [Ethernet DO2 Function Selection = Inverse output of xx]	
		These parameter pairs are set incorrectly: $H2-21$ [Comparator 1 Lower Limit] $> H2-22$ [Comparator 1 Upper Limit] $H2-27$ [Comparator 2 Lower Limit] $> H2-28$ [Comparator 2 Upper Limit]	- Set parameters $H2-21 \leq H2-22$. - Set parameters $H2-27 \leq H2-28$.

7.7 Auto-Tuning Errors

This table gives information about errors detected during Auto-Tuning. If the drive detects an Auto-Tuning error, the keypad will show the error and the motor will coast to stop. The drive will not send notification signals for faults and alarms when Auto-Tuning errors occur.

Two types of Auto-Tuning errors are: *Endx* and *Erx*. *Endx* identifies that Auto-Tuning has successfully completed with calculation errors. Find and repair the cause of the error and do Auto-Tuning again, or set the motor parameters manually. You can use the drive in the application if you cannot find the cause of the *Endx* error.

Erx identifies that Auto-Tuning was not successful. Find and repair the cause of the error and do Auto-Tuning again.

Code	Name	Causes	Possible Solutions
End1	Excessive Rated Voltage Setting	The torque reference was more than 20% during Auto-Tuning or the no-load current that was measured after Auto-Tuning is more than 80%.	- Make sure that the input motor nameplate data is correct. - Do Auto-Tuning again and correctly set the motor nameplate data. - If you can uncouple the motor and load, remove the motor from the machine and do Rotational Auto-Tuning again. - If you cannot uncouple the motor and load, use the results from Auto-Tuning.
Code	Name	Causes	Possible Solutions
End2	Iron Core Saturation Coefficient	The motor nameplate data entered during Auto-Tuning is incorrect.	- Make sure that the input motor nameplate data is correct. - Do Auto-Tuning again and correctly set the motor nameplate data.
		Auto-Tuning results were not in the applicable parameter setting range, and <i>E2-07</i> or <i>E2-08</i> [Motor Saturation Coefficient 2] have temporary values.	- Examine and repair damaged motor wiring. - If you can uncouple the motor and load, remove the motor from the machine and do Rotational Auto-Tuning again.
Code	Name	Causes	Possible Solutions
End3	Rated Current Setting Alarm	The rated current value is incorrect.	Do Auto-Tuning again and set the correct rated current shown on the motor nameplate.
Code	Name	Causes	Possible Solutions
End4	Adjusted Slip Calculation Error	The Auto-Tuning results were not in the applicable parameter setting range.	- Make sure the input motor nameplate data is correct. - Do Rotational Auto-Tuning again and correctly set the motor nameplate data. - If you cannot uncouple the motor and load, do Stationary Auto-Tuning 2.
		The motor rated slip that was measured after Stationary Auto-Tuning was 0.2 Hz or lower.	
		The motor rated slip that was measured after compensation with <i>E2-08</i> [Motor Saturation Coefficient 2] is not in the applicable range.	
		The secondary resistor measurement results were not in the applicable range.	
Code	Name	Causes	Possible Solutions
End5	Resistance Tuning Error	The Auto-Tuning results of the Line-to-Line Resistance were not in the applicable range.	- Make sure that the input motor nameplate data is correct. - Examine and repair damaged motor wiring.
Code	Name	Causes	Possible Solutions
End6	Leakage Inductance Alarm	The Auto-Tuning results were not in the applicable parameter setting range.	Make sure that the input motor nameplate data is correct, and do Auto-Tuning again.
		<i>A1-02</i> [Control Method Selection] setting is not applicable.	- Examine the value set in <i>A1-02</i>. - Make sure that the input motor nameplate data is correct, and do Auto-Tuning again.
Code	Name	Causes	Possible Solutions
End7	No-Load Current Alarm	The Auto-Tuning results of the motor no-load current value were not in the applicable range.	Examine and repair damaged motor wiring.
		Auto-Tuning results were less than 5% of the motor rated current.	Make sure that the input motor nameplate data is correct, and do Auto-Tuning again.

Code	Name	Causes	Possible Solutions
End8	HFI Alarm	- Inductance saliency ratio (<i>E5-07/E5-06</i>) is too small. - The drive cannot find the <i>n8-36 [HFI Frequency Level for L Tuning]</i> value.	- Set the correct value on the motor nameplate <i>E5-xx [PM motor parameters]</i> or do Stationary/Rotational Auto-Tuning, and then do High Frequency Injection Tuning again. - When it is necessary to set <i>n8-35 = 1 [Initial Pole Detection Method = High Frequency Injection]</i> or <i>n8-57 = 1 [HFI Overlap Selection = Enabled]</i>, make sure that there is no unusual noise in the low speed range (10% or less) and that the motor does not rotate in reverse at start. If there is unusual noise in the low speed range (10% or less), increase <i>n8-41</i> in increments of 0.5. Set <i>n8-41 > 0.0</i> for IPM motors. Note: If the drive detects <i>End8</i>, it will automatically set <i>n8-35 = 0 [Pull-in]</i> and <i>n8-57 = 0 [Disabled]</i>. Do not change the settings unless necessary.
Code	Name	Causes	Possible Solutions
End9	Initial Pole Detection Alarm	The drive cannot calculate the correct value for <i>n8-84 [Polarity Detection Current]</i> during High Frequency Injection Tuning.	- Set the correct value on the motor nameplate <i>E5-xx [PM motor parameters]</i> or do Stationary/Rotational Auto-Tuning, and then do High Frequency Injection Tuning again. - When <i>n8-35 = 1 [Initial Pole Detection Method = High Frequency Injection]</i> or <i>n8-57 = 1 [HFI Overlap Selection = Enabled]</i>, make sure that the motor does not rotate in reverse at start. If there is unusual noise in the low speed range (10% or less), increase <i>n8-41</i> in increments of 0.5. Set <i>n8-41 > 0.0</i> for IPM motors. Note: If the drive detects <i>End9</i>, it will automatically set <i>n8-35 = 0 [Pull-in]</i> and <i>n8-57 = 0 [Disabled]</i>. Do not change the settings unless necessary.
Code	Name	Causes	Possible Solutions
Er-01	Motor Data Error	The motor nameplate data entered during Auto-Tuning is incorrect.	- Make sure that the motor nameplate data is correct. - Do Auto-Tuning again and correctly set the motor nameplate data.
		The combination of the motor rated power and motor rated current do not match.	- Examine the combination of drive capacity and motor output. - Do Auto-Tuning again, and correctly set the motor rated power and motor rated current.
		The combination of the motor rated current that was entered during Auto-Tuning and <i>E2-03 [Motor No-Load Current]</i> do not match.	- Examine the motor rated current and the no-load current. - Set <i>E2-03</i> correctly. - Do Auto-Tuning again, and correctly set the motor rated current.
		The combination of the setting values of Motor Base Frequency and Motor Base Speed do not match.	Do Auto-Tuning again, and correctly set the Motor Base Frequency and Motor Base Speed.
Code	Name	Causes	Possible Solutions
Er-02	Drive in an Alarm State	The motor nameplate data entered during Auto-Tuning is incorrect.	- Make sure that the motor nameplate data entered in Auto-Tuning is correct. - Do Auto-Tuning again and correctly set the motor nameplate data.
		You did Auto-Tuning while the drive had a minor fault or alarm.	Clear the minor fault or alarm and do Auto-Tuning again.
		There is a defective motor cable or cable connection.	Examine and repair motor wiring.
		The load is too large.	- Decrease the load. - Examine the machine area to see if, for example, the motor shaft is locked.
		The drive detected a minor fault during Auto-Tuning.	- Stop Auto-Tuning. - Examine the minor fault code and remove the cause of the problem. - Do Auto-Tuning again.
Code	Name	Causes	Possible Solutions
Er-03	STOP Button was Pressed	During Auto-Tuning,  was pushed.	Auto-Tuning did not complete correctly. Do Auto-Tuning again.

7.7 Auto-Tuning Errors

Code	Name	Causes	Possible Solutions
Er-04	Line-to-Line Resistance Error	The Auto-Tuning results were not in the applicable parameter setting range.	- Examine and repair motor wiring. - Disconnect the machine from the motor and do Rotational Auto-Tuning again.
		Auto-Tuning did not complete in a pre-set length of time.	
		There is a defective motor cable or cable connection.	
		The motor nameplate data entered during Auto-Tuning is incorrect.	- Make sure that the input motor nameplate data is correct. - Do Auto-Tuning again and correctly set the motor nameplate data.
Code	Name	Causes	Possible Solutions
Er-05	No-Load Current Error	The Auto-Tuning results were not in the applicable parameter setting range.	- Examine and repair motor wiring. - Disconnect the machine from the motor and do Rotational Auto-Tuning again.
		Auto-Tuning did not complete in a pre-set length of time.	
		The motor nameplate data entered during Auto-Tuning is incorrect.	- Make sure that the input motor nameplate data is correct. - Do Auto-Tuning again and correctly set the motor nameplate data.
		Rotational Auto-Tuning was done with a load that was more than 30% of the rating connected to the motor.	- Disconnect the machine from the motor and do Rotational Auto-Tuning again. - If you cannot uncouple the motor and load, make sure that the load is less than 30% of the motor rating. If a mechanical brake is installed in the motor, release the brake during Rotational Auto-Tuning.
Code	Name	Causes	Possible Solutions
Er-08	Rated Slip Error	The motor nameplate data entered during Auto-Tuning is incorrect.	- Make sure that the input motor nameplate data is correct. - Do Auto-Tuning again and correctly set the motor nameplate data.
		Auto-Tuning did not complete in a pre-set length of time.	- Examine and repair the motor wiring. - If the motor and machine are connected during Rotational Auto-Tuning, decouple the motor from the machinery.
		The Auto-Tuning results were not in the applicable parameter setting range.	
		Rotational Auto-Tuning was done with a load that was more than 30% of the rating connected to the motor.	- Disconnect the machine from the motor and do Rotational Auto-Tuning again. - If you cannot uncouple the motor and load, make sure that the load is less than 30% of the motor rating. If a mechanical brake is installed in the motor, release the brake during Rotational Auto-Tuning.
Code	Name	Causes	Possible Solutions
Er-09	Acceleration Error	The motor did not accelerate for the specified acceleration time.	- Increase the value set in <i>C1-01 [Acceleration Time 1]</i>. - Disconnect the machine from the motor and do Rotational Auto-Tuning again.
		The value of <i>L7-01</i> or <i>L7-02 [Forward/Reverse Torque Limit]</i> is small.	Increase the value set in <i>L7-01</i> or <i>L7-02</i> .
		Rotational Auto-Tuning was done with a load that was more than 30% of the rating connected to the motor.	- Disconnect the machine from the motor and do Rotational Auto-Tuning again. - If you cannot uncouple the motor and load, make sure that the load is less than 30% of the motor rating. If a mechanical brake is installed in the motor, release the brake during Rotational Auto-Tuning.
Code	Name	Causes	Possible Solutions
Er-10	Motor Direction Error	There is defective drive and motor wiring.	Examine and repair motor wiring.
		There is defective drive and encoder wiring.	Examine and repair the wiring to the encoder.
		The machine pulled the motor to rotate in the opposite direction.	Disconnect the machine from the motor and do Rotational Auto-Tuning again.
		When the torque reference is 100% or higher, the sign of the speed reference was opposite of the detected speed.	
Code	Name	Causes	Possible Solutions
Er-11	Motor Speed Error	The torque reference during acceleration is too high (100%).	- Increase the value set in <i>C1-01 [Acceleration Time 1]</i>. - Disconnect the machine from the motor and do Rotational Auto-Tuning again.

Code	Name	Causes	Possible Solutions
Er-12	Current Detection Error	There is a phase loss in the drive input power. (U/T1, V/T2, W/T3)	Examine and repair motor wiring.
		The current exceeded the current rating of the drive.	- Check the motor wiring for any short circuits between the wires. - Check and turn ON any magnetic contactors used between motors. - Replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
		The output current is too low.	
		You tried Auto-Tuning without a motor connected to the drive.	Connect the motor and do Auto-Tuning.
		There was a current detection signal error.	Replace the control board or the drive. For information about replacing the control board, contact Yaskawa or your nearest sales representative.
Code	Name	Causes	Possible Solutions
Er-13	Leakage Inductance Alarm	The motor rated current value is incorrect.	Correctly set the rated current indicated on the motor nameplate and perform Auto-Tuning again.
		The drive could not complete tuning for leakage inductance in fewer than 300 seconds.	Examine and repair motor wiring.
Code	Name	Causes	Possible Solutions
Er-14	Motor Speed Error 2	The motor speed was more than two times the amplitude of speed reference during Inertia Tuning.	Decrease the value set in C5-01 [ASR Proportional Gain 1].
Code	Name	Causes	Possible Solutions
Er-15	Torque Saturation Error	During Inertia Tuning, the output torque was more than the value set in L7-01 to L7-04 [Torque Limit].	- Increase the value set in L7-01 to L7-04 [Torque Limit] as much as possible. - Decrease the values set for the frequency and amplitude of the test signals used when doing inertia tuning. First, decrease the test signal amplitude, and then do Inertia Tuning. If the error continues, decrease the test signal frequency and do Inertia Tuning again.
Code	Name	Causes	Possible Solutions
Er-16	Inertia ID Error	The inertia found by the drive was too small or too large during Inertia Tuning (10% or less, or 50000% or more).	- Decrease the values set for the frequency and amplitude of the test signals used when doing inertia tuning. First, decrease the test signal amplitude, and then do Inertia Tuning. If the error continues, decrease the test signal frequency and do Inertia Tuning again. - Correctly set the motor inertia as specified by the motor, and do Inertia Tuning again.
Code	Name	Causes	Possible Solutions
Er-17	Reverse Prohibited Error	<i>b1-04 = 1 [Reverse Operation Selection = Reverse Disabled]</i> Note: You cannot do Inertia Tuning if the drive cannot rotate the motor in reverse.	- Enable reverse in the target machine. - Set <i>b1-04 = 0 [Reverse Enabled]</i>. - Do Inertia Tuning again.
Code	Name	Causes	Possible Solutions
Er-18	Back EMF Error	The result of the induced voltage tuning was not in the applicable range.	- Make sure that the input motor nameplate data is correct. - Do Auto-Tuning again and correctly set the motor nameplate data.
Code	Name	Causes	Possible Solutions
Er-19	PM Inductance Error	The Auto-Tuning results of the PM motor inductance were not in the applicable range.	- Make sure that the input motor nameplate data is correct. - Do Auto-Tuning again and correctly set the motor nameplate data.
Code	Name	Causes	Possible Solutions
Er-20	Stator Resistance Error	The Auto-Tuning results of the PM Motor Stator Resistance were not in the applicable range.	- Make sure that the input motor nameplate data is correct. - Do Auto-Tuning again and correctly set the motor nameplate data.
Code	Name	Causes	Possible Solutions
Er-25	HighFreq Inject Param Tuning Err	The motor data is incorrect.	Do Stationary Auto-Tuning again. Note: If the drive detects <i>Er-25</i> after doing Stationary Auto-Tuning, the motor may not be able to use high frequency injection control. Contact Yaskawa or your nearest sales representative for more information.

7.8 Backup Function Operating Mode Display and Errors

◆ Operating Mode Display

When you use the LCD keypad to do the backup function, the keypad shows the running operation on the LCD display. These indicators do not show that an error has occurred.

Keypad Display	Name	Display	Status
Drive and Keypad mismatch. Should the parameters be restored?	Detection of inconsistency between the drive and keypad	Normally displayed	The drive detected the connection of a keypad from a different drive. Select [Yes] to copy parameters backed up in the keypad to the connected drive.
Restore Restore from keypad	Restoring parameters	Flashing	The parameters stored in the keypad have been restored to the drive.
End	Backup/restore/verify operation ended normally	Normally displayed	The parameter backup, restore, or verify operation ended normally.
Backup Backup from Drive	Backing up parameters	Flashing	The parameters stored in the drive are being backed up to the keypad.
Verify Keypad & Drive	Verifying parameters	Flashing	The parameter settings stored in the keypad and the parameter settings in the drive match or are being compared.

◆ Backup Function Runtime Errors

When an error occurs, the keypad shows a code to identify the error.

The table in this section show the error codes. If there are errors, refer to these tables:

Note:

Push any key on the keypad to clear an error.

Code	Name	Causes	Possible Solutions
CPEr	Control Mode Mismatch	The keypad setting and drive setting for <i>A1-02 [Control Method Selection]</i> do not agree.	1. Set <i>A1-02</i> on the drive to the same value that is on the keypad. 2. Restore the parameters.
Code	Name	Causes	Possible Solutions
CPyE	Error Writing Data	Parameter restore did not end correctly.	Restore the parameters.
Code	Name	Causes	Possible Solutions
CSEr	Control Mode Mismatch	The keypad is broken.	Replace the keypad.
Code	Name	Causes	Possible Solutions
dFPS	Drive Model Mismatch	You tried to restore parameters to a different drive model than the one that you backed up.	1. Examine the drive model that you used to back up the parameters. 2. Restore the parameters.
Code	Name	Causes	Possible Solutions
iFEr	Keypad Communication Error	There was a communications error between the keypad and the drive.	Examine the connector or cable connection.
Code	Name	Causes	Possible Solutions
ndAT	Error Received Data	The parameter settings for model and specifications (power supply voltage and capacity) are different between the keypad and the drive.	1. Make sure that drive model and the value set in <i>o2-04 [Drive Model (KVA) Selection]</i> agree. 2. Restore the parameters.
		The parameters are not stored in the keypad.	1. Connect a keypad that has the correct parameters. 2. Restore the parameters.
Code	Name	Causes	Possible Solutions
PWEr	DWEZ Password Mismatch	The password set in the backup operation with <i>qx-xx [DriveWorksEZ Parameters]</i> and <i>rx-xx [DriveWorksEZ Connections]</i> is incorrect.	Set the DWEZ PC software password supplied by Yaskawa for the DWEZ program user ID downloaded to the drive.
Note: <i>U8-11 and U8-12 [DWEZ Versions 1 and 2]</i> show the user ID of the DWEZ program.			

Code	Name	Causes	Possible Solutions
rdEr	Error Reading Data	You tried to back up the data when <i>o3-02 = 0 [Copy Allowed Selection = Disabled]</i> .	Set <i>o3-02 = 1 [Enabled]</i> and back up again.
Code	Name	Causes	Possible Solutions
vAEr	Voltage Class, Capacity Mismatch	The power supply specifications or drive capacity parameter settings are different between the keypad and the drive.	1. Make sure that drive model and the value set in <i>o2-04 [Drive Model (KVA) Selection]</i> agree. 2. Restore the parameters.
Code	Name	Causes	Possible Solutions
vFyE	Parameters do not Match	The parameters that are backed up in the keypad and the parameters in the drive are not the same.	1. Restore or backup the parameter again. 2. Verify the parameters.

7.9 Diagnosing and Resetting Faults

When a fault occurs and the drive stops, do the procedures in this section to remove the cause of the fault, then re-energize the drive.

◆ Fault and Power Loss Occur at the Same Time

⚠ WARNING Electrical Shock Hazard

After the drive blows a fuse or trips a GFCI, do not immediately energize the drive or operate peripheral devices. Wait for the time specified on the warning label at a minimum and make sure that all indicators are OFF. Then check the wiring and peripheral device ratings to find the cause of the problem. If you do not know the cause of the problem, contact Yaskawa before you energize the drive or peripheral devices.

If you do not fix the problem before you operate the drive or peripheral devices, it can cause serious injury or death.

⚠ WARNING Crush Hazard

Wear eye protection before you maintain and inspect the drive, or replace parts.

If you do not wear eye protection, it can cause serious injury from flying objects.

1. Supply power to the control circuit from the external 24 V input.
2. Use monitor parameters *U2-xx [Fault Trace]* to show the fault code and data about the operating status of the drive immediately before the fault occurred.
3. Use the information in the Troubleshooting tables to remove the fault.

Note:

1. To find the faults that were triggered, check the fault history in *U2-02 [Previous Fault]*. To find information about drive status (such as frequency, current, and voltage) when the faults were triggered, check *U2-03 to U2-20*.
 2. If the fault display stays after you re-energize the drive, remove the cause of the fault and reset.
-

◆ Fault Occurs Without Power Loss

1. Examine the fault code shown on the keypad.
 2. Use the information in the Troubleshooting tables to remove the fault.
 3. Do a fault reset.
-

◆ Fault Reset Procedure

If a fault occurs, you must remove the cause of the fault and re-energize the drive. [Table 7.3](#) lists the different methods to reset the drive after a fault.

Table 7.3 Fault Reset Methods

Methods	Description
Method 1	While the keypad is showing the fault or alarm code, push  on the keypad.
Method 2	Switch ON the MFDI terminal set to $H1\text{-}xx = 14$ [MFDI Function Select = Fault Reset]. Note: The default setting for $H1\text{-}02$ [Terminal S2 Function Selection] is 14 [Fault Reset]. 
Method 3	- De-energize the drive main circuit power supply. - Energize the drive again after the keypad display goes out. 

Note:
Turn the Run command OFF to reset the fault. If the drive receives a Run command from the PLC or control circuit terminal, the drive will not reset the fault. If you do a fault reset when the drive has a Run command, the keypad will show minor fault *CrST* [Remove RUN Command to Reset].

7.10 Troubleshooting Without Fault Display

Note:

Make sure that you use a keypad that has a flash number of 1004 or later. Keypads that have a flash number of 1003 or earlier will not show characters correctly.

If the drive or motor operate incorrectly, but the keypad does not show a fault or error code, refer to the items this section.

- Motor hunting and oscillation
- Unsatisfactory motor torque
- Unsatisfactory speed precision
- Unsatisfactory motor torque and speed response
- Motor noise

◆ Typical Problems

Symptom	Reference
The Parameter Settings Will Not Change	282
The Motor Does Not Rotate after You Enter a Run Command	283
The Motor Rotates in the Opposite Direction from the Run Command	284
The Motor Rotates in Only One Direction	284
The Motor Is Too Hot	284
The Correct Auto-Tuning Mode Is Not Available	285
The Motor Stalls during Acceleration or Accel/Decel Time Is Too Long	285
The Drive Frequency Reference Is Different than the Controller Frequency Reference Command	285
PM Motor Speed Is Not Stable	286
There Is Too Much Motor Oscillation and the Rotation Is Irregular	286
Deceleration Takes Longer than Expected when You Enable Dynamic Braking	286
There Is Audible Noise from the Drive or Motor Cables when You Energize the Drive	287
The Ground Fault Circuit Interrupter (GFCI) Trips During Run	287
Motor Rotation Causes Unexpected Audible Noise from Connected Machinery	287
Motor Rotation Causes Oscillation or Hunting	287
PID Output Fault	288
The Starting Torque Is Not Sufficient	288
The Motor Rotates after You Shut Off Drive Output	288
The Output Frequency Is Lower Than the Frequency Reference	288
The Motor Will Not Restart after Power Loss	289

◆ The Parameter Settings Will Not Change

Causes	Possible Solutions
The drive is operating the motor (the drive is in Drive Mode).	Stop the drive and change to Programming Mode.
Parameter <i>A1-01</i> = 0 [<i>Access Level Selection = Operation Only</i>].	Set <i>A1-01</i> = 2 [<i>Access Level Selection = Advanced Level</i>] or <i>A1-01</i> = 3 [<i>Expert Level</i>].
Parameter <i>H1-xx</i> = 1B [<i>MFDI Function Select = Programming Lockout</i>].	Activate the terminals to which <i>H1-xx</i> = 1B is set, and then change the parameters.

Causes	Possible Solutions
You entered an incorrect password in <i>A1-04 [Password]</i> .	- Enter the correct password to <i>A1-04</i> again. - If you forgot the password, set the password again with <i>A1-04</i> and <i>A1-05 [Password Setting]</i>. Note: If you set the password, you cannot change these parameters until the password aligns: <i>A1-01 [Access Level Selection]</i> <i>A1-02 [Control Method Selection]</i> <i>A1-03 [Initialize Parameters]</i> <i>A1-06 [Application Preset]</i> <i>A1-07 [DriveWorksEZ Function Selection]</i> <i>A2-01 to A2-32 [User Parameter 1 to User Parameter 32]</i>
The drive detected <i>Uv [Undervoltage]</i> .	- View <i>U1-07 [DC Bus Voltage]</i> to see the power supply voltage. - Examine the main circuit wiring.

◆ The Motor Does Not Rotate after You Enter a Run Command

Causes	Possible Solutions
The drive is not in Drive Mode.	- Make sure that the READY LED on the keypad is ON. - If the READY LED is OFF, push and hold the ESC Key to go back to the frequency reference screen (the initial screen).
The drive stopped and you pushed  to transfer the Run command source to the keypad.	Do one of these two: - Push . - Re-energize the drive. Note: When  must not change the Run command source, set <i>o2-01 = 0 [LO/RE Key Function Selection = Disabled]</i>.
Auto-Tuning completed.	Push and hold the ESC Key to go back to the frequency reference screen (the initial screen). Note: When Auto-Tuning completes, the drive changes to Programming Mode. The drive will not accept a Run command unless the drive is in Drive Mode.
The drive received a Fast Stop command.	Turn off the fast stop input signal.
The settings for the source that supplies the Run command are incorrect.	Set <i>b1-02 [Run Command Selection 1]</i> correctly.
The frequency reference source is not set correctly.	Set <i>b1-01 [Frequency Reference Selection 1]</i> correctly.
There is defective wiring in the control circuit terminals.	- Correctly wire the drive control circuit terminals. - View <i>U1-10 [Digital Input Status]</i> for input terminal status.
The settings for voltage input and current input of the master frequency reference are incorrect.	Examine the analog input terminal signal level set in <i>H3-01 [Terminal A1 Signal Level Select]</i> .
The setting for the Sinking/Sourcing mode is incorrect.	Set DIP switch S3 according to your application.
The frequency reference is too low.	- View <i>U1-01 [Freq Reference]</i>. - Increase the frequency reference to a value higher than <i>E1-09 [Minimum Output Frequency]</i>.
The MFAI setting is incorrect.	- Make sure that the function set to the MFAI is correct. The frequency reference is 0 when <i>H3-02 = 1 [MFAI Function Select = Frequency Gain]</i> and voltage (current) is not input. - Use <i>U1-13 [Terminal A1]</i> to make sure that the analog input value set to terminal A1 is applicable.
You pushed  .	Turn the Run command OFF then ON from an external input. Note: When you push  during operation, the drive will ramp to stop. Set <i>o2-02 = 0 [STOP Key Function Selection = Disabled]</i> to disable the  function.
The 2-wire sequence is not set correctly.	Make sure that <i>H1-03 to H1-07</i> ≠ 0.

◆ The Motor Rotates in the Opposite Direction from the Run Command

Causes	Possible Solutions
The phase wiring between the drive and motor is incorrect.	- Examine the wiring between the drive and motor. - Connect drive output terminals U/T1, V/T2, and W/T3 in the correct sequence to agree with motor terminals U, V, and W. - Switch two motor cables U, V, and W to reverse motor direction.
The forward direction for the motor is set incorrectly.	- Connect drive output terminals U/T1, V/T2, and W/T3 in the correct sequence to agree with motor terminals U, V, and W. - Switch two motor cables U, V, and W to reverse motor direction.  Figure 7.1 Forward Rotating Motor Note: - For Yaskawa motors, the forward direction is counterclockwise when looking from the motor shaft side. - Refer to the motor specifications, and make sure that the forward rotation direction is correct for the application. The forward rotation direction of motors can be different for different motor manufacturers and types.
The signal connections for forward run and reverse run on the drive control circuit terminals and control panel side are incorrect.	Correctly wire the control circuit.
The motor is running at almost 0 Hz and the Speed Search estimated the speed to be in the opposite direction.	Set $b3-14 = 0$ [<i>Bi-directional Speed Search = Disabled</i>], then the drive will only do speed search in the specified direction.

◆ The Motor Rotates in Only One Direction

Causes	Possible Solutions
The drive will not let the motor rotate in reverse.	Set $b1-04 = 0$ [<i>Reverse Operation Selection = Reverse Enabled</i>].

◆ The Motor Is Too Hot

Causes	Possible Solutions
The load is too heavy.	- Decrease the load. - Increase the acceleration and deceleration times. - Examine the values set in $L1-01$ [<i>Motor Overload (oL1) Protection</i>], $L1-02$ [<i>Motor Overload Protection Time</i>], and $E2-01$ [<i>Motor Rated Current (FLA)</i>]. - Use a larger motor. Note: The motor also has a short-term overload rating. Examine this rating carefully before setting drive parameters.
The motor is running continuously at a very low speed.	- Change the run speed. - Use a drive-dedicated motor.
The drive is operating in a vector control mode, but Auto-Tuning has not been done.	- Do Auto-Tuning. - Calculate motor parameter and set motor parameters. - Set $A1-02 = 0$ [<i>Control Method Selection = V/f Control</i>].
The voltage insulation between motor phases is not sufficient.	- Use a motor with a voltage tolerance that is higher than the maximum voltage surge. - Use a drive-dedicated motor that is rated for use with AC drives for applications that use a motor on drives rated higher than 400 V class. - Install an AC reactor on the output side of the drive and set $C6-02 = 1$ [<i>Carrier Frequency Selection = 2.0 kHz</i>]. Note: When the motor is connected to the drive output terminals U/T1, V/T2, and W/T3, surges occur between the drive switching and the motor coils. These surges can be three times the drive input power supply voltage (600 V for a 200 V class drive, 1200 V for a 400 V class drive).
The air around the motor is too hot.	- Measure the surrounding air temperature. - Decrease the temperature in the area until it is in the specified temperature range.
The motor fan stopped or is clogged.	- Clean the motor fan. - Make the drive environment better.

◆ The Correct Auto-Tuning Mode Is Not Available

Causes	Possible Solutions
The desired Auto-Tuning mode is not available for the selected control mode.	Change the motor control method with parameter <i>A1-02 [Control Method Selection]</i> .

◆ The Motor Stalls during Acceleration or Accel/Decel Time Is Too Long

Causes	Possible Solutions
The drive and motor system are at the torque limit or current suppression will not let the drive accelerate.	- Decrease the load. - Use a larger motor. Note: Although the drive has a Stall Prevention function and a Torque Compensation Limit function, if you try to accelerate too fast or try to drive a load that is too large, it can be too much for the limits of the motor.
Torque limit is set incorrectly.	Set the torque limit correctly.
The acceleration time setting is too short.	Examine the values set in <i>C1-01, C1-03, C1-05, or C1-07 [Acceleration Time]</i> and set them to applicable values.
The load is too large.	- Increase the acceleration time. - Examine the mechanical brake and make sure that it is fully releasing. - Decrease the load to make sure that the output current stays less than the motor rated current. - Use a larger motor. Note: • In extruder and mixer applications, the load can increase as the temperature decreases. • Although the drive has a Stall Prevention function and a Torque Compensation Limit function, if you try to accelerate too fast or try to drive a load that is too large, it can be too much for the limits of the motor.
The frequency reference is low.	- Examine <i>E1-04 [Maximum Output Frequency]</i> and increase the setting if it is set too low. - Examine <i>U1-01 [Frequency Reference]</i> for the correct frequency reference. - Examine the multi-function input terminals to see if a frequency reference signal switch is set. - When you use an MFAL, examine the low gain level set in <i>H3-03 [Terminal A1 Gain Setting]</i>.
The motor characteristics and drive parameter settings are not compatible.	- Set the correct V/f pattern to agree with the characteristics of the motor. - Examine the V/f pattern set in <i>E1-03 [V/f Pattern Selection]</i>. - Do Rotational Auto-Tuning.
The drive is operating in vector control mode, but you did not complete Auto-Tuning.	- Do Auto-Tuning. - Calculate motor data and reset motor parameters. - Set <i>A1-02 = 0 [Control Method Selection = V/f Control]</i>.
The Stall Prevention level during acceleration setting is too low.	Increase the value set in <i>L3-02 [Stall Prevent Level during Accel]</i>. Note: If the <i>L3-02</i> value is too low, the acceleration time can be unsatisfactorily long.
The Stall Prevention level during run setting is too low.	Increase the value set in <i>L3-06 [Stall Prevent Level during Run]</i>. Note: If the <i>L3-06</i> value is too low, speed will decrease before the drive outputs torque.
The drive is at the limit of the V/f motor control method.	- When the motor cable is longer than 50 m (164 ft), do Auto-Tuning for line-to-line resistance. - Set the V/f pattern to "High Starting Torque". - Use a Vector Control method. Note: V/f control method does not supply high torque at low speeds.
The current limit setting is not correct.	Set the current limit again.

◆ The Drive Frequency Reference Is Different than the Controller Frequency Reference Command

Causes	Possible Solutions
The analog input gain and bias for the frequency reference input are set incorrectly.	Examine the gain and bias settings for the analog input that set the frequency reference. Terminal A1: <i>H3-03 [Terminal A1 Gain Setting]</i>, <i>H3-04 [Terminal A1 Bias Setting]</i>
PID control is enabled.	If PID control is not necessary, set <i>b5-01 = 0 [PID Mode Setting = Disabled]</i>. Note: When PID control is enabled, the drive adjusts the output frequency as specified by the target value. The drive will only accelerate to the maximum output frequency set in <i>E1-04 [Maximum Output Frequency]</i> while PID control is active.

◆ The Motor Speed Is Not Stable When Using a PM Motor

Causes	Possible Solutions
<i>E5-01 [PM Motor Code Selection]</i> is set incorrectly.	Refer to "Motor Performance Fine-Tuning" in the technical manual.
The drive is operating the motor at more than the specified speed control range.	Examine the speed control range and adjust the speed.
The motor is hunting.	Adjust these parameters to have the largest effect: • <i>n8-55 [Motor to Load Inertia Ratio]</i> • <i>n8-45 [Speed Feedback Detection Gain]</i> • <i>C4-02 [Torque Compensation Delay Time]</i>
Hunting occurs at start.	Increase the value set in <i>C2-01 [S-Curve Time @ Start of Accel]</i> .
Too much current is flowing through the drive.	Set <i>E5-01 [PM Motor Code Selection]</i> correctly as specified by the motor. For special-purpose motors, enter the correct value to <i>E5-xx</i> as specified by the motor test report.
Operation is not stable when <i>n8-57 = 1 [HFI Overlap Selection = Enabled]</i> .	• Do High Frequency Injection Auto-Tuning. • Decrease the value set in <i>n8-41 [HFI P Gain]</i> in increments of 0.5. Note: Set <i>n8-41</i> > 0.0 for IPM motors.

◆ There Is Too Much Motor Oscillation and the Rotation Is Irregular

Causes	Possible Solutions
Unsatisfactory balance of motor phases.	• Make sure that the drive input power voltage supplies stable power. • Set <i>L8-05 = 0 [Input Phase Loss Protect Select = Disabled]</i>.
The motor is hunting.	• Set <i>n1-01 = 1 [Hunting Prevention Selection = Enabled]</i>. • Increase the value of <i>n2-01 [SpdFeedbackDetectCtr (AFR) Gain]</i> or <i>n2-02 [SpdFeedbackDetCtr (AFR)TimeConst1]</i>.

◆ Deceleration Takes Longer Than Expected When Dynamic Braking Is Enabled

Causes	Possible Solutions
The stall prevention during deceleration setting is incorrect.	• Examine the setting for <i>L3-04 [Decel Stall Prevention Selection]</i>. • When the drive has a dynamic braking option installed, set <i>L3-04 = 0 [Disabled]</i>. • If the drive detects <i>ov [Overvoltage]</i>, set <i>L3-04 = 3 [General Purpose w/ DB resistor]</i>.
The deceleration time setting is too long.	Set <i>C1-02, C1-04, C1-06, or C1-08 [Deceleration Times]</i> to applicable values.
The motor torque is not sufficient.	Use a larger motor. Note: If these items are correct, the demand on the motor is more than the motor capacity: • Parameter settings are correct. • The drive does not detect <i>ov [Overvoltage]</i>.
The drive and motor system reached the torque limit.	• Examine the values set in <i>L7-01 to L7-04 [Torque Limit]</i> and increase them if necessary. Note: If the torque limit is enabled, deceleration time can increase because the drive cannot output more torque than the limit. • If <i>H3-02 = 10, 11, 12, 13, 15 [MFAI Function Select = Torque Limit]</i>, examine the setting for the MFAI. • Examine the value set in <i>H3-02</i>. • Use <i>U1-13 [Terminal A1 Input Voltage]</i> to make sure that the analog input value set to terminal A1 is applicable.
The load is more than the internal torque limit as specified by the drive rated current.	Replace the drive with a larger capacity model.

◆ There Is Audible Noise from the Drive or Motor Cables when You Energize the Drive

Causes	Possible Solutions
The relay switching in the drive is making too much noise.	• Use <i>C6-02 [Carrier Frequency Selection]</i> to decrease the carrier frequency. • Connect a noise filter to the input side of the drive power supply. • Connect a noise filter to the output side of the drive. • Isolate the control circuit wiring from the main circuit wiring. • Use a metal cable gland to wire the drive. • Shield the periphery of the drive with metal. • Make sure that the drive and motor are grounded correctly. • Make sure that ground faults have not occurred in the wiring or motor.

◆ The Ground Fault Circuit Interrupter (GFCI) Trips During Run

Causes	Possible Solutions
There is too much leakage current from the drive.	• Increase the GFCI sensitivity or use GFCI with a higher threshold. • Use <i>C6-02 [Carrier Frequency Selection]</i> to decrease the carrier frequency. • Decrease the length of the cable used between the drive and the motor. • Install a noise filter or AC reactor on the output side of the drive. Set <i>C6-02 = 1 [2.0 kHz]</i> when connecting an AC reactor.

◆ Motor Rotation Causes Unexpected Audible Noise from Connected Machinery

Causes	Possible Solutions
The carrier frequency and the resonant frequency of the connected machinery are the same.	• Adjust <i>C6-02 to C6-05 [Carrier Frequency]</i>. • Set <i>C6-02 = 1 to 6 [Carrier Frequency Selection = Frequency other than Swing PWM]</i>. Note: If <i>C6-02 = 7 to A [Carrier Frequency Selection = Swing PWM]</i>, the drive will not know if the noise comes from the drive or the machine.
The drive output frequency and the resonant frequency of the connected machinery are the same.	• Adjust <i>d3-01 to d3-21 [Jump Frequency]</i>. • Put the motor on a rubber pad to decrease vibration.

◆ Motor Rotation Causes Oscillation or Hunting

Causes	Possible Solutions
The frequency reference is assigned to an external source, and there is electrical interference in the signal.	• Make sure that electrical interference does not have an effect on the signal lines. • Isolate control circuit wiring from main circuit wiring. • Use twisted-pair cables or shielded wiring for the control circuit. • Increase the value of <i>H3-13 [Analog Input FilterTime Constant]</i>.
The cable between the drive and motor is too long.	• Do Auto-Tuning. • Make the wiring as short as possible.
The PID parameters are not sufficiently adjusted.	Adjust <i>b5-xx [PID control]</i> .

◆ PID Output Fault

Causes	Possible Solutions
There is no PID feedback input.	- Examine the MFAI terminal settings. - Make sure that $H3-02 = B$ [MFAI Function Select = PID Feedback]. - Make sure that the MFAI terminal settings agree with the signal inputs. - Examine the connection of the feedback signal. - Make sure that you set $b5-xx$ [PID Control] correctly. Note: If there is no PID feedback input to the terminal, the detected value is 0, which causes a PID fault and also causes the drive to operate at maximum frequency.
The detection level and the target value do not align.	Use $H3-03$ [Terminal A1 Gain Setting] to adjust PID target and feedback signal scaling. Note: PID control keeps the difference between the target value and detection value at 0. Set the input level for the values relative to each other.
Reverse drive output frequency and speed detection. When output frequency increases, the sensor detects a speed decrease.	Set $b5-09 = 1$ [PID Output Level Selection = Reverse output (reverse acting)].

◆ The Starting Torque Is Not Sufficient

Causes	Possible Solutions
Auto-Tuning has not been done in vector control method.	Do Auto-Tuning.
The control method was changed after doing Auto-Tuning.	Do Auto-Tuning again.
Stationary Auto-Tuning for Line-to-Line Resistance was done.	Do Rotational Auto-Tuning.

◆ The Motor Rotates after the Drive Output Is Shut Off

Causes	Possible Solutions
DC Injection Braking is too low and the drive cannot decelerate correctly.	- Increase the value set in $b2-02$ [DC Injection Braking Current]. - Increase the value set in $b2-04$ [DC Inject Braking Time at Stop].
The stopping method makes the drive coast to stop.	Set $b1-03 = 0$ or 2 [Stopping Method Selection = Ramp to Stop, DC Injection Braking to Stop].

◆ The Output Frequency Is Lower Than the Frequency Reference

Causes	Possible Solutions
The frequency reference is in the Jump frequency range.	Adjust $d3-01$ to $d3-21$ [Jump Frequency]. Note: Enabling the Jump frequency prevents the drive from outputting the frequencies specified in the Jump range.
The upper limit for the frequency reference has been exceeded.	Set $E1-04$ [Maximum Output Frequency] and $d2-01$ [Frequency Reference Upper Limit] to the best values for the application. Note: This calculation supplies the upper value for the output frequency: $E1-04 \times d2-01 / 100$
A large load triggered Stall Prevention function during acceleration.	- Decrease the load. - Adjust $L3-02$ [Stall Prevent Level during Accel].
$L3-01 = 3$ [Stall Prevent Select during Accel = ILim Mode] has been set.	- Check whether the V/f pattern and motor parameter settings are appropriate, and set them correctly. - If this does not solve the problem, and it is not necessary to limit the current level of stall during acceleration, adjust $L3-02$. - If this does not solve the problem, set $L3-01 = 1$ [Enabled].
The motor is rotating at this speed: $b2-01$ [DC Injection/Zero SpeedThreshold] $\leq$ Motor Speed $< E1-09$ [Minimum Output Frequency]	Set $E1-09 < b2-01$.

◆ The Motor Will Not Restart after a Loss of Power

Causes	Possible Solutions
The drive did not receive a Run command after applying power.	- Examine the sequence and wiring that enters the Run command. - Set up a relay to make sure that the Run command stays enabled during a loss of power.

◆ The motor base frequency is exceeded, and the output voltage exceeds the motor rated voltage.

Causes	Possible Solutions
<i>nA-11 [Output Voltage Limit Level 2]</i> is set incorrectly.	Increase the setting in 0.10-unit increments.

Periodic Inspection and Maintenance

This chapter gives information about how to examine and maintain drives in use, how to replace cooling fans and other parts, and how to store drives.

8.1	Section Safety	292
8.2	Inspection.....	294
8.3	Maintenance	297
8.4	Replace Cooling Fans	299
8.5	Replace the Drive	306
8.6	Storage Guidelines	309

8.1 Section Safety

DANGER

Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

WARNING

Fire Hazard

Always ground the motor-side grounding terminal.

If you do not ground the equipment correctly, it can cause death or serious injury from fire or electrical shock when you touch the motor case.

Tighten all terminal screws to the correct tightening torque shown in this manual.

If connections are too loose or too tight, it can cause incorrect operation or damage to the terminal block. Overheated connections can cause death or serious injury from fire.

Attach the drive to metal or other noncombustible material. Do not put flammable or combustible materials on the drive and do not install the drive near flammable or combustible materials.

If you put flammable or combustible materials on the drive or install the drive near flammable or combustible materials, it can cause death or serious injury from fire.

Electrical Shock Hazard

Do not make changes that are not given in this manual and do not make modifications to the drive.

If you make changes or modifications to the drive, it can cause death or serious injury from electrical shock. Changes not given in this manual and modifications to the drive will cause damage to the drive, and will void the warranty. Yaskawa is not responsible for modifications to the product made by the user.

Protect the motor terminals to prevent physical contact with them. The motor can run after you de-energize the drive. After you turn off drive power, induced voltage is generated at the motor terminals while the PM motor is rotating.

If you touch a motor that is moving or energized, it can cause death or serious injury from electrical shock.

Reattach the covers and safety shields before you operate the drive. Do not operate the drive with covers removed. Use the drive only as specified in this manual.

Some figures in this manual include drives without covers or safety shields to more clearly show the inside of the drive. If you operate the drive without covers and safety shields, it can cause death or serious injury from electrical shock.

Only let authorized personnel install, wire, maintain, examine, replace parts, and repair the drive.

If personnel are not approved, it can cause death or serious injury from electrical shock or fire.

Do not wear loose clothing and make sure that you remove all metal objects, for example watches or rings, when you wire, examine, and repair the drive.

Loose clothing can catch on the drive and jewelry can conduct electricity and cause death or serious injury from electrical shock.

⚠ WARNING**Sudden Movement Hazard**

Make sure that you align the phase order for the drive and motor when you connect the motor to drive output terminals U/T1, V/T2, and W/T3.

If the phase order is incorrect, it can cause the motor to run in reverse. If function settings are incorrect, sudden movement of the machine can cause death or serious injury.

Damage to Equipment

Do not apply incorrect voltage to the main circuit of the drive. Operate the drive in the specified range of the input voltage on the drive nameplate.

Voltages that are higher than the permitted nameplate tolerance can cause damage to the drive.

⚠ CAUTION**Burn Hazard**

De-energize the drive, wait for a minimum of 15 minutes, and make sure that the heatsink is cool before you replace the cooling fans. Do not touch a hot drive heatsink as it will reach high temperatures (approximately 65 °C (149 °F) or higher).

If you touch a hot drive heatsink, it can burn you.

NOTICE**Damage to Equipment**

When you touch the drive and circuit boards, make sure that you observe correct electrostatic discharge (ESD) procedures.

If you do not follow procedures, it can cause ESD damage to the drive circuitry.

Use the instructions in this manual to replace the cooling fans. When you do maintenance on the fans, replace all the fans to increase product life.

If you install the fans incorrectly, it can cause damage to the drive.

Make sure that all connections are correct after you install the drive and connect peripheral devices.

Incorrect connections can cause damage to the drive.

Do not energize and de-energize the drive more frequently than one time each 30 minutes.

If you frequently energize and de-energize the drive, it can cause drive failure.

Do not operate a drive or connected equipment that has damaged or missing parts.

You can cause damage to the drive and connected equipment.

Note:

Do not use unshielded cable for control wiring. Use shielded, twisted-pair wires and ground the shield to the ground terminal of the drive. Unshielded wire can cause electrical interference and unsatisfactory system performance.

8.2 Inspection

Power electronics have limited life and can show changes in performance and deterioration of performance after years of use in usual conditions. To help prevent these problems, it is important to do preventive maintenance and regular inspection, and replace parts on the drive.

Drives contain different types of power electronics, for example power transistors, semiconductors, capacitors, resistors, fans, and relays. The electronics in the drive are necessary for correct motor control.

Follow the inspection lists in this chapter as a part of a regular maintenance program.

Note:

Examine the drive one time each year at a minimum.

The operating conditions, environmental conditions, and use conditions will have an effect on the examination frequency for connected equipment.

Examine the drive more frequently if you use the drive in bad conditions or in these conditions:

- High surrounding air temperatures
- Frequent starting and stopping
- Changes in the AC power supply or load
- Too much vibration or shock loading
- Dust, metal dust, salt, sulfuric acid, or chlorine atmospheres
- Unsatisfactory storage conditions.

◆ Recommended Daily Inspection

Table 8.1 gives information about the recommended daily inspection for Yaskawa drives. Examine the items in Table 8.1 each day to make sure that the components do not wear out or fail. Make a copy of this checklist and put a check mark in the “Checked” column after each inspection.

Table 8.1 Daily Inspection Checklist

Inspection Area	Inspection Points	Corrective Action	Checked
Motor	Examine for unusual oscillation or noise coming from the motor.	• Check the load coupling. • Measure motor vibration. • Tighten all loose components.	
Cooling System	Examine for unusual heat from the drive or motor and visible discoloration.	• Check for a load that is too heavy. • Tighten loose screws. • Check for a dirty heatsink or motor. • Measure the surrounding air temperature.	
	Examine the cooling fans.	• Check for a clogged or dirty fan. • Use the performance life monitor to check for correct fan operation.	
Surrounding Environment	Make sure that the installation environment is applicable.	Remove the source of contamination or correct unsatisfactory environment.	
Load	Make sure that the drive output current is not more than the motor or drive rating for an extended period of time.	• Check for a load that is too heavy. • Check the correct motor parameter settings.	
Power Supply Voltage	Examine main power supply and control voltages.	• Correct the voltage or power supply to agree with nameplate specifications. • Verify all main circuit phases.	

◆ Recommended Periodic Inspection

Table 8.2 to Table 8.6 give information about the recommended periodic inspections for Yaskawa drives. Examine the drive one time each year at a minimum. The operating conditions, environmental conditions, and use conditions will have an effect on the examination frequency for connected equipment. You must use your experience with the application to select the correct inspection frequency for each drive installation. Periodic inspections will help to prevent performance deterioration and product failure. Make a copy of this checklist and put a check mark in the “Checked” column after each inspection.

⚠ DANGER Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

Table 8.2 Main Circuit Periodic Inspection Checklist

Inspection Area	Inspection Points	Corrective Action	Checked
General	- Examine equipment for discoloration from too much heat or deterioration. - Examine for damaged parts.	- Replace damaged components as necessary. - The drive does not have many serviceable parts and it could be necessary to replace the drive.	
	Examine for dirt, unwanted particles, or dust on components.	- Examine enclosure door seal. - Use a vacuum cleaner to remove unwanted particles and dust without touching the components. - If you cannot remove unwanted particles and dust with a vacuum cleaner, replace the components.	
Conductors and Wiring	- Examine wiring and connections for discoloration or damage. Examine wiring and connections for discoloration from too much heat. - Examine wire insulation and shielding for discoloration and wear.	Repair or replace damaged wiring.	
Terminal Block	Examine terminals for stripped, damaged, or loose connections.	- Tighten loose screws. - Replace damaged screws.	
Electromagnetic Contactors and Relays	- Examine contactors and relays for too much noise during operation. - Examine coils for signs of too much heat, such as melted or broken insulation.	- Check coil voltage for overvoltage or undervoltage conditions. - Replace broken relays, contactors, or circuit boards that you can remove.	
Dynamic Braking Option	Examine the insulation for discoloration from too much heat.	If there is discoloration in the option, check to make sure that there is not damage to the wiring. A small quantity of discoloration is not a problem.	
Electrolytic capacitor	- Examine for leaks, discoloration, or cracks. - Examine if the cap has come off, if there is swelling, or if there are leaks from broken sides.	The drive does not have many serviceable parts and it could be necessary to replace the drive.	
Diodes, IGBT (Power Transistor)	Examine for dust or other unwanted material collected on the surface.	Use a vacuum cleaner to remove unwanted particles and dust without touching the components.	

Table 8.3 Motor Periodic Inspection Checklist

Inspection Area	Inspection Points	Corrective Action	Checked
Operation Check	Check for increased vibration or unusual noise.	Stop the motor and contact approved maintenance personnel as necessary.	

Table 8.4 Control Circuit Periodic Inspection Checklist

Inspection Area	Inspection Points	Corrective Action	Checked
General	- Examine terminals for stripped, damaged, or loose connections. - Make sure that all terminals have been correctly tightened.	- Tighten loose screws. - Replace damaged screws or terminals. - If terminals are integral to a circuit board, it could be necessary to replace the control board or the drive.	
Circuit Boards	- Check for odor, discoloration, or rust. - Make sure that all connections are correctly fastened. - Make sure that the surface of the circuit board does not have dust or oil mist.	- Tighten loose connections. - Use a vacuum cleaner to remove unwanted particles and dust without touching the components. - If you cannot remove unwanted particles and dust with a vacuum cleaner, replace the components. - Do not use solvents to clean the board. - The drive does not have many serviceable parts and it could be necessary to replace the drive.	

Table 8.5 Cooling System Periodic Inspection Checklist

Inspection Area	Inspection Points	Corrective Action	Checked
Cooling fans	- Check for unusual oscillation or unusual noise. - Check for damaged or missing fan blades.	Clean or replace the fans as necessary.	
Heatsink	- Examine for dust or other unwanted material collected on the surface. - Examine for dirt.	Use a vacuum cleaner to remove unwanted particles and dust without touching the components.	
Air Duct	Examine air intake, exhaust openings and make sure that there are no unwanted materials on the surface.	Clear blockages and clean air duct as necessary.	

Table 8.6 Keypad Periodic Inspection Checklist

Inspection Area	Inspection Points	Corrective Action	Checked
General	- Make sure that the keypad shows the data correctly. - Examine for dust or other unwanted material that collected on components in the area.	- If you have problems with the display or the keys, contact Yaskawa or your nearest sales representative. - Clean the keypad.	

8.3 Maintenance

The drive Maintenance Monitors keep track of component wear and tell the user when the end of the estimated performance life is approaching. The Maintenance Monitors prevent the need to shut down the full system for unexpected problems. Users can set alarm notifications for the maintenance periods for these drive components:

- Cooling fan
- Electrolytic capacitor
- Soft charge bypass relay
- IGBT

Contact Yaskawa or your nearest sales representative for more information about part replacement.

◆ Replaceable Parts

You can replace these parts of the drive:

- Cooling fan

If there is a failure in the main circuit, replace the drive.

You can remove the control circuit board of the drive. When you remove the control circuit terminal block of the drive and install a new terminal block, you can easily replace the control circuit terminal block. Refer to [Replace the Drive on page 306](#) for more information.

If the drive is in the warranty period, contact Yaskawa or your nearest sales representative before you replace parts. Yaskawa reserves the right to replace or repair the drive as specified by the Yaskawa warranty policy.

⚠ DANGER Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

◆ Part Replacement Guidelines

[Table 8.7](#) shows the standard replacement period for replacement parts. When you replace these parts, make sure that you use Yaskawa replacement parts for the applicable model and design revision number of your drive.

Table 8.7 Standard Replacement Period

Parts	Standard Replacement Period
Cooling fan	10 years
Electrolytic capacitor ^{*/}	10 years

*1 If there is damage to parts that you cannot repair or replace, replace the drive.

Note:

Performance life estimate is based on these use conditions. These conditions are provided for the purpose of replacing parts to maintain performance. Some parts may require more frequent replacement due to poor environments or rigorous use. Operating conditions for performance life estimate: Surrounding air temperature: Yearly average of 40 °C (IP20/UL Open Type), Load factor: 80%, Operating rate: 24 hours a day

◆ Monitors that Display the Lifespan of Drive Components

The drive keypad shows percentage values for the replacement parts to help you know when you must replace those components. Use the monitors in [Table 8.8](#) to check replacement periods. When the monitor value is 100%, the component is at the end of its useful life and there is an increased risk of drive malfunction. Yaskawa recommends that you check the maintenance period regularly to make sure that you get the maximum performance life.

Table 8.8 Performance Life Monitors

Monitor No.	Parts	Description
U4-03	Cooling fan	Shows the total operation time of fans as 0 to 99999 hours. After this value is 99999, the drive automatically resets it to 0.
U4-04		Shows the total fan operation time as a percentage of the specified maintenance period.
U4-05	Electrolytic capacitor	Shows the total capacitor usage time as a percentage of the specified maintenance period.
U4-06	Soft charge bypass relay	Shows the number of times the drive is energized as a percentage of the performance life of the inrush circuit.
U4-07	IGBT	Shows the percentage of the maintenance period for the IGBTs.

◆ Alarm Outputs for Maintenance Monitors

You can use *H2-xx [MFDO Function Selection]* to send a message that tells you when a specified component is near the end of its performance life estimate. Set the applicable value to *H2-xx* as shown in Table 8.9 for your component. When the specified component is near the end of its performance life estimate, the MFDO terminals set for *H2-xx = 2F [Maintenance Notification]* will turn ON, and the keypad will show an alarm that identifies the component to replace.

Table 8.9 Maintenance Period Alarms

Display	Alarm Name	Cause	Possible Solutions	MFDO (Setting Value in H2-xx)
LT-1	Cooling Fan Maintenance Time	The cooling fan is at 90% of its expected performance life.	Replace the cooling fan, then set <i>o4-03 = 0 [Fan Operation Time Setting = 0 h]</i> to reset the cooling fan operation time.	2F
LT-2	Capacitor Maintenance Time	The capacitors for the main circuit and control circuit are at 90% of expected performance life.	Replace the board or the drive. Contact Yaskawa or your nearest sales representative to replace the board.	
LT-3	SoftChargeBypassRelay Maintenance Time	The soft charge bypass relay is at 90% of its performance life estimate.	Replace the board or the drive. Contact Yaskawa or your nearest sales representative to replace the board.	
LT-4	IGBT Maintenance Time (50%)	The IGBT is at 50% of its expected performance life.	Check the load, carrier frequency, and output frequency.	
TrPC	IGBT Maintenance Time (90%)	The IGBT is at 90% of its expected performance life.	Replace the IGBT or the drive.	10

◆ Related Parameters

Replace the component, then set *o4-03*, *o4-05*, *o4-07*, and *o4-09 [Maintenance Setting] = 0* to reset the Maintenance Monitor. If these parameters are not reset after the corresponding parts have been replaced, the Maintenance Monitor function will continue to count down the performance life from the value that was reached with the old part. If the Maintenance Monitor is not reset, the drive will not have the correct value of the performance life for the new component.

Note:

The maintenance period changes for different operating environments.

Table 8.10 Maintenance Setting Parameters

No.	Name	Function
o4-03	Fan Operation Time Setting	Sets the value from which to start the cumulative drive cooling fan operation time in 10-hour units. Note: When <i>o4-03 = 30</i> has been set, the drive will count the operation time for the cooling fan from 300 hours and <i>U4-03 [Cooling Fan Opn Time]</i> will show 300 h.
o4-05	Capacitor Maintenance Setting	Sets the value from which to start the count for the main circuit capacitor maintenance period as a percentage.
o4-07	Softcharge Relay Maintenance Set	Sets as a percentage the value from which to start the count for the soft charge bypass relay maintenance time.
o4-09	IGBT Maintenance Setting	Sets the value from which to start the count for the IGBT maintenance period as a percentage.

8.4 Replace Cooling Fans

NOTICE

Use the instructions in this manual to replace the cooling fans. When you do maintenance on the fans, replace all the fans to increase product life.

If you install the fans incorrectly, it can cause damage to the drive.

To replace a cooling fan, contact Yaskawa or your nearest sales representative.

◆ Number of Cooling Fans

Table 8.11 Single-Phase 200 V Class

Model	Cooling Fans	Replacement Procedure	Ref.
B001 - B006	-	-	-
B010, B012	1	A	299
B018	2	B	

Table 8.12 Three-Phase 200 V Class

Model	Cooling Fans	Replacement Procedure	Ref.
2001-2004	-	-	-
2006 - 2021	1	A	299
2030	1	B	303
2042 - 2082	2	A	299

Table 8.13 Three-Phase 400 V Class

Model	Cooling Fans	Replacement Procedure	Ref.
4001 - 4004	-	-	-
4005 - 4012	1	A	299
4018, 4023	1	B	303
4031 - 4060	2	A	299

◆ Replace the Cooling Fan (Procedure A)

⚠ DANGER Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

⚠ CAUTION Burn Hazard

De-energize the drive, wait for a minimum of 15 minutes, and make sure that the heatsink is cool before you replace the cooling fans. Do not touch a hot drive heatsink as it will reach high temperatures (approximately 65 °C (149 °F) or higher).

If you touch a hot drive heatsink, it can burn you.

NOTICE

Use the instructions in this manual to replace the cooling fans. When you do maintenance on the fans, replace all the fans to increase product life.

If you install the fans incorrectly, it can cause damage to the drive.

■ Remove a Fan

1. To remove the fan finger guard from the drive, push the hooks on the left and right sides of it and pull up.

A - Fan finger guard

Figure 8.1 Remove the Fan Finger Guard

2. Pull the cooling fan straight up from the drive. Disconnect the power supply connector and remove the fan from the drive.

A - Cooling fan

Figure 8.2 Remove the Cooling Fan

■ Install a Fan

Reverse the removal procedure to install a cooling fan.

1. Connect the power supply connector between the drive and cooling fan.

Figure 8.3 Connect the Power Supply Connector

2. Align the notches on the fan with the pins on the drive and install the cooling fans in the drive.

A - Alignment pins on drive
B - Front of drive

C - Notch on fan

Figure 8.4 Install the Cooling Fan

Note:

When you install the cooling fan, make sure that you do not pinch cables between the cooling fan and the drive.

3. Put the cable and connector in the recess of the drive.

A - Front of drive

Figure 8.5 Put the Cable and Connector in the Drive Recess

8.4 Replace Cooling Fans

Note:

The connector installation position is different for different models.

Figure 8.6 Put the Connector in the Recess

Figure 8.7 Put the Connector in Between the Fans

Figure 8.8 Put the Connector in Between the Drive and Fan

4. Insert the fan cover straight until the hook clicks into place.

Figure 8.9 Reattach the Fan Finger Guard

5. Energize the drive and set $\alpha 4-03 = 0$ [*Fan Operation Time Setting = 0 h*] to reset the cooling fan operation time.

◆ Replace the Cooling Fan (Procedure B)

⚠ DANGER Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

⚠ CAUTION Burn Hazard

De-energize the drive, wait for a minimum of 15 minutes, and make sure that the heatsink is cool before you replace the cooling fans. Do not touch a hot drive heatsink as it will reach high temperatures (approximately 65 °C (149 °F) or higher).

If you touch a hot drive heatsink, it can burn you.

NOTICE

Use the instructions in this manual to replace the cooling fans. When you do maintenance on the fans, replace all the fans to increase product life.

If you install the fans incorrectly, it can cause damage to the drive.

■ Remove a Fan

1. Push the tabs toward the back of the drive and pull up to remove the fan finger guard from the drive.

A - Fan finger guard

Figure 8.10 Remove the Fan Finger Guard

2. Pull the cooling fan straight up from the drive. Disconnect the power supply connector and remove the fan from the drive.

A - Cooling fan

Figure 8.11 Remove the Cooling Fan

■ Install the Cooling Fans

Reverse the removal procedure to install a cooling fan.

1. Connect the power supply connector between the drive and cooling fan.

Figure 8.12 Connecting the power supply connector

2. Install the cooling fans so that they align with the pins on the drive.

A - Alignment pins on drive
B - Front of drive

C - Notches

Figure 8.13 Installing the cooling fans

Note:

When you install the cooling fan, make sure that you do not pinch cables between the cooling fan and the drive.

3. Put the cable and connector in the recess of the drive.

A - Front of drive

Figure 8.14 Putting the cable and connector in the recess

4. Insert the tabs of the fan cover into the holes in the drive and press in the fan cover until the hook clicks into place.

Figure 8.15 Reattach the Fan Finger Guard

5. Energize the drive and set $\alpha 4-03 = 0$ [*Fan Operation Time Setting = 0 h*] to reset the cooling fan operation time.

8.5 Replace the Drive

◆ Replace the Drive

⚠ **DANGER** Electrical Shock Hazard

De-energize the drive before you examine or wire the drive, install or remove options, and replace the cooling fans. Disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after you de-energize the drive. When all indicators are OFF, measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, you can examine or wire the drive, install or remove options, and replace the cooling fans.

If you do work on an energized drive, it will cause death or serious injury from electrical shock.

⚠ **WARNING** Electrical Shock Hazard

Only let authorized personnel install, wire, maintain, examine, replace parts, and repair the drive. If personnel are not approved, it can cause death or serious injury from electrical shock or fire.

NOTICE Damage to Equipment

When you touch the drive and circuit boards, make sure that you observe correct electrostatic discharge (ESD) procedures.

If you do not follow procedures, it can cause ESD damage to the drive circuitry.

■ Notes on Wiring the Main Circuit Terminal Block

Read these notes before you wire the main circuit terminal block.

⚠ **WARNING** Fire Hazard

Refer to “Main Circuit Wire Gauges and Tightening Torques” in this manual to select the correct wires. Remove the insulation from the connection wires to the wire stripping lengths shown in the manual.

If you pinch the insulation in the wire terminals, false-contact can overheat the terminals when you energize the drive and cause death or serious injury from fire.

⚠ **WARNING** Fire Hazard

Do not use bent or crushed wires. Remove the damaged end of the wire before you use it. Incorrect connections can cause death or serious injury from fire.

⚠ **WARNING** Fire Hazard

If you use stranded wire, make sure that all of the wire strands are in the connection. Also, do not twist the stranded wire too much.

Short circuits between terminals from stranded wire that is not in the connection or connections that are twisted too much can cause death or serious injury from fire.

NOTICE

If you use power tools to tighten the terminal screws, use a low speed setting (300 min⁻¹ (r/min) to 400 min⁻¹ (r/min)).

High speeds can cause damage to the terminal screws.

- Use UL-Listed, vinyl-coated insulated copper wires for operation with a continuous maximum permitted temperature of 75 °C at 600 V.
- Remove all unwanted objects that are near the terminal block connections.
- Remove the insulation from the connection wires to the wire stripping lengths shown in the manual.
- Do not solder stranded wire. Soldered wire connections can become loose over time and cause unsatisfactory drive performance.

- Put the wire all the way into the terminal block. Remove the insulation from the wire to the recommended wire stripping length to fit the wire with insulation in the plastic housing.
 - Use a torque driver, torque ratchet, or torque wrench for the screws. A slotted driver or a hex tool will be necessary to wire the screw clamp terminal. Use applicable tools as specified by the recommended conditions in the product manual.
 - Users can purchase wiring tools from Yaskawa. Contact Yaskawa or your nearest sales representative for more information.
 - Wire gauges on the drive you are replacing may not match the wire gauge ranges on your new drive. Contact Yaskawa or your nearest sales representative for more information about the connection procedures.
 - Do not tighten the terminal screws at an angle of 5 degrees or more. Failure to obey can cause damage to the terminal screws.
- If you damage a terminal screw, contact Yaskawa or your nearest sales representative.

Figure 8.16 Permitted Angle

- Put the bit all the way into the hex socket to tighten the hex socket cap screw.
- When you tighten slotted screws, hold the straight-edge screwdriver perpendicularly to the screw. Make sure that you align the end of the straight-edge screwdriver with the screw groove.

Figure 8.17 Tightening Slotted Screws

- After you connect the wires to the terminal block, lightly pull on the wires to make sure that they do not come out of the terminals.
- Do not let strain on the wiring cause damage. Use a strain relief near the wiring to release the tension. Refer to [Figure 8.18](#) for an example.

A - Cable clamp

Figure 8.18 Strain Relief Example

8.5 Replace the Drive

Table 8.14 Recommended Wiring Tools

Screw Size	Screw Shape	Wire Gauge	Adapter	Bit		Torque Driver Model (Tightening Torque)	Torque Wrench (Tightening Torque)
				Model	Manufacturer		
M3		-	Bit	SF-BIT-SL 0,5X3,0-70	PHOENIX CONTACT	TSD-M 1,2NM (0.3 - 1.2 N·m (2.7 - 10.6 lbf·in))	-
M4		-	Bit	SF-BIT-SL 1,0X4,0-70	PHOENIX CONTACT	TSD-M 3NM (1.2 - 3.0 N·m (10.6 - 26.6 lbf·in))	-
M5 ^{*1}		≤ 25 mm ² (AWG 10)	Bit	SF-BIT-SL 1,2X6,5-70	PHOENIX CONTACT	TSD-M 3NM (1.2 - 3.0 N·m (10.6 - 26.6 lbf·in))	-
		≥ 30 mm ² (AWG 8)				-	4.1 - 4.5 N·m (36.3 - 39.8 lbf·in) ^{*2} ^{*3}
M6	 (WAF: 5 mm)	-	Bit	SF-BIT-HEX 5-50	PHOENIX CONTACT	-	5 - 9 N·m (44.3 - 79.7 lbf·in) ^{*2} ^{*3}

*1 When you wire drive models 2042, 2056, 4031, 4038, 4044, and 4060, select the correct tools for the wire gauge.

*2 Use 6.35 mm (0.25 in) bit socket holder.

*3 Use a torque wrench that can apply this torque measurement range.

8.6 Storage Guidelines

The chemicals in the electrolytic capacitors and other electronic parts of the drive change over time. When you store the drive for long periods of time, use the information in this section to help keep the performance life estimates.

◆ Storage Location

- Temperature and Humidity

When you store the drive for approximately one month, for example during shipping, you can put the drive in a location where the temperature is $-20\text{ }^{\circ}\text{C}$ to $+70\text{ }^{\circ}\text{C}$ ($-4\text{ }^{\circ}\text{F}$ to $+158\text{ }^{\circ}\text{F}$). Correctly package and store the drive during shipping to prevent vibration and impact damage.

Do not put the drive in direct sunlight or where there will be condensation or ice. Put the drive in a location where the relative humidity is 95% or less.

- Dust and Oil Mist

Do not keep the drive locations with dust or oil mist. For example, cement factories and cotton mills.

- Corrosive Gas

Do not keep the drive in locations with corrosive gas. For example, chemical plants, refineries, and sewage plants.

- Salt Damage

Do not keep the drive in salty locations. For example, locations near the ocean, and salt damage-designated locations.

Do not keep the drive in unsatisfactory locations. Keep all drives in storage rooms that are safe from unsatisfactory elements.

◆ Regular Application of Power

To prevent deterioration of the capacitors, Yaskawa recommends that you apply power to the drive a minimum of one time each year for a minimum of 30 minutes.

If you store the drive for longer than two years and do not apply power, Yaskawa recommends that you use a variable power source and gradually increase the power from 0 V to the rated drive voltage over a period of 2 to 3 minutes. Apply power for a minimum of 1 hour with no load to reform the main circuit electrolytic capacitor. When you operate the drive after you apply power, wire the drive correctly and check for drive faults, overcurrents, motor vibration, motor speed differences, and other defects during operation.

Figure 8.19 Power Distribution Method

Disposal

9.1	Section Safety	312
9.2	Disposal Instructions	313
9.3	WEEE Directive	314

9.1 Section Safety

WARNING

Electrical Shock Hazard

Before you energize the drive, make sure that the electrical connections are correct and safe and that all covers are correctly installed. When the drive power is already ON, disconnect input power to the drive and output from the drive to the motor, and wait for a minimum time specified on the drive warning label. When all indicators are OFF, remove the covers and measure the DC bus voltage. When the DC bus voltage decreases below 50 Vdc, remove the terminal cover and do the work on wiring, circuit board, and other parts. Use terminals for their intended function only.

Incorrect wiring or ground connections, and incorrect repair of protective covers can cause death or serious injury from electrical shock.

Only let authorized personnel install, wire, maintain, examine, replace parts, and repair the drive.

If personnel are not approved, it can cause death or serious injury from electrical shock or fire.

Do not wear loose clothing and make sure that you remove all metal objects, for example watches or rings, when you wire, examine, and repair the drive.

Loose clothing can catch on the drive and jewelry can conduct electricity and cause death or serious injury from electrical shock.

Crush Hazard

Wear eye protection before you maintain and inspect the drive, or replace parts.

If you do not wear eye protection, it can cause serious injury from flying objects.

Before you move the drive, make sure that all of the screws on the drive are as tight as possible. Hold the drive by the body or heatsink to carry the drive. Do not hold the drive by the keypad or front cover.

If you move the drive while the screws are loose, it can cause covers to fall, and if you hold the keypad or drive front cover to move the drive, the drive can fall and cause injury.

9.2 Disposal Instructions

Correctly dispose of the product and packing material as specified by applicable regional, local, and municipal laws and regulations.

9.3 WEEE Directive

The wheeled bin symbol on this product, its manual, or its packaging identifies that you must recycle it at the end of its product life.

You must discard the product at an applicable collection point for electrical and electronic equipment (EEE). Do not discard the product with usual waste.

10.1 Section Safety

DANGER

Do not ignore the safety messages in this manual.

If you ignore the safety messages in this manual, it will cause serious injury or death. The manufacturer is not responsible for injuries or damage to equipment.

10.2 Drive Duty Modes

The drive has two duty modes from which to select for the application: Heavy Duty (HD) and Normal Duty (ND). Refer to [Table 10.1](#) for information about the differences between HD and ND ratings.

Table 10.1 Drive Duty Modes

Duty Rating	C6-01 Setting	Application	Default Carrier Frequency	Overload Tolerance (oL2 [Drive Overload])
Heavy Duty Rating (HD)	0	• Extruder • Conveyor • Cranes • Constant torque or high overload capacity	Determined by o2-04, A1-02	150% of the rated output current for 60 seconds The permitted frequency of overload is one time each 10 minutes.
Normal Duty Rating (ND)	1	• Fan • Pump • Blower • Variable speed control	Determined by o2-04, A1-02	110% of the rated output current for 60 seconds The permitted frequency of overload is one time each 10 minutes.

Power Supply	Rated Voltage/Rated Frequency		- Three-phase AC power supply 200 V to 240 V at 50/60 Hz - DC power supply 270 V to 340 V			
	Permitted Voltage Fluctuation		-15% to +10%			
	Permitted Frequency Fluctuation		±5%			
	Input Power (kVA)	HD	17.0	24.0	31.0	44.0
		ND	24.0	31.0	37.0	52.0

*1 The maximum applicable motor output complies with 208 V motor ratings as specified in NEC Table 430.250. The rated output current of the drive output amps must be equal to or more than the motor rated current.

*2 The maximum applicable motor output is based on 4-pole, general-purpose 220 V motor ratings. The rated output current of the drive output amps must be equal to or more than the motor rated current.

*3 The rated output capacity is calculated with a rated output voltage of 220 V.

10.5 Model Specifications (Three-Phase 400 V Class)

Table 10.6 Ratings (Three-Phase 400 V Class)

Model		Duty Rating	4001	4002	4004	4005	4007	4009	4012
Maximum Applicable Motor Output ^{*1} (kW)		HD	0.2	0.4	0.75	1.5	2.2	3.0	3.7
		ND	0.4	0.75	1.5	2.2	3.0	3.7	5.5
Maximum Applicable Motor Output ^{*1} (HP)		HD	1/2	3/4	2	3	3	4	5
		ND	1/2	1	2	3	4	5	7.5
Input	Rated Input Current (A)	HD (AC)	1.2	1.8	3.2	4.4	6.0	8.2	10.4
		HD (DC)	1.5	2.2	3.9	5.4	7.3	10	12.7
		ND (AC)	1.2	2.1	4.3	5.9	8.1	9.4	14

The permitted frequency of overload is one time each 10 minutes. Note: Derating can be necessary for applications that start and stop frequently.					
	Carrier Frequency		HD: 8 kHz without derating the drive capacity. ND: 2 kHz without derating the drive capacity. Derate the drive capacity to use values to 15 kHz maximum.					
	Maximum Output Voltage		Three-phase 380 V to 480 V Note: The maximum output voltage is proportional to the input voltage.					
	Maximum Output Frequency		- V/f, OLV, OLV/PM: 590 Hz - AOLV/PM: 270 Hz - EZOLV: 120 Hz					
Measures for Harmonics	DC reactor		External options					
Braking Device	Braking Transistor		Standard internal characteristics					
EMC Filter	EMC Filter IEC61800-3		External options					
Power Supply	Rated Voltage/Rated Frequency		Three-phase AC power supply 380 V to 480 V at 50/60 Hz					
	Permitted Voltage Fluctuation		-15% to +10%					
	Permitted Frequency Fluctuation		±5%					
	Input Power (kVA)	HD	14	18	27	36	47	55
		ND	18	22	35	40	55	74

*1 The maximum applicable motor output complies with 380 V motor ratings as specified in Annex G of IEC 60947-4-1. The rated output current of the drive output amps must be equal to or more than the motor rated current.

*2 The rated output capacity is calculated with a rated output voltage of 440 V.

10.6 Drive Specifications

Note:

- To get the OLV specifications, do Rotational Auto-Tuning.
- To get the longest product life, install the drive in an environment that meets the necessary specifications.

Table 10.8 Control Characteristics

Item	Specification
Control Methods	• V/f Control • Open Loop Vector • PM Open Loop Vector • PM Advanced Open Loop Vector • EZ Vector Control
Frequency Control Range	• V/f, OLV, and OLV/PM: 0.01 Hz to 590 Hz • AOLV/PM: 0.01 Hz to 270 Hz • EZOLV: 0.01 Hz to 120 Hz
Frequency Accuracy (Temperature Fluctuation)	Digital inputs: $\pm 0.01\%$ of the maximum output frequency ($-10\text{ }^{\circ}\text{C}$ to $+40\text{ }^{\circ}\text{C}$ ($14\text{ }^{\circ}\text{F}$ to $104\text{ }^{\circ}\text{F}$)) Analog inputs: In $\pm 0.1\%$ of the maximum output frequency ($25\text{ }^{\circ}\text{C} \pm 10\text{ }^{\circ}\text{C}$ ($77\text{ }^{\circ}\text{F} \pm 18\text{ }^{\circ}\text{F}$))
Frequency Setting Resolution	Digital inputs: 0.01 Hz Analog inputs: 1/2048 of the maximum output frequency (11-bit)
Output Frequency Resolution	0.001 Hz
Frequency Setting Signal	Main speed frequency reference: 0 Vdc to 10 Vdc (minimum 15 k Ω)
Starting Torque	• V/f: 150%/3 Hz • OLV: 150%/1 Hz • OLV/PM: 100%/5% speed • AOLV/PM: 100%/0 min⁻¹ (when high frequency injection is enabled) • EZOLV: 100%/10% speed Note: Correctly select the drive and motor capacity for this starting torque in these control methods: • OLV • AOLV/PM
Speed Control Range	• V/f: 1:40 • OLV: 1:100 • OLV/PM: 1:10 • AOLV/PM: 1:100 (when high frequency injection is enabled) • EZOLV: 1:10
Zero Speed Control	Possible in AOLV/PM control methods.
Torque Limits	You can use parameter settings for different limits in four quadrants in these control methods: • OLV • AOLV/PM • EZOLV
Acceleration and Deceleration Times	0.0 s to 6000.0 s The drive can set four pairs of different acceleration and deceleration times.
Braking Torque	Approximately 20% without a resistor Approximately 125% with a dynamic braking option • Short-time average deceleration torque Motor output 0.1/0.2 kW: over 150% Motor output 0.4/0.75 kW: over 100% Motor output 1.5 kW: over 50% Motor output 2.2 kW and larger: over 20%, Overexcitation Braking/High Slip Braking allow for approximately 40% ⚠ WARNING Set L3-04 = 0 [Stall Prevention during Decel = Disabled] when you operate the drive with: • a regenerative converter • regenerative unit • braking resistor • braking resistor unit. If you set the parameter incorrectly, the drive can decelerate for too long and cause serious injury or death. Note: • Short-time average deceleration torque refers to the necessary torque to decelerate the motor (uncoupled from the load) from the rated speed to zero. Motor characteristics can change the actual specifications. • Motor characteristics change the continuous regenerative torque and short-time average deceleration torque for motors 2.2 kW and larger.

Item	Specification
V/f Characteristics	Select from 15 pre-defined V/f patterns, or a user-set V/f pattern.
Main Control Functions	Feed Forward Control, Restart After Momentary Power Loss, Speed Search, Overtorque Detection, Torque Limit, 17 Step Speed (max.), Accel/Decel Switch, S-curve Acceleration/Deceleration, Auto-Tuning (Rotational and Stationary), Dwell Function, Cooling Fan ON/OFF Switch, Slip Compensation, Torque Compensation, Frequency Jump, Upper/Lower Limits for Frequency Reference, DC Injection Braking at Start and Stop, Overexcitation Braking, High Slip Braking, PID Control (with Sleep Function), Energy Saving Control, Auto Restart, Application Presets, DriveWorksEZ (customized functions), Parameter Backup Function, Online Tuning, KEB, Overexcitation Deceleration, Overvoltage Suppression, High Frequency Injection, etc.

Table 10.9 Protection Functions

Item	Specification
Motor Protection	Electronic thermal overload protection
Momentary Overcurrent Protection	Drive stops when the output current is more than 200% of the HD output current.
Overload Protection	Drive stops when the output current is more than these overload tolerances: • HD: 150% of the rated output current for 60 seconds. • ND: 110% of the rated output current for 60 seconds. Note: If output frequency < 6 Hz, the drive can trigger the overload protection function when the output current is in the overload tolerance range.
Overvoltage Protection	200 V Class: Stops when the DC bus voltage is more than approximately 410 V 400 V Class: Stops when the DC bus voltage is more than approximately 820 V
Undervoltage Protection	Single-phase 200 V class: Stops when the DC bus voltage decreases to less than approximately 160 V Three-phase 200 V class: Stops when the DC bus voltage decreases to less than approximately 190 V Three-phase 400 V class: Stops when the DC bus voltage decreases to less than approximately 380 V
Momentary Power Loss Ride-thru	Stops when power loss is longer than 15 ms and continues operation if power loss is shorter than 2 s (depending on parameter settings). Note: • Load size and motor speed can cause the stop time to be shorter. • Drive capacity will change the continuous operation time. A Momentary Power Loss Recovery Unit is necessary to continue operation through a 2 s power loss on models 2001 to 2042 and 4001 to 4023.
Heatsink Overheat Protection	The drive stops when the thermistor detects an IGBT temperature more than approximately 100°C (212°F). The trip temperature level is different for different drive models.
Braking Resistor Overheat Protection	Overheat detection for braking resistor (optional ERF-type, 3% ED)
Stall Prevention	Stall prevention is available during acceleration, deceleration, and during run.
Ground Fault Protection	Electronic circuit protection Note: This protection detects ground faults during run. The drive will not provide protection when: • There is a low-resistance ground fault for the motor cable or terminal block • There is a ground fault and you energize the drive
DC Bus Charge LED	Charge LED illuminates when DC bus voltage is more than 50 V.

Table 10.10 Environment

Item	Specification
Area of Use	Indoors
Power Supply	Overvoltage Category III
Surrounding Air Temperature	IP20/UL Open Type: -10 °C to +50 °C (14 °F to 122 °F) • When you install the drive in an enclosure, use a cooling fan or air conditioner to keep the internal air temperature in the permitted range. • Do not let the drive freeze.
Humidity	95% RH or less Do not let condensation form on the drive.
Storage Temperature	-20 °C to +70 °C (-4 °F to +158 °F) (short-term temperature during transportation)
Surrounding Area	Pollution degree 2 or less Install the drive in an area without: • Oil mist, corrosive or flammable gas, or dust • Metal powder, oil, water, or other unwanted materials • Radioactive materials or flammable materials, including wood • Harmful gas or fluids • Salt • Direct sunlight

10.6 Drive Specifications

Item	Specification
Altitude	1000 m (3281 ft) Maximum Note: Derate the output current by 1% for each 100 m (328 ft) to install the drive in altitudes between 1000 m to 4000 m (3281 ft to 13123 ft). It is not necessary to derate the rated voltage in these conditions: • Installing the drive at 2000 m (6562 ft) or lower • Installing the drive between 2000 m to 4000 m (6562 ft to 13123 ft) and grounding the neutral point on the power supply. Contact Yaskawa or your nearest sales representative if you will not ground the neutral point.
Vibration ^{*/}	⚠ WARNING Sudden Movement Hazard Do not use the Normally Closed (N.C.) relay output terminal in areas with high vibration or shock. If the drive gets too much vibration or shock, the N.C. relay output terminal can open for a short time. If the N.C. relay output terminal opens, the machine can start suddenly and can cause death or serious injury. Drive with DIN rail bracket • Vibration – 10 Hz to 20 Hz: 0.4 G – 20 Hz to 60 Hz: 0.2 G • Shock – 4 G/11 ms Drive without DIN rail bracket • Vibration – 10 Hz to 20 Hz: 1.0 G – 20 Hz to 60 Hz: 0.6 G • Shock – 4 G/11 ms
Installation Orientation	Install the drive vertically for sufficient airflow to cool the drive.

^{*1} This drive passed the vibration test with a logarithmic sweep as specified by EN 60068-2-6 and JIS C60068-2-6. If the internal components of the drive vibrate too much, it can cause damage to the drive even when the vibration frequency is in the specification. If the drive components vibrate, improve the installation environment to decrease vibration.

- Put the motor on a rubber pad to decrease vibration.
- Reinforce the structure of the installation.

Table 10.11 Standard

Item	Specification
Applicable Standards	• UL 61800-5-1 • EN 61800-3 • EN 61800-5-1 • Two Safe Disable inputs and one EDM output according to EN ISO 13849-1 (Cat.3, PL e), EN 61800-5-2 SIL3
Enclosure Protection Design	IP20/UL Open Type

10.7 Drive Derating

You must derate the drive capacity to operate the drive above the rated temperature, altitude, and default carrier frequency.

◆ Carrier Frequency Settings and Rated Current Values

The tables in this section show how the drive rated output current changes when the *C6-02 [Carrier Frequency Selection]* value changes. The output current value changes linearly as the carrier frequency changes. You can use the values from the tables to calculate a frequency that is not shown.

■ Single-Phase 200 V Class

◆ Derating Depending on Surrounding Air Temperature

When you install drives in these conditions, set L8-12 [*Ambient Temperature Setting*] and L8-35 [*Installation Method Selection*].

- Surrounding air temperatures are higher than the rated conditions
- Install drives side-by-side in the enclosure panel

Derate the output current as specified in [Figure 10.1](#).

A - L8-35 = 0 [IP20/UL Open Type]
(0.5 m/s of airflow around the drive is necessary)

B - L8-35 = 1 [Side-by-Side Mounting]

C - L8-35 = 3 [External Heatsink]

Figure 10.1 Derating Depending on Drive Installation Method

■ L8-12: Ambient Temperature Setting

No. (Hex.)	Name	Description	Default (Range)
L8-12 (04B8)	Ambient Temperature Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the surrounding air temperature of the drive installation area.	40 °C (-10 °C - +60 °C)

Note:

The setting range changes when the L8-35 [Installation Method Selection] value changes:

- 0 [IP20/UL Open Type]: -10 °C to +60 °C
- 1 [Side-by-Side Mounting]: -10 °C to +50 °C
- 3 [External Heatsink]: -10 °C to +50 °C

The drive automatically adjusts the drive rated current to the best value as specified by the set temperature. Set the surrounding air temperature of the area where you install the drive to a value that is more than the drive rating.

Refer to [Derating Depending on Surrounding Air Temperature on page 329](#) for information about derating as specified by surrounding air temperature.

■ L8-35: Installation Method Selection

No. (Hex.)	Name	Description	Default (Range)
L8-35 (04EC)	Installation Method Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of drive installation.	0 (0 - 3)

Note:

- Parameter A1-03 [Initialize Parameters] does not initialize this parameter.
- This parameter is set to the correct value when the drive is shipped. Change the value only in these conditions:
 - Side-by-Side installation
 - Mounting a standard drive with the heatsink outside the enclosure panel.

The drive automatically adjusts the overload protection detection level to the best value for each setting value. Refer to [Derating Depending on Surrounding Air Temperature on page 329](#) for information about derating as specified by surrounding air temperature.

0 : IP20/UL Open Type

Use this setting to install IP20/UL Open Type drives.

Make sure that there is 30 mm (1.18 in) minimum of space between drives or between the drive and side of the enclosure panel.

1 : Side-by-Side Mounting

Use this setting to install more than one drive side-by-side.

3 : External Heatsink

Use this setting when the heatsink (cooling fin) is outside the enclosure panel.

◆ Altitude Derating

Install the drive in a location that has an altitude of 1000 m (3281 ft) or lower.

Derate the output current by 1% for each 100 m (328 ft) to install the drive in altitudes between 1000 to 4000 m (3281 to 13123 ft).

It is not necessary to derate the rated voltage in these conditions:

- Installing the drive at 2000 m (6562 ft) or lower
- Installing the drive between 2000 to 4000 m (6562 to 13123 ft) and grounding the neutral point on the power supply.

If you do not ground the drive with a neutral network, contact Yaskawa or your nearest sales representative.

10.9 Peripheral Devices and Options

Table 10.28 to Table 10.31 show the available peripheral devices and options for the drive. Contact Yaskawa or your nearest sales representative to make an order.

- Selection: Refer to the drive catalog for information about available products.
- Installation and wiring: Refer to the instruction manual for each option.

Table 10.28 Main Circuit Options

Name	Intended Use
DC Link Choke	To improve the drive input power factor. • To prevent damage to the drive when the power supply capacity is large. You must only use this option when the power supply capacity is more than 600 kVA. • To decrease harmonic current. • To improve the power supply total power factor.
AC reactor	To improve the drive input power factor. • To prevent damage to the drive when the power supply capacity is large. You must only use this option when the power supply capacity is more than 600 kVA. • To decrease harmonic current. • To improve the power supply total power factor.

Table 10.29 Keypad

Name	Model	Intended Use
LCD Keypad	JVOP-KPLCA04xxx	A replacement keypad that has an LCD display. Use connection cables that are 3 m (9.8 ft) long maximum to connect this keypad for remote operation.
LED Keypad	JVOP-KPLEA04xxx	A replacement keypad that has an LED display. Use connection cables that are 3 m (9.8 ft) long maximum to connect this keypad for remote operation.
Bluetooth LCD Keypad	JVOP-KPLCC04xxx	A replacement LCD keypad that can connect to the drive with Bluetooth communications and DriveWizard Mobile.
Blank Cover	JVOPKPBCH04AAA	To keep the protection performance when you install the keypad outside of the control panel.
Remote Control Extension Cable	1 m: WV001 3 m: WV003	To connect the keypad and drive. This option is an RJ-45, 8-pin straight-through UTP CAT5e cable.

Table 10.30 Attachments

Name	Model	Intended Use
Heatsink External Mounting Kit	ZPSA-GA50Vx-x	Use this option to install the heatsink outside of the control panel. Use this option only if the drive model is GA51UxxxxxBx.

Table 10.31 Engineering Tools

Name	Model	Intended Use
DriveWizard	-	To use a PC to program drives and manage parameters.
DriveWorksEZ	-	To use a PC to do advanced drive programming.

11.1 Section Safety

DANGER

Do not ignore the safety messages in this manual.

If you ignore the safety messages in this manual, it will cause serious injury or death. The manufacturer is not responsible for injuries or damage to equipment.

11.2 How to Read the Parameter List

◆ Icons and Terms that Identify Parameters and Control Modes

Icon	Description
	The parameter is available when operating the drive with V/f Control.
	The parameter is available when operating the drive with Open Loop Vector Control.
	The parameter is available when operating the drive with Open Loop Vector Control for PM.
	The parameter is available when operating the drive with Advanced Open Loop Vector Control for PM.
	The parameter is available when operating the drive with EZ Open Loop Vector Control.
Hex.	Hexadecimal numbers that represent Modbus addresses to change parameters over network communication.
RUN	The parameter can be changed settings during run.
Expert	The parameter that is available in Expert Mode only. <i>*1</i>

*1 Set $A1-01 = 3$ [*Access Level Selection = Expert Level*] to display and set Expert Mode parameters on the keypad.

Note:

Gray icons identify parameters that are not available in the specified control method.

11.3 Parameter Groups

Represents the type of product parameters.

Parameter	Name
A1	Initialization
A2	User Parameters
b1	Operation Mode Selection
b2	DC Injection Braking and Short Circuit Braking
b3	Speed Search
b4	Timer Function
b5	PID control
b6	Dwell Function
b8	Energy Saving
C1	Accel & Decel Time
C2	S-Curve Characteristics
C3	Slip Compensation
C4	Torque Compensation
C5	Auto Speed Regulator (ASR)
C6	Duty & Carrier Frequency
d1	Frequency Reference
d2	Reference Limits
d3	Jump Frequency
d4	Frequency Ref Up/Down & Hold
d6	Field Weakening /Forcing
d7	Offset Frequency
E1	V/f Pattern for Motor 1
E2	Motor Parameters
E3	V/f Pattern for Motor 2
E4	Motor 2 Parameters
E5	PM Motor Settings
E9	Motor Setting
F1	Fault Detection during PG Speed Control
F6	Ethernet Settings
F7	Ethernet Options
H1	Digital Inputs
H2	Digital Outputs
H3	Analog Inputs

T4	EZ Tuning
U1	Operation Status Monitors
U2	Fault Trace
U3	Fault History
U4	Maintenance Monitors
U5	PID Monitors
U6	Operation Status Monitors
U8	DriveWorksEZ Monitors

11.4 A: Initialization Parameters

◆ A1: Initialization

No. (Hex.)	Name	Description	Default (Range)	Ref.
A1-00 (0100) RUN	Language Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the language for the LCD keypad. Note: When you use <i>A1-03 [Initialize Parameters]</i> to initialize the drive, the drive will not reset this parameter. 0 : English 1 : Japanese 2 : German 3 : French 4 : Italian 5 : Spanish 6 : Portuguese 7 : Chinese 8 : Czech 9 : Russian 10 : Turkish 11 : Polish 12 : Greek	0 (0 - 12)	469
A1-01 (0101) RUN	Access Level Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets user access to parameters. The access level controls which parameters the keypad will display, and which parameters the user can set. 0 : Operation Only 1 : User Parameters 2 : Advanced Level 3 : Expert Level	2 (0 - 3)	469
A1-02 (0102)	Control Method Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the control method for the drive application and the motor. 0 : V/f Control 2 : Open Loop Vector 5 : PM Open Loop Vector 6 : PM Advanced Open Loop Vector 8 : EZ Vector Control	2 (0, 2, 5, 6, 8)	470
A1-03 (0103)	Initialize Parameters	V/f OLV OLV/PM AQLV/PM EZOLV Sets parameters to default values. 0 : No Initialization 1110 : User Initialization 2220 : 2-Wire Initialization	0 (0 - 2220)	471
A1-04 (0104)	Password	V/f OLV OLV/PM AQLV/PM EZOLV Entry point for the password set in <i>A1-05 [Password Setting]</i>. The user can view the settings of parameters that are locked without entering the password. Enter the correct password in this parameter to change parameter settings.	0000 (0000 - 9999)	472
A1-05 (0105)	Password Setting	V/f OLV OLV/PM AQLV/PM EZOLV Set the password to lock parameters and prevent changes to parameter settings. Enter the correct password in <i>A1-04 [Password]</i> to unlock parameters and accept changes.	0000 (0000 - 9999)	473
A1-06 (0127)	Application Preset	V/f OLV OLV/PM AQLV/PM EZOLV Sets the drive to operate in selected application conditions. 0 : General-purpose 1 : Water Supply Pump 2 2 : Conveyor 3 : Exhaust Fan 4 : HVAC Fan 5 : Air Compressor 8 : Conveyor 2	0 (0 - 5, 8)	473
A1-07 (0128)	DriveWorksEZ Function Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the drive to operate with DriveWorksEZ. 0 : DWEZ Disabled 1 : DWEZ Enabled 2 : Enabled/Disabled wDigital Input	0 (0 - 2)	478

11.4 A: Initialization Parameters

No. (Hex.)	Name	Description	Default (Range)	Ref.
A1-11 (111D) Expert	Firmware Update Lock	V/f OLV OLV/PM AOLV/PM EZOLV Protects the drive firmware. When you enable the protection, you cannot update the drive firmware. 0 : Disabled 1 : Enabled	0 (0, 1)	478
A1-12 (1564)	Bluetooth ID	V/f OLV OLV/PM AOLV/PM EZOLV Sets the password necessary to use Bluetooth to control the drive with a smartphone or tablet.	- (0000 - 9999)	479

◆ A2: User Parameters

No. (Hex.)	Name	Description	Default (Setting Range)	Ref.
A2-01 (0106)	User Parameter 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the first line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	A1-02 (Determined by A1-06)	479
A2-02 (0107)	User Parameter 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the second line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	b1-01 (Determined by A1-06)	479
A2-03 (0108)	User Parameter 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the third line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	b1-02 (Determined by A1-06)	479
A2-04 (0109)	User Parameter 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the fourth line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	b1-03 (Determined by A1-06)	479
A2-05 (010A)	User Parameter 5	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the fifth line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	C1-01 (Determined by A1-06)	479
A2-06 (010B)	User Parameter 6	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the sixth line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	C1-02 (Determined by A1-06)	479
A2-07 (010C)	User Parameter 7	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the seventh line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	C6-01 (Determined by A1-06)	479
A2-08 (010D)	User Parameter 8	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the eighth line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	C6-02 (Determined by A1-06)	479
A2-09 (010E)	User Parameter 9	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the ninth line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	d1-01 (Determined by A1-06)	479
A2-10 (010F)	User Parameter 10	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 10th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	d1-02 (Determined by A1-06)	479
A2-11 (0110)	User Parameter 11	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 11th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	d1-03 (Determined by A1-06)	479
A2-12 (0111)	User Parameter 12	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 12th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	d1-04 (Determined by A1-06)	479
A2-13 (0112)	User Parameter 13	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 13th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	d1-17 (Determined by A1-06)	479
A2-14 (0113)	User Parameter 14	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 14th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	E1-01 (Determined by A1-06)	479
A2-15 (0114)	User Parameter 15	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 15th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	E1-03 (Determined by A1-06)	479
A2-16 (0115)	User Parameter 16	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 16th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters A2-01 to A2-32.	E1-04 (Determined by A1-06)	479

No. (Hex.)	Name	Description	Default (Setting Range)	Ref.
A2-17 (0116)	User Parameter 17	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 17th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	E1-05 (Determined by A1-06)	479
A2-18 (0117)	User Parameter 18	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 18th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	E1-06 (Determined by A1-06)	479
A2-19 (0118)	User Parameter 19	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 19th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	E1-09 (Determined by A1-06)	479
A2-20 (0119)	User Parameter 20	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 20th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	E1-13 (Determined by A1-06)	479
A2-21 (011A)	User Parameter 21	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 21st line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	E2-01 (Determined by A1-06)	479
A2-22 (011B)	User Parameter 22	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 22nd line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	E2-04 (Determined by A1-06)	479
A2-23 (011C)	User Parameter 23	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 23rd line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	E2-11 (Determined by A1-06)	479
A2-24 (011D)	User Parameter 24	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 24th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	H4-02 (Determined by A1-06)	479
A2-25 (011E)	User Parameter 25	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 25th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	L1-01 (Determined by A1-06)	479
A2-26 (011F)	User Parameter 26	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 26th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	L3-04 (Determined by A1-06)	479
A2-27 (0120)	User Parameter 27	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 27th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	- (Determined by A1-06)	479
A2-28 (0121)	User Parameter 28	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 28th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	- (Determined by A1-06)	479
A2-29 (0122)	User Parameter 29	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 29th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	- (Determined by A1-06)	479
A2-30 (0123)	User Parameter 30	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 30th line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	- (Determined by A1-06)	479
A2-31 (0124)	User Parameter 31	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 31st line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	- (Determined by A1-06)	479
A2-32 (0125)	User Parameter 32	V/f OLV OLV/PM AOLV/PM EZOLV Sets the parameter number to show on the 32nd line in Setup Mode. You can select a maximum of 32 parameters for the drive and set them to parameters <i>A2-01</i> to <i>A2-32</i> .	- (Determined by A1-06)	479
A2-33 (0126)	User Parameter Auto Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the automatic save feature for changes to parameters <i>A2-17</i> to <i>A2-32</i> [User Parameters 17 to 32]. 0 : Disabled: Manual Entry Required 1 : Enabled: Auto Save Recent Params	Determined by A1-06 (0, 1)	479

11.5 b: Application

◆ b1: Operation Mode Selection

No. (Hex.)	Name	Description	Default (Setting Range)	Ref.
b1-01 (0180)	Frequency Reference Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the input method for the frequency reference. 0 : Keypad 1 : Analog Input 2 : USB Connection 3 : Ethernet	3 (0 - 3)	480
b1-02 (0181)	Run Command Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the input method for the Run command. 0 : Keypad 1 : Digital Input 2 : USB Connection 3 : Ethernet	3 (0 - 3)	481
b1-03 (0182)	Stopping Method Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method to stop the motor after removing a Run command or entering a Stop command. Note: When A1-02 = 5, 6, 8 [Control Method Selection = OLV/PM, AOLV/PM, EZOLV], the setting range is 0, 1, 3. 0 : Ramp to Stop 1 : Coast to Stop 2 : DC Injection Braking to Stop 3 : Coast to Stop with Timer	0 (0 - 3)	481
b1-04 (0183)	Reverse Operation Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the reverse operation function. Disable reverse operation in fan or pump applications where reverse rotation is dangerous. 0 : Reverse Enabled 1 : Reverse Disabled	0 (0, 1)	484
b1-06 (0185)	Digital Input Reading	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of times that the drive reads the sequence input command to prevent malfunction because of electrical interference. 0 : Single Scan 1 : Double Scan	1 (0, 1)	484
b1-07 (0186)	LOCAL/REMOTE Run Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive response to an existing Run command when the drive receives a second Run command from a different location. 0 : Disregard Existing RUN Command 1 : Accept Existing RUN Command	0 (0, 1)	484
b1-08 (0187)	Run Command Select in PRG Mode	V/f OLV OLV/PM AOLV/PM EZOLV Sets the conditions for the drive to accept a Run command entered from an external source when using the keypad to set parameters. 0 : Disregard RUN while Programming 1 : Accept RUN while Programming 2 : Allow Programming Only at Stop	0 (0 - 2)	485
b1-14 (01C3)	Phase Order Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the phase order for output terminals U/T1, V/T2, and W/T3. This parameter can align the Forward Run command from the drive and the forward direction of the motor without changing wiring. 0 : Standard 1 : Switch Phase Order	0 (0, 1)	485
b1-15 (01C4)	Frequency Reference Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the input method for frequency reference 2. 0 : Keypad 1 : Analog Input 2 : USB Connection 3 : Ethernet	0 (0 - 3)	486

No. (Hex.)	Name	Description	Default (Setting Range)	Ref.
b1-16 (01C5)	Run Command Selection 2	V/f OLV OLV/PM AQLV/PM EZOLV Sets the input method for Run Command 2 when the user switches the control circuit terminals ON/OFF to change the Run command source. 0 : Keypad 1 : Digital Input 2 : USB Connection 3 : Ethernet	0 (0 - 3)	486
b1-17 (01C6)	Run Command at Power Up	V/f OLV OLV/PM AQLV/PM EZOLV Sets drive response when the CPU changes from de-energized to energized and there is an active Run command. Set this parameter in applications where energizing or de-energizing the drive enables the Run command. When the CPU stays energized during loss of power, <i>L2-01 [Power Loss Ride Through Select]</i> sets operation. 0 : Disregard Existing RUN Command 1 : Accept Existing RUN Command	0 (0, 1)	487
b1-35 (1117) Expert	Digital Input Deadband Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the deadband time for MFDIs.	0.0 ms (0.0 to 100.0 ms)	487

◆ b2: DC Injection Braking and Short Circuit Braking

No. (Hex.)	Name	Description	Default (Range)	Ref.
b2-01 (0189)	DC Injection/Zero SpeedThreshold	V/f OLV OLV/PM AQLV/PM EZOLV Sets the frequency to start DC Injection Braking or Short Circuit Braking near the end of a stop ramp. Note: This parameter is available when <i>b1-03 = 0 [Stopping Method Selection = Ramp to Stop]</i>.	Determined by A1-02 (0.0 - 10.0 Hz)	488
b2-02 (018A)	DC Injection Braking Current	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DC Injection Braking current as a percentage of the drive rated current.	50% (0 - 75%)	488
b2-03 (018B)	DC Inject Braking Time at Start	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DC Injection Braking Time at stop.	0.00 s (0.00 - 10.00 s)	489
b2-04 (018C)	DC Inject Braking Time at Stop	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DC Injection Braking Time at stop.	Determined by A1-02 (0.00 - 10.00 s)	489
b2-08 (0190)	Magnetic Flux Compensation Value	V/f OLV OLV/PM AQLV/PM EZOLV Sets how much current the drive injects when DC Injection Braking at Start starts (Initial Excitation) as a percentage of <i>E2-03 [Motor No-Load Current]</i>.	0% (0 - 1000%)	489
b2-12 (01BA)	Short Circuit Brake Time @ Start	V/f OLV OLV/PM AQLV/PM EZOLV Sets the Short Circuit Braking time at start.	0.00 s (0.00 - 25.50 s)	490
b2-13 (01BB)	Short Circuit Brake Time @ Stop	V/f OLV OLV/PM AQLV/PM EZOLV Sets the Short Circuit Braking time at stop.	A1-02 = 8: 0.00 s Other than A1-02 = 8: 0.50 s (0.00 - 25.50 s)	490
b2-18 (0177)	Short Circuit Braking Current	V/f OLV OLV/PM AQLV/PM EZOLV Sets the Short Circuit Braking Current as a percentage of the motor rated current. Note: Parameter <i>A1-02 [Control Method Selection]</i> selects which parameter is the motor rated current. • <i>A1-02 = 5, 6 [OLV/PM, AQLV/PM]: E5-03 [PM Motor Rated Current (FLA)]</i> • <i>A1-02 = 8 [EZOLV]: E9-06 [Motor Rated Current (FLA)]</i>	100.0% (0.0 - 200.0%)	490

◆ b3: Speed Search

No. (Hex.)	Name	Description	Default (Range)	Ref.
b3-01 (0191)	Speed Search at Start Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Speed Search at Start function so the drive will do Speed Search with each Run command. 0 : Disabled 1 : Enabled	Determined by A1-02 (0, 1)	494
b3-02 (0192)	SpeedSearch Deactivation Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current level that stops Speed Search as a percentage of the drive rated output current. Usually it is not necessary to change this setting.	Determined by A1-02 (0 - 200%)	494
b3-03 (0193)	Speed Search Deceleration Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the deceleration time during Speed Search operation. Set the length of time to decelerate from the maximum output frequency to the minimum output frequency. Note: When A1-02 = 8 [Control Method Selection = EZOLV], this parameter takes effect only in Expert Mode.	2.0 s (0.1 - 10.0 s)	494
b3-04 (0194)	V/f Gain during Speed Search	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ratio used to reduce the V/f during searches to reduce the output current during speed searches.	Determined by o2-04 (10 - 100)	495
b3-05 (0195)	Speed Search Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Speed Search delay time to activate a magnetic contactor installed between the drive and motor.	0.2 s (0.0 - 100.0 s)	495
b3-06 (0196) Expert	Speed Estimation Current Level 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level of current that flows to the motor during Speed Estimation Speed Search as a coefficient of the motor rated current. Usually it is not necessary to change this setting.	Determined by o2-04 (0.0 - 2.0)	495
b3-07 (0197) Expert	Speed Estimation Current Level 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level of current that flows to the motor during Speed Estimation Speed Search as a coefficient of E2-03 [Motor No-Load Current] or E4-03 [Motor 2 Rated No-Load Current]. Usually it is not necessary to change this setting.	1.0 (0.0 - 3.0)	495
b3-08 (0198)	Speed Estimation ACR P Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain for the automatic current regulator during Speed Estimation Speed Search. Also adjusts speed search responsiveness. Usually it is not necessary to change this setting.	Determined by A1-02 and o2-04 (0.00 - 6.00)	495
b3-09 (0199)	Speed Estimation ACR I Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time for the automatic current regulator during Speed Estimation Speed Search. Also adjusts speed search responsiveness. Usually it is not necessary to change this setting.	Determined by A1-02 when A1-02 ≠ 5 20.0 when A1-02 = 5 (0.0 - 1000.0 ms)	496
b3-10 (019A) Expert	Speed Estimation Detection Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain to correct estimated frequencies from Speed Estimation Speed Search.	1.05 (1.00 - 1.20)	496
b3-14 (019E)	Bi-directional Speed Search	V/f OLV OLV/PM AOLV/PM EZOLV Sets the direction of Speed Search to the direction of the frequency reference or in the motor rotation direction as detected by the drive. 0 : Disabled 1 : Enabled Note: When you set A1-02, b3-24, and E9-01, set b3-14.	0 (0, 1)	496
b3-17 (01F0) Expert	Speed Est Retry Current Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current level for the search retry function in Speed Estimation Speed Search as a percentage where drive rated current is a setting value of 100%.	150% (0 - 200%)	496
b3-18 (01F1) Expert	Speed Est Retry Detection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will wait to retry Speed Estimation Speed Search when too much current flow stopped the Speed Search.	0.10 s (0.00 - 1.00 s)	496
b3-19 (01F2)	Speed Search Restart Attempts	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of times to restart Speed Search if Speed Search does not complete.	3 times (0 - 10 times)	496

No. (Hex.)	Name	Description	Default (Range)	Ref.
b3-24 (01C0)	Speed Search Method Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Speed Search method when you start the motor or when you restore power after a momentary power loss. Note: - When $A1-02 = 8$ [Control Method Selection = EZOLV], the default setting changes when the setting for $E9-01$ [Motor Type Selection] changes. $E9-01 = 0$ [Induction (IM)]: 2 $E9-01 = 1, 2$ [Permanent Magnet (PM), Synchronous Reluctance (SynRM)]: 1 - When you set $A1-02 = 8$ and $E9-01 = 1$ or 2, set $b3-24 = 1$. If $b3-24 = 2$, the drive will detect $oPE08$ [Parameter Selection Error]. - When you set $b3-24$, it will trigger the drive to initialize $b3-14$ [Bi-directional Speed Search]. After you set $b3-24$, set $b3-14$. 1 : Speed Estimation 2 : Current Detection 2	2 (1, 2)	497
b3-25 (01C8) Expert	Speed Search Wait Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time the drive will wait to start the Speed Search Retry function.	0.5 s (0.0 - 30.0 s)	497
b3-26 (01C7) Expert	Direction Determination Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level to find the motor rotation direction. Increase the value if the drive cannot find the direction.	1000 (40 to 60000)	497
b3-29 (077C) Expert	Speed Search Back-EMF Threshold	V/f OLV OLV/PM AOLV/PM EZOLV Sets the induced voltage for motors that use Speed Search. The drive will start Speed Search when the motor induced voltage level is the same as the setting value. Usually it is not necessary to change this setting.	10% (0 - 10%)	497
b3-31 (0BC0) Expert	Spd Search Current Reference Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current level that decreases the output current during Current Detection Speed Search.	1.50 (1.50 - 3.50)	498
b3-32 (0BC1) Expert	Spd Search Current Complete Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current level that completes Speed Search.	1.20 (0.00 - 1.49)	498
b3-33 (0B3F) Expert	Speed Search during Uv Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that starts Speed Search at start-up if the drive detects a U_v [Undervoltage] when it receives a Run command. 0 : Disabled 1 : Enabled	1 (0, 1)	498
b3-39 (1B8F) Expert	Regen Judgment Lv of Spd Search	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level to determine the regenerative state during speed search. Usually it is not necessary to change this setting.	15% (0 - 50%)	498
b3-54 (3123)	Search Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will run Speed Search.	400 ms (10 - 2000 ms)	499
b3-55 (3124) Expert	Current Increment Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will increase the current from zero current to the setting value of $b3-06$ [Speed Estimation Current Level 1].	10 ms (10 - 2000 ms)	499
b3-56 (3126)	InverseRotationSearch WaitTime	V/f OLV OLV/PM AOLV/PM EZOLV Sets the wait time until the drive starts inverse rotation search after it completes forward search when you do inverse rotation search during Current Detection Speed Search.	Determined by o2-04 (0.1 - 5.0 s)	499
b3-61 (1B96) Expert	Init Magnet Pole Estimation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the responsiveness for initial motor magnetic pole calculation when $A1-02 = 6$ [Control Method Selection = AOLV/PM]. Set $b3-61 > 0.0$ for an ordinary IPM motor. It is automatically set if High Frequency Injection Tuning is used. Note: - Set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] to enable this parameter. - Set $n8-41$ [HFI P Gain] to adjust the responsiveness for initial motor magnetic pole calculation when $A1-02 = 5$ [OLV/PM].	5.0 (-20.0 - +20.0)	499

◆ b4: Timer Function

No. (Hex.)	Name	Description	Default (Range)	Ref.
b4-01 (01A3)	Timer Function ON-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ON-delay time for the timer input.	0.0 s (0.0 - 3000.0 s)	500
b4-02 (01A4)	Timer Function OFF-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the OFF-delay time for the timer input.	0.0 s (0.0 - 3000.0 s)	500
b4-03 (0B30) Expert	Terminal MA,MB,MC ON-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time to activate the contact after the function set in <i>H2-01</i> activates.	0 ms (0 - 65000 ms)	500
b4-04 (0B31) Expert	Terminal MA,MB,MC OFF-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time to deactivate the contact after the function set in <i>H2-01</i> deactivates.	0 ms (0 - 65000 ms)	500
b4-05 (0B32) Expert	Ethernet DO1 ON Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time to activate the contact after the function set in <i>H2-02</i> activates.	0 ms (0 - 65000 ms)	501
b4-06 (0B33) Expert	Ethernet DO1 OFF Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time to deactivate the contact after the function set in <i>H2-02</i> deactivates.	0 ms (0 - 65000 ms)	501
b4-07 (0B34) Expert	Ethernet DO2 ON Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time until the contact is turned ON after the function set with <i>H2-03</i> turns ON.	0 ms (0 - 65000 ms)	501
b4-08 (0B35) Expert	Ethernet DO2 OFF Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time to deactivate the contact after the function set in <i>H2-03</i> deactivates.	0 ms (0 - 65000 ms)	501

◆ b5: PID control

No. (Hex.)	Name	Description	Default (Range)	Ref.
b5-01 (01A5)	PID Mode Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of PID control. 0 : Disabled 1 : Standard 2 : Standard (D on feedback) 3 : Fref + PID Trim 4 : Fref + PID Trim (D on feedback) 5 : Same as 7series & prior, b5-01=1 6 : Same as 7series & prior, b5-01=2 7 : Same as 7series & prior, b5-01=3 8 : Same as 7series & prior, b5-01=4 Note: Use settings 5 to 8 instead of settings 1 to 4 when the drive is a replacement for Varispeed F7.	0 (0 - 8)	506
b5-02 (01A6) RUN	Proportional Gain (P)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain (P) that is applied to PID input.	1.00 (0.00 - 25.00)	507
b5-03 (01A7) RUN	Integral Time (I)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time (I) that is applied to PID input.	1.0 s (0.0 - 360.0 s)	507
b5-04 (01A8) RUN	Integral Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit for integral control (I) as a percentage of the Maximum Output Frequency. Note: Parameter <i>A1-02</i> [Control Method Selection] selects which parameter is the maximum output frequency. • <i>A1-02</i> ≠ 8 [EZOLV]: <i>E1-04</i> [Maximum Output Frequency] • <i>A1-02</i> = 8: <i>E9-02</i> [Maximum Speed]	100.0% (0.0 - 100.0%)	507
b5-05 (01A9) RUN	Derivative Time (D)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the derivative time (D) for PID control. This parameter adjusts system responsiveness.	0.00 s (0.00 - 10.00 s)	508

No. (Hex.)	Name	Description	Default (Range)	Ref.
b5-06 (01AA) RUN	PID Output Limit	V/f OLV OLV/PM AQLV/PM EZOLV Sets the maximum possible output from the PID controller as a percentage of the Maximum Output Frequency. Note: Parameter <i>A1-02 [Control Method Selection]</i> selects which parameter is the maximum output frequency. • <i>A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency]</i> • <i>A1-02 = 8: E9-02 [Maximum Speed]</i>	100.0% (0.0 - 100.0%)	508
b5-07 (01AB) RUN	PID Offset Adjustment	V/f OLV OLV/PM AQLV/PM EZOLV Sets the offset for the PID control output as a percentage of the Maximum Output Frequency. Note: Parameter <i>A1-02 [Control Method Selection]</i> selects which parameter is the maximum output frequency. • <i>A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency]</i> • <i>A1-02 = 8: E9-02 [Maximum Speed]</i>	0.0% (-100.0 - +100.0%)	508
b5-08 (01AC) RUN Expert	PID Primary Delay Time Constant	V/f OLV OLV/PM AQLV/PM EZOLV Sets the primary delay time constant for the PID control output. Usually it is not necessary to change this setting.	0.00 s (0.00 - 10.00 s)	508
b5-09 (01AD)	PID Output Level Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the polarity of the PID output. 0 : Normal Output (Direct Acting) 1 : Reverse Output (Reverse Acting)	0 (0, 1)	508
b5-10 (01AE) RUN	PID Output Gain Setting	V/f OLV OLV/PM AQLV/PM EZOLV Sets the amount of gain to apply to the PID output.	1.00 (0.00 - 25.00)	508
b5-11 (01AF)	PID Output Reverse Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function that enables and disables reverse motor rotation for negative PID control output. 0 : Lower Limit is Zero 1 : Negative Output Accepted	0 (0, 1)	509
b5-12 (01B0)	Feedback Loss Detection Select	V/f OLV OLV/PM AQLV/PM EZOLV Sets the drive response to PID feedback loss/excess. Sets drive operation after the drive detects PID feedback loss/excess. 0 : Digital Out Only, Always Detect 1 : Alarm + Digital Out, Always Det 2 : Fault + Digital Out, Always Det 3 : Digital Out Only, @ PID Enable 4 : Alarm + Digital Out, @PID Enable 5 : Fault + Digital Out, @PID Enable	0 (0 - 5)	509
b5-13 (01B1)	PID Feedback Loss Detection Lvl	V/f OLV OLV/PM AQLV/PM EZOLV Sets the level that triggers <i>PID Feedback Loss [FbL]</i> detection as a percentage of the Maximum Output Frequency. Note: Parameter <i>A1-02 [Control Method Selection]</i> selects which parameter is the maximum output frequency. • <i>A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency]</i> • <i>A1-02 = 8: E9-02 [Maximum Speed]</i>	0% (0 - 100%)	510
b5-14 (01B2)	PID Feedback Loss Detection Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the length of time that PID Feedback must be less than <i>b5-13 [PID Feedback Loss Detection Lvl]</i> to detect <i>PID Feedback Loss [FbL]</i>.	1.0 s (0.0 - 25.5 s)	510
b5-15 (01B3)	PID Sleep Function Start Level	V/f OLV OLV/PM AQLV/PM EZOLV Sets the output level that triggers the PID Sleep function.	Determined by A1-02 (0.0 - 590.0)	510
b5-16 (01B4)	PID Sleep Delay Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets a delay time to start or stop the PID Sleep function.	0.0 s (0.0 - 25.5 s)	510
b5-17 (01B5) RUN	PID Accel/Decel Time	V/f OLV OLV/PM AQLV/PM EZOLV Raises or lowers the PID setpoint using the acceleration and deceleration times set to the drive. This is a soft-starter for the PID setpoint.	0.0 s (0.0 - 6000.0 s)	510
b5-18 (01DC)	b5-19 PID Setpoint Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function that enables and disables <i>b5-19 [PID Setpoint Value]</i>. 0 : Disabled 1 : Enabled	0 (0, 1)	511

11.5 b: Application

No. (Hex.)	Name	Description	Default (Range)	Ref.
b5-19 (01DD) RUN	PID Setpoint Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID setpoint when <i>b5-18 = 1</i> [<i>b5-19 PID Setpoint Selection = Enabled</i>].	0.00% (0.00 - 100.00%)	511
b5-20 (01E2)	PID Unit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of digits to set and show the PID setpoint. 0 : 0.01Hz units 1 : 0.01% units 2 : rev/min 3 : User Units	1 (0 - 3)	511
b5-34 (019F) RUN	PID Output Lower Limit Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit level for the PID control as a percentage of <i>E1-04</i> [<i>Maximum Output Frequency</i>]. When you use <i>b5-34</i> , set <i>b5-91 = 0</i> [<i>EZ Sleep Minimum Speed = 0 (Disabled)</i>]. When you set the output lower limit level as Hz units or min ⁻¹ (r/min) units, refer to b5-91: EZ Sleep Minimum Speed on page 516 . Note: Parameter <i>A1-02</i> [<i>Control Method Selection</i>] selects which parameter is the maximum output frequency. • <i>A1-02</i> ≠ 8 [<i>EZOLV</i>]: <i>E1-04</i> [<i>Maximum Output Frequency</i>] • <i>A1-02</i> = 8: <i>E9-02</i> [<i>Maximum Speed</i>]	0.0% (-100.0 - +100.0%)	511
b5-35 (01A0) RUN	PID Input Limit Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output upper limit for the PID control as a percentage of the Maximum Output Frequency. Note: Parameter <i>A1-02</i> [<i>Control Method Selection</i>] selects which parameter is the maximum output frequency. • <i>A1-02</i> ≠ 8 [<i>EZOLV</i>]: <i>E1-04</i> [<i>Maximum Output Frequency</i>] • <i>A1-02</i> = 8: <i>E9-02</i> [<i>Maximum Speed</i>]	1000.0% (0.0 - 1000.0%)	512
b5-36 (01A1)	PID High Feedback Detection Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level that triggers <i>Excessive PID Feedback [FbH]</i> as a percentage of the Maximum Output Frequency. Note: Parameter <i>A1-02</i> [<i>Control Method Selection</i>] selects which parameter is the maximum output frequency. • <i>A1-02</i> ≠ 8 [<i>EZOLV</i>]: <i>E1-04</i> [<i>Maximum Output Frequency</i>] • <i>A1-02</i> = 8: <i>E9-02</i> [<i>Maximum Speed</i>]	100% (0 - 100%)	512
b5-37 (01A2)	PID High Feedback Detection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the PID feedback signal must be more than the level set in <i>b5-36</i> [<i>PID Feedback High Detection Lvl</i>] to cause <i>Excessive PID Feedback [FbH]</i> .	1.0 s (0.0 - 25.5 s)	512
b5-38 (01FE)	PID User Unit Display Scaling	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value that the drive sets or shows as the PID setpoint when at the maximum output frequency.	Determined by b5-20 (1 - 60000)	512
b5-39 (01FF)	PID User Unit Display Digits	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of digits to set and show the PID setpoint. 0 : No Decimal Places (XXXXX) 1 : One Decimal Places (XXXX.X) 2 : Two Decimal Places (XXX.XX) 3 : Three Decimal Places (XX.XXX)	Determined by b5-20 (0 - 3)	512
b5-40 (017F)	Frequency Reference Monitor @PID	V/f OLV OLV/PM AOLV/PM EZOLV Sets the contents for monitor <i>U1-01</i> [<i>Frequency Reference</i>] in PID control. 0 : U1-01 Includes PID Output 1 : U1-01 Excludes PID Output	0 (0, 1)	513
b5-47 (017D)	PID Trim Mode Output Reverse Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets reverse motor rotation when the PID control output is negative. 0 : Lower Limit is Zero 1 : Negative Output Accepted	1 (0, 1)	513
b5-53 (0B8F) RUN	PID Integrator Ramp Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the responsiveness of PID control when the PID feedback changes quickly.	0.0 Hz (0.0 - 10.0 Hz)	513
b5-55 (0BE1)	PID Feedback Monitor Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor (<i>Ux-xx</i>) used as the PID Feedback. Set the <i>x-xx</i> part of the <i>Ux-xx</i> [<i>Monitor</i>].	000 (000 - 999)	514
b5-56 (0BE2)	PID Feedback Monitor Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the monitor set in <i>b5-55</i> [<i>PID Feedback Monitor Selection</i>].	1.00 (0.00 - 10.00)	514

No. (Hex.)	Name	Description	Default (Range)	Ref.
b5-57 (11DD)	PID Feedback Monitor Bias	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bias for the monitor specified in b5-55 [PID Feedback Monitor Selection].	0.00 (-10.00 - +10.00)	514
b5-58 (1182) RUN	PID Setpoint 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID setpoint when H1-xx = 3E or 3F [MFDI Function Select = PID Setpoint Selection 1/2]. This value is a percentage of the maximum output frequency. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	0.00% (0.00 - 100.00%)	514
b5-59 (1183) RUN	PID Setpoint 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID setpoint when H1-xx = 3E or 3F [MFDI Function Select = PID Setpoint Selection 1/2]. This value is a percentage of the maximum output frequency. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	0.00% (0.00 - 100.00%)	514
b5-60 (1184) RUN	PID Setpoint 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID setpoint when H1-xx = 3E or 3F [MFDI Function Select = PID Setpoint Selection 1/2]. This value is a percentage of the maximum output frequency. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	0.00% (0.00 - 100.00%)	514
b5-61 (119A)	PID Trim Mode Lower Limit Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that adjusts the PID output in relation to the frequency reference. 0 : Disabled 1 : Enabled	0 (0, 1)	514
b5-62 (119B)	PID Trim Mode Lower Limit Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID Trim Mode Lower Limit Value as a percentage of the maximum output frequency. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	0.00% (0.00 - 100.00%)	515
b5-63 (119C)	PID Differential FB Monitor Sel	V/f OLV OLV/PM AOLV/PM EZOLV Selects the monitor (Ux-xx) used as the PID Differential Feedback. Set the x-xx part of the Ux-xx [Monitor].	000 (000 - 999)	515
b5-64 (119D)	PID Differential FB Monitor Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the monitor specified in b5-63 [PID Differential FB Monitor Sel].	1.00 (0.00 - 10.00)	515
b5-65 (119F)	PID Differential FB Monitor Bias	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bias for the monitor specified in b5-63 [PID Differential FB Monitor Sel].	0.00 (-10.00 - +10.00)	515
b5-66 (11DE)	PID Feedback Monitor Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the signal level for the monitor specified in b5-55 [PID Feedback Monitor Selection]. 0 : Absolute 1 : Bi-directional (+/-)	0 (0, 1)	515
b5-67 (11DF)	PID Differential FB Monitor Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the signal level for the monitor specified in b5-63 [PID Differential FB Monitor Sel]. 0 : Absolute 1 : Bi-directional (+/-)	0 (0, 1)	515
b5-89 (0B89) RUN	Sleep Method Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets sleep and wake up operation when using PID. 0 : Standard 1 : EZ Sleep/Wake-up	0 (0, 1)	516
b5-90 (0B90)	EZ Sleep Unit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the measurement units for b5-91 [EZ Sleep Minimum Speed] and b5-92 [EZ Sleep Level]. 0 : 0.1Hz units 1 : rev/min	0 (0, 1)	516

No. (Hex.)	Name	Description	Default (Range)	Ref.
b5-91 (0B91) RUN	EZ Sleep Minimum Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output lower limit level for the PID control as Hz units or min ⁻¹ (r/min) units. When you use b5-91, set b5-34 = 0.0 [PID Output Lower Limit Level = 0.0 (disabled)]. When you set the lower limit for PID output as a percentage of the Maximum Output Frequency, refer to "b5-34: PID Output Lower Limit Level".	0.0 Hz or 0 min ⁻¹ (r/min) (0.0 to 590.0 Hz or 0 to 35400 min ⁻¹ (r/min))	516
b5-92 (0B92) RUN	EZ Sleep Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value that the output frequency or motor speed must be less than for longer than b5-93 [EZ Sleep Time] to enter Sleep Mode.	0.0 Hz or 0 min ⁻¹ (r/min) (0.0 to 590.0 Hz or 0 to 35400 min ⁻¹ (r/min))	516
b5-93 (0B93) RUN	EZ Sleep Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the output frequency or motor speed must be less than b5-92 [EZ Sleep Level] to enter Sleep Mode.	5.0 s (0.0 - 1000.0 s)	516
b5-94 (0B94) RUN	EZ Sleep Wake-up Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level at which the drive resumes operation when exiting Sleep Mode.	0.00% (0.00 - 600.00%)	517
b5-95 (0B95)	EZ Sleep Wake-up Mode	V/f OLV OLV/PM AOLV/PM EZOLV Sets the wake-up mode to use when exiting Sleep Mode. 0 : Absolute 1 : Setpoint Delta	0 (0, 1)	517
b5-96 (0B96) RUN	EZ Sleep Wake-up Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the EZ Wake-up time.	1.0 s (0.0 - 1000.0 s)	517

◆ b6: Dwell Function

No. (Hex.)	Name	Description	Default (Range)	Ref.
b6-01 (01B6)	Dwell Reference at Start	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output frequency that the drive will hold momentarily when the motor starts.	0.0 (Determined by A1-02)	518
b6-02 (01B7)	Dwell Time at Start	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will hold the output frequency when the motor starts.	0.0 s (0.0 - 10.0 s)	518
b6-03 (01B8)	Dwell Reference at Stop	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output frequency that the drive will hold momentarily when ramping to stop the motor.	0.0 (Determined by A1-02)	518
b6-04 (01B9)	Dwell Time at Stop	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time for the drive to hold the output frequency when ramping to stop the motor.	0.0 s (0.0 - 10.0 s)	518

◆ b8: Energy Saving

No. (Hex.)	Name	Description	Default (Range)	Ref.
b8-01 (01CC)	Energy Saving Control Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Energy-saving control function. 0 : Disabled 1 : Enabled 2 : Automatic Optimization Note: • When A1-02 = 6 [Control Method Selection = AOLV/PM], you can only select setting 2 in Expert Mode. • If you set b8-01 = 2 and L7-42 = 1 [Current Lim Sel = Enabled], the drive detects oPE16 [Energy Saving Constants Error].	0 (0 - 2)	519
b8-02 (01CD) RUN Expert	Energy Saving Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for Energy-saving control.	Determined by A1-02 (0.0 - 10.0)	519
b8-03 (01CE) RUN Expert	Energy Saving Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the responsiveness for Energy-saving control.	Determined by A1-02 , C6-01 and o2-04 (0.00 - 10.00 s)	519

No. (Hex.)	Name	Description	Default (Range)	Ref.
b8-04 (01CF) Expert	Energy Saving Coefficient Value	V/f OLV OLV/PM AQLV/PM EZOLV Sets the Energy-saving control coefficient to maintain maximum motor efficiency. The default setting is for Yaskawa motors.	Determined by C6-01, E2-11, and o2-04 (0.00 - 655.00)	519
b8-05 (01D0) Expert	Power Detection Filter Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the time constant to measure output power.	20 ms (0 - 2000 ms)	519
b8-06 (01D1) Expert	Search Operation Voltage Limit	V/f OLV OLV/PM AQLV/PM EZOLV Sets the voltage limit for Search Operation as a percentage of the motor rated voltage.	0% (0 - 100%)	520
b8-16 (01F8) Expert	PM E-Save Coefficient Ki	V/f OLV OLV/PM AQLV/PM EZOLV Sets torque linearity. This parameter uses the Ki value from the motor nameplate. Usually it is not necessary to change this setting.	1.00 (0.00 - 3.00)	520
b8-17 (01F9) Expert	PM E-Save Coefficient Kt	V/f OLV OLV/PM AQLV/PM EZOLV Sets torque linearity. This parameter uses the Kt value from the motor nameplate. Usually it is not necessary to change this setting.	1.00 (0.00 - 3.00)	520
b8-18 (01FA) Expert	E-Save d-axis Current FilterTime	V/f OLV OLV/PM AQLV/PM EZOLV Sets the d-axis current reference filter time constant.	0.100 s (0.000 - 5.000 s)	520
b8-19 (0B40) Expert	E-Save Search Frequency	V/f OLV OLV/PM AQLV/PM EZOLV Sets the frequency of Energy-saving control search operations. Usually it is not necessary to change this setting.	Determined by A1-02 (10 - 300 Hz)	520
b8-20 (0B41) Expert	E-Save Search Width	V/f OLV OLV/PM AQLV/PM EZOLV Sets the amplitude of Energy-saving control search operations.	1.0 degrees (0.1 - 5.0 degrees)	521
b8-21 (0B42) Expert	PM E-Save Search Gain	V/f OLV OLV/PM AQLV/PM EZOLV Sets the gain of Energy-saving control search operations.	0.3Hz (0.1 - 20.0 Hz)	521
b8-22 (0B43) Expert	PM E-Save Search LPF Cutoff Freq	V/f OLV OLV/PM AQLV/PM EZOLV Sets the frequency of the filter used to extract the high-efficiency phase from search operations. Usually it is not necessary to change this setting.	10.0 Hz (1.0 - 30.0 Hz)	521
b8-23 (0B44) Expert	PM E-Save Search Limit	V/f OLV OLV/PM AQLV/PM EZOLV Sets the search operations output limit. Usually it is not necessary to change this setting.	15.0 degrees (0.0 - 30.0 degrees)	521
b8-24 (0B45) Expert	PM E-Save High Freq ACR Gain	V/f OLV OLV/PM AQLV/PM EZOLV Sets the gain for high-frequency current control.	200.0 Hz (100.0 - 1000.0 Hz)	521
b8-25 (0B46) Expert	PM E-Save Search Start Level	V/f OLV OLV/PM AQLV/PM EZOLV Sets the start level for search operations.	10.0% (0.0 - 100.0%)	522
b8-26 (0B47) Expert	PM E-Save Power Setpoint	V/f OLV OLV/PM AQLV/PM EZOLV Sets a value to increase torque accuracy.	0.0% (-10.0 - +10.0%)	522
b8-28 (0B8B) Expert	Over Excitation Action Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function for excitation operation. 0 : Disabled 1 : Enabled	0 (0, 1)	522
b8-29 (0B8C)	Energy Saving Priority Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the priority of drive response between changes to the load or Energy-saving control. Enable this to prioritize energy-saving control. Disable this to prioritize tracking related to fast load changes, and prevent motor stall. 0 : Priority: Drive Response 1 : Priority: Energy Savings	0 (0, 1)	522

11.6 C: Tuning

◆ C1: Accel & Decel Time

No. (Hex.)	Name	Description	Default (Range)	Ref.
C1-01 (0200) RUN	Acceleration Time 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to accelerate from zero to maximum output frequency.	10.0 s (0.0 - 6000.0 s)	525
C1-02 (0201) RUN	Deceleration Time 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to decelerate from maximum output frequency to zero.	10.0 s (0.0 - 6000.0 s)	525
C1-03 (0202) RUN	Acceleration Time 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to accelerate from zero to maximum output frequency.	10.0 s (0.0 - 6000.0 s)	525
C1-04 (0203) RUN	Deceleration Time 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to decelerate from maximum output frequency to zero.	10.0 s (0.0 - 6000.0 s)	525
C1-05 (0204) RUN	Acceleration Time 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to accelerate from zero to maximum output frequency.	10.0 s (0.0 - 6000.0 s)	525
C1-06 (0205) RUN	Deceleration Time 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to decelerate from maximum output frequency to zero.	10.0 s (0.0 - 6000.0 s)	525
C1-07 (0206) RUN	Acceleration Time 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to accelerate from zero to maximum output frequency.	10.0 s (0.0 - 6000.0 s)	526
C1-08 (0207) RUN	Deceleration Time 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to decelerate from maximum output frequency to zero.	10.0 s (0.0 - 6000.0 s)	526
C1-09 (0208) RUN	Fast Stop Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will decelerate to zero for a Fast Stop. Note: • Decelerating too quickly can cause an <i>ov</i> [Overvoltage] fault that shuts off the drive while the motor to coasts to a stop. Set a Fast Stop time in <i>C1-09</i> that prevents motor coasting and makes sure that the motor stops quickly and safely. • When <i>L2-29 = 0</i> [Kinetic Energy Backup Method = Single Drive KEB Ride-Thru 1] and you do KEB Auto-Tuning, the drive will automatically set <i>C1-09</i> . If you must not change the Fast Stop time, do not do KEB Tuning.	10.0 s (0.0 - 6000.0 s)	526
C1-10 (0209)	Accel/Decel Time Setting Units	V/f OLV OLV/PM AOLV/PM EZOLV Sets the setting units for <i>C1-01</i> to <i>C1-08</i> [Accel/Decel Times 1 to 4], <i>C1-09</i> [Fast Stop Time], <i>L2-06</i> [Kinetic Energy Backup Decel Time], and <i>L2-07</i> [Kinetic Energy Backup Accel Time]. 0 : 0.01 s (0.00 to 600.00 s) 1 : 0.1 s (0.0 to 6000.0 s)	1 (0, 1)	526
C1-11 (020A)	Accel/Decel Time Switching Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency at which the drive will automatically change acceleration and deceleration times.	Determined by A1-02 (0.0 - 590.0 Hz)	527
C1-14 (0264) RUN	Accel/Decel Rate Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base frequency used to calculate acceleration and deceleration rates.	0.0 Hz (0.0 - 590.0 Hz)	527

◆ C2: S-Curve Characteristics

No. (Hex.)	Name	Description	Default (Range)	Ref.
C2-01 (020B)	S-Curve Time @ Start of Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the S-curve acceleration time at start.	Determined by A1-02 (0.00 - 10.00 s)	529
C2-02 (020C)	S-Curve Time @ End of Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the S-curve acceleration time at completion.	0.20 s (0.00 - 10.00 s)	529

No. (Hex.)	Name	Description	Default (Range)	Ref.
C2-03 (020D)	S-Curve Time @ Start of Decel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the S-curve deceleration time at start.	0.20 s (0.00 - 10.00 s)	529
C2-04 (020E)	S-Curve Time @ End of Decel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the S-curve deceleration time at completion.	0.00 s (0.00 - 10.00 s)	529

◆ C3: Slip Compensation

No. (Hex.)	Name	Description	Default (Range)	Ref.
C3-01 (020F) RUN	Slip Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the slip compensation function. Usually it is not necessary to change this setting. Note: Correctly set these parameters before changing the slip compensation gain: • E2-01 [Motor Rated Current (FLA)] • E2-02 [Motor Rated Slip] • E2-03 [Motor No-Load Current]	Determined by A1-02 (0.0 - 2.5)	530
C3-02 (0210) RUN	Slip Compensation Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the slip compensation delay time when speed is unstable or when the slip compensation response is too slow. Usually it is not necessary to change this setting.	Determined by A1-02 (0 - 10000 ms)	530
C3-03 (0211)	Slip Compensation Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit for the slip compensation function as a percentage of the motor rated slip.	200% (0 - 250%)	530
C3-04 (0212)	Slip Compensation at Regen	V/f OLV OLV/PM AOLV/PM EZOLV Sets the slip compensation function during regeneration. 0 : Disabled 1 : Enabled Above 6Hz 2 : Enabled Above Defined Range	0 (0 - 2)	531
C3-05 (0213)	Output Voltage Limit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the automatic reduction of motor magnetic flux when the output voltage is saturated. 0 : Disabled 1 : Enabled	0 (0, 1)	531
C3-16 (0261) Expert	Vout Modulation Limit Start Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the modulation factor that starts the output voltage limit operation when C3-05 = 1 [Output Voltage Limit Selection = Enabled].	90.0% (70.0 - 90.0%)	531
C3-17 (0262) Expert	Vout Modulation Limit Max Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the modulation factor used with C3-18 [Output Voltage Limit Level] for the output voltage limit operation when C3-05 = 1 [Output Voltage Limit Selection = Enabled].	100.0% (85.0 - 100.0%)	532
C3-18 (0263) Expert	Output Voltage Limit Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum drop width of the voltage reference when C3-05 = 1 [Output Voltage Limit Selection = Enabled].	90.0% (50.0 - 100.0%)	532
C3-21 (033E) RUN	Motor 2 Slip Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the motor 2 slip compensation function. Usually it is not necessary to change this setting. Note: Correctly set these parameters before changing the slip compensation gain: • E4-01 [Motor 2 Rated Current] • E4-02 [Motor 2 Rated Slip] • E4-03 [Motor 2 Rated No-Load Current]	Determined by E3-01 (0.0 - 2.5)	532
C3-22 (0241) RUN	Motor 2 Slip Comp Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the slip compensation delay time for motor 2 when speed is unstable or when the slip compensation response is too slow. Usually it is not necessary to change this setting.	Determined by E3-01 (0 - 10000 ms)	532
C3-23 (0242)	Motor 2 Slip Compensation Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit for the slip compensation function as a percentage of the motor 2 rated slip.	200% (0 - 250%)	532

No. (Hex.)	Name	Description	Default (Range)	Ref.
C3-24 (0243)	Motor 2 Slip Comp during Regen	V/f OLV OLV/PM AOLV/PM EZOLV Sets the slip compensation during regenerative operation function for motor 2. 0 : Disabled 1 : Enabled Above 6Hz 2 : Enabled Above Defined Range	0 (0 - 2)	533
C3-29 (1B5D) Expert	Slip Compensation Gain @ Low Spd	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the slip compensation function in the low speed range. Usually it is not necessary to change this setting.	0.0 (0.0 - 2.5)	533

◆ C4: Torque Compensation

No. (Hex.)	Name	Description	Default (Range)	Ref.
C4-01 (0215) RUN	Torque Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the torque compensation function. Use this parameter value for motor 1 when operating multiple motors. Note: When A1-02 = 8 [Control Method Selection = EZOLV], you cannot change this parameter during drive run.	Determined by A1-02 (0.00 - 2.50)	534
C4-02 (0216) RUN	Torque Compensation Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque compensation delay time. Usually it is not necessary to change this setting. Note: When A1-02 = 5, 8 [Control Method Selection = OLV/PM, EZOLV], you cannot change the setting while the drive is running.	Determined by A1-02 (0 - 60000 ms)	534
C4-03 (0217)	Torque Compensation @ FWD Start	V/f OLV OLV/PM AOLV/PM EZOLV Set the amount of torque reference for forward start as a percentage of the motor rated torque.	0.0% (0.0 - 200.0%)	534
C4-04 (0218)	Torque Compensation @ REV Start	V/f OLV OLV/PM AOLV/PM EZOLV Sets the amount of torque reference for reverse start as a percentage of the motor rated torque.	0.0% (-200.0 - 0.0%)	534
C4-05 (0219)	Torque Compensation Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the starting torque constant to use with C4-03 and C4-04 [Torque Compensation @ FWD/REV Start].	10 ms (0 - 200 ms)	535
C4-06 (021A)	Motor 2 Torque Comp Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value if <i>ov</i> [Overvoltage] occurs with sudden changes in the load, at the end of acceleration, or at the start of deceleration.	150 ms (0 - 10000 ms)	535
C4-07 (0341) RUN	Motor 2 Torque Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for motor 2 torque compensation function when using the Motor Switch function.	1.00 (0.00 - 2.50)	535
C4-23 (1583) Expert	Current Control Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Current control gain. Usually it is not necessary to change this parameter.	1.00 (0.50 - 2.50)	535

◆ C5: Auto Speed Regulator (ASR)

No. (Hex.)	Name	Description	Default (Range)	Ref.
C5-01 (021B) RUN	ASR Proportional Gain 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain to adjust ASR response.	Determined by A1-02 (0.00 - 300.00)	537
C5-02 (021C) RUN	ASR Integral Time 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ASR integral time.	Determined by A1-02 (0.000 - 60.000 s)	538
C5-03 (021D) RUN	ASR Proportional Gain 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain to adjust ASR response.	Determined by A1-02 (0.00 - 300.00)	538
C5-04 (021E) RUN	ASR Integral Time 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ASR integral time.	Determined by A1-02 (0.000 - 60.000 s)	538

No. (Hex.)	Name	Description	Default (Range)	Ref.
C5-06 (0220)	ASR Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant of the torque reference output from the speed loop. Usually it is not necessary to change this setting.	Determined by A1-02 (0.000 - 0.500 s)	538
C5-07 (0221)	ASR Gain Switchover Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency where the drive will switch between these parameters: <i>C5-01 and C5-03 [ASR Proportional Gain 1/2]</i> <i>C5-02 and C5-04 [ASR Integral Time 1/2]</i>	Determined by A1-02 (Determined by A1-02)	538
C5-08 (0222)	ASR Integral Limit	V/f OLV OLV/PM AOLV/PM EZOLV Set the upper limit of the ASR integral amount as a percentage of the rated load.	400% (0 - 400%)	539
C5-29 (0B18) Expert	Speed Control Response	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level of speed control responsiveness. Usually it is not necessary to change this setting. 0 : Standard 1 : High Performance 1	1 (0, 1)	539
C5-39 (030D)	ASR Primary Delay Time Const 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant used when the torque reference is output from ASR. Usually it is not necessary to change this parameter.	0.000 s (0.000 - 0.500 s)	539

◆ C6: Duty & Carrier Frequency

No. (Hex.)	Name	Description	Default (Range)	Ref.
C6-01 (0223)	Normal / Heavy Duty Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive duty rating. 0 : Heavy Duty Rating 1 : Normal Duty Rating	1 (0, 1)	539
C6-02 (0224)	Carrier Frequency Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the carrier frequency for the transistors in the drive. 1 : 2.0 kHz 2 : 5.0 kHz (AOLV/PM: 4.0 kHz) 3 : 8.0 kHz (AOLV/PM: 6.0 kHz) 4 : 10.0 kHz (AOLV/PM: 8.0 kHz) 5 : 12.5 kHz (AOLV/PM: 10.0 kHz) 6 : 15.0 kHz (AOLV/PM: 12.0 kHz) 7 : Swing PWM1 (Audible Sound 1) 8 : Swing PWM2 (Audible Sound 2) 9 : Swing PWM3 (Audible Sound 3) A : Swing PWM4 (Audible Sound 4) B : Leakage Current Rejection PWM F : User Defined (C6-03 to C6-05) Note: • The setting range changes when the A1-02 [Control Method Selection] value changes: –5, 8 [OLV/PM, EZOLV]: You can set C6-02 = 1 to 6, B, and F. –6 [AOLV/PM]: You can set C6-02 = 1 to 6. • The carrier frequency for Swing PWM 1 is equivalent to 2.0 kHz. Swing PWM applies a special PWM pattern to decrease the audible noise.	Determined by A1-02, C6-01, and o2-04 (Determined by A1-02)	540
C6-03 (0225)	Carrier Frequency Upper Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit of the carrier frequency. Set C6-02 = F [Carrier Frequency Selection = User Defined (C6-03 to C6-05)] to set this parameter.	Determined by C6-02 (1.0 - 15.0 kHz)	541
C6-04 (0226)	Carrier Frequency Lower Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit of the carrier frequency. Set C6-02 = F [Carrier Frequency Selection = User Defined (C6-03 to C6-05)] to set this parameter.	Determined by C6-02 (1.0 - 15.0 kHz)	542
C6-05 (0227)	Carrier Freq Proportional Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain for the carrier frequency. Set C6-02 = F [Carrier Frequency Selection = User Defined (C6-03 to C6-05)] to set this parameter.	Determined by C6-02 (0 - 99)	542
C6-09 (022B)	Carrier Freq at Rotational Tune	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Auto-Tuning carrier frequency. Usually it is not necessary to change this setting. 0 : 5 kHz 1 : Use C6-03	0 (0, 1)	542

11.7 d: References

◆ d1: Frequency Reference

No. (Hex.)	Name	Description	Default (Range)	Ref.
d1-01 (0280) RUN	Reference 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03</i> [Frequency Display Unit Selection]. Note: When <i>A1-02</i> = 6 [Control Method Selection = AOLV/PM], the default setting is <i>o1-03</i> = 1 [0.01% (100% = E1-04)].	0.00 Hz (0.00 - 590.00 Hz)	546
d1-02 (0281) RUN	Reference 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03</i> [Frequency Display Unit Selection]. Note: When <i>A1-02</i> = 6 [Control Method Selection = AOLV/PM], the default setting is <i>o1-03</i> = 1 [0.01% (100% = E1-04)].	0.00 Hz (0.00 - 590.00 Hz)	546
d1-03 (0282) RUN	Reference 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03</i> [Frequency Display Unit Selection]. Note: When <i>A1-02</i> = 6 [Control Method Selection = AOLV/PM], the default setting is <i>o1-03</i> = 1 [0.01% (100% = E1-04)].	0.00 Hz (0.00 - 590.00 Hz)	547
d1-04 (0283) RUN	Reference 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03</i> [Frequency Display Unit Selection]. d1-16 (0291) RUN	Reference 16	V/f OLV OLV/PM AQLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03</i> [Frequency Display Unit Selection]. Note: When <i>A1-02</i> = 6 [Control Method Selection = AQLV/PM], the default setting is <i>o1-03</i> = 1 [0.01% (100% = E1-04)].	0.00 Hz (0.00 - 590.00 Hz)	550
d1-17 (0292) RUN	Jog Reference	V/f OLV OLV/PM AQLV/PM EZOLV Sets the Jog frequency reference in the units from <i>o1-03</i> [Frequency Display Unit Selection]. Set <i>H1-xx</i> = 6 [MFDI Function Select = Jog Reference Selection] to use the Jog frequency reference. Note: When <i>A1-02</i> = 6 [Control Method Selection = AQLV/PM], the default setting is <i>o1-03</i> = 1 [0.01% (100% = E1-04)].	6.00 Hz (0.00 - 590.00 Hz)	550

◆ d2: Reference Limits

No. (Hex.)	Name	Description	Default (Range)	Ref.
d2-01 (0289)	Frequency Reference Upper Limit	V/f OLV OLV/PM AQLV/PM EZOLV Sets maximum limit for all frequency references. The maximum output frequency is 100%. Note: Parameter <i>A1-02</i> [Control Method Selection] selects which parameter is the maximum output frequency. • <i>A1-02</i> ≠ 8 [EZOLV]: <i>E1-04</i> [Maximum Output Frequency] • <i>A1-02</i> = 8: <i>E9-02</i> [Motor Max Revolutions]	100.0% (0.0 - 110.0%)	550
d2-02 (028A)	Frequency Reference Lower Limit	V/f OLV OLV/PM AQLV/PM EZOLV Sets minimum limit for all frequency references. The maximum output frequency is 100%. Note: Parameter <i>A1-02</i> [Control Method Selection] selects which parameter is the maximum output frequency. • <i>A1-02</i> ≠ 8 [EZOLV]: <i>E1-04</i> [Maximum Output Frequency] • <i>A1-02</i> = 8: <i>E9-02</i> [Motor Max Revolutions]	0.0% (0.0 - 110.0%)	550
d2-03 (0293)	Analog Frequency Ref Lower Limit	V/f OLV OLV/PM AQLV/PM EZOLV Sets the lower limit for the master frequency reference (the first frequency of the multi-step speed reference) as a percentage. The maximum output frequency is 100%. Note: Parameter <i>A1-02</i> [Control Method Selection] selects which parameter is the maximum output frequency. • <i>A1-02</i> ≠ 8: <i>E1-04</i> [Maximum Output Frequency] • <i>A1-02</i> = 8: <i>E9-02</i> [Maximum Speed]	0.0% (0.0 - 110.0%)	551

◆ d3: Jump Frequency

No. (Hex.)	Name	Description	Default (Range)	Ref.
d3-01 (0294)	Jump Frequency 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)	552
d3-02 (0295)	Jump Frequency 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)	552
d3-03 (0296)	Jump Frequency 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)	552
d3-04 (0297)	Jump Frequency Width	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 20.0 Hz)	552
d3-05 (0B00)	Jump Frequency 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)	552
d3-06 (0BD0)	Jump Frequency 5	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)	552
d3-07 (0B02)	Jump Frequency 6	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)	553
d3-08 (0B03)	Jump Frequency 7	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)	553
d3-09 (0B04)	Jump Frequency 8	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)	553
d3-10 (0B05)	Jump Frequency 9	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)	553
d3-11 (0B06)	Jump Frequency 10	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)	553
d3-12 (0B07)	Jump Frequency Width 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-01 [Jump Frequency 1]. Note: • When d3-12 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-01. • When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].	Determined by A1-02 (0.0 - 20.0 Hz)	553
d3-13 (0B08)	Jump Frequency Width 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-02 [Jump Frequency 2]. Note: • When d3-13 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-02. • When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].	Determined by A1-02 (0.0 - 20.0 Hz)	554
d3-14 (0B09)	Jump Frequency Width 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-03 [Jump Frequency 3]. Note: • When d3-14 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-03. • When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].	Determined by A1-02 (0.0 - 20.0 Hz)	554
d3-15 (0B0A)	Jump Frequency Width 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-05 [Jump Frequency 4]. Note: • When d3-15 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-05. • When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].	Determined by A1-02 (0.0 - 20.0 Hz)	554
d3-16 (0B0B)	Jump Frequency Width 5	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-06 [Jump Frequency 5]. Note: • When d3-16 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-06. • When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].	Determined by A1-02 (0.0 - 20.0 Hz)	554

No. (Hex.)	Name	Description	Default (Range)	Ref.
d3-17 (0B0C)	Jump Frequency Width 6	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-07 [Jump Frequency 6]. Note: - When d3-17 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-07. - When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].	Determined by A1-02 (0.0 - 20.0 Hz)	554
d3-18 (0BD1)	Jump Frequency Width 7	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-08 [Jump Frequency 7]. Note: - When d3-18 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-08. - When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].	Determined by A1-02 (0.0 - 20.0 Hz)	555
d3-19 (0B0E)	Jump Frequency Width 8	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-09 [Jump Frequency 8]. Note: - When d3-19 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-09. - When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].	Determined by A1-02 (0.0 - 20.0 Hz)	555
d3-20 (0B0F)	Jump Frequency Width 9	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-10 [Jump Frequency 9]. Note: - When d3-20 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-10. - When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].	Determined by A1-02 (0.0 - 20.0 Hz)	555
d3-21 (0B10)	Jump Frequency Width 10	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-11 [Jump Frequency 10]. Note: - When d3-21 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-11. - When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].	Determined by A1-02 (0.0 - 20.0 Hz)	555

◆ d4: Frequency Ref Up/Down & Hold

No. (Hex.)	Name	Description	Default (Range)	Ref.
d4-01 (0298)	Freq Reference Hold Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that saves the frequency reference or the frequency bias (Up/Down 2) after a Stop command or when de-energizing the drive. Set H1-xx [MFDI Function Selection] to one of these values to enable this parameter: - A [Accel/Decel Ramp Hold] 10/11 [Up/Down Command] 75/76 [Up/Down 2 Command] 0 : Disabled 1 : Enabled	0 (0, 1)	556
d4-03 (02AA) RUN	Up/Down 2 Bias Step Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bias that the Up/Down 2 function adds to or subtracts from the frequency reference.	0.00 Hz (0.00 - 99.99 Hz)	557
d4-04 (02AB) RUN	Up/Down 2 Ramp Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the acceleration and deceleration times for the Up/Down 2 function to apply the bias to the frequency reference. 0 : Use Selected Accel/Decel Time 1 : Use Accel/Decel Time 4	0 (0, 1)	558
d4-05 (02AC) RUN	Up/Down 2 Bias Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that saves the bias value to the drive when you open or close the two Up/Down 2 Commands [H1-xx = 75, 76]. Set d4-03 [Up/Down 2 Bias Step Frequency] = 0.00 before you set this parameter. 0 : Hold when Neither Up/Down Closed 1 : Reset when Neither / Both Closed	0 (0, 1)	558

11.7 d: References

No. (Hex.)	Name	Description	Default (Range)	Ref.
d4-06 (02AD)	Frequency Ref Bias (Up/Down 2)	V/f OLV OLV/PM AOLV/PM EZOLV Saves the bias value from the Up/Down 2 Command where the Maximum Output Frequency is 100%. Note: Parameter <i>A1-02 [Control Method Selection]</i> selects which parameter is the maximum output frequency. <i>A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency]</i> <i>A1-02 = 8: E9-02 [Maximum Speed]</i>	0.0% (-99.9 - +100.0%)	559
d4-07 (02AE) RUN	Analog Freq Ref Fluctuate Limit	V/f OLV OLV/PM AOLV/PM EZOLV If the frequency reference changes for more than the level set to this parameter, then the bias value will be held. The value is set as a percentage of the Maximum Output Frequency. Note: Parameter <i>A1-02 [Control Method Selection]</i> selects which parameter is the maximum output frequency. <i>A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency]</i> <i>A1-02 = 8: E9-02 [Maximum Speed]</i>	1.0% (0.1 - 100.0%)	559
d4-08 (02AF) RUN	Up/Down 2 Bias Upper Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit of the Up/Down 2 bias as a percentage of the Maximum Output Frequency. Note: Parameter <i>A1-02 [Control Method Selection]</i> selects which parameter is the maximum output frequency. <i>A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency]</i> <i>A1-02 = 8: E9-02 [Maximum Speed]</i>	100.0% (0.0 - 100.0%)	559
d4-09 (02B0) RUN	Up/Down 2 Bias Lower Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit of the Up/Down 2 bias as a percentage of the Maximum Output Frequency. Note: Parameter <i>A1-02 [Control Method Selection]</i> selects which parameter is the maximum output frequency. <i>A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency]</i> <i>A1-02 = 8: E9-02 [Maximum Speed]</i>	0.0% (-99.9 - 0.0%)	560
d4-10 (02B6)	Up/Down Freq Lower Limit Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower frequency limit for the Up/Down function. 0 : Greater of d2-02 or Analog 1 : d2-02	0 (0, 1)	560

◆ d6: Field Weakening /Forcing

No. (Hex.)	Name	Description	Default (Range)	Ref.
d6-01 (02A0)	Field Weakening Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive output voltage as a percentage of <i>E1-05 [Maximum Output Voltage]</i> when <i>H1-xx = 63 [Field Weakening]</i> is activated.	80% (0 - 100%)	561
d6-02 (02A1)	Field Weakening Frequency Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum output frequency to start field weakening.	0.0 Hz (0.0 - 590.0 Hz)	561
d6-03 (02A2)	Field Forcing Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the field forcing function. 0 : Disabled 1 : Enabled	0 (0, 1)	561
d6-06 (02A5)	Field Forcing Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the limit value for field forcing to increase the motor excitation current reference as a percentage of <i>E2-03 [Motor No-Load Current]</i>. Usually it is not necessary to change this setting.	400% (100 - 400%)	561

◆ d7: Offset Frequency

No. (Hex.)	Name	Description	Default (Range)	Ref.
d7-01 (02B2) RUN	Offset Frequency 1	V/f OLV OLV/PM AOLV/PM EZOLV Uses $H1-xx = 44$ [MFDI Function Select = Add Offset Frequency 1 (d7-01)] as a percentage of the Maximum Output Frequency to add or subtract the set frequency to/from the frequency reference. Note: Parameter $A1-02$ [Control Method Selection] selects which parameter is the maximum output frequency. • $A1-02 \neq 8$ [EZOLV]: $E1-04$ [Maximum Output Frequency] • $A1-02 = 8$: $E9-02$ [Maximum Speed]	0.0% (-100.0 - +100.0%)	562
d7-02 (02B3) RUN	Offset Frequency 2	V/f OLV OLV/PM AOLV/PM EZOLV Uses $H1-xx = 45$ [MFDI Function Select = Add Offset Frequency 2 (d7-02)] as a percentage of the Maximum Output Frequency to add or subtract the set frequency to/from the frequency reference. Note: Parameter $A1-02$ [Control Method Selection] selects which parameter is the maximum output frequency. • $A1-02 \neq 8$ [EZOLV]: $E1-04$ [Maximum Output Frequency] • $A1-02 = 8$: $E9-02$ [Maximum Speed]	0.0% (-100.0 - +100.0%)	562
d7-03 (02B4) RUN	Offset Frequency 3	V/f OLV OLV/PM AOLV/PM EZOLV Uses $H1-xx = 46$ [MFDI Function Select = Add Offset Frequency 3 (d7-03)] as a percentage of the Maximum Output Frequency to add or subtract the set frequency to/from the frequency reference. Note: Parameter $A1-02$ [Control Method Selection] selects which parameter is the maximum output frequency. • $A1-02 \neq 8$ [EZOLV]: $E1-04$ [Maximum Output Frequency] • $A1-02 = 8$: $E9-02$ [Maximum Speed]	0.0% (-100.0 - +100.0%)	562

11.8 E: Motor Parameters

◆ E1: V/f Pattern for Motor 1

No. (Hex.)	Name	Description	Default (Range)	Ref.
E1-01 (0300)	Input AC Supply Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive input voltage. NOTICE Damage to Equipment Set E1-01 [Input AC Supply Voltage] to align with the drive input voltage (not motor voltage). If this parameter is incorrect, the protective functions of the drive will not operate correctly and it can cause damage to the drive.	200 V Class: 240 V, 400 V Class: 480 V (200 V Class: 155 to 255 V, 400 V Class: 310 to 510 V)	564
E1-03 (0302)	V/f Pattern Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the V/f pattern for the drive and motor. You can use one of the preset patterns or you can make a custom pattern. 0 : Const Trq, 50Hz base, 50Hz max 1 : Const Trq, 60Hz base, 60Hz max 2 : Const Trq, 50Hz base, 60Hz max 3 : Const Trq, 60 Hz base, 72 Hz max 4 : VT, 50Hz, 65% Vmid reduction 5 : VT, 50Hz, 50% Vmid reduction 6 : VT, 60 Hz, 65% Vmid reduction 7 : VT, 60 Hz, 50% Vmid reduction 8 : High Trq, 50Hz, 25% Vmin Boost 9 : High Trq, 50Hz, 65% Vmin Boost A : High Trq, 60 Hz, 25% Vmin Boost B : High Trq, 60 Hz, 65% Vmin Boost C : Const Trq, 60 Hz base, 90 Hz max D : Const Trq, 60 Hz base, 120 Hz max E : Const Trq, 60 Hz base, 180 Hz max F : V/f Pattern Selection Note: - When A1-02 = 2 [Control Method Selection = OLV], settings 0 to E are not available. - Set the correct V/f pattern for the application and operation area. An incorrect V/f pattern can decrease motor torque and increase current from overexcitation.	F (Determined by A1-02)	565
E1-04 (0303)	Maximum Output Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum output frequency for the V/f pattern.	Determined by A1-02 and E5-01 (Determined by A1-02 and E5-01)	570
E1-05 (0304)	Maximum Output Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum output voltage for the V/f pattern.	200 V Class: 230.0 V, 400 V: 460.0 V (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)	570
E1-06 (0305)	Base Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base frequency for the V/f pattern.	Determined by A1-02 and E5-01 (0.0 - E1-04)	570
E1-07 (0306)	Mid Point A Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output frequency for the V/f pattern.	Determined by A1-02 (0.0 - E1-04)	570
E1-08 (0307)	Mid Point A Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output voltage for the V/f pattern.	Determined by A1-02, C6-01 and o2-04 (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)	570
E1-09 (0308)	Minimum Output Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum output frequency for the V/f pattern.	Determined by A1-02 and E5-01 (Determined by A1-02, E1-04, and E5-01)	571
E1-10 (0309)	Minimum Output Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum output voltage for the V/f pattern.	Determined by A1-02 (200 V Class: 0.0 to 255.0 V, 400 V Class: 0.0 to 510.0 V)	571

No. (Hex.)	Name	Description	Default (Range)	Ref.
E1-11 (030A) Expert	Mid Point B Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output frequency for the V/f pattern.	0.0 Hz (0.0 - E1-04)	571
E1-12 (030B) Expert	Mid Point B Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle point voltage for the V/f pattern.	0.0 V (200 V Class: 0.0 to 255.0 V, 400 V Class: 0.0 to 510.0 V)	571
E1-13 (030C) Expert	Base Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base voltage for the V/f pattern.	0.0 V (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)	571

◆ E2: Motor Parameters

No. (Hex.)	Name	Description	Default (Range)	Ref.
E2-01 (030E)	Motor Rated Current (FLA)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated current in amps.	Determined by o2-04, C6-01 (10% to 200% of the drive rated current)	191
E2-02 (030F)	Motor Rated Slip	V/f OLV OLV/PM AOLV/PM EZOLV Sets motor rated slip.	Determined by o2-04, C6-01 (0.000 - 20.000 Hz)	572
E2-03 (0310)	Motor No-Load Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the no-load current for the motor in amps when operating at the rated frequency and the no-load voltage.	Determined by o2-04, C6-01 (0 to E2-01)	572
E2-04 (0311)	Motor Pole Count	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of motor poles. Note: • When A1-02 = 0 [Control Method Selection = V/f], the maximum value is 120. • When A1-02 = 2 [OLV], the maximum value is 48.	4 (2 - 120)	572
E2-05 (0312)	Motor Line-to-Line Resistance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the line-to-line resistance for the motor stator windings.	Determined by o2-04, C6-01 (0.000 - 65.000 Ω)	573
E2-06 (0313)	Motor Leakage Inductance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage drop from motor leakage inductance when the motor is operating at the rated frequency and rated current. This value is a percentage of Motor Rated Voltage.	Determined by o2-04, C6-01 (0.0 - 60.0%)	573
E2-07 (0314)	Motor Saturation Coefficient 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor iron-core saturation coefficient at 50% of the magnetic flux.	0.50 (0.00 - 0.50)	573
E2-08 (0315)	Motor Saturation Coefficient 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor iron-core saturation coefficient at 75% of the magnetic flux.	0.75 (E2-07 - 0.75)	573
E2-09 (0316) Expert	Motor Mechanical Loss	V/f OLV OLV/PM AOLV/PM EZOLV Sets the mechanical loss of the motor. It is set as a percentage of E2-11 [Motor Rated Power]. Usually it is not necessary to change this setting.	0.0% (0.0 - 10.0%)	573
E2-10 (0317)	Motor Iron Loss	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor iron loss.	Determined by o2-04, C6-01 (0 - 65535 W)	574
E2-11 (0318)	Motor Rated Power	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated output in the units from o1-58 [Motor Power Unit Selection].	Determined by o2-04, C6-01 (0.00 - 650.00)	574

◆ E3: V/f Pattern for Motor 2

No. (Hex.)	Name	Description	Default (Range)	Ref.
E3-01 (0319)	Motor 2 Control Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the control method for motor 2. Note: When you change this setting, the drive will set all parameters that are dependent on this parameter to their default settings. 0 : V/f Control 2 : Open Loop Vector	0 (0, 2)	574
E3-04 (031A)	Motor 2 Maximum Output Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Set the maximum output frequency for the motor 2 V/f pattern.	Determined by E3-01 (40.0 - 590.0 Hz)	575
E3-05 (031B)	Motor 2 Maximum Output Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum output voltage for the motor 2 V/f pattern.	Determined by E3-01 (200 V Class: 0.0 - 255.0 V _r 400 V Class: 0.0 - 510.0 V)	575
E3-06 (031C)	Motor 2 Base Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base frequency for the motor 2 V/f pattern.	Determined by E3-01 (0.0 - E3-04)	575
E3-07 (031D)	Motor 2 Mid Point A Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output frequency for the motor 2 V/f pattern.	Determined by E3-01 (0.0 - E3-04)	575
E3-08 (031E)	Motor 2 Mid Point A Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output voltage for the motor 2 V/f pattern.	Determined by E3-01 (200 V Class: 0.0 - 255.0 V _r 400 V Class: 0.0 - 510.0 V)	575
E3-09 (031F)	Motor 2 Minimum Output Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum output frequency for the motor 2 V/f pattern.	Determined by E3-01 (0.0 - E3-04)	575
E3-10 (0320)	Motor 2 Minimum Output Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum output voltage for the motor 2 V/f pattern.	Determined by E3-01 (200 V Class: 0.0 - 255.0 V _r 400 V Class: 0.0 - 510.0 V)	575
E3-11 (0345) Expert	Motor 2 Mid Point B Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output frequency for the motor 2 V/f pattern. Set this parameter to adjust the V/f pattern for the constant output range. Usually it is not necessary to change this parameter.	0.0 Hz (0.0 - E3-04)	576
E3-12 (0346) Expert	Motor 2 Mid Point B Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output voltage for the motor 2 V/f pattern. Set this parameter to adjust the V/f pattern for the constant output range. Usually it is not necessary to change this parameter.	0.0 V (200 V Class: 0.0 to 255.0 V _r , 400 V Class: 0.0 to 510.0 V)	576
E3-13 (0347) Expert	Motor 2 Base Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base voltage for the motor 2 V/f pattern. Set this parameter to adjust the V/f pattern for the constant output range. Usually it is not necessary to change this parameter.	0.0 V (200 V Class: 0.0 to 255.0 V _r , 400 V Class: 0.0 to 510.0 V)	576

◆ E4: Motor 2 Parameters

No. (Hex.)	Name	Description	Default (Range)	Ref.
E4-01 (0321)	Motor 2 Rated Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated current for motor 2 in amps.	Determined by o2-04, C6-01 (10% to 200% of the drive rated current)	576
E4-02 (0322)	Motor 2 Rated Slip	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated slip for motor 2.	Determined by o2-04, C6-01 (0.000 - 20.000 Hz)	577
E4-03 (0323)	Motor 2 Rated No-Load Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the no-load current for motor 2 in amps when operating at the rated frequency and the no-load voltage.	Determined by o2-04, C6-01 (0 to E4-01)	577
E4-04 (0324)	Motor 2 Motor Poles	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of poles for motor 2.	4 (2 - 120)	577
E4-05 (0325)	Motor 2 Line-to-Line Resistance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the line-to-line resistance for the motor 2 stator windings.	Determined by o2-04, C6-01 (0.000 - 65.000 Ω)	577

No. (Hex.)	Name	Description	Default (Range)	Ref.
E4-06 (0326)	Motor 2 Leakage Inductance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage drop from motor 2 leakage inductance as a percentage of Motor Rated Voltage when motor 2 operates at the rated frequency and rated current.	Determined by o2-04, C6-01 (0.0 - 60.0%)	578
E4-07 (0343)	Motor 2 Saturation Coefficient 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor 2 iron-core saturation coefficient at 50% of the magnetic flux.	0.50 (0.00 - 0.50)	578
E4-08 (0344)	Motor 2 Saturation Coefficient 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor 2 iron-core saturation coefficient at 75% of the magnetic flux.	0.75 (E4-07 - 0.75)	578
E4-09 (033F) Expert	Motor 2 Mechanical Loss	V/f OLV OLV/PM AOLV/PM EZOLV Sets the mechanical loss of motor 2. It is set as a percentage of E4-11 [Motor 2 Rated Power]. Usually it is not necessary to change this setting.	0.0% (0.0 - 10.0%)	578
E4-10 (0340)	Motor 2 Iron Loss	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor iron loss for motor 2.	Determined by o2-04, C6-01 (0 - 65535 W)	578
E4-11 (0327)	Motor 2 Rated Power	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated power in the units from o1-58 [Motor Power Unit Selection].	Determined by o2-04, C6-01 (0.00 - 650.00 HP)	578

◆ E5: PM Motor Settings

No. (Hex.)	Name	Description	Default (Range)	Ref.
E5-01 (0329)	PM Motor Code Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor code for Yaskawa PM motors. The drive uses the motor code to automatically set some parameters to their correct settings.	FFFF (0000 - FFFF)	579
E5-02 (032A)	PM Motor Rated Power	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor rated output in the units from o1-58 [Motor Power Unit Selection].	Determined by o2-04, C6-01 (0.10 - 30.00 kW)	579
E5-03 (032B)	Motor Rated Current (FLA)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor rated current (FLA).	Determined by o2-04, C6-01 (10% to 200% of the drive rated current)	192
E5-04 (032C)	PM Motor Pole Count	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of PM motor poles.	4 (2 - 120)	580
E5-05 (032D)	PM Motor Resistance (ohms/phase)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the resistance per phase of a PM motor. Set 50% of the line-to-line resistance.	0.100 Ω (0.000 - 65.000 Ω)	580
E5-06 (032E)	PM d-axis Inductance (mH/phase)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor d-axis inductance.	1.00 mH (0.00 - 300.00 mH)	580
E5-07 (032F)	PM q-axis Inductance (mH/phase)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor q-axis inductance.	1.00 mH (0.00 - 600.00 mH)	580
E5-09 (0331)	PM Back-EMF Vpeak (mV/(rad/s))	V/f OLV OLV/PM AOLV/PM EZOLV Sets the peak value of PM motor induced voltage.	0.0 mV/(rad/sec) (0.0 - 2000.0 mV/(rad/s))	580
E5-24 (0353)	PM Back-EMF L-L Vrms (mV/rpm)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the RMS value for PM motor line voltage.	200 V Class: 100.0 mV/min ⁻¹ 400 V Class: 200.0 mV/min ⁻¹ (0.0 - 6500.0 mV/min ⁻¹)	581
E5-25 (035E) Expert	Polarity Estimation Timeout	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that switches polarity for initial polarity estimation. Usually it is not necessary to change this setting. 0 : Disabled 1 : Enabled	0 (0, 1)	581

◆ E9: Motor Setting

No. (Hex.)	Name	Description	Default (Range)	Ref.
E9-01 (11E4)	Motor Type Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of motor. 0 : Induction (IM) 1 : Permanent Magnet (PM) 2 : Synchronous Reluctance (SynRM)	0 (0 - 2)	581
E9-02 (11E5)	Maximum Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum speed of the motor.	Determined by E9-01 (40.0 - 120.0 Hz)	582
E9-03 (11E6)	Rated Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated rotation speed of the motor.	Determined by E9-01 (100 - 7200 min ⁻¹)	582
E9-04 (11E7)	Base Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated frequency of the motor.	Determined by E9-01 (40.0 - 120.0 Hz)	582
E9-05 (11E8)	Motor Rated Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated voltage of the motor.	200 V Class: 230.0 V, 400 V Class: 460.0 V (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)	582
E9-06 (11E9)	Motor Rated Current (FLA)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated current in amps.	Determined by E9-01 and o2-04 (10% to 200% of the drive rated current)	192
E9-07 (11EA)	Motor Rated Power	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated output in the units from o1-58 [Motor Power Unit Selection].	Determined by E9-02 and o2-04 (0.00 - 650.00 kW)	583
E9-08 (11EB)	Motor Pole Count	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of motor poles.	4 (2 to 120)	583
E9-09 (11EC)	Motor Rated Slip	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated slip.	0.000 Hz (0.000 - 20.000 Hz)	583
E9-10 (11ED)	Motor Line-to-Line Resistance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the line-to-line resistance for the motor stator windings.	Determined by o2-04 (0.000 - 65.000 Ω)	583

11.9 F: Ethernet

◆ F1: Fault Detection in PG Speed Control

No. (Hex.)	Name	Description	Default (Range)	Ref.
F1-04 (0383)	Speed Deviation Detection Select	V/f OLV OLV/PM AQLV/PM EZOLV Sets the method to stop the motor or let the motor continue to operate when the drive detects <i>dEv</i> [Speed Deviation]. 0 : Ramp to Stop 1 : Coast to Stop 2 : Fast Stop (Use C1-09) 3 : Alarm Only	3 (0 - 3)	584
F1-08 (0387)	Overspeed Detection Level	V/f OLV OLV/PM AQLV/PM EZOLV Sets the detection level of <i>oS</i> [Overspeed] as a percentage when the maximum output frequency is 100%. Note: - Parameter <i>A1-02</i> [Control Method Selection] selects which parameter is the maximum output frequency. –<i>A1-02</i> ≠ 8 [EZOLV]: <i>E1-04</i> [Maximum Output Frequency] –<i>A1-02</i> = 8: <i>E9-02</i> [Motor Max Revolutions]	115% (0 - 120%)	584
F1-09 (0388)	Overspeed Detection Delay Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the length of time that the speed feedback must be more than the <i>F1-08</i> level to cause <i>oS</i> [Overspeed].	Determined by A1-02 (0.0 - 2.0 s)	585
F1-10 (0389)	Speed Deviation Detection Level	V/f OLV OLV/PM AQLV/PM EZOLV Sets the detection level of <i>dEv</i> [Speed Deviation] as a percentage when the maximum output frequency is 100%. Note: - Parameter <i>A1-02</i> [Control Method Selection] selects which parameter is the maximum output frequency. –<i>A1-02</i> ≠ 8 [EZOLV]: <i>E1-04</i> [Maximum Output Frequency] –<i>A1-02</i> = 8: <i>E9-02</i> [Maximum Speed]	10% (0 - 50%)	585
F1-11 (038A)	Speed Deviation Detect DelayTime	V/f OLV OLV/PM AQLV/PM EZOLV Sets the length of time that the difference between the frequency reference and speed feedback must be more than the level in <i>F1-10</i> to cause <i>dEv</i> [Speed Deviation].	0.5 s (0.0 - 10.0 s)	585

◆ F6: Ethernet Settings

No. (Hex.)	Name	Description	Default (Range)	Ref.
F6-01 (03A2)	Communication Error Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the method to stop the motor or let the motor continue operating when the drive detects <i>bUS</i> [Ethernet Communication Error]. 0 : Ramp to Stop 1 : Coast to Stop 2 : Fast Stop (Use C1-09) 3 : Alarm Only 4 : Alarm (Run at d1-04) 5 : Alarm - Ramp Stop	1 (0 - 5)	586
F6-02 (03A3)	Comm External Fault (EF0) Detect	V/f OLV OLV/PM AQLV/PM EZOLV Sets the conditions at which <i>EF0</i> [Ethernet External Fault] is detected. 0 : Always Detected 1 : Detected during RUN Only	0 (0, 1)	586
F6-03 (03A4)	Comm External Fault (EF0) Select	V/f OLV OLV/PM AQLV/PM EZOLV Sets the method to stop the motor or let the motor continue operating when the drive detects <i>EF0</i> [Ethernet External Fault]. 0 : Ramp to Stop 1 : Coast to Stop 2 : Fast Stop (Use C1-09) 3 : Alarm Only	1 (0 - 3)	587
F6-04 (03A5)	bUS Error Detection Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the delay time for the drive to detect <i>bUS</i> [Ethernet Communication Error].	2.0 s (0.0 - 12.0 s)	587

No. (Hex.)	Name	Description	Default (Range)	Ref.
F6-06 (03A7)	Torque Limit by Comm. Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enables and disables the torque reference and torque limit received from Ethernet communication. 0 : Disabled 1 : Enabled	0 (0, 1)	587
F6-07 (03A8)	Multi-Step Ref @ NetRef/ComRef	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enables and disables the multi-step speed reference when the frequency reference source is NetRef or ComRef (Ethernet communications). 0 : Disable Multi-Step References 1 : Enable Multi-Step References	1 (0, 1)	587
F6-08 (036A)	Comm Parameter Reset @Initialize	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to initialize <i>F6-xx</i> and <i>F7-xx</i> parameters when the drive is initialized with <i>A1-03</i> [Initialize Parameters]. 0 : No Reset - Parameters Retained 1 : Reset Back to Factory Default	0 (0, 1)	588
F6-14 (03BB)	BUS Error Auto Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the automatic reset function for <i>bUS</i> [Ethernet Communication Error]. 0 : Disabled 1 : Enabled	0 (0, 1)	588
F6-15 (0B5B)	Ethernet Parameters	V/f OLV OLV/PM AOLV/PM EZOLV Sets the update method when you change <i>F6-xx</i> [Ethernet Settings], <i>F7-xx</i> [Ethernet Options]. 0 : Reload at Next Power Cycle 1 : Reload Now 2 : Cancel Reload Request	0 (0 - 2)	588
F6-20 (036B)	MECHATROLINK Station Address	V/f OLV OLV/PM AOLV/PM EZOLV Sets the station address for MECHATROLINK communication. Change the parameter then re-energize the drive. Note: - Re-energize the drive to apply the setting changes. - Make sure to set a different station address for each device on the network. - When the station address is 0000, the drive uses the station address from the last cyclic communication. If this is the first cyclic communication, the drive uses station address 0021.	0021 (0000 - FFEF)	588
F6-23 (036E)	MECHATROLINK Monitor Select (E)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register used for the monitor functions of INV_CTL (Inverter Operation Control Command), INV_CTL_EX (Extended Inverter Operation Control Command), and INV_I/O (Inverter I/O Control Command). Restart the drive after you change the parameter setting.	0000 (0000 - FFFF)	589
F6-24 (036F)	MECHATROLINK Monitor Select (F)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register used for the monitor functions of INV_CTL (Inverter Operation Control Command), INV_CTL_EX (Extended Inverter Operation Control Command), and INV_I/O (Inverter I/O Control Command). Restart the drive after you change the parameter setting.	0000 (0000 - FFFF)	589
F6-25 (03C9)	MECHATROLINK Watchdog Error Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method to stop the motor or let the motor continue operating when the drive detects <i>E5</i> [MECHATROLINK Watchdog Timer Err]. 0 : Ramp to Stop 1 : Coast to Stop 2 : Fast Stop (Use C1-09) 3 : Alarm Only	1 (0 - 3)	589
F6-26 (03CA)	MECHATROLINK Allowable No of Err	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of times that the drive must detect a <i>bUS</i> alarm to cause a <i>bUS</i> [Ethernet Communication Error].	2 (2 - 10 times)	589
F6-48 (02FE)	BACnet Device Object Identifier0	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Instance Identifier of the BACnet Device Object, where the <i>F6-48</i> value is the least significant word.	0 (0 - FFFF (Hex.))	589

No. (Hex.)	Name	Description	Default (Range)	Ref.
F6-49 (02FF)	BACnet Device Object Identifier1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Instance Identifier of the BACnet Device Object, where the <i>F6-49</i> value is the most significant word.	0 (0 - 3F(Hex.))	590
F6-54 (03C5)	Net Idle Fault Detection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive operation when EtherNet/IP communication is in Idle Mode. 0 : Enabled 1 : Disabled, No Fault Detection 2 : Vendor Specific 3 : RUN Forward 4 : RUN Reverse Note: • Change the parameter then cycle power on the drive. • When you set <i>F6-54</i> = 2, use <i>F6-01</i> to select drive operation to stop or continue.	0 (0 - 4)	590

◆ F7: Ethernet Options

No. (Hex.)	Name	Description	Default (Range)	Ref.
F7-01 (03E5)	IP Address 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the first octet of the IP Address for the device that is connecting to the network. Restart the drive after you change this parameter. Note: When <i>F7-13</i> = 0 [<i>Address Mode at Startup</i> = <i>Static</i>]: • Use parameters <i>F7-01</i> to <i>F7-04</i> [<i>IP Address 1 to 4</i>] to set the IP Address. Be sure to set a different IP address for each drive on the network. • Also set parameters <i>F7-05</i> to <i>F7-12</i> [<i>Subnet Mask 1 to 4</i> , <i>Gateway Address 1 to 4</i>].	192 (0 - 255)	590
F7-02 (03E6)	IP Address 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second octet of the IP Address for the device that is connecting to the network. Restart the drive after you change this parameter. Note: When <i>F7-13</i> = 0 [<i>Address Mode at Startup</i> = <i>Static</i>]: • Use parameters <i>F7-01</i> to <i>F7-04</i> [<i>IP Address 1 to 4</i>] to set the IP Address. Be sure to set a different IP address for each drive on the network. • Also set parameters <i>F7-05</i> to <i>F7-12</i> [<i>Subnet Mask 1 to 4</i> , <i>Gateway Address 1 to 4</i>].	168 (0 - 255)	590
F7-03 (03E7)	IP Address 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the third octet of the IP Address for the device that is connecting to the network. Restart the drive after you change this parameter. Note: When <i>F7-13</i> = 0 [<i>Address Mode at Startup</i> = <i>Static</i>]: • Use parameters <i>F7-01</i> to <i>F7-04</i> [<i>IP Address 1 to 4</i>] to set the IP Address. Be sure to set a different IP address for each drive on the network. • Also set parameters <i>F7-05</i> to <i>F7-12</i> [<i>Subnet Mask 1 to 4</i> , <i>Gateway Address 1 to 4</i>].	1 (0 - 255)	590
F7-04 (03E8)	IP Address 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the fourth octet of the IP Address for the device that is connecting to the network. Restart the drive after you change this parameter. Note: When <i>F7-13</i> = 0 [<i>Address Mode at Startup</i> = <i>Static</i>]: • Use parameters <i>F7-01</i> to <i>F7-04</i> [<i>IP Address 1 to 4</i>] to set the IP Address. Be sure to set a different IP address for each drive on the network. • Also set parameters <i>F7-05</i> to <i>F7-12</i> [<i>Subnet Mask 1 to 4</i> , <i>Gateway Address 1 to 4</i>].	20 (0 - 255)	591
F7-05 (03E9)	Subnet Mask 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the first octet of the subnet mask of the connected network. Note: Set this parameter when <i>F7-13</i> = 0 [<i>Address Mode at Startup</i> = <i>Static</i>].	255 (0 - 255)	591
F7-06 (03EA)	Subnet Mask 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second octet of the subnet mask of the connected network. Note: Set this parameter when <i>F7-13</i> = 0 [<i>Address Mode at Startup</i> = <i>Static</i>].	255 (0 - 255)	591
F7-07 (03EB)	Subnet Mask 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the third octet of the subnet mask of the connected network. Note: Set this parameter when <i>F7-13</i> = 0 [<i>Address Mode at Startup</i> = <i>Static</i>].	255 (0 - 255)	591

11.9 F: Ethernet

No. (Hex.)	Name	Description	Default (Range)	Ref.
F7-08 (03EC)	Subnet Mask 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the fourth octet of the subnet mask of the connected network. Note: Set this parameter when <i>F7-13 = 0</i> [<i>Address Mode at Startup = Static</i>].	0 (0 - 255)	591
F7-09 (03ED)	Gateway Address 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the first octet of the gateway address of the connected network. Note: Set this parameter when <i>F7-13 = 0</i> [<i>Address Mode at Startup = Static</i>].	192 (0 - 255)	591
F7-10 (03EE)	Gateway Address 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second octet of the gateway address of the connected network. Note: Set this parameter when <i>F7-13 = 0</i> [<i>Address Mode at Startup = Static</i>].	168 (0 - 255)	592
F7-11 (03EF)	Gateway Address 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the third octet of the gateway address of the connected network. Note: Set this parameter when <i>F7-13 = 0</i> [<i>Address Mode at Startup = Static</i>].	1 (0 - 255)	592
F7-12 (03F0)	Gateway Address 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the fourth octet of the gateway address of the connected network. Note: Set this parameter when <i>F7-13 = 0</i> [<i>Address Mode at Startup = Static</i>].	1 (0 - 255)	592
F7-13 (03F1)	Address Mode at Startup	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method to set the Ethernet IP addresses. 0 : Static 1 : BOOTP 2 : DHCP Note: - The following setting values are available when you use the PROFINET communication. –0: Static –2: DHCP - When <i>F7-13 = 0</i>, set parameters <i>F7-01</i> to <i>F7-12</i> [<i>IP Address 1 to Gateway Address 4</i>] to set the IP Address. Be sure to set a different IP address for each drive on the network.	2 (0 - 2)	592
F7-14 (03F2)	Duplex Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the duplex mode setting method. 0 : Half/Half 1 : Auto/Auto 2 : Full/Full 3 : Half/Auto 4 : Half/Full 5 : Auto/Half 6 : Auto/Full 7 : Full/Half 8 : Full/Auto	1 (0 - 8)	592
F7-15 (03F3)	Communication Speed Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the communications speed. 10 : 10/10 Mbps 100 : 100/100 Mbps 101 : 10/100 Mbps 102 : 100/10 Mbps	10 (10, 100 - 102)	593
F7-16 (03F4)	Timeout Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection time for a communications timeout. Note: Set this parameter to 0.0 to disable the connection timeout function.	0.0 s (0.0 - 30.0 s)	593
F7-17 (03F5)	EtherNet/IP Speed Scaling Factor	V/f OLV OLV/PM AOLV/PM EZOLV Sets the scaling factor for the speed monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)	593
F7-18 (03F6)	EtherNet/IP Current Scale Factor	V/f OLV OLV/PM AOLV/PM EZOLV Sets the scaling factor for the output current monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)	593
F7-19 (03F7)	EtherNet/IP Torque Scale Factor	V/f OLV OLV/PM AOLV/PM EZOLV Sets the scaling factor for the torque monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)	593

No. (Hex.)	Name	Description	Default (Range)	Ref.
F7-20 (03F8)	EtherNet/IP Power Scaling Factor	V/f OLV OLV/PM AOLV/PM EZOLV Sets the scaling factor for the power monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)	594
F7-21 (03F9)	EtherNet/IP Voltage Scale Factor	V/f OLV OLV/PM AOLV/PM EZOLV Sets the scaling factor for the voltage monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)	594
F7-22 (03FA)	EtherNet/IP Time Scaling	V/f OLV OLV/PM AOLV/PM EZOLV Sets the scaling factor for the time monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)	594
F7-23 (03FB)	Dynamic Out Param 1 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Output 1 in the Output Assembly. The drive writes Dynamic Output 1 data to the register that this parameter sets. The drive will not write the values from Dynamic Output 1 of Output Assembly to the registers when the Modbus address is 0. When you use a PROFINET, set this parameter to set to configurable output 1.	0	594
F7-24 (03FC)	Dynamic Out Param 2 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Output 2 in the Output Assembly. The drive writes Dynamic Output 2 data to the register that this parameter sets. The drive will not write the values from Dynamic Output 2 of Output Assembly to the registers when the Modbus address is 0. When you use a PROFINET, set this parameter to set to configurable output 2.	0	594
F7-25 (03FD)	Dynamic Out Param 3 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Output 3 in the Output Assembly. The drive writes Dynamic Output 3 data to the register that this parameter sets. The drive will not write the values from Dynamic Output 3 of Output Assembly to the registers when the Modbus address is 0. When you use a PROFINET, set this parameter to set to configurable output 3.	0	594
F7-26 (03FE)	Dynamic Out Param 4 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Output 4 in the Output Assembly. The drive writes Dynamic Output 4 data to the register that this parameter sets. The drive will not write the values from Dynamic Output 4 of Output Assembly to the registers when the Modbus address is 0. When you use a PROFINET, set this parameter to set to configurable output 4.	0	594
F7-27 (03FF)	Dynamic Out Param 5 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Output 5 in the Output Assembly. The drive writes Dynamic Output 5 data to the register that this parameter sets. The drive will not write the values from Dynamic Output 5 of Output Assembly to the registers when the Modbus address is 0. When you use a PROFINET, set this parameter to set to configurable output 5.	0	594
F7-28 (0370)	Dynamic Out Param 6 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Output 6 in the Output Assembly. The drive writes Dynamic Output 6 data to the register that this parameter sets. The drive will not write the values from Dynamic Output 6 of Output Assembly to the registers when the Modbus address is 0. When you use a PROFINET, set this parameter to set to configurable output 6.	0	594
F7-29 (0371)	Dynamic Out Param 7 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Output 7 in the Output Assembly. The drive writes Dynamic Output 7 data to the register that this parameter sets. The drive will not write the values from Dynamic Output 7 of Output Assembly to the registers when the Modbus address is 0. When you use a PROFINET, set this parameter to set to configurable output 7.	0	594
F7-30 (0372)	Dynamic Out Param 8 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Output 8 in the Output Assembly. The drive writes Dynamic Output 8 data to the register that this parameter sets. The drive will not write the values from Dynamic Output 8 of Output Assembly to the registers when the Modbus address is 0. When you use a PROFINET, set this parameter to set to configurable output 8.	0	594
F7-31 (0373)	Dynamic Out Param 9 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Output 9 in the Output Assembly. The drive writes Dynamic Output 9 data to the register that this parameter sets. The drive will not write the values from Dynamic Output 9 of Output Assembly to the registers when the Modbus address is 0. When you use a PROFINET, set this parameter to set to configurable output 9.	0	594
F7-32 (0374)	Dynamic Out Param10 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Output 10 in the Output Assembly. The drive writes Dynamic Output 10 data to the register that this parameter sets. The drive will not write the values from Dynamic Output 10 of Output Assembly to the registers when the Modbus address is 0. When you use a PROFINET, set this parameter to set to configurable output 10.	0	594
F7-33 (0375)	Dynamic In Param 1 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Input 1 in the Input Assembly. The drive sends Dynamic Input 1 data from the register that this parameter sets. The drive returns the EtherNet/IP default register value when the Modbus address is 0 and the value sent to Dynamic Input 1 of Input Assembly is not defined. When you use a PROFINET, set this parameter to set to configurable input 1.	0	594

No. (Hex.)	Name	Description	Default (Range)	Ref.
F7-34 (0376)	Dynamic In Param 2 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Input 2 in the Input Assembly. The drive sends Dynamic Input 2 data from the register that this parameter sets. The drive returns the EtherNet/IP default register value when the Modbus address is 0 and the value sent to Dynamic Input 2 of Input Assembly is not defined. When you use a PROFINET, set this parameter to set to configurable input 2.	0	594
F7-35 (0377)	Dynamic In Param 3 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Input 3 in the Input Assembly. The drive sends Dynamic Input 3 data from the register that this parameter sets. The drive returns the EtherNet/IP default register value when the Modbus address is 0 and the value sent to Dynamic Input 3 of Input Assembly is not defined. When you use a PROFINET, set this parameter to set to configurable input 3.	0	594
F7-36 (0378)	Dynamic In Param 4 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Input 4 in the Input Assembly. The drive sends Dynamic Input 4 data from the register that this parameter sets. The drive returns the EtherNet/IP default register value when the Modbus address is 0 and the value sent to Dynamic Input 4 of Input Assembly is not defined. When you use a PROFINET, set this parameter to set to configurable input 4.	0	594
F7-37 (0379)	Dynamic In Param 5 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Input 5 in the Input Assembly. The drive sends Dynamic Input 5 data from the register that this parameter sets. The drive returns the EtherNet/IP default register value when the Modbus address is 0 and the value sent to Dynamic Input 5 of Input Assembly is not defined. When you use a PROFINET, set this parameter to set to configurable input 5.	0	594
F7-38 (037A)	Dynamic In Param 6 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Input 6 in the Input Assembly. The drive sends Dynamic Input 6 data from the register that this parameter sets. The drive returns the EtherNet/IP default register value when the Modbus address is 0 and the value sent to Dynamic Input 6 of Input Assembly is not defined. When you use a PROFINET, set this parameter to set to configurable input 6.	0	594
F7-39 (037B)	Dynamic In Param 7 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Input 7 in the Input Assembly. The drive sends Dynamic Input 7 data from the register that this parameter sets. The drive returns the EtherNet/IP default register value when the Modbus address is 0 and the value sent to Dynamic Input 7 of Input Assembly is not defined. When you use a PROFINET, set this parameter to set to configurable input 7.	0	594
F7-40 (037C)	Dynamic In Param 8 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Input 8 in the Input Assembly. The drive sends Dynamic Input 8 data from the register that this parameter sets. The drive returns the EtherNet/IP default register value when the Modbus address is 0 and the value sent to Dynamic Input 8 of Input Assembly is not defined. When you use a PROFINET, set this parameter to set to configurable input 8.	0	594
F7-41 (037D)	Dynamic In Param 9 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Input 9 in the Input Assembly. The drive sends Dynamic Input 9 data from the register that this parameter sets. The drive returns the EtherNet/IP default register value when the Modbus address is 0 and the value sent to Dynamic Input 9 of Input Assembly is not defined. When you use a PROFINET, set this parameter to set to configurable input 9.	0	594
F7-42 (037E)	Dynamic In Param 10 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV When you use an EtherNet/IP, set the register for Dynamic Input 10 in the Input Assembly. The drive sends Dynamic Input 10 data from the register that this parameter sets. The drive returns the EtherNet/IP default register value when the Modbus address is 0 and the value sent to Dynamic Input 10 of Input Assembly is not defined. When you use a PROFINET, set this parameter to set to configurable input 10.	0	594
F7-43 (1BCE)	PLC Cnxn Close Behavior@Run	V/f OLV OLV/PM AOLV/PM EZOLV Set the operation when an EtherNet/IP Forward Close command (PLC communication disconnection command) is received from the network during operation. 0 : Continue 1 : Clear RUN Command 2 : bUS Fault (set by F6-01)	0 (0 - 2)	594
F7-50 (1BC1)	BACnet/IP Port	V/f OLV OLV/PM AOLV/PM EZOLV Sets the UDP port on which the drive will receive incoming BACnet messages.	47808 (1024 - 65535)	594
F7-51 (1BE9)	BBMD Foreign Register Addr 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the first octet of the IP Address of the BACnet Broadcast Management Device (BBMD) to which the drive will register as a foreign device.	0 (0 - 255)	595
F7-52 (1BEA)	BBMD Foreign Register Addr 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second octet of the IP Address of the BACnet Broadcast Management Device (BBMD) to which the drive will register as a foreign device.	0 (0 - 255)	595
F7-53 (1BEB)	BBMD Foreign Register Addr 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the third octet of the IP Address of the BACnet Broadcast Management Device (BBMD) to which the drive will register as a foreign device.	0 (0 - 255)	595

No. (Hex.)	Name	Description	Default (Range)	Ref.
F7-54 (1BEC)	BBMD Foreign Register Addr 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the fourth octet of the IP Address of the BACnet Broadcast Management Device (BBMD) to which the drive will register as a foreign device.	0 (0 - 255)	595
F7-55 (1BED)	BBMD Foreign Port #	V/f OLV OLV/PM AOLV/PM EZOLV Sets the UDP port of the BBMD device to which the drive will register.	47808 (1024 - 65535)	595
F7-56 (1BEE)	BBMD Foreign Register Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time interval in which the drive will repeat BBMD foreign registration.	3600 s (0 - 65535 s)	595
F7-57 (1BEF)	BACnet/IP BUS Timeout Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will wait after it receives a Run command or frequency reference command before it detects a BUS fault.	3600 s (0 - 65535 s)	595
F7-80 (0794)	MECHATROLINK Monitor Select (10)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 10H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command). Note: Re-energize the drive to apply the setting changes.	0000 (0000 - FFFF)	595
F7-81 (0795)	MECHATROLINK Monitor Select (11)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 11H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command). Note: Re-energize the drive to apply the setting changes.	0000 (0000 - FFFF)	596
F7-82 (0796)	MECHATROLINK Monitor Select (12)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 12H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command). Note: Re-energize the drive to apply the setting changes.	0000h (0000 - FFFF)	596
F7-83 (0797)	MECHATROLINK Monitor Select (13)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 13H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command). Note: Re-energize the drive to apply the setting changes.	0000 (0000 - FFFF)	596
F7-84 (0798)	MECHATROLINK Monitor Select (14)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 14H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command). Note: Re-energize the drive to apply the setting changes.	0000 (0000 - FFFF)	596
F7-85 (0799)	MECHATROLINK Monitor Select (15)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 15H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command). Note: Re-energize the drive to apply the setting changes.	0000 (0000 - FFFF)	596
F7-86 (079A)	MECHATROLINK Monitor Select (16)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 16H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command). Note: Re-energize the drive to apply the setting changes.	0000 (0000 - FFFF)	596

11.10 H: Terminal Functions

◆ H1: Digital Inputs

No. (Hex.)	Name	Description	Default (Range)	Ref.
H1-01 (0438)	Terminal S1 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function for MFDI terminal S1.	40 (1 - 1FF)	598
H1-02 (0439)	Terminal S2 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function for MFDI terminal S2.	41 (1 - 1FF)	598
H1-03 (0400)	Ethernet DI3 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to bit 6 of the MEMOBUS register 0001 (Hex.).	24 (1 - 1FF)	598
H1-04 (0401)	Ethernet DI4 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to bit 7 of the MEMOBUS register 0001 (Hex.).	14 (1 - 1FF)	598
H1-05 (0402)	Ethernet DI5 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to bit 8 of the MEMOBUS register 0001 (Hex.).	3 (0 - 1FF)	598
H1-06 (0403)	Ethernet DI6 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to bit 9 of the MEMOBUS register 0001 (Hex.).	4 (1 - 1FF)	598
H1-07 (0404)	Ethernet DI7 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to bit A of the MEMOBUS register 0001 (Hex.).	6 (1 - 1FF)	599
H1-21 (0B70)	Terminal S1 Function Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second function for MFDI terminal S1.	F (1 - 19F)	599
H1-22 (0B71)	Terminal S2 Function Select 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second function for MFDI terminal S2.	F (1 - 19F)	599
H1-23 (0B72)	Ethernet DI3 Function Selection2	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI second function to set to bit 6 of the MEMOBUS register 0001 (Hex.).	F (1 - 19F)	599
H1-24 (0B73)	Ethernet DI4 Function Selection2	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI second function to set to bit 7 of the MEMOBUS register 0001 (Hex.).	F (1 - 19F)	599
H1-25 (0B74)	Ethernet DI5 Function Selection2	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI second function to set to bit 8 of the MEMOBUS register 0001 (Hex.).	F (1 - 19F)	599
H1-26 (0B75)	Ethernet DI6 Function Selection2	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI second function to set to bit 9 of the MEMOBUS register 0001 (Hex.).	F (1 - 19F)	600
H1-27 (0B76)	Ethernet DI7 Function Selection2	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI second function to set to bit A of the MEMOBUS register 0001 (Hex.).	F (1 - 19F)	600
H1-40 (0B54)	Mbus Reg 15C0h bit0 Input Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to <i>bit 0</i> of the Modbus register 15C0 (Hex.).	F (1 - 19F)	600
H1-41 (0B55)	Mbus Reg 15C0h bit1 Input Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to <i>bit 1</i> of the Modbus register 15C0 (Hex.).	F (1 - 19F)	600
H1-42 (0B56)	Mbus Reg 15C0h bit2 Input Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to <i>bit 2</i> of the Modbus register 15C0 (Hex.).	F (1 - 19F)	600

■ H1-xx: MFDI Setting Values

Setting Value	Function	Description	Ref.
1	LOCAL/REMOTE Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive control for the keypad (LOCAL) or an external source (REMOTE). ON : LOCAL OFF : REMOTE	600
2	External Reference 1/2 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to use Run command source 1/2 or Reference command source 1/2 when in REMOTE Mode. ON : b1-15 [Frequency Reference Selection 2], b1-16 [Run Command Selection 2] OFF : b1-01 [Frequency Reference Selection 1], b1-02 [Run Command Selection 1]	601
3	Multi-Step Speed Reference 1	V/f OLV OLV/PM AOLV/PM EZOLV Uses speed references d1-01 to d1-16 to set a multi-step speed reference.	601
4	Multi-Step Speed Reference 2	V/f OLV OLV/PM AOLV/PM EZOLV Uses speed references d1-01 to d1-16 to set a multi-step speed reference.	601

Setting Value	Function	Description	Ref.
5	Multi-Step Speed Reference 3	V/f OLV OLV/PM AOLV/PM EZOLV Uses speed references <i>d1-01</i> to <i>d1-16</i> to set a multi-step speed reference.	601
6	Jog Reference Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to use the JOG Frequency Reference (JOG command) set in <i>d1-17</i> . The JOG Frequency Reference (JOG command) overrides <i>Frequency References 1 to 16</i> (<i>d1-01</i> to <i>d1-16</i>).	602
7	Accel/Decel Time Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to use <i>Acceleration/Deceleration Time 1</i> [<i>C1-01</i> , <i>C1-02</i>] or <i>Acceleration/Deceleration Time 2</i> [<i>C1-03</i> , <i>C1-04</i>].	602
8	Baseblock Command (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command that stops drive output and coasts the motor to stop when the input is ON. ON : Baseblock (drive output stop) OFF : Normal operation	602
9	Baseblock Command (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command that stops drive output and coasts the motor to stop when the input terminal is OFF. ON : Normal operation OFF : Baseblock (drive output stop)	602
A	Accel/Decel Ramp Hold	V/f OLV OLV/PM AOLV/PM EZOLV Momentarily pauses motor acceleration and deceleration when the terminal is turned ON, retains the output frequency that was stored in the drive at the time of the pause, and restarts motor operation.	603
B	Overheat Alarm (oH2)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to show an <i>oH2</i> [<i>External Overheat (H1-XX=B)</i>] alarm when the input terminal is ON. The alarm does not have an effect on drive operation.	603
C	Analog Terminal Enable Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command that enables or disables the terminal A1. ON : Input to the terminal A1 is enabled OFF : Input to the terminal A1 is disabled	603
E	ASR Integral Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to reset the integral value and use PI control or P control for the speed control loop. ON : P control OFF : PI control	603
F	Not Used	V/f OLV OLV/PM AOLV/PM EZOLV Use this setting for unused terminals or to use terminals in through mode.	603
10	Up Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to use a push button switch to increase the drive frequency reference. You must also set <i>Setting 11</i> [<i>Down Command</i>]. ON : Increases the frequency reference. OFF : Holds the current frequency reference.	603
11	Down Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to use a push button switch to decrease the drive frequency reference. You must also set <i>Setting 10</i> [<i>Up Command</i>]. ON : Decreases the frequency reference. OFF : Holds the current frequency reference.	605
12	Forward Jog	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to operate the motor in the forward direction at the Jog Frequency set in <i>d1-17</i> [<i>Jog Reference</i>].	606
13	Reverse Jog	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to operate the motor in the reverse direction at the Jog Frequency set in <i>d1-17</i> [<i>Jog Reference</i>].	606
14	Fault Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to reset the current fault when the Run command is inactive. Note: The drive ignores the fault reset command when the Run command is active. Remove the Run command before trying to reset a fault.	606
15	Fast Stop (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to ramp to stop in the deceleration time set in <i>C1-09</i> [<i>Fast Stop Time</i>] when the input terminal is ON while the drive is operating.	606
16	Motor 2 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command for the drive to operate motor 1 or motor 2. Stop the motors before switching. ON : Operate motor 2 OFF : Operate motor 1	607
17	Fast Stop (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to ramp to stop in the deceleration time set in <i>C1-09</i> [<i>Fast Stop Time</i>] when the input terminal is ON while the drive is operating.	607

11.10 H: Terminal Functions

Setting Value	Function	Description	Ref.
18	Timer Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to start the timer function. Use this setting with <i>Timer Output [H2-xx = 12]</i> .	608
19	PID Disable	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to disable PID control when <i>b5-01 = 1 to 8 [PID Mode Setting = Enabled]</i> . ON : PID control disabled OFF : PID control enabled	608
1A	Accel/Decel Time Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>H1-xx = 7 [Accel/Decel Time Selection 1]</i> together. Sets the drive to use <i>Acceleration/Deceleration Time 3 [C1-05, C1-06]</i> or <i>Acceleration/Deceleration Time 4 [C1-07, C1-08]</i> .	608
1B	Programming Lockout	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to prevent parameter changes when the terminal is OFF. ON : Programming Lockout OFF : Parameter Write Prohibit	608
1E	Reference Sample Hold	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to sample the frequency reference at terminal A1, and hold the frequency reference at that frequency.	609
20	External Fault (NO-Always-Ramp)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal activates, the drive ramps to stop in the selected deceleration time. Fault relay output terminal MA-MC will turn ON, and MB-MC will turn OFF. The drive always detects external faults whether the drive is stopped or running.	609
21	External Fault (NC-Always-Ramp)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal deactivates, the drive ramps to stop in the selected deceleration time. Fault relay output terminal MA-MC will turn ON, and MB-MC will turn OFF. The drive always detects external faults whether the drive is stopped or running.	609
22	External Fault (NO-@Run-Ramp)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal activates during run, the drive ramps to stop in the selected deceleration time. Fault relay output terminal MA-MC will turn ON, and MB-MC will turn OFF. The drive does not detect external faults while the drive is stopped.	609
23	External Fault (NC-@Run-Ramp)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal deactivates during run, the drive ramps to stop in the selected deceleration time. Fault relay output terminal MA-MC will turn ON, and MB-MC will turn OFF. The drive does not detect external faults while the drive is stopped.	609
24	External Fault (NO-Always-Coast)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal activates, the drive shuts off the output and the motor coasts to stop. Fault relay output terminal MA-MC will turn ON, and MB-MC will turn OFF. The drive always detects external faults whether the drive is stopped or running.	609
25	External Fault (NC-Always-Coast)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal deactivates, the drive shuts off the output and the motor coasts to stop. Fault relay output terminal MA-MC will turn ON, and MB-MC will turn OFF. The drive always detects external faults whether the drive is stopped or running.	609
26	External Fault (NO-@Run-Coast)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal activates during run, the drive shuts off the output and the motor coasts to stop. Fault relay output terminal MA-MC will turn ON, and MB-MC will turn OFF. The drive does not detect external faults while the drive is stopped.	609
27	External Fault (NC-@Run-Coast)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal deactivates during run, the drive shuts off the output and the motor coasts to stop. Fault relay output terminal MA-MC will turn ON, and MB-MC will turn OFF. The drive does not detect external faults while the drive is stopped.	609
28	External Fault (NO-Always-FStop)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal activates, the drive stops the motor in the deceleration time set to <i>C1-09 [Fast Stop Time]</i> . Fault relay output terminal MA-MC turns ON, and MB-MC turns OFF. Stopped drives and running drives will detect external faults.	609
29	External Fault (NC-Always-FStop)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal deactivates, the drive stops the motor in the deceleration time set to <i>C1-09 [Fast Stop Time]</i> . Fault relay output terminal MA-MC turns ON, and MB-MC turns OFF. Stopped drives and running drives will detect external faults.	609
2A	External Fault (NO-@Run-FStop)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal activates during run, the drive stops the motor in the deceleration time set to <i>C1-09 [Fast Stop Time]</i> . Fault relay output terminal MA-MC turns ON, and MB-MC turns OFF. Stopped drives will not detect external faults.	609
2B	External Fault (NC-@Run-FStop)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal deactivates during run, the drive stops the motor in the deceleration time set to <i>C1-09 [Fast Stop Time]</i> . Fault relay output terminal MA-MC turns ON, and MB-MC turns OFF. Stopped drives will not detect external faults.	609

Setting Value	Function	Description	Ref.
2C	External Fault (NO-Always-Alarm)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal activates, the keypad shows <i>EFx</i> [External Fault (Input Terminal Sx)] and the output terminal set for Alarm [H2-01 to H2-03 = 10] activates. The drive continues operation. Stopped drives and running drives will detect external faults.	609
2D	External Fault (NC-Always-Alarm)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal deactivates, the keypad shows <i>EFx</i> [External Fault (Input Terminal Sx)] and the output terminal set for Alarm [H2-01 to H2-03 = 10] activates. The drive continues operation. Stopped drives and running drives will detect external faults.	610
2E	External Fault (NO-@Run-Alarm)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal activates during run, the keypad shows <i>EFx</i> [External Fault (Input Terminal Sx)] and the output terminal set for Alarm [H2-01 to H2-03 = 10] activates. The drive continues operation. Stopped drives will not detect external faults.	610
2F	External Fault (NC-@Run-Alarm)	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal deactivates during run, the keypad shows <i>EFx</i> [External Fault (Input Terminal Sx)] and the output terminal set for Alarm [H2-01 to H2-03 = 10] activates. The drive continues operation. Stopped drives will not detect external faults.	610
30	PID Integrator Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to reset and hold the PID control integral to 0 when the terminal is ON.	610
31	PID Integrator Hold	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to hold the integral value of the PID control while the terminal is activated.	610
32	Multi-Step Speed Reference 4	V/f OLV OLV/PM AOLV/PM EZOLV Uses speed references <i>d1-01</i> to <i>d1-16</i> to set a multi-step speed reference.	610
34	PID Soft Starter Disable	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID soft starter function. ON : Disabled OFF : Enabled	611
35	PID Input (Error) Invert	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to turn the terminal ON and OFF to switch the PID input level (polarity).	611
3E	PID Setpoint Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>H1-xx</i> = 3F [PID Setpoint Selection 2] together. Sets the function to switch the PID setpoint to <i>b5-58</i> to <i>b5-60</i> [PID Setpoint 2 to 4].	611
3F	PID Setpoint Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>H1-xx</i> = 3E [PID Setpoint Selection 1] at the same time. Sets the function to switch the PID setpoint to <i>b5-58</i> to <i>b5-60</i> [PID Setpoint 2 to 4].	611
40	Forward RUN (2-Wire)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Forward Run command for 2-wire sequence 1. Set this function and <i>H1-xx</i> = 41 [Reverse RUN (2-Wire)] together. ON : Forward Run OFF : Stop Note: • If you turn ON the Forward Run command terminal and the Reverse Run command terminal, it will cause an <i>EF</i> [FWD/REV Run Command Input Error] alarm and the motor will ramp to stop. • Initialize the drive with a 2-wire sequence to set the Forward Run command to terminal S1. • This function will not operate at the same time as <i>H1-xx</i> = 42, 43 [Run Command (2-Wire Sequence 2), FWD/REV (2-Wire Sequence 2)].	611
41	Reverse RUN (2-Wire)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Forward Run command for 2-wire sequence 1. Set this function and <i>H1-xx</i> = 40 [Forward RUN (2-Wire)] together. ON : Reverse Run OFF : Stop Note: • If you turn ON the Forward Run command terminal and the Reverse Run command terminal, it will cause an <i>EF</i> [FWD/REV Run Command Input Error] alarm and the motor will ramp to stop. • Initialize the drive with a 2-wire sequence to set the Reverse Run command to terminal S2. • This function will not operate at the same time as <i>H1-xx</i> = 42, 43 [Run Command (2-Wire Sequence 2), FWD/REV (2-Wire Sequence 2)].	612
42	Run Command (2-Wire Sequence 2)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Run command for 2-wire sequence 2. Set this function and <i>H1-xx</i> = 43 [FWD/REV (2-Wire Sequence 2)] together. ON : Run OFF : Stop Note: This function will not operate at the same time as <i>H1-xx</i> = 40, 41 [Forward RUN (2-Wire), Reverse RUN (2-Wire)].	612

11.10 H: Terminal Functions

Setting Value	Function	Description	Ref.
43	FWD/REV (2-Wire Sequence 2)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the direction of motor rotation for 2-wire sequence 2. Set this function and $H1\text{-}xx = 42$ [Run Command (2-Wire Sequence 2)] together. ON : Reverse Run OFF : Forward Run Note: - You must input the Run command to rotate the motor. - This function will not operate at the same time as $H1\text{-}xx = 40, 41$ [Forward RUN (2-Wire), Reverse RUN (2-Wire)].	612
44	Add Offset Frequency 1 (d7-01)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to add the offset frequency set in $d7\text{-}01$ [Offset Frequency 1] to the frequency reference when the terminal activates.	612
45	Add Offset Frequency 2 (d7-02)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to add the offset frequency set in $d7\text{-}02$ [Offset Frequency 2] to the frequency reference when the terminal activates.	613
46	Add Offset Frequency 3 (d7-03)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to add the offset frequency set in $d7\text{-}03$ [Offset Frequency 3] to the frequency reference when the terminal activates.	613
60	DC Injection Braking Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to use DC Injection Braking to stop the motor. Note: When $A1\text{-}02 = 8$ [Control Method Selection = EZOLV], this function is available with a PM motor.	613
61	Speed Search from Fmax	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to use an external reference to start speed search although $b3\text{-}01 = 0$ [Speed Search Selection at Start = Disabled] to not allow speed search at start. Note: The drive will detect $oPE03$ [Multi-Function Input Setting Err] when $H1\text{-}xx = 61$ [Speed Search from Fmax] and $H1\text{-}xx = 62$ [Speed Search from Fref] are set at the same time.	613
62	Speed Search from Fref	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to use an external reference to start speed search although $b3\text{-}01 = 0$ [Speed Search Selection at Start = Disabled] to not allow speed search at start. Note: The drive will detect $oPE03$ [Multi-Function Input Setting Err] when $H1\text{-}xx = 61$ [Speed Search from Fmax] and $H1\text{-}xx = 62$ [Speed Search from Fref] are set at the same time.	614
63	Field Weakening	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to send the Field Weakening Level and Field Weakening Frequency Limit commands set in $d6\text{-}01$ [Field Weakening Level] and $d6\text{-}02$ [Field Weakening Frequency Limit] when the input terminal is activated.	614
65	KEB Ride-Thru 1 Activate (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation of the KEB1 function through the KEB Ride-Thru 1 (N.C.). ON : Normal operation OFF : Deceleration during momentary power loss	614
66	KEB Ride-Thru 1 Activate (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation of the KEB1 function through the KEB Ride-Thru 1 (N.O.). ON : Deceleration during momentary power loss OFF : Normal operation	614
68	High Slip Braking (HSB) Activate	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to use high-slip braking to stop the motor.	614
6A	Drive Enable	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to show dnE [Drive Disabled] on the keypad and ignore Run commands when the terminal is OFF.	615
75	Up 2 Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to increase the frequency reference bias value to accelerate the motor when the terminal is activated. Set this function and $H1\text{-}xx = 76$ [Down 2 Command] together. Note: When you use this function, set the optimal bias limit values with $d4\text{-}08$ and $d4\text{-}09$ [Up/Down 2 Bias Upper Limit/Lower Limit].	615
76	Down 2 Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to decrease the frequency reference bias value to decelerate the motor when the terminal is activated. Set this function and $H1\text{-}xx = 75$ [Up 2 Command] together. Note: When you use this function, set the optimal bias limit values with $d4\text{-}08$ and $d4\text{-}09$ [Up/Down 2 Bias Upper Limit/Lower Limit].	616

Setting Value	Function	Description	Ref.
77	ASR Gain (C5-03) Select	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function to switch the ASR proportional gain to C5-01 [ASR Proportional Gain 1] or C5-03 [ASR Proportional Gain 2]. ON : C5-03 OFF : C5-01	616
78	Analog TorqueLim Polarity Invert	V/f OLV OLV/PM AQLV/PM EZOLV Sets the rotation direction of the TorqueLimit. ON : TorqueLimit reverse direction OFF : TorqueLimit forward direction	616
7A	KEB Ride-Thru 2 Activate (N.C.)	V/f OLV OLV/PM AQLV/PM EZOLV Sets operation of the KEB2 function through the KEB Ride-Thru 2 (N.C.). ON : Normal operation OFF : Deceleration during momentary power loss	617
7B	KEB Ride-Thru 2 Activate (N.O.)	V/f OLV OLV/PM AQLV/PM EZOLV Sets operation of the KEB2 function through the KEB Ride-Thru 2 (N.O.). ON : Deceleration during momentary power loss OFF : Normal operation	617
7C	Short Circuit Braking (N.O.)	V/f OLV OLV/PM AQLV/PM EZOLV Sets operation of Short Circuit Braking (N.O.). ON : Short Circuit Braking is enabled. OFF : Normal operation Note: When A1-02 = 8 [Control Method Selection = EZOLV], this function is available only when you use a PM motor.	617
7D	Short Circuit Braking (N.C.)	V/f OLV OLV/PM AQLV/PM EZOLV Sets operation of Short Circuit Braking (N.C.). ON : Normal operation OFF : Short Circuit Braking is enabled. Note: When A1-02 = 8 [Control Method Selection = EZOLV], this function is available only when you use a PM motor.	617
90	DWEZ Digital Input 1	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DriveWorksEZ digital input 1. Refer to the DriveWorksEZ online manual for more information.	618
91	DWEZ Digital Input 2	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DriveWorksEZ digital input 2. Refer to the DriveWorksEZ online manual for more information.	618
92	DWEZ Digital Input 3	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DriveWorksEZ digital input 3. Refer to the DriveWorksEZ online manual for more information.	618
93	DWEZ Digital Input 4	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DriveWorksEZ digital input 4. Refer to the DriveWorksEZ online manual for more information.	618
94	DWEZ Digital Input 5	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DriveWorksEZ digital input 5. Refer to the DriveWorksEZ online manual for more information.	618
95	DWEZ Digital Input 6	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DriveWorksEZ digital input 6. Refer to the DriveWorksEZ online manual for more information.	618
96	DWEZ Digital Input 7	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DriveWorksEZ digital input 7. Refer to the DriveWorksEZ online manual for more information.	618
9F	DWEZ Disable	V/f OLV OLV/PM AQLV/PM EZOLV Sets operation of the DriveWorksEZ program saved in the drive. ON : Disabled OFF : Enabled Note: Set A1-07 = 2 [DriveWorksEZ Function Selection = Enabled/Disabled wDigital Input] to use this function.	618
101	!LOCAL/REMOTE Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets drive control for the keypad (LOCAL) or an external source (REMOTE). ON : REMOTE OFF : LOCAL	618
102	!External Reference 1/2 Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the drive to use Run command source 1/2 or Reference command source 1/2 when in REMOTE Mode. ON : b1-01 = [Frequency Reference Selection 1], b1-02 [Run Command Selection 1] OFF : b1-15 = [Frequency Reference Selection 2], b1-16 [Run Command Selection 2]	618
103	!Multi-Step Speed Reference 1	V/f OLV OLV/PM AQLV/PM EZOLV Uses a combination of multi-step speed references 1, 2, 3, and 4 (N.C.) to switch d1-01 to d1-16 [Reference 1 to 16].	618

11.10 H: Terminal Functions

Setting Value	Function	Description	Ref.
104	!Multi-Step Speed Reference 2	V/f OLV OLV/PM AOLV/PM EZOLV Uses a combination of multi-step speed references 1, 2, 3, and 4 (N.C.) to switch <i>d1-01</i> to <i>d1-16</i> [Reference 1 to 16].	618
105	!Multi-Step Speed Reference 3	V/f OLV OLV/PM AOLV/PM EZOLV Uses a combination of multi-step speed references 1, 2, 3, and 4 (N.C.) to switch <i>d1-01</i> to <i>d1-16</i> [Reference 1 to 16].	618
106	!Jog Reference Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to use the JOG Frequency Reference (JOG command) set in <i>d1-17</i> [Jog Reference]. The JOG Frequency Reference (JOG command) overrides the <i>d1-01</i> to <i>d1-16</i> [References 1 to 16].	618
107	!Accel/Decel Time Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to use <i>C1-01</i> , <i>C1-02</i> [Acceleration/Deceleration Time 1] or <i>C1-03</i> , <i>C1-04</i> [Acceleration/Deceleration Time 2].	618
10A	!Accel/Decel Ramp Hold	V/f OLV OLV/PM AOLV/PM EZOLV Momentarily pauses motor acceleration and deceleration when the terminal deactivates, retains the output frequency that was stored in the drive at the time of the pause, and restarts motor operation.	618
10B	!Overheat Alarm (oH2)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to display an <i>oH2</i> [Drive Overheat Warning] alarm when the input terminal deactivates. The alarm does not have an effect on drive operation.	618
10C	!Analog Terminal Enable Selection	V/f OLV OLV/PM AOLV/PM EZOLV Enables and disables the terminal A1 function. ON : Input to the terminal A1 is disabled OFF : Input to the terminal A1 is enabled	618
10E	!ASR Integral Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to reset the integral value and use PI control or P control for the speed control loop. ON : PI control OFF : P control	618
110	!Up Command	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>I11</i> [!Down Command] together. Sets the Up command and Down command to use the two push button switches to increase and decrease the drive frequency reference. ON : Holds the current frequency reference. OFF : Increases the frequency reference.	618
111	!Down Command	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>I10</i> [!Up Command] together. Sets the Up command and Down command to use the two push button switches to increase and decrease the drive frequency reference. ON : Holds the current frequency reference. OFF : Decreases the frequency reference.	618
114	!Fault Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to reset the current fault when the Run command is not active. Note: The drive ignores the fault reset command when the Run command is active. Remove the Run command before you try to reset a fault.	618
116	!Motor 2 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command for the drive to operate motor 1 or motor 2. Stop the motors before switching. ON : Operate motor 1 OFF : Operate motor 2	618
118	!Timer Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to start the timer function. Use this setting with <i>H2-xx</i> = <i>I12</i> [!Timer Output].	618
119	!PID Disable	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to disable PID control with an external input when <i>b5-01</i> = 1 to 8 [PID Function Setting = Enabled]. ON : PID control enabled OFF : PID control disabled	618
11A	!Accel/Decel Time Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>H1-xx</i> = <i>I07</i> [!Accel/Decel Time Selection 1] together. Sets the drive to use <i>C1-01</i> to <i>C1-08</i> [Acceleration/Deceleration Times 1 to 4].	618
11B	!Programming Lockout	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to prevent parameter changes when the terminal is OFF. You can continue to view parameter setting values when the terminal is ON [Parameter Write Prohibit]. ON : Parameter Write Prohibit OFF : Programming Lockout	618
11E	!Reference Sample Hold	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to sample the frequency reference at terminal A1, and hold the frequency reference at that frequency.	618

Setting Value	Function	Description	Ref.
130	!PID Integrator Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to reset and hold the PID control integral to 0 when the terminal deactivates.	618
131	!PID Integrator Hold	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to hold the integral value of the PID control while the terminal deactivates.	618
132	!Multi-Step Speed Reference 4	V/f OLV OLV/PM AOLV/PM EZOLV Uses a combination of multi-step speed references 1, 2, 3, and 4 (N.C.) to switch <i>d1-01</i> to <i>d1-16</i> [Reference 1 to 16].	618
134	!PID Soft Starter Disable	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID soft starter function. ON : Enabled OFF : Disabled	618
135	!PID Input (Error) Invert	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to turn the terminal ON and OFF to switch the PID input level (polarity).	618
13E	!PID Setpoint Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>H1-xx</i> = 13F [!PID Setpoint Selection 2] together. Sets the function to use the PID setpoint set in <i>b5-58</i> to <i>b5-60</i> [PID setpoint2 to 4].	618
13F	!PID Setpoint Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>H1-xx</i> = 13E [!PID Setpoint Selection 1] together. Sets the function to use the PID setpoint set in <i>b5-58</i> to <i>b5-60</i> [PID setpoint2 to 4].	618
144	!Add Offset Frequency 1 (d7-01)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to add the offset frequency set in <i>d7-01</i> to the frequency reference when the terminal deactivates.	618
145	!Add Offset Frequency 2 (d7-02)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to add the offset frequency set in <i>d7-02</i> to the frequency reference when the terminal deactivates.	618
146	!Add Offset Frequency 3 (d7-03)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to add the offset frequency set in <i>d7-03</i> to the frequency reference when the terminal deactivates.	618
160	!DC Injection Braking Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to use DC Injection Braking to stop the motor. Note: When <i>A1-02</i> = 8 [Control Method Selection = EZ Vector Control], this function is available if you use a PM motor.	618
161	!Speed Search from Fmax	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to use an external reference to start speed search although <i>b3-01</i> = 0 [Speed Search Selection at Start = Disabled] to not allow speed search at start. Note: The drive will detect <i>oPE03</i> [Multi-Function Input Setting Err] when <i>H1-xx</i> = 161 [!Speed Search from Fmax] and <i>H1-xx</i> = 162 [!Speed Search from Fref] are set at the same time.	618
162	!Speed Search from Fref	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to use an external reference to start speed search although <i>b3-01</i> = 0 [Speed Search Selection at Start = Disabled] to not allow speed search at start. Note: The drive will detect <i>oPE03</i> [Multi-Function Input Setting Err] when <i>H1-xx</i> = 161 [!Speed Search from Fmax] and <i>H1-xx</i> = 162 [!Speed Search from Fref] are set at the same time.	618
163	!Field Weakening	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to send the Field Weakening Level and Field Weakening Frequency Limit commands set in <i>d6-01</i> and <i>d6-02</i> when the input terminal deactivates.	618
168	!High Slip Braking (HSB) Activate	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to use high-slip braking to stop the motor.	618
16A	!Drive Enable	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to show <i>dnE</i> [Drive Enabled] on the keypad and ignore Run commands when the terminal activates.	618
175	!Up 2 Command	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal deactivates, the motor accelerates by increasing the frequency reference bias value. Set !Up 2 Command and !Down 2 Command together. Note: When you use the functions, set the optimal bias limit values with <i>d4-08</i> and <i>d4-09</i> [Up/Down 2 Bias Upper Limit/Lower Limit (Up/Down 2)].	618
176	!Down 2 Command	V/f OLV OLV/PM AOLV/PM EZOLV When the terminal deactivates, the motor decelerates by decreasing the frequency reference bias value. Set !Up 2 Command and !Down 2 Command together. Note: When you use the functions, set the optimal bias limit values with <i>d4-08</i> and <i>d4-09</i> [Up/Down 2 Bias Upper Limit/Lower Limit (Up/Down 2)].	618

11.10 H: Terminal Functions

Setting Value	Function	Description	Ref.
177	!ASR Gain (C5-03) Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to switch the ASR proportional gain to <i>C5-01 [ASR Proportional Gain 1]</i> or <i>C5-03 [ASR Proportional Gain 2]</i>. ON : C5-01 OFF : C5-03	618
178	!Analog TorqueLim Polarity Invert	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rotation direction of the external torque reference. ON : External torque reference forward direction OFF : External torque reference reverse direction	618
17E	!Reverse Rotation Identifier	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rotation direction when you use Simple Closed Loop V/f Control method. ON : Forward run OFF : Reverse run	618
17F	!PID Bi-Directional Enable	V/f OLV OLV/PM AOLV/PM EZOLV Switches the PID Bi-Directional output to enable or disable. ON : Disabled OFF : Enabled	618
19F	!DWEZ Disable	V/f OLV OLV/PM AOLV/PM EZOLV Switches the DriveWorksEZ program saved in the drive to enable or disable. ON : Enabled OFF : Disable Note: Set <i>A1-07 = 2 [DriveWorksEZ Function Selection = Digital input]</i> to use this function.	618

◆ H2: Digital Outputs

No. (Hex.)	Name	Description	Default (Range)	Ref.
H2-01 (040B)	Term MA/MB-MC Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function set for MFDO terminal MA-MC or MB-MC. Note: Set this parameter to <i>F</i> when the terminal is not being used or to use the terminal in through mode.	E (0 - 1FF)	620
H2-02 (040C)	Ethernet DO1 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the MFDO for bit 1 of Modbus register 002D (Hex.). Note: Set this parameter to <i>F</i> when the terminal is not being used or to use the terminal in through mode.	0 (0 - 1FF)	621
H2-03 (040D)	Ethernet DO2 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the MFDO for bit 2 of Modbus register 002D (Hex.). Note: Set this parameter to <i>F</i> when the terminal is not being used or to use the terminal in through mode.	2 (0 - 1FF)	621
H2-06 (0437)	Watt Hour Output Unit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the unit for the output signal when <i>H2-01 to H2-03 = 39 [MFDO Function Selection = Watt Hour Pulse Output]</i>. 0 : 0.1 kWh units 1 : 1 kWh units 2 : 10 kWh units 3 : 100 kWh units 4 : 1000 kWh units	0 (0 - 4)	621
H2-07 (0B3A)	Modbus Register 1 Address Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the address of the Modbus register output to the MFDO terminal.	0001 (0001 - 1FFF)	621
H2-08 (0B3B)	Modbus Register 1 Bit Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bit of the Modbus register output to the MFDO terminal.	0000 (0000 - FFFF)	622
H2-09 (0B3C)	Modbus Register 2 Address Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the address of the Modbus register output to the MFDO terminal.	0001 (0001 - 1FFF)	622
H2-10 (0B3D)	Modbus Register 2 Bit Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bit of the Modbus register output to the MFDO terminal.	0000 (0000 - FFFF)	622

No. (Hex.)	Name	Description	Default (Range)	Ref.
H2-20 (1540)	Comparator 1 Monitor Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor number for comparator 1. Set the x-xx part of the Ux-xx [Monitor]. For example, set H2-20 = 102 to monitor U1-02 [Output Frequency].	102 (000 - 999)	622
H2-21 (1541)	Comparator 1 Lower Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit detection level for comparator 1 when the full scale analog output for the monitor selected in H2-20 [Comparator 1 Monitor Selection] is the 100% value.	0.0% (0.0 - 300.0%)	622
H2-22 (1542)	Comparator 1 Upper Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit detection level for comparator 1 when the full scale analog output for the monitor selected in H2-20 [Comparator 1 Monitor Selection] is the 100% value.	0.0% (0.0 - 300.0%)	622
H2-23 (1543)	Comparator 1 Hysteresis	V/f OLV OLV/PM AOLV/PM EZOLV Sets the hysteresis level for comparator 1 as a percentage of the full scale analog output for the monitor selected in H2-20 [Comparator 1 Monitor Selection].	0.0% (0.0 - 10.0%)	623
H2-24 (1544)	Comparator 1 On-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the on-delay time for comparator 1.	0.0 s (0.0 - 600.0 s)	623
H2-25 (1545)	Comparator 1 Off-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the off-delay time for comparator 1.	0.0 s (0.0 - 600.0 s)	623
H2-26 (1546)	Comparator 2 Monitor Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor number for comparator 2. Set the x-xx part of the Ux-xx [Monitor]. For example, set H2-26 = 103 to monitor U1-03 [Output Current].	103 (000 - 999)	623
H2-27 (1547)	Comparator 2 Lower Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit detection level for comparator 2 as a percentage of the full scale analog output for the monitor selected in H2-26 [Comparator 2 Monitor Selection].	0.0% (0.0 - 300.0%)	623
H2-28 (1548)	Comparator 2 Upper Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit detection level for comparator 2 as a percentage of the full scale analog output for the monitor selected in H2-26 [Comparator 2 Monitor Selection].	0.0% (0.0 - 300.0%)	623
H2-29 (1549)	Comparator 2 Hysteresis	V/f OLV OLV/PM AOLV/PM EZOLV Sets the hysteresis level for comparator 2 as a percentage of the full scale analog output for the monitor selected in H2-26 [Comparator 2 Monitor Selection].	0.0% (0.0 - 10.0%)	624
H2-30 (154A)	Comparator 2 On-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the on-delay time for comparator 2.	0.0 s (0.0 - 600.0 s)	624
H2-31 (154B)	Comparator 2 Off-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the off-delay time for comparator 2.	0.0 s (0.0 - 600.0 s)	624
H2-32 (159A)	Comparator 1 Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant that is applied to the primary delay filter used for the analog output of the monitor selected with H2-20 [Comparator 1 Monitor Selection].	0.0s (0.0 - 10.0 s)	624
H2-33 (159B)	Comparator1 Protection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive operation when it detects CP1 [Comparator1 Limit Fault]. 0 : Ramp to Stop 1 : Coast to Stop 2 : Fast Stop (Use C1-09) 3 : Alarm Only 4 : Digital Output Only	4 (0 - 4)	624
H2-34 (159C)	Comparator 2 Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant that is applied to the primary delay filter used for the analog output of the monitor selected with H2-26 [Comparator 2 Monitor Selection].	0.0s (0.0 - 10.0 s)	625
H2-35 (159D)	Comparator2 Protection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive operation when it detects CP2 [Comparator2 Limit Fault]. 0 : Ramp to Stop 1 : Coast to Stop 2 : Fast Stop (Use C1-09) 3 : Alarm Only 4 : Digital Output Only	4 (0 - 4)	625
H2-36 (159E)	Comparator 1 Ineffective Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that CP1 [Comparator1 Limit Fault] is disabled.	0.0 s (0.0 - 1000.0 s)	625
H2-37 (159F)	Comparator 2 Ineffective Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that CP2 [Comparator2 Limit Fault] is disabled.	0.0 s (0.0 - 1000.0 s)	625
H2-40 (0B58)	Mbus Reg 15E0h bit0 Output Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets the MFDO for bit 0 of Modbus register 15E0 (Hex.).	F (0 - 1FF)	626
H2-41 (0B59)	Mbus Reg 15E0h bit1 Output Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets the MFDO for bit 1 of Modbus register 15E0 (Hex.).	F (0 - 1FF)	626

11.10 H: Terminal Functions

No. (Hex.)	Name	Description	Default (Range)	Ref.
H2-42 (0B5A) Expert	Mbus Reg 15E0h bit2 Output Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets the MFDO for bit 2 of Modbus register 15E0 (Hex.).	F (0 - 1FF)	626
H2-60 (1B46) Expert	Term MA,MB,MC Secondary Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second function for terminal MA/MB-MC. Outputs the logical calculation results of the terminals set to functions by <i>H2-01 [Term MA,MB,MC Function Selection]</i> .	F (0 - FF)	626
H2-61 (1B47) Expert	Term MA,MB,MC Logical Operation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the logical operation for the functions set in <i>H2-01 [Term MA,MB,MC Function Selection]</i> and <i>H2-60 [Term MA,MB,MC Secondary Function]</i> .	0 (0 - 8)	626
H2-62 (1B48) Expert	Term MA,MB,MC Minimum ON Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum ON time that the drive uses to output the logical calculation results from terminal MA/MB-MC.	0.1 s (0.0 - 25.0 s)	626
H2-63 (1B49) Expert	Ethernet DO1 Function Select 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second function to MFDO for bit 1 of Modbus register 002D (Hex.).	F (0 - FF)	626
H2-64 (1B4A) Expert	Ethernet DO1 Logical Operation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the logical operation for the functions set in <i>H2-02 [Ethernet DO1 Function Selection]</i> and <i>H2-63 [Ethernet DO1 Function Select 2]</i> .	0 (0 - 8)	627
H2-65 (1B4B) Expert	Ethernet DO1 Minimum ON Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum ON time used to output the logical calculation results from Ethernet DO1.	0.1 s (0.0 - 25.0 s)	627
H2-66 (1B4C) Expert	Ethernet DO2 Secondary Function2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second function to MFDO for bit 2 of Modbus register 002D (Hex.).	F (0 - FF)	627
H2-67 (1B4D) Expert	Ethernet DO2 Logical Operation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the logical operation for the functions set in <i>H2-03 [Ethernet DO2 Function Selection]</i> and <i>H2-66 [Ethernet DO2 Secondary Function2]</i> .	0 (0 - 8)	627
H2-68 (1B4E) Expert	Ethernet DO2 Minimum ON Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum ON time used to output the logical calculation results from Ethernet DO2.	0.1 s (0.0 - 25.0 s)	627

■ H2-xx: MFDO Setting Values

Setting Value	Function	Description	Ref.																		
0	During Run	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when you input a Run command and when the drive is outputting voltage. ON : Drive is running OFF : Drive is stopping	627																		
1	Zero Speed	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is less than <i>E1-09 [Minimum Output Frequency]</i> or <i>b2-01 [DC Injection/Zero SpeedThreshold]</i>. Note: Parameter <i>A1-02 [Control Method Selection]</i> selects which parameter is the reference. <table><tr><th>A1-02 Setting</th><th>Control Method Selection</th><th>Parameter Used as the Reference</th></tr><tr><td>0</td><td>V/f</td><td><i>E1-09</i></td></tr><tr><td>2</td><td>OLV</td><td><i>b2-01</i></td></tr><tr><td>5</td><td>OLV/PM</td><td><i>E1-09</i></td></tr><tr><td>6</td><td>AOLV/PM</td><td><i>E1-09</i></td></tr><tr><td>8</td><td>EZOLV</td><td><i>E1-09</i></td></tr></table> ON : Output frequency < value of <i>E1-09</i> or <i>b2-01</i>. OFF : Output frequency ≥ <i>E1-09</i> or <i>b2-01</i>.	A1-02 Setting	Control Method Selection	Parameter Used as the Reference	0	V/f	<i>E1-09</i>	2	OLV	<i>b2-01</i>	5	OLV/PM	<i>E1-09</i>	6	AOLV/PM	<i>E1-09</i>	8	EZOLV	<i>E1-09</i>	628
A1-02 Setting	Control Method Selection	Parameter Used as the Reference																			
0	V/f	<i>E1-09</i>																			
2	OLV	<i>b2-01</i>																			
5	OLV/PM	<i>E1-09</i>																			
6	AOLV/PM	<i>E1-09</i>																			
8	EZOLV	<i>E1-09</i>																			
2	Speed Agree 1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is in the range of the frequency reference ± <i>L4-02 [Speed Agree Detection Width]</i>. ON : The output frequency is in the range of “frequency reference ± <i>L4-02</i>”. OFF : The output frequency does not align with the frequency reference although the drive is running.	628																		

Setting Value	Function	Description	Ref.
3	User-Set Speed Agree 1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is in the range of $L4-01$ [Speed Agree Detection Level] $\pm L4-02$ [Speed Agree Detection Width] and in the range of the frequency reference $\pm L4-02$. Note: The detection function operates in the two motor rotation directions. The drive uses the $L4-01$ value as the forward/reverse detection level. ON : The output frequency is in the range as defined by the result of "$L4-01 \pm L4-02$" and the range of frequency reference $\pm L4-02$. OFF : The output frequency is not in the range of "$L4-01 \pm L4-02$" nor the range of frequency reference $\pm L4-02$.	629
4	Frequency Detection 1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is higher than the value of $L4-01$ [Speed Agree Detection Level] + $L4-02$ [Speed Agree Detection Width]. After the terminal deactivates, the terminal stays deactivated until the output frequency = $L4-01$. Note: The detection function operates in the two motor rotation directions. The drive uses the $L4-01$ value as the forward/reverse detection level. ON : The output frequency is less than $L4-01$ or is not more than $L4-01 + L4-02$. OFF : The output frequency is more than $L4-01 + L4-02$.	629
5	Frequency Detection 2	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is higher than the value of $L4-01$ [Speed Agree Detection Level]. After the terminal activates, the terminal stays activated until the output frequency is at the value of $L4-01 - L4-02$. Note: The detection function operates in the two motor rotation directions. The drive uses the $L4-01$ value as the forward/reverse detection level. ON : The output frequency is more than $L4-01$. OFF : The output frequency is less than "$L4-01 - L4-02$," or it is not more than $L4-01$.	630
6	Drive Ready	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive is ready and running.	630
7	DC Bus Undervoltage	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the DC bus voltage or control circuit power supply is at the voltage set in $L2-05$ [Undervoltage Detection Lvl (Uv1)] or less. The terminal also activates when there is a fault with the DC bus voltage. ON : The DC bus voltage $\leq L2-05$ OFF : The DC bus voltage $> L2-05$	631
8	During Baseblock (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates during baseblock. When the drive is in baseblock, the drive output transistor stops switching and does not make DC bus voltage. ON : During baseblock OFF : The drive is not in baseblock.	631
9	Frequency Reference from Keypad	V/f OLV OLV/PM AOLV/PM EZOLV Shows the selected frequency reference source. ON : The keypad is the frequency reference source. OFF : Parameter $b1-01$ or $b1-15$ [Frequency Reference Selection 1 or 2] is the frequency reference source.	631
A	Run Command Source	V/f OLV OLV/PM AOLV/PM EZOLV Shows the selected Run command source. ON : The keypad is the Run command source. OFF : Parameter $b1-02$ or $b1-16$ [Run Command Selection 1 or 2] is the Run command source.	631
B	Torque Detection 1 (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects overtorque or undertorque. ON : The output current/torque $> L6-02$ [Torque Detection Level 1], or the output current/torque $< L6-02$ for longer than the time set in $L6-03$ [Torque Detection Time 1].	631
C	Frequency Reference Loss	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects a loss of frequency reference.	631
D	Braking Resistor Fault	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the mounting-type braking resistor is overheating or when there is a braking transistor fault.	632
E	Fault	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects a fault. Note: The terminal will not activate for $CPF00$ and $CPF01$ [Control Circuit Error] faults.	632
F	Not Used	V/f OLV OLV/PM AOLV/PM EZOLV Use this setting for unused terminals or to use terminals in through mode. Also use this setting as the PLC contact output. This signal does not function if you do not configure signals from the PLC.	632
10	Alarm	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects a minor fault.	632

11.10 H: Terminal Functions

Setting Value	Function	Description	Ref.
11	Fault Reset Command Active	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive receives the Reset command from the control circuit terminal, serial communications, or PLC.	632
12	Timer Output	V/f OLV OLV/PM AOLV/PM EZOLV Sets the terminal as the timer output. Use this setting with the timer input set in $H1-xx = 18$ [MFDI Function Selection = Timer Function].	632
13	Speed Agree 2	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is in the range of the frequency reference $\pm L4-04$ [Speed Agree Detection Width(+/-)]. Note: The detection function operates in the two motor rotation directions. ON : The output frequency is in the range of "frequency reference $\pm L4-04$ ". OFF : The output frequency is not in the range of "frequency reference $\pm L4-04$ ".	632
14	User-Set Speed Agree 2	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is in the range of $L4-03$ [Speed Agree Detection Level(+/-)] $\pm L4-04$ [Speed Agree Detection Width(+/-)] and in the range of the frequency reference $\pm L4-04$. Note: The detection level set in $L4-03$ is a signed value. The drive will only detect in one direction. ON : The output frequency is in the range as defined by the result of " $L4-03 \pm L4-04$ " and the range of frequency reference $\pm L4-04$. OFF : The output frequency is not in the range of " $L4-03 \pm L4-04$ " nor the range of frequency reference $\pm L4-04$.	633
15	Frequency Detection 3	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is more than " $L4-03$ [Speed Agree Detection Level(+/-)] $+ L4-04$ [Speed Agree Detection Width(+/-)]". After the terminal deactivates, the terminal stays deactivated until the output frequency is at the value of $L4-03$. Note: The detection level set in $L4-03$ is a signed value. The drive will only detect in one direction. ON : The output frequency is less than $L4-03$ or is not more than $L4-03 + L4-04$. OFF : The output frequency is higher than $L4-03 + L4-04$.	633
16	Frequency Detection 4	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is higher than the value of $L4-03$ [Speed Agree Detection Level (+/-)]. After the terminal activates, the terminal stays activated until the output frequency = $L4-03 - L4-04$. Note: The detection level set in $L4-03$ is a signed value. The drive will only detect in one direction. ON : The output frequency is more than $L4-03$. OFF : The output frequency is less than " $L4-03 - L4-04$," or it is not more than $L4-03$.	634
17	Torque Detection 1 (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive detects overtorque or undertorque. OFF : The output current/torque $> L6-02$ [Torque Detection Level 1], or the output current/torque $< L6-02$ for longer than the time set in $L6-03$ [Torque Detection Time 1].	634
18	Torque Detection 2 (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects overtorque or undertorque. ON : The output current/torque $> L6-05$ [Torque Detection Level 2], or the output current/torque $< L6-05$ for longer than the time set in $L6-06$ [Torque Detection Time 2].	634
19	Torque Detection 2 (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive detects overtorque or undertorque. OFF : The output current/torque $> L6-05$ [Torque Detection Level 2], or the output current/torque $< L6-05$ for longer than the time set in $L6-06$ [Torque Detection Time 2].	635
1A	During Reverse	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the motor operates in the reverse direction. ON : The motor is operating in the reverse direction. OFF : The motor is operating in the forward direction or the motor stopped.	635
1B	During Baseblock (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates during baseblock. When the drive is in baseblock, the drive output transistor stops switching and does not make DC bus voltage. ON : The drive is not in baseblock. OFF : During baseblock	635
1C	Motor 2 Selected	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when you select motor 2. ON : Motor 2 Selected OFF : Motor 1 Selected	635
1E	Executing Auto-Restart	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the Auto Restart function is trying to restart after a fault.	636
1F	Motor Overload Alarm (oL1)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the electronic thermal protection value of the motor overload protective function is a minimum of 90% of the detection level.	636

Setting Value	Function	Description	Ref.
20	Drive Overheat Pre-Alarm (oH)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive heatsink temperature is at the level set with <i>L8-02</i> [Overheat Alarm Level].	636
21	Safe Torque OFF	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates (safety stop state) when the safety circuit and safety diagnosis circuit are operating correctly and when terminals H1-HC and H2-HC are OFF (Open). ON : Safety stop state OFF : Safety circuit fault or RUN/READY	636
22	Mechanical Weakening Detection	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects mechanical weakening.	636
2F	Maintenance Notification	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when drive components are at their estimated maintenance period. Tells you about the maintenance period for these items: • IGBT • Cooling Fan • Capacitor • Soft charge bypass relay	636
30	During Torque Limit	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the torque reference is the torque limit set with <i>L7</i> parameters or <i>H3-02</i> [MFAI Function Selection]. When you set <i>L7-42</i> = 1 [Current Lim Sel = Enabled], the terminal activates when the current value is at the current limit set in <i>L7-43</i> [Current Lim Val].	637
37	During Frequency Output	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive outputs frequency. ON : The drive is outputting frequency. OFF : The drive is not outputting frequency.	637
38	Drive Enabled	V/f OLV OLV/PM AOLV/PM EZOLV This terminal activates when the <i>H1-xx</i> = 6A [Drive Enable] terminal activates.	637
39	Watt Hour Pulse Output	V/f OLV OLV/PM AOLV/PM EZOLV Outputs the pulse that shows the watt hours.	637
3C	LOCAL Control Selected	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the Run command source or frequency reference source is LOCAL. ON : LOCAL OFF : REMOTE	638
3D	During Speed Search	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive is doing speed search.	638
3E	PID Feedback Low	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects <i>FbL</i> [PID Feedback Loss].	638
3F	PID Feedback High	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects <i>FbH</i> [Excessive PID Feedback].	638
4A	During KEB Ride-Thru	V/f OLV OLV/PM AOLV/PM EZOLV The activates during KEB Ride-Thru.	638
4B	During Short Circuit Braking	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates during Short Circuit Braking. Note: When <i>A1-02</i> = 8 [Control Method Selection = EZOLV], this function is available only when you use a PM motor.	638
4C	During Fast Stop	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the fast stop is in operation.	639
4D	oH Pre-Alarm Time Limit	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when <i>L8-03</i> = 4 [Overheat Pre-Alarm Selection = Operate at Reduced Speed (L8-19)] and oH [Heatsink Overheat] does not clear after the drive decreases the frequency for 10 cycles.	639
4E	Braking Transistor Fault (rr)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the internal braking transistor overheats and the drive detects an <i>rr</i> [Dynamic Braking Transistor Fault] fault.	639
4F	Braking Resistor Overheat (rH)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the braking resistor overheats and the drive detects an <i>rH</i> [Braking Resistor Overheat] fault.	639
61	Pole Position Detection Complete	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when drive receives a Run command and the drive detects the motor magnetic pole position of the PM motor.	639

11.10 H: Terminal Functions

Setting Value	Function	Description	Ref.																		
62	Modbus Reg 1 Status Satisfied	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the bit specified by H2-08 [Modbus Register 1 Bit Select] for the Modbus register address set with H2-07 [Modbus Register 1 Address Select] activates.	639																		
63	Modbus Reg 2 Status Satisfied	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the bit specified by H2-10 [Modbus Register 2 Bit Select] for the Modbus register address set with H2-09 [Modbus Register 2 Address Select] activates.	639																		
66	Comparator1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates if the monitor value set with H2-20 [Comparator 1 Monitor Selection] is in range of the values of H2-21 [Comparator 1 Lower Limit] and H2-22 [Comparator 1 Upper Limit] for the time set in H2-24 [Comparator 1 On-Delay Time].	639																		
67	Comparator2	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates if the monitor value set with H2-26 [Comparator 2 Monitor Selection] is not in the range of the values of H2-27 [Comparator 2 Lower Limit] and H2-28 [Comparator 2 Upper Limit] for the time set in H2-30 [Comparator 2 On-Delay Time].	640																		
6A	Data Logger Error	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects a LoG [Com Error / Abnormal SD card].	640																		
90	DWEZ Digital Output 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the DriveWorksEZ digital output 1. Refer to the DriveWorksEZ online manual for more information.	640																		
91	DWEZ Digital Output 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the DriveWorksEZ digital output 2. Refer to the DriveWorksEZ online manual for more information.	640																		
92	DWEZ Digital Output 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the DriveWorksEZ digital output 3. Refer to the DriveWorksEZ online manual for more information.	640																		
100	!During Run	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when you input a Run command and when the drive is outputting voltage. ON : Drive is stopping OFF : Drive is running	641																		
101	!Zero Speed	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is less than E1-09 [Minimum Output Frequency] or b2-01 [DC Injection/Zero SpeedThreshold]. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the reference. <table><tr><th>A1-02 Setting</th><th>Control Method Selection</th><th>Parameter Used as the Reference</th></tr><tr><td>0</td><td>V/f</td><td>E1-09</td></tr><tr><td>2</td><td>OLV</td><td>b2-01</td></tr><tr><td>5</td><td>OLV/PM</td><td>E1-09</td></tr><tr><td>6</td><td>AOLV/PM</td><td>E1-09</td></tr><tr><td>8</td><td>EZOLV</td><td>E1-09</td></tr></table> ON : Output frequency ≥ E1-09 or b2-01. OFF : Output frequency < value of E1-09 or b2-01.	A1-02 Setting	Control Method Selection	Parameter Used as the Reference	0	V/f	E1-09	2	OLV	b2-01	5	OLV/PM	E1-09	6	AOLV/PM	E1-09	8	EZOLV	E1-09	641
A1-02 Setting	Control Method Selection	Parameter Used as the Reference																			
0	V/f	E1-09																			
2	OLV	b2-01																			
5	OLV/PM	E1-09																			
6	AOLV/PM	E1-09																			
8	EZOLV	E1-09																			
102	!Speed Agree 1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is in the range of the frequency reference ± L4-02 [Speed Agree Detection Width]. ON : The output frequency does not align with the frequency reference although the drive is running. OFF : The output frequency is in the range of “frequency reference ± L4-02”.	641																		
103	!User-Set Speed Agree 1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is in the range of L4-01 [Speed Agree Detection Level] ± L4-02 [Speed Agree Detection Width] and in the range of the frequency reference ± L4-02. Note: The detection function operates in the two motor rotation directions. The drive uses the L4-01 value as the forward/reverse detection level. ON : The output frequency is not in the range of “L4-01 ± L4-02” nor the range of frequency reference ± L4-02. OFF : The output frequency is in the range as defined by the result of “L4-01 ± L4-02” and the range of frequency reference ± L4-02.	641																		
104	!Frequency Detection 1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is higher than the value of L4-01 [Speed Agree Detection Level] + L4-02 [Speed Agree Detection Width]. When the terminal activates, it stays activated until the output frequency = L4-01. Note: The detection function operates in the two motor rotation directions. The drive uses the L4-01 value as the forward/reverse detection level. ON : The output frequency is higher than L4-01 + L4-02. OFF : The output frequency is less than L4-01 or is not more than L4-01 + L4-02.	641																		

Setting Value	Function	Description	Ref.
105	!Frequency Detection 2	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is higher than the value of <i>L4-01</i> [<i>Speed Agree Detection Level</i>]. After the terminal activates, the terminal stays on until the output frequency = <i>L4-01</i> - <i>L4-02</i>. Note: The detection function operates in the two motor rotation directions. The drive uses the <i>L4-01</i> value as the forward/reverse detection level. ON : The output frequency is less than "<i>L4-01</i> - <i>L4-02</i>," or it is not more than <i>L4-01</i>. OFF : The output frequency is more than <i>L4-01</i>.	641
106	!Drive Ready	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive is ready and running.	641
107	!DC Bus Undervoltage	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the DC bus voltage or control circuit power supply is at or below the voltage set in <i>L2-05</i> [<i>Undervoltage Detection Lvl (Uv1)</i>]. The terminal also deactivates when there is a fault with the DC bus voltage. ON : The DC bus voltage is more than the setting value of <i>L2-05</i>. OFF : The DC bus voltage is less than the setting value of <i>L2-05</i>.	641
108	During Baseblock (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates during baseblock. When the drive is in baseblock, the drive output transistor stops switching and does not make DC bus voltage. ON : The drive is not in baseblock. OFF : During baseblock	641
109	!Frequency Reference from Keypad	V/f OLV OLV/PM AOLV/PM EZOLV Shows the selected frequency reference source. ON : <i>b1-01</i> [<i>Frequency Reference Selection 1</i>] or <i>b1-15</i> [<i>Frequency Reference Selection 2</i>] is the frequency reference source. OFF : The keypad is the frequency reference source.	641
10A	!Run Command from Keypad	V/f OLV OLV/PM AOLV/PM EZOLV Shows the selected Run command source. ON : <i>b1-02</i> [<i>Run Command Selection 1</i>] or <i>b1-16</i> [<i>Run Command Selection 2</i>] is the Run command source. OFF : The keypad is the Run command source.	641
10B	Torque Detection 1 (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive detects overtorque or undertorque. OFF : The output current/torque exceeds the torque value set with <i>L6-02</i> [<i>Torque Detection Level 1</i>], or the level has dropped and remained in this state longer than the time set with <i>L6-03</i> [<i>Torque Detection Time 1</i>].	641
10C	!Frequency Reference Loss	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive detects a loss of frequency reference.	641
10D	!Braking Resistor Fault	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the mounting-type braking resistor is overheating or when there is a braking transistor fault.	641
10E	!Fault	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive detects a fault. Note: Faults <i>CPF00</i> and <i>CPF01</i> [<i>Control Circuit Error</i>] are excluded.	641
110	!Alarm	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive detects a minor fault.	641
111	!Fault Reset Command Active	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive receives the Reset command from the control circuit terminal, serial communications, or PLC.	641
112	!Timer Output	V/f OLV OLV/PM AOLV/PM EZOLV Sets the terminal as the timer output. Use this setting with the timer input set in <i>H1-xx</i> = <i>118</i> [<i>MFDI Function Selection</i> = !<i>Timer Function</i>].	641
113	!Speed Agree 2	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is in the range of the frequency reference $\pm$ <i>L4-04</i> [<i>Speed Agree Detection Width(+/-)</i>]. Note: The detection function operates in the two motor rotation directions. ON : The output frequency is not in the range of "frequency reference $\pm$ <i>L4-04</i>". OFF : The output frequency is in the range of "frequency reference $\pm$ <i>L4-04</i>".	641
114	!User-Set Speed Agree 2	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is in the range of <i>L4-03</i> [<i>Speed Agree Detection Level(+/-)</i>] $\pm$ <i>L4-04</i> [<i>Speed Agree Detection Width(+/-)</i>] and in the range of the frequency reference $\pm$ <i>L4-04</i>. Note: The detection level set in <i>L4-03</i> is a signed value. The drive will only detect in one direction. ON : The output frequency is not in the range of "<i>L4-03</i> $\pm$ <i>L4-04</i>" nor the range of frequency reference $\pm$ <i>L4-04</i>. OFF : The output frequency is in the range of "<i>L4-03</i> $\pm$ <i>L4-04</i>" and the range of frequency reference $\pm$ <i>L4-04</i>.	641

11.10 H: Terminal Functions

Setting Value	Function	Description	Ref.
115	!Frequency Detection 3	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is higher than "$L4-03$ [Speed Agree Detection Level(+/-)] + $L4-04$ [Speed Agree Detection Width(+/-)]". After the terminal deactivates, the terminal stays deactivated until the output frequency = $L4-03$. Note: The detection level set in $L4-03$ is a signed value. The drive will only detect in one direction. ON : The output frequency is higher than $L4-03 + L4-04$. OFF : The output frequency is less than $L4-03$ or is not more than $L4-03 + L4-04$.	641
116	!Frequency Detection 4	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is higher than the value of $L4-03$ [Speed Agree Detection Level(+/-)]. After the terminal deactivates, the terminal stays deactivated until the output frequency = $L4-03 - L4-04$. Note: The detection level set in $L4-03$ is a signed value. The drive will only detect in one direction. ON : The output frequency is less than "$L4-03 - L4-04$," or it is not more than $L4-03$. OFF : The output frequency is more than $L4-03$.	641
117	Torque Detection 1 (N. O.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects overtorque or undertorque. ON : The output current/torque exceeds the torque value set with $L6-02$ [Torque Detection Level 1], or the level has dropped and remained in this state longer than the time set with $L6-03$ [Torque Detection Time 1].	641
118	Torque Detection 2 (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive detects overtorque or undertorque. OFF : The output current/torque exceeds the torque value set with $L6-05$ [Torque Detection Level 2], or the level has dropped and remained in this state longer than the time set with $L6-06$ [Torque Detection Time 2].	641
119	Torque Detection 2 (N. O.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects overtorque or undertorque. ON : The output current/torque exceeds the torque value set with $L6-05$ [Torque Detection Level 2], or the level has dropped and remained in this state longer than the time set with $L6-06$ [Torque Detection Time 2].	641
11A	!During Reverse	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the motor operates in the reverse direction. ON : The motor is operating in the forward direction or the motor stopped. OFF : The motor is operating in the reverse direction.	641
11B	During Baseblock (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates during baseblock. When the drive is in baseblock, the drive output transistor stops switching and does not make DC bus voltage. ON : During baseblock OFF : The drive is not in baseblock.	641
11C	!Motor 2 Selected	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when motor 2 is selected. ON : Motor 1 Selection OFF : Motor 2 Selection	641
11E	!Executing Auto-Restart	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the Auto Restart function is trying to restart after a fault.	641
11F	!Motor Overload Alarm (oL1)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the electronic thermal protection value of the motor overload protective function is a minimum of 90% of the detection level.	641
120	!Drive Overheat Pre-Alarm (oH)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive heatsink temperature is at the level set with $L8-02$ [Overheat Alarm Level].	641
121	!Safe Torque OFF	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates (safety stop state) when the safety circuit and safety diagnosis circuit are operating correctly and when terminals H1-HC and H2-HC are OFF (Open). ON : Safety circuit fault or RUN/READY OFF : Safety stop state	641
122	!Mechanical Weakening Detection	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive detects mechanical weakening.	641
12F	!Maintenance Notification	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when drive components are at their estimated maintenance period. Tells you about the maintenance period for these items: • IGBT • Cooling Fan • Capacitor • Soft charge bypass relay	641
130	!During Torque Limit	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the torque reference is the torque limit set with $L7$ parameters or $H3-02$ [MFAI Function Selection].	641

Setting Value	Function	Description	Ref.
137	!During Frequency Output	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the drive outputs frequency. ON : The drive is not outputting frequency. OFF : The drive is outputting frequency.	641
138	!Drive Enabled	V/f OLV OLV/PM AQLV/PM EZOLV This terminal deactivates when the $H1-xx = 16A$ [Drive Enable] terminal deactivates.	641
139	!Watt Hour Pulse Output	V/f OLV OLV/PM AQLV/PM EZOLV Outputs the pulse that shows the watt hours.	641
13C	!LOCAL Control Selected	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the Run command source or frequency reference source is LOCAL. ON : REMOTE OFF : LOCAL	641
13D	!During Speed Search	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the drive does speed search.	641
13E	!PID Feedback Low	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the drive detects FbL [PID Feedback Loss].	641
13F	!PID Feedback High	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the drive detects FbH [Excessive PID Feedback].	641
14A	!During KEB Ride-Thru	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the drive executes the KEB Ride-Thru function.	641
14B	!During Short Circuit Braking	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates during Short Circuit Braking. Note: When $A1-02 = 8$ [Control Method Selection = EZ Vector Control], this function is available when you use a PM motor.	641
14C	!During Fast Stop	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the fast stop is in operation.	641
14D	!oH Pre-Alarm Reduction Limit	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when $L8-03 = 4$ [Overheat Pre-Alarm Selection = Operate at Reduced Speed (L8-19)] and oH [Heatsink Overheat] does not clear after the drive decreases the frequency for 10 cycles.	641
14E	!Braking Transistor Fault (rr)	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the internal braking transistor overheats and the drive detects an rr [Dynamic Braking Transistor Fault] fault.	641
14F	!Braking Resistor Overheat (rH)	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the braking resistor overheats and the drive detects an rH [Braking Resistor Overheat] fault.	641
161	!RotorPositionDetection Complete	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when drive receives a Run command and the drive detects the motor magnetic pole position of the PM motor.	641
162	!Modbus Reg 1 Status Satisfied	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the bit specified by $H2-07$ turns on regarding the Modbus register address configured with $H2-08$.	641
163	!Modbus Reg 2 Status Satisfied	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the bit specified by $H2-10$ turns on regarding the Modbus register address configured with $H2-09$.	641
166	!Comparator 1	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the monitor value set with $H2-20$ is within range of $H2-21$ and $H2-22$ for the time set in $H2-24$.	641
167	!Comparator 2	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the when the monitor value set with $H2-26$ is outside the range of $H2-27$ and $H2-28$ for the time set in $H2-30$.	641
16A	!Data Logger Error	V/f OLV OLV/PM AQLV/PM EZOLV The terminal deactivates when the drive detects a LoG [Com Error / Abnormal SD card].	641
190	!DWEZ Digital Output 1	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DriveWorksEZ digital output 1. Refer to the DriveWorksEZ online manual for more information.	641
191	!DWEZ Digital Output 2	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DriveWorksEZ digital output 2. Refer to the DriveWorksEZ online manual for more information.	641
192	!DWEZ Digital Output 3	V/f OLV OLV/PM AQLV/PM EZOLV Sets the DriveWorksEZ digital output 3. Refer to the DriveWorksEZ online manual for more information.	641

◆ H3: Analog Inputs

No. (Hex.)	Name	Description	Default (Range)	Ref.
H3-01 (0410)	Terminal A1 Signal Level Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the input signal level for MFAI terminal A1. 0 : 0 to 10V (Lower Limit at 0) 1 : 0 V to 10 V (Without Lower Limit)	0 (0, 1)	643
H3-02 (0434)	Terminal A1 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function for MFAI terminal A1.	0 (0 - 32)	643
H3-03 (0411) RUN	Terminal A1 Gain Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain of the analog signal input to MFAI terminal A1.	100.0% (-999.9 - +999.9%)	643
H3-04 (0412) RUN	Terminal A1 Bias Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bias of the analog signal input to MFAI terminal A1.	0.0% (-999.9 - +999.9%)	643
H3-13 (041B)	Analog Input FilterTime Constant	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant for primary delay filters on MFAI terminals.	0.03 s (0.00 - 2.00 s)	644
H3-16 (02F0)	Terminal A1 Offset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the offset level for analog signals input to terminal A1. Usually it is not necessary to change this setting.	0 (-500 - +500)	644
H3-40 (0B5C)	Mbus Reg 15C1h Input Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus AI1 function.	F (4 - 2F)	644
H3-41 (0B5F)	Mbus Reg 15C2h Input Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus AI2 function.	F (4 - 2F)	644
H3-42 (0B62)	Mbus Reg 15C3h Input Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus AI3 function.	F (4 - 2F)	644
H3-43 (117F)	Mbus Reg Inputs FilterTime Const	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant to apply a primary delay filter to the Modbus analog input register values.	0.00 s (0.00 - 2.00 s)	645

■ H3-xx: MFAI Setting Values

Setting Value	Function	Description	Ref.
0	Frequency Reference	V/f OLV OLV/PM AOLV/PM EZOLV The input value from the MFAI terminal set with this function becomes the master frequency reference.	645
1	Frequency Gain	V/f OLV OLV/PM AOLV/PM EZOLV The drive multiplies the analog frequency reference with the input value from the MFAI set with this function.	645
2	Auxiliary Frequency Reference 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets Reference 2 through multi-step speed reference to enable the command reference (Auxiliary Frequency Reference 1) from the analog input terminal set here. This value is a percentage where the Maximum Output Frequency setting is a setting value of 100%. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	645
3	Auxiliary Frequency Reference 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets Reference 3 through multi-step speed reference to enable the command reference (Auxiliary Frequency Reference 2) from the analog input terminal set here. This value is a percentage where the Maximum Output Frequency setting is a setting value of 100%. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	645
4	Output Voltage Bias	V/f OLV OLV/PM AOLV/PM EZOLV Set this parameter to input a bias signal to amplify the output voltage.	645
5	Accel/Decel Time Gain	V/f OLV OLV/PM AOLV/PM EZOLV Enters a signal to adjust the gain used for C1-01 to C1-08 [Acceleration/Deceleration Times 1 to 4] and C1-09 [Fast Stop Time] when the full scale analog signal (10 V or 20 mA) is 100%.	646
6	DC Injection Braking Current	V/f OLV OLV/PM AOLV/PM EZOLV Enters a signal to adjust the current level used for DC Injection Braking when the drive rated output current is 100%.	646

Setting Value	Function	Description	Ref.
7	Torque Detection Level	V/f OLV OLV/PM AQLV/PM EZOLV Enters a signal to adjust the overtorque/undertorque detection level. Note: Use this function with L6-01 [Torque Detection Selection 1]. This parameter functions as an alternative to L6-02 [Torque Detection Level 1].	646
8	Stall Prevent Level during Run	V/f OLV OLV/PM AQLV/PM EZOLV Enters a signal to adjust the stall prevention level during run if the drive rated current is 100%.	647
9	Output Frequency Lower Limit	V/f OLV OLV/PM AQLV/PM EZOLV Enters a signal to adjust the output frequency lower limit level as a percentage of the maximum output frequency. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	647
B	PID Feedback	V/f OLV OLV/PM AQLV/PM EZOLV Enter the PID feedback value as a percentage of the maximum output frequency. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	647
C	PID Setpoint	V/f OLV OLV/PM AQLV/PM EZOLV Enters the PID setpoint as a percentage of the maximum output frequency. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	647
D	Frequency Bias	V/f OLV OLV/PM AQLV/PM EZOLV Enters the bias value added to the frequency reference as a percentage of the maximum output frequency. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	647
E	Motor Temperature (PTC Input)	V/f OLV OLV/PM AQLV/PM EZOLV Uses the motor Positive Temperature Coefficient (PTC) thermistor to prevent heat damage to the motor as a percentage of the current value when the 10 V analog signal is input.	648
F	Not Used	V/f OLV OLV/PM AQLV/PM EZOLV Use this setting for unused terminals or to use terminals in through mode.	648
10	Forward Torque Limit	V/f OLV OLV/PM AQLV/PM EZOLV Enters the forward torque limit if the motor rated torque is 100%.	648
11	Reverse Torque Limit	V/f OLV OLV/PM AQLV/PM EZOLV Enters the load torque limit if the motor rated torque is 100%.	649
12	Regenerative Torque Limit	V/f OLV OLV/PM AQLV/PM EZOLV Enters the regenerative torque limit if the motor rated torque is 100%.	650
13	General Torque Limit 1	V/f OLV OLV/PM AQLV/PM EZOLV Enters the torque limit if the motor rated torque is 100%.	650
14	Torque Compensation	V/f OLV OLV/PM AQLV/PM EZOLV Enters the torque compensation value if the motor rated torque is 100%.	650
15	General Torque Limit 2	V/f OLV OLV/PM AQLV/PM EZOLV Enters the torque limit that is the same for all quadrants for forward, reverse, and regenerative operation if the motor rated torque is 100%.	650
16	Differential PID Feedback	V/f OLV OLV/PM AQLV/PM EZOLV Enters the PID differential feedback value if the full scale analog signal (10 V) is 100%.	650
1F	Not Used	V/f OLV OLV/PM AQLV/PM EZOLV Use this setting for unused terminals or to use terminals in through mode.	650
30	DWEZ Analog Input 1	V/f OLV OLV/PM AQLV/PM EZOLV Use with DriveWorksEZ. Refer to the DriveWorksEZ online manual for more information.	650

11.10 H: Terminal Functions

Setting Value	Function	Description	Ref.
31	DWEZ Analog Input 2	V/f OLV OLV/PM AOLV/PM EZOLV Use with DriveWorksEZ. Refer to the DriveWorksEZ online manual for more information.	650
41	V/f Out Gain	V/f OLV OLV/PM AOLV/PM EZOLV You can change the output voltage when you adjust the voltage reference via one of the analog input terminals or controller. An internal 0.3 s delay has been added to prevent sudden, drastic change to the V/f pattern. Note: When you set $H3\text{-}xx = 41$ to adjust the Output voltage gain, the drive ignores a voltage reference from the controller.	651

◆ H5: Modbus Communication

No. (Hex.)	Name	Description	Default (Range)	Ref.
H5-11 (043C) RUN	Comm ENTER Command Mode	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to make the Enter command necessary to change parameters through Modbus communications. 0 : ENTER Command Required 1 : ENTER Command Not Required	1 (0, 1)	651
H5-17 (11A1) Expert	ENTER command response @CPU BUSY	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation when the EEPROM write command is sent without EEPROM write available. Usually it is not necessary to change this setting. 0 : Ignore Command(No ROM/RAM Write) 1 : Write to RAM Only	0 (0, 1)	651
H5-18 (11A2)	Motor Speed Filter over Comms	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant used when monitoring motor speed during PLC.	0 ms (0 - 100 ms)	652
H5-20 (0B57)	Communication Parameters Reload	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to immediately enable updated Modbus communications parameters. 0 : Reload at Next Power Cycle 1 : Reload Now	0 (0, 1)	652
H5-22 (11CF)	Speed Search from Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV Enables the Modbus communication register Speed Search function (bit0 of 15DFH). 0 : Disabled 1 : Enabled	0 (0, 1)	652
H5-25 (1589) RUN	Function 5A Register 1 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Returns the contents of the specified Modbus communications register when responding to the master device.	0044H (U1-05) (0000H - FFFFH)	652
H5-26 (158A) RUN	Function 5A Register 2 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Returns the contents of the specified Modbus communications register when responding to the master device.	0045H (U1-06) (0000H - FFFFH)	652
H5-27 (158B) RUN	Function 5A Register 3 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Returns the contents of the specified Modbus communications register when responding to the master device.	0042H (U1-03) (0000H - FFFFH)	653
H5-28 (158C) RUN	Function 5A Register 4 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Returns the contents of the specified Modbus communications register when responding to the master device.	0049H (U1-10) (0000H - FFFFH)	653

◆ H7: Virtual MFIO Selection

No. (Hex.)	Name	Description	Default (Range)	Ref.
H7-00 (116F) Expert	Virtual MFIO selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable the virtual I/O function. Set this parameter to 1 to operate the virtual I/O function. 0 : Disabled 1 : Enabled	0 (0, 1)	654
H7-01 (1185) Expert	Virtual Multi-Function Input 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enters the virtual input set in H7-10 [Virtual Multi-Function Output 1]. Note: 1B [Programming Lockout] and 11B [Inverse Input of 1B] are not available.	F (1 - 19F)	654

No. (Hex.)	Name	Description	Default (Range)	Ref.
H7-02 (1186) Expert	Virtual Multi-Function Input 2	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function that enters the virtual input set in H7-12 [Virtual Multi-Function Output 2]. Note: 1B [Programming Lockout] and 11B [Inverse Input of 1B] are not available.	F (1 - 19F)	654
H7-03 (1187) Expert	Virtual Multi-Function Input 3	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function that enters the virtual input set in H7-14 [Virtual Multi-Function Output 3]. Note: 1B [Programming Lockout] and 11B [Inverse Input of 1B] are not available.	F (1 - 19F)	654
H7-04 (1188) Expert	Virtual Multi-Function Input 4	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function that enters the virtual input set in H7-16 [Virtual Multi-Function Output 4]. Note: 1B [Programming Lockout] and 11B [Inverse Input of 1B] are not available.	F (1 - 19F)	654
H7-10 (11A4) Expert	Virtual Multi-Function Output 1	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function for virtual digital output 1.	F (0 - 192)	654
H7-11 (11A5) Expert	Virtual Output 1 Delay Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the minimum ON time for virtual digital output 1.	0.1 s (0.0 - 25.0 s)	655
H7-12 (11A6) Expert	Virtual Multi-Function Output 2	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function for virtual digital output 2.	F (0 - 192)	655
H7-13 (11A7) Expert	Virtual Output 2 Delay Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the minimum ON time for virtual digital output 2.	0.1 s (0.0 - 25.0 s)	655
H7-14 (11A8) Expert	Virtual Multi-Function Output 3	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function for virtual digital output 3.	F (0 - 192)	655
H7-15 (11A9) Expert	Virtual Output 3 Delay Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the minimum ON time for virtual digital output 3.	0.1 s (0.0 - 25.0 s)	655
H7-16 (11AA) Expert	Virtual Multi-Function Output 4	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function for virtual digital output 4.	F (0 - 192)	655
H7-17 (11AB) Expert	Virtual Output 4 Delay Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the minimum ON time for virtual digital output 4.	0.1 s (0.0 - 25.0 s)	655
H7-30 (1177) Expert	Virtual Analog Input Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the virtual analog input function.	F (0 - 32)	656
H7-31 (1178) RUN Expert	Virtual Analog Input Gain	V/f OLV OLV/PM AQLV/PM EZOLV Sets the virtual analog input gain.	100.0% (-999.9 - 999.9%)	656
H7-32 (1179) RUN Expert	Virtual Analog Input Bias	V/f OLV OLV/PM AQLV/PM EZOLV Sets the virtual analog input bias.	0.0% (-999.9 - 999.9%)	656
H7-40 (1163)	Virtual Analog Out Signal Select	V/f OLV OLV/PM AQLV/PM EZOLV Sets the signal level of the virtual analog output. 0 : 0 to 100% (Absolute Value) 1 : -100 to 100% 2 : 0 to 100% (Lower Limit at 0)	0 (0 - 2)	656

11.10 H: Terminal Functions

No. (Hex.)	Name	Description	Default (Range)	Ref.
H7-41 (1164)	Virtual Analog Output Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor to be output from the virtual analog output. Set the x-xx part of the <i>Ux-xx</i> [Monitor]. For example, set <i>H7-41</i> = 102 to monitor <i>U1-02</i> [Output Frequency].	102 (0 - 999)	656
H7-42 (1165)	Virtual Analog Output FilterTime	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant for a primary filter of the virtual analog output.	0.00 s (0.00 - 2.00 s)	656

11.11 L: Protection Functions

◆ L1: Motor Protection

No. (Hex.)	Name	Description	Default (Range)	Ref.
L1-01 (0480)	Motor Overload (oL1) Protection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor overload protection with electronic thermal protectors. 0 : Disabled 1 : Variable Torque 2 : Constant Torque 10:1 Speed Range 3 : Constant Torque 100:1 SpeedRange 4 : PM Variable Torque 5 : PM Constant Torque 6 : Variable Torque (50Hz) Note: When only one motor is connected to a drive, set <i>L1-01</i> = 1 to 6 [Enabled]. External thermal relays are not necessary in these conditions.	Determined by A1-02 (0 - 6)	192
L1-02 (0481)	Motor Overload Protection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the operation time for the electronic thermal protector of the drive to prevent damage to the motor. Usually it is not necessary to change this setting.	1.0 min (0.1 - 5.0 min)	195
L1-03 (0482)	Motor Thermistor oH Alarm Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive operation when the PTC input signal entered into the drive is at the <i>oH3</i> [Motor Overheat Alarm] detection level. 0 : Ramp to Stop 1 : Coast to Stop 2 : Fast Stop 3 : Alarm Only	3 (0 - 3)	196
L1-04 (0483)	Motor Thermistor oH Fault Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive operation when the PTC input signal to the drive is at the <i>oH4</i> [Motor Overheat Fault (PTC Input)] detection level. 0 : Ramp to Stop 1 : Coast to Stop 2 : Fast Stop	1 (0 - 2)	196
L1-05 (0484)	Motor Thermistor Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the primary delay time constant for the PTC input signal entered to the drive. This parameter prevents accidental motor overheat faults.	0.20 s (0.00 - 10.00 s)	663
L1-08 (1103)	oL1 Current Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the reference current for the motor 1 thermal overload detection. When the current level > 0.0 A, you cannot set this value < 10% of drive rated current.	0.0 A (0.0 A or 10% to 150% of the drive rated current)	663
L1-09 (1104)	oL1 Current Level for Motor 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the reference current for the motor 2 thermal overload detection. When the current level > 0.0 A, you cannot set this value < 10% of drive rated current.	0.0 A (0.0 A or 10 to 150% of the drive rated current)	663
L1-13 (046D)	Motor Overload Memory Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that keeps the current electronic thermal protector value when the drive stops receiving power. 0 : Disabled 1 : Enabled	1 (0, 1)	663
L1-22 (0768) RUN	Leakage Current Filter Time1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the leakage current detection reduction filter time constant during constant speed run. Note: You can set this parameter when <i>C6-02</i> = B [Carrier Frequency Selection = Leakage Current Detection Reduction Rate PWM].	Determined by C6-02 (0.0 - 60.0 s)	663
L1-23 (0769) RUN	Leakage Current Filter Time2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the leakage current detection reduction filter time constant during acceleration/ deceleration. Note: - You can set this parameter when <i>C6-02</i> = B [Carrier Frequency Selection = Leakage Current Detection Reduction Rate PWM]. - When the setting value increases, the current monitor also starts up slowly. Examine the relevant sequence for problems.	Determined by C6-02 (0.0 - 60.0 s)	664

◆ L2: Power Loss Ride Through

No. (Hex.)	Name	Description	Default (Range)	Ref.
L2-01 (0485)	Power Loss Ride Through Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive operation after a momentary power loss. 0 : Disabled 1 : Enabled for L2-02 Time 2 : Enabled while CPU Power Active 3 : Kinetic Energy Backup: L2-02 4 : Kinetic Energy Backup: CPU Power 5 : Kinetic Energy Backup: DecelStop	0 (0 - 5)	669
L2-02 (0486)	Power Loss Ride Through Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will wait before it tries to restart if the DC bus voltage is less than <i>L2-05 [Undervoltage Detection Lvl (Uv1)]</i> after a momentary power loss.	Determined by o2-04, C6-01 (0.0 - 25.5 s)	670
L2-03 (0487)	Minimum Baseblock Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum time to continue the drive output block (baseblock) after a baseblock.	Determined by o2-04, C6-01 (0.1 - 5.0 s)	671
L2-04 (0488)	Powerloss V/f Recovery Ramp Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time for the drive output voltage to go back to correct voltage after completing speed searches.	Determined by o2-04, C6-01 (0.0 - 5.0 s)	671
L2-05 (0489)	Undervoltage Detection Lvl (Uv1)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage at which a <i>Uv1 [DC Bus Undervoltage]</i> fault is triggered or at which the KEB function is activated. Usually it is not necessary to change this setting. NOTICE Damage to Equipment When you set this parameter to a value lower than the default, you must install an AC reactor on the input side of the power supply. If you do not install an AC reactor, it will cause damage to the drive circuitry.	Determined by o2-04 and E1-01 (200 V Class: 150 - 210 V, 400 V Class: 300 - 420 V)	671
L2-06 (048A) Expert	Kinetic Energy Backup Decel Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the deceleration time during KEB operation used to decrease the maximum output frequency to 0. Note: When <i>L2-29 = 1, 2, or 3 [Kinetic Energy Backup Method = Single Drive KEB Ride-Thru 2, System KEB Ride-Thru 1, or System KEB Ride-Thru 2]</i> and you do KEB Auto-Tuning, the drive will automatically set this value.	0.0 s (0.0 - 6000.0 s)	671
L2-07 (048B) Expert	Kinetic Energy Backup Accel Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the acceleration time to return the frequency to the frequency reference before a power loss after canceling KEB operation.	0.0 s (0.0 - 6000.0 s)	672
L2-08 (048C) Expert	Frequency Gain at KEB Start	V/f OLV OLV/PM AOLV/PM EZOLV Sets the quantity of output frequency reduction used when KEB operation starts as a percentage of the motor rated slip before starting KEB operation.	100% (0 - 300%)	672
L2-09 (048D) Expert	KEB Minimum Frequency Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the quantity of output frequency reduction used as a percentage of <i>E2-02 [Motor Rated Slip]</i> when KEB operation starts.	20% (0 - 100%)	672
L2-10 (048E) Expert	Minimum KEB Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum length of time to operate the KEB after the drive detects a momentary power loss.	50 ms (0 - 25500 ms)	672
L2-11 (0461) Expert	KEB DC Bus Voltage Setpoint	V/f OLV OLV/PM AOLV/PM EZOLV Sets the target value that controls the DC bus voltage to a constant level in Single Drive KEB Ride-Thru 2. Sets the DC bus voltage level that completes the KEB operation for all other KEB methods.	Determined by E1-01 (Determined by E1-01)	673
L2-29 (0475) Expert	Kinetic Energy Backup Method	V/f OLV OLV/PM AOLV/PM EZOLV Sets the KEB function operation mode. 0 : Single Drive KEB Ride-Thru 1 1 : Single Drive KEB Ride-Thru 2 2 : System KEB Ride-Thru 1 3 : System KEB Ride-Thru 2	0 (0 - 3)	673

No. (Hex.)	Name	Description	Default (Range)	Ref.
L2-30 (045E) Expert	KEB Zero Speed Operation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the operation when the output frequency decreases below the zero level (DC braking injection starting frequency) during KEB deceleration when L2-01 = 3 to 5 [Power Loss Ride Through Select = Kinetic Energy Backup: L2-02, Kinetic Energy Backup: CPU Power, or Kinetic Energy Backup: DecelStop]. 0 : Baseblock 1 : DC/SC Braking	0 (0, 1)	674
L2-31 (045D) Expert	KEB Start Voltage Offset Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the KEB start voltage offset.	Determined by A1-02 (200 V Class: 0 - 100 V, 400 V Class: 0 - 200 V)	674

◆ L3: Stall Prevention

No. (Hex.)	Name	Description	Default (Range)	Ref.
L3-01 (048F)	Stall Prevention during Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method of the Stall Prevention During Acceleration. 0 : Disabled 1 : Enabled 2 : Intelligent (Ignore Accel Ramp) 3 : Current Limit Acceleration	1 (0 - 3)	675
L3-02 (0490)	Stall Prevent Level during Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output current level at which the Stall Prevention function operates during acceleration where the drive rated output current is 100%. Note: The upper limit to the setting range changes when the setting for C6-01 [Normal / Heavy Duty Selection] changes. • 150% when C6-01 = 0 [Heavy Duty Rating] • 120% when C6-01 = 1 [Normal Duty Rating]	Determined by C6-01 (0 - 150%)	676
L3-03 (0491)	Stall Prevent Limit during Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit for the stall prevention level used in the constant output range as a percentage of the drive rated output current.	50% (0 - 100%)	677
L3-04 (0492)	Stall Prevention during Decel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method that the drive will use to prevent overvoltage faults when decelerating. Note: 1. To connect a dynamic braking option (braking resistor or braking resistor unit) to the drive, set this parameter to 0 or 3. Parameter settings 1, 2, 4, 5, and 7 will enable Stall Prevention function during deceleration, and the dynamic braking option will not function. 2. The setting range changes when the A1-02 [Control Method Selection] value changes: • When A1-02 = 5 [OLV/PM], the setting range is 0 to 2. • When A1-02 = 6 or 8 [AOLV/PM or EZOLV], the setting range is 0 or 1. 0 : No 1 : General Purpose 2 : Intelligent (Ignore Decel Ramp) 3 : General Purpose w/ DB resistor 4 : Overexcitation/High Flux 5 : Overexcitation/High Flux 2 7 : Overexcitation/High Flux 3	1 (Determined by A1-02)	677
L3-05 (0493)	Stall Prevention during RUN	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable Stall Prevention During Run. Note: • An output frequency less than 6 Hz disables Stall Prevention during Run. The setting values of L3-05 and L3-06 [Stall Prevent Level during Run] do not have an effect. • The setting range changes when the A1-02 [Control Method Selection] value changes: – A1-02 = 0, 5 [V/f, OLV/PM] : 0 to 2 – A1-02 = 8 [EZOLV] : 0, 3 0 : No 1 : Deceleration Time 1 (C1-02) 2 : Deceleration Time 2 (C1-04) 3 : Intelligent (Ignore Decel Ramp)	2 (0 - Determined by A1-02)	679

11.11 L: Protection Functions

No. (Hex.)	Name	Description	Default (Range)	Ref.
L3-06 (0494)	Stall Prevent Level during Run	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output current level at which the Stall Prevention function is enabled during run when the drive rated output current is 100%. Note: - This parameter is applicable when L3-05 = 1, 2 [Stall Prevention during RUN = Deceleration Time 1 (C1-02), Deceleration Time 2 (C1-04)]. - The upper limit to the setting range changes when the setting for C6-01 [Normal / Heavy Duty Selection] changes. –150% when C6-01 = 0 [Heavy Duty Rating] –120% when C6-01 = 1 [Normal Duty Rating]	Determined by C6-01 (5 - 150%)	679
L3-11 (04C7)	Overvoltage Suppression Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the overvoltage suppression function. 0 : Disabled 1 : Enabled	0 (0, 1)	680
L3-17 (0462)	DC Bus Regulation Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the target value for the DC bus voltage when the overvoltage suppression function and the Decel Stall Prevention function (Intelligent Stall Prevention) are active.	200 V Class: 375 V, 400 V Class: 750 V (200 V Class: 150 to 400 V, 400 V Class: 300 to 800 V)	680
L3-20 (0465) Expert	DC Bus Voltage Adjustment Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain used to control the DC bus voltage.	Determined by A1-02 (0.00 - 5.00)	680
L3-21 (0466) Expert	OV Suppression Accel/Decel P Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain to calculate acceleration and deceleration rates.	Determined by A1-02 (0.10 - 10.00)	681
L3-22 (04F9)	PM Stall Prevention Decel Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the momentary deceleration time that the drive will use when it tries to accelerate a PM motor and detected motor stalls. This function is applicable when L3-01 = 1 [Stall Prevention during Accel = Enabled].	0.0 s (0.0 - 6000.0 s)	681
L3-23 (04FD)	Stall P Reduction at Constant HP	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to automatically decrease the Stall Prevention Level during Run for constant output ranges. 0 : Use L3-06 for Entire Speed Range 1 : Automatic Reduction @ CHP Region	0 (0, 1)	681
L3-24 (046E) Expert	Motor Accel Time @ Rated Torque	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor acceleration time to reach the maximum frequency at the motor rated torque for stopped single-drive motors.	Determined by o2-04, C6-01, E2-11, and E5-01 (0.001 - 10.000 s)	681
L3-25 (046F) Expert	Load Inertia Ratio	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ratio between motor inertia and machine inertia.	1.0 (0.1 - 1000.0)	682
L3-26 (0455) Expert	Additional DC Bus Capacitors	V/f OLV OLV/PM AOLV/PM EZOLV Sets the capacity for external main circuit capacitors. Usually it is not necessary to change this setting. Sets this parameter when you use the KEB Ride-Thru function.	0 µF (0 to 65000 µF)	682
L3-27 (0456)	Stall Prevention Detection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets a delay time between reaching the Stall Prevention level and starting the Stall Prevention function.	60 ms (0 - 5000 ms)	682
L3-34 (016F) Expert	Torque Limit Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant that returns the torque limit to its initial value when KEB operation operates in Single Drive KEB Ride-Thru mode.	Determined by A1-02 (0.000 - 1.000 s)	682
L3-35 (0747) Expert	Speed Agree Width for Auto Decel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width for speed agreement when L3-04 = 2 [Stall Prevention during Decel = Intelligent (Ignore Decel Ramp)]. Usually it is not necessary to change this setting.	0.00 Hz (0.00 - 1.00 Hz)	683
L3-36 (11D0)	Current Suppression Gain@Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain to suppress current and motor speed hunting during operation when L3-01 = 3 [Stall Prevention during Accel = Current Limit Method]. Usually it is not necessary to change this setting.	Determined by A1-02 (0.0 - 100.0)	683
L3-37 (11D1) Expert	Current Limit P Gain @Accel	V/f OLV OLV/PM AOLV/PM EZOLV Suppresses current hunting during acceleration. Usually it is not necessary to change this setting.	5 ms (0 - 100 ms)	683
L3-38 (11D2) Expert	Current Limit I Time @ Accel	V/f OLV OLV/PM AOLV/PM EZOLV Suppresses current hunting and overshooting that occurs when the drive stalls during acceleration. Usually it is not necessary to change this setting.	10.0 (0.0 - 100.0)	683

No. (Hex.)	Name	Description	Default (Range)	Ref.
L3-39 (11D3)	Current Limit Filter Time@Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant to adjust the acceleration rate when $L3-01 = 3$ [Stall Prevention during Accel = Current Limit Acceleration]. Usually it is not necessary to change this setting.	100.0 ms (1.0 - 1000.0 ms)	683
L3-40 (11D4)	Current Limit S-Curve @ Acc/Dec	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable the best S-curve characteristic used for current-limited acceleration. 0 : Disabled 1 : Enabled	0 (0, 1)	683

◆ L4: Speed Detection

No. (Hex.)	Name	Description	Default (Range)	Ref.
L4-01 (0499)	Speed Agree Detection Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level to detect speed agree or motor speed. Sets the level to detect speed agree or motor speed when $H2-01$ to $H2-03 = 2, 3, 4, 5$ [MFDO Function Selection = Speed Agree 1, User-set Speed Agree 1, Frequency Detection 1, Frequency Detection 2].	Determined by A1-02 (Determined by A1-02)	684
L4-02 (049A)	Speed Agree Detection Width	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width to detect speed agree or motor speed. Sets the width to detect speed agree or motor speed when $H2-01$ to $H2-03 = 2, 3, 4, 5$ [MFDO Function Selection = Speed Agree 1, User-set Speed Agree 1, Frequency Detection 1, Frequency Detection 2].	Determined by A1-02 (Determined by A1-02)	684
L4-03 (049B)	Speed Agree Detection Level(+/-)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level to detect speed agree or motor speed. Sets the level to detect speed agree or motor speed when $H2-01$ to $H2-03 = 13, 14, 15, 16$ [MFDO Function Selection = Speed Agree 2, User-set Speed Agree 2, Frequency Detection 3, Frequency Detection 4].	Determined by A1-02 (Determined by A1-02)	684
L4-04 (049C)	Speed Agree Detection Width(+/-)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width to detect speed agree or motor speed. Sets the width to detect speed agree or motor speed when $H2-01$ to $H2-03 = 13, 14, 15, 16$ [MFDO Function Selection = Speed Agree 2, User-set Speed Agree 2, Frequency Detection 3, Frequency Detection 4].	Determined by A1-02 (Determined by A1-02)	684
L4-05 (049D)	Fref Loss Detection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the operation when the drive detects a loss of frequency reference. 0 : Stop 1 : Run at (L4-06 x Last Reference)	0 (0, 1)	684
L4-06 (04C2)	Frequency Reference @Loss of Ref	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference as a percentage to continue drive operation after it detects a frequency reference loss. The value is a percentage of the frequency reference before the drive detected the loss.	80.0% (0.0 - 100.0%)	685
L4-07 (0470)	Speed Agree Detection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the condition that activates speed detection. 0 : No Detection during Baseblock 1 : Detection Always Enabled	0 (0, 1)	685
L4-08 (047F)	Speed Agree Source Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to use the soft starter output frequency or the motor speed (estimation value) for speed detection. 0 : Softstarter Output (Reference) 1 : Motor Speed (Actual Speed)	0 (0, 1)	685

◆ L5: Fault Restart

No. (Hex.)	Name	Description	Default (Range)	Ref.
L5-01 (049E)	Number of Auto-Restart Attempts	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of times that the drive will try to restart.	0 (0 - 10 times)	687
L5-02 (049F)	Fault Contact at Restart Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that sends signals to the MFDO terminal set for Fault [$H2-xx = E$] while the drive is automatically restarting. 0 : Active Only when Not Restarting 1 : Always Active	0 (0, 1)	687

11.11 L: Protection Functions

No. (Hex.)	Name	Description	Default (Range)	Ref.
L5-04 (046C)	Interval Method Restart Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time interval between each Auto Restart attempt. This function is enabled when <i>L5-05 = 1</i> [Auto Restart Operation Selection = Use <i>L5-04</i> Time].	10.0 s (0.5 - 600.0 s)	687
L5-05 (0467)	Auto-Restart Method	V/f OLV OLV/PM AOLV/PM EZOLV Sets the count method for the Auto Restart operation. 0 : Continuous/Immediate Attempts 1 : Interval/Attempt after <i>L5-04</i> sec	0 (0, 1)	687
L5-07 (0B2A)	Fault Reset Enable Select Grp1	V/f OLV OLV/PM AOLV/PM EZOLV Use these 4 digits to set the Auto Restart function for <i>oL1</i> to <i>oL4</i>. From left to right, the digits set <i>oL1</i>, <i>oL2</i>, <i>oL3</i>, and <i>oL4</i>, in order. 0000 : Disabled 0001 : Enabled (—/—/—/oL4) 0010 : Enabled (—/—/oL3/—) 0011 : Enabled (—/—/oL3/oL4) 0100 : Enabled (—/oL2/—/—) 0101 : Enabled (—/oL2/—/oL4) 0110 : Enabled (—/oL2/oL3/—) 0111 : Enabled (—/oL2/oL3/oL4) 1000 : Enabled (oL1/—/—/—) 1001 : Enabled (oL1/—/—/oL4) 1010 : Enabled (oL1/—/oL3/—) 1011 : Enabled (oL1/—/oL3/oL4) 1100 : Enabled (oL1/oL2/—/—) 1101 : Enabled (oL1/oL2/—/oL4) 1110 : Enabled (oL1/oL2/oL3/—) 1111 : Enabled (oL1/oL2/oL3/oL4)	1111 (0000 - 1111)	687
L5-08 (0B2B)	Fault Reset Enable Select Grp2	V/f OLV OLV/PM AOLV/PM EZOLV Use these 4 digits to set the Auto Restart function for <i>Uv1</i>, <i>ov</i>, <i>oH1</i>, and <i>GF</i>. From left to right, the digits set <i>Uv1</i>, <i>ov</i>, <i>oH1</i>, and <i>GF</i>, in order. 0000 : Disabled 0001 : Enabled (—/—/—/GF) 0010 : Enabled (—/—/oH1/—) 0011 : Enabled (—/—/oH1/GF) 0100 : Enabled (—/ov/—/—) 0101 : Enabled (—/ov/—/GF) 0110 : Enabled (—/ov/oH1/—) 0111 : Enabled (—/ov/oH1/GF) 1000 : Enabled (Uv1/—/—/—) 1001 : Enabled (Uv1/—/—/GF) 1010 : Enabled (Uv1/—/oH1/—) 1011 : Enabled (Uv1/—/oH1/GF) 1100 : Enabled (Uv1/ov/—/—) 1101 : Enabled (Uv1/ov/—/GF) 1110 : Enabled (Uv1/ov/oH1/—) 1111 : Enabled (Uv1/ov/oH1/GF)	1111 (0000 - 1111)	688

◆ L6: Torque Detection

No. (Hex.)	Name	Description	Default (Range)	Ref.
L6-01 (04A1)	Torque Detection Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets torque detection conditions that will trigger an overtorque or undertorque response from the drive. 0 : Disabled 1 : oL @ Speed Agree - Alarm only 2 : oL @ RUN - Alarm only 3 : oL @ Speed Agree - Fault 4 : oL @ RUN - Fault 5 : UL @ Speed Agree - Alarm only 6 : UL @ RUN - Alarm only 7 : UL @ Speed Agree - Fault 8 : UL @ RUN - Fault	0 (0 - 8)	691
L6-02 (04A2)	Torque Detection Level 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level for Overtorque/Undertorque Detection 1. In V/f control, drive rated output current = 100% value. In vector control, motor rated torque = 100% value.	150% (0 - 300%)	692
L6-03 (04A3)	Torque Detection Time 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection time for Overtorque/Undertorque Detection 1.	0.1 s (0.0 - 10.0 s)	692
L6-04 (04A4)	Torque Detection Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed range that detects overtorque and undertorque and the operation of drives (operation status) after detection. 0 : Disabled 1 : oL @ Speed Agree - Alarm only 2 : oL @ RUN - Alarm only 3 : oL @ Speed Agree - Fault 4 : oL @ RUN - Fault 5 : UL @ Speed Agree - Alarm only 6 : UL @ RUN - Alarm only 7 : UL @ Speed Agree - Fault 8 : UL @ RUN - Fault	0 (0 - 8)	692
L6-05 (04A5)	Torque Detection Level 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level for Overtorque/Undertorque Detection 2. In V/f control, drive rated output current = 100% value. In vector control, motor rated torque = 100% value.	150% (0 - 300%)	693
L6-06 (04A6)	Torque Detection Time 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection time for Overtorque/Undertorque Detection 2.	0.1 s (0.0 - 10.0 s)	693
L6-07 (04E5)	Torque Detection Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant for a primary filter to the torque reference or to the output current used to detect overtorque/undertorque.	0 ms (0 - 1000 ms)	693
L6-08 (0468)	Mechanical Fatigue Detect Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed where the drive detects mechanical deterioration and how the drive operates (operation status) after detection. 0 : Disabled 1 : oL5 @ Speed > L6-09 - Alarm 2 : oL5 @ Speed > L6-09 - Alarm 3 : oL5 @ Speed > L6-09 - Fault 4 : oL5 @ Speed > L6-09 - Fault 5 : UL5 @ Speed < L6-09 - Alarm 6 : UL5 @ Speed < L6-09 - Alarm 7 : UL5 @ Speed < L6-09 - Fault 8 : UL5 @ Speed < L6-09 - Fault	0 (0 - 8)	693
L6-09 (0469)	Mech Fatigue Detect Speed Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed level where the drive will operate the mechanical deterioration detection function, as a percentage of the Maximum Output Frequency. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 ≠ 8 [EZOLV]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Maximum Speed]	110.0% (-110.0 - 110.0%)	694

11.11 L: Protection Functions

No. (Hex.)	Name	Description	Default (Range)	Ref.
L6-10 (046A)	Mech Fatigue Detect Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time for mechanical deterioration detection.	0.1 s (0.0 - 10.0 s)	694
L6-11 (046B)	Mech Fatigue Hold Off Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time that the drive will start mechanical deterioration detection triggered by the cumulative operation time of the drive.	0 h (0 - 65535 h)	694

◆ L7: Torque/Current Limit

No. (Hex.)	Name	Description	Default (Range)	Ref.
L7-01 (04A7) RUN	Forward Torque Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque limit value for forward motoring as a percentage, where motor rated torque is the 100% value. Note: When you set L7-42 = 1 [Current Lim Sel = Enabled], the drive disables L7-01 to L7-04 [Torque Limits] and limits the output current at the value set in L7-43 [Current Lim Val].	200% (0 - 300%)	695
L7-02 (04A8) RUN	Reverse Torque Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque limit value for reversed motoring as a percentage, where motor rated torque is the 100% value. Note: When you set L7-42 = 1 [Current Lim Sel = Enabled], the drive disables L7-01 to L7-04 [Torque Limits] and limits the output current at the value set in L7-43 [Current Lim Val].	200% (0 - 300%)	696
L7-03 (04A9) RUN	Forward Regenerative Trq Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque limit value for forward regenerative conditions as a percentage of the motor rated torque. Note: When you set L7-42 = 1 [Current Lim Sel = Enabled], the drive disables L7-01 to L7-04 [Torque Limits] and limits the output current at the value set in L7-43 [Current Lim Val].	200% (0 - 300%)	696
L7-04 (04AA) RUN	Reverse Regenerative Trq Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque limit value for reversed regenerative conditions as a percentage of the motor rated torque. Note: When you set L7-42 = 1 [Current Lim Sel = Enabled], the drive disables L7-01 to L7-04 [Torque Limits] and limits the output current at the value set in L7-43 [Current Lim Val].	200% (0 - 300%)	696
L7-06 (04AC)	Torque Limit Integral Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time constant for the torque limit function.	200 ms (5 - 10000 ms)	696
L7-07 (04C9)	Torque Limit during Accel/Decel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque limit function during acceleration and deceleration. 0 : Proportional only 1 : Proportional & Integral control	0 (0, 1)	697
L7-16 (044D)	Torque Limit Process at Start	V/f OLV OLV/PM AOLV/PM EZOLV Assigns a time filter to allow the torque limit to build at start. 0 : Disabled 1 : Enabled	1 (0, 1)	697
L7-42 (0D47)	Current Lim Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable the current limit function. 0 : Disabled 1 : Enabled Note: • When you set L7-42 = 1, the drive disables L7-01 to L7-04 [Torque Limits] and limits the output current at the value set in L7-43 [Current Lim Val]. • If you set L7-42 = 1 and b8-01 = 2 [Energy Saving Control Selection = Automatic Optimization], the drive detects oPE16 [Energy Saving Constants Error]. • When L7-42 = 1, the MFDO terminal set for H2-xx = 30 [During Torque Limit] shows the current limit status.	0 (0, 1)	697
L7-43 (0D48)	Current Lim Val	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current limit value when L7-42 = 1 [Current Lim Sel = Enabled]. Note: When you set L7-43 = 0.0 A, the drive limits the output current at the value set in E5-03 [PM Motor Rated Current (FLA)].	0.0 A (0.0 A, 10% to 150% of the drive rated current)	697

◆ L8: Drive Protection

No. (Hex.)	Name	Description	Default (Range)	Ref.
L8-01 (04AD)	3% ERF DB Resistor Protection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function to enable braking resistor protection with a Yaskawa ERF series braking resistor (3% ED) installed on the heatsink. 0 : No 1 : Yes	0 (0, 1)	698
L8-02 (04AE)	Overheat Alarm Level	V/f OLV OLV/PM AQLV/PM EZOLV Sets the <i>oH</i> detection level in temperature.	Determined by o2-04, C6-01 (50 - 150 °C)	698
L8-03 (04AF)	Overheat Pre-Alarm Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets operation after the drive detects an <i>oH</i> alarm. 0 : Ramp to Stop 1 : Coast to Stop 2 : Fast Stop (Use C1-09) 3 : Alarm Only 4 : Operate at Reduced Speed (L8-19)	3 (0 - 4)	698
L8-05 (04B1)	Input Phase Loss Protection Sel	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function to enable and disable input phase loss detection. 0 : Disabled 1 : Enabled	Determined by o2-04 (Determined by o2-04)	699
L8-07 (04B3)	Output Phase Loss Protection Sel	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function to enable and disable output phase loss detection. The drive starts output phase loss detection when the output current decreases to less than 5% of the drive rated current. Note: The drive can incorrectly start output phase loss detection in these conditions: • The motor rated current is very small compared to the drive rating. • The drive is operating a PM motor with a small load. 0 : Disabled 1 : Fault when one phase is lost 2 : Fault when two phases are lost	1 (0 - 2)	699
L8-09 (04B5)	Output Ground Fault Detection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function to enable and disable ground fault protection. 0 : Disabled 1 : Enabled	Determined by o2-04 (0, 1)	700
L8-10 (04B6)	Heatsink Fan Operation Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets operation of the heatsink cooling fan. 0 : During Run, w/ L8-11 Off-Delay 1 : Always On 2 : Temperature-Dependent Fan Ctrl.	0 (0 - 2)	700
L8-11 (04B7)	Heatsink Fan Off-Delay Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the length of time that the drive will wait before it stops the cooling fan after it cancels the Run command when L8-10 = 0 [<i>Heatsink Fan Operation Selection = During Run, w/ L8-11 Off-Delay</i>].	60 s (0 - 300 s)	700
L8-12 (04B8)	Ambient Temperature Setting	V/f OLV OLV/PM AQLV/PM EZOLV Sets the surrounding air temperature of the drive installation area. Note: The setting range changes when the L8-35 [<i>Installation Method Selection</i>] value changes: • 0 [<i>IP20/UL Open Type</i>]: -10 °C to +60 °C • 1 [<i>Side-by-Side Mounting</i>]: -10 °C to +50 °C • 3 [<i>External Heatsink</i>]: -10 °C to +50 °C	40 °C (-10 °C - +60 °C)	330
L8-15 (04BB)	Drive oL2 @ Low Speed Protection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function to decrease the drive overload level at which the drive will trigger <i>oL2</i> [<i>Drive Overload</i>] during low speed operation (6 Hz or slower) to prevent damage to the main circuit transistors. Note: Contact Yaskawa or your nearest sales representative before disabling this function at low speeds. If you frequently operate drives with high output current in low speed ranges, it can cause heat stress and decrease the life span of drive IGBTs. 0 : Disabled (No Additional Derate) 1 : Enabled (Reduced oL2 Level)	1 (0, 1)	701

11.11 L: Protection Functions

No. (Hex.)	Name	Description	Default (Range)	Ref.
L8-18 (04BE)	Software Current Limit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Set the software current limit selection function to prevent damage to the main circuit transistor caused by too much current. 0 : Disabled 1 : Enabled	0 (0, 1)	701
L8-19 (04BF)	Freq Reduction @ oH Pre-Alarm	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ratio at which the drive derates the frequency reference during an oH alarm.	0.8 (0.1 - 0.9)	701
L8-27 (04DD)	Overcurrent Detection Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor overcurrent detection level as a percentage of the motor rated current value. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the motor rated current. • A1-02 ≠ 8[EZOLV]: E5-03 [PM Motor Rated Current (FLA)] • A1-02 = 8: E9-06 [Motor Rated Current (FLA)]	300.0% (0.0 - 1000.0%)	701
L8-29 (04DF)	Output Unbalance Detection Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to detect LF2 [Output Current Imbalance]. 0 : Disabled 1 : Enabled	1 (0, 1)	702
L8-31 (04E1)	LF2 Detection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the LF2 [Output Current Imbalance] detection time.	3 (1 - 100)	702
L8-35 (04EC)	Installation Method Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of drive installation. Note: This parameter is set to the correct value when the drive is shipped. 0 : IP20/UL Open Type 1 : Side-by-Side Mounting 3 : External Heatsink	0 (0 - 3)	330
L8-40 (04F1)	Carrier Freq Reduction Off-Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time until the automatically reduced carrier frequency returns to the condition before the reduction.	Determined by A1-02 (0.00 - 2.00 s)	703
L8-41 (04F2)	High Current Alarm Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to cause an HCA [Current Alarm] when the output current is more than 150% of the drive rated current. 0 : No 1 : Yes	0 (0, 1)	703
L8-51 (0471) Expert	STPo I Detection Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the STPo [Motor Step-Out Detected] detection level as a percentage of the motor rated current. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the motor rated current. • A1-02 = 5 [OLV/PM]: E5-03 [PM Motor Rated Current (FLA)] • A1-02 = 8 [EZOLV]: E9-06 [Motor Rated Current (FLA)]	0.0% (0.0 - 300.0%)	703
L8-52 (0472) Expert	STPo Integration Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level for STPo [Motor Step-Out Detected] related to the ACR integral value.	1.0 (0.1 - 2.0)	703
L8-53 (0473) Expert	STPo Integration Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time until the drive detects STPo after it is more than the value of L8-51 [STPo I Detection Level].	1.0 s (1.0 - 10.0 s)	703
L8-54 (0474) Expert	STPo Id Diff Detection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Id deviation detection function for STPo [Motor Step-Out Detected]. 0 : Disabled 1 : Enabled	1 (0, 1)	703
L8-55 (045F)	Internal DB TransistorProtection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the protection function for the internal braking transistor. 0 : Disable 1 : Protection Enabled	1 (0, 1)	704
L8-56 (047D) Expert	Stall P @ Accel Activation Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length time that the acceleration stall prevention function can continue to operate before the drive detects an STPo [Motor Step-Out Detected].	5000 ms (100 - 5000 ms)	704

No. (Hex.)	Name	Description	Default (Range)	Ref.
L8-57 (047E) Expert	Stall Prevention Retry Counts	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of times the acceleration stall prevention function can operate until speeds agree before the drive detects an <i>STPo</i> [Motor Step-Out Detected].	10 (1 - 10 times)	704
L8-90 (0175) Expert	STPo Detection Level (Low Speed)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level that the control fault must be equal to or more than to cause an <i>STPo</i> [Motor Step-Out Detected].	Determined by A1-02 (0 - 5000 times)	704
L8-93 (073C) Expert	Low Speed Pull-out DetectionTime	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time the drive will wait to start baseblock after detecting <i>LSo</i> [Low Speed Motor Step-Out].	1.0 s (0.0 - 10.0 s)	704
L8-94 (073D) Expert	Low Speed Pull-out Detect Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level for <i>LSo</i> [Low Speed Motor Step-Out] as a percentage of <i>E1-04</i> [Maximum Output Frequency].	3% (0 - 10%)	705
L8-95 (077F) Expert	Low Speed Pull-out Amount	V/f OLV OLV/PM AOLV/PM EZOLV Sets the average count of <i>LSo</i> [Low Speed Motor Step-Out] detections.	10 (1 - 50 times)	705

11.12 n: Special Adjustment

◆ n1: Hunting Prevention

No. (Hex.)	Name	Description	Default (Range)	Ref.
n1-01 (0580)	Hunting Prevention Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to prevent hunting. Note: When you replace a V1000-series drive with a GA500 drive, set $n1-01 = 1$ [<i>Hunting Prevention Selection = Enabled</i>]. 0 : Disabled 1 : Enabled	0 (0, 1)	706
n1-02 (0581) Expert	Hunting Prevention Gain Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the performance of the hunting prevention function. Usually it is not necessary to change this parameter.	1.00 (0.00 - 2.50)	706
n1-03 (0582) Expert	Hunting Prevention Time Constant	V/f OLV OLV/PM AOLV/PM EZOLV Sets the primary delay time constant of the hunting prevention function. Usually it is not necessary to change this parameter.	Determined by o2-04 (0 - 500 ms)	706
n1-05 (0530) Expert	Hunting Prevent Gain in Reverse	V/f OLV OLV/PM AOLV/PM EZOLV Sets the performance of the hunting prevention function. This parameter adjusts Reverse run. Usually it is not necessary to change this parameter.	0.00 (0.00 - 2.50)	706
n1-13 (1B59) Expert	DC Bus Stabilization Control	V/f OLV OLV/PM AOLV/PM EZOLV Sets the oscillation suppression function for the DC bus voltage. 0 : Disabled 1 : Enabled	0 (0, 1)	707
n1-14 (1B5A) Expert	DC Bus Stabilization Time	V/f OLV OLV/PM AOLV/PM EZOLV Adjusts the responsiveness of the oscillation suppression function for the DC bus voltage. Set $n1-13 = 1$ [<i>DC Bus Stabilization Control = Enabled</i>] to enable this parameter.	100.0 ms (50.0 - 500.0 ms)	707

◆ n2: Auto Freq Regulator (AFR)

No. (Hex.)	Name	Description	Default (Range)	Ref.
n2-01 (0584)	Automatic Freq Regulator Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain of the AFR function as a magnification value. Usually it is not necessary to change this setting.	1.00 (0.00 - 10.00)	707
n2-02 (0585)	Automatic Freq Regulator Time 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant that sets the rate of change for the AFR function. Usually it is not necessary to change this setting.	50 ms (0 - 2000 ms)	708
n2-03 (0586)	Automatic Freq Regulator Time 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant that sets the speed difference of the AFR function. Use this parameter for speed searches or regeneration. Usually it is not necessary to change this setting.	750 ms (0 - 2000 ms)	708

◆ n3: High Slip/Overexcite Braking

No. (Hex.)	Name	Description	Default (Range)	Ref.
n3-01 (0588) Expert	HSB Deceleration Frequency Width	V/f OLV OLV/PM AOLV/PM EZOLV Sets the amount by which the output frequency is to be lowered during high-slip braking, as a percentage of $E1-04$ [<i>Maximum Output Frequency</i>], which represents the 100% value.	5% (1 - 20%)	710
n3-02 (0589) Expert	HSB Current Limit Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum current output during high-slip braking as a percentage, where $E2-01$ [<i>Motor Rated Current (FLA)</i>] is 100%. Also set the current suppression to prevent exceeding drive overload tolerance. Note: The upper limit to the setting range changes when the setting for $C6-01$ [<i>Normal / Heavy Duty Selection</i>] changes. • 150% when $C6-01 = 0$ [<i>Heavy Duty Rating</i>] • 120% when $C6-01 = 1$ [<i>Normal Duty Rating</i>]	Determined by C6-01 (0 - 150%)	710

No. (Hex.)	Name	Description	Default (Range)	Ref.
n3-03 (058A) Expert	HSB Dwell Time at Stop	V/f OLV OLV/PM AQLV/PM EZOLV Sets the dwell time, a length of time when high-slip braking is ending and during which the motor speed decreases and runs at a stable speed. For a set length of time, the drive will hold the actual output frequency at the minimum output frequency set in <i>E1-09</i> .	1.0 s (0.0 - 10.0 s)	710
n3-04 (058B) Expert	HSB Overload Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the time used to detect <i>oL7 [High Slip Braking Overload]</i> , which occurs when the output frequency does not change during high-slip braking. Usually it is not necessary to change this parameter.	40 s (30 - 1200 s)	710
n3-13 (0531)	OverexcitationBraking (OEB) Gain	V/f OLV OLV/PM AQLV/PM EZOLV Sets the gain value that the drive multiplies by the V/f pattern output value during overexcitation deceleration to calculate the overexcitation level.	1.10 (1.00 - 1.40)	711
n3-14 (0532) Expert	OEB High Frequency Injection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function that injects harmonic signals during overexcitation deceleration. 0 : Disabled 1 : Enabled	0 (0, 1)	711
n3-21 (0579)	HSB Current Suppression Level	V/f OLV OLV/PM AQLV/PM EZOLV Sets the upper limit of the current that is suppressed at the time of overexcitation deceleration as a percentage of the drive rated current.	100% (0 - 150%)	711
n3-23 (057B)	Overexcitation Braking Operation	V/f OLV OLV/PM AQLV/PM EZOLV Sets the direction of motor rotation where the drive will enable overexcitation. 0 : Disabled 1 : Enabled Only when Rotating FWD 2 : Enabled Only when Rotating REV	0 (0 - 2)	711

◆ n5: Feed Forward Control

No. (Hex.)	Name	Description	Default (Range)	Ref.
n5-01 (05B0)	Feed Forward Control Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the feed forward function. 0 : Disabled 1 : Enabled	0 (0, 1)	712
n5-02 (05B1)	Motor Inertia Acceleration Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the length of time for the motor to accelerate from the stopped to the maximum frequency with a single motor at the rated torque. Inertia Tuning automatically sets the motor acceleration time.	Determined by C6-01, E5-01, and o2-04 (0.001 - 10.000 s)	713
n5-03 (05B2)	Feed Forward Control Gain	V/f OLV OLV/PM AQLV/PM EZOLV Sets the ratio between load inertia and motor inertia. Inertia Tuning automatically sets the Feedforward Control Gain value.	1.00 (0.00 - 100.00)	713
n5-04 (05B3) RUN Expert	Speed Response Frequency	V/f OLV OLV/PM AQLV/PM EZOLV Sets the response frequency for the speed reference. Usually it is not necessary to change this parameter.	Determined by A1-02 (0.00 - 500.00 Hz)	714

◆ n6: Online Tuning

No. (Hex.)	Name	Description	Default (Range)	Ref.
n6-01 (0570)	Online Tuning Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the type of motor data that Online Tuning uses for OLV control. 0 : Disabled 1 : Line-to-Line Resistance Tuning 2 : Voltage Correction Tuning	0 (0 - 2)	714
n6-05 (05C7) Expert	Online Tuning Gain	V/f OLV OLV/PM AQLV/PM EZOLV Sets the compensation gain when <i>n6-01 = 2 [Online Tuning Selection = Voltage Correction Tuning]</i> . Usually it is not necessary to change this parameter.	1.0 (0.1 - 50.0)	715

◆ n7: EZ Drive

No. (Hex.)	Name	Description	Default (Range)	Ref.
n7-01 (3111) Expert	Damping Gain for Low Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the oscillation suppression gain for the low speed range.	1.0 (0.1 - 10.0)	715
n7-05 (3115) Expert	Response Gain for Load Changes	V/f OLV OLV/PM AOLV/PM EZOLV Sets the response gain related to changes in the load.	50 (10 - 1000)	715
n7-07 (3117) Expert	Speed Calculation Gain1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed calculation gain during usual operation. Usually it is not necessary to change this setting.	15.0 (1.0 - 50.0)	715
n7-08 (3118) Expert	Speed Calculation Gain2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed calculation gain during a speed search.	25.0 (1.0 - 50.0)	715
n7-10 (311A) Expert	Pull-in Current Switching Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed range to operate with the pull-in current command. Drive rated frequency = 100% value. If there is a large quantity of oscillation when you operate in the low speed range, increase the setting value.	10.0% (0.0 - 100.0%)	716
n7-17 (3122)	Resistance TemperatureCorrection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to adjust for changes in the motor resistance value caused by changes in the temperature. 0 : Invalid 1 : Valid (Only 1 time) 2 : Valid (Every time)	1 (0 to 2)	716
n7-19 (3128) Expert	Flux Error Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for magnetic flux compensation. Usually it is not necessary to change this setting.	5000% (0 - 50000%)	716

◆ n8: PM Motor Control Tuning

No. (Hex.)	Name	Description	Default (Range)	Ref.
n8-01 (0540)	Pole Position Detection Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Initial Rotor Position Estimated Current as a percentage where <i>E5-03 [PM Motor Rated Current (FLA)]</i> = 100%. Usually it is not necessary to change this setting.	50% (0 - 100%)	716
n8-02 (0541)	Pole Alignment Current Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current at the time of polar attraction as a percentage where <i>E5-03 [motor rated current]</i> is 100%. Usually it is not necessary to change this setting.	80% (0 - 150%)	717
n8-11 (054A) Expert	Observer Calculation Gain 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for speed estimation. Usually it is not necessary to change this setting.	Determined by n8-72 (0.0 - 1000.0)	717
n8-14 (054D) Expert	Polarity Compensation Gain 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for speed estimation. Usually it is not necessary to change this setting.	1.000 (0.000 - 10.000)	717
n8-15 (054E) Expert	Polarity Compensation Gain 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for speed estimation. Usually it is not necessary to change this setting.	0.500 (0.000 - 10.000)	717
n8-21 (0554) Expert	Motor Back-EMF (Ke) Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for speed estimation. Usually it is not necessary to change this setting.	0.90 (0.80 - 1.00)	717
n8-23 (0556) Expert	ACR q Gain @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain for current regulator q-axis control when the drive estimates the initial pole. Usually it is not necessary to change this setting.	0 (0 - 2000)	717
n8-24 (0557) Expert	ACR q Integral Time @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time for current regulator q-axis control when the drive estimates the initial pole. Usually it is not necessary to change this setting.	0.0 ms (0.0 - 100.0 ms)	718
n8-25 (0558) Expert	ACR q Limit @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the q-axis limit of the current regulator when the drive estimates the initial pole. Usually it is not necessary to change this setting.	0% (0 - 150%)	718

No. (Hex.)	Name	Description	Default (Range)	Ref.
n8-26 (0559) Expert	ACR d Gain @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain for current regulator d-axis control when the drive estimates the initial pole. Usually it is not necessary to change this setting.	500 (0 - 2000)	718
n8-27 (055A) Expert	ACR d Integral Time @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time for current regulator d-axis control when the drive estimates the initial pole. Usually it is not necessary to change this setting.	0.0 ms (0.0 - 100.0 ms)	718
n8-28 (055B) Expert	ACR d Lim @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the d-axis limit of the current regulator when the drive estimates the initial pole. Usually it is not necessary to change this setting.	100% (0 - 150%)	718
n8-35 (0562)	Initial Pole Detection Method	V/f OLV OLV/PM AOLV/PM EZOLV Sets how the drive detects the position of the rotor when the motor starts. Note: • When you use an SPM motor, set $n8-35 = 0$. When you use an IPM motor, set $n8-35 = 0$ to 2. • When you set $n8-35 = 1$, do High Frequency Injection Auto-Tuning. 0 : Pull-in 1 : High Frequency Injection 2 : Pulse Injection	Determined by A1-02 (0 - 2)	718
n8-36 (0563)	HFI Frequency Level for L Tuning	V/f OLV OLV/PM AOLV/PM EZOLV Sets the injection frequency for high frequency injection. Note: • Set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] or $n8-57 = 1$ [HFI Overlap Selection = Enabled] to enable this parameter. • The drive automatically calculates this value when High Frequency Injection Auto-Tuning completes successfully.	500 Hz (200 - 1000 Hz)	719
n8-37 (0564) Expert	HFI Voltage Amplitude Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the high frequency injection amplitude as a percentage where 200 V = 100% for 200 V class drives and 400 V = 100% for a 400 V class drives. Usually it is not necessary to change this setting. Note: • Set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] or $n8-57 = 1$ [HFI Overlap Selection = Enabled] to enable this parameter. • The drive automatically calculates this value when High Frequency Injection Auto-Tuning completes successfully.	20.0% (0.0 - 50.0%)	719
n8-39 (0566)	HFI LPF Cutoff Freq	V/f OLV OLV/PM AOLV/PM EZOLV Sets the low-pass filter shut-off frequency for high frequency injection. Note: • Set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] or $n8-57 = 1$ [HFI Overlap Selection = Enabled] to enable this parameter. • The drive automatically calculates this value when High Frequency Injection Auto-Tuning completes successfully.	250 Hz (0 - 1000 Hz)	719
n8-41 (0568) Expert	HFI P Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the response gain for the high frequency injection speed estimation. Note: • Set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] or $n8-57 = 1$ [HFI Overlap Selection = Enabled] to enable this parameter. • When A1-02 = 6 [Control Method Selection = AOLV/PM] and you do High Frequency Injection Auto-Tuning, the drive automatically sets this parameter.	2.5 (-10.0 - +10.0)	719
n8-42 (0569) Expert	HFI I Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time constant for the high frequency injection speed estimation. Usually it is not necessary to change this setting.	0.10 s (0.00 - 9.99 s)	719
n8-45 (0538)	Speed Feedback Detection Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the internal speed feedback detection reduction unit gain as a magnification value. Usually it is not necessary to change this setting.	0.80 (0.00 - 10.00)	720
n8-46 (0539) Expert	PM Phase Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain to compensate for phase differences. Usually it is not necessary to change this setting.	0.3 (0.0 - 10.0)	720
n8-47 (053A)	Pull-in Current Comp Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant the drive uses to align the pull-in current reference value with the actual current value. Usually it is not necessary to change this setting.	5.0 s (0.0 - 100.0 s)	720
n8-48 (053B) RUN	Pull-in/Light Load Id Current	V/f OLV OLV/PM AOLV/PM EZOLV On the basis that parameter E5-03 [Motor Rated Current (FLA)] is the 100% value, this parameter sets the d-axis current that flows to the motor during run at constant speed as a percentage.	30% (0 - 200%)	720

11.12 n: Special Adjustment

No. (Hex.)	Name	Description	Default (Range)	Ref.
n8-49 (053C) RUN Expert	Heavy Load Id Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the d-axis current to that the drive will supply to the motor to run it at a constant speed with a heavy load. Considers <i>E5-03 [PM Motor Rated Current (FLA)]</i> to be 100%. Usually it is not necessary to change this setting.	Determined by E5-01 (-200.0 - +200.0%)	721
n8-50 (053D) Expert	Medium Load Iq Level (High)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the load current level at which heavy load control starts where <i>E5-03 [Motor Rated Current (FLA)]</i> is 100%. Usually it is not necessary to change this setting.	80% (50 - 255)	721
n8-51 (053E)	Pull-in Current @ Acceleration	V/f OLV OLV/PM AOLV/PM EZOLV Sets the pull-in current allowed to flow during acceleration/deceleration as a percentage of the motor rated current. Note: Parameter <i>A1-02 [Control Method Selection]</i> selects which parameter is the motor rated current. <i>A1-02 = 5 [OLV/PM]: E5-03 [PM Motor Rated Current (FLA)]</i> <i>A1-02 = 8 [EZOLV]: E9-06 [Motor Rated Current (FLA)]</i>	Determined by A1-02 (0 - 200%)	721
n8-54 (056D) Expert	Voltage Error Compensation Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant that the drive uses when adjusting for voltage errors.	1.00 s (0.00 - 10.00 s)	721
n8-55 (056E)	Motor to Load Inertia Ratio	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ratio between motor inertia and machine inertia. 0 : Below 1:10 1 : Between 1:10 and 1:30 2 : Between 1:30 and 1:50 3 : Beyond 1:50	0 (0 - 3)	722
n8-56 (056F) Expert	PM High Performance Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the high efficiency control method for IPM motors. Usually it is not necessary to change this setting. 0 : Disabled 1 : Enabled (Vd) 2 : Enabled (Vd & Vq)	1 (0 - 2)	722
n8-57 (0574)	HFI Overlap Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that detects motor speed with high frequency injection. Note: When you set <i>n8-57 = 1</i>, do High Frequency Injection Auto-Tuning. 0 : Disabled 1 : Enabled	0 (0, 1)	723
n8-62 (057D) Expert	Output Voltage Limit Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output voltage limit to prevent saturation of the output voltage. Usually it is not necessary to change this parameter. Note: When <i>A1-02 = 8 [Control Method Selection = EZOLV]</i>, the default settings are: 200 V class: 230.0 V 400 V class: 460.0 V	200 V Class: 200.0 V, 400 V: 400.0 V (200 V Class: 0.0 to 240.0 V, 400 V Class: 0.0 to 480.0 V)	723
n8-63 (057E) Expert	Output Voltage Limit P Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain for output voltage control. Usually it is not necessary to change this setting.	1.00 (0.00 - 100.00)	723
n8-64 (057F) Expert	Output Voltage Limit I Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time for output voltage control. Usually it is not necessary to change this setting.	0.040 s (0.000 - 5.000)	723
n8-65 (065C) Expert	Speed Fdbk Gain @ oV Suppression	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain of internal speed feedback detection suppression while the overvoltage suppression function is operating as a magnification value. Usually it is not necessary to change this parameter.	1.50 (0.00 - 10.00)	723
n8-66 (0235) Expert	Output Voltage Limit Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant for output voltage control. Usually it is not necessary to change this setting.	0.020 s (0.000 - 5.000)	724
n8-68 (0237) Expert	Output Voltage Limit Level 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage tuning gain for the voltage limit suppression setting.	0.95 (0.50 - 1.50)	724
n8-69 (065D) Expert	Speed Observer Control P Gain	V/f OLV OLV/PM AOLV/PM EZOLV Usually it is not necessary to change this setting. Sets the Proportional gain that the drive uses for speed estimation.	1.00 (0.00 - 20.00)	724

No. (Hex.)	Name	Description	Default (Range)	Ref.
n8-70 (065E) Expert	Speed Observer Control I Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed estimator integral time constant. It is available when $n8-72 = 1$ [Speed Estimation Method Select = Method 2]. Usually it is not necessary to change this setting.	0.0 s (0.0 - 100.0)	724
n8-71 (065F) Expert	Speed Observer Control D Gain	V/f OLV OLV/PM AOLV/PM EZOLV Set the speed estimator differential gain. It is available when $n8-72 = 1$ [Speed Estimation Method Select = Method 2]. Usually it is not necessary to change this setting.	5.00 (0.00 - 50.00)	724
n8-72 (0655) Expert	Speed Estimation Method Select	V/f OLV OLV/PM AOLV/PM EZOLV Selects the speed estimation method. Usually it is not necessary to change this setting. 0 : Method 1 1 : Method 2	1 (0, 1)	724
n8-73 (0656) Expert	Observer Mode Switch-Over Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed level for pull-in current control at motor start as a percentage of $E1-06$ [Base Frequency]. Usually it is not necessary to change this setting.	10% (0 - 100)	724
n8-74 (05C3) Expert	Light Load Iq Level	V/f OLV OLV/PM AOLV/PM EZOLV Set $n8-48$ [Pull-in/Light Load Id Current] to the percentage of load current (q-axis current) that you will apply, where $E5-03$ [Motor Rated Current (FLA)] = a setting value of 100%.	30% (0 - 255%)	725
n8-75 (05C4) Expert	Medium Load Iq Level (low)	V/f OLV OLV/PM AOLV/PM EZOLV Set $n8-78$ [Medium Load Id Current] to the percentage of load current (q-axis current) that you will apply, where $E5-03$ [Motor Rated Current (FLA)] = a setting value of 100%.	50% (0 - 255%)	725
n8-76 (05CD) Expert	Id Switching Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant for the d-axis current reference. Usually it is not necessary to change this setting.	200 ms (0 - 5000 ms)	725
n8-77 (05CE) Expert	Heavy Load Iq Level	V/f OLV OLV/PM AOLV/PM EZOLV Set $n8-49$ [Heavy Load Id Current] to the percentage of load current (q-axis current) that you will apply, where $E5-03$ [Motor Rated Current (FLA)] = a setting value of 100%.	90% (0 - 255%)	725
n8-78 (05F4) RUN Expert	Medium Load Id Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level of the pull-in current as a percentage, where $E5-03$ [PM Motor Rated Current (FLA)] = 100%.	0% (-100.0 - 200.0)	725
n8-79 (05FE)	Pull-in Current @ Deceleration	V/f OLV OLV/PM AOLV/PM EZOLV Sets the pull-in current that can flow during deceleration as a percentage of the $E5-03$ [PM Motor Rated Current (FLA)]. Note: When $n8-79 = 0$, the drive will use the value set in $n8-51$ [Pull-in Current @ Acceleration].	50% (0 - 200%)	725
n8-84 (02D3) Expert	Polarity Detection Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current that the drive uses to estimate the initial motor magnetic pole as a percentage where $E5-03$ [PM Motor Rated Current (FLA)] = 100%.	100% (0 - 150%)	726
n8-87 (02DA)	Output Voltage Limit Method	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method of output voltage limit. If there is vibration in the constant output range, set Feedforward Method. Usually it is not necessary to change this setting. 0 : Feedback Method 1 : Feedforward Method	0 (0, 1)	726
n8-88 (02BD)	Vout Limit Switching Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current level at which output voltage limit sequence selection occurs as a percentage where the motor rated current is 100%. Normally there is no need to change this setting. Note: Parameter $A1-02$ [Control Method Selection] selects which parameter is the motor rated current. • $A1-02 = 5, 6$ [OLV/PM, AOLV/PM]: $E5-03$ [PM Motor Rated Current (FLA)] • $A1-02 = 8$ [EZOLV]: $E9-06$ [PM Motor Rated Current (FLA)]	400% (0 - 400%)	726
n8-89 (02BE)	Vout Limit Switching Hysteresis	V/f OLV OLV/PM AOLV/PM EZOLV Sets the hysteresis width of the current level at which output voltage limit sequence selection occurs as a percentage where the motor rated current is 100%. Normally there is no need to change this setting. Note: Parameter $A1-02$ [Control Method Selection] selects which parameter is the motor rated current. • $A1-02 = 5, 6$ [OLV/PM, AOLV/PM]: $E5-03$ [PM Motor Rated Current (FLA)] • $A1-02 = 8$ [EZOLV]: $E9-06$ [PM Motor Rated Current (FLA)]	3% (0 - 400%)	726

No. (Hex.)	Name	Description	Default (Range)	Ref.
n8-90 (02BF)	Vout Limit Switching Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed level at which output voltage limit sequence selection occurs as a percentage where the maximum output frequency is 100%. Usually it is not necessary to change this setting. Note: Parameter A1-02 [Control Method Selection] selects which parameter is the maximum output frequency. • A1-02 = 5, 6 [OLV/PM, AOLV/PM]: E1-04 [Maximum Output Frequency] • A1-02 = 8: E9-02 [Motor Max Revolutions]	200% (0 - 200%)	726
n8-91 (02F7)	Id Limit at Voltage Saturation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the limit value of feedback output voltage limit Id operation. Enabled when n8-87 = 0 [Output Voltage Control Selection = Speed Feedback Form]. Usually it is not necessary to change this setting.	-50% (-200 - 0%)	727
n8-94 (012D) Expert	Flux Position Estimation Method	V/f OLV OLV/PM AOLV/PM EZOLV Sets the criteria that the drive uses to find changes in speed or load. Usually it is not necessary to change this setting. 0 : Softstarter 1 : Speed Feedback	1 (0, 1)	727
n8-95 (012E) Expert	Flux Position Est Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant of the filter used for the recognition criteria value for speed and load changes. Usually it is not necessary to change this setting.	30 ms (0 - 100 ms)	727

◆ nA: PM Motor Control Tuning

No. (Hex.)	Name	Description	Default (Range)	Ref.
nA-01 (3129) Expert	Observer Calc Gain 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for speed estimation. Usually it is not necessary to change this setting.	30.0 (0.0 - 1000.0)	727
nA-04 (1BF5) Expert	Output Voltage Limit q-Axis Current Command Reference Switch Hysteresis	V/f OLV OLV/PM AOLV/PM EZOLV Sets the switch hysteresis of the q-axis current command referenced to the (-20% - 0%) d-axis current command to suppress shock at the output voltage limit. Sets the switch hysteresis of the q-axis current command as a percentage of motor rated current. Usually it is not necessary to change this parameter.	-10% (-20% - 0%)	727
nA-07 (3170) Expert	Drive Method Switching Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the switching speed width level. Usually it is not necessary to change this setting.	0.0% (0.0 - 100.0)	727
nA-08 (3171) Expert	Drive Method Switching Width	V/f OLV OLV/PM AOLV/PM EZOLV Sets the switching speed width level. Usually it is not necessary to change this setting.	10.0 (1.0 - 100.0)	728
nA-09 (3172) Expert	Stop Condition Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the criteria for determining stoppage. Usually it is not necessary to change this setting. Note: • This parameter is enabled when nA-07 ≠ 0.0 [Drive Method Switching Speed ≠ 0.0%]. • If nA-09 = 0 [Stop Condition Selection = Output Frequency], set nA-10 = 1 [Minimum Output Frequency Limit = Enabled]. If nA-09 = 0 and nA-10 = 0 [Disabled], the drive will detect oPE08 [Parameter Selection Error]. 0 : Output Frequency 1 : SFS Output Frequency	0 (0, 1)	728
nA-10 (3173) Expert	Minimum Output Frequency Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable or disable the minimum output frequency limit. When you enable this parameter, the drive sets the lower limit of E1-09 [Minimum Output Frequency] to the 5% of E1-06 [Base Frequency]. Usually you do not need to change it. 0 : Disabled 1 : Enabled	1 (0, 1)	728
nA-11 (1BF8) Expert	Output Voltage Limit Level 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage limit level for output voltage limit control. Usually it is not necessary to change this setting.	1.00 (0.50 - 1.50)	728

11.13 o: Keypad-Related Settings

◆ o1: Keypad Display

No. (Hex.)	Name	Description	Default (Range)	Ref.
o1-01 (0500) RUN	User Monitor Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the <i>U</i> monitor for the Drive Mode. This parameter is only available with an LED keypad.	106 (104 - 855)	730
o1-02 (0501) RUN	Monitor Selection at Power-up	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor item that the keypad screen shows after you energize the drive. Refer to "U: Monitors" for information about the monitor items that the keypad screen can show. This parameter is only available with an LED keypad. 1 : Frequency Reference (U1-01) 2 : Direction 3 : Output Frequency (U1-02) 4 : Output Current (U1-03) 5 : User Monitor (<i>o1-01</i>)	1 (1 - 5)	730
o1-03 (0502)	Frequency Display Unit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the display units for the frequency reference and output frequency. 0 : 0.01 Hz 1 : 0.01% (100% = E1-04) 2 : Revolutions Per Minute (RPM) 3 : User units (Set with o1-10, o1-11)	Determined by A1-02 (0 - 3)	730
o1-04 (0503)	V/f Pattern Display Unit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the setting unit for parameters that set the V/f pattern frequency. 0 : Hz 1 : min ⁻¹ (r/min) units	Determined by A1-02 (0, 1)	731
o1-05 (0504) RUN	LCD Contrast Adjustment	V/f OLV OLV/PM AOLV/PM EZOLV Sets the contrast of the LCD display on the keypad.	5 (0 - 10)	732
o1-10 (0520)	User Units Maximum Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value that the drive shows as the maximum output frequency.	Determined by o1-03 (1 - 60000)	732
o1-11 (0521)	User Units Decimal Position	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of decimal places for frequency reference and monitor values. 0 : No Decimal Places (XXXXXX) 1 : One Decimal Places (XXXX.X) 2 : Two Decimal Places (XXX.XX) 3 : Three Decimal Places (XX.XXX)	Determined by o1-03 (0 - 3)	732
o1-24 (11AD) RUN	Custom Monitor 1	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters <i>o1-24</i> to <i>o1-35</i> . This parameter sets the user monitor to show on the first line. The registered monitor is also used for different monitor displays of bar graph, analog meter, and waveform.	101 (0, 101 - 999)	732
o1-25 (11AE) RUN	Custom Monitor 2	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters <i>o1-24</i> to <i>o1-35</i> . This parameter sets the user monitor to show on the second line. The registered monitor is also used for different monitor displays of bar graph and waveform.	102 (0, 101 - 999)	732
o1-26 (11AF) RUN	Custom Monitor 3	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters <i>o1-24</i> to <i>o1-35</i> . This parameter sets the user monitor to show on the third line. The registered monitor is also used for the monitor display of the bar graph.	103 (0, 101 - 999)	732
o1-27 (11B0) RUN	Custom Monitor 4	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters <i>o1-24</i> to <i>o1-35</i> . This parameter sets the user monitor to show on the fourth line.	0 (0, 101 - 999)	732
o1-28 (11B1) RUN	Custom Monitor 5	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters <i>o1-24</i> to <i>o1-35</i> . This parameter sets the user monitor to show on the fifth line.	0 (0, 101 - 999)	732
o1-29 (11B2) RUN	Custom Monitor 6	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters <i>o1-24</i> to <i>o1-35</i> . This parameter sets the user monitor to show on the sixth line.	0 (0, 101 - 999)	732

11.13 o: Keypad-Related Settings

No. (Hex.)	Name	Description	Default (Range)	Ref.
o1-30 (11B3) RUN	Custom Monitor 7	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters o1-24 to o1-35. This parameter sets the user monitor to show on the seventh line.	0 (0, 101 - 999)	732
o1-31 (11B4) RUN	Custom Monitor 8	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters o1-24 to o1-35. This parameter sets the user monitor to show on the eighth line.	0 (0, 101 - 999)	732
o1-32 (11B5) RUN	Custom Monitor 9	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters o1-24 to o1-35. This parameter sets the user monitor to show on the ninth line.	0 (0, 101 - 999)	732
o1-33 (11B6) RUN	Custom Monitor 10	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters o1-24 to o1-35. This parameter sets the user monitor to show on the 10th line.	0 (0, 101 - 999)	732
o1-34 (11B7) RUN	Custom Monitor 11	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters o1-24 to o1-35. This parameter sets the user monitor to show on the 11th line.	0 (0, 101 - 999)	732
o1-35 (11B8) RUN	Custom Monitor 12	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 12 monitors as user monitors and set them to parameters o1-24 to o1-35. This parameter sets the user monitor to show on the 12th line.	0 (0, 101 - 999)	732
o1-36 (11B9) RUN	LCD Backlight Brightness	V/f OLV OLV/PM AOLV/PM EZOLV Sets the intensity of the LCD keypad backlight.	5 (1 - 5)	733
o1-37 (11BA) RUN	LCD Backlight ON/OFF Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the automatic shut off function for the LCD backlight. 0 : OFF 1 : ON	1 (0, 1)	733
o1-38 (11BB) RUN	LCD Backlight Off-Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time until the LCD backlight automatically turns off.	60 s (10 - 300 s)	733
o1-39 (11BC) RUN	Show Initial Setup Screen	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to show the LCD keypad initial setup screen each time you energize the drive. This parameter is only available with an LCD keypad. 0 : No 1 : Yes	1 (0, 1)	734
o1-40 (11BD) RUN	Home Screen Display Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor display mode for the Home screen. This parameter is only available with an LCD keypad. 0 : Custom Monitor 1 : Bar Graph 2 : Analog Gauge 3 : Trend Plot	0 (0 - 3)	734
o1-41 (11C1) RUN	1st Monitor Area Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis value used to display the monitor set in o1-24 [Custom Monitor 1] as a bar graph. This parameter is only available with an LCD keypad. 0 : +/- Area (- o1-42 ~ o1-42) 1 : + Area (0 ~ o1-42)	0 (0 - 1)	734
o1-42 (11C2) RUN	1st Monitor Area Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis value used to display the monitor set in o1-24 [Custom Monitor 1] as a bar graph. This parameter is only available with an LCD keypad.	100.0% (0.0 - 100.0%)	734
o1-43 (11C3) RUN	2nd Monitor Area Selection	V/f OLV OLV/PM AOLV/PM EZOLV Selects the horizontal range used to display the monitor set in o1-25 [Custom Monitor 2] as a bar graph. This parameter is only available with an LCD keypad. 0 : +/- Area (- o1-44 ~ o1-44) 1 : + Area (0 ~ o1-44)	0 (0 - 1)	734
o1-44 (11C4) RUN	2nd Monitor Area Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis value used to display the monitor set in o1-25 [Custom Monitor 2] as a bar graph. This parameter is only available with an LCD keypad.	100.0% (0.0 - 100.0%)	735

No. (Hex.)	Name	Description	Default (Range)	Ref.
o1-45 (11C5) RUN	3rd Monitor Area Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis value used to display the monitor set in o1-26 [Custom Monitor 3] as a bar graph. This parameter is only available with an LCD keypad. 0 : +/- Area (- o1-46 ~ o1-46) 1 : + Area (0 ~ o1-46)	0 (0 - 1)	735
o1-46 (11C6) RUN	3rd Monitor Area Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis value used to display the monitor set in o1-26 [Custom Monitor 3] as a bar graph. This parameter is only available with an LCD keypad.	100.0% (0.0 - 100.0%)	735
o1-47 (11C7) RUN	Trend Plot 1 Scale Minimum Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis minimum value used to display the monitor set in o1-24 [Custom Monitor 1] as a trend plot. This parameter is only available with an LCD keypad.	-100.0% (-300.0 - +299.9%)	735
o1-48 (11C8) RUN	Trend Plot 1 Scale Maximum Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum value for the vertical axis used to display the monitor that was set in o1-24 [Custom Monitor 1] as a trend plot. This parameter is only available with an LCD keypad.	100.0% (-299.9 - +300.0%)	735
o1-49 (11C9) RUN	Trend Plot 2 Scale Minimum Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis minimum value used to display the monitor set in o1-25 [Custom Monitor 2] as a trend plot. This parameter is only available with an LCD keypad.	-100.0% (-300.0 - +299.9%)	735
o1-50 (11CA) RUN	Trend Plot 2 Scale Maximum Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum value for the vertical axis used to display the monitor that was set in o1-25 [Custom Monitor 2] as a trend plot. This parameter is only available with an LCD keypad.	100.0% (-299.9 - +300.0%)	736
o1-51 (11CB) RUN	Trend Plot Time Scale Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time scale (horizontal axis) to display the trend plot. When you change this setting, the drive automatically adjusts the data sampling time. This parameter is only available with an LCD keypad.	300 s (1 - 3600 s)	736
o1-55 (11EE) RUN	Analog Gauge Area Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the range used to display the monitor set in o1-24 [Custom Monitor 1] as an analog gauge. This parameter is only available with an LCD keypad. 0 : +/- Area (- o1-56 ~ o1-56) 1 : + Area (0 ~ o1-56)	1 (0, 1)	736
o1-56 (11EF) RUN	Analog Gauge Area Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value used to display the monitor set in o1-24 [Custom Monitor 1] as an analog meter. This parameter is only available with an LCD keypad.	100.0% (0.0 - 100.0%)	736
o1-58 (3125)	Motor Power Unit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the setting unit for parameters that set the motor rated power. 0 : kW 1 : HP	1 (0, 1)	736
o1-88 (31C2) RUN	Connected LED keypad Selection	V/f OLV OLV/PM AOLV/PM EZOLV Set the type of LED keypad you are using. 0 : Standard LED Keypad 1 : Optional LED Keypad	0 (0, 1)	737

◆ o2: Keypad Operation

No. (Hex.)	Name	Description	Default (Range)	Ref.
o2-01 (0505)	LO/RE Key Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that lets you use LO/RE to switch between LOCAL and REMOTE Modes. 0 : Disabled 1 : Enabled	1 (0, 1)	738
o2-02 (0506)	STOP Key Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to use  on the keypad to stop the drive when the Run command source for the drive is REMOTE (external) and not assigned to the keypad. 0 : Disabled 1 : Enabled	1 (0, 1)	738

11.13 o: Keypad-Related Settings

No. (Hex.)	Name	Description	Default (Range)	Ref.
o2-03 (0507)	User Parameter Default Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to keep the settings of changed parameters as user parameter defaults to use during initialization. 0 : No change 1 : Set defaults 2 : Clear all	0 (0 - 2)	739
o2-04 (0508)	Drive Model (KVA) Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Drive Model code. Set this parameter after replacing the control board.	Determined by the drive (-)	739
o2-05 (0509)	Home Mode Freq Ref Entry Mode	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that makes it necessary to push  to use the keypad to change the frequency reference value while in Drive Mode. 0 : ENTER Key Required 1 : Immediate / MOP-style	0 (0, 1)	740
o2-06 (050A)	Keypad Disconnect Detection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that stops the drive if you disconnect the keypad connection cable from the drive or if you damage the cable while the keypad is the Run command source. 0 : Disabled 1 : Enabled	1 (0, 1)	740
o2-07 (0527)	Keypad RUN Direction @ Power-up	V/f OLV OLV/PM AOLV/PM EZOLV Sets the direction of motor rotation when the drive is energized and the keypad is the Run command source. 0 : Forward 1 : Reverse	0 (0, 1)	740
o2-09 (050D)	Reserved	-	-	741
o2-19 (061F) Expert	Parameter Write during Uv	V/f OLV OLV/PM AOLV/PM EZOLV Lets you change parameters during Uv [Undervoltage]. 0 : Disabled 1 : Enabled	0 (0, 1)	741
o2-27 (1565)	bCE Detection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive operation if the Bluetooth device is disconnected when you operate the drive in Bluetooth Mode. 0 : Ramp to Stop 1 : Coast to Stop 2 : Fast Stop (Use C1-09) 3 : Alarm Only 4 : No Alarm Display	3 (0 - 4)	741

◆ o3: Copy Keypad Function

No. (Hex.)	Name	Description	Default (Range)	Ref.
o3-01 (0515)	Copy Keypad Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that saves and copies drive parameters to a different drive with the keypad. 0 : Copy Select 1 : Backup (drive → keypad) 2 : Restore (keypad → drive) 3 : Verify (check for mismatch) 4 : Erase (backup data of keypad)	0 (0 - 4)	741
o3-02 (0516)	Copy Allowed Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the copy function when o3-01 = 1 [Copy Keypad Function Selection = Backup (drive → keypad)]. 0 : Disabled 1 : Enabled	0 (0, 1)	742

No. (Hex.)	Name	Description	Default (Range)	Ref.
o3-04 (0B3E)	Select Backup/Restore Location	V/f OLV OLV/PM AQLV/PM EZOLV Sets the storage location for drive parameters when you back up and restore parameters. This parameter is only available when using an LCD keypad. 0 : Memory Location 1 1 : Memory Location 2 2 : Memory Location 3 3 : Memory Location 4	0 (0 - 3)	742
o3-05 (0BDA)	Select Items to Backup/Restore	V/f OLV OLV/PM AQLV/PM EZOLV Sets which parameters are backed up, restored, and referenced. This parameter is only available when using an LCD keypad. 0 : Standard Parameters 1 : Standard + DWEZ Parameters	1 (0, 1)	742
o3-06 (0BDE)	Auto Parameter Backup Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function that automatically backs up parameters. This parameter is only available when using an LCD keypad. 0 : Disabled 1 : Enabled	1 (0, 1)	742
o3-07 (0BDF)	Auto Parameter Backup Interval	V/f OLV OLV/PM AQLV/PM EZOLV Sets the interval at which the automatic parameter backup function saves parameters from the drive to the keypad. Note: This parameter is only available when using an LCD keypad. 0 : Every 10 minutes 1 : Every 30 minutes 2 : Every 60 minutes 3 : Every 12 hours	1 (0 - 3)	743

◆ o4: Maintenance Monitors

No. (Hex.)	Name	Description	Default (Range)	Ref.
o4-01 (050B)	Elapsed Operating Time Setting	V/f OLV OLV/PM AQLV/PM EZOLV Sets the initial value of the cumulative drive operation time in 10-hour units.	0 h (0 - 9999 h)	743
o4-02 (050C)	Elapsed Operating Time Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the condition that counts the cumulative operation time. 0 : U4-01 Shows Total Power-up Time 1 : U4-01 Shows Total RUN Time	0 (0, 1)	743
o4-03 (050E)	Fan Operation Time Setting	V/f OLV OLV/PM AQLV/PM EZOLV Sets the value from which to start the cumulative drive cooling fan operation time in 10-hour units.	0 h (0 - 9999 h)	743
o4-05 (051D)	Capacitor Maintenance Setting	V/f OLV OLV/PM AQLV/PM EZOLV Sets the U4-05 [CapacitorMaintenance] monitor value.	0% (0 - 150%)	744
o4-07 (0523)	Softcharge Relay Maintenance Set	V/f OLV OLV/PM AQLV/PM EZOLV Sets the U4-06 [PreChargeRelayMainte] monitor value.	0% (0 - 150%)	744
o4-09 (0525)	IGBT Maintenance Setting	V/f OLV OLV/PM AQLV/PM EZOLV Sets the U4-07 [IGBT Maintenance] monitor value.	0% (0 - 150%)	744
o4-11 (0510)	Fault Trace/History Init (U2/U3)	V/f OLV OLV/PM AQLV/PM EZOLV Resets the records of Monitors U2-xx [Fault Trace] and U3-xx [Fault History]. 0 : Disabled 1 : Enabled	0 (0, 1)	744
o4-12 (0512)	kWh Monitor Initialization	V/f OLV OLV/PM AQLV/PM EZOLV Resets the monitor values for U4-10 [kWh, Lower 4 Digits] and U4-11 [kWh, Upper 5 Digits]. 0 : No Reset 1 : Reset	0 (0, 1)	745
o4-13 (0528)	RUN Command Counter @ Initialize	V/f OLV OLV/PM AQLV/PM EZOLV Resets the monitor values for U4-02 [Num of Run Commands], U4-24 [Number of Runs (Low)], and U4-25 [Number of Runs (High)]. 0 : No Reset 1 : Reset	0 (0, 1)	745

11.13 o: Keypad-Related Settings

No. (Hex.)	Name	Description	Default (Range)	Ref.
o4-22 (154F) RUN	Time Format	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time display format. This parameter is only available when using an LCD keypad. 0 : 24 Hour Clock 1 : 12 Hour Clock 2 : 12 Hour JP Clock	1 (0 - 2)	745
o4-23 (1550) RUN	Date Format	V/f OLV OLV/PM AOLV/PM EZOLV Sets the date display format. This parameter is only available when using an LCD keypad. 0 : YYYY/MM/DD 1 : DD/MM/YYYY 2 : MM/DD/YYYY	2 (0 - 2)	745
o4-24 (310F) RUN	bAT Detection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the operation when the drive detects <i>bAT</i> [Keypad Battery Low Voltage] and <i>TiM</i> [Keypad Time Not Set]. This parameter is only available when you use an LCD keypad. 0 : Disabled 1 : Enable (Alarm Detected) 2 : Enable (Fault Detected)	0 (0 - 2)	746

◆ o5: Log Function

No. (Hex.)	Name	Description	Default (Range)	Ref.
o5-00 (1E81) RUN	Log Type	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of data log function. This parameter is only available when you use an LCD keypad. 0 : Long Term Log 1 : Short Term Log	0 (0, 1)	749
o5-01 (1551) RUN	Log Start/Stop Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log function. This parameter is only available when using an LCD keypad. 0 : OFF 1 : ON	0 (0, 1)	750
o5-02 (1552) RUN	Log Sampling Interval	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log sampling cycle. This parameter is only available when using an LCD keypad.	Determined by o5-00 (Determined by o5-00 and C5-29)	750
o5-03 (1553) RUN	Log Monitor Data 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	101 (000, 101 - 999)	750
o5-04 (1554) RUN	Log Monitor Data 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available when using an LCD keypad.	102 (000, 101 - 999)	750
o5-05 (1555) RUN	Log Monitor Data 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	103 (000, 101 - 999)	750
o5-06 (1556) RUN	Log Monitor Data 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	107 (000, 101 - 999)	751
o5-07 (1557) RUN	Log Monitor Data 5	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	108 (000, 101 - 999)	751
o5-08 (1558) RUN	Log Monitor Data 6	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available when using an LCD keypad.	V/f, OLV/PM : 000, OLV, AOLV/PM, EZOLV : 105 (000, 101 - 999)	751
o5-09 (1559) RUN	Log Monitor Data 7	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available when using an LCD keypad.	110 (000, 101 - 999)	751
o5-10 (155A) RUN	Log Monitor Data 8	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	112 (000, 101 - 999)	751

No. (Hex.)	Name	Description	Default (Range)	Ref.
o5-11 (155B) RUN	Log Monitor Data 9	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	000 (000, 101 - 999)	752
o5-12 (155C) RUN	Log Monitor Data 10	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	000 (000, 101 - 999)	752
o5-15 (1B82) RUN	Trigger Type Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of trigger for the short-term data log. This parameter is only available when you use an LCD keypad. 0 : Digital Trigger 1 : Analog Trigger	0 (0, 1)	752
o5-16 (1B83) RUN	Digital Trigger Object	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function for the digital trigger target from the setting values for multi-function digital outputs. This parameter is only available when you use an LCD keypad.	E (0 - FF)	752
o5-17 (1B84) RUN	Analog Trigger Object	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor for the analog trigger target. This parameter is only available when you use an LCD keypad. Note: • Set the x-xx part of the Ux-xx [Monitor]. For example, set o5-17 = 101 to monitor U1-01 [Frequency Reference]. • When it is not necessary to set a data log monitor, set this parameter to 000.	102 (0 - 999)	752
o5-18 (1B85) RUN	Analog Trigger Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level to compare with the analog trigger target. This parameter is only available when using an LCD keypad.	0.0% (-999.9% - +999.9%)	753
o5-19 (1B86) RUN	Trigger Condition	V/f OLV OLV/PM AOLV/PM EZOLV Sets the condition with which to detect the trigger. This parameter is only available when you use an LCD keypad. 0 : Rising Edge 1 : Falling Edge	0 (0, 1)	753
o5-20 (1B87) RUN	Pre-Trigger Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the percentage of data to save before the drive detects the trigger for the short-term data log. This parameter is only available when you use an LCD keypad.	90% (0 - 100%)	753
o5-21 (1B88) RUN	Trend Log Sampling Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the sampling cycle for the trend log to save data before the drive detects the trigger. The trend log works at the same time as the short-term data log. This parameter is only available when you use an LCD keypad. 0 : Trend Log Disabled 1 : 0.1 s (About 1 hour) 2 : 1 s (About 10 hours) 3 : 10 s (About 100 hours) 4 : 60 s (About 600 hours)	0 (0 - 4)	753

11.14 q: DriveWorksEZ Parameters

◆ q1-01 to qx-xx: Reserved for DriveWorksEZ

No. (Hex.)	Name	Description	Default (Range)
q1-01 to qx-xx (1600 - xxxx)	Reserved for DriveWorksEZ	V/f OLV OLV/PM AOLV/PM EZOLV These parameters are reserved for use with DriveWorksEZ.	Refer to "DriveWorksEZ Operation Manual".

11.15 r: DWEZ Connection 1-20

◆ r1-01 to r1-40: DriveWorksEZ Connection Parameters 1 to 20 (Upper / Lower)

No. (Hex.)	Name	Description	Default (Range)
r1-01 to r1-40: (1840 - 1867)	DriveWorksEZ Connection Parameters 1 to 20 (Upper / Lower)	V/f OLV OLV/PM AOLV/PM EZOLV DriveWorksEZ Connection Parameters 1 to 20 (Upper / Lower)	0 (0 - FFFFH)

11.16 T: Motor Tuning

◆ T0: Tuning Mode Selection

No. (Hex.)	Name	Description	Default (Range)	Ref.
T0-00 (1197)	Tuning Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of Auto-Tuning. 0 : Motor Parameter Tuning 1 : Control Tuning	0 (0, 1)	754

◆ T1: Induction Motor Auto-Tuning

No. (Hex.)	Name	Description	Default (Range)	Ref.
T1-00 (0700)	Motor 1/Motor 2 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets which motor to tune when motor 1/2 switching is enabled. You can only use the keypad to set this parameter. You cannot use external input terminals to set it. Note: This parameter is enabled when $H1-xx = 16$ [Motor 2 Selection] is set. When $H1-xx \neq 16$ the keypad will not show this parameter. 1 : Motor 1 2 : Motor 2	1 (1, 2)	754
T1-01 (0701)	Auto-Tuning Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of Auto-Tuning. 0 : Rotational Auto-Tuning 1 : Stationary Auto-Tuning 1 2 : Stationary Line-Line Resistance	Determined by A1-02 (Determined by A1-02)	755
T1-02 (0702)	Motor Rated Power	V/f OLV OLV/PM AOLV/PM EZOLV Uses the units set in $o1-58$ [Motor Power Unit Selection] to set the motor rated output power.	Determined by o2-04, C6-01 (0.00 - 650.00 HP)	755
T1-03 (0703)	Motor Rated Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated voltage (V) of the motor. Enter the base speed voltage for constant output motors.	Determined by o2-04, C6-01 (200 V Class: 0.0 - 255.5 V, 400 V Class: 0.0 - 511.0 V)	755
T1-04 (0704)	Motor Rated Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated current (A) of the motor.	Determined by o2-04 (10% to 200% of the drive rated current)	755
T1-05 (0705)	Motor Base Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base frequency (Hz) of the motor.	60.0 Hz (0.0 - 590.0 Hz)	755
T1-06 (0706)	Number of Motor Poles	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of motor poles.	4 (2 to 120)	756
T1-07 (0707)	Motor Base Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor base speed for Auto-Tuning (min^{-1} (r/min)).	1750 min^{-1} (r/min) (0 - 35400 min^{-1} (r/min))	756
T1-09 (0709)	Motor No-Load Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the no-load current of the motor.	- (0A - T1-04; max. of 2999.9)	756
T1-10 (070A)	Motor Rated Slip Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets motor rated slip.	- (0.000 - 20.000 Hz)	756
T1-11 (070B)	Motor Iron Loss	V/f OLV OLV/PM AOLV/PM EZOLV Sets the iron loss to calculate the energy-saving coefficient.	Determined by E2-10 or E4-10 (0 - 65535 W)	756

No. (Hex.)	Name	Description	Default (Range)	Ref.
T1-12 (0BDB)	Test Mode Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function to enable Test Mode after Stationary Auto-Tuning. When you can operate the motor with a light load attached after Stationary Auto-Tuning is complete, enable this parameter. Note: You must first set $T1-10 = 0$ [Motor Rated Slip Frequency = 0 Hz] to enable this parameter. 0 : No 1 : Yes	0 (0, 1)	756
T1-13 (0BDC)	No-load voltage	V/f OLV OLV/PM AQLV/PM EZOLV Sets the no-load voltage of the motor. When the no-load voltage at rated speed is available, for example on the motor test report, set the voltage in this parameter. If the no-load voltage is not available, do not change this parameter. Note: - To get the same qualities as a Yaskawa 1000-series drive or previous series drive, set this parameter = $T1-03$ [Motor Rated Voltage]. - The default setting is different for different models. –B001 - B006, 2001 - 2008, 4001 - 4004: $T1-03 \times 0.85$ –B010 - B018, 2010 - 2082, 4005 - 4060: $T1-03 \times 0.90$	$T1-03 \times 0.9$ (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)	757

◆ T2: PM Motor Auto-Tuning

No. (Hex.)	Name	Description	Default (Range)	Ref.
T2-01 (0750)	PM Auto-Tuning Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the type of Auto-Tuning for PM motors. 0 : Manual Entry w/ Motor Data Sheet 1 : Stationary (Ld, Lq, R) 2 : Stationary (R Only) 4 : Rotational (Ld, Lq, R, back-EMF) 5 : High Frequency Injection	0 (Determined by A1-02)	757
T2-02 (0751)	PM Motor Code Selection	V/f OLV OLV/PM AQLV/PM EZOLV If the drive is operating an SMRD, SMRA, or SSR1 series Yaskawa PM motor, enter the PM motor code in to align with the rotation speed and motor output.	FFFF (0000 - FFFF)	757
T2-03 (0752)	PM Motor Type	V/f OLV OLV/PM AQLV/PM EZOLV Sets the type of PM motor the drive will operate. 0 : IPM motor 1 : SPM motor	1 (0, 1)	758
T2-04 (0730)	PM Motor Rated Power	V/f OLV OLV/PM AQLV/PM EZOLV Uses the units set in $o1-58$ [Motor Power Unit Selection] to set the PM motor rated output power.	Determined by o2-04, C6-01 (0.00 - 650.00 HP)	758
T2-05 (0732)	PM Motor Rated Voltage	V/f OLV OLV/PM AQLV/PM EZOLV Sets the rated voltage (V) of the motor.	200 V Class: 230.0 V, 400 V Class: 460.0 V (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)	758
T2-06 (0733)	PM Motor Rated Current	V/f OLV OLV/PM AQLV/PM EZOLV Sets the rated current (A) of the motor.	Determined by o2-04 (10% to 200% of the drive rated current)	758
T2-07 (0753)	PM Motor Base Frequency	V/f OLV OLV/PM AQLV/PM EZOLV Sets the base frequency (Hz) of the motor.	60.0 Hz (0.0 - 590.0 Hz)	758
T2-08 (0734)	Number of PM Motor Poles	V/f OLV OLV/PM AQLV/PM EZOLV Sets the number of motor poles.	4 (2 - 120)	758
T2-09 (0731)	PM Motor Base Speed	V/f OLV OLV/PM AQLV/PM EZOLV Sets the motor base speed (min^{-1} (r/min)).	1750 min^{-1} (r/min) (0 - 34500 min^{-1} (r/min))	758
T2-10 (0754)	PM Motor Stator Resistance	V/f OLV OLV/PM AQLV/PM EZOLV Sets the stator resistance for each motor phase. Note: This parameter does not set line-to-line resistance.	Determined by T2-02 (0.000 - 65.000 Ω)	759
T2-11 (0735)	PM Motor d-Axis Inductance	V/f OLV OLV/PM AQLV/PM EZOLV Sets the d-axis inductance of the motor on a per phase basis.	Determined by T2-02 (0.00 - 600.00 mH)	759
T2-12 (0736)	PM Motor q-Axis Inductance	V/f OLV OLV/PM AQLV/PM EZOLV Sets the q-Axis inductance of the motor on a per phase basis.	Determined by T2-02 (0.00 - 600.00 mH)	759

11.16 T: Motor Tuning

No. (Hex.)	Name	Description	Default (Range)	Ref.
T2-13 (0755)	Back-EMF Units Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the units that the drive uses to set the induced voltage constant. 0 : mV/(rev/min) 1 : mV/(rad/sec)	0 (0, 1)	759
T2-14 (0737)	Back-EMF Voltage Constant (Ke)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor induced voltage constant (Ke).	Determined by T2-13 (0.0 - 2000.0)	759
T2-15 (0756)	Pull-In Current Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level of the pull-in current as a percentage of <i>E5-03 [PM Motor Rated Current (FLA)]</i> . Usually it is not necessary to change this setting.	30% (0 - 120%)	759

◆ T3: ASR and Inertia Tuning

No. (Hex.)	Name	Description	Default (Range)	Ref.
T3-00 (1198)	Control Loop Tuning Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of Control Auto-Tuning. 2 : Deceleration Rate Tuning 3 : KEB Tuning	2 (2, 3)	760

◆ T4: EZ Tuning

No. (Hex.)	Name	Description	Default (Range)	Ref.
T4-01 (3130)	EZ Tuning Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of Auto-Tuning for EZOLV control. 0 : Motor Parameter Setting 1 : Line-to-Line Resistance	0 (0, 1)	760
T4-02 (3131)	Motor Type Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of motor. 0 : Induction (IM) 1 : Permanent Magnet (PM) 2 : Synchronous Reluctance (SynRM)	0 (0, 1, 2)	760
T4-04 (3133)	Motor Rated Revolutions	V/f OLV OLV/PM AOLV/PM EZOLV Sets rated rotation speed (min ⁻¹) of the motor.	- ((40 Hz to 120 Hz) × 60 × 2/E9-08)	760
T4-05 (3134)	Motor Rated Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated frequency (Hz) of the motor.	Determined by E9-01 and o2-04 (40.0 - 120.0 Hz)	761
T4-06 (3135)	Motor Rated Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated voltage (V) of the motor.	200 V Class: 230.0 V, 400 V Class: 460.0 V (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)	761
T4-07 (3136)	Motor Rated Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated current (A) of the motor.	Determined by o2-04, C6-01 (10% to 200% of the drive rated current)	761
T4-08 (3137)	Motor Rated Capacity	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated power in the units set in o1-58 [Motor Power Unit Selection].	Determined by E9-10 (0.10 - 650.00 HP)	761
T4-09 (3138)	Number of Poles	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of motor poles.	Determined by E9-01 (2 - 120)	761

11.17 U: Monitors

◆ U1: Operation Status Monitors

No. (Hex.)	Name	Description
U1-01 (0040)	Frequency Reference	V/f OLV OLV/PM AOLV/PM EZOLV Shows the frequency reference value. Parameter <i>o1-03</i> [Keypad Display Unit Selection] sets the display units. Unit: 0.01 Hz
U1-02 (0041)	Output frequency	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output frequency. Parameter <i>o1-03</i> [Keypad Display Unit Selection] sets the display units. Unit: 0.01 Hz
U1-03 (0042)	Output Current	V/f OLV OLV/PM AOLV/PM EZOLV Shows the actual output current. The keypad shows the value of <i>U1-03</i> in amperes (A). When looking at the monitor through Modbus communications, the current is "8192 = drive rated current (A)". Calculate the current from the monitor value that is in at Modbus communications using "Numerals being displayed / 8192 × drive rated current (A)." Unit: When the drive model changes, the display units for this parameter also change. 0.01 A units: B001 - B018, 2001 - 2042, 4001 - 4023 0.1A units: 2056 - 2082, 4031 - 4060
U1-04 (0043)	Control method selection	V/f OLV OLV/PM AOLV/PM EZOLV Shows the drive control method. 0 : V/f Control 2 : Open Loop Vector 5 : PM Open Loop Vector 6 : PM Advanced Open Loop Vector 8 : EZ Vector Control
U1-05 (0044)	Motor Speed	V/f OLV OLV/PM AOLV/PM EZOLV Shows the detected motor speed. Parameter <i>o1-03</i> [Keypad Display Unit Selection] sets the display units. Unit: 0.01 Hz
U1-06 (0045)	Output Voltage Ref	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output voltage reference. Unit: 0.1 V
U1-07 (0046)	DC Bus Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Shows the DC bus voltage. Unit: 1 V
U1-08 (0047)	Output Power	V/f OLV OLV/PM AOLV/PM EZOLV Shows the internally-calculated output power. When you change <i>A1-02</i> [Control Method Selection], it will also change the signal level of the analog output. - A1-02 = 0: Drive capacity (kW) - A1-02 = 2: Motor Rated Power [E2-11] (kW) - A1-02 = 5, 6: PM Motor Rated Power [E5-02] (kW) - A1-02 = 8: Motor Rated Power [E9-07] (kW) Unit: When the drive model changes, the display units for this parameter also change. 0.01 kW: B001 - B018, 2001 - 2042, 4001 - 4023 0.1 kW: 2056 - 2082, 4031 - 4060
U1-09 (0048)	Torque Reference	V/f OLV OLV/PM AOLV/PM EZOLV Shows the internal torque reference value. Unit: 0.1%
U1-10 (0049)	Digital Input Status	V/f OLV OLV/PM AOLV/PM EZOLV Shows the status of the MFDO terminal where $\overline{1}$ = ON and $\overline{0}$ = OFF. For example, <i>U1-10</i> shows  when terminal S1 is ON. bit0 : Terminal S1 (MFDI 1) bit1 : Terminal S2 (MFDI 2) bit2 : Ethernet DI3 bit3 : Ethernet DI4 bit4 : Ethernet DI5 bit5 : Ethernet DI6 bit6 : Ethernet DI7 bit7 : Not used (normal value of [0]).

No. (Hex.)	Name	Description
U1-11 (004A)	Digital Output Status	V/f OLV OLV/PM AOLV/PM EZOLV Shows the status of the MFDO terminal where $\bar{I}$ = ON and I = OFF. For example, U1-11 shows  when terminal MA is ON. Note: When $H2-xx = 100$ to 192 [Inverse Outputs of 0 to 92], U1-11 does not show the status in inverse. bit0 : Terminal MA/MB-MC bit1 : Ethernet DO1 bit2 : Ethernet DO2 bit3 : Not used (normal value of [$\bar{I}$]). bit4 : Not used (normal value of [$\bar{I}$]). bit5 : Not used (normal value of [$\bar{I}$]). bit6 : Not used (normal value of [$\bar{I}$]). bit7 : Not used (normal value of [$\bar{I}$]).
U1-12 (004B)	Drive Status	V/f OLV OLV/PM AOLV/PM EZOLV Shows drive status where $\bar{I}$ = ON and I = OFF. For example, U1-12 shows  during run with the Reverse Run command. bit0 : During Run bit1 : During zero-speed bit2 : During reverse bit3 : During fault reset signal input bit4 : During speed agreement bit5 : Drive Ready bit6 : During minor fault detection bit7 : During fault detection
U1-13 (004E)	Terminal A1 Level	V/f OLV OLV/PM AOLV/PM EZOLV Shows the signal level of terminal A1. Unit: 0.1%
U1-16 (0053)	SFS Output Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output frequency after soft start. Shows the frequency with acceleration and deceleration times and S-curves. Parameter $o1-03$ [Keypad Display Unit Selection] sets the display units. Unit: 0.01 Hz
U1-18 (0061)	oPE Fault Parameter	V/f OLV OLV/PM AOLV/PM EZOLV Shows the parameter number that caused the $oPE02$ [Parameter Range Setting Error] or $oPE08$ [Parameter Selection Error].
U1-25 (004D)	SoftwareNumber Flash	V/f OLV OLV/PM AOLV/PM EZOLV Shows the ID.
U1-26 (005B)	SoftwareNumber ROM	V/f OLV OLV/PM AOLV/PM EZOLV Shows the ROM ID.
U1-50 (1199) Expert	Virtual Analog Input	V/f OLV OLV/PM AOLV/PM EZOLV Shows the virtual analog input value.
U1-91 (154E) Expert	Output Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Shows the drive internal output voltage. Unit: 0.1 V

◆ U2: Fault Trace

No. (Hex.)	Name	Description
U2-01 (0080)	Current Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault that the drive has when viewing the monitor.
U2-02 (0081)	Previous Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault that occurred most recently.

No. (Hex.)	Name	Description
U2-03 (0082)	Freq Reference@Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the frequency reference at the fault that occurred most recently. Use <i>U1-01 [Frequency Reference]</i> to monitor the frequency reference value. Unit: 0.01 Hz
U2-04 (0083)	Output Freq @ Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output frequency at the fault that occurred most recently. Use <i>U1-02 [Output Frequency]</i> to monitor the actual output frequency. Unit: 0.01 Hz
U2-05 (0084)	Output Current@Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output current at the fault that occurred most recently. Use <i>U1-03 [Output Current]</i> to monitor the actual output current. The keypad shows the value of <i>U1-03</i> in amperes (A). When looking at the monitor through Modbus communications, the current is "8192 = drive rated current (A)". Calculate the current from the monitor value that is in at Modbus communications using "Numerals being displayed / 8192 × drive rated current (A)." Unit: When the drive model changes, the display units for this parameter also change. 0.01 A units: B001 - B018, 2001 - 2042, 4001 - 4023 0.1A units: 2056 - 2082, 4031 - 4060
U2-06 (0085)	Motor Speed @ Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the motor speed at the fault that occurred most recently. Use <i>U1-05 [Motor Speed]</i> to monitor the motor speed. Unit: 0.01 Hz
U2-07 (0086)	Output Voltage@Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output voltage reference at the fault that occurred most recently. Use <i>U1-06 [Output Voltage Ref]</i> to monitor the output voltage reference. Unit: 0.1 V
U2-08 (0087)	DC Bus Voltage@Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the DC bus voltage at the fault that occurred most recently. Use <i>U1-07 [DC Bus Voltage]</i> to monitor the DC bus voltage. Unit: 1 V
U2-09 (0088)	Output Power @ Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output power at the fault that occurred most recently. Use <i>U1-08 [Output Power]</i> to monitor the output power. Unit: 0.1 kW
U2-10 (0089)	Torque Ref @ Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the torque reference at the fault that occurred most recently as a percentage of the motor rated torque. Use <i>U1-09 [Torque Reference]</i> to monitor the torque reference. Unit: 0.1%
U2-11 (008A)	Digital Input Status @ Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the status of the MFDI terminals at the most recent fault where $\overline{1}$ = ON and $\overline{0}$ = OFF. For example, <i>U2-11</i> shows  when terminal S1 is ON. Use <i>U1-10 [Digital Input Status]</i> to monitor the actual MFDI terminal status. bit0 : Terminal S1 bit1 : Terminal S2 bit2 : Ethernet DI3 bit3 : Ethernet DI4 bit4 : Ethernet DI5 bit5 : Ethernet DI6 bit6 : Ethernet DI7 bit7 : Not used (normal value of [0]).

No. (Hex.)	Name	Description
U2-12 (008B)	Digital Output Status @ Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the status of the MFDO terminals at the most recent fault where $I = ON$ and $I = OFF$. For example, U2-12 shows  when terminal MA is ON. Use U1-11 [Digital Output Status] to monitor the actual MFDO terminal status. bit0 : Terminal MA/MB-MC bit1 : Ethernet DO1 bit2 : Ethernet DO2 bit3 : Not used (normal value of [I]). bit4 : Not used (normal value of [I]). bit5 : Not used (normal value of [I]). bit6 : Not used (normal value of [I]). bit7 : Not used (normal value of [I]).
U2-13 (008C)	Operation Status @ Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the status of the MFDO terminals at the most recent fault where $I = ON$ and $I = OFF$. For example, U2-13 shows  during run. Use U1-12 [Drive Status] to monitor the actual MFDO terminal status. bit0 : During Run bit1 : During zero-speed bit2 : During reverse bit3 : During fault reset signal input bit4 : During speed agreement bit5 : Drive Ready bit6 : During minor fault detection bit7 : During fault detection
U2-14 (008D)	Elapsed Time @ Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time of the drive at the fault that occurred most recently. Use U4-01 [Cumulative Ope Time] to monitor the cumulative operation time. Unit: 1 h
U2-15 (07E0)	SFS Output @ Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output frequency after soft start at the fault that occurred most recently. Use U1-16 [SFS Output Frequency] to monitor the output frequency after soft start. Unit: 0.01 Hz
U2-16 (07E1)	q-Axis Current@Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the q-Axis current of the motor at the fault that occurred most recently. Use U6-01 [Iq Secondary Current] to monitor the q-Axis current of the motor. Unit: 0.1 %
U2-17 (07E2)	d-Axis Current@Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the d-Axis current of the motor at the fault that occurred most recently. Use U6-02 [Id Excitation Current] to monitor the d-Axis current of the motor. Unit: 0.1%
U2-19 (07E4)	ControlDeviation@Flt	V/f OLV OLV/PM AOLV/PM EZOLV Shows the amount of control axis deviation ($\Delta\theta$) at the fault that occurred most recently. Use U6-10 [ContAxisDeviation $\Delta\theta$] to monitor the actual amount of control axis deviation ($\Delta\theta$). Unit: 0.1 °

No. (Hex.)	Name	Description
U2-20 (008E)	Heatsink Temp @Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the heatsink temperature at the fault that occurred most recently. Use U4-08 [Heatsink Temperature] to monitor the temperature of the heatsink. Unit: 1 °C
U2-21 (1166) Expert	STPo Detect @ Fault	V/f OLV OLV/PM AOLV/PM EZOLV Monitors conditions to detect STPo [Motor Step-Out Detected] faults. The bit for each condition is shown as $\overline{1}$ = ON or $\overline{1}$ = OFF. For example, U2-21 shows  when the drive detects excessive current. bit0 : Excessive current bit1 : Induced voltage deviation bit2 : d-axis current deviation bit3 : Motor lock at startup bit4 : Acceleration stall continue bit5 : Acceleration stall repeat bit6 : Not used (normal value of [$\overline{1}$]). bit7 : Not used (normal value of [$\overline{1}$]).

◆ U3: Fault History

No. (Hex.)	Name	Description
U3-01 (0090)	1st MostRecent Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault history of the most recent fault. Note: The drive saves this fault history to two types of registers at the same time for the Modbus communications.
U3-02 (0091)	2nd MostRecent Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault history of the second most recent fault. Note: The drive saves this fault history to two types of registers at the same time for the Modbus communications.
U3-03 (0092)	3rd MostRecent Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault history of the third most recent fault. Note: The drive saves this fault history to two types of registers at the same time for the Modbus communications.
U3-04 (0093)	4th MostRecent Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault history of the fourth most recent fault. Note: The drive saves this fault history to two types of registers at the same time for the Modbus communications.
U3-05 (0804)	5th MostRecent Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault history of the fifth most recent fault.
U3-06 (0805)	6th MostRecent Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault history of the sixth most recent fault.
U3-07 (0806)	7th MostRecent Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault history of the seventh most recent fault.
U3-08 (0807)	8th MostRecent Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault history of the eighth most recent fault.
U3-09 (0808)	9th MostRecent Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault history of the ninth most recent fault.
U3-10 (0809)	10th MostRecentFault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the fault history of the tenth most recent fault.
U3-11 (0094)	ElapsedTime@1stFault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time when the most recent fault occurred. Note: The drive saves this cumulative operation time to two types of registers at the same time for the Modbus communications. Unit: 1 h

No. (Hex.)	Name	Description
U3-12 (0095)	ElapsedTime@2ndFault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time when the second most recent fault occurred. Note: The drive saves this cumulative operation time to two types of registers at the same time for the Modbus communications. Unit: 1 h
U3-13 (0096)	ElapsedTime@3rdFault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time when the third most recent fault occurred. Note: The drive saves this cumulative operation time to two types of registers at the same time for the Modbus communications. Unit: 1 h
U3-14 (0097)	ElapsedTime@4thFault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time when the fourth most recent fault occurred. Note: The drive saves this cumulative operation time to two types of registers at the same time for the Modbus communications. Unit: 1 h
U3-15 (080E)	ElapsedTime@5thFault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time when the fifth most recent fault occurred. Unit: 1 h
U3-16 (080F)	ElapsedTime@6thFault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time when the sixth most recent fault occurred. Unit: 1 h
U3-17 (0810)	ElapsedTime@7thFault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time when the seventh most recent fault occurred. Unit: 1 h
U3-18 (0811)	ElapsedTime@8thFault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time when the eighth most recent fault occurred. Unit: 1 h
U3-19 (0812)	ElapsedTime@9thFault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time when the ninth most recent fault occurred. Unit: 1 h
U3-20 (0813)	ElapsedTime@10 Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time when the tenth most recent fault occurred. Unit: 1 h

◆ U4: Maintenance Monitors

No. (Hex.)	Name	Description
U4-01 (004C)	Cumulative Ope Time	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time of the drive. Use parameter <i>o4-01 [Elapsed Operating Time Setting]</i> to reset this monitor. Use parameter <i>o4-02 [Elapsed Operating Time Selection]</i> to select the cumulative operation times from: - The time from when the drive is energized until it is de-energized. - The time at which the Run command is turned ON. The maximum value that the monitor will show is 99999. After this value is more than 99999, the drive automatically resets it and starts to count from 0 again. Unit: 1 h Note: The Modbus communication data is shown in 10 h units. Use register 0099H for data in 1 h units.
U4-02 (0075)	Num of Run Commands	V/f OLV OLV/PM AOLV/PM EZOLV Shows how many times that the drive has received a Run command. Use parameter <i>o4-13 [RUN Command Counter @ Initialize]</i> to reset this monitor. The maximum value that the monitor will show is 65535. After this value is more than 65535, the drive automatically resets it and starts to count from 0 again. Unit: 1
U4-03 (0067)	Cooling Fan Ope Time	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time of the cooling fans. Use parameter <i>o4-03 [Fan Operation Time Setting]</i> to reset this monitor. The maximum value that the monitor will show is 99999. After this value is more than 99999, the drive automatically resets it and starts to count from 0 again. Unit: 1 h Note: The Modbus communication data is shown in 10 h units. Use register 009BH for data in 1 h units.

No. (Hex.)	Name	Description
U4-04 (007E)	Cool Fan Maintenance	V/f OLV OLV/PM AOLV/PM EZOLV Shows the cumulative operation time of the cooling fans as a percentage of the estimated performance life of the cooling fans. The default value is 0. The value counts up from 0. Use <i>o4-03 [Fan Operation Time Setting]</i> to reset this monitor. Unit: 1% Note: Replace the cooling fans when this monitor is at 90%.
U4-05 (007C)	CapacitorMaintenance	V/f OLV OLV/PM AOLV/PM EZOLV Shows the operation time of the electrolytic capacitors for the main circuit and control circuit as a percentage of the estimated performance life of the electrolytic capacitors. The default value is 0. The value counts up from 0. Use <i>o4-05 [Capacitor Maintenance Setting]</i> to reset this monitor. Unit: 1% Note: Replace the electrolytic capacitor when this monitor is at 90%.
U4-06 (07D6)	PreChargeRelayMainte	V/f OLV OLV/PM AOLV/PM EZOLV Shows the operation time of the soft charge bypass relay as a percentage of the estimated performance life of the soft charge bypass relay. The default value is 0. The value counts up from 0. Use <i>o4-07 [Softcharge Relay Maintenance Set]</i> to reset this monitor. Unit: 1% Note: Replace the drive when this monitor is at 90%.
U4-07 (07D7)	IGBT Maintenance	V/f OLV OLV/PM AOLV/PM EZOLV Shows the operation time of the IGBTs as a percentage of the estimated performance life of the IGBTs. The default value is 0. The value counts up from 0. Use <i>o4-09 [IGBT Maintenance Setting]</i> to reset this monitor. Unit: 1% Note: Replace the drive when this monitor is at 90%.
U4-08 (0068)	Heatsink Temperature	V/f OLV OLV/PM AOLV/PM EZOLV Shows the heatsink temperature of the drive. Unit: 1 °C
U4-09 (005E)	LED Check	V/f OLV OLV/PM AOLV/PM EZOLV Turns on all of the keypad LEDs to make sure that the LEDs operate correctly. 1. With <i>U4-09</i> displayed, press . All LEDs on the keypad will turn on. Note: When Safety input 2 CH is open (STo), READY will flash.
U4-10 (005C)	kWh, Lower 4 Digits	V/f OLV OLV/PM AOLV/PM EZOLV Shows the lower 4 digits of the watt hour value for the drive. Unit: 1 kWh Note: The watt hour is displayed in 9 digits. Monitor <i>U4-11 [kWh, Upper 5 Digits]</i> shows the upper 5 digits and <i>U4-10</i> shows the lower 4 digits. Example for 12345678.9 kWh: <i>U4-10</i>: 678.9 kWh <i>U4-11</i>: 12345 MWh
U4-11 (005D)	kWh, Upper 5 Digits	V/f OLV OLV/PM AOLV/PM EZOLV Shows the upper 5 digits of the watt hour value for the drive. Unit: 1 MWh Note: Monitor <i>U4-11</i> shows the upper 5 digits and <i>U4-10 [kWh, Lower 4 Digits]</i> shows the lower 4 digits. Example for 12345678.9 kWh: <i>U4-10</i>: 678.9 kWh <i>U4-11</i>: 12345 MWh

No. (Hex.)	Name	Description
U4-13 (07CF)	Peak Hold Current	V/f OLV OLV/PM AOLV/PM EZOLV Shows the hold value of the peak value (rms) for the drive output current. Use <i>U4-14 [PeakHold Output Freq]</i> to show the drive output frequency at the time that the drive holds the output current. The drive will hold the peak hold current at the next start up and restart of the power supply. The drive keeps the value that was under hold during baseblock (during stop). The keypad shows the value of <i>U4-13</i> in amperes (A). When looking at the monitor through Modbus communications, the current is "8192 = drive rated current (A)". Calculate the current from the monitor value that is in at Modbus communications using "Numerals being displayed / 8192 × drive rated current (A)." Unit: When the drive model changes, the display units for this parameter also change. • 0.01 A units: B001 - B018, 2001 - 2042, 4001 - 4023 • 0.1A units: 2056 - 2082, 4031 - 4060
U4-14 (07D0)	PeakHold Output Freq	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output frequency at which the peak value (rms) of the drive output current is held. The peak hold current can be monitored by <i>U4-13 [Peak Hold Current]</i>. The peak hold output frequency will be cleared at the next startup and restart of the power supply. The drive keeps the value that was under hold during baseblock (during stop). Unit: 0.01 Hz
U4-16 (07D8)	Motor oL1 Level	V/f OLV OLV/PM AOLV/PM EZOLV Shows the integrated value of <i>oL1 [Motor Overload]</i> as a percentage of <i>oL1</i> detection level. Unit: 0.1%
U4-18 (07DA)	Reference Source	V/f OLV OLV/PM AOLV/PM EZOLV Shows the selected frequency reference source. The keypad shows the frequency reference source as "XY-nn" as specified by these rules: X: <i>External Reference 1/2 Selection [H1-xx = 2]</i> selection status • 1: <i>b1-01 [Frequency Reference Selection 1]</i> • 2: <i>b1-15 [Frequency Reference Selection 2]</i> Y-nn: Frequency reference source • 0-01: Keypad (<i>d1-01 [Reference 1]</i>) • 1-00: Analog input (unassigned) • 1-01: MFAI terminal A1 • 2-02 to 2-17: Multi-step speed reference (<i>d1-02 to d1-17 [Reference 2 to 16, Jog Reference]</i>) • 3-01: Modbus communications • 4-01: Ethernet • 7-01: DriveWorksEZ • 9-01: Up/Down command
U4-19 (07DB)	Modbus FreqRef (dec)	V/f OLV OLV/PM AOLV/PM EZOLV Shows the frequency reference sent to the drive from the Modbus communications as a decimal. Unit: 0.01%
U4-20 (07DC)	COM Freq Ref(dec)	V/f OLV OLV/PM AOLV/PM EZOLV Shows the frequency reference sent to the drive from Ethernet communications as a decimal. Unit: 0.01 %

No. (Hex.)	Name	Description
U4-21 (07DD)	Run Command Source	V/f OLV OLV/PM AOLV/PM EZOLV Shows the selected Run command source. The keypad shows the Run command source as "XY-nn" as specified by these rules: X: External Reference 1/2 Selection [H1-xx = 2] selection status 1: b1-02 [Run Command Selection 1] 2: b1-16 [Run Command Selection 2] Y: Run command source 0: Keypad 1: Control circuit terminal 3: Modbus communications 4: Ethernet 7: DriveWorksEZ nn: Run command limit status data 00: No limit status. 01: The Run command was left ON when the drive stopped in the Programming Mode. 02: The Run command was left ON when switching from LOCAL Mode to REMOTE Mode. 03: The Run command is in standby after the drive was energized until the soft charge bypass contactor turns ON. Note: The drive will detect <i>Uv1</i> [DC Bus Undervoltage] or <i>Uv</i> [Undervoltage] if the soft charge bypass contactor does not turn ON after 10 s. 04: Restart after run stop is prohibited. 05: Fast stop has been executed using the MFDI terminal. Or, the motor has ramped to stop by pressing the STOP key on the keypad. 06: b1-17 = 0 [Run Command at Power Up = Disregard Existing RUN Command] is set. 07: During baseblock while coast to stop with timer. 08: Frequency reference is below E1-09 [Minimum Output Frequency] during baseblock. 09: Waiting for the Enter command from PLC.
U4-22 (07DE)	Modbus CmdData (hex)	V/f OLV OLV/PM AOLV/PM EZOLV Shows the operation signal (register 0001H) sent to the drive from Modbus communications as a 4-digit hexadecimal number (zero suppress). The keypad shows the operation signal as specified by these rules: bit 0 : Forward run/Stop bit 1 : Reverse run/Stop bit 2 : External fault bit 3 : Fault Reset Procedure bit 4 : Multi-function input 1 bit 5 : Multi-function input 2 bit 6 : Multi-function input 3 bit 7 : Multi-function input 4 bit 8 : Multi-function input 5 bit 9 : Multi-function input 6 bit A : Multi-function input 7 bit B : Not used (normal value of 0). bit C : Not used (normal value of 0). bit D : Not used (normal value of 0). bit E : Not used (normal value of 0). bit F : Not used (normal value of 0).
U4-23 (07DF)	COM CmdData (hex)	V/f OLV OLV/PM AOLV/PM EZOLV Shows the operation signal (register 0001H) sent to the drive from Ethernet communications as a 4-digit hexadecimal number. The keypad shows the operation signal as specified by these rules: bit 0 : Forward run/Stop bit 1 : Reverse run/Stop bit 2 : External fault bit 3 : Fault Reset Procedure bit 4 : Multi-function input 1 bit 5 : Multi-function input 2 bit 6 : Multi-function input 3 bit 7 : Multi-function input 4 bit 8 : Multi-function input 5 bit 9 : Multi-function input 6 bit A : Multi-function input 7 bit B : Not used (normal value of 0). bit C : Not used (normal value of 0). bit D : Not used (normal value of 0). bit E : Not used (normal value of 0). bit F : Not used (normal value of 0).

11.17 U: Monitors

No. (Hex.)	Name	Description
U4-24 (07E6)	Number of Runs (Low)	V/f OLV OLV/PM AOLV/PM EZOLV Shows the lower 4 digits of the drive run count. Note: The drive run count is an 8-digit number. Monitor <i>U4-25 [Number of Runs(High)]</i> shows the upper 4 digits and <i>U4-24</i> shows the lower 4 digits.
U4-25 (07E7)	Number of Runs(High)	V/f OLV OLV/PM AOLV/PM EZOLV Shows the upper 4 digits of the drive run count. Note: The drive run count is an 8-digit number. Monitor <i>U4-25</i> shows the upper 4 digits and <i>U4-24 [Number of Runs (Low)]</i> shows the lower 4 digits.
U4-52 (1592)	Torque Limit via Communication	V/f OLV OLV/PM AOLV/PM EZOLV Shows the torque reference that the drive received from Modbus communications as a decimal number. Unit: 0.1%
U4-75 (1BC4)	Ethernet Protocol	V/f OLV OLV/PM AOLV/PM EZOLV Displays the protocol of the communication currently selected. 70 : Protocol not set 71 : Modbus TCP/IP 72 : EtherNet/IP 73 : MECHATROLINK-4 74 : EtherCAT 75 : BACnet/IP 78 : PROFINET
U4-76 (1BC5)	MAC Address 1 1,2	V/f OLV OLV/PM AOLV/PM EZOLV Displays the first and second octets of MAC address 1.
U4-77 (1BC6)	MAC Address 1 3,4	V/f OLV OLV/PM AOLV/PM EZOLV Displays the third and fourth octets of MAC address 1.
U4-78 (1BC7)	MAC Address 1 5,6	V/f OLV OLV/PM AOLV/PM EZOLV Displays the fifth and sixth octets of MAC address 1.
U4-79 (1BC8) Expert	MAC Address 2 1,2	V/f OLV OLV/PM AOLV/PM EZOLV Displays the first and second octets of MAC address 2.
U4-80 (1BC9) Expert	MAC Address 2 3,4	V/f OLV OLV/PM AOLV/PM EZOLV Displays the third and fourth octets of MAC address 2.
U4-81 (1BCA) Expert	MAC Address 2 5,6	V/f OLV OLV/PM AOLV/PM EZOLV Displays the fifth and sixth octets of MAC address 2.
U4-82 (1BCB) Expert	MAC Address 3 1,2	V/f OLV OLV/PM AOLV/PM EZOLV Displays the first and second octets of MAC address 3.
U4-83 (1BCC) Expert	MAC Address 3 3,4	V/f OLV OLV/PM AOLV/PM EZOLV Displays the third and fourth octets of MAC address 3.
U4-84 (1BCD) Expert	MAC Address 3 5,6	V/f OLV OLV/PM AOLV/PM EZOLV Displays the fifth and sixth octets of MAC address 3.

◆ U5: PID Monitors

No. (Hex.)	Name	Description
U5-01 (0057)	PID Feedback	V/f OLV OLV/PM AOLV/PM EZOLV Shows the PID control feedback value. Parameter <i>b5-20 [PID Unit Selection]</i> sets the display units. Unit: 0.01%
U5-02 (0063)	PID Input	V/f OLV OLV/PM AOLV/PM EZOLV Shows the change between the PID setpoint and PID feedback (the quantity of PID input) as a percentage of the maximum output frequency. Unit: 0.01%

No. (Hex.)	Name	Description
U5-03 (0064)	PID Output	V/f OLV OLV/PM AOLV/PM EZOLV Shows the PID control output as a percentage of the maximum output frequency. Unit: 0.01%
U5-04 (0065)	PID Setpoint	V/f OLV OLV/PM AOLV/PM EZOLV Shows the PID setpoint. Parameter <i>b5-20 [PID Unit Selection]</i> sets the display units. Unit: 0.01%
U5-05 (07D2)	PID DifferentialFdbk	V/f OLV OLV/PM AOLV/PM EZOLV Shows the PID differential feedback value as a percentage of the maximum output frequency. Set <i>H3-02 = 16 [MFAI Function Selection = Differential PID Feedback]</i> to enable this monitor. Unit: 0.01%
U5-06 (07D3)	PID Fdbk-Diff PID Fdbk	V/f OLV OLV/PM AOLV/PM EZOLV Shows the difference from calculating <i>U5-05 [PID DifferentialFdbk] - U5-01 [PID Feedback]</i>. Unit: 0.01% Note: <i>U5-01 = U5-06 when H3-02 ≠ 16 [MFAI Function Selection ≠ Differential PID Feedback].</i>
U5-21 (0872) Expert	Energy Save Coeff Ki	V/f OLV OLV/PM AOLV/PM EZOLV Shows the energy-saving coefficient Ki value for PM. Unit: 0.01
U5-22 (0873) Expert	Energy Save Coeff Kt	V/f OLV OLV/PM AOLV/PM EZOLV Shows the energy-saving coefficient Kt value for PM. Unit: 0.01
U5-30 (3000)	Time Hr Min HHMM	V/f OLV OLV/PM AOLV/PM EZOLV Displays the current time (hours/minutes). The display format is "XHHMM". X: Not displayed when LCD is connected. Not displayed when <i>o4-22 = 0</i> when LED is connected. Displays "A" or "P" when <i>o4-22 = 1, 2</i>. HH: 0 to 23 (decimal) MM: 0 to 59 (decimal)
U5-31 (3001)	Date Year	V/f OLV OLV/PM AOLV/PM EZOLV Displays the current year. The display format is "20YY". 20YY: 00 to 99 (decimal)
U5-32 (3002)	Date Mo Day MMDD	V/f OLV OLV/PM AOLV/PM EZOLV Displays the current month and day. The display format is "MMDD". MM: 01 to 12 (decimal number) DD: 01 to 31 (decimal number)
U5-33 (3003)	Date Week	V/f OLV OLV/PM AOLV/PM EZOLV Displays the current day of the week. The display format is "DW". W: 0 (Sun), 1 (Mon), 2 (Tue), 3 (Wed), 4 (Thu), 5 (Fri), 6 (Sat)

No. (Hex.)	Name	Description
U5-92 (1EC0)	Keypad Button Status Monitor	V/f OLV OLV/PM AOLV/PM EZOLV Shows the status of left and right arrow keys of the keypad where $\overline{I}$ = ON and I = OFF. For example, when you push and hold  for one second while bit 0 = $\overline{I}$ (OFF), the value of bit 0 will be $\overline{I}$ (ON). The status toggles. When you push and hold  while bit 0 = $\overline{I}$ (ON), the value of bit 0 will be I (OFF). Note: - This function is only available when the drive is in Drive Mode. If the drive is not in Drive Mode, this monitor value will not change. - If the keypad is disconnected, the value of the bit in this monitor keeps the value before the disconnection. bit0 : Left arrow key [ bit1 : Right arrow key [ bit2 : Left arrow key + Right arrow key [ +  bit3 : Not used (normal value of [$\overline{I}$]). bit4 : Not used (normal value of [$\overline{I}$]). bit5 : Not used (normal value of [$\overline{I}$]). bit6 : Not used (normal value of [$\overline{I}$]). bit7 : Not used (normal value of [$\overline{I}$]). ⚠ WARNING Sudden Movement Hazard Do not create a host controller program or DriveWorksEZ program that starts/stops the drive based on U5-92 [Keypad Button Status Monitor]. If you do not correctly set the program, it can cause incorrect operation and death or serious injury from sudden movement of the machine.
U5-99 (1599)	PID Setpoint Command	V/f OLV OLV/PM AOLV/PM EZOLV Shows the PID setpoint command. Parameter b5-20 [PID Unit Selection] sets the display units. Unit: 0.01%

◆ U6: Operation Status Monitors

No. (Hex.)	Name	Description
U6-01 (0051)	Iq Secondary Current	V/f OLV OLV/PM AOLV/PM EZOLV Shows the value calculated for the motor secondary current (q-Axis) as a percentage of the motor rated secondary current. Unit: 0.1%
U6-02 (0052)	Id ExcitationCurrent	V/f OLV OLV/PM AOLV/PM EZOLV Shows the value calculated for the motor excitation current (d-Axis) as a percentage of the motor rated secondary current. Unit: 0.1%
U6-03 (0054)	ASR Input	V/f OLV OLV/PM AOLV/PM EZOLV Shows the ASR input value as a percentage of the maximum frequency. Unit: 0.01%
U6-04 (0055)	ASR Output	V/f OLV OLV/PM AOLV/PM EZOLV Shows the ASR output value as a percentage of the motor rated secondary current. Unit: 0.01%
U6-05 (0059)	OutputVoltageRef: Vq	V/f OLV OLV/PM AOLV/PM EZOLV Shows the drive internal voltage reference for motor secondary current control (q-Axis). Unit: 0.1 V
U6-06 (005A)	OutputVoltageRef: Vd	V/f OLV OLV/PM AOLV/PM EZOLV Shows the drive internal voltage reference for motor excitation current control (d-Axis). Unit: 0.1 V
U6-07 (005F) Expert	q-Axis ACR Output	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output value for current control related to motor secondary current (q axis). Unit: 0.1 %
U6-08 (0060) Expert	d-Axis ACR Output	V/f OLV OLV/PM AOLV/PM EZOLV Shows the output value for current control related to motor excitation current (d axis). Unit: 0.1 %
U6-09 (07C0) Expert	AdvPhase Compens Δθcmp	V/f OLV OLV/PM AOLV/PM EZOLV Displays the data on forward phase compensation for the calculation results of the amount of control axis deviation. Unit: 1 °

No. (Hex.)	Name	Description
U6-10 (07C1) Expert	ContAxisDeviation $\Delta\theta$	V/f OLV OLV/PM AOLV/PM EZOLV Shows the deviation between the $\gamma\delta$ -Axis that the drive uses for motor control and the dq-Axis. Unit: 0.1 °
U6-14 (07CB) Expert	MagPolePosition(Obs)	V/f OLV OLV/PM AOLV/PM EZOLV Shows the value of the flux position estimation. Unit: 0.1 °
U6-17 (07D1) Expert	Energy Save Coeff	V/f OLV OLV/PM AOLV/PM EZOLV Shows the total time of direction of motor rotation detections for Speed Estimation Speed Searches. This value adjusts <i>b3-26 [Direction Determination Level]</i> . Note: Upper limit is +32767 and lower limit is -32767.
U6-20 (07D4)	UP/DOWN 2 Bias Value	V/f OLV OLV/PM AOLV/PM EZOLV Shows the bias value used to adjust the frequency reference. Unit: 0.1%
U6-21 (07D5)	Offset Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Shows the total value of <i>d7-01 to d7-03 [Offset Frequency 1 to 3]</i> selected with <i>Add Offset Frequency 1 to 3 [H1-xx = 44 to 46]</i> . Unit: 0.1%
U6-30 (007A) Expert	Magnetic flux command	V/f OLV OLV/PM AOLV/PM EZOLV Monitor magnetic flux command 10 V: 100% (It can support to 0 to ± 10 V) Unit: 0.01%
U6-31 (007B)	TorqueDetect Monitor	V/f OLV OLV/PM AOLV/PM EZOLV Shows the torque reference or the output current after applying the filter set to <i>L6-07 [Torque Detection Filter Time]</i> . Unit: 0.1%
U6-36 (0720) Expert	Comm Errors-Host	V/f OLV OLV/PM AOLV/PM EZOLV Shows the number of inter-CPU communication errors. When you de-energize the drive, this value resets to 0.
U6-37 (0721) Expert	Comm Errors-Sensor	V/f OLV OLV/PM AOLV/PM EZOLV Shows the number of inter-CPU communication errors. When you de-energize the drive, this value resets to 0.
U6-57 (07C4)	PolePolarityDeterVal	V/f OLV OLV/PM AOLV/PM EZOLV Shows the change from the integrated current when the drive finds the polarity. Unit: 1 Note: If the change from the integrated current is less than 819, increase <i>n8-84 [Polarity Detection Current]</i> . <i>U6-57 = 8192</i> is equivalent to the motor rated current.
U6-80 (07B0)	Ethernet IP Addr 1	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available local IP Address (1st octet).
U6-81 (07B1)	Ethernet IP Addr 2	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available local IP Address (2nd octet).
U6-82 (07B2)	Ethernet IP Addr 3	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available local IP Address (3rd octet).
U6-83 (07B3)	Ethernet IP Addr 4	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available local IP Address (4th octet).
U6-84 (07B4)	Ethernet Subnet 1	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available subnet mask (1st octet).
U6-85 (07B5)	Ethernet Subnet 2	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available subnet mask (2nd octet).
U6-86 (07B6)	Ethernet Subnet 3	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available subnet mask (3rd octet).
U6-87 (07B7)	Ethernet Subnet 4	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available subnet mask (4th octet).
U6-88 (07B8)	Ethernet Gateway 1	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available Gateway address (1st octet).
U6-89 (07B9)	Ethernet Gateway 2	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available Gateway address (2nd octet).

11.17 U: Monitors

No. (Hex.)	Name	Description
U6-90 (07F0)	Ethernet Gateway 3	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available Gateway address (3rd octet).
U6-91 (07F1)	Ethernet Gateway 4	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available Gateway address (4th octet).
U6-92 (07F2)	Ethernet Speed	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available communications speed. 10: 10 Mbps 100: 100 Mbps
U6-93 (07F3)	Online Duplex	V/f OLV OLV/PM AOLV/PM EZOLV Shows the currently available Duplex setting.
U6-94 (07F4)	Ethernet SPARE 1	V/f OLV OLV/PM AOLV/PM EZOLV Shows the value of monitor value 15 (8FAH). Note: For more information, refer to the manual for each communication protocol in use.
U6-95 (07F5)	Ethernet SPARE 2	V/f OLV OLV/PM AOLV/PM EZOLV Shows the value of monitor value 16 (8FBH). Note: For more information, refer to the manual for each communication protocol in use.
U6-96 (07F6)	Ethernet SPARE 3	V/f OLV OLV/PM AOLV/PM EZOLV Shows the value of monitor value 17 (8FCH). Note: For more information, refer to the manual for each communication protocol in use.
U6-97 (07F7)	Ethernet SPARE 4	V/f OLV OLV/PM AOLV/PM EZOLV Shows the software version of Ethernet communications.
U6-98 (07F8)	First Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the contents of the most recent fault from Ethernet communications.
U6-99 (07F9)	Current Fault	V/f OLV OLV/PM AOLV/PM EZOLV Shows the contents of current fault from Ethernet communications.

◆ U8: DriveWorksEZ Monitors

12.12	T: Auto-Tuning.....	754

12.1 Section Safety

DANGER

Do not ignore the safety messages in this manual.

If you ignore the safety messages in this manual, it will cause serious injury or death. The manufacturer is not responsible for injuries or damage to equipment.

12.2 A: Initialization Parameters

A parameters [Initialization Parameters] set the operating environment and operating conditions for the drive.

◆ A1: Initialization

A1 parameters set the operating environment and operating conditions for the drive. For example, these parameters set the keypad language, the control method, and the parameter access level for the drive.

■ A1-00: Language Selection

No. (Hex.)	Name	Description	Default (Range)
A1-00 (0100) RUN	Language Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the language for the LCD keypad.	0 (0 - 12)

Note:

- This parameter is only available when you use an LCD keypad or a Bluetooth LCD Keypad.
- When you use *A1-03 [Initialize Parameters]* to initialize the drive, the drive will not reset this parameter.

0 : English

1 : Japanese

2 : German

3 : French

4 : Italian

5 : Spanish

6 : Portuguese

7 : Chinese

8 : Czech

9 : Russian

10 : Turkish

11 : Polish

12 : Greek

■ A1-01: Access Level Selection

No. (Hex.)	Name	Description	Default (Range)
A1-01 (0101) RUN	Access Level Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets user access to parameters. The access level controls which parameters the keypad will display, and which parameters the user can set.	2 (0 - 3)

0 : Operation Only

Access to *A1-00*, *A1-01*, *A1-04 [Password]*, and the *U Monitors*.

1 : User Parameters

Access to *A1-00*, *A1-01*, *A1-04*, and *A2-01 to A2-32 [User Parameters 1 to 32]*.

2 : Advanced Level

Access to all parameters, but not Expert Mode parameters.

3 : Expert Level

Access to all parameters including Expert Mode parameters.

Table 12.1 shows which keypad screens are available for each *A1-01* settings.

Table 12.1 Access Level and Available Keypad Screens

Mode	Keypad Screen	A1-01 [Access Level Selection] Setting			
		0	1	2	3
Drive Mode	Monitors	Yes	Yes	Yes	Yes
Programming Mode	Parameters	Yes	Yes	Yes	Yes
	User Custom Parameters	No	Yes	Yes	Yes
	Parameter Backup/Restore	No	No	Yes	Yes
	Modified Parameters/Fault Log	No	No	Yes	Yes
	Auto-Tuning	No	No	Yes	Yes
	Initial Setup Screen	No	No	Yes	Yes
	Diagnostic Tools	No	No	Yes	Yes

Note:

- When you use A1-04 and A1-05 [Password Setting] to set a password, you cannot change the values set in A1-01 to A1-03, A1-06, A1-07, or A2-01 to A2-32.
- When H1-xx = 1B [MF DI Function Select = Program Lockout], you must activate the terminal to change parameter settings.
- When you use Modbus communications, you must send the Enter command from the controller to the drive and complete the serial communication write process before you can use the keypad to change parameter settings.

■ A1-02: Control Method Selection

No. (Hex.)	Name	Description	Default (Range)
A1-02 (0102)	Control Method Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the control method for the drive application and the motor.	2 (0, 2, 5, 6, 8)

Note:

When you change the control methods, the parameter values specified by A1-02 and E3-01 [Motor 2 Control Mode Selection] are changed to their default values.

Sets the control method for the drive application and the motor.

0 : V/f Control

Use this control method in these applications and conditions:

- For general variable-speed control applications in which a high level of responsiveness or high-precision speed control is not necessary.
- Applications in which more than one motor are connected to one drive
- When there is not sufficient data to set the motor parameters
- When it is not possible to do Auto-Tuning. The speed control range is 1:40.

2 : Open Loop Vector

Use this control method for general variable-speed control applications in which high-precision speed control is necessary. In this control method, a feedback signal from the motor is not necessary to have high torque response and high torque when operating at low speeds. The speed control range is 1:100.

5 : PM Open Loop Vector

The drive controls an IPM motor or SPM motor in this control method. Use this control method for general variable-speed control applications in which a high level of responsiveness or high-precision speed control are not necessary. The speed control range is 1:10.

6 : PM Advanced Open Loop Vector

The drive can control an IPM motor in this control method. Use this control method for general variable-speed control applications in which high-precision speed control and torque limit are necessary. The speed control range is 1:20. The speed control range is 1:10 when n8-57 = 1 [HFI Overlap Selection = Enabled].

8 : EZ Vector Control

The drive controls induction motors and PM motors in this control method. This control method uses an easier procedure to operate motors with more efficiency. Use this control method for derating torque applications. For example, fans and pumps.

■ A1-03: Initialize Parameters

No. (Hex.)	Name	Description	Default (Range)
A1-03 (0103)	Initialize Parameters	V/f OLV OLV/PM AOLV/PM EZOLV Sets parameters to default values.	0 (0 - 2220)

Note:

- After you initialize the drive, the drive automatically sets $A1-03 = 0$.
- User Parameters can save the parameter values for your application and use these values as default values for drive initialization.
- To use the 2 motor switchover function, first turn OFF the terminal to which $H1-xx = 16$ [MFDI Function Selection = Motor 2 Selection] is set, then change the $A1-03$ setting. An incorrect procedure will trigger $oPE08$ [Parameter Selection Error].

0 : No Initialization

1110 : User Initialization

Sets parameters to the values set by the user as user settings. Set $o2-03 = 1$ [User Parameter Default Value = Set defaults] to save the user settings.

You can save the parameter settings that were adjusted for the test run as user-set default values to the drive. When you make changes to the parameter values after you save the settings as User Parameter Settings, the drive will set the parameters to the User Parameter Setting value when you initialize with $A1-03 = 1110$.

Follow this procedure to save User Parameter setting values, and to do a User Initialization.

1. Set parameters correctly for the application.
2. Set $o2-03 = 1$ [User Parameter Default Value = Set defaults].
This saves parameter settings for a User Initialization.
The drive will then automatically set $o2-03 = 0$.
3. Set $A1-03 = 1110$ to reset to the saved parameter settings.
When you initialize the drive, the drive sets the parameter values to the User Parameter setting values.

2220 : 2-Wire Initialization

Sets MFDI terminal S1 to Forward Run and terminal S2 to Reverse Run, and resets all parameters to default settings. The drive will not initialize the parameters in [Table 12.2](#) when $A1-03 = 2220$.

Table 12.2 Parameters that are not Initialized Using a 2-Wire Sequence

No.	Name
A1-00	Language Selection
A1-02	Control Method Selection
A1-07	DriveWorksEZ Function Selection
A1-12 <i>*I</i>	Bluetooth ID
E1-03	V/f Pattern Selection
E5-01	PM Motor Code Selection
E5-02	PM Motor Rated Power
E5-03	Motor Rated Current (FLA)
E5-04	PM Motor Pole Count
E5-05	PM Motor Resistance (ohms/phase)
E5-06	PM d-axis Inductance (mH/phase)
E5-07	PM q-axis Inductance (mH/phase)
E5-09	PM Back-EMF V _{peak} (mV/(rad/s))
E5-24	PM Back-EMF L-L V _{rms} (mV/rpm)
E5-25	Polarity Estimation Timeout

12.2 A: Initialization Parameters

No.	Name
F6-08	Comm Parameter Reset @Initialize
F6-xx/F7-xx	Ethernet Settings and Ethernet Set F6-08 = 1 [Comm Parameter Reset @Initialize = Reset Back to Factory Default] to initialize Ethernet communications parameters.
L8-35	Installation Method Selection
o2-04	Drive Model (KVA) Selection
q1-xx - q8-xx	DriveWorksEZ Parameters
r1-xx	DWEZ Connection 1-20

*1 When you use A1-03 [Initialize Parameters] to initialize drives, the drive will not reset A1-12.

Note:

- Set A1-06 [Application Preset] to let the drive automatically set the best parameter settings for the selected application. The drive does not initialize A1-02 when A1-03 = 2220.
- When A1-03 = 2220, the drive automatically set A1-05 [Password Setting] = 0000. Make sure that you set the password again for applications where a password is necessary.

■ A1-04: Password

No. (Hex.)	Name	Description	Default (Range)
A1-04 (0104)	Password	V/f OLV OLV/PM AOLV/PM EZOLV Entry point for the password set in A1-05 [Password Setting]. The user can view the settings of parameters that are locked without entering the password. Enter the correct password in this parameter to change parameter settings.	0000 (0000 - 9999)

If the password entered in A1-04 does not agree with the password setting in A1-05, you cannot change these parameters:

- A1-01 [Access Level Selection]
- A1-02 [Control Method Selection]
- A1-03 [Initialize Parameters]
- A1-06 [Application Preset]
- A1-07 [DriveWorksEZ Function Selection]
- A2-01 to A2-32 [User Parameter 1 to 32]

To lock parameter settings after making changes without changing the password, enter the incorrect password in A1-04 and push .

Enter the Password to Unlock Parameters

Use this procedure to unlock parameter settings.

Set the password in A1-05 [Password Setting], and show the Parameter Setting Mode screen on the keypad.

This procedure verifies the password, and makes sure that the parameter settings are unlocked.

- Push  or  to select "A: Initialization Parameters", then push .
- Push  or  to select [A1-04], then push .
You can now change parameter settings.
- Push  or  to move the digit and enter the password.
- Push  to confirm the password.
The drive unlocks the parameters and automatically shows the Parameters Screen.
- Push  or  to show [A1-02], then push .
- Push  or  to make sure that you can change the setting value.

Push  (Back) until the keypad shows the Parameter Setup Mode screen.

■ A1-05: Password Setting

No. (Hex.)	Name	Description	Default (Range)
A1-05 (0105)	Password Setting	V/f OLV OLV/PM AOLV/PM EZOLV Set the password to lock parameters and prevent changes to parameter settings. Enter the correct password in A1-04 [Password] to unlock parameters and accept changes.	0000 (0000 - 9999)

This parameter locks these parameters:

- A1-01 [Access Level Selection]
- A1-02 [Control Method Selection]
- A1-03 [Initialize Parameters]
- A1-06 [Application Preset]
- A1-07 [DriveWorksEZ Function Selection]
- A2-01 to A2-32 [User Parameter 1 to 32]

Note:

- Usually, the keypad will not show A1-05. To show and set A1-05, show A1-04 [Password] and then push  and  on the keypad at the same time.
- After you set A1-05, the keypad will not show it again until you enter the correct password in A1-04. Make sure that you remember the A1-05 setting value. If you do not know the A1-05 setting value, contact Yaskawa or your nearest sales representative.
- When A1-03 = 2220 [2-Wire Initialization], the drive is initialized to A1-05 = 0000. Be sure to set the password again when a password is necessary for the application.
- Change the setting value in A1-05 to change the password. The new setting value becomes the new password.
- When you use the password to unlock and change a parameter, enter a value other than the password in A1-04 to lock the parameter again with the same password.
- If A1-04 ≠ A1-05, Modbus Communication cannot read or write A1-05.

■ A1-06: Application Preset

⚠ WARNING Sudden Movement Hazard

Check the I/O signals and the external sequences for the drive before you set the Application Preset function.

When you set the Application Preset function (A1-06 ≠ 0), it changes the I/O terminal functions for the drive and it can cause equipment to operate unusually. This can cause serious injury or death.

No. (Hex.)	Name	Description	Default (Range)
A1-06 (0127)	Application Preset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to operate in selected application conditions.	0 (0 - 5, 8)

The drive software contains the application presets shown below. Set A1-06 to align with the application to let the drive automatically set the best parameter settings for the selected application. The drive saves parameters that you frequently use the application in parameters A2-01 to A2-16 [User Parameters 1 to 16] for easy configuration and reference in Setup Mode.

- Water supply pump
- Conveyor
- Exhaust fan
- HVAC fan
- Air compressor

Note:

- Before you set A1-06, make sure that you set A1-03 = 2220 [Initialize Parameters = 2-Wire Initialization] to initialize parameters.
- It is not possible to change the A1-06 value. To set an application preset, set A1-03 = 2220 to initialize parameters, then set this parameter. If initializing all parameters will cause a problem, do not change the settings. If you set A2-33 = 1 [User Parameter Auto Selection = Enabled: Auto Save Recent Params] to set parameters to A2-17 to A2-32 [User Parameters 17 to 32] automatically, the drive will reset these parameters when you change the A1-06 setting.

0 : General-purpose

12.2 A: Initialization Parameters

The drive saves the parameters in [Table 12.3](#) as User Parameters.

Table 12.3 Parameters Saved as User Parameters with the General-purpose Preset

User Parameter No.	Parameter No. Saved	Name
A2-01	A1-02	Control Method Selection
A2-02	b1-01	Frequency Reference Selection 1
A2-03	b1-02	Run Command Selection 1
A2-04	b1-03	Stopping Method Selection
A2-05	C1-01	Acceleration Time 1

L3-04	Stall Prevention during Decel	7: Overexcitation/High Flux 3

12.2 A: Initialization Parameters

No.	Name	Optimal Value
n3-13	OverexcitationBraking (OEB) Gain	1.40
n3-21	HSB Current Suppression Level	150

The drive saves the parameters in [Table 12.15](#) as User Parameters.

Table 12.15 Parameters Saved as User Parameters with the Conveyor 2 Preset

User Parameter No.	Parameter No. Saved	Name
A2-01	A1-02	Control Method Selection
A2-02	b1-01	Frequency Reference Selection 1
A2-03	b1-02	Run Command Selection 1
A2-04	C1-01	Acceleration Time 1
A2-05	C1-02	Deceleration Time 1
A2-06	E2-01	Motor Rated Current (FLA)
A2-07	L3-04	Stall Prevention during Decel
A2-08	n3-13	OverexcitationBraking (OEB) Gain
A2-09	n3-21	HSB Current Suppression Level

■ A1-07: DriveWorksEZ Function Selection

No. (Hex.)	Name	Description	Default (Range)
A1-07 (0128)	DriveWorksEZ Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to operate with DriveWorksEZ.	0 (0 - 2)

DriveWorksEZ is a simple visual programming tool that lets you connect function blocks to customize the drive and add PLC functions.

Note:

- DriveWorksEZ will overwrite drive settings when it uses MFDI/MFDO and MFAI/MFAO. When you use DriveWorksEZ to make changes to the drive, the changes will stay after you disable DriveWorksEZ.
- For more information about DriveWorksEZ, contact Yaskawa or your nearest sales representative.

0 : DWEZ Disabled

1 : DWEZ Enabled

2 : Enabled/Disabled wDigital Input

Set $H1-xx = 9F$ [*MFDI Function Select = DWEZ Disable*]. Deactivate the digital input to enable programs made with DriveWorksEZ. Activate the terminal to disable the programs.

If $A1-07 = 1$ [*DriveWorksEZ Function Selection = DWEZ Enabled*], the drive will continue to disable DWEZ when these conditions are true:

- Drive is not in operation
- The MFDI terminals set for $H1-xx = 9F$ activate.

■ A1-11: Firmware Update Lock

No. (Hex.)	Name	Description	Default (Range)
A1-11 (111D) Expert	Firmware Update Lock	V/f OLV OLV/PM AOLV/PM EZOLV Protects the drive firmware. When you enable the protection, you cannot update the drive firmware.	0 (0, 1)

0 : Disabled

Lock is disabled.

1 : Enabled

Lock is enabled.

■ A1-12: Bluetooth ID

No. (Hex.)	Name	Description	Default (Range)
A1-12 (1564)	Bluetooth ID	V/f OLV OLV/PM AOLV/PM EZOLV Sets the password necessary to use Bluetooth to control the drive with a smartphone or tablet.	- (0000 - 9999)

◆ A2: User Parameters

You can register frequently used parameters and recently changed parameters here to access them quickly. Use Setup Mode to show the saved parameters.

■ A2-01 to A2-32: User Parameters 1 to 32

No. (Hex.)	Name	Description	Default (Range)
A2-01 to A2-32 (0106 - 0125)	User Parameters 1 to 32	V/f OLV OLV/PM AOLV/PM EZOLV You can select a maximum of 32 parameters for the drive and save the values to parameters <i>A2-01 to A2-32</i> . Use Setup Mode to show the saved parameters. You can immediately access these saved parameters.	Parameters in General-Purpose Setup Mode (Determined by A1-06)

Note:

- When the *A1-06 [Application Preset]* value changes, the settings for *A2-01 to A2-32* change.
- You must set *A1-01 = 1 [Access Level Selection = User Parameters]* to access parameters *A2-01 to A2-32*.
- When *A1-07 = 1 or 2 [DriveWorksEZ Function Selection = DWEZ Enabled or Enabled/Disabled wDigital Input]*, the drive saves *qx-xx [DriveWorksEZ Parameters]* to *A2-01 to A2-32*.

The drive saves these parameters to *A2-01 to A2-32*.

- The drive saves a maximum of 32 parameters.

Note:

Set *A1-01 = 2 [Advanced Level]* or *A1-01 = 3 [Expert Level]* to save the necessary parameters.

- The drive automatically saves changed parameters to *A2-17 to A2-32*.

Note:

Set *A2-33 = 1 [User Parameter Auto Selection = Enabled]*.

■ A2-33: User Parameter Auto Selection

No. (Hex.)	Name	Description	Default (Range)
A2-33 (0126)	User Parameter Auto Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the automatic save feature for changes to parameters <i>A2-17 to A2-32 [User Parameters 17 to 32]</i> .	Determined by A1-06 (0, 1)

0 : Disabled: Manual Entry Required

Set User Parameters manually.

1 : Enabled: Auto Save Recent Parm

The drive automatically registers changed parameter *A2-17 to A2-32*. The drive automatically saves the most recently changed parameter to *A2-17*, and saves a maximum of 16 parameters. After the drive registers 16 parameters, when you save a new parameter, the drive will remove a parameter from the User Parameter list to make space for the new parameter. The drive removes parameters with First In, First Out.

Use Setup Mode to show the saved parameters.

Note:

In General-Purpose Setup Mode, the drive saves parameters starting with *A2-27* because the drive saves parameters *A2-26* and lower by default.

12.3 b: Application

b parameters set these functions:

- Frequency reference source/Run command source
- Stopping method settings
- DC Injection Braking
- Speed Search
- Timer Function
- PID control
- Dwell function
- Energy-Saving Control

◆ b1: Operation Mode Selection

b1 parameters set the operation mode for the drive.

■ b1-01: Frequency Reference Selection 1

No. (Hex.)	Name	Description	Default (Setting Range)
b1-01 (0180)	Frequency Reference Selection 1	V/fOLVOLV/PMAOLV/PM EZOLV Sets the input method for the frequency reference.	3 (0 - 3)

Note:

- Push **LO/RE** on the keypad to set the input mode to LOCAL and use the keypad to enter the frequency reference.
- If the frequency reference is 0 Hz or less than the value set in *E1-09 [Minimum Output Frequency]* and the drive receives the Run command, the RUN LED on the keypad will flash. Examine the setting for the frequency reference input and enter a value $\geq E1-09$.

0 : Keypad

Use the keypad to enter the frequency reference.

Use **▲** and **▼** on the keypad to change the frequency reference.

1 : Analog Input

Use MFAI terminal A1 to input an analog frequency reference.

Table 12.16 Frequency Reference

Terminal	Terminal Signal Level	Parameter Settings				Note
		Signal Level Selection	Function Selection	Gain	Bias	
A1	0 - 10 V (Lower Limit at 0)	H3-01 = 0	H3-02 = 0 [Frequency Reference]	H3-03	H3-04	-
	0 - 10 V (Without Lower Limit)	H3-01 = 1				

Figure 12.1 Example of Setting the Frequency Reference to Terminal A1

2 : USB Connection

Use the USB connector on the keypad to enter the frequency reference when you use DriveWizard.

3 : Ethernet

Use a Ethernet communications connected to the drive to enter the frequency reference.

Refer to the “Multi-Protocol Ethernet Communications Technical Reference” (SIEP C730600 00) to set the communication protocol.

■ b1-02: Run Command Selection 1

No. (Hex.)	Name	Description	Default (Range)
b1-02 (0181)	Run Command Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the input method for the Run command.	3 (0 - 3)

0 : Keypad

Use the keypad to enter the Run command.

You can use the JOG operation or the FWD/REV commands from the keypad.

Note:

The  on the keypad is on while keypad is the Run command source.

1 : Digital Input

Use the control circuit terminals to enter the Run command. Select the input method for the Run command with an *H1-xx* parameter.

Set *H1-xx* = 40 to 43 [*Run Command (2-Wire Sequence)*]. The default setting is 2-wire sequence 1.

- 2-wire Sequence 1
This sequence has two input types: FWD/Stop and REV/Stop. Set *A1-03* = 2220 [*Initialize Parameters = 2-Wire Initialization*] to initialize the drive and set terminals S1 and S2 for a 2-wire sequence.
- 2-wire Sequence 2
This sequence has two input types: Run/Stop and FWD/REV.

2 : USB Connection

Use the USB connector on the keypad to enter the Run command when you use DriveWizard.

3 : Ethernet

Use a Ethernet communications connected to the drive to enter the Run command.

Refer to the “Multi-Protocol Ethernet Communications Technical Reference” (SIEP C730600 00) to set the communication protocol.

■ b1-03: Stopping Method Selection

No. (Hex.)	Name	Description	Default (Range)
b1-03 (0182)	Stopping Method Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method to stop the motor after removing a Run command or entering a Stop command.	0 (0 - 3)

Note:

When *A1-02* = 5, 6, 8 [*Control Method Selection* = *OLV/PM*, *AOLV/PM*, *EZOLV*], the setting range is 0, 1, 3.

Select the applicable stopping method for the application from these four options:

0 : Ramp to Stop

When you enter the Stop command or turn OFF the Run command, the drive ramps the motor to stop.

The drive ramps the motor to stop as specified by the deceleration time. The default setting for the deceleration time is *C1-02* [*Deceleration Time 1*]. The actual deceleration time changes as the load conditions change (for example, mechanical loss and inertia).

If the output frequency is less than or equal to the value set in *b2-01* [*DC Injection/Zero SpeedThreshold*] during deceleration, the drive will do DC Injection Braking, Zero Speed Control, or Short Circuit Braking, as specified by the control method.

- Ramp to Stop with V/f Control and OLV Control Methods

Parameter *b2-01* sets the frequency to start DC Injection Braking at stop. If the output frequency is less than or equal to the value set in *b2-01* during deceleration, then the drive will perform DC Injection Braking for the time set in *b2-04* [DC Inject Braking Time at Stop].

Figure 12.2 Ramp to Stop with V/f and OLV Control Methods

Note:

When $b2-01 \leq E1-09$ [Minimum Output Frequency], the drive will start DC Injection Braking from the frequency set in *E1-09*.

• **Ramp to Stop with OLV/PM, AOLV/PM, and EZOLV Control Methods**

Parameter *b2-01* sets the frequency to start Short Circuit Braking. When the output frequency is less than or equal to the value set in *b2-01* during deceleration, then the drive will do Short Circuit Braking for the time set in *b2-13* [Short Circuit Brake Time @ Stop]. When $b2-04 \neq 0$, the drive will do DC Injection Braking for the time set in *b2-04* when Short Circuit Braking is complete.

Figure 12.3 Ramp to Stop with OLV/PM, AOLV/PM, and EZOLV Control Methods

Note:

When $b2-01 \leq E1-09$, the drive will start Short Circuit Braking from the frequency set in *E1-09*.

If $b2-01 = 0 \text{ Hz}$ and $E1-09 = 0 \text{ Hz}$, the drive will not do Short Circuit Braking.

1 : Coast to Stop

When you enter the Stop command or turn OFF the Run command, the drive turns OFF the output and coasts the motor to stop.

Load conditions will have an effect on the deceleration rate as the motor coasts to stop (for example, mechanical loss and inertia).

Figure 12.4 Coast to Stop

Note:

When you enter the Stop command or turn OFF the Run command, the drive ignores the Run command for the time set in *L2-03* [Minimum Baseblock Time]. Do not enter the Run command until the motor comes to a complete stop. Use DC Injection or Speed Search to restart the motor before it stops.

2 : DC Injection Braking to Stop

When you enter the Stop command or turn OFF the Run command, the drive turns OFF the output for the time set in *L2-03*. The drive waits for the minimum baseblock time and then injects the amount of DC current into the motor set in *b2-02* [DC Injection Braking Current] to stop the motor with DC current.

DC Injection Braking stops the motor more quickly than coast to stop.

Note:

If *A1-02* = 5, 6, DC Injection Braking to Stop is not available.

Figure 12.5 DC Injection Braking to Stop

The value set in *b2-04* and the output frequency when the drive receives the Stop command determine the DC Injection Braking time. The drive calculates the DC Injection Braking time as in Figure 12.6.

Figure 12.6 DC Injection Braking Time and Output Frequency

Note:

Set *L2-03* to a high value that will not trigger *oC* [Overcurrent] when the drive uses DC Injection Braking to stop the motor.

3 : Coast to Stop with Timer

Enter the Stop command or turn OFF the Run command and turn OFF drive output and coast the motor to stop. The drive ignores the Run command until the “Run wait time *t*” is expired.

To start the drive again, wait until the the “Run wait time *t*” is expired then enter the Run command.

Figure 12.7 Coast to Stop with Timer

The active deceleration time and the output frequency when drive receives the Stop command determine the length of “Run wait time *t*”.

Figure 12.8 Run Wait Time and Output Frequency

■ b1-04: Reverse Operation Selection

No. (Hex.)	Name	Description	Default (Range)
b1-04 (0183)	Reverse Operation Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the reverse operation function. Disable reverse operation in fan or pump applications where reverse rotation is dangerous.	0 (0, 1)

When reverse operation is prohibited, the drive will not accept a Reverse operation command.

0 : Reverse Enabled

The drive will accept a Reverse operation command.

1 : Reverse Disabled

The drive will not accept a Reverse operation command.

■ b1-06: Digital Input Reading

No. (Hex.)	Name	Description	Default (Range)
b1-06 (0185)	Digital Input Reading	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of times that the drive reads the sequence input command to prevent malfunction because of electrical interference.	1 (0, 1)

0 : Single Scan

The drive reads the terminal status one time. The drive immediately reads all changes to the terminal status.

This setting lets the drive quickly respond to changes in the sequence, but noise can cause malfunction.

1 : Double Scan

The drive reads all changes to the terminal status two times to make sure that the reading is the same.

The drive responds slower than when it reads the sequence one time, but this setting prevents malfunction because of electrical interference.

■ b1-07: LOCAL/REMOTE Run Selection

No. (Hex.)	Name	Description	Default (Range)
b1-07 (0186)	LOCAL/REMOTE Run Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive response to an existing Run command when the drive receives a second Run command from a different location.	0 (0, 1)

This parameter interlocks the drive to help prevent accidents that can occur if the motor starts to rotate because the Run command source changed.

To switch the RUN command source, push **LO/RE** on the keypad or set $H1-xx = 1, 2$ [*MFDI Function Selection = LOCAL/REMOTE Selection, External Reference 1/2 Selection*] and activate/deactivate the terminal.

0 : Disregard Existing RUN Command

If a Run command is enabled when you switch between Run command sources, the drive will not operate the motor.

When the drive is operating the motor, turn OFF the Run command to stop the motor. Enter the Run command again to start operation.

1 : Accept Existing RUN Command

If a Run command is enabled when you switch between Run command sources, the drive will start to operate the motor or continue to operate the motor.

■ b1-08: Run Command Select in PRG Mode

No. (Hex.)	Name	Description	Default (Range)
b1-08 (0187)	Run Command Select in PRG Mode	V/f OLV OLV/PM AOLV/PM EZOLV Sets the conditions for the drive to accept a Run command entered from an external source when using the keypad to set parameters.	0 (0 - 2)

As a safety precaution, when the drive is in Programming Mode, it will not respond to a Run command.

This parameter helps prevent accidents that can occur if the motor starts to rotate because the drive received a Run command from an external source while the user is programming the drive. You can also set the drive to not show the Programming Mode when a Run command is active.

Note:

Refer to this table for Drive Mode and Programming Mode functions.

Mode	Keypad Screen	Function
Drive Mode	Monitors	Sets monitor display.
Programming Mode	Parameters	Changes parameter settings.
	User Custom Parameters	Shows the User Parameters.
	Parameter Backup/Restore	Saves parameters to the keypad as backup.
	Modified Parameters/Fault Log	Shows modified parameters and fault history.
	Auto-Tuning	Auto-Tunes the drive.
	Initial Setup Screen	Changes initial settings.
	Diagnostic Tools	Sets data logs and backlight.

0 : Disregard RUN while Programming

The drive does not accept the Run command when setting the parameters in the Programming Mode.

1 : Accept RUN while Programming

The drive accepts a Run command entered from an external source when setting the parameters in Programming Mode.

2 : Allow Programming Only at Stop

The drive does not allow the user to enter the Programming Mode while the drive is operating. The keypad does not display the Programming Mode while the drive is operating.

■ b1-14: Phase Order Selection

No. (Hex.)	Name	Description	Default (Range)
b1-14 (01C3)	Phase Order Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the phase order for output terminals U/T1, V/T2, and W/T3. This parameter can align the Forward Run command from the drive and the forward direction of the motor without changing wiring.	0 (0, 1)

0 : Standard

1 : Switch Phase Order

■ b1-15: Frequency Reference Selection 2

No. (Hex.)	Name	Description	Default (Range)
b1-15 (01C4)	Frequency Reference Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the input method for frequency reference 2.	0 (0 - 3)

This parameter is enabled when $H1-xx = 2$ [*MFDI Function Selection = External Reference 1/2 Selection*] is activated.

Note:

- Push **LO/RE** on the keypad to set the input mode to LOCAL and use the keypad to enter the frequency reference.
- If the frequency reference is 0 Hz or less than or equal to the value set in *E1-09* [*Minimum Output Frequency*] and the drive receives the Run command, the RUN LED on the keypad will flash. Examine the setting for the frequency reference input and enter a value $\geq E1-09$.

0 : Keypad

Use the keypad to enter the frequency reference.

Use **▲** and **▼** on the keypad to change the frequency reference.

1 : Analog Input

Use MFAI terminal A1 to input an analog frequency reference.

Table 12.17 Frequency Reference

Terminal	Terminal Signal Level	Parameter Settings				Note
		Signal Level Selection	Function Selection	Gain	Bias	
A1	0 - 10 V (Lower Limit at 0)	H3-01 = 0	H3-02 = 0 [Frequency Reference]	H3-03	H3-04	-
	0 - 10 V (Without Lower Limit)	H3-01 = 1				

Figure 12.9 Example of Setting the Frequency Reference to Terminal A1

2 : USB Connection

Use the USB connector on the keypad to enter the frequency reference when you use DriveWizard.

3 : Ethernet

Use a Ethernet communications connected to the drive to enter the frequency reference.

Refer to the “Multi-Protocol Ethernet Communications Technical Reference” (SIEP C730600 00) to set the communication protocol.

■ b1-16: Run Command Selection 2

No. (Hex.)	Name	Description	Default (Range)
b1-16 (01C5)	Run Command Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the input method for Run Command 2 when the user switches the control circuit terminals ON/OFF to change the Run command source.	0 (0 - 3)

Activate $H1-xx = 2$ [*MFDI Function Selection = External Reference 1/2 Selection*] to enable this parameter.

0 : Keypad

Use the keypad to enter the Run command.

You can use the JOG operation or the FWD/REV commands from the keypad.

Note:

The  is on while the keypad is the Run command source.

1 : Digital Input

Use the control circuit terminals to enter the Run command. Select the input method for the Run command with an *H1-xx* parameter.

Set *H1-xx* = 40 to 43 [*Run Command (2-Wire Sequence)*]. The default setting is 2-wire sequence 1.

- 2-wire Sequence 1

This sequence has two input types: FWD/Stop and REV/Stop. Set *A1-03* = 2220 [*Initialize Parameters = 2-Wire Initialization*] to initialize the drive and set terminals S1 and S2 for a 2-wire sequence.

- 2-wire Sequence 2

This sequence has two input types: Run/Stop and FWD/REV.

2 : USB Connection

Use the USB connector on the keypad to enter the Run command when you use DriveWizard.

3 : Ethernet

Use a Ethernet communications connected to the drive to enter the Run command.

Refer to the “Multi-Protocol Ethernet Communications Technical Reference” (SIEP C730600 00) to set the communication protocol.

■ b1-17: Run Command at Power Up

No. (Hex.)	Name	Description	Default (Range)
b1-17 (01C6)	Run Command at Power Up	     Sets drive response when the CPU changes from de-energized to energized and there is an active Run command. Set this parameter in applications where energizing or de-energizing the drive enables the Run command. When the CPU stays energized during loss of power, <i>L2-01</i> [<i>Power Loss Ride Through Select</i>] sets operation.	0 (0, 1)

0 : Disregard Existing RUN Command

The drive does not start to operate the application when you apply power, even when there is an existing Run command.

Enter the Run command again to operate the application.

Note:

When you energize the drive,  on the keypad will flash quickly if the Run command is already enabled from an external source.

1 : Accept Existing RUN Command

When there is an existing Run command, the drive starts to operate the application when you apply power.

■ b1-35: Digital Input Deadband Time

No. (Hex.)	Name	Description	Default (Range)
b1-35 (1117) Expert	Digital Input Deadband Time	     Sets the deadband time for MFDIs.	0.0 ms (0.0 to 100.0 ms)

When the on/off time for MFDIs is longer than the time set in *b1-35*, the drive activates the MFDI. Set this parameter to prevent malfunctions caused by relay chattering for applications in which relays send input to MFDI terminals.

◆ b2: DC Injection Braking and Short Circuit Braking

b2 parameters set the DC Injection Braking and Short Circuit Braking functions.

- DC Injection Braking: A braking method that injects DC current into the motor windings. This function should not be used too frequently, because it generates a fair amount of heat in the motor.
- Short Circuit Braking: A braking method for PM motors.

■ b2-01: DC Injection/Zero SpeedThreshold

No. (Hex.)	Name	Description	Default (Range)
b2-01 (0189)	DC Injection/Zero SpeedThreshold	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency to start DC Injection Braking or Short Circuit Braking near the end of a stop ramp.	Determined by A1-02 (0.0 - 10.0 Hz)

Note:

This parameter is available when *b1-03* = 0 [Stopping Method Selection = Ramp to Stop].

When the control method selected in *A1-02* [Control Method Selection] changes, the *b2-01* function changes.

Parameter Settings	Functions of b2-01
<i>A1-02</i> = 0, 2 [V/f or OLV]	Parameter <i>b2-01</i> sets the frequency to start DC Injection Braking at stop. When the output frequency is less than or equal to the value set in <i>b2-01</i>, the drive will inject the quantity of DC current set in <i>b2-02</i> [DC Injection Braking Current] into the motor for the time set in <i>b2-04</i> [DC Inject Braking Time at Stop]. Figure 12.10 DC Injection Braking at Stop Note: When $b2-01 \leq E1-09$ [Minimum Output Frequency], the drive will start DC Injection Braking from the frequency set in <i>E1-09</i>.
<i>A1-02</i> = 5, 6, or 8 [OLV/PM, AOLV/PM, or EZOLV]	Parameter <i>b2-01</i> sets the frequency to start Short Circuit Braking at stop. When the output frequency is less than or equal to the value set in <i>b2-01</i>, the drive will do Short Circuit Braking for the time set in <i>b2-13</i> [Short Circuit Brake Time @ Stop]. When <i>b2-04</i> > 0.00 s, the drive will complete Short Circuit Braking, then do DC Injection Braking for the time set in <i>b2-04</i>. Figure 12.11 Short Circuit Braking at Stop Note: When $b2-01 \leq E1-09$, the drive will start Short Circuit Braking from the frequency set in <i>E1-09</i>. If $b2-01$ and <i>E1-09</i> = 0 Hz, the drive will not do Short Circuit Braking.

■ b2-02: DC Injection Braking Current

No. (Hex.)	Name	Description	Default (Range)
b2-02 (018A)	DC Injection Braking Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the DC Injection Braking current as a percentage of the drive rated current.	50% (0 - 75%)

When the DC Injection Braking current is more than 50%, the drive decreases the carrier frequency to 1 kHz. The motor rated current determines how much DC Injection Braking current that the drive can use.

The DC Injection Braking current level has an effect on the strength of the magnetic field that locks the motor shaft. As the current level increases, the motor windings will supply more heat. Do not set this parameter higher than the level that is necessary to hold the motor shaft.

■ b2-03: DC Inject Braking Time at Start

No. (Hex.)	Name	Description	Default (Range)
b2-03 (018B)	DC Inject Braking Time at Start	V/f OLV OLV/PM AOLV/PM EZOLV Sets the DC Injection Braking Time at stop.	0.00 s (0.00 - 10.00 s)

This function stops then restarts a coasting motor and increases motor flux to make high starting torque (a process called initial excitation). Set this parameter to 0.00 to disable the function.

Note:

To restart a coasting motor, use DC Injection Braking to stop and then restart the motor, or enable Speed Search. Enable DC Injection Braking or Speed Search to prevent *ov* [Overvoltage] or *oC* [Overcurrent] faults.

■ b2-04: DC Inject Braking Time at Stop

No. (Hex.)	Name	Description	Default (Range)
b2-04 (018C)	DC Inject Braking Time at Stop	V/f OLV OLV/PM AOLV/PM EZOLV Sets the DC Injection Braking Time at stop.	Determined by A1-02 (0.00 - 10.00 s)

This function fully stops a motor with a large inertia during deceleration and will not let the inertia continue to rotate the motor.

Set this parameter to 0.00 to disable the function.

When a longer time is required to stop the motor, increase the value.

■ b2-08: Magnetic Flux Compensation Value

No. (Hex.)	Name	Description	Default (Range)
b2-08 (0190)	Magnetic Flux Compensation Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets how much current the drive injects when DC Injection Braking at Start starts (Initial Excitation) as a percentage of E2-03 [Motor No-Load Current].	0% (0 - 1000%)

This parameter is effective when you start a high-capacity motor (a motor with a large secondary circuit time constant). This function can quickly increase motor flux to make high starting torque (a process called initial excitation).

The current level for DC Injection Braking at start changes linearly from the setting of b2-08 to the setting of E2-03 as shown in Figure 12.12.

Figure 12.12 DC Current Level during DC Injection Braking at Start

12.3 b: Application

Note:

- If $b2-08 < 100\%$, flux will develop very slowly.
- When $b2-08 = 0\%$, the DC current level will be the DC Injection current set in $b2-02$ [DC Injection Braking Current].
- If $b2-08$ is set too high, DC Injection Braking at start can cause a large noise. Adjust $b2-08$ to decrease the volume to the permitted level.

■ b2-12: Short Circuit Brake Time @ Start

No. (Hex.)	Name	Description	Default (Range)
b2-12 (01BA)	Short Circuit Brake Time @ Start	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Short Circuit Braking time at start.	0.00 s (0.00 - 25.50 s)

This function stops and restarts a coasting PM motor. The drive short circuits all the three motor phases to make braking torque in the motor.

Set this parameter to 0.00 to disable the function.

Note:

- Short circuit Braking will let external forces rotate the PM motor. Use DC Injection Braking to prevent motor rotation from external forces.
- Motor speed and load conditions can make it necessary to install a dynamic braking option on the drive.

■ b2-13: Short Circuit Brake Time @ Stop

No. (Hex.)	Name	Description	Default (Range)
b2-13 (01BB)	Short Circuit Brake Time @ Stop	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Short Circuit Braking time at stop.	A1-02 = 8: 0.00 s Other than A1-02 = 8: 0.50 s (0.00 - 25.50 s)

This function fully stops a PM motor with a large inertia during deceleration and will not let the inertia continue to rotate the motor.

Short Circuit Braking operates for the time set in $b2-13$ when output frequency is less than the value set in $b2-01$ [DC Injection/Zero SpeedThreshold] or $E1-09$ [Minimum Output Frequency].

Set this parameter to 0.00 to disable the function.

Note:

Motor speed and load conditions can make it necessary to install a dynamic braking option on the drive.

■ b2-18: Short Circuit Braking Current

No. (Hex.)	Name	Description	Default (Range)
b2-18 (0177)	Short Circuit Braking Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Short Circuit Braking Current as a percentage of the motor rated current.	100.0% (0.0 - 200.0%)

The Short Circuit Braking current cannot be higher than the drive rated current, although you can use $b2-18$ to set a higher current level. The maximum rated current is 120% when the drive is set for Normal Duty ($C6-01 = 1$ [Normal Duty Rating]). The maximum rated current is 150% when the drive is set for Heavy Duty ($C6-01 = 0$ [Heavy Duty Rating]).

◆ b3: Speed Search

The Speed Search function detects the actual speed of a coasting motor, then restarts the motor before the motor stops. Use Speed Search in these conditions:

- To continue operation after momentary power loss
- To switch from commercial power supply to drive power
- To restart a coasting fan

For example, the drive output turns off and the motor coasts when there is a momentary loss of power. After you return power, the drive does Speed Search on the coasting motor, and restarts the motor from the detected speed.

When you use a PM motor, enable $b3-01$ [Speed Search at Start Selection].

There are two types of Speed Search for induction motors: Current Detection and Speed Estimation. Use parameter *b3-24 [Speed Search Method Selection]* to select the type of Speed Search.

Parameter settings are different for different types of Speed Search. Refer to [Table 12.18](#) for more information.

Table 12.18 Speed Search and Related Parameters

Parameter	Speed Estimation	Current Detection 2
	b3-24 = 1	b3-24 = 2
b3-01 [Speed Search at Start Selection]	x	x
b3-03 [Speed Search Deceleration Time]	-	x
b3-05 [Speed Search Delay Time]	x	x
b3-06 [Speed Estimation Current Level 1]	x	-
b3-07 [Speed Estimation Current Level 2]	x	-
b3-08 [Speed Estimation ACR P Gain]	x	-
b3-09 [Speed Estimation ACR I Time]	x	-
b3-10 [Speed Estimation Detection Gain]	x	-
b3-14 [Bi-directional Speed Search]	x	x
b3-17 [Speed Est Retry Current Level]	x	x
b3-18 [Speed Est Retry Detection Time]	x	x
b3-19 [Speed Search Restart Attempts]	x	x
b3-24 [Speed Search Method Selection]	x (1)	x (2)
b3-25 [Speed Search Wait Time]	x	x
b3-26 [Direction Determination Level]	x	-
b3-29 [Speed Search Back-EMF Threshold]	-	-
b3-31 [Spd Search Current Reference Lvl]	-	x
b3-32 [Spd Search Current Complete Lvl]	-	x
b3-33 [Speed Search during Uv Selection]	x	x
b3-54 [Search Time]	-	-
b3-55 [Current Increment Time]	-	-
b3-56 [InverseRotationSearch WaitTime]	-	x

Note:

- To use Speed Estimation Speed Search with V/f Control, do Rotational Auto-Tuning before you set the Speed Search function. If the wire length between the drive and motor changed since the last time you did Auto-Tuning, do Stationary Auto-Tuning for Line-to-Line Resistance process again.
- If $A1-02 = 5, 6$ [*PM Open Loop Vector*, *PM Advanced Open Loop Vector*] and the wiring distance between the motor and drive is long or if the motor is coasting at more than or equal to 120 Hz, do not use Speed Search to restart the motor. Use Short Circuit Braking.

■ Current Detection 2

Use this Speed Search function with induction motors. Set $b3-24 = 2$ [*Speed Search Method Selection = Current Detection 2*]. Current Detection Speed Search injects current into the motor to detect the speed of an induction motor. Speed Search increases the output voltage for the time set in $L2-04$ [*Powerloss V/f Recovery Ramp Time*], starting from the maximum output frequency or the frequency reference.

Figure 12.13 Current Detection 2 after Momentary Power Loss

Note:

After you restore power, the drive will not do Speed Search until the time set in *b3-05* [Speed Search Delay Time] expires. This means that the drive will not always start Speed Search when the time set in *L2-03* [Minimum Baseblock Time] expires.

If you enter the Run command at the same time as Speed Search, the drive will not do Speed Search until the time set in *L2-03* expires. When the value set in *L2-03* < *b3-05*, the drive will use the wait time set in *b3-05*.

Figure 12.14 Speed Search Selection at Start (Current Detection Type)

⚠ WARNING Sudden Movement Hazard

Do not do Current Detection Speed Search with light loads or a stopped motor. If you do Auto-Tuning in these conditions, the motor can suddenly accelerate and cause serious injury or death.

Note:

- You cannot use Current Detection Speed Search with PM motors.
- If the motor is rotating in reverse, you cannot do Speed Search.
- If the drive detects *oL1* [Motor Overload] during Current Detection Speed Search, decrease *b3-03*.
- If the drive detects *oC* [Overcurrent] or *ov* [Overvoltage] during Current Detection Speed Search after the drive recovers from a momentary power loss, increase *L2-03*.

■ Speed Estimation

Use this Speed Search function with induction motors. Set *b3-24* = 1 [Speed Search Method Selection = Speed Estimation]. This function uses less current and has a shorter search time than other functions. This function lets you do Speed Search when the motor is rotating in reverse. When you return power after a power loss, the motor will not suddenly accelerate.

Note:

You cannot do Speed Estimation Speed Search in these conditions:

- When You Operate More than One Motor with One Drive
- When you use a high-speed motor (120 Hz or higher)
- When you use a 1.5 kW or smaller motor.
- When the motor output is more than 1 frame size smaller than the drive capacity
- When there is a long wiring distance between the drive and motor

For these conditions, use Current Detection Speed Search.

Speed Estimation Speed Search uses these two steps to estimate the motor speed:

1. Residual Voltage Search

When there is a short baseblock time, the drive searches for residual voltage. The drive uses the residual voltage in the motor to estimate the motor speed and direction of rotation. The drive outputs the estimated motor speed as frequency, then uses the deceleration rate set in *L2-04* to increase the voltage. When the output voltage aligns with the V/f pattern, the drive accelerates or decelerates the motor to the frequency reference. If the drive cannot estimate the motor speed because of low residual voltage, it will automatically do Current Injection.

Figure 12.15 Speed Search after Baseblock

Note:

After you return power, the drive waits for the time set in *b3-05*. If power loss is longer than the time set in *L2-03*, the drive will start Speed Search when the time set in *b3-05* is expired after the power recovery.

2. Current Injection

If there is not sufficient residual voltage in the motor, the drive does Current Injection. The drive injects the quantity of DC current set in *b3-06* [*Speed Estimation Current Level 1*] into the motor windings to estimate the motor speed and direction of rotation. The drive outputs the estimated motor speed as frequency, then uses the deceleration rate set in *L2-04* to increase the voltage. When the output voltage aligns with the V/f pattern, the drive accelerates or decelerates the motor to the frequency reference.

Figure 12.16 Speed Search Selection at Start

Note:

Set the lower limit of the delay time to *b3-05* for when Speed Search starts.

■ Speed Search and Operation Conditions

These conditions apply to Speed Search operation. When $A1-02 = 0, 2$ [Control Method Selection = *V/f Control, Open Loop Vector*], set $b3-24$ [Speed Search Method Selection] before you do Speed Search.

- Do Speed Search with each Run Command
The drive ignores a Speed Search command from the external terminals.
- Use an MFDI to do an External Speed Search Command
To use an MFDI to do Speed Search, input the Run command at the same time that terminal Sx set for Speed Search activates, or after Speed Search activates.
Set Speed Search to $H1-xx$ to do the function externally. You cannot set external Speed Search 1 and 2 at the same time.

Table 12.19 Execute Speed Search via the Digital Input Terminals

H1-xx Setting	Name	Current Detection 2	Speed Estimation
61	Speed Search from Fmax	ON: Speed Search starts from $E1-04$ [Maximum Output Frequency].	External Speed Search commands 1 and 2 work the same. The drive estimates the motor speed, then starts Speed Search from the estimated speed.
62	Speed Search from Fref	ON: Speed Search starts from the frequency reference immediately before you input the Speed Search command.	

- Do Speed Search with Each Auto Restart
Set $L5-01$ [Number of Auto-Restart Attempts] = 1 or more. After an Auto Restart fault, the drive automatically does Speed Search.
- Do Speed Search after Momentary Power Loss
Set $L2-01 = 1, 2$ [Power Loss Ride Through Select = *Enabled for L2-02 Time, Enabled while CPU Power Active*].
- Do Speed Search after You Clear the External Baseblock Command
When there is an active Run command and the output frequency is higher than the minimum frequency, you must clear the external baseblock command to do Speed Search.

■ b3-01: Speed Search at Start Selection

No. (Hex.)	Name	Description	Default (Range)
b3-01 (0191)	Speed Search at Start Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Speed Search at Start function so the drive will do Speed Search with each Run command.	Determined by A1-02 (0, 1)

0 : Disabled

Enter a Run command to start to operate the drive at the minimum output frequency.

When the Run command is enabled and the *Speed Search from Fmax or Fref* [$H1-xx = 61, 62$] is input from a multi-function input terminal, the drive will do Speed Search and start to operate the motor.

1 : Enabled

Enter the Run command to do Speed Search. The drive completes Speed Search, then starts to operate the motor.

■ b3-02: SpeedSearch Deactivation Current

No. (Hex.)	Name	Description	Default (Range)
b3-02 (0192)	SpeedSearch Deactivation Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current level that stops Speed Search as a percentage of the drive rated output current. Usually it is not necessary to change this setting.	Determined by A1-02 (0 - 200%)

If the drive cannot restart the motor, decrease this setting.

■ b3-03: Speed Search Deceleration Time

No. (Hex.)	Name	Description	Default (Range)
b3-03 (0193)	Speed Search Deceleration Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the deceleration time during Speed Search operation. Set the length of time to decelerate from the maximum output frequency to the minimum output frequency.	2.0 s (0.1 - 10.0 s)

This is the output frequency deceleration time used by Current Detection Speed Search and by the Current Injection Method of Speed Estimation Speed Search.

Note:

- When $A1-02 = 8$ [Control Method Selection = EZOLV], this parameter takes effect only in Expert Mode.
- If the drive detects *oL1* [Motor Overload] during Current Detection Speed Search, decrease the value set in *b3-03*.

■ b3-04: V/f Gain during Speed Search

No. (Hex.)	Name	Description	Default (Range)
b3-04 (0194)	V/f Gain during Speed Search	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ratio used to reduce the V/f during searches to reduce the output current during speed searches.	Determined by o2-04 (10 - 100)

Use this formula to calculate the output voltage during Speed Search:

Output voltage during Speed Search = Configured V/f $\times$ b3-04

When the current detection search operates correctly, this configuration is not necessary.

■ b3-05: Speed Search Delay Time

No. (Hex.)	Name	Description	Default (Range)
b3-05 (0195)	Speed Search Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Speed Search delay time to activate a magnetic contactor installed between the drive and motor.	0.2 s (0.0 - 100.0 s)

When you use a magnetic contactor between the drive and motor, you must close the contactor before the drive will do Speed Search. This parameter sets a delay time to activate the magnetic contactor.

■ b3-06: Speed Estimation Current Level 1

No. (Hex.)	Name	Description	Default (Range)
b3-06 (0196) Expert	Speed Estimation Current Level 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level of current that flows to the motor during Speed Estimation Speed Search as a coefficient of the motor rated current. Usually it is not necessary to change this setting.	Determined by o2-04 (0.0 - 2.0)

When the speed estimation value is the minimum output frequency, increase this setting. You can do this when the motor coasts at a high speed while the drive estimates the speed during Speed Estimation Speed Search. The limit of the output current during speed search is automatically the drive rated current.

Note:

When the drive cannot accurately estimate the speed after you adjust this parameter, use Current Detection Speed Search.

■ b3-07: Speed Estimation Current Level 2

No. (Hex.)	Name	Description	Default (Range)
b3-07 (0197) Expert	Speed Estimation Current Level 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level of current that flows to the motor during Speed Estimation Speed Search as a coefficient of <i>E2-03</i> [Motor No-Load Current] or <i>E4-03</i> [Motor 2 Rated No-Load Current]. Usually it is not necessary to change this setting.	1.0 (0.0 - 3.0)

During Speed Estimation Speed Searches, when the speed estimation value aligns with the minimum output frequency, increase the setting value in 0.1-unit increments. The limit of the output current during speed search is automatically the drive rated current.

■ b3-08: Speed Estimation ACR P Gain

No. (Hex.)	Name	Description	Default (Range)
b3-08 (0198)	Speed Estimation ACR P Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain for the automatic current regulator during Speed Estimation Speed Search. Also adjusts speed search responsiveness. Usually it is not necessary to change this setting.	Determined by A1-02 and o2-04 (0.00 - 6.00)

■ b3-09: Speed Estimation ACR I Time

No. (Hex.)	Name	Description	Default (Range)
b3-09 (0199)	Speed Estimation ACR I Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time for the automatic current regulator during Speed Estimation Speed Search. Also adjusts speed search responsiveness. Usually it is not necessary to change this setting.	Determined by A1-02 when A1-02 ≠ 5 20.0 when A1-02 = 5 (0.0 - 1000.0 ms)

■ b3-10: Speed Estimation Detection Gain

No. (Hex.)	Name	Description	Default (Range)
b3-10 (019A) Expert	Speed Estimation Detection Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain to correct estimated frequencies from Speed Estimation Speed Search.	1.05 (1.00 - 1.20)

If the drive detects *ov* [DC Bus Overvoltage] when you restart the motor, increase the setting value.

■ b3-14: Bi-directional Speed Search

No. (Hex.)	Name	Description	Default (Range)
b3-14 (019E)	Bi-directional Speed Search	V/f OLV OLV/PM AOLV/PM EZOLV Sets the direction of Speed Search to the direction of the frequency reference or in the motor rotation direction as detected by the drive.	0 (0, 1)

Note:

When you set A1-02, b3-24, and E9-01, set b3-14.

0 : Disabled

The drive uses the frequency reference to detect the direction of motor rotation.

1 : Enabled

The drive detects the direction of motor rotation during Speed Search.

■ b3-17: Speed Est Retry Current Level

No. (Hex.)	Name	Description	Default (Range)
b3-17 (01F0) Expert	Speed Est Retry Current Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current level for the search retry function in Speed Estimation Speed Search as a percentage where drive rated current is a setting value of 100%.	150% (0 - 200%)

When a large quantity of current flows during Speed Estimation Speed Search, the drive temporarily stops operation to prevent overvoltage and overcurrent. When the current is at the level set in b3-17, the drive tries speed search again.

■ b3-18: Speed Est Retry Detection Time

No. (Hex.)	Name	Description	Default (Range)
b3-18 (01F1) Expert	Speed Est Retry Detection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will wait to retry Speed Estimation Speed Search when too much current flow stopped the Speed Search.	0.10 s (0.00 - 1.00 s)

When the current is more than the level set in b3-17 [Speed Est Retry Current Level] during the time set in b3-18, the drive tries speed search again.

■ b3-19: Speed Search Restart Attempts

No. (Hex.)	Name	Description	Default (Range)
b3-19 (01F2)	Speed Search Restart Attempts	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of times to restart Speed Search if Speed Search does not complete.	3 times (0 - 10 times)

If the drive does the number of Speed Search restarts set in this parameter, it will trigger an *SEr [Speed Search Retries Exceeded]* error.

■ b3-24: Speed Search Method Selection

No. (Hex.)	Name	Description	Default (Range)
b3-24 (01C0)	Speed Search Method Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Speed Search method when you start the motor or when you restore power after a momentary power loss.	2 (1, 2)

Note:

- When *A1-02 = 8 [Control Method Selection = EZOLV]*, the default setting changes when the setting for *E9-01 [Motor Type Selection]* and the drive model change.
 - E9-01 = 0 [Induction (IM)]*
 - E9-01 = 1, 2 [Permanent Magnet (PM), Synchronous Reluctance (SynRM)]*: 1
- When you set *A1-02 = 8* and *E9-01 = 1 or 2*, set *b3-24 = 1*. If *b3-24 = 2*, the drive will detect *oPE08 [Parameter Selection Error]*.
- When you set *b3-24*, it will trigger the drive to initialize *b3-14 [Bi-directional Speed Search]*. After you set *b3-24*, set *b3-14*.

Set *b3-01 = 1 [Speed Search at Start Selection = Enabled]* to do Speed Search at start. Set *L2-01 = 1 [Power Loss Ride Through Select = Enabled for L2-02 Time]* to do Speed Search after you restore power after a momentary power loss.

1 : Speed Estimation

The drive uses the residual voltage from a short baseblock time to estimate the motor speed.

If there is not sufficient residual voltage, then the drive will inject DC current into the motor to estimate the motor speed.

2 : Current Detection 2

The drive will inject DC current into the motor to estimate motor speed.

■ b3-25: Speed Search Wait Time

No. (Hex.)	Name	Description	Default (Range)
b3-25 (01C8) Expert	Speed Search Wait Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time the drive will wait to start the Speed Search Retry function.	0.5 s (0.0 - 30.0 s)

If the drive detects these faults during speed search, increase the setting value:

- oC [Overcurrent]*
- ov [Overvoltage]*
- SEr [Speed Search Retries Exceeded]*

■ b3-26: Direction Determination Level

No. (Hex.)	Name	Description	Default (Range)
b3-26 (01C7) Expert	Direction Determination Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level to find the motor rotation direction. Increase the value if the drive cannot find the direction.	1000 (40 to 60000)

■ b3-29: Speed Search Back-EMF Threshold

No. (Hex.)	Name	Description	Default (Range)
b3-29 (077C) Expert	Speed Search Back-EMF Threshold	V/f OLV OLV/PM AOLV/PM EZOLV Sets the induced voltage for motors that use Speed Search. The drive will start Speed Search when the motor induced voltage level is the same as the setting value. Usually it is not necessary to change this setting.	10% (0 - 10%)

To make adjustments, gradually decrease the setting value. If you decrease the setting value too much, speed search will not operate correctly.

■ b3-31: Spd Search Current Reference Lvl

No. (Hex.)	Name	Description	Default (Range)
b3-31 (0BC0) Expert	Spd Search Current Reference Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current level that decreases the output current during Current Detection Speed Search.	1.50 (1.50 - 3.50)

Set this parameter as a ratio of $E2-03$ [Motor No-Load Current]. The setting is a ratio with respect to 30% of the motor rated current when $E2-03 \leq E2-01$ [Motor Rated Current (FLA)] $\times 0.3$.

Note:

When $A1-02 = 8$ [Control Method Selection = EZOLV], the setting is a ratio with respect to $E9-06$ [Motor Rated Current (FLA)] $\times 0.5$.

■ b3-32: Spd Search Current Complete Lvl

No. (Hex.)	Name	Description	Default (Range)
b3-32 (0BC1) Expert	Spd Search Current Complete Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current level that completes Speed Search.	1.20 (0.00 - 1.49)

The Current Detection Speed Search gradually decreases the output frequency to search for the motor speed when the output current is equal to or less than Speed Search Current Complete Level.

Set this parameter as a ratio of $E2-03$ [Motor No-Load Current]. The setting is a ratio with respect to 30% of the motor rated current when $E2-03 \leq E2-01$ [Motor Rated Current (FLA)] $\times 0.3$.

Note:

When $A1-02 = 8$ [Control Method Selection = EZOLV], the setting is a ratio with respect to $E9-06$ [Motor Rated Current (FLA)] $\times 0.5$.

■ b3-33: Speed Search during Uv Selection

No. (Hex.)	Name	Description	Default (Range)
b3-33 (0B3F) Expert	Speed Search during Uv Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that starts Speed Search at start-up if the drive detects a Uv [Undervoltage] when it receives a Run command.	1 (0, 1)

Set these three parameters as shown to enable $b3-33$:

- $L2-01 = 1, 2$ [Power Loss Ride Through Select = Enabled for L2-02 Time, Enabled while CPU Power Active]
- $b3-01 = 1$ [Speed Search at Start Selection = Enabled]
- $b1-03 = 1$ [Stopping Method Selection = Coast to Stop]

0 : Disabled

1 : Enabled

■ b3-39: Regen Judgment Lv of Spd Search

No. (Hex.)	Name	Description	Default (Range)
b3-39 (1B8F) Expert	Regen Judgment Lv of Spd Search	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level to determine the regenerative state during speed search. Usually it is not necessary to change this setting.	15% (0 - 50%)

If the speed search is not completed after starting the speed search, increase the setting value in 5% increments after the drive stops.

If the drive detects ov [Overvoltage] during speed search, decrease the setting value in 5% increments after the drive stops.

■ b3-54: Search Time

No. (Hex.)	Name	Description	Default (Range)
b3-54 (3123)	Search Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will run Speed Search.	400 ms (10 - 2000 ms)

If you set this parameter too low, Speed Search will not operate correctly.

If the drive detects *oC* [Overcurrent] immediately after Speed Search Starts:

- Increase the value of *L2-03* [Minimum Baseblock Time] and decrease the motor speed you use to start Speed Search.
- Increases the setting value of *b3-08* [Speed Estimation ACR P Gain].
- Increase the value of *b3-54*.

If the drive detects *oC* or *ov* [DC Bus Overvoltage] during Speed Search, increase the value of *b3-08*.

■ b3-55: Current Increment Time

No. (Hex.)	Name	Description	Default (Range)
b3-55 (3124) Expert	Current Increment Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will increase the current from zero current to the setting value of <i>b3-06</i> [Speed Estimation Current Level 1].	10 ms (10 - 2000 ms)

Gradually increase the setting value when a large quantity of current flows after speed search starts. If you set this value too high, speed search will not operate correctly.

■ b3-56: InverseRotationSearch WaitTime

No. (Hex.)	Name	Description	Default (Range)
b3-56 (3126)	InverseRotationSearch WaitTime	V/f OLV OLV/PM AOLV/PM EZOLV Sets the wait time until the drive starts inverse rotation search after it completes forward search when you do inverse rotation search during Current Detection Speed Search.	Determined by <i>o2-04</i> (0.1 - 5.0 s)

■ b3-61: Init Magnet Pole Estimation Gain

No. (Hex.)	Name	Description	Default (Range)
b3-61 (1B96) Expert	Init Magnet Pole Estimation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the responsiveness for initial motor magnetic pole calculation when <i>A1-02</i> = 6 [Control Method Selection = AOLV/PM]. Set <i>b3-61</i> > 0.0 for an ordinary IPM motor.	5.0 (-20.0 - +20.0)

Used when *n8-35* = 1 [Initial Pole Detection Method = High Frequency Injection]. Sets the responsiveness for initial motor magnetic pole calculation. Set this parameter to a positive value for an ordinary motor. When you use High Frequency Injection Tuning, it will automatically set this parameter.

◆ b4: Timer Function

The drive uses timers to delay activating and deactivating MFDO terminals.

Timers prevent sensors and switches from making chattering noise.

There are two types of timers:

- Timers that set a delay for timer inputs and timer outputs.
These timers delay activating and deactivating of the MFDIs and MFDOs.
To enable this function, set *H1-xx* = 18 [MFDI Function Selection = Timer Function], and set *H2-01* to *H2-03* = 12 [MFDO Function Selection = Timer Output].
- Timers that set a delay to activate and deactivate MFDO terminals.
These timers delay activating and deactivating MFDO terminals.
To enable this function, set delay times in parameters *b4-03* to *b4-08*.

■ Timer Function Operation

- Timers that Set a Delay for Timer Inputs and Timer Outputs

Triggers timer output if the timer input is active for longer than the time set in *b4-01* [Timer Function ON-Delay Time]. Triggers timer output late for the time set in *b4-02* [Timer Function OFF-Delay Time]. Figure 12.17 shows an example of how the timer function works.

Figure 12.17 Example of Timer Function Operation

- Setting On/Off-delay Time for MFDO

Figure 12.18 uses H2-01 terminals to show an example of how the timer function works. Use *b4-03* [Terminal MA, MB, MC ON-Delay Time] and *b4-04* [Terminal MA, MB, MC OFF-Delay Time] to set this function.

Figure 12.18 Example of How the Timer Function Works with H2-01 Terminals

Note:

When the terminal is triggered, it continues for a minimum of 100 ms. The on/off-delay time of MFDO terminal does not have an effect.

■ b4-01: Timer Function ON-Delay Time

No. (Hex.)	Name	Description	Default (Range)
b4-01 (01A3)	Timer Function ON-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ON-delay time for the timer input.	0.0 s (0.0 - 3000.0 s)

■ b4-02: Timer Function OFF-Delay Time

No. (Hex.)	Name	Description	Default (Range)
b4-02 (01A4)	Timer Function OFF-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the OFF-delay time for the timer input.	0.0 s (0.0 - 3000.0 s)

■ b4-03: Terminal MA,MB,MC ON-Delay Time

No. (Hex.)	Name	Description	Default (Range)
b4-03 (0B30) Expert	Terminal MA,MB,MC ON-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time to activate the contact after the function set in <i>H2-01</i> activates.	0 ms (0 - 65000 ms)

■ b4-04: Terminal MA,MB,MC OFF-Delay Time

No. (Hex.)	Name	Description	Default (Range)
b4-04 (0B31) Expert	Terminal MA,MB,MC OFF-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time to deactivate the contact after the function set in <i>H2-01</i> deactivates.	0 ms (0 - 65000 ms)

■ b4-05: Ethernet DO1 ON Delay

No. (Hex.)	Name	Description	Default (Range)
b4-05 (0B32) Expert	Ethernet DO1 ON Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time to activate the contact after the function set in <i>H2-02</i> activates.	0 ms (0 - 65000 ms)

■ b4-06: Ethernet DO1 OFF Delay

No. (Hex.)	Name	Description	Default (Range)
b4-06 (0B33) Expert	Ethernet DO1 OFF Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time to deactivate the contact after the function set in <i>H2-02</i> deactivates.	0 ms (0 - 65000 ms)

■ b4-07: Ethernet DO2 ON Delay

No. (Hex.)	Name	Description	Default (Range)
b4-07 (0B34) Expert	Ethernet DO2 ON Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time until the contact is turned ON after the function set with <i>H2-03</i> turns ON.	0 ms (0 - 65000 ms)

■ b4-08: Ethernet DO2 OFF Delay

No. (Hex.)	Name	Description	Default (Range)
b4-08 (0B35) Expert	Ethernet DO2 OFF Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time to deactivate the contact after the function set in <i>H2-03</i> deactivates.	0 ms (0 - 65000 ms)

◆ b5: PID control

The drive has a PID control function. You can control drive output to adjust the proportional gain, integral time, and derivative time that has an effect on the bias between the target value and the feedback value to match the target value to the detected value. Use this function to adjust the drive output to accurately match the flow, pressure, and temperature in the application match the target value.

Use a combination of these controls to increase the performance:

- P control
P control has a proportional effect on the deviation. It outputs the product (the controlled output) proportional to the deviation. You cannot use only the offset from P control to get to zero deviation.
- I control
I control is the integral of the deviation. It uses an integral value of the deviation to output the product (the controlled output). I control helps align the feedback value and the target value. If you use only a proportional effect (P control), it will cause an offset. Use a proportional effect with integral control, and the offset will disappear over time.
- D control
D control is the derivative of the deviation. D control has an effect on drive output when there are sudden, large changes in the deviation or feedback value. It quickly returns drive output to the value before the sudden change. It multiplies a time constant by a derivative value of the deviation (slope of the deviation), and adds that result to PID input to calculate the deviation of the signal, then it corrects the deviation.

Note:

D control causes less stable operation because the noise changes the deviation signal. Use D control only when necessary.

■ PID Control Operation

Figure 12.19 shows PID control operation. The modified output (output frequency) changes when the drive uses PID control to keep the deviation (the difference between the target value and the feedback value) constant.

Figure 12.19 PID Control Operation

■ PID Control Applications

Table 12.20 shows applications for PID control.

Table 12.20 PID Control Applications

Application	Control Content	Sensors Used
Speed Control	- The drive uses a feedback signal for the machine speed, and adjusts that speed to align with the target value. - The drive uses speed data from other machinery as the target value to do synchronous control. The drive then adds that target value to the feedback from the machine it is operating to align its speed with the other machinery.	Tacho generator
Pressure control	The drive uses feedback from the actual pressure to hold constant pressure.	Pressure sensor
Flow control	The drive uses feedback from the actual flow to hold constant flow.	Flow rate sensor
Temperature control	The drive uses feedback from the actual temperature to control a fan and hold constant temperature.	Thermocoupler, thermistor

■ Input Methods for the PID Setpoint

Use *b5-01 [PID Mode Setting]* to select how the PID setpoint is input to the drive.

One of the inputs in Table 12.21 will be the PID setpoint.

When the input in Table 12.21 is disabled, either the frequency reference set in *b1-01 [Frequency Reference Selection 1]* or *b1-15 [Frequency Reference Selection 2]* will be the PID setpoint.

Table 12.21 Input Methods for the PID Setpoint

Input Methods for the PID Setpoint	Setting Value
MFAI terminal A1	Set <i>H3-02 = C [Terminal A1 Function Selection = PID Setpoint]</i> .
Modbus register 0006H	Sets Modbus register 000FH (Control Selection Setting) bit 1 to 1 (PID setpoint input). Enters the PID setpoint to Modbus register 0006H (PID Target, 0.01% units, signed).
<i>b5-19 [PID Setpoint Value]</i>	Set <i>b5-18 = 1 [b5-19 PID Setpoint Selection = Enabled]</i> . Enters the PID setpoint to <i>b5-19</i> .

Note:

If you set two inputs for the PID setpoint, it will trigger operation error *oPE07 [Analog Input Selection Error]*.

■ Entering the PID Feedback Value

You can use two methods to input the PID feedback value to the drive. One method uses a single feedback signal for usual PID control. The other method uses two signals. The difference between those signals sets the deviation.

• Use a single feedback signal.

Use Table 12.22 to select how the feedback signal is input to the drive for PID control.

Table 12.22 PID Feedback Input Method

PID Feedback Input Method	Setting Value
MFAI terminal A1	Set <i>H3-02 = B [PID Feedback]</i> .

- Use [Table 12.23](#) to select how the second feedback value is input to the drive. The drive calculates the deviation of the second feedback value. Set $H3-02 = 16$ [*Terminal A1 Function Selection = Differential PID Feedback*] to enable the second feedback signal used to calculate the deviation.

PID Differential Feedback Input Method	Setting Value
MFAI terminal A1	Set $H3-02 = 16$ [Differential PID Feedback].

If you set $H3-02 = 16$, it will trigger *oPE07 [Analog Input Selection Error]*.

The drive detects feedback loss when the feedback value is less than the value in *b5-13* for longer than the time in *b5-14*.

- *b5-12 [Feedback Loss Detection Select]*
- *b5-13 [PID Feedback Loss Detection Lvl]*
- *b5-14 [PID Feedback Loss Detection Time]*

- *Excessive PID Feedback [FbH]*

Set these parameters to set how the drive detects a feedback level that is too high.

The drive detects too much PID feedback when the feedback value is more than the value in *b5-36* for longer than the time in *b5-37*.

- *b5-12 [Feedback Loss Detection Select]*
- *b5-36 [PID High Feedback Detection Lvl]*
- *b5-37 [PID High Feedback Detection Time]*

Figure 12.21 shows the operation principle when the feedback value is too low, and the drive detects feedback loss. The operation is the same when the drive detects too much feedback.

Figure 12.21 Time Chart for PID Feedback Loss Detection Time

■ PID Sleep

PID sleep stops drive operation when the PID output or the frequency reference is less than *b5-15 [PID Sleep Function Start Level]*. This function shuts off drive output after the motor decelerates to the set frequency.

The drive will automatically restart the motor when the PID output or the frequency reference is more than the *b5-15* value for the time set in *b5-16 [PID Sleep Delay Time]*.

Figure 12.22 shows the PID Sleep function.

Figure 12.22 PID Sleep Time Chart

Note:

- The PID Sleep function is enabled when PID control is disabled.
- When the PID Sleep function is triggered, the drive will stop the motor as specified by *b1-03 [Stopping Method Selection]*.

■ Fine-Tuning PID

Fine-tune the following parameter settings to have PID control eliminate problems with overshoot and oscillation.

- *b5-02 [Proportional Gain (P)]*
- *b5-03 [Integral Time (I)]*
- *b5-05 [Derivative Time (D)]*
- *b5-08 [PID Primary Delay Time Constant]*

Purpose	Procedure	Results
Prevent overshoot.	- Set <i>b5-05 [Derivative Time (D)]</i> to a smaller value. - Set <i>b5-03 [Integral Time (I)]</i> to a larger value.	Response Before adjustment After adjustment Time
Quickly stabilize control.	- Set <i>b5-05 [Derivative Time (D)]</i> to a larger value. - Set <i>b5-03 [Integral Time (I)]</i> to a smaller value.	Response After adjustment Before adjustment Time
Prevent long-cycle oscillations.	Set <i>b5-03 [Integral Time (I)]</i> to a larger value.	Response Before adjustment After adjustment Time
Prevent short-cycle oscillations.	- Set <i>b5-05 [Derivative Time (D)]</i> to a smaller value. - If you set <i>b5-05 = 0.00 [Derivative Time (D) = disabling D control]</i> and it does not stop oscillation, then set <i>b5-02 [Proportional Gain (P)]</i> to a smaller value or set <i>b5-08 [PID Primary Delay Time Constant]</i> to a larger value.	Response Before adjustment After adjustment Time

■ EZ Sleep/Wake-up Functionality

Set *b5-89 = 1 [Sleep Method Selection = EZ Sleep/Wake-up]* to enable the EZ Sleep/Wake-up function.

Note:

- When *b5-89 = 0 [Sleep Mode Selection = Standard]*, the EZ Sleep function and related parameters are disabled. Parameter *b5-91 [EZ Sleep Minimum Speed]* is not included in this rule.
- Set *b5-89 = 1* to disable *b5-15 [PID Sleep Function Start Level]*.

Setting Parameter	Description
<i>b5-90 [EZ Sleep Unit]</i>	This parameter sets the unit of measure for <i>b5-92 [EZ Sleep Level]</i> . When <i>b5-90 = 0 [0.1Hz units]</i> , the setting range of <i>b5-91 [EZ Sleep Minimum Speed]</i> is 0.0 to 590.0 Hz. When <i>b5-90 = 1 [rev/min]</i> , the setting range is 0 to 35400 min ⁻¹ (r/min). Note: When you change <i>b5-90</i> , the value of <i>b5-92</i> is not automatically updated.
<i>b5-91 [EZ Sleep Minimum Speed]</i>	Sets the output lower limit level for the PID control as Hz units or min ⁻¹ (r/min) units. When you use <i>b5-91</i> , set <i>b5-34 = 0.0 [PID Output Lower Limit Level = 0.0 (disabled)]</i> . *1
<i>b5-92 [EZ Sleep Level]</i>	When the output frequency or motor speed is less than the value of <i>b5-92</i> for longer than the value of <i>b5-93 [EZ Sleep Time]</i> , the drive does to sleep.
<i>b5-95 = 0 [EZ Sleep Wake-up Mode = Absolute]</i>	When the PID feedback is less than the value of <i>b5-94 [EZ Sleep Wake-up Level]</i> for longer than the time set in <i>b5-96 [EZ Sleep Wake-up Time]</i> , the drive restarts operation from sleep.
<i>b5-95 = 1 [EZ Sleep Wake-up Mode = Setpoint Delta]</i>	The drive resumes operation from the sleep state when the PID feedback has dropped below the value defined as the PID setpoint value minus <i>b5-94</i> continuously for the time configured with <i>b5-96</i> .

*1 When you set the lower limit for PID output as a percentage of the Maximum Output Frequency, refer to *b5-34: PID Output Lower Limit Level on page 511*. The *b5-89* setting does not have an effect.

Figure 12.23 EZ Sleep/Wake-up Operation: PID Output is Normal and *b5-92 = 0.0 Hz*

*1 The values of *b5-94* and *b5-95* set operation.

*2 In the example, *b5-92* is at the default setting of 0.0 Hz. Parameter *b5-91* is the EZ sleep level.

■ b5-01: PID Mode Setting

No. (Hex.)	Name	Description	Default (Range)
b5-01 (01A5)	PID Mode Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of PID control.	0 (0 - 8)

0 : Disabled

1 : Standard

Enables PID control. The drive does D control on the difference between the feedback value and the PID setpoint output through *U5-02 [PID Input]*.

2 : Standard (D on feedback)

Enables PID control. The drive does D control on the feedback output through *U5-06 [PID FdbkDif PID Fdbk]*.

3 : Fref + PID Trim

Enables PID control. The drive adds the frequency reference to the PID output. The drive does D control on the difference between the feedback value and the PID setpoint output through *U5-02 [PID Input]*.

4 : Fref + PID Trim (D on feedback)

Enables PID control. The drive adds the frequency reference to the PID output. The drive does D control on the feedback output through *U5-06 [PID FdbkDif PID Fdbk]*.

5 : Same as 7series & prior, b5-01=1

6 : Same as 7series & prior, b5-01=2

7 : Same as 7series & prior, b5-01=3

8 : Same as 7series & prior, b5-01=4

Note:

Use settings 5 to 8 instead of settings 1 to 4 when the drive is a replacement for Varispeed F7.

■ b5-02: Proportional Gain (P)

No. (Hex.)	Name	Description	Default (Range)
b5-02 (01A6) RUN	Proportional Gain (P)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain (P) that is applied to PID input.	1.00 (0.00 - 25.00)

Larger values decrease errors, but can cause oscillations. Smaller values let too much offset between the setpoint and feedback.

Set *b5-02* = 0.00 to disable P control.

■ b5-03: Integral Time (I)

No. (Hex.)	Name	Description	Default (Range)
b5-03 (01A7) RUN	Integral Time (I)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time (I) that is applied to PID input.	1.0 s (0.0 - 360.0 s)

Set a short integral time in *b5-03* to remove the offset more quickly. If the integral time is too short, overshoot or oscillation can occur.

Set *b5-03* = 0.00 to disable I control.

Figure 12.24 Integral Time and Deviation

■ b5-04: Integral Limit

No. (Hex.)	Name	Description	Default (Range)
b5-04 (01A8) RUN	Integral Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit for integral control (I) as a percentage of the Maximum Output Frequency.	100.0% (0.0 - 100.0%)

Applications with loads that quickly change will cause the output of the PID function to oscillate. Set this parameter to a low value to prevent oscillation, mechanical loss, and motor speed loss.

■ b5-05: Derivative Time (D)

No. (Hex.)	Name	Description	Default (Range)
b5-05 (01A9) RUN	Derivative Time (D)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the derivative time (D) for PID control. This parameter adjusts system responsiveness.	0.00 s (0.00 - 10.00 s)

When you increase the time setting, it will increase controller responsiveness, but it can also cause vibration. When you decrease the time setting, it will suppress overshoot and decrease controller responsiveness.

Set *b5-05* = 0.00 to disable D control.

■ b5-06: PID Output Limit

No. (Hex.)	Name	Description	Default (Range)
b5-06 (01AA) RUN	PID Output Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum possible output from the PID controller as a percentage of the Maximum Output Frequency.	100.0% (0.0 - 100.0%)

■ b5-07: PID Offset Adjustment

No. (Hex.)	Name	Description	Default (Range)
b5-07 (01AB) RUN	PID Offset Adjustment	V/f OLV OLV/PM AOLV/PM EZOLV Sets the offset for the PID control output as a percentage of the Maximum Output Frequency.	0.0% (-100.0 - +100.0%)

■ b5-08: PID Primary Delay Time Constant

No. (Hex.)	Name	Description	Default (Range)
b5-08 (01AC) RUN Expert	PID Primary Delay Time Constant	V/f OLV OLV/PM AOLV/PM EZOLV Sets the primary delay time constant for the PID control output. Usually it is not necessary to change this setting.	0.00 s (0.00 - 10.00 s)

Prevents resonance if there is a large quantity of mechanical friction or if rigidity is unsatisfactory. Set the value larger than the resonant frequency cycle. A value that is too large will decrease drive responsiveness.

■ b5-09: PID Output Level Selection

No. (Hex.)	Name	Description	Default (Range)
b5-09 (01AD)	PID Output Level Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the polarity of the PID output.	0 (0, 1)

Use this parameter in applications that decrease the drive output frequency when you increase the PID setpoint.

0 : Normal Output (Direct Acting)

A positive PID input increases the PID output (direct acting).

1 : Reverse Output (Reverse Acting)

A positive PID input decreases the PID output (reverse acting).

■ b5-10: PID Output Gain Setting

No. (Hex.)	Name	Description	Default (Range)
b5-10 (01AE) RUN	PID Output Gain Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the amount of gain to apply to the PID output.	1.00 (0.00 - 25.00)

Applies a gain to the PID output and can help when $b5-01 = 3$ or 4 [$PID\ Mode\ Setting = Fref + PID\ Trim, Fref + PID\ Trim\ (D\ on\ feedback)$].

■ b5-11: PID Output Reverse Selection

No. (Hex.)	Name	Description	Default (Range)
b5-11 (01AF)	PID Output Reverse Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enables and disables reverse motor rotation for negative PID control output.	0 (0, 1)

This parameter is disabled when $b5-01 = 3, 4$ [$PID\ Mode\ Setting = Fref + PID\ Trim, Fref + PID\ Trim\ (D\ on\ feedback)$]. There is no limit for PID output (PID output can be positive or negative). Operates the same as setting “1: Enabled: Negative lower limit”.

0 : Lower Limit is Zero

When PID output is negative, PID output is limited to 0 and drive output is shut off.

1 : Negative Output Accepted

When the PID output is negative, the motor will rotate in reverse. When $b1-04 = 1$ [$Reverse\ Operation\ Selection = Reverse\ Disabled$], the lower limit is 0.

■ b5-12: Feedback Loss Detection Select

No. (Hex.)	Name	Description	Default (Range)
b5-12 (01B0)	Feedback Loss Detection Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive response to PID feedback loss/excess. Sets drive operation after the drive detects PID feedback loss/excess.	0 (0 - 5)

0 : Digital Out Only, Always Detect

The MFDO terminal set for *PID Feedback Low* or *PID Feedback High* [$H2-01\ to\ H2-03 = 3E, 3F$] activates. When the drive detects feedback loss/excess, the keypad will not show an alarm and the drive will continue operation.

When the feedback signal is less than the level set in $b5-13$ [$PID\ Feedback\ Loss\ Detection\ Lvl$] for longer than the time set in $b5-14$ [$PID\ Feedback\ Loss\ Detection\ Time$], the MFDO terminal set for *PID Feedback Low* activates.

When the feedback signal is more than the level set in $b5-36$ [$PID\ High\ Feedback\ Detection\ Lvl$] for longer than the time set in $b5-37$ [$PID\ High\ Feedback\ Detection\ Time$] the MFDO terminal set for *PID Feedback High* activates.

When the feedback value is not in the detection range, the drive resets the MFDO.

1 : Alarm + Digital Out, Always Det

The drive detects FbL [$PID\ Feedback\ Loss$] and FbH [$Excessive\ PID\ Feedback$]. The MFDO terminal set for *PID Feedback Low* or *PID Feedback High* [$H2-01\ to\ H2-03 = 3E, 3F$] activates. The output terminal set for *Alarm* [$H2-01\ to\ H2-03 = 10$] activates and the drive continues operation.

When the feedback signal is less than the level set in $b5-13$ for longer than the time set in $b5-14$, the MFDO terminal set for *PID Feedback Low* activates.

When the feedback signal is more than the level set in $b5-36$ for longer than the time set in $b5-37$, the MFDO terminal set for *PID Feedback High* activates.

When the feedback value is not in the detection range, the drive resets the MFDO.

2 : Fault + Digital Out, Always Det

The drive detects FbL and FbH . MFDO terminal MA-MC turns ON, MB-MC turns OFF, and the motor coasts to stop.

When the feedback signal is less than the level set in $b5-13$ for the time set in $b5-14$, the drive detects FbL .

When the feedback signal is more than the level set in $b5-36$ for the time set in $b5-37$, the drive detects FbH .

3 : Digital Out Only, @ PID Enable

The MFDO terminal set for *PID Feedback Low* or *PID Feedback High* activates. The keypad will not show an alarm. The drive continues operation.

When the MFDI terminal set to *PID Disable* [$H1-xx = 19$] activates, the drive disables fault detection.

4 : Alarm + Digital Out, @PID Enable

The drive detects *FbL* and *FbH*. The MFDO terminal set for *PID Feedback Low* or *PID Feedback High* activates. The output terminal set for *Alarm [H2-01 to H2-03 = 10]* activates and the drive continues operation.

When the MFDI terminal set to *PID Disable [H1-xx = 19]* activates, the drive disables fault detection.

5 : Fault + Digital Out, @PID Enable

The drive detects *FbL* and *FbH*. MFDO terminal MA-MC turns ON, MB-MC turns OFF, and the drive coasts to stop.

When the MFDI terminal set to *PID Disable [H1-xx = 19]* activates, the drive disables fault detection.

■ b5-13: PID Feedback Loss Detection Lvl

No. (Hex.)	Name	Description	Default (Range)
b5-13 (01B1)	PID Feedback Loss Detection Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level that triggers <i>PID Feedback Loss [FbL]</i> detection as a percentage of the Maximum Output Frequency.	0% (0 - 100%)

The drive detects *PID Feedback Loss [FbL]* when the feedback signal decreases to less than the level set in *b5-13* for longer than the time set in *b5-14 [PID Feedback Loss Detection Time]*.

■ b5-14: PID Feedback Loss Detection Time

No. (Hex.)	Name	Description	Default (Range)
b5-14 (01B2)	PID Feedback Loss Detection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that PID Feedback must be less than <i>b5-13 [PID Feedback Loss Detection Lvl]</i> to detect <i>PID Feedback Loss [FbL]</i> .	1.0 s (0.0 - 25.5 s)

■ b5-15: PID Sleep Function Start Level

No. (Hex.)	Name	Description	Default (Range)
b5-15 (01B3)	PID Sleep Function Start Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output level that triggers the PID Sleep function.	Determined by A1-02 (0.0 - 590.0)

The drive goes into Sleep mode when the PID output or frequency reference is less than *b5-15* for longer than the time set to *b5-16 [PID Sleep Delay Time]*. The drive continues operation when the PID output or frequency reference is more than *b5-15* for longer than the time set to *b5-16*.

■ b5-16: PID Sleep Delay Time

No. (Hex.)	Name	Description	Default (Range)
b5-16 (01B4)	PID Sleep Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets a delay time to start or stop the PID Sleep function.	0.0 s (0.0 - 25.5 s)

■ b5-17: PID Accel/Decel Time

No. (Hex.)	Name	Description	Default (Range)
b5-17 (01B5) RUN	PID Accel/Decel Time	V/f OLV OLV/PM AOLV/PM EZOLV Raises or lowers the PID setpoint using the acceleration and deceleration times set to the drive. This is a soft-starter for the PID setpoint.	0.0 s (0.0 - 6000.0 s)

The drive usually uses the acceleration and deceleration times set in *C1-xx [Accel and Decel Times]*, but when PID control is enabled, the drive applies *C1-xx* after PID output. If you frequently change the PID setpoint, the drive responsiveness decreases. When resonance with PID control causes hunting, overshoot, or undershoot, set *b5-17* for longer acceleration and deceleration times.

Decrease *C1-xx* until hunting stops, then use *b5-17* to check the acceleration and deceleration. To enable and disable the setting in *b5-17* through an MFDI terminal, set *PID Soft Starter Disable [H1-xx = 34]*.

■ b5-18: b5-19 PID Setpoint Selection

No. (Hex.)	Name	Description	Default (Range)
b5-18 (01DC)	b5-19 PID Setpoint Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enables and disables <i>b5-19 [PID Setpoint Value]</i> .	0 (0, 1)

0 : Disabled

The drive does not use the value set in *b5-19* as the PID setpoint.

1 : Enabled

The drive uses the value set in *b5-19* as the PID setpoint.

■ b5-19: PID Setpoint Value

No. (Hex.)	Name	Description	Default (Range)
b5-19 (01DD) RUN	PID Setpoint Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID setpoint when <i>b5-18 = 1 [b5-19 PID Setpoint Selection = Enabled]</i> .	0.00% (0.00 - 100.00%)

■ b5-20: PID Unit Selection

No. (Hex.)	Name	Description	Default (Range)
b5-20 (01E2)	PID Unit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of digits to set and show the PID setpoint.	1 (0 - 3)

Set the units for these parameters and monitors:

- b5-19 [PID Setpoint Value]
- b5-58 [PID Setpoint2]
- b5-59 [PID Setpoint3]
- b5-60 [PID Setpoint4]
- U5-01 [PID Feedback]
- U5-04 [PID Setpoint]
- U5-99 [PID Setpoint Command]

0 : 0.01Hz units

The drive uses 0.01 Hz units.

1 : 0.01% units

The drive uses 0.01% units. Set the value as a percentage of *E1-04 [Maximum Output Frequency]*.

2 : rev/min

The drive uses 1 rev/min unit. Set *E2-04*, *E4-04*, or *E5-04 [Motor Pole Count]*.

3 : User Units

The drive uses the units set in *b5-38 [PID User Unit Display Scaling]* and *b5-39 [PID User Unit Display Digits]* to show the PID setpoint in *U5-01*, *U5-04*, *U5-06 [PID Feedback, PID Setpoint, PID Fdbk-Diff PID Fdbk]*.

■ b5-34: PID Output Lower Limit Level

No. (Hex.)	Name	Description	Default (Range)
b5-34 (019F) RUN	PID Output Lower Limit Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit level for the PID control as a percentage of <i>E1-04 [Maximum Output Frequency]</i> .	0.0% (-100.0 - +100.0%)

Use a lower limit to keep PID control output from dropping below a fixed level.

When you use *b5-34*, set *b5-91 = 0 [EZ Sleep Minimum Speed = 0 (Disabled)]*.

When you set the output lower limit level in Hz or min⁻¹ (r/min), refer to [b5-91: EZ Sleep Minimum Speed on page 516](#).

Set this parameter to 0.0% to disable this function.

■ b5-35: PID Input Limit Level

No. (Hex.)	Name	Description	Default (Range)
b5-35 (01A0) RUN	PID Input Limit Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output upper limit for the PID control as a percentage of the Maximum Output Frequency.	1000.0% (0.0 - 1000.0%)

A large input value for PID control makes a high output. The drive applies this limit to the negative and positive domains.

■ b5-36: PID High Feedback Detection Lvl

No. (Hex.)	Name	Description	Default (Range)
b5-36 (01A1)	PID High Feedback Detection Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level that triggers <i>Excessive PID Feedback [FbH]</i> as a percentage of the Maximum Output Frequency.	100% (0 - 100%)

When the feedback signal increases to more than the level set in *b5-36* for the time set in *b5-37* [*PID High Feedback Detection Time*], the drive will detect *Excessive PID Feedback [FbH]*.

■ b5-37: PID High Feedback Detection Time

No. (Hex.)	Name	Description	Default (Range)
b5-37 (01A2)	PID High Feedback Detection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the PID feedback signal must be more than the level set in <i>b5-36</i> [<i>PID Feedback High Detection Lvl</i>] to cause <i>Excessive PID Feedback [FbH]</i> .	1.0 s (0.0 - 25.5 s)

■ b5-38: PID User Unit Display Scaling

No. (Hex.)	Name	Description	Default (Range)
b5-38 (01FE)	PID User Unit Display Scaling	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value that the drive sets or shows as the PID setpoint when at the maximum output frequency.	Determined by b5-20 (1 - 60000)

The drive uses this parameter and *b5-39* [*PID Setpoint Display Digits*] together.

When *b5-20* = 3 [*PID Unit Selection* = *User Units*], the drive applies user-set PID setpoint and display units to these parameters and monitors:

- b5-19 [PID Setpoint Value]
- b5-58 [PID Setpoint2]
- b5-59 [PID Setpoint3]
- b5-60 [PID Setpoint4]
- U5-01 [PID Feedback]
- U5-04 [PID Setpoint]
- U5-99 [PID Setpoint Command]

■ b5-39: PID User Unit Display Digits

No. (Hex.)	Name	Description	Default (Range)
b5-39 (01FF)	PID User Unit Display Digits	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of digits to set and show the PID setpoint.	Determined by b5-20 (0 - 3)

The drive uses this parameter and *b5-38* [*PID Setpoint User Display*] together.

When $b5-20 = 3$ [*PID Unit Selection = User Units*], the drive applies user-set PID setpoint and display units to these parameters and monitors:

- b5-19 [PID Setpoint Value]
- b5-58 [PID Setpoint2]
- b5-59 [PID Setpoint3]
- b5-60 [PID Setpoint4]
- U5-01 [PID Feedback]
- U5-04 [PID Setpoint]
- U5-99 [PID Setpoint Command]

0 : No Decimal Places (XXXXX)

1 : One Decimal Places (XXXX.X)

2 : Two Decimal Places (XXX.XX)

3 : Three Decimal Places (XX.XXX)

■ b5-40: Frequency Reference Monitor @PID

No. (Hex.)	Name	Description	Default (Range)
b5-40 (017F)	Frequency Reference Monitor @PID	V/f OLV OLV/PM AOLV/PM EZOLV Sets the contents for monitor <i>U1-01</i> [<i>Frequency Reference</i>] in PID control.	0 (0, 1)

0 : U1-01 Includes PID Output

Monitor *U1-01* shows the frequency reference that was increased or decreased by the PID output.

1 : U1-01 Excludes PID Output

Monitor *U1-01* shows the actual frequency reference.

■ b5-47: PID Trim Mode Output Reverse Sel

No. (Hex.)	Name	Description	Default (Range)
b5-47 (017D)	PID Trim Mode Output Reverse Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets reverse motor rotation when the PID control output is negative.	1 (0, 1)

This parameter is enabled when $b5-01 = 3$ or 4 [*PID Mode Setting = Fref + PID Trim, Fref + PID Trim (D on feedback)*].

0 : Lower Limit is Zero

When PID output is negative, PID output is limited to 0 and drive output is shut off.

1 : Negative Output Accepted

When the PID output is negative, the motor will rotate in reverse.

■ b5-53: PID Integrator Ramp Limit

No. (Hex.)	Name	Description	Default (Range)
b5-53 (0B8F) RUN	PID Integrator Ramp Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the responsiveness of PID control when the PID feedback changes quickly.	0.0 Hz (0.0 - 10.0 Hz)

Note:

- This parameter is disabled when set to 0.0 Hz.
- When $b5-53 > 0.0$ Hz and the drive enables the integrator ramp limit, the PID integrator value limit is the range set by the output frequency $\pm b5-53$.
- When the PID feedback changes quickly, gradually decrease the value of this parameter in increments of 0.1 Hz to decrease the speed of the response of PID control.

■ b5-55: PID Feedback Monitor Selection

No. (Hex.)	Name	Description	Default (Range)
b5-55 (0BE1)	PID Feedback Monitor Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor (<i>Ux-xx</i>) used as the PID Feedback. Set the <i>x-xx</i> part of the <i>Ux-xx</i> [Monitor].	000 (000 - 999)

Note:

- You cannot select *parameter U5-xx*.
- This parameter is disabled when set to 000.

■ b5-56: PID Feedback Monitor Gain

No. (Hex.)	Name	Description	Default (Range)
b5-56 (0BE2)	PID Feedback Monitor Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the monitor set in b5-55 [PID Feedback Monitor Selection].	1.00 (0.00 - 10.00)

■ b5-57: PID Feedback Monitor Bias

No. (Hex.)	Name	Description	Default (Range)
b5-57 (11DD)	PID Feedback Monitor Bias	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bias for the monitor specified in b5-55 [PID Feedback Monitor Selection].	0.00 (-10.00 - +10.00)

■ b5-58 to b5-60: PID Setpoints 2 to 4

No. (Hex.)	Name	Description	Default (Range)
b5-58 to b5-60: (1182 - 1184) RUN	PID Setpoints 2 to 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID setpoint when <i>H1-xx</i> = 3E or 3F [MFDI Function Selection = PID Setpoint Selection 1/2]. This value is a percentage of the maximum output frequency.	0.00% (0.00 - 100.00%)

Table 12.24 shows how the different MFDI *H1-xx* values (3E and 3F) have an effect on the PID setpoint value.

Table 12.24 Switching of MFDI and PID Setpoint Value

H1-xx = 3E	H1-xx = 3F	PID Setpoint Value
OFF	OFF	No switch
ON	OFF	b5-58 [PID Setpoint2]
OFF	ON	b5-59 [PID Setpoint3]
ON	ON	b5-60 [PID Setpoint4]

■ b5-61: PID Trim Mode Lower Limit Sel

No. (Hex.)	Name	Description	Default (Range)
b5-61 (119A)	PID Trim Mode Lower Limit Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that adjusts the PID output in relation to the frequency reference.	0 (0, 1)

0 : Disabled

Does not adjust the PID output with the frequency reference.

1 : Enabled

Adjusts the PID output in relation to the frequency reference. The setting value of b5-62 [PID Trim Mode Lower Limit Value] sets the lower limit of the post-adjustment value. The maximum output frequency sets the upper limit.

Note:

- Set $b5-01 = 3, 4, 7, \text{ or } 8$ to enable this parameter.
- When $b5-61 = 1$, you can use this formula to adjust PID output proportional to the frequency reference:

$$U5-03 = U5-03 \times \left| \frac{F_{ref}}{F_{max}} \right|^{*1}$$

$U5-03$ [PID Output], F_{ref} [Frequency Reference], and F_{max} [Maximum Output Frequency]

*1 Lower limit = $b5-62$, Upper limit = Maximum output frequency

■ b5-62: PID Trim Mode Lower Limit Value

No. (Hex.)	Name	Description	Default (Range)
b5-62 (119B)	PID Trim Mode Lower Limit Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID Trim Mode Lower Limit Value as a percentage of the maximum output frequency.	0.00% (0.00 - 100.00%)

Note:

Set $b5-01 = 3, 4, 7, \text{ or } 8$ to enable this parameter.

■ b5-63: PID Differential FB Monitor Sel

No. (Hex.)	Name	Description	Default (Range)
b5-63 (119C)	PID Differential FB Monitor Sel	V/f OLV OLV/PM AOLV/PM EZOLV Selects the monitor ($Ux-xx$) used as the PID Differential Feedback. Set the $x-xx$ part of the $Ux-xx$ [Monitor].	000 (000 - 999)

Note:

- You cannot select *parameter* $U5-xx$.
- This parameter is disabled when set to 000.

■ b5-64: PID Differential FB Monitor Gain

No. (Hex.)	Name	Description	Default (Range)
b5-64 (119D)	PID Differential FB Monitor Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the monitor specified in $b5-63$ [PID Differential FB Monitor Sel].	1.00 (0.00 - 10.00)

■ b5-65: PID Differential FB Monitor Bias

No. (Hex.)	Name	Description	Default (Range)
b5-65 (119F)	PID Differential FB Monitor Bias	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bias for the monitor specified in $b5-63$ [PID Differential FB Monitor Sel].	0.00 (-10.00 - +10.00)

■ b5-66: PID Feedback Monitor Level

No. (Hex.)	Name	Description	Default (Range)
b5-66 (11DE)	PID Feedback Monitor Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the signal level for the monitor specified in $b5-55$ [PID Feedback Monitor Selection].	0 (0, 1)

0 : Absolute

1 : Bi-directional (+/-)

■ b5-67: PID Differential FB Monitor Lvl

No. (Hex.)	Name	Description	Default (Range)
b5-67 (11DF)	PID Differential FB Monitor Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the signal level for the monitor specified in $b5-55$ [PID Differential FB Monitor Sel].	0 (0, 1)

0 : Absolute**1 : Bi-directional (+/-)****■ b5-89: Sleep Method Selection**

No. (Hex.)	Name	Description	Default (Range)
b5-89 (0B89) RUN	Sleep Method Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets sleep and wake up operation when using PID.	0 (0, 1)

0 : Standard**1 : EZ Sleep/Wake-up****■ b5-90: EZ Sleep Unit**

No. (Hex.)	Name	Description	Default (Range)
b5-90 (0B90)	EZ Sleep Unit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the measurement units for <i>b5-91 [EZ Sleep Minimum Speed]</i> and <i>b5-92 [EZ Sleep Level]</i> .	0 (0, 1)

0 : 0.1Hz units**1 : rev/min****■ b5-91: EZ Sleep Minimum Speed**

No. (Hex.)	Name	Description	Default (Range)
b5-91 (0B91) RUN	EZ Sleep Minimum Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output lower limit level for the PID control as Hz units or min ⁻¹ (r/min) units.	0.0 Hz or 0 min ⁻¹ (r/min) (0.0 to 590.0 Hz or 0 to 35400 min ⁻¹ (r/min))

When you use *b5-91*, set *b5-34* = 0.0 [*PID Output Lower Limit Level* = 0.0 (disabled)].

When you set the lower limit for PID output as a percentage of the Maximum Output Frequency, refer to [b5-34: PID Output Lower Limit Level on page 511](#).

Note:

The value of *b5-90 [EZ Sleep Unit]* sets the units. When *b5-90* changes, this parameter does not automatically update. Set this parameter again after you change *b5-90*.

■ b5-92: EZ Sleep Level

No. (Hex.)	Name	Description	Default (Range)
b5-92 (0B92) RUN	EZ Sleep Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value that the output frequency or motor speed must be less than for longer than <i>b5-93 [EZ Sleep Time]</i> to enter Sleep Mode.	0.0 Hz or 0 min ⁻¹ (r/min) (0.0 to 590.0 Hz or 0 to 35400 min ⁻¹ (r/min))

Note:

When *b5-90 [EZ Sleep Unit]* changes, this parameter does not automatically update. Set this parameter again after you change *b5-90*.

■ b5-93: EZ Sleep Time

No. (Hex.)	Name	Description	Default (Range)
b5-93 (0B93) RUN	EZ Sleep Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the output frequency or motor speed must be less than <i>b5-92 [EZ Sleep Level]</i> to enter Sleep Mode.	5.0 s (0.0 - 1000.0 s)

■ b5-94: EZ Sleep Wake-up Level

No. (Hex.)	Name	Description	Default (Range)
b5-94 (0B94) RUN	EZ Sleep Wake-up Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level at which the drive resumes operation when exiting Sleep Mode.	0.00% (0.00 - 600.00%)

Note:

The values of *b5-20* [PID Unit Selection], *b5-38* [PID User Unit Display Scaling], and *b5-39* [PID User Unit Display Digits] set the units. When *b5-20*, *b5-38*, and *b5-39* change, this parameter does not automatically update. Set this parameter again after you change *b5-20*, *b5-38*, and *b5-39* are changed.

- When *b5-95* = 0 [EZ Sleep Wake-up Mode = Absolute]:
When *b5-09* = 0 [PID Output Level Selection = Normal Output (Direct Acting)], and the PID Feedback [*H3-xx* = *B*] is less than the value of *b5-94* for a time longer than the value of *b5-96* [EZ Sleep Wake-up Time], the drive will exit sleep and start operation again. When *b5-09* = 1 [Reverse Output (Reverse Acting)], and the PID feedback is more than setting value of *b5-94* for a time longer than the setting value of *b5-96*, the drive will exit sleep and start operation again.
- When *b5-95* = 1 [Setpoint Delta]:
When *b5-09* = 0, and the PID feedback is less than the value of "PID setpoint value - *b5-94*" for a time longer than the value of *b5-96*, the drive will exit sleep and start operation again. When *b5-09* = 1, and the PID feedback is more than the value of "PID setpoint value + *b5-94*" for a time longer than the setting value of *b5-96*, the drive will exit sleep and start operation again.

■ b5-95: EZ Sleep Wake-up Mode

No. (Hex.)	Name	Description	Default (Range)
b5-95 (0B95)	EZ Sleep Wake-up Mode	V/f OLV OLV/PM AOLV/PM EZOLV Sets the wake-up mode to use when exiting Sleep Mode.	0 (0, 1)

0 : Absolute

1 : Setpoint Delta

■ b5-96: EZ Sleep Wake-up Time

No. (Hex.)	Name	Description	Default (Range)
b5-96 (0B96) RUN	EZ Sleep Wake-up Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the EZ Wake-up time.	1.0 s (0.0 - 1000.0 s)

When the PID feedback is less than the value of *b5-94* [EZ Sleep Wake-up Level] continuously for the time set in *b5-96*, the drive will exit sleep and start operation again.

◆ b6: Dwell Function

The Dwell function momentarily holds the output frequency at start and stop.

This prevents motor speed loss when you start and stop heavy loads. The Dwell function is also enabled when backlash on the machine side causes sudden movement at the start of acceleration and deceleration.

At the start of acceleration, the drive uses the output frequency and acceleration time set for the Dwell function to automatically operate at low speed to minimize the effects of backlash. Then, the drive can accelerate again. The Dwell function operates the same for deceleration.

For conveyor applications, the Dwell function also lets the drive interlock the output frequency and a delay time for the holding brake on the load side.

The Dwell function momentarily stops during acceleration to prevent a PM motor from stepping out. [Figure 12.25](#) shows how the Dwell function works.

Note:

When you use the Dwell function at stop, set *b1-03* = 0 [Stopping Method Selection = Ramp to Stop].

Figure 12.25 Time Chart for the Dwell Function at Start/Stop

■ b6-01: Dwell Reference at Start

No. (Hex.)	Name	Description	Default (Range)
b6-01 (01B6)	Dwell Reference at Start	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output frequency that the drive will hold momentarily when the motor starts.	0.0 (Determined by A1-02)

When the drive accelerates to the output frequency set in *b6-01*, it holds that frequency for the time set in *b6-02* [Dwell Time at Start], and starts to accelerate again.

■ b6-02: Dwell Time at Start

No. (Hex.)	Name	Description	Default (Range)
b6-02 (01B7)	Dwell Time at Start	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will hold the output frequency when the motor starts.	0.0 s (0.0 - 10.0 s)

■ b6-03: Dwell Reference at Stop

No. (Hex.)	Name	Description	Default (Range)
b6-03 (01B8)	Dwell Reference at Stop	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output frequency that the drive will hold momentarily when ramping to stop the motor.	0.0 (Determined by A1-02)

When the drive decelerates to the output frequency set in *b6-03*, it holds that frequency for the time set in *b6-04* [Dwell Time at Stop] and starts to decelerate again.

■ b6-04: Dwell Time at Stop

No. (Hex.)	Name	Description	Default (Range)
b6-04 (01B9)	Dwell Time at Stop	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time for the drive to hold the output frequency when ramping to stop the motor.	0.0 s (0.0 - 10.0 s)

◆ b8: Energy Saving

Energy-saving control improves overall system operating efficiency by operating the motor at its most efficient level. Set *b8-01* and these parameters according to the control method and the motor.

- When you use V/f Control, set parameters *b8-04* to *b8-06*.
- When you use vector control with an induction motor, set parameters *b8-02* and *b8-03*.
- When you use a PM motor, set parameters *b8-16* and *b8-17*.

Note:

- Energy-saving control is not appropriate for applications with sudden changes in the load, or applications driving heavy loads such as a traverse car application.
- Energy-saving control maximizes operation based on precise motor data set to the drive. Make sure that you do Auto-Tuning and enter the correct information about the motor before you use the Energy-saving control.

■ b8-01: Energy Saving Control Selection

No. (Hex.)	Name	Description	Default (Range)
b8-01 (01CC)	Energy Saving Control Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Energy-saving control function.	0 (0 - 2)

0 : Disabled

1 : Enabled

2 : Automatic Optimization

Note:

- When A1-02 = 6 [Control Method Selection = AOLV/PM], you can only select setting 2 in Expert Mode.
- If you set b8-01 = 2 and L7-42 = 1 [Current Lim Sel = Enabled], the drive detects oPE16 [Energy Saving Constants Error].

■ b8-02: Energy Saving Gain

No. (Hex.)	Name	Description	Default (Range)
b8-02 (01CD) RUN Expert	Energy Saving Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for Energy-saving control.	Determined by A1-02 (0.0 - 10.0)

Increase the setting value to increase energy saving. If the setting value is too large, the motor will stall.

■ b8-03: Energy Saving Filter Time

No. (Hex.)	Name	Description	Default (Range)
b8-03 (01CE) RUN Expert	Energy Saving Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the responsiveness for Energy-saving control.	Determined by A1-02 , C6-01 and o2-04 (0.00 - 10.00 s)

Decrease the setting value to increase responsiveness. If the setting value is too low, operation will not be stable.

■ b8-04: Energy Saving Coefficient Value

No. (Hex.)	Name	Description	Default (Range)
b8-04 (01CF) Expert	Energy Saving Coefficient Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Energy-saving control coefficient to maintain maximum motor efficiency. The default setting is for Yaskawa motors.	Determined by C6-01, E2-11, and o2-04 (0.00 - 655.00)

When you use a motor from a different manufacturer, increase the setting value in 5% increments to find the minimum value for U1-08 [Output Power] at light loads.

When you decrease the setting value, it decreases the output voltage and decreases power consumption. If the setting value is too low, the motor will stall.

Note:

When you do Rotational Auto-Tuning, the drive will automatically set the energy-saving coefficient.

■ b8-05: Power Detection Filter Time

No. (Hex.)	Name	Description	Default (Range)
b8-05 (01D0) Expert	Power Detection Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant to measure output power.	20 ms (0 - 2000 ms)

Decrease the setting value to increase responsiveness to load changes. If you set the value too low during operation at light loads, motor speed is not stable.

■ b8-06: Search Operation Voltage Limit

No. (Hex.)	Name	Description	Default (Range)
b8-06 (01D1) Expert	Search Operation Voltage Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage limit for Search Operation as a percentage of the motor rated voltage.	0% (0 - 100%)

The Search Operation changes the output voltage in small increments to find a setpoint at which the drive can use minimum power to operate.

Set this parameter to 0 to disable Search Operation. This will not disable Energy-saving control.

If the setting value is too low, the motor will stall when loads suddenly increase.

■ b8-16: PM E-Save Coefficient Ki

No. (Hex.)	Name	Description	Default (Range)
b8-16 (01F8) Expert	PM E-Save Coefficient Ki	V/f OLV OLV/PM AOLV/PM EZOLV Sets torque linearity. This parameter uses the Ki value from the motor nameplate. Usually it is not necessary to change this setting.	1.00 (0.00 - 3.00)

When $b8-16 = 1.00$ (default), the drive will automatically calculate and control the energy-saving coefficient. If the motor nameplate has a description for “Ki”, set this parameter to the Ki value.

Do this procedure to prevent oscillation when you set $b8-01 = 1$ [Energy Saving Control Selection = Enabled].

1. Check U5-21 [Energy Save Coeff Ki] and make sure that it aligns with the Ki value on the motor nameplate.
2. If the numbers are different, set $b8-16$ to the Ki value on the motor nameplate.

■ b8-17: PM E-Save Coefficient Kt

No. (Hex.)	Name	Description	Default (Range)
b8-17 (01F9) Expert	PM E-Save Coefficient Kt	V/f OLV OLV/PM AOLV/PM EZOLV Sets torque linearity. This parameter uses the Kt value from the motor nameplate. Usually it is not necessary to change this setting.	1.00 (0.00 - 3.00)

When $E5-01 = 1xxx$ [PM Motor Code Selection = Yaskawa SSR1 series IPM motor], the drive automatically calculates the energy-saving coefficient Kt and uses that value to control operation.

Do this procedure to prevent oscillation when you set $b8-01 = 1$ [Energy Saving Control Selection = Enabled].

1. Check U5-22 [Energy Save Coeff Kt] and make sure that it aligns with the Kt value on the motor nameplate.
2. If the numbers are different, set $b8-17$ to the Kt value on the motor nameplate.

■ b8-18: E-Save d-axis Current FilterTime

No. (Hex.)	Name	Description	Default (Range)
b8-18 (01FA) Expert	E-Save d-axis Current FilterTime	V/f OLV OLV/PM AOLV/PM EZOLV Sets the d-axis current reference filter time constant.	0.100 s (0.000 - 5.000 s)

■ b8-19: E-Save Search Frequency

No. (Hex.)	Name	Description	Default (Range)
b8-19 (0B40) Expert	E-Save Search Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency of Energy-saving control search operations. Usually it is not necessary to change this setting.	Determined by A1-02 (10 - 300 Hz)

Note:

- If low inertia causes vibration in the machine, increase the setting value in 10 Hz increments and check the response. If $A1-02 = 8$ [Control Method Selection = EZOLV], increase the setting value in 1 Hz increments.
- To make the motor more efficient, decrease the setting value in 1 Hz increments until the point immediately before machine vibration starts to occur.

■ b8-20: E-Save Search Width

No. (Hex.)	Name	Description	Default (Range)
b8-20 (0B41) Expert	E-Save Search Width	V/f OLV OLV/PM AOLV/PM EZOLV Sets the amplitude of Energy-saving control search operations.	1.0 degrees (0.1 - 5.0 degrees)

An increase in the value can make the operational efficiency better. However, if the load inertia is small, it may be necessary to adjust the value to prevent machine vibration.

Note:

- If low inertia causes vibration in the machine, decrease the setting value in 1.0-degree increments and check the response.
- To make the motor more efficient, increase the setting value in 1.0-degree increments until the point immediately before machine vibration starts to occur.

■ b8-21: PM E-Save Search Gain

No. (Hex.)	Name	Description	Default (Range)
b8-21 (0B42) Expert	PM E-Save Search Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain of Energy-saving control search operations.	0.3Hz (0.1 - 20.0 Hz)

When you decrease the value of $C5-01$ [ASR Proportional Gain 1], also decrease the value of $b8-21$ to keep the correct ratio.

■ b8-22: PM E-Save Search LPF Cutoff Freq

No. (Hex.)	Name	Description	Default (Range)
b8-22 (0B43) Expert	PM E-Save Search LPF Cutoff Freq	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency of the filter used to extract the high-efficiency phase from search operations. Usually it is not necessary to change this setting.	10.0 Hz (1.0 - 30.0 Hz)

■ b8-23: PM E-Save Search Limit

No. (Hex.)	Name	Description	Default (Range)
b8-23 (0B44) Expert	PM E-Save Search Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the search operations output limit. Usually it is not necessary to change this setting.	15.0 degrees (0.0 - 30.0 degrees)

When the motor characteristics are correct, increase this value to make the motor more efficient.

■ b8-24: PM E-Save High Freq ACR Gain

No. (Hex.)	Name	Description	Default (Range)
b8-24 (0B45) Expert	PM E-Save High Freq ACR Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for high-frequency current control.	200.0 Hz (100.0 - 1000.0 Hz)

Note:

If the drive detects oC [Overcurrent], decrease the value.

■ b8-25: PM E-Save Search Start Level

No. (Hex.)	Name	Description	Default (Range)
b8-25 (0B46) Expert	PM E-Save Search Start Level	V/f OLV OLV/PM AQLV/PM EZOLV Sets the start level for search operations.	10.0% (0.0 - 100.0%)

Note:

If there is vibration in the machine, increase the value.

■ b8-26: PM E-Save Power Setpoint

No. (Hex.)	Name	Description	Default (Range)
b8-26 (0B47) Expert	PM E-Save Power Setpoint	V/f OLV OLV/PM AQLV/PM EZOLV Sets a value to increase torque accuracy.	0.0% (-10.0 - +10.0%)

■ b8-28: Over Excitation Action Selection

No. (Hex.)	Name	Description	Default (Range)
b8-28 (0B8B) Expert	Over Excitation Action Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the function for excitation operation.	0 (0, 1)

When operation is not stable at low speeds, set this parameter to 1 to enable the function.

0 : Disabled

1 : Enabled

■ b8-29: Energy Saving Priority Selection

No. (Hex.)	Name	Description	Default (Range)
b8-29 (0B8C)	Energy Saving Priority Selection	V/f OLV OLV/PM AQLV/PM EZOLV Sets the priority of drive response between changes to the load or Energy-saving control. Enable this to prioritize energy-saving control. Disable this to prioritize tracking related to fast load changes, and prevent motor stall.	0 (0, 1)

Enable this parameter when there are small changes in the load. It is possible that the motor cannot respond correctly to changes in the load.

0 : Priority: Drive Response

1 : Priority: Energy Savings

12.4 C: Tuning

C parameters adjust drive operation, including:

- Acceleration Time
- Deceleration Time
- Slip Compensation
- Torque Compensation
- Carrier Frequency

◆ C1: Accel & Decel Time

You can set four different acceleration and deceleration time pairs in the drive. When you activate and deactivate H1-xx = 7, 16, 1A [MFDI Function Select = Accel/Decel Time Selection 1, Motor 2 Selection, Accel/Decel Time Selection 2], you can switch acceleration and deceleration times during run.

Acceleration time parameters always set the time to accelerate from 0 Hz to *E1-04* [Maximum Output Frequency]. Deceleration time parameters always set the time to decelerate from *E1-04* to 0 Hz.

C1-01 [Acceleration Time 1] and *C1-02* [Deceleration Time 1] are the default active accel/decel settings.

Parameter	Range
C1-01 [Acceleration Time 1]	0.0 to 6000.0 s
C1-02 [Deceleration Time 1]	
C1-03 [Acceleration Time 2]	
C1-04 [Deceleration Time 2]	
C1-05 [Acceleration Time 3]	
C1-06 [Deceleration Time 3]	
C1-07 [Acceleration Time 4]	
C1-08 [Deceleration Time 4]	

Note:

The setting range for acceleration and deceleration times is 0.00 to 600.00 s when *C1-10* = 0 [Accel/Decel Time Setting Units = 0.01 s (0.00 to 600.00 s)].

■ Use MFDIs to Switch Acceleration Times

Table 12.25 shows the different acceleration and deceleration times.

Table 12.25 Accel/Decel Times and Active Parameters

H1-xx = 7 [Accel/Decel Time Selection 1]	H1-xx = 1A [Accel/Decel Time Selection 2]	Active Parameter	
		Acceleration Time	Deceleration Time
OFF	OFF	C1-01 [Acceleration Time 1]	C1-02 [Deceleration Time 1]
ON	OFF	C1-03 [Acceleration Time 2]	C1-04 [Deceleration Time 2]
OFF	ON	C1-05 [Acceleration Time 3]	C1-06 [Deceleration Time 3]
ON	ON	C1-07 [Acceleration Time 4]	C1-08 [Deceleration Time 4]

Figure 12.26 shows an operation example to change acceleration and deceleration times. It is necessary to set *b1-03* = 0 [Stopping Method Selection = Ramp to Stop] for this example.

Figure 12.26 Timing Diagram of Acceleration and Deceleration Times

■ Use Motor Selection to Switch Acceleration and Deceleration Times

When you set *H1-xx = 16* [*MFDI Function Selection = Motor 2 Selection*], you can activate and deactivate the input terminal to switch between motor 1 and motor 2.

Note:
You cannot use the Motor 2 Selection function with PM motors.

Table 12.26 shows the possible acceleration and deceleration time combinations when you use the Motor 2 Selection function.

Table 12.26 Motor Selection and Acceleration and Deceleration Times

H1-xx = 7 [Accel/Decel Time Selection 1]	H1-xx = 16 [Motor 2 Selection]			
	Motor 2 Selection: OFF		Motor 2 Selection: ON	
	Acceleration Time	Deceleration Time	Acceleration Time	Deceleration Time
OFF	C1-01	C1-02	C1-05	C1-06
ON	C1-03	C1-04	C1-07	C1-08

■ Use Output Frequency Level to Switch Acceleration and Deceleration Times

The drive can use output frequency to automatically switch between different acceleration and deceleration times. When the output frequency = *C1-11* [*Accel/Decel Time Switchover Freq*], the drive automatically switches the acceleration and deceleration times. Set *C1-11 = 0.0 Hz* to disable this function.

- Note:**
- Acceleration and deceleration times set to MFDIs are more important than the automatic switch using the frequency level set in *C1-11*. For example, if you set the switchover frequency to *C1-11*, the drive will not automatically switch acceleration and deceleration times when the MFDI terminal set for *Accel/Decel Time Selection 1* [*H1-xx = 7*] is activated.
 - If Motor 2 Selection [*H1-xx = 16*] is activated, the drive will set the acceleration/deceleration time to *C1-05* and *C1-06* for motor 2 when the output frequency is more than the frequency level set in *C1-11*.

When the output frequency ≥ *C1-11*, drive uses Accel/Decel Time 1(*C1-01*, *C1-02*)
When the output frequency < *C1-11*, drive uses Accel/Decel Time 4(*C1-07*, *C1-08*)

Figure 12.27 Accel/Decel Time Switching Frequency

■ C1-01: Acceleration Time 1

No. (Hex.)	Name	Description	Default (Range)
C1-01 (0200) RUN	Acceleration Time 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to accelerate from zero to maximum output frequency.	10.0 s (0.0 - 6000.0 s)

Note:

When $C1-10 = 0$ [Accel/Decel Time Setting Units = 0.01 s (0.00 to 600.00 s)], the setting range is 0.00 to 600.00 s.

■ C1-02: Deceleration Time 1

No. (Hex.)	Name	Description	Default (Range)
C1-02 (0201) RUN	Deceleration Time 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to decelerate from maximum output frequency to zero.	10.0 s (0.0 - 6000.0 s)

Note:

When $C1-10 = 0$ [Accel/Decel Time Setting Units = 0.01 s (0.00 to 600.00 s)], the setting range is 0.00 to 600.00 s.

■ C1-03: Acceleration Time 2

No. (Hex.)	Name	Description	Default (Range)
C1-03 (0202) RUN	Acceleration Time 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to accelerate from zero to maximum output frequency.	10.0 s (0.0 - 6000.0 s)

Note:

When $C1-10 = 0$ [Accel/Decel Time Setting Units = 0.01 s (0.00 to 600.00 s)], the setting range is 0.00 to 600.00 s.

■ C1-04: Deceleration Time 2

No. (Hex.)	Name	Description	Default (Range)
C1-04 (0203) RUN	Deceleration Time 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to decelerate from maximum output frequency to zero.	10.0 s (0.0 - 6000.0 s)

Note:

When $C1-10 = 0$ [Accel/Decel Time Setting Units = 0.01 s (0.00 to 600.00 s)], the setting range is 0.00 to 600.00 s.

■ C1-05: Acceleration Time 3

No. (Hex.)	Name	Description	Default (Range)
C1-05 (0204) RUN	Acceleration Time 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to accelerate from zero to maximum output frequency.	10.0 s (0.0 - 6000.0 s)

Note:

When $C1-10 = 0$ [Accel/Decel Time Setting Units = 0.01 s (0.00 to 600.00 s)], the setting range is 0.00 to 600.00 s.

■ C1-06: Deceleration Time 3

No. (Hex.)	Name	Description	Default (Range)
C1-06 (0205) RUN	Deceleration Time 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to decelerate from maximum output frequency to zero.	10.0 s (0.0 - 6000.0 s)

Note:

When $C1-10 = 0$ [Accel/Decel Time Setting Units = 0.01 s (0.00 to 600.00 s)], the setting range is 0.00 to 600.00 s.

■ C1-07: Acceleration Time 4

No. (Hex.)	Name	Description	Default (Range)
C1-07 (0206) RUN	Acceleration Time 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to accelerate from zero to maximum output frequency.	10.0 s (0.0 - 6000.0 s)

Note:

When $C1-10 = 0$ [Accel/Decel Time Setting Units = 0.01 s (0.00 to 600.00 s)], the setting range is 0.00 to 600.00 s.

■ C1-08: Deceleration Time 4

No. (Hex.)	Name	Description	Default (Range)
C1-08 (0207) RUN	Deceleration Time 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time to decelerate from maximum output frequency to zero.	10.0 s (0.0 - 6000.0 s)

Note:

When $C1-10 = 0$ [Accel/Decel Time Setting Units = 0.01 s (0.00 to 600.00 s)], the setting range is 0.00 to 600.00 s.

■ C1-09: Fast Stop Time

No. (Hex.)	Name	Description	Default (Range)
C1-09 (0208) RUN	Fast Stop Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will decelerate to zero for a Fast Stop.	10.0 s (0.0 - 6000.0 s)

Note:

- When $C1-10 = 0$ [Accel/Decel Time Setting Units = 0.01 s (0.00 to 600.00 s)], the setting range is 0.00 to 600.00 s.
- When $L2-29 = 0$ [Kinetic Energy Backup Method = Single Drive KEB Ride-Thru 1] and you do KEB Auto-Tuning, the drive will automatically set C1-09. If you must not change the Fast Stop time, do not do KEB Auto-Tuning.

The Fast Stop function will be triggered in the following circumstances.

- The Fast Stop operation will be triggered by the input of the Fast Stop command via the multi-function digital input terminal.
- The Fast Stop operation is will be triggered when by the input of the Fast Stop command is input via the multi-function digital input terminal.

Set $H1-xx = 15, 17$ [MFDI Function Select = Fast Stop (N.O.), Fast Stop (N.C.)].

When the Fast Stop command is input, the Fast Stop operation will be triggered at the deceleration time set to C1-09. The drive cannot be restarted after initiating a Fast Stop operation until deceleration is complete. Complete deceleration and cycle the Run command to clear the Fast Stop input.

The terminal set for $H2-xx = 4C$ [MFDO Function Select = During Fast Stop] will be ON during Fast Stop.

Note:

Decelerating too quickly can cause an *ov* [Overvoltage] fault that shuts off the drive while the motor to coasts to a stop. Set a Fast Stop time in C1-09 that prevents motor coasting and makes sure that the motor stops quickly and safely.

■ C1-10: Accel/Decel Time Setting Units

No. (Hex.)	Name	Description	Default (Range)
C1-10 (0209)	Accel/Decel Time Setting Units	V/f OLV OLV/PM AOLV/PM EZOLV Sets the setting units for C1-01 to C1-08 [Accel/Decel Times 1 to 4], C1-09 [Fast Stop Time], L2-06 [Kinetic Energy Backup Decel Time], and L2-07 [Kinetic Energy Backup Accel Time].	1 (0, 1)

0 : 0.01 s (0.00 to 600.00 s)

Sets acceleration and deceleration times in 0.01 s units. The setting range is 0.0 to 6000.0 s.

If one of these parameters is set to 1000.0 s or longer, you cannot set $C1-10 = 0$:

- C1-01 to C1-09

- L2-06
- L2-07

When one of those parameters is set to a value between 600.1 s and 1000.0 s, you can set $C1-10 = 0$, but the time will change to 600.00 s.

1 : 0.1 s (0.0 to 6000.0 s)

Sets acceleration and deceleration times in 0.1 s units. The setting range is 0.0 to 6000.0 s.

■ C1-11: Accel/Decel Time Switchover Freq

No. (Hex.)	Name	Description	Default (Range)
C1-11 (020A)	Accel/Decel Time Switching Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency at which the drive will automatically change acceleration and deceleration times.	Determined by A1-02 (0.0 - 590.0 Hz)

When the output frequency is at the $C1-11$ value, the drive automatically switches the acceleration and deceleration times. Set this parameter to 0.0 to disable this function.

When the output frequency $\geq C1-11$, drive uses Accel/Decel Time 1 (C1-01, C1-02)
 When the output frequency $< C1-11$, drive uses Accel/Decel Time 4 (C1-07, C1-08)

Figure 12.28 Accel/Decel Time Switchover Freq

Table 12.27 lists the possible combinations of acceleration and deceleration time switchover frequencies and the acceleration times for the Motor 2 Selection function.

Table 12.27 Motor and Acceleration and Deceleration Time Combination

C1-11	Motor 1		Motor 2	
	Acceleration Time	Deceleration Time	Acceleration Time	Deceleration Time
Less than the setting value	C1-07 [Acceleration Time 4]	C1-08 [Deceleration Time 4]	C1-07 [Acceleration Time 4]	C1-08 [Deceleration Time 4]
Equal to or more than the setting value	C1-01 [Acceleration Time 1]	C1-02 [Deceleration Time 1]	C1-05 [Acceleration Time 3]	C1-06 [Deceleration Time 3]

■ C1-14: Accel/Decel Rate Frequency

No. (Hex.)	Name	Description	Default (Range)
C1-14 (0264) RUN	Accel/Decel Rate Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base frequency used to calculate acceleration and deceleration rates.	0.0 Hz (0.0 - 590.0 Hz)

The acceleration and deceleration rates set in $C1-01$ to $C1-09$ [Acceleration/Deceleration Times 1 to 4, Fast Stop Time] will change when the value of $C1-14$ changes.

- When $C1-14 = 0.0$ Hz
 - $C1-01$, $C1-03$, $C1-05$, $C1-07$ [Acceleration Times 1 to 4]: Time to accelerate from 0 Hz to $E1-04$ [Maximum Output Frequency]
 - $C1-02$, $C1-04$, $C1-06$, $C1-08$ [Deceleration Times 1 to 4], $C1-09$ [Fast Stop Time]: Time to decelerate from $E1-04$ to 0 Hz.

Figure 12.29 Example 1: Acceleration/Deceleration Rate (When C1-14 = 0 Hz, E1-04 = 60 Hz, and the Frequency Reference is 60 Hz)

- When $C1-14 \neq 0.0$ Hz
 - C1-01, C1-03, C1-05, C1-07: Time to accelerate from 0 Hz to C1-14
 - C1-02, C1-04, C1-06, C1-08, C1-09: Time to decelerate from C1-14 to 0 Hz

Figure 12.30 Example 2: Acceleration/Deceleration Rate (When C1-14 = 40 Hz, E1-04 = 60 Hz, and the Frequency Reference is 60 Hz)

Figure 12.31 Example 3: Acceleration/Deceleration Rate (When C1-14 = 80 Hz, E1-04 = 60 Hz, and the Frequency Reference is 60 Hz)

Note:

- Figure 12.29 to Figure 12.31 show the accel/decel times when C2-01 to C2-04 [S-Curve Times @ Start/End of Accel/Decel] = 0.00 s.
- When L3-01 $\neq 0$ [Stall Prevention during Accel $\neq$ Disabled], Stall Prevention could cause the acceleration time to be longer than the set value.
- When L3-04 $\neq 0$ [Stall Prevention during Decel $\neq$ Disabled], Stall Prevention could cause the deceleration time to be longer than the set value.

◆ C2: S-Curve Characteristics

Use S-curve characteristics to smooth acceleration and deceleration and to minimize abrupt shock to the load. Set S-curve characteristic time during acceleration/deceleration at start and acceleration/deceleration at stop. The following figure explains how S-curves are applied.

Figure 12.32 S-Curve Timing Diagram - Forward/Reverse Operation

Note:

- If *STPo* [Motor Step-Out Detected] occurs when starting a PM motor, try increasing the value set to *C2-01*.
- Setting the S-curve will increase the acceleration and deceleration times.

$$\text{Acceleration time} = \text{Selected acceleration time} + \frac{C2-01 + C2-02}{2}$$

$$\text{Deceleration time} = \text{Selected deceleration time} + \frac{C2-03 + C2-04}{2}$$

■ C2-01: S-Curve Time @ Start of Accel

No. (Hex.)	Name	Description	Default (Range)
C2-01 (020B)	S-Curve Time @ Start of Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the S-curve acceleration time at start.	Determined by A1-02 (0.00 - 10.00 s)

■ C2-02: S-Curve Time @ End of Accel

No. (Hex.)	Name	Description	Default (Range)
C2-02 (020C)	S-Curve Time @ End of Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the S-curve acceleration time at completion.	0.20 s (0.00 - 10.00 s)

■ C2-03: S-Curve Time @ Start of Decel

No. (Hex.)	Name	Description	Default (Range)
C2-03 (020D)	S-Curve Time @ Start of Decel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the S-curve deceleration time at start.	0.20 s (0.00 - 10.00 s)

■ C2-04: S-Curve Time @ End of Decel

No. (Hex.)	Name	Description	Default (Range)
C2-04 (020E)	S-Curve Time @ End of Decel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the S-curve deceleration time at completion.	0.00 s (0.00 - 10.00 s)

◆ C3: Slip Compensation

The Slip Compensation function improves the speed accuracy of an induction motor. As loads on induction motors increase, motor slip increases and motor speed decreases. By adjusting the output frequency in accordance with the motor load, it compensates the slip and makes the motor speed equal to the frequency reference.

■ C3-01: Slip Compensation Gain

No. (Hex.)	Name	Description	Default (Range)
C3-01 (020F) RUN	Slip Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the slip compensation function. Usually it is not necessary to change this setting.	Determined by A1-02 (0.0 - 2.5)

Note:

Correctly set these parameters before changing the slip compensation gain:

- E2-01 [Motor Rated Current (FLA)]
- E2-02 [Motor Rated Slip]
- E2-03 [Motor No-Load Current]

Adjust this parameter as follows if necessary:

- If the motor speed is slower than the frequency reference, increase this parameter in 0.1-unit increments.
- If the motor speed is slower than the frequency reference value, decrease this parameter value in 0.1-unit increments.

■ C3-02: Slip Compensation Delay Time

No. (Hex.)	Name	Description	Default (Range)
C3-02 (0210) RUN	Slip Compensation Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the slip compensation delay time when speed is unstable or when the slip compensation response is too slow. Usually it is not necessary to change this setting.	Determined by A1-02 (0 - 10000 ms)

Use these settings to adjust this parameter as necessary:

- When the speed is not stable, increase the setting.
- When the slip compensation response is too slow, decrease the setting.

■ C3-03: Slip Compensation Limit

No. (Hex.)	Name	Description	Default (Range)
C3-03 (0211)	Slip Compensation Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit for the slip compensation function as a percentage of the motor rated slip.	200% (0 - 250%)

If you increase the value of C3-01 [Slip Compensation Gain] and the motor speed is slow, use this parameter. The drive uses this parameter when the slip is at the upper limit of slip compensation. Make sure that you measure the motor speed when you increase this parameter value. Set this parameter to make the frequency reference and the slip compensation limit less than the permitted range of the machine.

The slip compensation limit is constant in the constant torque range (frequency reference $\leq$ E1-06 [Base Frequency]). In the constant output range where the frequency reference $>$ E1-06, the slip compensation limit increases with the C3-03 value and the output frequency as shown in Figure 12.33.

Figure 12.33 Slip Compensation Limit

■ C3-04: Slip Compensation at Regen

No. (Hex.)	Name	Description	Default (Range)
C3-04 (0212)	Slip Compensation at Regen	V/f OLV OLV/PM AOLV/PM EZOLV Sets the slip compensation function during regeneration.	0 (0 - 2)

If you apply a regenerative load when the slip compensation function during regeneration is active, the quantity of regeneration can increase immediately. In this condition, it is necessary to use a dynamic braking option (braking resistor or braking resistor unit).

0 : Disabled

The drive will not do Slip compensation during regeneration.

The load and operation status (regenerative operation) can cause the motor speed to be higher or lower than the frequency reference.

1 : Enabled Above 6Hz

Slip compensation function is enabled during regeneration. Slip compensation is disabled at output frequencies of 6 Hz or less.

2 : Enabled Above Defined Range

The drive uses *E2-02 [Motor Rated Slip]* to automatically calculate the frequency range where it will disable slip compensation function during regenerative operation.

Slip compensation is enabled at frequencies as low as 2 Hz.

■ C3-05: Output Voltage Limit Selection

No. (Hex.)	Name	Description	Default (Range)
C3-05 (0213)	Output Voltage Limit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the automatic reduction of motor magnetic flux when the output voltage is saturated.	0 (0, 1)

The drive will decrease flux and increase current to compensate torque when voltage is saturated. Make sure that the drive has sufficient output current capacity before you enable this parameter. When this parameter = 1 [Enabled], the output current will increase by 10% at a maximum (at rated load) before it is enabled.

Enable this parameter to increase speed precision when you move heavy loads at high speeds in these conditions:

- Power supply voltage is low
- Motor rated voltage is high

Do not enable this parameter in these conditions:

- Operating a motor in the middle speed range or low speed range
- Power supply voltage is a minimum of 10% more than the motor rated voltage

When you enable this parameter, if the power supply voltage is much less than the motor rated voltage, torque control will not be accurate.

0 : Disabled

1 : Enabled

■ C3-16: Vout Modulation Limit Start Lvl

No. (Hex.)	Name	Description	Default (Range)
C3-16 (0261) Expert	Vout Modulation Limit Start Lvl	V/f OLV OLV/PM AOLV/PM EZOLV Sets the modulation factor that starts the output voltage limit operation when C3-05 = 1 [Output Voltage Limit Selection = Enabled].	90.0% (70.0 - 90.0%)

■ C3-17: Vout Modulation Limit Max Level

No. (Hex.)	Name	Description	Default (Range)
C3-17 (0262) Expert	Vout Modulation Limit Max Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the modulation factor used with C3-18 [Output Voltage Limit Level] for the output voltage limit operation when C3-05 = 1 [Output Voltage Limit Selection = Enabled].	100.0% (85.0 - 100.0%)

■ C3-18: Output Voltage Limit Level

No. (Hex.)	Name	Description	Default (Range)
C3-18 (0263) Expert	Output Voltage Limit Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum drop width of the voltage reference when C3-05 = 1 [Output Voltage Limit Selection = Enabled].	90.0% (50.0 - 100.0%)

■ C3-21: Motor 2 Slip Compensation Gain

No. (Hex.)	Name	Description	Default (Range)
C3-21 (033E) RUN	Motor 2 Slip Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the motor 2 slip compensation function. Usually it is not necessary to change this setting.	Determined by E3-01 (0.0 - 2.5)

Note:

Correctly set these parameters before you change the slip compensation gain:

- E4-01 [Motor 2 Rated Current]
- E4-02 [Motor 2 Rated Slip]
- E4-03 [Motor 2 Rated No-Load Current]

Adjust this parameter as follows if necessary:

- If the motor speed is slower than the frequency reference, increase C3-01 in 0.1-unit increments.
- If the motor speed is faster than the frequency reference, decrease C3-01 in 0.1-unit increments.

■ C3-22: Motor 2 Slip Comp Delay Time

No. (Hex.)	Name	Description	Default (Range)
C3-22 (0241) RUN	Motor 2 Slip Comp Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the slip compensation delay time for motor 2 when speed is unstable or when the slip compensation response is too slow. Usually it is not necessary to change this setting.	Determined by E3-01 (0 - 10000 ms)

Use these settings to adjust this parameter as necessary:

- When the speed is not stable, increase the setting.
- When the slip compensation response is too slow, decrease the setting.

■ C3-23: Motor 2 Slip Compensation Limit

No. (Hex.)	Name	Description	Default (Range)
C3-23 (0242)	Motor 2 Slip Compensation Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit for the slip compensation function as a percentage of the motor 2 rated slip.	200% (0 - 250%)

If you increase the value of C3-21 [Motor 2 Slip Compensation Gain] and the motor speed is slow, use this parameter. The drive uses this parameter when the slip is at the upper limit of slip compensation. Make sure that you measure the motor speed when you increase this parameter value. Set this parameter to make the frequency reference and the slip compensation limit less than the permitted range of the machine.

The slip compensation limit is constant in the constant torque range (frequency reference $\leq$ E3-06 [Motor 2 Base Frequency]). In the constant power range where the frequency reference $>$ E3-06, the slip compensation limit increases with the C3-23 value and the output frequency as shown in [Figure 12.34](#).

Figure 12.34 Motor 2 Slip Compensation Limit

■ C3-24: Motor 2 Slip Comp during Regen

No. (Hex.)	Name	Description	Default (Range)
C3-24 (0243)	Motor 2 Slip Comp during Regen	V/f OLV OLV/PM AOLV/PM EZOLV Sets the slip compensation during regenerative operation function for motor 2.	0 (0 - 2)

If you apply a regenerative load when the slip compensation function during regeneration is active, the quantity of regeneration can increase immediately. In this condition, it is necessary to use a dynamic braking option (braking resistor or braking resistor unit).

0 : Disabled

The drive will not do Slip compensation during regeneration.

The load and operation status (regenerative operation) can cause the motor speed to be higher or lower than the frequency reference.

1 : Enabled Above 6Hz

Slip compensation function is enabled during regeneration. Slip compensation is disabled at output frequencies of 6 Hz or less.

2 : Enabled Above Defined Range

The drive uses *E2-02 [Motor Rated Slip]* to automatically calculate the frequency range where it will disable slip compensation function during regenerative operation.

Slip compensation is enabled at frequencies as low as 2 Hz.

■ C3-29: Slip Compensation Gain @ Low Spd

No. (Hex.)	Name	Description	Default (Range)
C3-29 (1B5D) Expert	Slip Compensation Gain @ Low Spd	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the slip compensation function in the low speed range. Usually it is not necessary to change this setting.	0.0 (0.0 - 2.5)

Adjust this parameter as follows if necessary:

- If the motor speed is slower than the frequency reference, increase the setting value in 0.1 unit increments.
- If the motor speed is faster than the frequency reference, decrease the setting value in 0.1 unit increments.

◆ C4: Torque Compensation

Torque compensation is a function that increases voltage to increase output torque as compensation for insufficient torque production at start-up or low-speed operation.

Voltage drops due to motor winding resistance cause torque generating voltage to decrease, which causes insufficient torque. If the main circuit cable connecting the drive and motor is long, this can also cause insufficient torque due to voltage drops.

Note:

Set the motor parameters and V/f pattern properly before setting *C4 parameters*.

■ C4-01: Torque Compensation Gain

No. (Hex.)	Name	Description	Default (Range)
C4-01 (0215) RUN	Torque Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for the torque compensation function. Use this parameter value for motor 1 when operating multiple motors.	Determined by A1-02 (0.00 - 2.50)

For these control methods and states, adjust the setting value.

A1-02 [Control Method Selection]	Status	Adjustment
0 [V/f Control] 8 [EZ Vector Control]	Torque is not sufficient during low-speed operation of 10 Hz or less.	Increase the setting in 0.05-unit increments.
	There is vibration in the motor or the motor hunts when operating the drive with a light load.	Decrease the setting in 0.05-unit decrements.
	The cable length between the drive and motor is too long.	Increase the setting in 0.05-unit increments.

Note:

- Adjust C4-01 to make sure that output current is not more than the drive rated current while the drive operates at low speed.
- When A1-02 = 2 [Open Loop Vector], do not change this parameter under normal conditions. Torque accuracy will decrease.
- When A1-02 = 5 [PM Open Loop Vector], do not change this parameter under normal conditions. Setting this value too high can cause overcompensation and motor oscillation.
- When A1-02 = 8 [EZ Vector Control], you cannot change this parameter during drive run.

■ C4-02: Torque Compensation Delay Time

No. (Hex.)	Name	Description	Default (Range)
C4-02 (0216) RUN	Torque Compensation Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque compensation delay time. Usually it is not necessary to change this setting.	Determined by A1-02 (0 - 60000 ms)

Note:

When A1-02 = 5, 8 [Control Method Selection = OLV/PM, EZOLV], you cannot change the setting while the drive is running.

Set this parameter in these conditions:

- If there is vibration in the motor, increase the setting.
- If the motor speed or motor torque response is too slow, decrease the setting.

■ C4-03: Torque Compensation @ FWD Start

No. (Hex.)	Name	Description	Default (Range)
C4-03 (0217)	Torque Compensation @ FWD Start	V/f OLV OLV/PM AOLV/PM EZOLV Set the amount of torque reference for forward start as a percentage of the motor rated torque.	0.0% (0.0 - 200.0%)

The torque compensation function is performed using the time constant set in C4-05 [Torque Compensation Time]. This is available only when you start the motor with the forward command. Set this parameter to 0.0 to disable this function.

■ C4-04: Torque Compensation @ REV Start

No. (Hex.)	Name	Description	Default (Range)
C4-04 (0218)	Torque Compensation @ REV Start	V/f OLV OLV/PM AOLV/PM EZOLV Sets the amount of torque reference for reverse start as a percentage of the motor rated torque.	0.0% (-200.0 - 0.0%)

The drive uses the time constant set in C4-05 [Torque Compensation Time] to do the torque compensation function. This is available only when you start the motor with the reverse Run command.

■ C4-05: Torque Compensation Time

No. (Hex.)	Name	Description	Default (Range)
C4-05 (0219)	Torque Compensation Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the starting torque constant to use with C4-03 and C4-04 [Torque Compensation @ FWD/REV Start].	10 ms (0 - 200 ms)

■ C4-06: Motor 2 Torque Comp Delay Time

No. (Hex.)	Name	Description	Default (Range)
C4-06 (021A)	Motor 2 Torque Comp Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value if <i>ov</i> [Overvoltage] occurs with sudden changes in the load, at the end of acceleration, or at the start of deceleration.	150 ms (0 - 10000 ms)

Sets the time constant used during Speed Search or during regenerative operation when *ov* occurs.

Adjust this parameter in the following circumstances.

- Gradually reduce the setting in 10 ms increments and check the performance to improve motor torque speed response when *ov* occurs.

Note:

- Ensure that $C4-06 \geq C4-02$ [Torque Compensation Delay Time].
- Increase the setting value of $n2-03$ [Automatic Freq Regulator Time 2] proportional to C4-06.

■ C4-07: Motor 2 Torque Compensation Gain

No. (Hex.)	Name	Description	Default (Range)
C4-07 (0341) RUN	Motor 2 Torque Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for motor 2 torque compensation function when using the Motor Switch function.	1.00 (0.00 - 2.50)

In V/f Control, adjust the value in 0.05-unit increments for these conditions:

- When torque is not sufficient during low-speed operation of 10 Hz or less, increase the setting value
- When there is vibration in the motor or when the motor hunts when operating the drive with a light load, decrease the setting value
- When you use a long motor cable, increase the setting value.

Note:

- Adjust C4-07 to make sure that the output current is not more than the drive rated current during low-speed operation.
- When $A1-02 = 2$ [Control Method Selection = OLV], usually it is not necessary to change the setting. Torque accuracy will decrease.

■ C4-23: Current Control Gain

No. (Hex.)	Name	Description	Default (Range)
C4-23 (1583) Expert	Current Control Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Current control gain. Usually it is not necessary to change this parameter.	1.00 (0.50 - 2.50)

◆ C5: Auto Speed Regulator (ASR)

The ASR adjusts the torque reference to decrease the difference between frequency reference and motor speed.

A1-02 [Control Method Selection]	Targets of Adjustment
6: PM Advanced Open Loop Vector (AOLV/PM) 8: EZ Vector Control (EZOLV)	Torque Reference

Figure 12.35 is a speed control block diagram of each control method.

Figure 12.35 Speed Control Block Diagram for AOLV/PM and EZOLV

Note:

The detected speed is the speed estimation value when configured such that $A1-02 = 6$ or 8 [Control Method Selection = AOLV/PM or EZOLV].

■ Before You Adjust ASR Parameters

- Do Auto-Tuning and set up all motor data correctly.
- Always make adjustments with the load connected to the motor.
- Use analog output signals to monitor $U1-16$ [SFS Output Frequency] and $U1-05$ [Motor Speed] when you adjust the ASR.

■ ASR Adjustment Procedure for AOLV/PM and EZOLV

Do this procedure to adjust ASR parameters:

1. Run the motor at zero speed or low speed and increase $C5-01$ [ASR Proportional Gain 1] until immediately before vibration starts to occur.
2. Run the motor at zero speed or low speed and decrease $C5-02$ [ASR Integral Time 1] until immediately before vibration starts to occur.
3. Check for oscillation when you run the motor at maximum speed.
4. If oscillation occurs, increase $C5-02$ and decrease $C5-01$.
When there is no oscillation, the adjustment procedure is complete.
5. Set the low-speed gain. Run the motor at zero speed or low speed and increase $C5-03$ [ASR Proportional Gain 2] until immediately before vibration starts to occur.

Figure 12.36 Low-speed/High-speed Gain Settings

6. Set the low-speed integral time. Run the motor at zero speed or low speed and decrease $C5-04$ [ASR Integral Time 2] until immediately before vibration starts to occur.
7. Set $C5-07$ [ASR Gain Switchover Frequency].
8. Check for oscillation when you run the motor at speeds more than the setting in $C5-07$.

Note:

- If overshooting occurs when acceleration ends, decrease the value set in $C5-01$ and increase the value set in $C5-02$.
- If undershoot occurs at stop, decrease $C5-03$ and increase $C5-04$.

■ Use MFDI Switch for Proportional Gain

You can use the input terminals set for ASR Gain ($C5-03$) Select [$HI-xx = 77$] to switch the proportional gains set with $C5-01$ and $C5-03$. When the configured input terminal is deactivated, the proportional gain set for $C5-01$ is selected. When the terminal is activated, the proportional gain set for $C5-03$ is selected. The proportional gain changes linearly over the time set in $C5-02$ [ASR Integral Time 1]. The signals from this MFDI are more important than $C5-07$ [ASR Gain Switchover Frequency].

Figure 12.37 Proportional Gain through Multi-function Digital Input Switch

■ Adjust ASR Parameters

Use [Table 12.28](#) to adjust ASR. The table lists parameters for motor 1. You can make the same changes to motor 2 parameters when you run a second motor.

Note:

When adjusting the proportional gain and integral time, adjust the proportional gain first.

Table 12.28 ASR Response and Possible Solutions

Problem		Possible Solutions
Speed response is slow.		• Increase C5-01/C5-03 [ASR Proportional Gain]. • Decrease C5-02/C5-04 [ASR Integral Time].
Overshoot or undershoot occurs at the end of acceleration or deceleration.		• Decrease C5-01/C5-03. • Increase C5-02/C5-04.
Vibration and oscillation occur at constant speed.		• Decrease C5-01/C5-03. • Increase C5-02/C5-04. • Increase C5-06 [ASR Delay Time].
Oscillation at low speed and response is too slow at high speed. Oscillation at high speed and response is too slow at low speed.	-	When A1-02 = 6 [Control Method Selection = AOLV/PM], use C5-01 to C5-04 to set the best ASR settings for high and low speed. Use C5-07 [ASR Gain Switchover Frequency] to switch the ASR proportional gain and ASR integral time as specified by the output frequency.

■ C5-01: ASR Proportional Gain 1

No. (Hex.)	Name	Description	Default (Range)
C5-01 (021B) RUN	ASR Proportional Gain 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain to adjust ASR response.	Determined by A1-02 (0.00 - 300.00)

A higher gain provides a higher speed response. Usually, the gain increases with larger loads. Too much gain will cause vibration.

Note:

- The drive usually sets Motor 1 ASR with *C5-01* and *C5-02* [ASR Integral Time 1]. When you set *H1-xx* = 77 [MFDI Function Select = ASR Gain Switch], you can switch between *C5-01* and *C5-03* [ASR Proportional Gain 2]. You can also use *C5-01* as an alternative to *C5-03* and *C5-02* as an alternative to *C5-04* when the speed is less than or equal to the frequency set in *C5-07* [ASR Gain Switchover Frequency].
- The drive automatically adjusts *C5-01* in ASR Tuning.

■ **C5-02: ASR Integral Time 1**

No. (Hex.)	Name	Description	Default (Range)
C5-02 (021C) RUN	ASR Integral Time 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ASR integral time.	Determined by A1-02 (0.000 - 60.000 s)

When you increase the integral time, the responsiveness will decrease. An integral time that is too short can cause oscillation.

■ **C5-03: ASR Proportional Gain 2**

No. (Hex.)	Name	Description	Default (Range)
C5-03 (021D) RUN	ASR Proportional Gain 2	V/f OLV OLV/PM AQLV/PM EZOLV Sets the gain to adjust ASR response.	Determined by A1-02 (0.00 - 300.00)

A higher gain provides a higher speed response. Usually, the gain increases with larger loads. Too much gain will cause vibration.

■ **C5-04: ASR Integral Time 2**

No. (Hex.)	Name	Description	Default (Range)
C5-04 (021E) RUN	ASR Integral Time 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ASR integral time.	Determined by A1-02 (0.000 - 60.000 s)

When you increase the integral time, the responsiveness will decrease. An integral time that is too short can cause oscillation.

■ **C5-06: ASR Delay Time**

No. (Hex.)	Name	Description	Default (Range)
C5-06 (0220)	ASR Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant of the torque reference output from the speed loop. Usually it is not necessary to change this setting.	Determined by A1-02 (0.000 - 0.500 s)

If you have a load with low rigidity or if oscillation is a problem, decrease *C5-01* in 2-unit decrements or decrease *C5-06* in 0.001-unit decrements.

■ **C5-07: ASR Gain Switchover Frequency**

No. (Hex.)	Name	Description	Default (Range)
C5-07 (0221)	ASR Gain Switchover Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency where the drive will switch between these parameters: <i>C5-01</i> and <i>C5-03</i> [ASR Proportional Gain 1/2] <i>C5-02</i> and <i>C5-04</i> [ASR Integral Time 1/2]	Determined by A1-02 (Determined by A1-02)

Switching the proportional gain and integral time in the low or high speed range can help operation become stable. A good switching point is 80% of the frequency where oscillation occurs or at 80% of the maximum output frequency.

Note:

An MFDI set for *H1-xx* = 77 [MFDI Function Selection = ASR Gain (C5-03) Select] will have priority over the ASR gain switching frequency.

■ C5-08: ASR Integral Limit

No. (Hex.)	Name	Description	Default (Range)
C5-08 (0222)	ASR Integral Limit	V/f OLV OLV/PM AOLV/PM EZOLV Set the upper limit of the ASR integral amount as a percentage of the rated load.	400% (0 - 400%)

■ C5-29: Speed Control Response

No. (Hex.)	Name	Description	Default (Range)
C5-29 (0B18) Expert	Speed Control Response	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level of speed control responsiveness. Usually it is not necessary to change this setting.	1 (0, 1)

If a high level of speed control responsiveness is necessary, set $C5-29 = 1$, then adjust the speed control (ASR) parameter.

0 : Standard

1 : High Performance 1

■ C5-39: ASR Primary Delay Time Const 2

No. (Hex.)	Name	Description	Default (Range)
C5-39 (030D)	ASR Primary Delay Time Const 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant used when the torque reference is output from ASR. Usually it is not necessary to change this parameter.	0.000 s (0.000 - 0.500 s)

If you have a load with low rigidity or if oscillation is a problem, increase this setting in 0.01 unit increments.

◆ C6: Duty & Carrier Frequency

C6 parameters are used to set the selection of drive duty rating, selection of carrier frequency, and upper and lower limits of carrier frequencies.

■ C6-01: Normal / Heavy Duty Selection

No. (Hex.)	Name	Description	Default (Range)
C6-01 (0223)	Normal / Heavy Duty Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive duty rating.	1 (0, 1)

0 : Heavy Duty Rating

The overload tolerance is 150% of the rated output current for 60 seconds.

1 : Normal Duty Rating

The overload tolerance is 110% of the rated output current for 60 seconds.

There are two types of load ratings for this product depending on the load characteristics of the application: Heavy Duty Rating (HD) and Normal Duty Rating (ND).

The drive rated output current, overload tolerance, and acceleration stall prevention level change when the duty rating changes. Set the drive to agree with the duty rating of the selected drive capacity. In HD, the tolerance is 150% overload for 60 seconds. In ND, the tolerance is 110% overload for 60 seconds. The rated output current for ND drives is higher than the rated output current for HD drives. Refer to [Model Specifications \(Single-Phase 200 V Class\) on page 318](#), [Model Specifications \(Three-Phase 200 V Class\) on page 319](#), and [Model Specifications \(Three-Phase 400 V Class\) on page 322](#) for more information about the rated output current.

Table 12.29 Differences between Heavy Duty Rating and Normal Duty Rating

Item	Heavy Duty Rating (HD)	Normal Duty Rating (ND)
C6-01 Setting	0	1
Load Characteristics		
Application	A high overload tolerance is necessary during start up, acceleration, deceleration, and equivalent conditions. • Extruder • Conveyor • Constant torque or high overload capacity are necessary.	Overload tolerance is not necessary. • Fan • Pump • Blower
Overload Tolerance	150% - 60 seconds	110% - 60 seconds
Stall Prevent Level during Accel	150%	120%
Stall Prevent Level during Run	150%	120%
Carrier Frequency	2 kHz	2 kHz Swing-PWM

Note:

- Set the stall prevention level during acceleration with *L3-02* and the stall prevention level during run with *L3-06*.
- Changing *C6-01* also changes the maximum capacity of applicable drive motors. The drive automatically changes the setting values *E2-xx* and *E4-xx* to applicable values. The drive also automatically changes these parameters that depend on motor output:
 - b8-04 [Energy Saving Coefficient Value]
 - L2-03 [Minimum Baseblock Time]
 - L3-24 [Motor Accel Time @ Rated Torque]
 - n5-02 [Motor Inertia Acceleration Time]

■ C6-02: Carrier Frequency Selection

No. (Hex.)	Name	Description	Default (Range)
C6-02 (0224)	Carrier Frequency Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the carrier frequency for the transistors in the drive.	Determined by A1-02, C6-01, and o2-04 (Determined by A1-02)

Changes to the switching frequency will decrease audible noise and decrease leakage current.

Note:

Increasing the carrier frequency to more than the default setting will automatically decrease the drive current rating.

1 : 2.0 kHz

2 : 5.0 kHz (AOLV/PM: 4.0 kHz)

3 : 8.0 kHz (AOLV/PM: 6.0 kHz)

4 : 10.0 kHz (AOLV/PM: 8.0 kHz)

5 : 12.5 kHz (AOLV/PM: 10.0 kHz)

6 : 15.0 kHz (AOLV/PM: 12.0 kHz)

7 : Swing PWM1 (Audible Sound 1)

8 : Swing PWM2 (Audible Sound 2)

9 : Swing PWM3 (Audible Sound 3)

A : Swing PWM4 (Audible Sound 4)

B : Leakage Current Rejection PWM

Set this when the wiring distance between the drive and motor is long and there is a fault in the current monitor or the drive detects and alarm because of the effect of a leakage current.

The carrier frequency is equivalent to 2.0 kHz.

F : User Defined (C6-03 to C6-05)

Use C6-03 to C6-05 to set detailed setting values.

Note:

- The setting range changes when the A1-02 [Control Method Selection] value changes:
 - 5, 8 [OLV/PM, EZOLV]: You can set C6-02 = 1 to 6, B, and F.
 - 6 [AOLV/PM]: You can set C6-02 = 1 to 6.
- The carrier frequency for Swing PWM 1 is equivalent to 2.0 kHz. Swing PWM applies a special PWM pattern to decrease the audible noise.

Table 12.30 Guidelines for Carrier Frequency Parameter Setup

Symptom	Remedy
Speed and torque are not stable at low speed.	Decrease the carrier frequency.
Speed and torque are not stable at low speed.	Decrease the carrier frequency.
Too much leakage current from the drive.	Decrease the carrier frequency.
Wiring between the drive and motor is too long.	Decrease the carrier frequency. Note: If the motor cable is too long, it can be necessary to decrease the carrier frequency. Refer to Table 12.31 for the wiring distance and decrease the carrier frequency.
Audible motor noise is too loud.	Increase the carrier frequency. Use Swing PWM. Note: The default carrier frequency in ND is C6-02 = 7 [Swing PWM1 (Audible Sound 1)], with a 2 kHz base. You can increase the carrier frequency in Normal Duty mode, but this will decrease the drive rated current.

Table 12.31 Wiring Distance

Wiring Distance	50 m (164 ft) Maximum	100 m (328 ft) Maximum	More than 100 m (328 ft)
C6-02 [Carrier Frequency Selection]	1 to F (up to 15 kHz)	1 to 2 (up to 5 kHz), 7	1 (up to 2 kHz), 7

Note:

- If the length of the wire between the drive and an induction motor is longer than 100 m (328 ft), set A1-02 = 0 [V/f].
- The maximum wiring cable length between the drive and a PM motor is 100 m (328 ft).
- If the cable length between the drive and the motor is too long when A1-02 = 6, set A1-02 = 5.

■ C6-03: Carrier Frequency Upper Limit

No. (Hex.)	Name	Description	Default (Range)
C6-03 (0225)	Carrier Frequency Upper Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit of the carrier frequency. Set C6-02 = F [Carrier Frequency Selection = User Defined (C6-03 to C6-05)] to set this parameter.	Determined by C6-02 (1.0 - 15.0 kHz)

Setting a Fixed User-Defined Carrier Frequency

When you cannot use C6-02 to set a carrier frequency between set selectable values, you can set the value in C6-03. The carrier frequency will be fixed to the value set to C6-03.

When A1-02 = 0 [Control Method Selection = V/f], set C6-03 = C6-04 [Carrier Frequency Lower Limit] to fix the carrier frequency.

Setting a Variable Carrier Frequency to Agree with the Output Frequency

When A1-02 = 0, set C6-03, C6-04, and C6-05 [Carrier Freq Proportional Gain] as shown in Figure 12.38 to make the carrier frequency change linearly with the output frequency.

Figure 12.38 Setting a Variable Carrier Frequency to Agree with the Output Frequency

Note:

- When $C6-05 \leq 7$, the drive disables $C6-04$. The carrier frequency is fixed to the value set to $C6-03$.
- The drive detects *oPE11* [Carrier Frequency Setting Error] when these conditions are correct at the same time:
 - $C6-05 \geq 6$
 - $C6-04 \geq C6-03$
- When $A1-02 = 0, 2, 5, 8$ [Control Method Selection = *v/f*, *OLV*, *OLV/PM*, *EZOLV*], in the area where the output frequency is more than $C6-03$ and $C6-12$, the carrier frequency = output frequency $\times 12$, and it will change with the output frequency.

Figure 12.39 Carrier Frequency when $C6-03 = 2.0$ kHz, $E1-04 = 400.0$ Hz**■ C6-04: Carrier Frequency Lower Limit**

No. (Hex.)	Name	Description	Default (Range)
C6-04 (0226)	Carrier Frequency Lower Limit	☒ <i>v/f</i> ☐ <i>OLV</i> ☐ <i>OLV/PM</i> ☐ <i>AOLV/PM</i> ☐ <i>EZOLV</i> Sets the lower limit of the carrier frequency. Set $C6-02 = F$ [Carrier Frequency Selection = User Defined ($C6-03$ to $C6-05$)] to set this parameter.	Determined by $C6-02$ (1.0 - 15.0 kHz)

Set $C6-03$ [Carrier Frequency Upper Limit], $C6-04$, and $C6-05$ [Carrier Freq Proportional Gain] to make the carrier frequency change linearly with the output frequency.

Note:

The drive detects *oPE11* [Carrier Frequency Setting Error] when these conditions are correct at the same time:

- $C6-04 \geq C6-03$
- $C6-05 \geq 6$

■ C6-05: Carrier Freq Proportional Gain

No. (Hex.)	Name	Description	Default (Range)
C6-05 (0227)	Carrier Freq Proportional Gain	☒ <i>v/f</i> ☐ <i>OLV</i> ☐ <i>OLV/PM</i> ☐ <i>AOLV/PM</i> ☐ <i>EZOLV</i> Sets the proportional gain for the carrier frequency. Set $C6-02 = F$ [Carrier Frequency Selection = User Defined ($C6-03$ to $C6-05$)] to set this parameter.	Determined by $C6-02$ (0 - 99)

Set $C6-03$ [Carrier Frequency Upper Limit], $C6-04$ [Carrier Frequency Lower Limit], and $C6-05$ to make the carrier frequency change linearly with the output frequency.

■ C6-09: Carrier Freq at Rotational Tune

No. (Hex.)	Name	Description	Default (Range)
C6-09 (022B)	Carrier Freq at Rotational Tune	☐ <i>v/f</i> ☒ <i>OLV</i> ☐ <i>OLV/PM</i> ☐ <i>AOLV/PM</i> ☐ <i>EZOLV</i> Sets the Auto-Tuning carrier frequency. Usually it is not necessary to change this setting.	0 (0, 1)

If $C6-09 = 0$ and you do Auto-Tuning on a high frequency motor or low impedance motor, it can cause *oC* [Overcurrent]. To prevent *oC*, increase the carrier frequency value, set $C6-09 = 1$, then do Auto-Tuning.

The procedure to set the carrier frequency when the $A1-02$ [Control Method Selection] setting changes.

- When $A1-02 = 2$ [*OLV*], set $C6-02 = F$ [Carrier Frequency Selection = User Defined ($C6-03$ to $C6-05$)] and then increase the value set to $C6-03$ [Carrier Frequency Upper Limit].
- When $A1-02 = 5$ or 6 [*OLV/PM* or *AOLV/PM*], use $C6-02$ to increase the carrier frequency.

0 : 5 kHz**Note:**

When $A1-02 = 5$ or 6 , the carrier frequency is 2 kHz.

1 : Use C6-03**Note:**

When $A1-02 = 5$ or 6 , the carrier frequency is the value set to $C6-02$.

12.5 d: References

d parameters [References] set the frequency reference input method and dead band range. They also set torque control, field weakening, and field forcing functions.

⚠ WARNING Sudden Movement Hazard

Use fast stop circuits to safely and quickly stop the drive. After you wire the fast stop circuits, you must check their operation. Test the operation of the fast stop function before you use the drive. If you do not test the fast stop circuit before you operate the drive, it can cause serious injury or death.

◆ d1: Frequency Reference

Figure 12.40 shows the frequency reference input method, command source selection method, and priority descriptions.

Figure 12.40 Frequency Reference Setting Hierarchy

■ Multi-Step Speed Operation

The drive has a multi-step speed operation function that can set many frequency references in advance. Set frequency references in *d1-xx* parameters. You can select the set frequency references with MFDI signals from an external source. Activate and deactivate the digital input to select the frequency reference to change the motor speed in steps. You can use the 16-step frequency reference and one Jog Frequency Reference (JOG command) to switch the speed to the maximum 17-step speeds.

Note:

- The Jog Frequency Reference (JOG command) overrides all other frequency references.
- You can use the MFDI to switch the frequency reference when the motor is running. The drive will apply the enabled acceleration and deceleration times.
- The default settings for Multi-Step Speed Reference 1 (master frequency reference) and Multi-Step Speed Reference 2 (auxiliary frequency reference) are the analog frequency reference.

■ Setting Procedures for Multi-step Speed Operation

Use an Analog Input as Reference 1

This section gives information about the procedures to set these examples:

- Multi-Step Speed 6 (6 types of frequency references)
- When you set the voltage input of analog inputs from terminal A1 to 0 V to 10 V (Lower Limit at 0)

Procedure	Configuration Parameter	Task Contents
1	Reference 1	1. Sets $b1-01 = 1$ [Frequency Reference Selection 1 = Analog Input]. 2. Sets $H3-02 = 0$ [Terminal A1 Function Selection = Frequency Reference]. 3. Sets $H3-01 = 0$ [Terminal A1 Signal Level Select = 0 V to 10 V (Lower Limit at 0)].
2	Reference 2	Sets the value of $d1-02$ [Reference 2].
4	Reference 3	Sets the value of $d1-03$ [Reference 3].
5	Reference 4	Sets the value of $d1-04$ [Reference 4].
6	Reference 5	Sets the value of $d1-05$ [Reference 5].
7	Jog Reference	Sets $d1-17$ [Jog Reference] to the jog speed.
8	External digital input (3 inputs)	Set the Multi-Step Speed Reference 1 to 3 [$H1-xx = 3, 4, 5$] to one of the MFDI terminals S1, S2 and bit 6 - A of MEMOBUS register 0001 (Hex.).
9	JOG command	Set the Jog Reference Selection [$H1-xx = 6$] to one of the MFDI terminals S1, S2 and bit 6 - A of MEMOBUS register 0001 (Hex.).

Use the Maximum 17-Step Speed with All Digital Inputs

This section is the procedure to set the 17-step speeds (17 types of frequency references) without an analog input.

Procedure	Configuration Parameter	Task Contents
1	Analog reference	Sets $H3-02 = F$ [Terminal A1 Function Selection = Not Used], and disables the analog reference.
2	Reference 2 to 16	Sets the values of $d1-02$ to $d1-16$ [Reference 2 to 16].
3	Jog Reference	Sets $d1-17$ [Jog Reference] to the jog speed.
4	External digital input (4 inputs)	Set Multi-Step Speed Reference 1 to 4 [$H1-xx = 3, 4, 5, 32$] to one of the MFDI terminals S1, S2 and bit 6 - A of MEMOBUS register 0001 (Hex.).
5	JOG command	Set the Jog Reference Selection [$H1-xx = 6$] to one of the MFDI terminals S1, S2 and bit 6 - A of MEMOBUS register 0001 (Hex.).

Multi-step Speed Operation Combinations

Refer to [Table 12.32](#) and [Figure 12.41](#) for information about multi-step speed reference combinations. The selected frequency reference changes when the combination of digital input signals from an external source changes.

Table 12.32 Multi-step Speed Reference and MFDI Terminal Combinations

Related Parameters	Multi-Step Speed Reference 1 $H1-xx = 3$	Multi-Step Speed Reference 2 $H1-xx = 4$	Multi-Step Speed Reference 3 $H1-xx = 5$	Multi-Step Speed Reference 4 $H1-xx = 32$	Jog Reference $H1-xx = 6$

*1 The Jog Frequency Reference (JOG command) overrides all other frequency references.

Figure 12.41 Time Chart for Multi-step Speed Reference/JOG Reference

■ d1-01: Reference 1

No. (Hex.)	Name	Description	Default (Range)
d1-01 (0280) RUN	Reference 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from o1-03 [Frequency Display Unit Selection].	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the E1-04 [Maximum Output Frequency] and d2-01 [Frequency Reference Upper Limit] values change. Calculate the upper limit value with this formula:
Upper limit value = $(E1-04) \times (d2-01) / 100$
- When A1-02 = 6 [Control Method Selection = AOLV/PM], the drive sets o1-03 = 1 [0.01% (100% = E1-04)].
- To set d1-01 to 1-step speed parameter in a multi-step speed operation, set b1-01 = 0 [Frequency Reference Selection 1 = Keypad].

■ d1-02: Reference 2

No. (Hex.)	Name	Description	Default (Range)
d1-02 (0281) RUN	Reference 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from o1-03 [Frequency Display Unit Selection].	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04 [Maximum Output Frequency]* and *d2-01 [Frequency Reference Upper Limit]* values change.
- When *A1-02 = 6 [Control Method Selection = AOLV/PM]*, the drive sets *o1-03 = 1 [0.01% (100% = E1-04)]*.
- To set *d1-02* to Multi-Step Speed 2, set *H3-02 ≠ 2 [MFAI Function Select ≠ Auxiliary Frequency Reference 1]*.

■ d1-03: Reference 3

No. (Hex.)	Name	Description	Default (Range)
d1-03 (0282) RUN	Reference 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03 [Frequency Display Unit Selection]</i> .	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04 [Maximum Output Frequency]* and *d2-01 [Frequency Reference Upper Limit]* values change.
- When *A1-02 = 6 [Control Method Selection = AOLV/PM]*, the drive sets *o1-03 = 1 [0.01% (100% = E1-04)]*.
- To set *d1-03* to Multi-Step Speed 3, set *H3-02 ≠ 3 [MFAI Function Select ≠ Auxiliary Frequency Reference 2]*.

■ d1-04: Reference 4

No. (Hex.)	Name	Description	Default (Range)
d1-04 (0283) RUN	Reference 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03 [Frequency Display Unit Selection]</i> .	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04 [Maximum Output Frequency]* and *d2-01 [Frequency Reference Upper Limit]* values change.
- When *A1-02 = 6 [Control Method Selection = AOLV/PM]*, the drive sets *o1-03 = 1 [0.01% (100% = E1-04)]*.
- This parameter sets the frequency reference of Multi-Step Speed 4.

■ d1-05: Reference 5

No. (Hex.)	Name	Description	Default (Range)
d1-05 (0284) RUN	Reference 5	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03 [Frequency Display Unit Selection]</i> .	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04 [Maximum Output Frequency]* and *d2-01 [Frequency Reference Upper Limit]* values change.
- When *A1-02 = 6 [Control Method Selection = AOLV/PM]*, the drive sets *o1-03 = 1 [0.01% (100% = E1-04)]*.
- This parameter sets the frequency reference of Multi-Step Speed 5.

■ d1-06: Reference 6

No. (Hex.)	Name	Description	Default (Range)
d1-06 (0285) RUN	Reference 6	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03 [Frequency Display Unit Selection]</i> .	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04 [Maximum Output Frequency]* and *d2-01 [Frequency Reference Upper Limit]* values change.
- When *A1-02 = 6 [Control Method Selection = AOLV/PM]*, the drive sets *o1-03 = 1 [0.01% (100% = E1-04)]*.
- This parameter sets the frequency reference of Multi-Step Speed 6.

■ d1-07: Reference 7

No. (Hex.)	Name	Description	Default (Range)
d1-07 (0286) RUN	Reference 7	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03</i> [Frequency Display Unit Selection].	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04* [Maximum Output Frequency] and *d2-01* [Frequency Reference Upper Limit] values change.
- When *A1-02* = 6 [Control Method Selection = AOLV/PM], the drive sets *o1-03* = 1 [0.01% (100% = *E1-04*)].
- This parameter sets the frequency reference of Multi-Step Speed 7.

■ d1-08: Reference 8

No. (Hex.)	Name	Description	Default (Range)
d1-08 (0287) RUN	Reference 8	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03</i> [Frequency Display Unit Selection].	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04* [Maximum Output Frequency] and *d2-01* [Frequency Reference Upper Limit] values change.
- When *A1-02* = 6 [Control Method Selection = AOLV/PM], the drive sets *o1-03* = 1 [0.01% (100% = *E1-04*)].
- This parameter sets the frequency reference of Multi-Step Speed 8.

■ d1-09: Reference 9

No. (Hex.)	Name	Description	Default (Range)

d1-14 (028F) RUN	Reference 14	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03 [Frequency Display Unit Selection]</i> .	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04 [Maximum Output Frequency]* and *d2-01 [Frequency Reference Upper Limit]* values change.
- When *A1-02 = 6 [Control Method Selection = AOLV/PM]*, the drive sets *o1-03 = 1 [0.01% (100% = E1-04)]*.
- This parameter sets the frequency reference of Multi-Step Speed 14.

■ d1-15: Reference 15

No. (Hex.)	Name	Description	Default (Range)
d1-15 (0290) RUN	Reference 15	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03 [Frequency Display Unit Selection]</i> .	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04 [Maximum Output Frequency]* and *d2-01 [Frequency Reference Upper Limit]* values change.
- When *A1-02 = 6 [Control Method Selection = AOLV/PM]*, the drive sets *o1-03 = 1 [0.01% (100% = E1-04)]*.
- This parameter sets the frequency reference of Multi-Step Speed 15.

■ d1-16: Reference 16

No. (Hex.)	Name	Description	Default (Range)
d1-16 (0291) RUN	Reference 16	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference in the units from <i>o1-03</i> [Frequency Display Unit Selection].	0.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04* [Maximum Output Frequency] and *d2-01* [Frequency Reference Upper Limit] values change.
- When *A1-02* = 6 [Control Method Selection = AOLV/PM], the drive sets *o1-03* = 1 [0.01% (100% = *E1-04*)].
- This parameter sets the frequency reference of Multi-Step Speed 16.

■ d1-17: Jog Reference

No. (Hex.)	Name	Description	Default (Range)
d1-17 (0292) RUN	Jog Reference	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Jog frequency reference in the units from <i>o1-03</i> [Frequency Display Unit Selection]. Set <i>H1-xx</i> = 6 [MFDI Function Select = Jog Reference Selection] to use the Jog frequency reference.	6.00 Hz (0.00 - 590.00 Hz)

Note:

- The upper limit value changes when the *E1-04* [Maximum Output Frequency] and *d2-01* [Frequency Reference Upper Limit] values change.
- When *A1-02* = 6 [Control Method Selection = AOLV/PM], the drive sets *o1-03* = 1 [0.01% (100% = *E1-04*)].

◆ d2: Reference Limits

d2 parameters set the upper and lower frequency limits to control the motor speed. Apply these parameters to for example, run the motor at low-speed due to mechanical strength concerns, or if the motor should not be run at low speed because of lubrication issues with the gears and bearings.

The upper frequency limit is set in *d2-01* [Frequency Reference Upper Limit] and the lower limit is set in *d2-02* [Frequency Reference Lower Limit].

Figure 12.42 Upper and Lower Frequency Limits

■ d2-01: Frequency Reference Upper Limit

No. (Hex.)	Name	Description	Default (Range)
d2-01 (0289)	Frequency Reference Upper Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets maximum limit for all frequency references. The maximum output frequency is 100%.	100.0% (0.0 - 110.0%)

When the frequency reference is more than the value set in *d2-01* the drive will continue to operate at the value set in *d2-01*.

■ d2-02: Frequency Reference Lower Limit

No. (Hex.)	Name	Description	Default (Range)
d2-02 (028A)	Frequency Reference Lower Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets minimum limit for all frequency references. The maximum output frequency is 100%.	0.0% (0.0 - 110.0%)

When the frequency reference is less than the value set in $d2-02$, the drive will continue to operate at the value set in $d2-02$. The motor will accelerate to the $d2-02$ value after the drive receives a Run command and a lower frequency reference than $d2-02$ has been entered.

■ d2-03: Analog Frequency Ref Lower Limit

No. (Hex.)	Name	Description	Default (Range)
d2-03 (0293)	Analog Frequency Ref Lower Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit for the master frequency reference (the first frequency of the multi-step speed reference) as a percentage. The maximum output frequency is 100%.	0.0% (0.0 - 110.0%)

This parameter does not change the lower limit of Jog reference, frequency reference for multi-step speed operation, or the auxiliary frequency reference.

The drive operates at the value set in $d2-03$ when the frequency reference decreases to less than the value set in $d2-03$.

Note:

When lower limits are set to parameters $d2-02$ [Frequency Reference Lower Limit] and $d2-03$, the drive uses the larger value as the lower limit.

◆ d3: Jump Frequency

The Jump frequency is a function that sets the dead band to a specified frequency band. If a machine that operated at constant speed is operated with variable speed, it can make resonance. To operate the machine without resonance from the natural frequency of the machinery mechanical system, use a frequency band jump.

You can program the drive to have ten different Jump frequencies. Set $d3-01$ [Jump Frequency 1] to $d3-03$ [Jump Frequency 3] and $d3-05$ [Jump Frequency 4] to $d3-11$ [Jump Frequency 10] to the center value for the frequency to avoid.

You can set the jump frequency widths individually. Set each jump frequency width to $d3-12$ [Jump Frequency Width 1] to $d3-21$ [Jump Frequency Width 10]. When $d3-12$ to $d3-21 = 0.0$ Hz, the drive uses the value set in $d3-04$ [Jump Frequency Width].

When you input a frequency reference that is the same as or near the Jump frequency width, the frequency reference changes automatically.

The drive accelerates or decelerates the motor smoothly until the frequency reference is not in the range of the Jump frequency band. The drive will use the active accel/decel time to go through the specified dead band range. If the frequency reference is not in the range of the Jump frequency band, switch to constant speed operation.

Figure 12.43 Jump Frequency

Note:

- When you set Jump Frequencies 1 to 10, make sure that the parameters do not overlap. The drive will not indicate this condition.
- When the drive is in the range of the Jump frequency, the frequency reference changes automatically. When the drive jumps frequencies, the output frequency changes smoothly as specified by the values set in *C1-01 [Acceleration Time 1]* and *C1-02 [Deceleration Time 1]*.

■ d3-01: Jump Frequency 1

No. (Hex.)	Name	Description	Default (Range)
d3-01 (0294)	Jump Frequency 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)

Note:

Set this parameter to 0.0 Hz to disable the Jump frequency.

■ d3-02: Jump Frequency 2

No. (Hex.)	Name	Description	Default (Range)
d3-02 (0295)	Jump Frequency 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)

Note:

Set this parameter to 0.0 Hz to disable the Jump frequency.

■ d3-03: Jump Frequency 3

No. (Hex.)	Name	Description	Default (Range)
d3-03 (0296)	Jump Frequency 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)

Note:

Set this parameter to 0.0 Hz to disable the Jump frequency.

■ d3-04: Jump Frequency Width

No. (Hex.)	Name	Description	Default (Range)
d3-04 (0297)	Jump Frequency Width	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 20.0 Hz)

■ d3-05: Jump Frequency 4

No. (Hex.)	Name	Description	Default (Range)
d3-05 (0B00)	Jump Frequency 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)

Note:

Set this parameter to 0.0 Hz to disable the Jump frequency.

■ d3-06: Jump Frequency 5

No. (Hex.)	Name	Description	Default (Range)
d3-06 (0BD0)	Jump Frequency 5	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)

Note:

Set this parameter to 0.0 Hz to disable the Jump frequency.

■ d3-07: Jump Frequency 6

No. (Hex.)	Name	Description	Default (Range)
d3-07 (0B02)	Jump Frequency 6	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)

Note:

Set this parameter to 0.0 Hz to disable the Jump frequency.

■ d3-08: Jump Frequency 7

No. (Hex.)	Name	Description	Default (Range)
d3-08 (0B03)	Jump Frequency 7	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)

Note:

Set this parameter to 0.0 Hz to disable the Jump frequency.

■ d3-09: Jump Frequency 8

No. (Hex.)	Name	Description	Default (Range)
d3-09 (0B04)	Jump Frequency 8	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)

Note:

Set this parameter to 0.0 Hz to disable the Jump frequency.

■ d3-10: Jump Frequency 9

No. (Hex.)	Name	Description	Default (Range)
d3-10 (0B05)	Jump Frequency 9	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)

Note:

Set this parameter to 0.0 Hz to disable the Jump frequency.

■ d3-11: Jump Frequency 10

No. (Hex.)	Name	Description	Default (Range)
d3-11 (0B06)	Jump Frequency 10	V/f OLV OLV/PM AOLV/PM EZOLV Sets the median value of the frequency band that the drive will avoid.	Determined by A1-02 (0.0 - 590.0 Hz)

Note:

Set this parameter to 0.0 Hz to disable the Jump frequency.

■ d3-12: Jump Frequency Width 1

No. (Hex.)	Name	Description	Default (Range)
d3-12 (0B07)	Jump Frequency Width 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-01 [Jump Frequency 1].	Determined by A1-02 (0.0 - 20.0 Hz)

Note:

- When d3-12 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-01.
- When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].

■ d3-13: Jump Frequency Width 2

No. (Hex.)	Name	Description	Default (Range)
d3-13 (0B08)	Jump Frequency Width 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set <i>d3-02</i> [Jump Frequency 2].	Determined by A1-02 (0.0 - 20.0 Hz)

Note:

- When *d3-13* = 0.0 Hz, the drive uses the setting value of *d3-04* [Jump Frequency Width] as the width of the frequency band for *d3-02*.
- When *A1-02* = 6 [Control Method Selection = AOLV/PM], the default setting is *o1-03* = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].

■ d3-14: Jump Frequency Width 3

No. (Hex.)	Name	Description	Default (Range)
d3-14 (0B09)	Jump Frequency Width 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set <i>d3-03</i> [Jump Frequency 3].	Determined by A1-02 (0.0 - 20.0 Hz)

Note:

- When *d3-14* = 0.0 Hz, the drive uses the setting value of *d3-04* [Jump Frequency Width] as the width of the frequency band for *d3-03*.
- When *A1-02* = 6 [Control Method Selection = AOLV/PM], the default setting is *o1-03* = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].

■ d3-15: Jump Frequency Width 4

No. (Hex.)	Name	Description	Default (Range)
d3-15 (0B0A)	Jump Frequency Width 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set <i>d3-05</i> [Jump Frequency 4].	Determined by A1-02 (0.0 - 20.0 Hz)

Note:

- When *d3-15* = 0.0 Hz, the drive uses the setting value of *d3-04* [Jump Frequency Width] as the width of the frequency band for *d3-05*.
- When *A1-02* = 6 [Control Method Selection = AOLV/PM], the default setting is *o1-03* = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].

■ d3-16: Jump Frequency Width 5

No. (Hex.)	Name	Description	Default (Range)
d3-16 (0B0B)	Jump Frequency Width 5	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set <i>d3-06</i> [Jump Frequency 5].	Determined by A1-02 (0.0 - 20.0 Hz)

Note:

- When *d3-16* = 0.0 Hz, the drive uses the setting value of *d3-04* [Jump Frequency Width] as the width of the frequency band for *d3-06*.
- When *A1-02* = 6 [Control Method Selection = AOLV/PM], the default setting is *o1-03* = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].

■ d3-17: Jump Frequency Width 6

No. (Hex.)	Name	Description	Default (Range)
d3-17 (0B0C)	Jump Frequency Width 6	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set <i>d3-07</i> [Jump Frequency 6].	Determined by A1-02 (0.0 - 20.0 Hz)

Note:

- When *d3-17* = 0.0 Hz, the drive uses the setting value of *d3-04* [Jump Frequency Width] as the width of the frequency band for *d3-07*.
- When *A1-02* = 6 [Control Method Selection = AOLV/PM], the default setting is *o1-03* = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].

■ d3-18: Jump Frequency Width 7

No. (Hex.)	Name	Description	Default (Range)
d3-18 (0BD1)	Jump Frequency Width 7	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-08 [Jump Frequency 7].	Determined by A1-02 (0.0 - 20.0 Hz)

Note:

- When d3-18 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-08.
- When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].

■ d3-19: Jump Frequency Width 8

No. (Hex.)	Name	Description	Default (Range)
d3-19 (0B0E)	Jump Frequency Width 8	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-09 [Jump Frequency 8].	Determined by A1-02 (0.0 - 20.0 Hz)

Note:

- When d3-19 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-09.
- When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].

■ d3-20: Jump Frequency Width 9

No. (Hex.)	Name	Description	Default (Range)
d3-20 (0B0F)	Jump Frequency Width 9	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-10 [Jump Frequency 9].	Determined by A1-02 (0.0 - 20.0 Hz)

Note:

- When d3-20 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-10.
- When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].

■ d3-21: Jump Frequency Width 10

No. (Hex.)	Name	Description	Default (Range)
d3-21 (0B10)	Jump Frequency Width 10	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width of the frequency band when you set d3-11 [Jump Frequency 10].	Determined by A1-02 (0.0 - 20.0 Hz)

Note:

- When d3-21 = 0.0 Hz, the drive uses the setting value of d3-04 [Jump Frequency Width] as the width of the frequency band for d3-11.
- When A1-02 = 6 [Control Method Selection = AOLV/PM], the default setting is o1-03 = 1 [Frequency Display Unit Selection = 0.01% (100% = E1-04)].

◆ d4: Frequency Ref Up/Down & Hold

The d4 parameters set the Frequency Reference Hold function and Up/Down and Up/Down 2 commands.

- Frequency Reference Hold Function Command: This acceleration/deceleration ramp hold command uses an MFDI to momentarily stop the acceleration/deceleration of the motor, and continues to operate the motor at the output frequency at which the command reference was input. Turn OFF the acceleration/deceleration ramp hold command to continue acceleration/deceleration.
- Up/Down command: The Up/Down command is a function to activate and deactivate an MFDI to increase and decrease the frequency reference. The Up/Down command overrides frequency references from the analog input terminal and keypad.
- Up/Down 2 command: The Up/Down 2 command is a function that adds a set bias value to the frequency reference to accelerate or decelerate. The Up/Down 2 command activates and deactivates the MFDI to add a bias value.

■ d4-01: Freq Reference Hold Selection

No. (Hex.)	Name	Description	Default (Range)
d4-01 (0298)	Freq Reference Hold Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that saves the frequency reference or the frequency bias (Up/Down 2) after a Stop command or when de-energizing the drive.	0 (0, 1)

Set *H1-xx [MFDI Function Selection]* to one of these values to enable this parameter:

- *A [Accel/Decel Ramp Hold]*
- *10/11 [Up/Down Command]*
- *75/76 [Up/Down 2 Command]*

0 : Disabled

- Acceleration/Deceleration Ramp Hold
When you enter a Stop command or de-energize the drive, the hold value is reset to 0 Hz. The drive will use the active frequency reference when it restarts.
- Up/Down Command
When you enter a Stop command or de-energize the drive, the frequency reference value is reset to 0 Hz. The drive will start from 0 Hz when it restarts.
- Up/Down 2 Command
When you enter the Stop command or 5 s after you release the Up/Down 2 command, the drive does not save the frequency bias. The Up/Down 2 function will start with a bias of 0% when the drive restarts.

1 : Enabled

- Acceleration/Deceleration Ramp Hold
When you clear the Run command or de-energize the drive, it will save the last hold value. The drive will use the saved value as the frequency reference when it restarts.

Note:

When you energize the drive, continuously enable the MFDI terminal set for *Accel/Decel Ramp Hold [H1-xx = A]*. If the digital input does not activate, the drive will clear the hold value and set it to 0 Hz.

Figure 12.44 Frequency Reference Hold with Accel/Decel Hold Function

- Up/Down Command
When you clear the Run command or de-energize the drive, it will save the frequency reference value. The drive will use the saved value as the frequency reference when it restarts.
- Up/Down 2 Command with Frequency Reference from Keypad
When a Run command is active and you release the Up/Down 2 command for longer than 5 s, the drive adds the Up/Down 2 bias value to the frequency reference and sets it to 0. The drive saves the frequency reference value to which the bias value was added. The drive will use the new value as the frequency reference when it restarts.

Figure 12.45 Up/Down 2 Example with Reference from Keypad and d4-01 = 1

- Up/Down 2 Command with Frequency Reference from Input Sources Other Than the Keypad
When a Run command is active and you release the Up/Down 2 command for longer than 5 s, the drive will save the bias value in *d4-06* [*Frequency Ref Bias (Up/Down 2)*]. The drive saves the frequency reference + *d4-06* as a frequency reference value. The drive will use the new value as the frequency reference when it restarts.

Figure 12.46 Up/Down 2 Example with Other Reference than Keypad and d4-01 = 1

Note:

To use the combination of the frequency reference hold function and the Up/Down 2 function, configure the Up/Down 2 upper limit [*d4-08*] and lower limit [*d4-09*] correctly.

Remove the Saved Frequency Reference Value

The procedure to remove the saved frequency reference value is different for different functions. Use these methods to remove the value:

- Release the input programmed for *Accel/Decel Ramp Hold* [*HI-xx = A*].
- Set an Up or Down command while no Run command is active.
- Use the Up/Down 2 Command to set *d4-06* = 0.0 or set *d4-06* = 0.0 during stop.

■ d4-03: Up/Down 2 Bias Step Frequency

No. (Hex.)	Name	Description	Default (Range)
d4-03 (02AA) RUN	Up/Down 2 Bias Step Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bias that the Up/Down 2 function adds to or subtracts from the frequency reference.	0.00 Hz (0.00 - 99.99 Hz)

The operation is different for different setting values:

- Setting d4-03 = 0.00 Hz

When the *Up/Down 2 Command* [*H1-xx* = 75, 76] is active, the drive uses the accel/decel times set in *d4-04* [*Up/Down 2 Ramp Selection*] to increase or decrease the bias value.

Figure 12.47 Up/Down 2 Bias when d4-03 = 0.00 Hz

• **Setting d4-03 ≠ 0.00 Hz**

When the *Up/Down 2 Command* [*H1-xx* = 75, 76] is active, the drive increases or decreases the bias in steps for the value set in *d4-03*. The drive uses the acceleration and deceleration times set in *d4-04*.

Figure 12.48 Up/Down 2 Bias when d4-03 ≠ 0.00 Hz

■ **d4-04: Up/Down 2 Ramp Selection**

No. (Hex.)	Name	Description	Default (Range)
d4-04 (02AB) RUN	Up/Down 2 Ramp Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the acceleration and deceleration times for the Up/Down 2 function to apply the bias to the frequency reference.	0 (0, 1)

0 : Use Selected Accel/Decel Time

Use the active acceleration and deceleration times to increase or decrease the bias.

1 : Use Accel/Decel Time 4

Use *C1-07* [*Acceleration Time 4*] and *C1-08* [*Deceleration Time 4*] to increase or decrease the bias.

■ **d4-05: Up/Down 2 Bias Mode Selection**

No. (Hex.)	Name	Description	Default (Range)
d4-05 (02AC) RUN	Up/Down 2 Bias Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that saves the bias value to the drive when you open or close the two <i>Up/Down 2 Commands</i> [<i>H1-xx</i> = 75, 76]. Set <i>d4-03</i> [<i>Up/Down 2 Bias Step Frequency</i>] = 0.00 before you set this parameter.	0 (0, 1)

0 : Hold when Neither Up/Down Closed

When the two MFDI terminals set for *Up/Down 2 Command* [*H1-xx* = 75, 76] activate or deactivate, the drive will hold the bias value.

1 : Reset when Neither / Both Closed

When the two MFDI terminals set for *Up/Down 2 Command* [*H1-xx = 75, 76*] activate or deactivate, the drive will reset the bias value to 0. The drive will use the acceleration and deceleration times set in *d4-04* [*Up/Down 2 Ramp Selection*] to accelerate and decelerate the motor to the selected output frequency.

■ d4-06: Frequency Ref Bias (Up/Down 2)

No. (Hex.)	Name	Description	Default (Range)
d4-06 (02AD)	Frequency Ref Bias (Up/Down 2)	V/f OLV OLV/PM AOLV/PM EZOLV Saves the bias value from the Up/Down 2 Command where the Maximum Output Frequency is 100%.	0.0% (-99.9 - +100.0%)

The Up/Down 2 function setting changes the function of *d4-06*:

Note:

When the keypad sets the frequency reference, you do not usually use parameter *d4-06*.

- When *d4-01 = 0* [*Freq Reference Hold Selection = Disabled*] and a source other than the keypad sets the frequency reference, the drive adds the value set in *d4-06* to the frequency reference. If the value set in *d4-06* is a negative number, the drive will subtract it from frequency reference.
- When *d4-01 = 1* [*Enabled*] and a source other than the keypad sets the frequency reference, the drive will store the bias value adjusted with the Up/Down 2 command in *d4-06* 5 seconds after you release the Up/Down 2 command. The drive adds or subtracts the value set in *d4-06* to the frequency reference.

Conditions that Reset or Disable d4-06

The drive resets and disables the bias value in these conditions:

- d4-01 = 0* and the Run command was cleared.
- H1-xx = 75, 76* [*MFDI Function Select = Up/Down 2 Command*] is not set.
- The frequency reference source was changed.
This includes switching LOCAL/REMOTE and multi-step speed reference.
- A digital input changed the frequency reference value.
- d4-03* [*Up/Down 2 Bias Step Frequency*] = 0 and *d4-05 = 1* [*Up/Down 2 Bias Mode Selection = Reset when Neither / Both Closed*], and the two MFDI terminals set for *Up/Down 2 Command* [*H1-xx = 75/76*] are activated or deactivated.
- The value of *E1-04* [*Maximum Output Frequency*] was changed.

■ d4-07: Analog Freq Ref Fluctuate Limit

No. (Hex.)	Name	Description	Default (Range)
d4-07 (02AE) RUN	Analog Freq Ref Fluctuate Limit	V/f OLV OLV/PM AOLV/PM EZOLV If the frequency reference changes for more than the level set to this parameter, then the bias value will be held. The value is set as a percentage of the Maximum Output Frequency.	1.0% (0.1 - 100.0%)

Handles frequency reference changes while *Up/Down 2 Command* [*H1-xx = 75, 76*] is activated. When the frequency reference changes for more than the level set in *d4-07*, the drive will hold the bias value, and the drive will accelerate or decelerate to the frequency reference. When the drive is at the frequency reference, it releases the bias hold and the bias follows the Up/Down 2 input commands.

This parameter is applicable only when the analog input sets the frequency reference.

■ d4-08: Up/Down 2 Bias Upper Limit

No. (Hex.)	Name	Description	Default (Range)
d4-08 (02AF) RUN	Up/Down 2 Bias Upper Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit of the Up/Down 2 bias as a percentage of the Maximum Output Frequency.	100.0% (0.0 - 100.0%)

The drive saves the set bias upper limit in *d4-06* [*Frequency Ref Bias (Up/Down 2)*]. Set *d4-08* an applicable value before you use the Up/Down 2 function.

Note:

When $d4-01 = 1$ [*Freq Reference Hold Selection = Enabled*] and $b1-01 = 0$ [*Frequency Reference Selection 1 = Keypad*], the drive will add the bias value to the frequency reference when it does not receive an Up/Down 2 command for 5 s. Then the drive will reset the value to 0 at which time you can increase the bias to the limit set in $d4-08$ again.

■ d4-09: Up/Down 2 Bias Lower Limit

No. (Hex.)	Name	Description	Default (Range)
d4-09 (02B0) RUN	Up/Down 2 Bias Lower Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit of the Up/Down 2 bias as a percentage of the Maximum Output Frequency.	0.0% (-99.9 - 0.0%)

The drive saves the set bias lower limit in $d4-06$ [*Frequency Ref Bias (Up/Down 2)*]. Set $d4-09$ to an applicable value before you use the Up/Down 2 function.

Note:

When $d4-01 = 1$ [*Freq Reference Hold Selection = Enabled*] and $b1-01 = 0$ [*Frequency Reference Selection 1 = Keypad*], the drive will add the bias value to the frequency reference when it does not receive an Up/Down 2 command for 5 s. Then the drive will reset the value to 0.

If you increase the bias with the Up 2 command and $d4-09 = 0$, you cannot use a Down 2 command to decrease the frequency reference. To decrease speed in this condition, set a negative lower limit in $d4-09$.

■ d4-10: Up/Down Freq Lower Limit Select

No. (Hex.)	Name	Description	Default (Range)
d4-10 (02B6)	Up/Down Freq Lower Limit Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower frequency limit for the Up/Down function.	0 (0, 1)

0 : Greater of d2-02 or Analog

The higher value between $d2-02$ [*Frequency Reference Lower Limit*] and an analog input programmed for *Frequency Reference* [$H3-02 = 0$] sets the lower frequency reference limit.

Note:

When you use *External Reference 1/2 Selection* [$H1-xx = 2$] to switch between the Up/Down function and an analog input as the reference source, the analog value becomes the lower reference limit when the Up/Down command is active. Set $d4-10 = 1$ to isolate the Up/Down function and the analog input value.

1 : d2-02

You can only use $d2-02$ to set the lower limit of the frequency reference.

◆ d6: Field Weakening /Forcing

$d6$ parameters set the field weakening and field forcing functions.

The field weakening function decreases the energy consumption of the motor. It decreases the output voltage of the drive to a set level. The function decreases the motor excitation current inversely proportional to speed in a constant output range, and does not let the induced voltage of the motor become more than the power supply voltage. To enable this function, set *Field Weakening* [$H1-xx = 63$] ON.

Note:

Use the Field Weakening function in constant light-load applications. To control the energy consumption of the motor for other load conditions, use the $b8$ parameters [*Energy Saving*].

The Field Forcing function adjusts the delaying influence of the motor time constant when the drive changes the excitation current reference and it also increases motor responsiveness. This function uses a high motor excitation current reference for drive start-up only to help develop actual motor excitation current. Enable the Field Forcing function to increase motor responsiveness.

Note:

You cannot use Field Forcing during DC Injection Braking.

■ d6-01: Field Weakening Level

No. (Hex.)	Name	Description	Default (Range)
d6-01 (02A0)	Field Weakening Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive output voltage as a percentage of <i>E1-05 [Maximum Output Voltage]</i> when <i>H1-xx = 63 [Field Weakening]</i> is activated.	80% (0 - 100%)

■ d6-02: Field Weakening Frequency Limit

No. (Hex.)	Name	Description	Default (Range)
d6-02 (02A1)	Field Weakening Frequency Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum output frequency to start field weakening.	0.0 Hz (0.0 - 590.0 Hz)

Make sure that these two conditions are correct to enable the Field Weakening command:

- The output frequency $\geq$ *d6-02*.
- There is a speed agreement status.

■ d6-03: Field Forcing Selection

No. (Hex.)	Name	Description	Default (Range)
d6-03 (02A2)	Field Forcing Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the field forcing function.	0 (0, 1)

0 : Disabled

1 : Enabled

■ d6-06: Field Forcing Limit

No. (Hex.)	Name	Description	Default (Range)
d6-06 (02A5)	Field Forcing Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the limit value for field forcing to increase the motor excitation current reference as a percentage of <i>E2-03 [Motor No-Load Current]</i> . Usually it is not necessary to change this setting.	400% (100 - 400%)

Note:

You cannot use Field Forcing during DC Injection Braking.

◆ d7: Offset Frequency

The drive will use 3 digital signal inputs to add or subtract the set frequency (offset frequency) to/from the frequency reference and correct the speed. The drive uses the terminal set in *H1-xx = 44 to 46 [MFDI Function Selection = Add Offset Frequency 1 (d7-01) to Add Offset Frequency 3 (d7-03)]* to set the offset frequency. When you close more than one input at the same time, the drive adds the selected offset values together.

Figure 12.49 shows the Offset frequency function:

Figure 12.49 Offset Frequency Operation

■ d7-01: Offset Frequency 1

No. (Hex.)	Name	Description	Default (Range)
d7-01 (02B2) RUN	Offset Frequency 1	V/f OLV OLV/PM AOLV/PM EZOLV Uses H1-xx = 44 [MFDI Function Select = Add Offset Frequency 1 (d7-01)] as a percentage of the Maximum Output Frequency to add or subtract the set frequency to/from the frequency reference.	0.0% (-100.0 - +100.0%)

■ d7-02: Offset Frequency 2

No. (Hex.)	Name	Description	Default (Range)
d7-02 (02B3) RUN	Offset Frequency 2	V/f OLV OLV/PM AOLV/PM EZOLV Uses H1-xx = 45 [MFDI Function Select = Add Offset Frequency 2 (d7-02)] as a percentage of the Maximum Output Frequency to add or subtract the set frequency to/from the frequency reference.	0.0% (-100.0 - +100.0%)

■ d7-03: Offset Frequency 3

No. (Hex.)	Name	Description	Default (Range)
d7-03 (02B4) RUN	Offset Frequency 3	V/f OLV OLV/PM AOLV/PM EZOLV Uses H1-xx = 46 [MFDI Function Select = Add Offset Frequency 3 (d7-03)] as a percentage of the Maximum Output Frequency to add or subtract the set frequency to/from the frequency reference.	0.0% (-100.0 - +100.0%)

12.6 E: Motor Parameters

E parameters cover drive input voltage, V/f pattern, and motor parameters.

◆ E1: V/f Pattern for Motor 1

E1 parameters set the drive input voltage and motor V/f characteristics. To switch drive operation from one motor to another motor, set the V/f characteristics for motor 1.

■ V/f Pattern Settings

The drive uses a V/f pattern to adjust the output voltage relative to the frequency reference.

This product has been preconfigured with 15 voltage/frequency (V/f) patterns. Use *E1-03 [V/f Pattern Selection]* to select the V/f pattern that is appropriate for the application.

Additionally, one custom V/f pattern is available. Set *E1-03 = F [Custom]* and then manually set parameters *E1-04* to *E1-10*.

Table 12.33 Predefined V/f Patterns

Setting Value	Specification	Characteristic	Application
0	Const Trq, 50Hz base, 50Hz max	Constant torque	For general purpose applications. This pattern is used when the load torque is constant without any rotation speed such as that used for linear conveyor systems.
1	Const Trq, 60Hz base, 60Hz max		
2	Const Trq, 50Hz base, 60Hz max		
3	Const Trq, 60Hz base, 72Hz max		
4	VT, 50Hz, 65% Vmid reduction	Derated Torque characteristics	This pattern is used for torque loads proportional to the square or cube of the rotation speed, such as is the case with fans and pumps.
5	VT, 50Hz, 50% Vmid reduction		
6	VT, 60Hz, 65% Vmid reduction		
7	VT, 60Hz, 50% Vmid reduction		
8	High Trq, 50 Hz, 25% Vmin boost	High starting torque	This pattern is used when strong torque is required during startup.
9	High Trq, 50 Hz, 65% Vmin boost		
A	High Trq, 60 Hz, 25% Vmin boost		
B	High Trq, 60 Hz, 65% Vmin boost		
C	High Freq, 60Hz base, 90Hz max	Constant output	This pattern is used to rotate motors at greater than 60 Hz. Output voltage is constant when operating at greater than 60 Hz.
D	High Freq, 60Hz base, 120Hz max		
E	High Freq, 60Hz base, 180Hz max		
F	Custom	Constant torque	Enables a custom V/f pattern by changing <i>E1-04</i> to <i>E1-13 [V/f Pattern for Motor 1]</i> . The default settings for <i>E1-04</i> to <i>E1-13</i> are the same as <i>Setting Value 1 [Const Trq, 60Hz base, 60Hz max]</i> .

Note:

When you manually set V/f patterns, note these items:

- To set linear V/f characteristics at frequencies lower than *E1-06* [Base Frequency], set *E1-07* = *E1-09* [Mid Point A Frequency = Minimum Output Frequency]. In this application, the drive ignores *E1-08* [Mid Point A Voltage].
- Set the five frequencies as specified by these rules: Incorrect settings will cause *oPE10* [V/f Data Setting Error].
 $E1-09 \leq E1-07 < E1-06 \leq E1-11 \leq E1-04$ [Minimum Output Frequency $\leq$ Mid Point A Frequency $<$ Base Frequency $\leq$ Mid Point B Frequency $\leq$ Maximum Output Frequency]
- Setting *E1-11* = 0 [Mid Point B Frequency = 0 Hz] disables *E1-12* [Mid Point B Voltage]. Ensure that the four frequencies are set according to the following rules;
 $E1-09 \leq E1-07 < E1-06 \leq E1-04$
- When you use *A1-03* [Initialize Parameters] to initialize the drive, it will not reset *E1-03*.

Figure 12.50 V/f Pattern

■ E1-01: Input AC Supply Voltage

No. (Hex.)	Name	Description	Default (Range)
E1-01 (0300)	Input AC Supply Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive input voltage.	200 V Class: 240 V, 400 V Class: 480 V (200 V Class: 155 to 255 V, 400 V Class: 310 to 510 V)

NOTICE Damage to Equipment

Set *E1-01* [Input AC Supply Voltage] to align with the drive input voltage (not motor voltage).

If this parameter is incorrect, the protective functions of the drive will not operate correctly and it can cause damage to the drive.

Values Related to the Drive Input Voltage

The value set in *E1-01* is the base value that the drive uses for the motor protective functions in Table 12.34. With a 400 V class drive, the detection level changes for some motor protective functions.

Table 12.34 Values Related to the Drive Input Voltage

Voltage	E1-01 Setting	Approximate Values				
		ov Detection Level	BTR Operation Level (rr Detection Level) */	L2-05 [Undervoltage Detection Lvl (Uv1)]	L2-11 [KEB DC Bus Voltage Setpoint]	L3-17 [DC Bus Regulation Level]
200 V Class	All settings	410 V	394 V	190 V	260 V	375 V
400 V Class	Setting value $\geq$ 400 V	820 V	788 V	380 V	500 V	750 V
	Setting value $<$ 400 V	820 V	788 V	350 V	460 V	750 V

*1 This is the protection function enabled in drives with built-in braking transistors. These values show the level that will trigger the built-in braking transistor. Refer to "YASKAWA AC Drive Series Option Braking Unit and Braking Resistor Unit Installation Manual (TOBPC72060001)" for more information.

■ E1-03: V/f Pattern Selection

No. (Hex.)	Name	Description	Default (Range)
E1-03 (0302)	V/f Pattern Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the V/f pattern for the drive and motor. You can use one of the preset patterns or you can make a custom pattern.	F (Determined by A1-02)

Note:

- When $A1-02 = 2$ [Control Method Selection = OLV], settings 0 to E are not available.
- Set the correct V/f pattern for the application and operation area. An incorrect V/f pattern can decrease motor torque and increase current from overexcitation.
- Parameter $A1-03$ [Initialize Parameters] will not reset the value of $E1-03$.

0 : Const Trq, 50Hz base, 50Hz max

Use this constant torque pattern for general applications. This pattern is used when the load torque is constant without any rotation speed such as that used for linear conveyor systems.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

1 : Const Trq, 60Hz base, 50Hz max

Use this constant torque pattern for general applications. This pattern is used when the load torque is constant without any rotation speed such as that used for linear conveyor systems.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

2 : Const Trq, 50Hz base, 60Hz max

Use this constant torque pattern for general applications. This pattern is used when the load torque is constant without any rotation speed such as that used for linear conveyor systems.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

3 : Const Trq, 60Hz base, 72Hz max

Use this constant torque pattern for general applications. This pattern is used when the load torque is constant without any rotation speed such as that used for linear conveyor systems.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

4 : VT, 50Hz, 65% Vmid reduction

Use this derated torque pattern for torque loads proportional to the cube of the rotation speed. For example, fans and pumps.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

5 : VT, 50Hz, 50% Vmid reduction

Use this derated torque pattern for torque loads proportional to the square of the rotation speed. For example, fans and pumps.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

6 : VT, 60Hz, 65% Vmid reduction

Use this derated torque pattern for torque loads proportional to the cube of the rotation speed. For example, fans and pumps.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

7 : VT, 60Hz, 50% Vmid reduction

Use this derated torque pattern for torque loads proportional to the square of the rotation speed. For example, fans and pumps.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

8 : High Trq, 50 Hz, 25% Vmin Boost

Use this pattern when moderate torque is necessary during start up.

Select this pattern only in these conditions:

- The wiring distance between the drive and motor is 150 m (492.1 ft) minimum
- There is an AC reactor connected to the drive output.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

9 : High Trq, 50 Hz, 65% Vmin Boost

Use this pattern when high torque is necessary during start up.

Select this pattern only in these conditions:

- The wiring distance between the drive and motor is 150 m (492.1 ft) minimum
- There is an AC reactor connected to the drive output.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

A : High Trq, 60 Hz, 25% Vmin Boost

Use this pattern when moderate torque is necessary during start up.

Select this pattern only in these conditions:

- The wiring distance between the drive and motor is 150 m (492.1 ft) minimum
- There is an AC reactor connected to the drive output.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

B : High Trq, 60 Hz, 65% Vmin Boost

Use this pattern when high torque is necessary during start up.

Select this pattern only in these conditions:

- The wiring distance between the drive and motor is 150 m (492.1 ft) minimum
- There is an AC reactor connected to the drive output.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

C : Const Trq, 60Hz base, 90Hz max

Use this constant output pattern to rotate motors at more than 60 Hz. Output voltage is constant when you operate at more than 60 Hz.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

D : Const Trq, 60Hz base, 120Hz max

Use this constant output pattern to rotate motors at more than 60 Hz. Output voltage is constant when you operate at more than 60 Hz.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

E : Const Trq, 60Hz base, 180Hz max

Use this constant output pattern to rotate motors at more than 60 Hz. Output voltage is constant when you operate at more than 60 Hz.

Note:

The voltage values in the figures are for 200 V class drives. Multiply the values by 2 for 400 V class drives.

12.6 E: Motor Parameters

F : Custom

Set *E1-04* to *E1-13* [*V/f Pattern for Motor 1*] to set the values for this custom pattern.

The default settings are the same as *Setting Value 1* [*Const Trq, 60Hz base, 60Hz max*].

■ E1-04: Maximum Output Frequency

No. (Hex.)	Name	Description	Default (Range)
E1-04 (0303)	Maximum Output Frequency	<input checked="" type="button" value="V/f"/> OLV OLV/PM AOLV/PM EZOLV Sets the maximum output frequency for the V/f pattern.	Determined by A1-02 and E5-01 (Determined by A1-02 and E5-01)

■ E1-05: Maximum Output Voltage

No. (Hex.)	Name	Description	Default (Range)
E1-05 (0304)	Maximum Output Voltage	<input checked="" type="button" value="V/f"/> OLV OLV/PM AOLV/PM EZOLV Sets the maximum output voltage for the V/f pattern.	200 V Class: 230.0 V, 400 V: 460.0 V (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)

■ E1-06: Base Frequency

No. (Hex.)	Name	Description	Default (Range)
E1-06 (0305)	Base Frequency	<input checked="" type="button" value="V/f"/> OLV OLV/PM AOLV/PM EZOLV Sets the base frequency for the V/f pattern.	Determined by A1-02 and E5-01 (0.0 - E1-04)

■ E1-07: Mid Point A Frequency

No. (Hex.)	Name	Description	Default (Range)
E1-07 (0306)	Mid Point A Frequency	<input checked="" type="button" value="V/f"/> OLV OLV/PM AOLV/PM EZOLV Sets a middle output frequency for the V/f pattern.	Determined by A1-02 (0.0 - E1-04)

■ E1-08: Mid Point A Voltage

No. (Hex.)	Name	Description	Default (Range)
E1-08 (0307)	Mid Point A Voltage	<input checked="" type="button" value="V/f"/> OLV OLV/PM AOLV/PM EZOLV Sets a middle output voltage for the V/f pattern.	Determined by A1-02 , C6-01 and o2-04 (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)

Note:

Default setting is determined by *A1-02* [*Control Method Selection*], *C6-01* [*Normal / Heavy Duty Selection*], and *o2-04* [*Drive Model Selection*].

■ E1-09: Minimum Output Frequency

No. (Hex.)	Name	Description	Default (Range)
E1-09 (0308)	Minimum Output Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum output frequency for the V/f pattern.	Determined by A1-02 and E5-01 (Determined by A1-02, E1-04, and E5-01)

■ E1-10: Minimum Output Voltage

No. (Hex.)	Name	Description	Default (Range)
E1-10 (0309)	Minimum Output Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum output voltage for the V/f pattern.	Determined by A1-02 (200 V Class: 0.0 to 255.0 V, 400 V Class: 0.0 to 510.0 V)

■ E1-11: Mid Point B Frequency

No. (Hex.)	Name	Description	Default (Range)
E1-11 (030A) Expert	Mid Point B Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output frequency for the V/f pattern.	0.0 Hz (0.0 - E1-04)

Note:

Set this parameter to 0.0 to disable the function.

■ E1-12: Mid Point B Voltage

No. (Hex.)	Name	Description	Default (Range)
E1-12 (030B) Expert	Mid Point B Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle point voltage for the V/f pattern.	0.0 V (200 V Class: 0.0 to 255.0 V, 400 V Class: 0.0 to 510.0 V)

Note:

Set this parameter to 0.0 to disable the function.

■ E1-13: Base Voltage

No. (Hex.)	Name	Description	Default (Range)
E1-13 (030C) Expert	Base Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base voltage for the V/f pattern.	0.0 V (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)

Note:

- After Auto-Tuning, the value of E1-13 = E1-05 [Maximum Output Voltage].
- When E1-13 = 0.0, use the value of E1-05 to control the voltage.

◆ E2: Motor Parameters

E2 parameters [Motor Parameters] are used to set induction motor data. To switch drive operation from one motor to another motor, configure the first motor (motor 1).

If Auto-Tuning cannot be performed, set the E2 parameters manually. Performing Auto-Tuning automatically sets the E2 parameters to the optimal values.

Note:

If A1-02 [Control Method Selection] is set to the following control modes, the keypad does not display E2-xx.

- 5 [PM Open Loop Vector]
- 6 [PM Advanced Open Loop Vector]
- 8 [EZ Vector Control]

■ E2-01: Motor Rated Current (FLA)

No. (Hex.)	Name	Description	Default (Range)
E2-01 (030E)	Motor Rated Current (FLA)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated current in amps.	Determined by o2-04, C6-01 (10% to 200% of the drive rated current)

Note:

- If $E2-01 < E2-03$ [Motor No-Load Current], the drive will detect $oPE02$ [Parameter Range Setting Error].
- When the drive model changes, the display units for this parameter also change.
 - 0.01 A: B001 to B018, 2001 to 2042, 4001 to 4023
 - 0.1 A: 2056 to 2082, 4031 to 4060

The value set for $E2-01$ becomes the reference value for motor protection and the torque limit. Enter the motor rated current written on the motor nameplate. Auto-Tuning the drive will automatically set $E2-01$ to the value input for $Tl-04$ [Motor Rated Current].

■ E2-02: Motor Rated Slip

No. (Hex.)	Name	Description	Default (Range)
E2-02 (030F)	Motor Rated Slip	V/f OLV OLV/PM AOLV/PM EZOLV Sets motor rated slip.	Determined by o2-04, C6-01 (0.000 - 20.000 Hz)

This parameter value becomes the base slip compensation value. The drive automatically sets this parameter during Auto-Tuning. When you cannot do Auto-Tuning, calculate the motor rated slip with the information on the motor nameplate and this formula:

$$E2-02 = f - (n \times p) / 120$$

- f : Motor rated frequency (Hz)
- n : Rated motor speed (min^{-1} (r/min))
- p : Number of motor poles

■ E2-03: Motor No-Load Current

No. (Hex.)	Name	Description	Default (Range)
E2-03 (0310)	Motor No-Load Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the no-load current for the motor in amps when operating at the rated frequency and the no-load voltage.	Determined by o2-04, C6-01 (0 to $E2-01$)

Note:

- When the drive model changes, the display units for this parameter also change.
- 0.01 A: B001 - B018, 2001 - 2042, 4001 - 4023
 - 0.1 A: 2056 - 2082, 4031 - 4060

The drive automatically sets this parameter during Auto-Tuning. When you cannot do Auto-Tuning, you can also use the motor no-load current on the motor test report to enter this value manually. Get the test report from the motor manufacturer.

Note:

The default setting of the no-load current is for a 4-pole motor recommended by Yaskawa.

■ E2-04: Motor Pole Count

No. (Hex.)	Name	Description	Default (Range)
E2-04 (0311)	Motor Pole Count	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of motor poles.	4 (2 - 120)

Note:

- When $A1-02 = 0$ [Control Method Selection = V/f], the maximum value is 120.
- When $A1-02 = 2$ [OLV], the maximum value is 48.

Auto-Tuning automatically sets this parameter to the value of [Number of Motor Poles].

■ E2-05: Motor Line-to-Line Resistance

No. (Hex.)	Name	Description	Default (Range)
E2-05 (0312)	Motor Line-to-Line Resistance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the line-to-line resistance for the motor stator windings.	Determined by o2-04, C6-01 (0.000 - 65.000 Ω)

Note:

This value is the motor line-to-line resistance. Do not set this parameter with the resistance per phase.

Auto-Tuning automatically sets this parameter. If you cannot do Auto-Tuning, use the test report from the motor manufacturer to configure the settings. Use one of these formulas to calculate the motor line-to-line resistance:

- E-type insulation: [the resistance value (Ω) shown on the test report at 75 °C] × 0.822
- B-type insulation: [the resistance value (Ω) shown on the test report at 75 °C] × 0.822
- F-type insulation: [the resistance value (Ω) shown on the test report at 115 °C] × 0.728

■ E2-06: Motor Leakage Inductance

No. (Hex.)	Name	Description	Default (Range)
E2-06 (0313)	Motor Leakage Inductance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage drop from motor leakage inductance when the motor is operating at the rated frequency and rated current. This value is a percentage of Motor Rated Voltage.	Determined by o2-04, C6-01 (0.0 - 60.0%)

The drive automatically sets this parameter during Auto-Tuning.

Note:

The motor nameplate does not usually show the quantity of voltage drop. If you do not know the value of the motor leakage inductance, contact the motor manufacturer to receive a copy of the motor test report.

■ E2-07: Motor Saturation Coefficient 1

No. (Hex.)	Name	Description	Default (Range)
E2-07 (0314)	Motor Saturation Coefficient 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor iron-core saturation coefficient at 50% of the magnetic flux.	0.50 (0.00 - 0.50)

The drive uses this coefficient when it operates with constant output. The drive uses this coefficient when it operates the motor in the constant output range.

■ E2-08: Motor Saturation Coefficient 2

No. (Hex.)	Name	Description	Default (Range)
E2-08 (0315)	Motor Saturation Coefficient 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor iron-core saturation coefficient at 75% of the magnetic flux.	0.75 (E2-07 - 0.75)

The drive uses this coefficient when it operates with constant output. The drive uses this coefficient when it operates the motor in the constant output range.

■ E2-09: Motor Mechanical Loss

No. (Hex.)	Name	Description	Default (Range)
E2-09 (0316) Expert	Motor Mechanical Loss	V/f OLV OLV/PM AOLV/PM EZOLV Sets the mechanical loss of the motor. It is set as a percentage of E2-11 [Motor Rated Power]. Usually it is not necessary to change this setting.	0.0% (0.0 - 10.0%)

Adjust this parameter in these conditions. The drive adds the configured mechanical loss to the torque reference value as a torque compensation value:

- There is a large quantity of torque loss from motor bearing friction.

- There is a large quantity of torque loss in fans and pumps.

■ E2-10: Motor Iron Loss

No. (Hex.)	Name	Description	Default (Range)
E2-10 (0317)	Motor Iron Loss	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor iron loss.	Determined by o2-04, C6-01 (0 - 65535 W)

■ E2-11: Motor Rated Power

No. (Hex.)	Name	Description	Default (Range)
E2-11 (0318)	Motor Rated Power	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated output in the units from o1-58 [Motor Power Unit Selection].	Determined by o2-04, C6-01 (0.00 - 650.00)

The drive automatically sets this parameter to the value input for “Motor Rated Power” during Auto-Tuning.

◆ E3: V/f Pattern for Motor 2

E3 parameters [V/f Pattern for Motor 2] set the control mode and V/f pattern used for motor 2.

Note:

V/f preset patterns equivalent to those set with E1-03 [V/f Pattern Selection] are not available for E3 parameters. Use E3-04 [Motor 2 Maximum Output Frequency] to E3-10 [Motor 2 Minimum Output Voltage] to manually set the V/f pattern.

■ Notes on Manually Setting V/f Patterns

Figure 12.51 Motor 2 V/f Pattern Diagram

- To configure a linear V/f pattern at frequencies lower than E3-06 [Motor 2 Base Frequency], set E3-07 = E3-09 [Motor 2 Mid Point A Frequency = Motor 2 Minimum Output Frequency]. In this application, the drive ignores E1-08 [Mid Point A Voltage].
- Set the five frequencies as specified by these rules:
 $E3-09 \leq E3-07 < E3-06 \leq E3-11 \leq E3-04$ [Motor 2 Minimum Output Frequency ≤ Motor 2 Mid Point A Frequency < Motor 2 Base Frequency ≤ Motor 2 Mid Point B Frequency ≤ Motor 2 Maximum Output Frequency]
 Incorrect settings will trigger oPE10 [V/f Data Setting Error].
- If E3-11 = 0.0 Hz, the drive will ignore the V/f pattern settings.
- When you use A1-03 [Initialize Parameters] to initialize the drive, the drive will reset the manually set values for E3-04 to E3-13 [Motor 2 Base Voltage] to default values.

■ E3-01: Motor 2 Control Mode Selection

No. (Hex.)	Name	Description	Default (Range)
E3-01 (0319)	Motor 2 Control Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the control method for motor 2.	0 (0, 2)

Note:

- When you change this setting, the drive will set all parameters that are dependent on *E3-01* to their default settings.
- Parameter *L1-01* [*Motor Overload (oL1) Protection*] sets the protection operation of *oL1* [*Motor Overload*] the same as Motor 1.
- When you use parameter *A1-03* [*Initialize Parameters*] to initialize the drive, this parameter is not reset.

0 : V/f Control**2 : Open Loop Vector****■ E3-04: Motor 2 Maximum Output Frequency**

No. (Hex.)	Name	Description	Default (Range)
E3-04 (031A)	Motor 2 Maximum Output Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Set the maximum output frequency for the motor 2 V/f pattern.	Determined by E3-01 (40.0 - 590.0 Hz)

■ E3-05: Motor 2 Maximum Output Voltage

No. (Hex.)	Name	Description	Default (Range)
E3-05 (031B)	Motor 2 Maximum Output Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum output voltage for the motor 2 V/f pattern.	Determined by E3-01 (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)

■ E3-06: Motor 2 Base Frequency

No. (Hex.)	Name	Description	Default (Range)
E3-06 (031C)	Motor 2 Base Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base frequency for the motor 2 V/f pattern.	Determined by E3-01 (0.0 - E3-04)

■ E3-07: Motor 2 Mid Point A Frequency

No. (Hex.)	Name	Description	Default (Range)
E3-07 (031D)	Motor 2 Mid Point A Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output frequency for the motor 2 V/f pattern.	Determined by E3-01 (0.0 - E3-04)

■ E3-08: Motor 2 Mid Point A Voltage

No. (Hex.)	Name	Description	Default (Range)
E3-08 (031E)	Motor 2 Mid Point A Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output voltage for the motor 2 V/f pattern.	Determined by E3-01 (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)

■ E3-09: Motor 2 Minimum Output Frequency

No. (Hex.)	Name	Description	Default (Range)
E3-09 (031F)	Motor 2 Minimum Output Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum output frequency for the motor 2 V/f pattern.	Determined by E3-01 (0.0 - E3-04)

■ E3-10: Motor 2 Minimum Output Voltage

No. (Hex.)	Name	Description	Default (Range)
E3-10 (0320)	Motor 2 Minimum Output Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum output voltage for the motor 2 V/f pattern.	Determined by E3-01 (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)

■ E3-11: Motor 2 Mid Point B Frequency

No. (Hex.)	Name	Description	Default (Range)
E3-11 (0345) Expert	Motor 2 Mid Point B Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output frequency for the motor 2 V/f pattern. Set this parameter to adjust the V/f pattern for the constant output range. Usually it is not necessary to change this parameter.	0.0 Hz (0.0 - E3-04)

Note:

- Set this parameter to 0.0 to disable the function.
- When you initialize the drive, this parameter is reset to the default value.

■ E3-12: Motor 2 Mid Point B Voltage

No. (Hex.)	Name	Description	Default (Range)
E3-12 (0346) Expert	Motor 2 Mid Point B Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets a middle output voltage for the motor 2 V/f pattern. Set this parameter to adjust the V/f pattern for the constant output range. Usually it is not necessary to change this parameter.	0.0 V (200 V Class: 0.0 to 255.0 V; 400 V Class: 0.0 to 510.0 V)

Note:

- Set this parameter to 0.0 to disable the function.
- When you initialize the drive, this parameter is reset to the default value.
- The setting value changes automatically when you do Auto-Tuning (rotational and stationary 1 or 2).

■ E3-13: Motor 2 Base Voltage

No. (Hex.)	Name	Description	Default (Range)
E3-13 (0347) Expert	Motor 2 Base Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base voltage for the motor 2 V/f pattern. Set this parameter to adjust the V/f pattern for the constant output range. Usually it is not necessary to change this parameter.	0.0 V (200 V Class: 0.0 to 255.0 V; 400 V Class: 0.0 to 510.0 V)

Note:

- When you initialize the drive, this parameter is reset to the default value.
- The setting value changes automatically when you do Auto-Tuning (rotational and stationary 1 or 2).

◆ E4: Motor 2 Parameters

E4 parameters [Motor 2 Parameters] set induction motor data. To switch drive operation from one motor to a different motor, configure motor 2.

Auto-Tuning automatically sets the *E4 parameters* to the best values for the application. If you cannot do Auto-Tuning, set the *E4 parameters* manually.

Note:

E3-xx and *E4-xx* are available when *H1-xx* = 16 [*MFDI Function Select* = *Motor 2 Selection*].

■ E4-01: Motor 2 Rated Current

No. (Hex.)	Name	Description	Default (Range)
E4-01 (0321)	Motor 2 Rated Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated current for motor 2 in amps.	Determined by o2-04, C6-01 (10% to 200% of the drive rated current)

Note:

- If $E4-01 \leq E4-03$ [*Motor 2 Rated No-Load Current*], the drive will detect oPE02 [*Parameter Range Setting Error*].
- When the drive model changes, the display units for this parameter also change.
 - 0.01 A: B001 - B018, 2001 - 2042, 4001 - 4023
 - 0.1 A: 2056 - 2082, 4031 - 4060

The value set for *E4-01* becomes the reference value for motor protection, the torque limit, and torque control. Enter the motor rated current written on the motor nameplate. Auto-Tuning automatically sets the value of *E4-01* to the value input for [Motor Rated Current].

■ E4-02: Motor 2 Rated Slip

No. (Hex.)	Name	Description	Default (Range)
E4-02 (0322)	Motor 2 Rated Slip	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated slip for motor 2.	Determined by o2-04, C6-01 (0.000 - 20.000 Hz)

The value set in *E4-02* becomes the base slip compensation value. The drive sets this parameter during Rotational Auto-Tuning and Stationary Auto-Tuning. If you cannot do Auto-Tuning, use the information written on the motor nameplate and this formula to calculate the motor rated slip:

$$E4-02 = f - (n \times p) / 120$$

- f: Motor rated frequency (Hz)
- n: Rated motor speed (min^{-1} (r/min))
- p: Number of motor poles

■ E4-03: Motor 2 Rated No-Load Current

No. (Hex.)	Name	Description	Default (Range)
E4-03 (0323)	Motor 2 Rated No-Load Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the no-load current for motor 2 in amps when operating at the rated frequency and the no-load voltage.	Determined by o2-04, C6-01 (0 to E4-01)

Note:

When the drive model changes, the display units for this parameter also change.

- 0.01 A: B001 - B018, 2001 - 2042, 4001 - 4023
- 0.1 A: 2056 - 2082, 4031 - 4060

You can also manually enter the motor no-load current shown on the motor test report to *E4-03*. Contact the motor manufacturer for the motor test report.

Note:

The default setting of the no-load current is for a 4-pole motor recommended by Yaskawa.

■ E4-04: Motor 2 Motor Poles

No. (Hex.)	Name	Description	Default (Range)
E4-04 (0324)	Motor 2 Motor Poles	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of poles for motor 2.	4 (2 - 120)

Auto-Tuning automatically sets *E4-04* to the value input for [Number of Motor Poles].

■ E4-05: Motor 2 Line-to-Line Resistance

No. (Hex.)	Name	Description	Default (Range)
E4-05 (0325)	Motor 2 Line-to-Line Resistance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the line-to-line resistance for the motor 2 stator windings.	Determined by o2-04, C6-01 (0.000 - 65.000 Ω)

Note:

This value is the line-to-line resistance for motor 2. Do not set this parameter with the resistance per phase.

Auto-Tuning automatically sets this parameter. If you cannot do Auto-Tuning, use the test report from the motor manufacturer to configure the settings. To calculate the motor line-to-line resistance, use the information shown on the motor nameplate with one of these formulas:

- E-type insulation: [the resistance value (Ω) shown on the test report at 75 °C] $\times$ 0.822
- B-type insulation: [the resistance value (Ω) shown on the test report at 75 °C] $\times$ 0.822
- F-type insulation: [the resistance value (Ω) shown on the test report at 115 °C] $\times$ 0.728

■ E4-06: Motor 2 Leakage Inductance

No. (Hex.)	Name	Description	Default (Range)
E4-06 (0326)	Motor 2 Leakage Inductance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage drop from motor 2 leakage inductance as a percentage of Motor Rated Voltage when motor 2 operates at the rated frequency and rated current.	Determined by o2-04, C6-01 (0.0 - 60.0%)

The drive sets this parameter during Rotational Auto-Tuning and Stationary Auto-Tuning.

Note:

You cannot usually find the quantity of voltage drop on the motor nameplate. If you do not know the value of the motor 2 leakage inductance, get the test report from the motor manufacturer.

■ E4-07: Motor 2 Saturation Coefficient 1

No. (Hex.)	Name	Description	Default (Range)
E4-07 (0343)	Motor 2 Saturation Coefficient 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor 2 iron-core saturation coefficient at 50% of the magnetic flux.	0.50 (0.00 - 0.50)

The drive sets this parameter during Rotational Auto-Tuning. The drive uses this value when it operates the motor in the constant output range.

■ E4-08: Motor 2 Saturation Coefficient 2

No. (Hex.)	Name	Description	Default (Range)
E4-08 (0344)	Motor 2 Saturation Coefficient 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor 2 iron-core saturation coefficient at 75% of the magnetic flux.	0.75 (E4-07 - 0.75)

The drive sets this parameter during Rotational Auto-Tuning. The drive uses this value when it operates the motor in the constant output range.

■ E4-09: Motor 2 Mechanical Loss

No. (Hex.)	Name	Description	Default (Range)
E4-09 (033F) Expert	Motor 2 Mechanical Loss	V/f OLV OLV/PM AOLV/PM EZOLV Sets the mechanical loss of motor 2. It is set as a percentage of <i>E4-11 [Motor 2 Rated Power]</i> . Usually it is not necessary to change this setting.	0.0% (0.0 - 10.0%)

Adjust this parameter in these conditions. The drive adds the configured mechanical loss to the torque reference value as a torque compensation value:

- There is a large quantity of torque loss from motor bearing friction.
- There is a large quantity of torque loss in fans and pumps.

■ E4-10: Motor 2 Iron Loss

No. (Hex.)	Name	Description	Default (Range)
E4-10 (0340)	Motor 2 Iron Loss	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor iron loss for motor 2.	Determined by o2-04, C6-01 (0 - 65535 W)

■ E4-11: Motor 2 Rated Power

No. (Hex.)	Name	Description	Default (Range)
E4-11 (0327)	Motor 2 Rated Power	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated power in the units from o1-58 [Motor Power Unit Selection].	Determined by o2-04, C6-01 (0.00 - 650.00 HP)

Auto-Tuning automatically sets this parameter to the value input for [Motor Rated Power].

◆ E5: PM Motor Settings

E5 parameters are used to set PM motor data.

Set *E5-01* to the motor code when using PM motors recommended by Yaskawa. *E5* and other related motor parameters will be automatically set to the optimal values.

Perform Auto-Tuning for all other PM motors. If information from motor nameplates or test reports is available, the *E5 parameters* can be manually entered.

Note:

- The keypad shows *E5-xx* only when *A1-02* = 5, 6 [*Control Method Selection* = *OLV/PM*, *AOLV/PM*].
- *E5-xx parameters* are not reset when the drive is initialized using parameter *A1-03* [*Initialize Parameters*].

■ E5-01: PM Motor Code Selection

No. (Hex.)	Name	Description	Default (Range)
E5-01 (0329)	PM Motor Code Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor code for Yaskawa PM motors. The drive uses the motor code to automatically set some parameters to their correct settings.	FFFF (0000 - FFFF)

Note:

- If the drive hunts or shows an alarm after you enter a motor code, use the keypad to enter the value shown on the nameplate to *E5-xx*.
- When you use a PM motor other than a Yaskawa SMRD, SMRA, or SSR1 series, set *E5-01* = *FFFF*.

Figure 12.52 gives information about the motor code setting digits.

Figure 12.52 PM Motor Code

■ E5-02: PM Motor Rated Power

No. (Hex.)	Name	Description	Default (Range)
E5-02 (032A)	PM Motor Rated Power	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor rated output in the units from <i>o1-58</i> [<i>Motor Power Unit Selection</i>].	Determined by <i>o2-04</i> , <i>C6-01</i> (0.10 - 30.00 kW)

These Auto-Tuning methods will automatically set this parameter:

- PM Motor Parameter Settings
- PM Stationary Auto-Tuning
- PM Rotational Auto-Tuning

■ E5-03: Motor Rated Current (FLA)

No. (Hex.)	Name	Description	Default (Range)
E5-03 (032B)	Motor Rated Current (FLA)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor rated current (FLA).	Determined by <i>o2-04</i> , <i>C6-01</i> (10% to 200% of the drive rated current)

Note:

When the drive model changes, the display units for this parameter also change.

- 0.01 A: B001 - B018, 2001 - 2042, 4001 - 4023
- 0.1 A: 2056 - 2082, 4031 - 4060

The drive automatically sets *E5-03* to the value input for *T2-06* [*PM Motor Rated Current*] after you do these types of Auto-Tuning:

12.6 E: Motor Parameters

- PM Motor Parameter Settings
- PM Stationary Auto-Tuning
- PM Stationary Tuning for Stator Resistance
- PM Rotational Auto-Tuning

■ E5-04: PM Motor Pole Count

No. (Hex.)	Name	Description	Default (Range)
E5-04 (032C)	PM Motor Pole Count	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of PM motor poles.	4 (2 - 120)

These types of Auto-Tuning will automatically set this parameter to the value of [Number of Motor Poles]:

- Manual Entry w/ Motor Data Sheet
- PM Stationary Auto-Tuning
- Rotational (Ld, Lq, R, back-EMF)

■ E5-05: PM Motor Resistance (ohms/phase)

No. (Hex.)	Name	Description	Default (Range)
E5-05 (032D)	PM Motor Resistance (ohms/phase)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the resistance per phase of a PM motor. Set 50% of the line-to-line resistance.	0.100 Ω (0.000 - 65.000 Ω)

PM motor Auto-Tuning automatically sets this parameter to the value of [PM Motor Stator Resistance].

Note:

Do not change the setting calculated by Auto-Tuning unless it is necessary.

■ E5-06: PM d-axis Inductance (mH/phase)

No. (Hex.)	Name	Description	Default (Range)
E5-06 (032E)	PM d-axis Inductance (mH/phase)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor d-axis inductance.	1.00 mH (0.00 - 300.00 mH)

PM motor Auto-Tuning automatically sets this parameter to the value of [PM Motor d-Axis Inductance].

Note:

Do not change the setting calculated by Auto-Tuning unless it is necessary.

■ E5-07: PM q-axis Inductance (mH/phase)

No. (Hex.)	Name	Description	Default (Range)
E5-07 (032F)	PM q-axis Inductance (mH/phase)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor q-axis inductance.	1.00 mH (0.00 - 600.00 mH)

PM motor Auto-Tuning automatically sets this parameter to the value of [PM Motor q-Axis Inductance].

Note:

Do not change the setting calculated by Auto-Tuning unless it is necessary.

■ E5-09: PM Back-EMF Vpeak (mV/(rad/s))

No. (Hex.)	Name	Description	Default (Range)
E5-09 (0331)	PM Back-EMF Vpeak (mV/(rad/s))	V/f OLV OLV/PM AOLV/PM EZOLV Sets the peak value of PM motor induced voltage.	0.0 mV/(rad/sec) (0.0 - 2000.0 mV/(rad/s))

Set this parameter when you use an IPM motor (SSR1-Series).

PM motor Auto-Tuning automatically sets this parameter to the value of [Back-EMF Voltage Constant (Ke)].

When *E5-01 = FFFF*, only set *E5-09* or *E5-24 [PM Back-EMF L-L V_{rms} (mV/rpm)]* as the induced voltage constant.

Note:

When you set this parameter, also set $E5-24 = 0.0$. The drive will detect *oPE08* [Parameter Selection Error] in these conditions:

- $E5-09 = 0.0$ and $E5-24 = 0.0$
- $E5-09 \neq 0.0$ and $E5-24 \neq 0.0$

■ E5-24: PM Back-EMF L-L Vrms (mV/rpm)

No. (Hex.)	Name	Description	Default (Range)
E5-24 (0353)	PM Back-EMF L-L Vrms (mV/rpm)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the RMS value for PM motor line voltage.	200 V Class: 100.0 mV/min ⁻¹ 400 V Class: 200.0 mV/min ⁻¹ (0.0 - 6500.0 mV/min ⁻¹)

Set this parameter when you use an SPM motor (SMRD-Series).

PM motor Auto-Tuning automatically sets this parameter to the value of [Back-EMF Voltage Constant (Ke)].

When $E5-01 = FFFF$, only set $E5-09$ [PM Back-EMF V_{peak} (mV/(rad/s))] or $E5-24$ as the induced voltage constant.

Note:

When you set this parameter, also set $E5-09 = 0.0$. The drive will detect *oPE08* [Parameter Selection Error] in these conditions:

- $E5-09 = 0.0$ and $E5-24 = 0.0$
- $E5-09 \neq 0.0$ and $E5-24 \neq 0.0$

■ E5-25: Polarity Estimation Timeout

No. (Hex.)	Name	Description	Default (Range)
E5-25 (035E) Expert	Polarity Estimation Timeout	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that switches polarity for initial polarity estimation. Usually it is not necessary to change this setting.	0 (0, 1)

When “Sd = 1” is shown on the motor nameplate or test report for Yaskawa motors, set this parameter to 1.

0 : Disabled

1 : Enabled

◆ E9: Motor Setting

E9 parameters are used to configure induction motors, PM motors, and SynRM motors. Configure these parameters only for derating torque applications in which a high level of responsiveness and accurate speed control are not required.

E9 parameters are automatically configured with values input by the Auto-Tuning process for motor parameter settings. *E9 parameters* can be manually configured when the EZ Tuning process cannot be performed.

■ E9-01: Motor Type Selection

No. (Hex.)	Name	Description	Default (Range)
E9-01 (11E4)	Motor Type Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of motor.	0 (0 - 2)

EZ Tuning automatically sets this parameter to the value of [Motor Type Selection].

0 : Induction (IM)

1 : Permanent Magnet (PM)

2 : Synchronous Reluctance (SynRM)

■ E9-02: Maximum Speed

No. (Hex.)	Name	Description	Default (Range)
E9-02 (11E5)	Maximum Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum speed of the motor.	Determined by E9-01 (40.0 - 120.0 Hz)

Note:

The unit of measure changes when the setting of *o1-04 [V/f Pattern Display Unit]*.

EZ Tuning automatically sets this parameter to the value of [Motor Max Revolutions].

■ E9-03: Rated Speed

No. (Hex.)	Name	Description	Default (Range)
E9-03 (11E6)	Rated Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated rotation speed of the motor.	Determined by E9-01 (100 - 7200 min ⁻¹)

EZ Tuning automatically sets this parameter to the value of [Rated Speed].

Note:

Set *E9-01 = 0 [Motor Type Selection = Induction (IM)]* before you set this parameter.

■ E9-04: Base Frequency

No. (Hex.)	Name	Description	Default (Range)
E9-04 (11E7)	Base Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated frequency of the motor.	Determined by E9-01 (40.0 - 120.0 Hz)

Note:

The unit of measure changes when the setting of *o1-04 [V/f Pattern Display Unit]*.

EZ Tuning automatically sets this parameter to the value of [Base Frequency].

■ E9-05: Base Voltage

No. (Hex.)	Name	Description	Default (Range)
E9-05 (11E8)	Motor Rated Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated voltage of the motor.	200 V Class: 230.0 V, 400 V Class: 460.0 V (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)

EZ Tuning automatically sets this parameter to the value of [Base Voltage].

■ E9-06: Motor Rated Current (FLA)

No. (Hex.)	Name	Description	Default (Range)
E9-06 (11E9)	Motor Rated Current (FLA)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated current in amps.	Determined by E9-01 and o2-04 (10% to 200% of the drive rated current)

Note:

When the drive model changes, the display units for this parameter also change.

- 0.01 A: B001 to B018, 2001 to 2042, 4001 to 4023
- 0.1 A: 2056 to 2082, 4031 to 4060

The setting value of *E9-06* is the reference value for motor protection. Enter the motor rated current written on the motor nameplate. Auto-Tuning the drive will automatically set *E9-06* to the value input for *T4-07 [Motor Rated Current]*.

■ E9-07: Motor Rated Power

No. (Hex.)	Name	Description	Default (Range)
E9-07 (11EA)	Motor Rated Power	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated output in the units from o1-58 [Motor Power Unit Selection].	Determined by E9-02 and o2-04 (0.00 - 650.00 kW)

Auto-Tuning automatically sets this parameter to the value of [Motor Rated Power (kW)].

■ E9-08: Motor Pole Count

No. (Hex.)	Name	Description	Default (Range)
E9-08 (11EB)	Motor Pole Count	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of motor poles.	4 (2 to 120)

Auto-Tuning automatically sets this parameter to the value of [Number of Motor Poles].

■ E9-09: Motor Rated Slip

No. (Hex.)	Name	Description	Default (Range)
E9-09 (11EC)	Motor Rated Slip	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated slip.	0.000 Hz (0.000 - 20.000 Hz)

The setting value of this parameter is the slip compensation reference value.

The drive uses the setting values of E9-03, E9-04, and E9-08 to calculate this parameter. When Motor Rated Slip = 0, Auto-Tuning automatically sets this parameter to the value of [Motor Rated Slip].

Note:

Set E9-01 = 0 [Motor Type Selection = Induction (IM)] before you set this parameter.

■ E9-10: Motor Line-to-Line Resistance

No. (Hex.)	Name	Description	Default (Range)
E9-10 (11ED)	Motor Line-to-Line Resistance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the line-to-line resistance for the motor stator windings.	Determined by o2-04 (0.000 - 65.000 Ω)

Note:

This value is the motor line-to-line resistance. Do not set this parameter with the resistance per phase.

Stationary Auto-Tuning automatically sets this parameter. If you cannot do Stationary Auto-Tuning, use the test report from the motor manufacturer. Use one of these formulas to calculate the motor line-to-line resistance:

- E-type insulation: [the resistance value (Ω) shown on the test report at 75 °C] × 0.822
- B-type insulation: [the resistance value (Ω) shown on the test report at 75 °C] × 0.822
- F-type insulation: [the resistance value (Ω) shown on the test report at 115 °C] × 0.728

12.7 F: Ethernet

F parameters set field bus communication.

◆ F1: Fault Detection in PG Speed Control

F1 parameters set the fault detection function in Speed Feedback (V/F Control).

⚠ WARNING Sudden Movement Hazard

Do test runs and examine the drive to make sure that the command references are correct. If you set the command reference incorrectly, it can cause damage to the drive or serious injury or death.

⚠ WARNING Sudden Movement Hazard

Make sure that the host controller circuitry has correct safety design that will let you keep control of the motor if the drive loses speed feedback. If you do not have control of the motor, it can cause serious injury or death.

■ F1-04: Speed Deviation Detection Select

No. (Hex.)	Name	Description	Default (Range)
F1-04 (0383)	Speed Deviation Detection Select	V/f OLV OLV/PM AOV/PM EZOLV Sets the method to stop the motor or let the motor continue to operate when the drive detects <i>dEv</i> [Speed Deviation].	3 (0 - 3)

When the difference between the frequency reference and the motor speed is more than the value set in *F1-10* [Speed Deviation Detection Level] for longer than the time set in *F1-11* [Speed Deviation Detect DelayTime], it will trigger *dEv*.

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault* [*H2-01* to *H2-03* = *E*] activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault* [*H2-01* to *H2-03* = *E*] activates.

2 : Fast Stop (Use C1-09)

The drive stops the motor in the deceleration time set in *C1-09* [Fast Stop Time]. The output terminal set for *Fault* [*H2-01* to *H2-03* = *E*] activates.

3 : Alarm Only

The keypad shows *dEv* and the drive continues operation. Only use this setting in special conditions to prevent damage to the motor and machinery. The output terminal set to *Alarm* [*H2-01* to *H2-03* = *10*] activates.

■ F1-08: Overspeed Detection Level

No. (Hex.)	Name	Description	Default (Range)
F1-08 (0387)	Overspeed Detection Level	V/f OLV OLV/PM AOV/PM EZOLV Sets the detection level of <i>oS</i> [Overspeed] as a percentage when the maximum output frequency is 100%.	115% (0 - 120%)

When the motor speed is more than the value set in *F1-08* for longer than the time set in *F1-09* [Overspeed Detection Delay Time], the drive will detect *oS*.

■ F1-09: Overspeed Detection Delay Time

No. (Hex.)	Name	Description	Default (Range)
F1-09 (0388)	Overspeed Detection Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the speed feedback must be more than the <i>F1-08</i> level to cause <i>oS</i> [<i>Overspeed</i>].	Determined by A1-02 (0.0 - 2.0 s)

When the motor speed is more than the value set in *F1-08* [*Overspeed Detection Level*] for longer than the time set in *F1-09*, the drive will detect *oS*.

■ F1-10: Speed Deviation Detection Level

No. (Hex.)	Name	Description	Default (Range)
F1-10 (0389)	Speed Deviation Detection Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level of <i>dEv</i> [<i>Speed Deviation</i>] as a percentage when the maximum output frequency is 100%.	10% (0 - 50%)

When the speed deviation between the frequency reference and the actual motor speed is more than the value set in *F1-10* for longer than the time set in *F1-11* [*Speed Deviation Detect DelayTime*], the drive will detect *dEv*.

■ F1-11: Speed Deviation Detect DelayTime

No. (Hex.)	Name	Description	Default (Range)
F1-11 (038A)	Speed Deviation Detect DelayTime	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the difference between the frequency reference and speed feedback must be more than the level in <i>F1-10</i> to cause <i>dEv</i> [<i>Speed Deviation</i>].	0.5 s (0.0 - 10.0 s)

When the speed deviation between the frequency reference and the actual motor speed is more than the value set in *F1-10* [*Speed Deviation Detection Level*] for longer than the time set in *F1-11*, the drive will detect *dEv*.

◆ F6, F7: Ethernet Settings and Ethernet Options

F6 and *F7* parameters set the basic communication settings and method of fault detection for Ethernet communications. The Ethernet communications parameters include common setting parameters and communication protocol-specific parameters.

Table 12.35 lists the parameters that need to be set for each communication protocol.

For more information, refer to the manual for each communication protocol in use.

⚠ WARNING Sudden Movement Hazard

Do test runs and examine the drive to make sure that the command references are correct.

If you set the command reference incorrectly, it can cause damage to the drive or serious injury or death.

Table 12.35 Correspondence Between Communication Protocols and Parameters

Parameter	Modbus TCP/IP	EtherNet/IP	EtherCAT	PROFINET	BACnet/IP	MECHATROLINK-4
F6-01 to F6-03	✓	✓	✓	✓	✓	✓
F6-04	-	-	-	-	-	-
F6-06	✓	✓	✓	✓	-	✓
F6-07, F6-08	✓	✓	✓	✓	✓	✓
F6-10, F6-11	-	-	-	-	-	-
F6-14	✓	✓	✓	✓	✓	-
F6-20	-	-	-	-	-	✓
F6-23 to F6-26	-	-	-	-	-	✓
F6-48, F6-49	-	-	-	-	✓	-

Parameter	Modbus TCP/IP	EtherNet/IP	EtherCAT	PROFINET	BACnet/IP	MECHATROLINK-4
F6-54	-	✓	-	-	-	-
F7-01 to F7-15	✓	✓	-	✓	✓	-
F7-16	✓	✓	-	✓	-	-
F7-17 to F7-22	-	✓	-	-	-	-
F7-23 to F7-42	-	✓	-	✓	-	-
F7-43	-	✓	-	-	-	-
F7-50 to F7-57	-	-	-	-	✓	-
F7-80 to F7-86	-	-	-	-	-	✓

■ F6-01: Communication Error Selection

No. (Hex.)	Name	Description	Default (Range)
F6-01 (03A2)	Communication Error Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method to stop the motor or let the motor continue operating when the drive detects <i>bUS</i> [Ethernet Communication Error].	1 (0 - 5)

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

2 : Fast Stop (Use C1-09)

The drive stops the motor in the deceleration time set in *C1-09* [Fast Stop Time]. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

3 : Alarm Only

The keypad shows *bUS* and the drive continues operation at the current frequency reference.

Note:

Separately prepare safety protection equipment and systems, for example fast stop switches.

The output terminal set to *Alarm* [H2-01 to H2-03 = 10] activates.

4 : Alarm (Run at d1-04)

The keypad shows *bUS* and the drive continues operation at the speed set in *d1-04* [Reference 4].

Note:

Separately prepare safety protection equipment and systems, for example fast stop switches.

5 : Alarm - Ramp Stop

The drive stops the motor during the deceleration time set in *C1-02* [Deceleration Time 1].

After you remove the *bUS* alarm, the motor will accelerate to the previous frequency reference.

■ F6-02: Comm External Fault (EF0) Detect

No. (Hex.)	Name	Description	Default (Range)
F6-02 (03A3)	Comm External Fault (EF0) Detect	V/f OLV OLV/PM AOLV/PM EZOLV Sets the conditions at which <i>EF0</i> [Ethernet External Fault] is detected.	0 (0, 1)

0 : Always Detected

1 : Detected during RUN Only

■ F6-03: Comm External Fault (EF0) Select

No. (Hex.)	Name	Description	Default (Range)
F6-03 (03A4)	Comm External Fault (EF0) Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method to stop the motor or let the motor continue operating when the drive detects <i>EF0</i> [Ethernet External Fault].	1 (0 - 3)

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

2 : Fast Stop (Use C1-09)

The drive stops the motor in the deceleration time set in *C1-09* [Fast Stop Time]. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

3 : Alarm Only

The keypad shows *EF0* and the drive continues operation.

Note:

Separately prepare safety protection equipment and systems, for example fast stop switches.

The output terminal set to *Alarm* [H2-01 to H2-03 = 10] activates.

■ F6-04: bUS Error Detection Time

No. (Hex.)	Name	Description	Default (Range)
F6-04 (03A5)	bUS Error Detection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the delay time for the drive to detect <i>bUS</i> [Ethernet Communication Error].	2.0 s (0.0 - 12.0 s)

■ F6-06: Torque Limit by Comm. Ethernet

No. (Hex.)	Name	Description	Default (Range)
F6-06 (03A7)	Torque Limit by Comm. Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enables and disables the torque reference and torque limit received from Ethernet communication.	0 (0, 1)

0 : Disabled

1 : Enabled

■ F6-07: Multi-Step Ref @ NetRef/ComRef

No. (Hex.)	Name	Description	Default (Range)
F6-07 (03A8)	Multi-Step Ref @ NetRef/ComRef	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enables and disables the multi-step speed reference when the frequency reference source is NetRef or ComRef (Ethernet communications).	1 (0, 1)

0 : Disable Multi-Step References

When NetRef or ComRef are the frequency reference source, the multi-step speed reference (2-step speed to 16-step speed references) and the Jog Frequency Reference (JOG command) are disabled.

1 : Enable Multi-Step References

When NetRef or ComRef are the frequency reference source, the multi-step speed reference (2-step speed through 16-step speed references) and the Jog Frequency Reference (JOG command) are enabled, and you can change the frequency reference.

■ F6-08: Comm Parameter Reset @Initialize

No. (Hex.)	Name	Description	Default (Range)
F6-08 (036A)	Comm Parameter Reset @Initialize	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to initialize <i>F6-xx</i> and <i>F7-xx</i> parameters when the drive is initialized with <i>A1-03</i> [Initialize Parameters].	0 (0, 1)

0 : No Reset - Parameters Retained

1 : Reset Back to Factory Default

Note:

When you use *A1-03* to initialize the drive, this setting will not change.

■ F6-14: BUS Error Auto Reset

No. (Hex.)	Name	Description	Default (Range)
F6-14 (03BB)	BUS Error Auto Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the automatic reset function for <i>BUS</i> [Ethernet Communication Error].	0 (0, 1)

0 : Disabled

1 : Enabled

■ F6-15: Ethernet Parameters

No. (Hex.)	Name	Description	Default (Range)
F6-15 (0B5B)	Ethernet Parameters	V/f OLV OLV/PM AOLV/PM EZOLV Sets the update method when you change <i>F6-xx</i> [Ethernet Settings], <i>F7-xx</i> [Ethernet Options].	0 (0 - 2)

Note:

- Set *F6-15* = 0, 1 to reload *F6-xx*, *F7-xx*.
- Set *F6-15* = 0, 1 to reset the display on the keypad to 0.
- If an unsupported communication protocol is active and you set *F6-15* = 1 [Reload Now], the drive detects a *CyPo* [Cycle Power to Accept Changes]. Re-energize the drive to update the Ethernet parameters.

0 : Reload at Next Power Cycle

Restart the drive to update parameters.

1 : Reload Now

The changed parameters are updated without restarting the drive.

2 : Cancel Reload Request

Cancels *CyPo* [Cycle Power to Accept Changes].

■ F6-20: MECHATROLINK Station Address

No. (Hex.)	Name	Description	Default (Range)
F6-20 (036B)	MECHATROLINK Station Address	V/f OLV OLV/PM AOLV/PM EZOLV Sets the station address for MECHATROLINK communication. Change the parameter then re-energize the drive.	0021 (0000 - FFEF)

Note:

- Re-energize the drive to apply the setting changes.
- Make sure to set a different station address for each device on the network.
- When the station address is 0000, the drive uses the station address from the last cyclic communication. If this is the first cyclic communication, the drive uses station address 0021.

■ F6-23: MECHATROLINK Monitor Select (E)

No. (Hex.)	Name	Description	Default (Range)
F6-23 (036E)	MECHATROLINK Monitor Select (E)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register used for the monitor functions of INV_CTL (Inverter Operation Control Command), INV_CTL_EX (Extended Inverter Operation Control Command), and INV_I/O (Inverter I/O Control Command). Restart the drive after you change the parameter setting.	0000 (0000 - FFFF)

To enable the Modbus register set in *F6-23*, set SEL_MON2/1 to 0EH or set SEL_MON3/4 and SEL_MON 5/6 to 0EH. Bytes of the response data enable the Modbus register content that was set in *F6-23*.

■ F6-24: MECHATROLINK Monitor Select (F)

No. (Hex.)	Name	Description	Default (Range)
F6-24 (036F)	MECHATROLINK Monitor Select (F)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register used for the monitor functions of INV_CTL (Inverter Operation Control Command), INV_CTL_EX (Extended Inverter Operation Control Command), and INV_I/O (Inverter I/O Control Command). Restart the drive after you change the parameter setting.	0000 (0000 - FFFF)

To enable the Modbus register set in *F6-24*, set SEL_MON2/1 to 0FH or set SEL_MON3/4 and SEL_MON 5/6 to 0FH. Bytes of the response data enable the Modbus register content that was set *F6-24*.

■ F6-25: MECHATROLINK Watchdog Error Sel

No. (Hex.)	Name	Description	Default (Range)
F6-25 (03C9)	MECHATROLINK Watchdog Error Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method to stop the motor or let the motor continue operating when the drive detects <i>E5</i> [MECHATROLINK Watchdog Timer Err].	1 (0 - 3)

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

2 : Fast Stop (Use C1-09)

The drive stops the motor in the deceleration time set in *C1-09* [Fast Stop Time]. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

3 : Alarm Only

The keypad shows *E5*, and the drive continues to operate.

Note:

Separately prepare safety protection equipment and systems, for example fast stop switches.

The output terminal set to *Alarm* [H2-01 to H2-03 = 10] activates.

■ F6-26: MECHATROLINK Allowable No of Err

No. (Hex.)	Name	Description	Default (Range)
F6-26 (03CA)	MECHATROLINK Allowable No of Err	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of times that the drive must detect a <i>bUS</i> alarm to cause a <i>bUS</i> [Ethernet Communication Error].	2 (2 - 10 times)

■ F6-48: BACnet Device Object Identifier0

No. (Hex.)	Name	Description	Default (Range)
F6-48 (02FE)	BACnet Device Object Identifier0	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Instance Identifier of the BACnet Device Object, where the <i>F6-48</i> value is the least significant word.	0 (0 - FFFF (Hex.))

■ F6-49: BACnet Device Object Identifier¹

No. (Hex.)	Name	Description	Default (Range)
F6-49 (02FF)	BACnet Device Object Identifier ¹	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the Instance Identifier of the BACnet Device Object, where the <i>F6-49</i> value is the most significant word.	0 (0 - 3F(Hex.))

■ F6-54: Net Idle Fault Detection

No. (Hex.)	Name	Description	Default (Range)
F6-54 (03C5)	Net Idle Fault Detection	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the drive operation when EtherNet/IP communication is in Idle Mode.	0 (0 - 4)

Note:

- Change the parameter then cycle power on the drive.
- When you set *F6-54* = 2, use *F6-01* to select drive operation to stop or continue.

0 : Enabled

1 : Disabled, No Fault Detection

This will not trigger *EF0*.

2 : Vendor Specific

3 : RUN Forward

4 : RUN Reverse

■ F7-01: IP Address 1

No. (Hex.)	Name	Description	Default (Range)
F7-01 (03E5)	IP Address 1	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the first octet of the IP Address for the device that is connecting to the network. Restart the drive after you change this parameter.	192 (0 - 255)

Note:

When *F7-13* = 0 [*Address Mode at Startup* = *Static*]:

- Use parameters *F7-01* to *F7-04* [*IP Address 1* to *4*] to set the IP Address. Be sure to set a different IP address for each drive on the network.
- Also set parameters *F7-05* to *F7-12* [*Subnet Mask 1* to *4*, *Gateway Address 1* to *4*].

■ F7-02: IP Address 2

No. (Hex.)	Name	Description	Default (Range)
F7-02 (03E6)	IP Address 2	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the second octet of the IP Address for the device that is connecting to the network. Restart the drive after you change this parameter.	168 (0 - 255)

Note:

When *F7-13* = 0 [*Address Mode at Startup* = *Static*]:

- Use parameters *F7-01* to *F7-04* [*IP Address 1* to *4*] to set the IP Address. Be sure to set a different IP address for each drive on the network.
- Also set parameters *F7-05* to *F7-12* [*Subnet Mask 1* to *4*, *Gateway Address 1* to *4*].

■ F7-03: IP Address 3

No. (Hex.)	Name	Description	Default (Range)
F7-03 (03E7)	IP Address 3	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the third octet of the IP Address for the device that is connecting to the network. Restart the drive after you change this parameter.	1 (0 - 255)

Note:

When $F7-13 = 0$ [Address Mode at Startup = Static]:

- Use parameters $F7-01$ to $F7-04$ [IP Address 1 to 4] to set the IP Address. Be sure to set a different IP address for each drive on the network.
- Also set parameters $F7-05$ to $F7-12$ [Subnet Mask 1 to 4, Gateway Address 1 to 4].

F7-04: IP Address 4

No. (Hex.)	Name	Description	Default (Range)
F7-04 (03E8)	IP Address 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the fourth octet of the IP Address for the device that is connecting to the network. Restart the drive after you change this parameter.	20 (0 - 255)

Note:

When $F7-13 = 0$ [Address Mode at Startup = Static]:

- Use parameters $F7-01$ to $F7-04$ [IP Address 1 to 4] to set the IP Address. Be sure to set a different IP address for each drive on the network.
- Also set parameters $F7-05$ to $F7-12$ [Subnet Mask 1 to 4, Gateway Address 1 to 4].

F7-05: Subnet Mask 1

No. (Hex.)	Name	Description	Default (Range)
F7-05 (03E9)	Subnet Mask 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the first octet of the subnet mask of the connected network.	255 (0 - 255)

Note:

Set this parameter when $F7-13 = 0$ [Address Mode at Startup = Static].

F7-06: Subnet Mask 2

No. (Hex.)	Name	Description	Default (Range)
F7-06 (03EA)	Subnet Mask 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second octet of the subnet mask of the connected network.	255 (0 - 255)

Note:

Set this parameter when $F7-13 = 0$ [Address Mode at Startup = Static].

F7-07: Subnet Mask 3

No. (Hex.)	Name	Description	Default (Range)
F7-07 (03EB)	Subnet Mask 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the third octet of the subnet mask of the connected network.	255 (0 - 255)

Note:

Set this parameter when $F7-13 = 0$ [Address Mode at Startup = Static].

F7-08: Subnet Mask 4

No. (Hex.)	Name	Description	Default (Range)
F7-08 (03EC)	Subnet Mask 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the fourth octet of the subnet mask of the connected network.	0 (0 - 255)

Note:

Set this parameter when $F7-13 = 0$ [Address Mode at Startup = Static].

F7-09: Gateway Address 1

No. (Hex.)	Name	Description	Default (Range)
F7-09 (03ED)	Gateway Address 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the first octet of the gateway address of the connected network.	192 (0 - 255)

Note:

Set this parameter when $F7-13 = 0$ [Address Mode at Startup = Static].

■ F7-10: Gateway Address 2

No. (Hex.)	Name	Description	Default (Range)
F7-10 (03EE)	Gateway Address 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second octet of the gateway address of the connected network.	168 (0 - 255)

Note:

Set this parameter when $F7-13 = 0$ [Address Mode at Startup = Static].

■ F7-11: Gateway Address 3

No. (Hex.)	Name	Description	Default (Range)
F7-11 (03EF)	Gateway Address 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the third octet of the gateway address of the connected network.	1 (0 - 255)

Note:

Set this parameter when $F7-13 = 0$ [Address Mode at Startup = Static].

■ F7-12: Gateway Address 4

No. (Hex.)	Name	Description	Default (Range)
F7-12 (03F0)	Gateway Address 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the fourth octet of the gateway address of the connected network.	1 (0 - 255)

Note:

Set this parameter when $F7-13 = 0$ [Address Mode at Startup = Static].

■ F7-13: Address Mode at Startup

No. (Hex.)	Name	Description	Default (Range)
F7-13 (03F1)	Address Mode at Startup	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method to set the Ethernet IP addresses.	2 (0 - 2)

0 : Static

1 : BOOTP

2 : DHCP

Note:

• The following setting values are available when using the PROFINET communication.

–0: Static

–2: DCP

• When $F7-13 = 0$, set parameters $F7-01$ to $F7-12$ [IP Address 1 to Gateway Address 4] to set the IP Address. Be sure to set a different IP address for each drive on the network.

■ F7-14: Duplex Mode Selection

No. (Hex.)	Name	Description	Default (Range)
F7-14 (03F2)	Duplex Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the duplex mode setting method.	1 (0 - 8)

0 : Half/Half

1 : Auto/Auto

2 : Full/Full

3 : Half/Auto

Port 1 is set to “Half” and port 2 is set to “Auto”.

4 : Half/Full

Port 1 is set to “Half” and port 2 is set to “Full”.

5 : Auto/Half

Port 1 is set to “Auto” and port 2 is set to “Half”.

6 : Auto/Full

Port 1 is set to “Auto” and port 2 is set to “Full”.

7 : Full/Half

Port 1 is set to “Full” and port 2 is set to “Half”.

8 : Full/Auto

Port 1 is set to “Full” and port 2 is set to “Auto”.

■ F7-15: Communication Speed Selection

No. (Hex.)	Name	Description	Default (Range)
F7-15 (03F3)	Communication Speed Selection	☐ V/f ☒ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the communications speed.	10 (10, 100 - 102)

10 : 10/10 Mbps

100 : 100/100 Mbps

101 : 10/100 Mbps

102 : 100/10 Mbps

Note:

Set this parameter when $F7-14 = 0$ or 2 [Duplex Mode Selection = Half/Half or Full/Full].

■ F7-16: Timeout Value

No. (Hex.)	Name	Description	Default (Range)
F7-16 (03F4)	Timeout Value	☐ V/f ☒ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the detection time for a communications timeout.	0.0 s (0.0 - 30.0 s)

Note:

Set this parameter to 0.0 to disable the connection timeout function.

■ F7-17: EtherNet/IP Speed Scaling Factor

No. (Hex.)	Name	Description	Default (Range)
F7-17 (03F5)	EtherNet/IP Speed Scaling Factor	☐ V/f ☒ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the scaling factor for the speed monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)

■ F7-18: EtherNet/IP Current Scale Factor

No. (Hex.)	Name	Description	Default (Range)
F7-18 (03F6)	EtherNet/IP Current Scale Factor	☐ V/f ☒ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the scaling factor for the output current monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)

■ F7-19: EtherNet/IP Torque Scale Factor

No. (Hex.)	Name	Description	Default (Range)
F7-19 (03F7)	EtherNet/IP Torque Scale Factor	☐ V/f ☒ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the scaling factor for the torque monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)

■ F7-20: EtherNet/IP Power Scaling Factor

No. (Hex.)	Name	Description	Default (Range)
F7-20 (03F8)	EtherNet/IP Power Scaling Factor	V/f OLV OLV/PM AOLV/PM EZOLV Sets the scaling factor for the power monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)

■ F7-21: EtherNet/IP Voltage Scale Factor

No. (Hex.)	Name	Description	Default (Range)
F7-21 (03F9)	EtherNet/IP Voltage Scale Factor	V/f OLV OLV/PM AOLV/PM EZOLV Sets the scaling factor for the voltage monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)

■ F7-22: EtherNet/IP Time Scaling

No. (Hex.)	Name	Description	Default (Range)
F7-22 (03FA)	EtherNet/IP Time Scaling	V/f OLV OLV/PM AOLV/PM EZOLV Sets the scaling factor for the time monitor in the EtherNet/IP Class ID 2AH Object.	0 (-15 - +15)

■ F7-23 to F7-32: Dynamic Out Param 1 to 10 for Ethernet

No. (Hex.)	Name	Description	Default (Range)
F7-23 to F7-27 (03FB - 03FF) F7-28 to F7-32 (0370 - 0374)	Dynamic Out Param 1 to 10 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV Parameters used in Output Assemblies 116, 117, 118, 119, 120 when you use EtherNet/IP. Each parameter contains a Modbus address. The value received for the Output Assembly will be written to this corresponding Modbus address. A Modbus address value of 0 means that the value received for the Output Assembly will not be written to any Modbus register. When you use PROFINET, set F7-23 to F7-32 to configurable Output 1 - 10.	0

■ F7-33 to F7-42: Dynamic In Param 1 to 10 for Ethernet

No. (Hex.)	Name	Description	Default (Range)
F7-33 to F7-42 (0375 - 037E)	Dynamic In Param 1 to 10 for Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV Parameters used in Input Assemblies 166, 167, 168, 169, 170 when you use EtherNet/IP. Each parameter contains a Modbus address. The value sent for the Input Assembly will be read from this corresponding Modbus address. A Modbus address value of 0 means that the value sent for the Input Assembly is not defined by the user, therefore the EtherNet/IP default register value will be returned. When you use PROFINET, set F7-33 to F7-42 to configurable Inputs 1 - 10.	0

■ F7-43: PLC Cnxn Close Behavior@Run

No. (Hex.)	Name	Description	Default (Range)
F7-43 (1BCE)	PLC Cnxn Close Behavior@Run	V/f OLV OLV/PM AOLV/PM EZOLV Set the operation when an EtherNet/IP Forward Close command (PLC communication disconnection command) is received from the network during operation.	0 (0 - 2)

0 : Continue

1 : Clear RUN Command

2 : bUS Fault (set by F6-01)

■ F7-50: BACnet/IP Port

No. (Hex.)	Name	Description	Default (Range)
F7-50 (1BC1)	BACnet/IP Port	V/f OLV OLV/PM AOLV/PM EZOLV Sets the UDP port on which the drive will receive incoming BACnet messages.	47808 (1024 - 65535)

■ F7-51: BBMD Foreign Register Addr 1

No. (Hex.)	Name	Description	Default (Range)
F7-51 (1BE9)	BBMD Foreign Register Addr 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the first octet of the IP Address of the BACnet Broadcast Management Device (BBMD) to which the drive will register as a foreign device.	0 (0 - 255)

■ F7-52: BBMD Foreign Register Addr 2

No. (Hex.)	Name	Description	Default (Range)
F7-52 (1BEA)	BBMD Foreign Register Addr 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second octet of the IP Address of the BACnet Broadcast Management Device (BBMD) to which the drive will register as a foreign device.	0 (0 - 255)

■ F7-53: BBMD Foreign Register Addr 3

No. (Hex.)	Name	Description	Default (Range)
F7-53 (1BEB)	BBMD Foreign Register Addr 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the third octet of the IP Address of the BACnet Broadcast Management Device (BBMD) to which the drive will register as a foreign device.	0 (0 - 255)

■ F7-54: BBMD Foreign Register Addr 4

No. (Hex.)	Name	Description	Default (Range)
F7-54 (1BEC)	BBMD Foreign Register Addr 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the fourth octet of the IP Address of the BACnet Broadcast Management Device (BBMD) to which the drive will register as a foreign device.	0 (0 - 255)

■ F7-55: BBMD Foreign Port

No. (Hex.)	Name	Description	Default (Range)
F7-55 (1BED)	BBMD Foreign Port #	V/f OLV OLV/PM AOLV/PM EZOLV Sets the UDP port of the BBMD device to which the drive will register.	47808 (1024 - 65535)

■ F7-56: BBMD Foreign Register Time

No. (Hex.)	Name	Description	Default (Range)
F7-56 (1BEE)	BBMD Foreign Register Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time interval in which the drive will repeat BBMD foreign registration.	3600 s (0 - 65535 s)

■ F7-57: BACnet/IP BUS Timeout Value

No. (Hex.)	Name	Description	Default (Range)
F7-57 (1BEF)	BACnet/IP BUS Timeout Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will wait after it receives a Run command or frequency reference command before it detects a bUS fault.	3600 s (0 - 65535 s)

■ F7-80: MECHATROLINK Monitor Select (10)

No. (Hex.)	Name	Description	Default (Range)
F7-80 (0794)	MECHATROLINK Monitor Select (10)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 10H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command).	0000 (0000 - FFFF)

■ F7-81: MECHATROLINK Monitor Select (11)

No. (Hex.)	Name	Description	Default (Range)
F7-81 (0795)	MECHATROLINK Monitor Select (11)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 11H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command).	0000 (0000 - FFFF)

■ F7-82: MECHATROLINK Monitor Select (12)

No. (Hex.)	Name	Description	Default (Range)
F7-82 (0796)	MECHATROLINK Monitor Select (12)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 12H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command).	0000h (0000 - FFFF)

■ F7-83: MECHATROLINK Monitor Select (13)

No. (Hex.)	Name	Description	Default (Range)
F7-83 (0797)	MECHATROLINK Monitor Select (13)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 13H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command).	0000 (0000 - FFFF)

■ F7-84: MECHATROLINK Monitor Select (14)

No. (Hex.)	Name	Description	Default (Range)
F7-84 (0798)	MECHATROLINK Monitor Select (14)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 14H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command).	0000 (0000 - FFFF)

■ F7-85: MECHATROLINK Monitor Select (15)

No. (Hex.)	Name	Description	Default (Range)
F7-85 (0799)	MECHATROLINK Monitor Select (15)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 15H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command).	0000 (0000 - FFFF)

■ F7-86: MECHATROLINK Monitor Select (16)

No. (Hex.)	Name	Description	Default (Range)
F7-86 (079A)	MECHATROLINK Monitor Select (16)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus register that is monitored when 16H is specified to SEL_MON_E1 to SEL_MON_E7 at INV_CTL_EX (Expanded Inverter Operation Control Command).	0000 (0000 - FFFF)

12.8 H: Terminal Function Selection

H parameters set functions for external input and output terminals.

◆ H1: Digital Inputs

H1 Parameters set the MFDI terminal functions.

■ H1-01 to H1-07 Terminal S1 and S2, Ethernet DI3 to DI7 Function Selection

The drive has 7 MFDI terminals. Refer to [Table 12.36](#) for drive default settings and functions.

Table 12.36 MFDI Default Settings and Functions

No.	Name	Default	Function
H1-01	Terminal S1 Function Selection	40	Forward RUN (2-Wire)
H1-02	Terminal S2 Function Selection	41	Reverse RUN (2-Wire)
H1-03	Ethernet DI3 Function Selection	24	External Fault (NO-Always-Coast)
H1-04	Ethernet DI4 Function Selection	14	Fault Reset
H1-05	Ethernet DI5 Function Selection	3	Multi-Step Speed Reference 1
H1-06	Ethernet DI6 Function Selection	4	Multi-Step Speed Reference 2
H1-07	Ethernet DI7 Function Selection	6	Jog Reference Selection

Refer to the [Table 12.37](#) and use *H1-xx [MFDI Function Select]* to set the function.

Table 12.37 MFDI Setting Values

Setting Value	Function	Ref.	Setting Value	Function	Ref.
1	LOCAL/REMOTE Selection	600	19	PID Disable	608
2	External Reference 1/2 Selection	601	1A	Accel/Decel Time Selection 2	608
3	Multi-Step Speed Reference 1	601	1B *2	Programming Lockout	608
4	Multi-Step Speed Reference 2	601	1E	Reference Sample Hold	609
5	Multi-Step Speed Reference 3	601	20 to 2F *1	External Fault	609
6	Jog Reference Selection	602	30	PID Integrator Reset	610
7	Accel/Decel Time Selection 1	602	31	PID Integrator Hold	610
8 *1	Baseblock Command (N.O.)	602	32	Multi-Step Speed Reference 4	610
9 *1	Baseblock Command (N.C.)	602	34	PID Soft Starter Disable	611
A	Accel/Decel Ramp Hold	603	35	PID Input (Error) Invert	611
B	Overheat Alarm (oH2)	603	3E	PID Setpoint Selection 1	611
C	Analog Terminal Enable Selection	603	3F	PID Setpoint Selection 2	611
E	ASR Integral Reset	603	40 *1	Forward RUN (2-Wire)	611
F	Through Mode	603	41 *1	Reverse RUN (2-Wire)	612
10	Up Command	603	42 *1	Run Command (2-Wire Sequence 2)	612
11	Down Command	605	43 *1	FWD/REV (2-Wire Sequence 2)	612
12 *1	Forward Jog	606	44	Add Offset Frequency 1 (d7-03)	612
13 *1	Reverse Jog	606	45	Add Offset Frequency 2 (d7-03)	613
14	Fault Reset	606	46	Add Offset Frequency 3 (d7-03)	613
15 *1	Fast Stop (N.O.)	606	60	DC Injection Braking Command	613
16	Motor 2 Selection	607	61	Speed Search from Fmax	613
17 *1	Fast Stop (N.C.)	607	62	Speed Search from Fref	614
18	Timer Function	608	63	Field Weakening	614

12.8 H: Terminal Function Selection

Setting Value	Function	Ref.
65 ^{*1}	KEB Ride-Thru 1 Activate (N.C.)	614
66 ^{*1}	KEB Ride-Thru 1 Activate (N.O.)	614
68	High Slip Braking (HSB) Activate	614
6A	Drive Enable	615
75	Up 2 Command	615
76	Down 2 Command	616
77	ASR Gain (C5-03) Select	616
78	Analog TorqueRef Polarity Invert	616
7A ^{*1}	KEB Ride-Thru 2 Activate (N.C.)	617

Setting Value	Function	Ref.
7B ^{*1}	KEB Ride-Thru 2 Activate (N.O.)	617
7C ^{*1}	Short Circuit Braking (N.O.)	617
7D ^{*1}	Short Circuit Braking (N.C.)	617
90 to 96 ^{*1}	DWEZ Digital Inputs 1 to 7	618
9F	DWEZ Disable	618
101 - 19F	Inverse Inputs of 1 to 9F Sets the function of the selected MFDI to operate inversely. To select the function for inverse input, enter two digits 01 to 9F for the "xx" in "1xx".	618

*1 Inverse input is not available.

*2 You cannot use H7-01 to H7-04 [Virtual Multi-Function Input 1 to 4] to set this.

■ H1-01: Terminal S1 Function Selection

No. (Hex.)	Name	Description	Default (Range)
H1-01 (0438)	Terminal S1 Function Selection	☐ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the function for MFDI terminal S1.	40 (1 - 1FF)

■ H1-02: Terminal S2 Function Selection

No. (Hex.)	Name	Description	Default (Range)
H1-02 (0439)	Terminal S2 Function Selection	☐ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the function for MFDI terminal S2.	41 (1 - 1FF)

■ H1-03: Ethernet DI3 Function Selection

No. (Hex.)	Name	Description	Default (Range)
H1-03 (0400)	Ethernet DI3 Function Selection	☐ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets MFDI function to set to bit 6 of the MEMOBUS register 0001 (Hex.).	24 (1 - 1FF)

■ H1-04: Ethernet DI4 Function Selection

No. (Hex.)	Name	Description	Default (Range)
H1-04 (0401)	Ethernet DI4 Function Selection	☐ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets MFDI function to set to bit 7 of the MEMOBUS register 0001 (Hex.).	14 (1 - 1FF)

■ H1-05: Ethernet DI5 Function Selection

No. (Hex.)	Name	Description	Default (Range)
H1-05 (0402)	Ethernet DI5 Function Selection	☐ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets MFDI function to set to bit 8 of the MEMOBUS register 0001 (Hex.).	3 (0 - 1FF)

■ H1-06: Ethernet DI6 Function Selection

No. (Hex.)	Name	Description	Default (Range)
H1-06 (0403)	Ethernet DI6 Function Selection	☐ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets MFDI function to set to bit 9 of the MEMOBUS register 0001 (Hex.).	4 (1 - 1FF)

■ H1-07: Ethernet DI7 Function Selection

No. (Hex.)	Name	Description	Default (Range)
H1-07 (0404)	Ethernet DI7 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to bit A of the MEMOBUS register 0001 (Hex.).	6 (1 - 1FF)

■ H1-21: Terminal S1 Function Select 2

No. (Hex.)	Name	Description	Default (Range)
H1-21 (0B70)	Terminal S1 Function Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second function for MFDI terminal S1.	F (1 - 19F)

When MFDI terminal S1 activates, it will operate the function set to *H1-01 [Terminal S1 Function Selection]* and the function set to *H1-21* at the same time.

When the setting value is *F*, the function is disabled.

■ H1-22: Terminal S2 Function Select 2

No. (Hex.)	Name	Description	Default (Range)
H1-22 (0B71)	Terminal S2 Function Select 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second function for MFDI terminal S2.	F (1 - 19F)

When MFDI terminal S2 activates, it will operate the function set to *H1-02 [Terminal S2 Function Selection]* and the function set to *H1-22* at the same time.

When the setting value is *F*, the function is disabled.

■ H1-23: Ethernet DI3 Function Selection2

No. (Hex.)	Name	Description	Default (Range)
H1-23 (0B72)	Ethernet DI3 Function Selection2	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI second function to set to bit 6 of the MEMOBUS register 0001 (Hex.).	F (1 - 19F)

When Ethernet DI3 activates, it will operate the function set to *H1-03 [Ethernet DI3 Function Selection]* and the function set to *H1-23* at the same time.

When the setting value is *F*, the function is disabled.

■ H1-24: Ethernet DI4 Function Selection2

No. (Hex.)	Name	Description	Default (Range)
H1-24 (0B73)	Ethernet DI4 Function Selection2	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI second function to set to bit 7 of the MEMOBUS register 0001 (Hex.).	F (1 - 19F)

When Ethernet DI4 activates, it will operate the function set to *H1-04 [Ethernet DI4 Function Selection]* and the function set to *H1-24* at the same time.

When the setting value is *F*, the function is disabled.

■ H1-25: Ethernet DI5 Function Selection2

No. (Hex.)	Name	Description	Default (Range)
H1-25 (0B74)	Ethernet DI5 Function Selection2	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI second function to set to bit 8 of the MEMOBUS register 0001 (Hex.).	F (1 - 19F)

When Ethernet DI5 activates, it will operate the function set to *H1-05 [Ethernet DI5 Function Selection]* and the function set to *H1-25* at the same time.

When the setting value is *F*, the function is disabled.

■ H1-26: Ethernet DI6 Function Selection2

No. (Hex.)	Name	Description	Default (Range)
H1-26 (0B75)	Ethernet DI6 Function Selection2	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI second function to set to bit 9 of the MEMOBUS register 0001 (Hex.).	F (1 - 19F)

When Ethernet DI6 activates, it will operate the function set to *H1-06 [Ethernet DI6 Function Selection]* and the function set to *H1-26* at the same time.

When the setting value is *F*, the function is disabled.

■ H1-27: Ethernet DI7 Function Selection2

No. (Hex.)	Name	Description	Default (Range)
H1-27 (0B76)	Ethernet DI7 Function Selection2	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI second function to set to bit A of the MEMOBUS register 0001 (Hex.).	F (1 - 19F)

When Ethernet DI7 activates, it will operate the function set to *H1-07 [Ethernet DI7 Function Selection]* and the function set to *H1-27* at the same time.

When the setting value is *F*, the function is disabled.

■ Modbus MFDI 1 to 3 Function Selection

You can set the function for the MFDI to Modbus register *bit 0 to 2* of [*15C0(Hex.)*]. Use *H1-40 to H1-42 [Extend MFDI Function Selection]* to select the bit function for each bit.

Note:

- Refer to [MFDI Setting Values on page 600](#) for more information about MFDI setting values.
- You cannot set values *20 to 2F [External Fault]* for *H1-40 to H1-42*.
- When you will not use *H1-40 to H1-42*, set them to *F [Through Mode]*.

■ H1-40: Mbus Reg 15C0h bit0 Input Func

No. (Hex.)	Name	Description	Default (Range)
H1-40 (0B54)	Mbus Reg 15C0h bit0 Input Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to <i>bit 0</i> of the Modbus register <i>15C0 (Hex.)</i> .	F (1 - 19F)

■ H1-41: Mbus Reg 15C0h bit1 Input Func

No. (Hex.)	Name	Description	Default (Range)
H1-41 (0B55)	Mbus Reg 15C0h bit1 Input Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to <i>bit 1</i> of the Modbus register <i>15C0 (Hex.)</i> .	F (1 - 19F)

■ H1-42: Mbus Reg 15C0h bit2 Input Func

No. (Hex.)	Name	Description	Default (Range)
H1-42 (0B56)	Mbus Reg 15C0h bit2 Input Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets MFDI function to set to <i>bit 2</i> of the Modbus register <i>15C0 (Hex.)</i> .	F (1 - 19F)

◆ MFDI Setting Values

Selects a function set with *H1-01 to H1-42*.

■ 1: LOCAL/REMOTE Selection

Setting Value	Function	Description
1	LOCAL/REMOTE Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive control for the keypad (LOCAL) or an external source (REMOTE).

Note:

- When the MFDI terminal sets the LOCAL/REMOTE selection,  on the keypad is disabled.
- When LOCAL Mode is selected, the green light for  comes on.
- When the Run command is ON, you cannot switch between LOCAL Mode and REMOTE Mode.

ON : LOCAL

The keypad is the Frequency reference source and Run command source.

OFF : REMOTE

The frequency reference and Run command settings are set in *b1-01*, *b1-02* [Frequency Reference Selection 1/2] or *b1-15*, *b1-16* [Run Command Selection 1/2].

■ 2: External Reference 1/2 Selection

Setting Value	Function	Description
2	External Reference 1/2 Selection	     Sets the drive to use Run command source 1/2 or Reference command source 1/2 when in REMOTE Mode.

Note:

The ability to switch the Run command source and frequency reference source depends on the setting of *b1-07* [LOCAL/REMOTE Run Selection].

Table 12.38 Ability to Switch the Run Command Source and Frequency Reference Source when Inputting the Run Command

<i>b1-07</i>	Run command source	Frequency reference source
0 [Disregard Existing RUN Command] (Default)	No	Yes
1 [Accept Existing RUN Command]	Yes	Yes

ON : *b1-15* [Frequency Reference Selection 2], *b1-16* [Run Command Selection 2]

OFF : *b1-01* [Frequency Reference Selection 1], *b1-02* [Run Command Selection 1]

■ 3: Multi-Step Speed Reference 1

Setting Value	Function	Description
3	Multi-Step Speed Reference 1	     Uses speed references <i>d1-01</i> to <i>d1-16</i> to set a multi-step speed reference.

Note:

Refer to [Setting Procedures for Multi-step Speed Operation on page 544](#) for more information.

■ 4: Multi-Step Speed Reference 2

Setting Value	Function	Description
4	Multi-Step Speed Reference 2	     Uses speed references <i>d1-01</i> to <i>d1-16</i> to set a multi-step speed reference.

Note:

Refer to [Setting Procedures for Multi-step Speed Operation on page 544](#) for more information.

■ 5: Multi-Step Speed Reference 3

Setting Value	Function	Description
5	Multi-Step Speed Reference 3	     Uses speed references <i>d1-01</i> to <i>d1-16</i> to set a multi-step speed reference.

Note:

Refer to [Setting Procedures for Multi-step Speed Operation on page 544](#) for more information.

■ 6: Jog Reference Selection

Setting Value	Function	Description
6	Jog Reference Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to use the JOG Frequency Reference (JOG command) set in <i>d1-17</i> . The JOG Frequency Reference (JOG command) overrides <i>Frequency References 1 to 16 (d1-01 to d1-16)</i> .

■ 7: Accel/Decel Time Selection 1

Setting Value	Function	Description
7	Accel/Decel Time Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to use <i>Acceleration/Deceleration Time 1 [C1-01, C1-02]</i> or <i>Acceleration/Deceleration Time 2 [C1-03, C1-04]</i> .

Note:

Refer to [C1: Accel & Decel Time on page 523](#) for more information.

■ 8: Baseblock Command (N.O.)

Setting Value	Function	Description
8	Baseblock Command (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command that stops drive output and coasts the motor to stop when the input is ON.

⚠ WARNING Incorrect Operation

Yaskawa recommends that you use *H1-xx = 9 [Baseblock Command (N.C.)]*.

If a circuit error occurs in the MFDI, the drive cannot stop the output when the terminal set to *H1-xx = 8 [Baseblock Command (N.O.)]* turns ON.

The keypad flashes *bb [Baseblock]*. If you cancel the baseblock command when the Run command is active, the drive will restart the motor and use the speed search function.

Figure 12.53 Baseblock Command Time Chart

ON : Baseblock (drive output stop)

OFF : Normal operation

■ 9: Baseblock Command (N.C.)

Setting Value	Function	Description
9	Baseblock Command (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command that stops drive output and coasts the motor to stop when the input terminal is OFF.

The keypad flashes *bb [Baseblock]*. If you cancel the baseblock command when the Run command is active, the drive will restart the motor and use the speed search function.

ON : Normal operation

OFF : Baseblock (drive output stop)

■ A: Accel/Decel Ramp Hold

Setting Value	Function	Description
A	Accel/Decel Ramp Hold	V/f OLV OLV/PM AOLV/PM EZOLV Momentarily pauses motor acceleration and deceleration when the terminal is turned ON, retains the output frequency that was stored in the drive at the time of the pause, and restarts motor operation.

If the terminal is deactivated, the drive restarts acceleration and deceleration.

When the acceleration/deceleration ramp hold terminal is activated and $d4-01 = 1$ [*Freq Reference Retention Select = Enabled*], the drive will store the output frequency in memory. While the acceleration/deceleration ramp hold command is activated, the drive will always restart the motor at this output frequency.

Note:

Refer to [d4-01: Freq Reference Hold Selection on page 556](#) for more information.

■ B: Overheat Alarm (oH2)

Setting Value	Function	Description
B	Overheat Alarm (oH2)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to show an oH2 [<i>External Overheat (H1-XX=B)</i>] alarm when the input terminal is ON. The alarm does not have an effect on drive operation.

■ C: Analog Terminal Enable Selection

Setting Value	Function	Description
C	Analog Terminal Enable Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command that enables or disables the terminal A1.

ON : Input to the terminal A1 is enabled

OFF : Input to the terminal A1 is disabled

■ E: ASR Integral Reset

Setting Value	Function	Description
E	ASR Integral Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to reset the integral value and use PI control or P control for the speed control loop.

ON : P control

OFF : PI control

■ F: Not Used

Setting Value	Function	Description
F	Not Used	V/f OLV OLV/PM AOLV/PM EZOLV Use this setting for unused terminals or to use terminals in through mode.

Through Mode uses the signal input to the terminal as a digital input for the upper sequence through Ethernet or Modbus communications. This input signal does not have an effect on drive operation.

■ 10: Up Command

Setting Value	Function	Description
10	Up Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to use a push button switch to increase the drive frequency reference. You must also set <i>Setting 11 [Down Command]</i>.

ON : Increases the frequency reference.

OFF : Holds the current frequency reference.

Note:

- If you set only the Up command or only the Down command, the drive will detect *oPE03 [Multi-Function Input Setting Err]*.
- If you set two or more of these functions at the same time, the drive will detect *oPE03*:
 - Up/Down command
 - Accel/Decel Ramp Hold
 - Reference Sample Hold
 - Offset Frequency 1, 2, 3 addition
 - Up/Down 2 Command
- The Up/Down command does not function in these conditions:
 - *b1-01 = 2, 3 [Frequency Reference Selection 1 = Modbus Communications, Ethernet]*
 - *b1-02 ≠ 1 [Run Command Selection 1 ≠ Control Circuit Terminal]*
 - Drive is in LOCAL mode
 - Set to *b1-15 [Frequency Reference Selection 2]* by use of *H1-xx = 2 [MFDI Function Select = External Reference 1/2 Selection]*

When you enter the UP command, the frequency reference increases.

The Up and Down commands have priority over all other frequency references. When you enable the Up/Down command, the drive will ignore these frequency references:

- Frequency reference from Keypad [*b1-01 = 0*]
- Frequency reference from Analog Input [*b1-01 = 1*]

Table 12.39 shows the Up and Down commands with their operation.

Table 12.39 Up Command and Down Command

Command status		Drive operation
Up command (10)	Down command (11)	
OFF	OFF	Keeps the current frequency reference.
ON	OFF	Increases the frequency reference.
OFF	ON	Decreases the frequency reference.
ON	ON	Keeps the current frequency reference.

Combine Frequency Reference Hold Functions and Up/Down Commands

- When you clear the Run command or when *d4-01 = 0 [Freq Reference Hold Selection = Disabled]*, and you restart the drive, the Up/Down command resets to 0.
- When *d4-01 = 1 [Enabled]*, the drive saves the frequency reference set during the Up/Down command. When you cycle the Run command or restart the drive, the drive saves the frequency reference value and restarts the motor at this frequency value. After you clear the Run command, activate the terminal set for the Up command or Down command to set the saved reference value to 0.

Note:

Refer to *d4-01: Freq Reference Hold Selection on page 556* for more information.

Combine Upper/Lower Limits of the Frequency Reference and the Up/Down Commands

Set the upper limit value of the frequency reference to *d2-01 [Frequency Reference Upper Limit]*.

Use an analog input or *d2-02 [Frequency Reference Lower Limit]* to set the lower limit value of the frequency reference. The configurable values change when the setting for *d4-10 [Up/Down Freq Lower Limit Select]* changes. When you input a Run command, these are the lower limits of the frequency reference:

- When the lower limit of the frequency reference is set only for *d2-02*, the drive accelerates the motor to the lower limit value of the frequency reference at the same time that you input the Run command.
- When the lower limit of the frequency reference is set only for analog input, the drive accelerates the motor to the lower limit value of the frequency reference when the Run command, and Up command or Down command for the drive is enabled. When only the Run command is enabled, the motor does not start.
- When these conditions occur, the drive accelerates the motor to the *d2-02* setting value when the Run command is input. When the motor accelerates to the setting value of *d2-02*, if the Up/Down command is enabled, the motor accelerates to the lower limit value of the analog input.
 - The lower limit value of the frequency reference is set for the analog input and *d2-02*
 - The lower limit value of the analog input is higher than the setting value of *d2-02*

Note:

Refer to [d4-01: Freq Reference Hold Selection on page 556](#) for more information.

Figure 12.54 shows an example of how Up/Down command operates. In this example, the lower limit value of the frequency reference is set in *d2-02*. Figure 12.54 shows the time chart when Freq Reference Retention Select [*d4-01*] is enabled and disabled.

Figure 12.54 Up/Down Command Time Chart

11: Down Command

Setting Value	Function	Description
11	Down Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to use a push button switch to decrease the drive frequency reference. You must also set <i>Setting 10 [Up Command]</i>.

ON : Decreases the frequency reference.

OFF : Holds the current frequency reference.

Note:

- If you set only the Up command or only the Down command, the drive will detect *oPE03 [Multi-Function Input Setting Err]*.
- If you set two or more of these functions at the same time, the drive will detect *oPE03*:
 - Up/Down command
 - Accel/Decel Ramp Hold
 - Reference Sample Hold
 - Offset Frequency 1, 2, 3 addition
 - Up/Down 2 Command
- The Up/Down command does not function in these conditions:
 - b1-01 = 2, 3 [Frequency Reference Selection 1 = Modbus Communications, Ethernet]*
 - b1-02 ≠ 1 [Run Command Selection 1 ≠ Control Circuit Terminal]*
 - Drive is in LOCAL mode
 - Set to *b1-15 [Frequency Reference Selection 2]* by use of *H1-xx = 2 [MFDI Function Select = External Reference 1/2 Selection]*

When you enter the UP command, the frequency reference increases. When you enter the Down command, the frequency reference decreases.

The Up and Down commands have priority over all other frequency references. When you enable the Up/Down command, the drive will ignore these frequency references:

- Frequency reference from Keypad [*b1-01 = 0*]
- Frequency reference from Analog Input [*b1-01 = 1*]

12: Forward Jog

Setting Value	Function	Description
12	Forward Jog	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to operate the motor in the forward direction at the Jog Frequency set in <i>d1-17</i> [Jog Reference].

Note:

- It is not necessary to input the Run command.
- The Forward JOG command has priority over all other frequency references.
- When the Forward JOG and Reverse JOG commands are activated at the same time for 500 ms or longer, the drive will ramp to stop.

Figure 12.55 JOG Operation Pattern

13: Reverse Jog

Setting Value	Function	Description
13	Reverse Jog	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to operate the motor in the reverse direction at the Jog Frequency set in <i>d1-17</i> [Jog Reference].

Note:

- It is not necessary to input the Run command.
- The Reverse JOG command has priority over all other frequency references.
- When the Forward JOG and Reverse JOG commands are activated at the same time for 500 ms or longer, the drive will ramp to stop.

14: Fault Reset

Setting Value	Function	Description
14	Fault Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to reset the current fault when the Run command is inactive.

If the drive detects a fault, the drive will activate the fault relay output, turn off the output, and the motor will coast to stop.

If the drive detects a fault for which you can set the stopping method, apply the appropriate Stopping Method. Then push  (RESET) on the keypad to turn the Run command OFF, or activate the fault reset terminal to reset the fault.

Note:

The drive ignores the fault reset command when the Run command is active. Remove the Run command before trying to reset a fault.

15: Fast Stop (N.O.)

Setting Value	Function	Description
15	Fast Stop (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to ramp to stop in the deceleration time set in <i>C1-09</i> [Fast Stop Time] when the input terminal is ON while the drive is operating.

WARNING Incorrect Operation

Yaskawa recommends that you use *H1-xx* = 17 [Fast Stop (N.C.)].

If a circuit error occurs in the MFDI, the drive cannot stop the output when the terminal set to *H1-xx* = 15 [Fast Stop (N.O.)] turns ON.

If you cancel the fast stop input, the drive will not restart the motor until you meet these conditions:

- Fully stop the motor
- Cancel the Run command
- Cancel the fast stop command

Note:

- To use the N.C. switch to input the fast stop command, set $H1-xx = 17$ [*Fast Stop (N.C.)*].
- Refer to [C1-09: Fast Stop Time on page 526](#) for more information.
- Set $C1-09$ [*Fast Stop Time*] to a correct deceleration time. If the deceleration time is too short, it can cause an overvoltage fault, which will not stop the motor from coasting.

16: Motor 2 Selection

Setting Value	Function	Description
16	Motor 2 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command for the drive to operate motor 1 or motor 2. Stop the motors before switching.

You can use an external input to switch operation between two induction motors. The drive will save the control methods, V/f patterns, and motor parameters for the two motors.

ON : Operate motor 2

OFF : Operate motor 1

When you select motor 2, the drive will switch to motor 2 parameters.

Table 12.40 Parameters that Switch between Motor 1 and Motor 2

Parameter	Motor 2 Selection	
	OFF (Motor 1)	ON (Motor 2)
C1-xx [Accel & Decel Time]	C1-01 to C1-04	C1-05 to C1-08
C3-xx [Slip Compensation]	C3-01 to C3-04	C3-21 to C3-24
C4-xx [Torque Compensation]	C4-01	C4-07
C5-xx [Automatic Speed Regulator (ASR)]	C5-01 to C5-08	-
E1-xx, E3-xx [V/f Patterns] E2-xx, E4-xx [Motor Parameters]	E1-xx, E2-xx	E3-xx, E4-xx

Note:

- When you use 2 motors, the drive applies the protective function set in $L1-01$ [*Motor Overload Protection Select*] to motor 1 and motor 2.
- You cannot switch between motors 1 and 2 during run. If you try to switch motors when they are running, it will cause a rUn error.
- You must wait 200 ms minimum to input a Run command.

17: Fast Stop (N.C.)

Setting Value	Function	Description
17	Fast Stop (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to ramp to stop in the deceleration time set in $C1-09$ [<i>Fast Stop Time</i>] when the input terminal is ON while the drive is operating.

If you cancel the fast stop input, the drive will not restart the motor until you meet these conditions:

- Fully stop the motor
- Cancel the Run command
- Cancel the fast stop command

Note:

- To use the N.O. switch to input the fast stop command, set 15 (Fast Stop (N.O.)).
- Refer to [C1-09: Fast Stop Time on page 526](#) for more information.
- Set *C1-09 [Fast Stop Time]* to a correct deceleration time. If the deceleration time is too short, it can cause an overvoltage fault and failure to stop the motor from coasting.

Figure 12.56 shows an example of how fast stop operates.

Figure 12.56 Fast Stop Time Chart

■ 18: Timer Function

Setting Value	Function	Description
18	Timer Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to start the timer function. Use this setting with <i>Timer Output [H2-xx = 12]</i> .

Note:

Refer to [b4: Timer Function on page 499](#) for more information.

■ 19: PID Disable

Setting Value	Function	Description
19	PID Disable	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to disable PID control when <i>b5-01 = 1 to 8 [PID Mode Setting = Enabled]</i> .

ON : PID control disabled

OFF : PID control enabled

■ 1A: Accel/Decel Time Selection 2

Setting Value	Function	Description
1A	Accel/Decel Time Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>H1-xx = 7 [Accel/Decel Time Selection 1]</i> together. Sets the drive to use <i>Acceleration/Deceleration Time 3 [C1-05, C1-06]</i> or <i>Acceleration/Deceleration Time 4 [C1-07, C1-08]</i> .

Note:

Refer to [C1: Accel & Decel Time on page 523](#) for more information.

■ 1B: Programming Lockout

Setting Value	Function	Description
1B	Programming Lockout	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to prevent parameter changes when the terminal is OFF.

You can continue to view parameter setting values when the terminal is *OFF [Parameter Write Prohibit]*.

ON : Programming Lockout

OFF : Parameter Write Prohibit

■ 1E: Reference Sample Hold

Setting Value	Function	Description
1E	Reference Sample Hold	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to sample the frequency reference at terminal A1, and hold the frequency reference at that frequency.

When the terminal is active for 100 ms, this function reads a sample of the analog frequency reference and holds that sample. When you input the sample/hold command again, the function again reads a sample of the analog frequency reference and holds that sample. When you turn off the power, the drive erases the saved analog frequency and resets the frequency reference to 0.

Figure 12.57 shows an example of how the function operates.

Figure 12.57 Reference Sample Hold

You cannot set the Reference Sample Hold function at the same time as these functions:

- $H1-xx = A$ [Accel/Decel Ramp Hold]
- $H1-xx = 10, 11$ [Up Command, Down Command]
- $H1-xx = 44$ to 46 [Add Offset Frequency 1 to 3]
- $H1-xx = 75, 76$ [Up 2 Command, Down 2 Command]

If you set them at the same time, the drive will detect *oPE03* [Multi-Function Input Setting Err].

■ 20 to 2F: External Fault

Setting Value	Function	Description
20 to 2F	External Fault	V/f OLV OLV/PM AOLV/PM EZOLV Sets a command to stop the drive when a failure or fault occurs on an external device.

⚠ WARNING Incorrect Operation

Yaskawa recommends that you use $H1-xx = 21, 23, 25, 27, 29, 2B, 2D, 2F$ [External Fault (N.C.)]. If a circuit error occurs in the MFDI, the drive cannot stop the output when the terminal set to $H1-xx = 20, 22, 24, 26, 28, 2A, 2C, 2E$ [External Fault (N.O.)] turns ON.

If an external fault is input to the drive, the keypad will show EFx [External Fault (Terminal Sx)], where x is the number of the terminal (terminal Sx) to which the external fault signal is assigned. For example, when an external fault signal is input to terminal $S2$, the keypad will show $EF3$ [External Flt(Ethernet Input DI3)].

Use these conditions to select the value to set in $H1-xx$:

- Signal input method from peripheral devices
- External fault detection method
- Motor stopping method (operation after external fault detection)

Table 12.41 shows the relation between the conditions and the value set to $H1-xx$.

Table 12.41 Stopping Methods for External Fault

Setting	Signal Input Method from Peripheral Devices ^{*1}		External Fault Detection Method ^{*2}		Stopping Method			
	N.O.	N.C.	Always Detected	Detected during RUN Only	Ramp to Stop (Fault)	Coast to Stop (Fault)	Fast Stop (Fault)	Continuous Operation (Alarm Only)
20	x	-	x	-	x	-	-	-
21	-	x	x	-	x	-	-	-
22	x	-	-	x	x	-	-	-
23	-	x	-	x	x	-	-	-
24	x	-	x	-	-	x	-	-
25	-	x	x	-	-	x	-	-
26	x	-	-	x	-	x	-	-
27	-	x	-	x	-	x	-	-
28	x	-	x	-	-	-	x	-
29	-	x	x	-	-	-	x	-
2A	x	-	-	x	-	-	x	-
2B	-	x	-	x	-	-	x	-
2C	x	-	x	-	-	-	-	x
2D	-	x	x	-	-	-	-	x
2E	x	-	-	x	-	-	-	x
2F	-	x	-	x	-	-	-	x

*1 Set the terminal to N.O. (detects external fault when switched ON) or N.C. (detects external fault when switched OFF).

*2 Set the drive to always detect each fault or to detect only during run.

30: PID Integrator Reset

Setting Value	Function	Description
30	PID Integrator Reset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to reset and hold the PID control integral to 0 when the terminal is ON.

Note:

Refer to [b5: PID control on page 501](#) for more information.

31: PID Integrator Hold

Setting Value	Function	Description
31	PID Integrator Hold	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to hold the integral value of the PID control while the terminal is activated.

When you turn off the input terminal, PID control restarts the integral.

Note:

Refer to [b5: PID control on page 501](#) for more information.

32: Multi-Step Speed Reference 4

Setting Value	Function	Description
32	Multi-Step Speed Reference ⁴	V/f OLV OLV/PM AOLV/PM EZOLV Uses speed references d1-01 to d1-16 to set a multi-step speed reference.

Note:

Refer to [Setting Procedures for Multi-step Speed Operation on page 544](#) for more information.

34: PID Soft Starter Disable

Setting Value	Function	Description
34	PID Soft Starter Disable	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PID soft starter function.

ON : Disabled

Disables *b5-17 [PID Accel/Decel Time]*.

OFF : Enabled

Enables *b5-17 [PID Accel/Decel Time]*.

Note:

Refer to [b5: PID control on page 501](#) for more information.

35: PID Input (Error) Invert

Setting Value	Function	Description
35	PID Input (Error) Invert	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to turn the terminal ON and OFF to switch the PID input level (polarity).

Note:

Refer to [b5: PID control on page 501](#) for more information.

3E: PID Setpoint Selection 1

Setting Value	Function	Description
3E	PID Setpoint Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>H1-xx = 3F [PID Setpoint Selection 2]</i> together. Sets the function to switch the PID setpoint to <i>b5-58 to b5-60 [PID Setpoint 2 to 4]</i> .

Refer to [b5-58 to b5-60: PID Setpoints 2 to 4 on page 514](#) for more information.

3F: PID Setpoint Selection 2

Setting Value	Function	Description
3F	PID Setpoint Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Set this function and <i>H1-xx = 3E [PID Setpoint Selection 1]</i> at the same time. Sets the function to switch the PID setpoint to <i>b5-58 to b5-60 [PID Setpoint 2 to 4]</i> .

Refer to [b5-58 to b5-60: PID Setpoints 2 to 4 on page 514](#) for more information.

40: Forward RUN (2-Wire)

Setting Value	Function	Description
40	Forward RUN (2-Wire)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Forward Run command for 2-wire sequence 1. Set this function and <i>H1-xx = 41 [Reverse RUN (2-Wire)]</i> together.

ON : Forward Run

OFF : Stop

Note:

- If you turn ON the Forward Run command terminal and the Reverse Run command terminal, it will cause an *EF [FWD/REV Run Command Input Error]* alarm and the motor will ramp to stop.
- Initialize the drive with a 2-wire sequence to set the Forward Run command to terminal S1.
- This function will not operate at the same time as *H1-xx = 42, 43 [Run Command (2-Wire Sequence 2), FWD/REV (2-Wire Sequence 2)]*.

Figure 12.58 2-Wire Sequence Wiring Example

■ 41: Reverse RUN (2-Wire)

Setting Value	Function	Description
41	Reverse RUN (2-Wire)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Forward Run command for 2-wire sequence 1. Set this function and $H1\text{-}xx = 40$ [Forward RUN (2-Wire)] together.

ON : Reverse Run

OFF : Stop

Note:

- If you turn ON the Forward Run command terminal and the Reverse Run command terminal, it will cause an *EF [FWD/REV Run Command Input Error]* alarm and the motor will ramp to stop.
- Initialize the drive with a 2-wire sequence to set the Reverse Run command to terminal S2.
- This function will not operate at the same time as $H1\text{-}xx = 42, 43$ [Run Command (2-Wire Sequence 2), FWD/REV (2-Wire Sequence 2)].

■ 42: Run Command (2-Wire Sequence 2)

Setting Value	Function	Description
42	Run Command (2-Wire Sequence 2)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Run command for 2-wire sequence 2. Set this function and $H1\text{-}xx = 43$ [FWD/REV (2-Wire Sequence 2)] together.

ON : Run

OFF : Stop

Note:

This function will not operate at the same time as $H1\text{-}xx = 40, 41$ [Forward RUN (2-Wire), Reverse RUN (2-Wire)].

■ 43: FWD/REV (2-Wire Sequence 2)

Setting Value	Function	Description
43	FWD/REV (2-Wire Sequence 2)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the direction of motor rotation for 2-wire sequence 2. Set this function and $H1\text{-}xx = 42$ [Run Command (2-Wire Sequence 2)] together.

ON : Reverse Run

OFF : Forward Run

Note:

- You must input the Run command to rotate the motor.
- This function will not operate at the same time as $H1\text{-}xx = 40, 41$ [Forward RUN (2-Wire), Reverse RUN (2-Wire)].

■ 44: Add Offset Frequency 1 (d7-01)

Setting Value	Function	Description
44	Add Offset Frequency 1 (d7-01)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to add the offset frequency set in <i>d7-01 [Offset Frequency 1]</i> to the frequency reference when the terminal activates.

Note:

Refer to *d7: Offset Frequency on page 561* for more information.

45: Add Offset Frequency 2 (d7-02)

Setting Value	Function	Description
45	Add Offset Frequency 2 (d7-02)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to add the offset frequency set in d7-02 [Offset Frequency 2] to the frequency reference when the terminal activates.

Note:

Refer to [d7: Offset Frequency on page 561](#) for more information.

46: Add Offset Frequency 3 (d7-03)

Setting Value	Function	Description
46	Add Offset Frequency 3 (d7-03)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to add the offset frequency set in d7-03 [Offset Frequency 3] to the frequency reference when the terminal activates.

Note:

Refer to [d7: Offset Frequency on page 561](#) for more information.

60: DC Injection Braking Command

Setting Value	Function	Description
60	DC Injection Braking Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to use DC Injection Braking to stop the motor.

If you input the Run command or JOG command, it will cancel DC Injection Braking.

[Figure 12.59](#) shows the time chart of the DC Injection Braking function.

Figure 12.59 DC Injection Braking Time Chart

Note:

- When $A1-02 = 8$ [Control Method Selection = EZOLV], this function is available with a PM motor.
- Refer to [b2: DC Injection Braking and Short Circuit Braking on page 488](#) for more information.

61: Speed Search from Fmax

Setting Value	Function	Description
61	Speed Search from Fmax	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to use an external reference to start speed search although $b3-01 = 0$ [Speed Search Selection at Start = Disabled] to not allow speed search at start.

When the terminal is activated for $b3-24 = 2$ [Speed Search Method Selection = Current Detection 2], the drive starts speed search from the maximum output frequency.

Note:

- The drive will detect $oPE03$ [Multi-Function Input Setting Err] if you set $H1-xx = 61$ and $H1-xx = 62$ at the same time.
- Refer to [b3: Speed Search on page 490](#) for more information.

■ 62: Speed Search from Fref

Setting Value	Function	Description
62	Speed Search from Fref	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to use an external reference to start speed search although $b3-01 = 0$ [Speed Search Selection at Start = Disabled] to not allow speed search at start.

When the terminal is activated for $b3-24 = 2$ [Speed Search Method Selection = Current Detection 2], the drive starts speed search from the frequency reference.

Note:

- The drive will detect *oPE03* [Multi-Function Input Setting Err] if you set $H1-xx = 61$ and $H1-xx = 62$ at the same time.
- Refer to [b3: Speed Search on page 490](#) for more information.

■ 63: Field Weakening

Setting Value	Function	Description
63	Field Weakening	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to send the Field Weakening Level and Field Weakening Frequency Limit commands set in $d6-01$ [Field Weakening Level] and $d6-02$ [Field Weakening Frequency Limit] when the input terminal is activated.

Note:

Refer to [d6: Field Weakening /Forcing on page 560](#) for more information.

■ 65: KEB Ride-Thru 1 Activate (N.C.)

Setting Value	Function	Description
65	KEB Ride-Thru 1 Activate (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation of the KEB1 function through the KEB Ride-Thru 1 (N.C.).

ON : Normal operation

OFF : Deceleration during momentary power loss

When you enable KEB Ride-Thru 1, set $L2-29$ [KEB Method Selection]. The drive operates with the selected KEB method.

Note:

- If you set *KEB Ride-Thru 1* [$H1-xx = 65, 66$] and *KEB Ride-Thru 2* [$H1-xx = 7A, 7B$] at the same time, the drive will detect *oPE03* [Multi-Function Input Setting Err].
- Refer to [KEB Ride-Thru Function on page 664](#) for more information.

■ 66: KEB Ride-Thru 1 Activate (N.O.)

Setting Value	Function	Description
66	KEB Ride-Thru 1 Activate (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation of the KEB1 function through the KEB Ride-Thru 1 (N.O.).

ON : Deceleration during momentary power loss

OFF : Normal operation

When you enable KEB Ride-Thru 1, set $L2-29$ [Kinetic Energy Backup Method]. The drive operates with the selected KEB method.

Note:

- If you set *KEB Ride-Thru 1* [$H1-xx = 65, 66$] and *KEB Ride-Thru 2* [$H1-xx = 7A, 7B$] at the same time, the drive will detect *oPE03* [Multi-Function Input Setting Err].
- Refer to [KEB Ride-Thru Function on page 664](#) for more information.

■ 68: High Slip Braking (HSB) Activate

Setting Value	Function	Description
68	High Slip Braking (HSB) Activate	V/f OLV OLV/PM AOLV/PM EZOLV Sets the command to use high-slip braking to stop the motor.

Note:

- When you restart the drive after you use high-slip braking, make sure that the drive fully stops the motor, then clear the high-slip braking input.
- Refer to [High Slip Braking \(HSB\) on page 708](#) for more information.

■ 6A: Drive Enable

Setting Value	Function	Description
6A	Drive Enable	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to show <i>dnE [Drive Disabled]</i> on the keypad and ignore Run commands when the terminal is OFF.

If you input the Run command before you turn ON the Drive Enable terminal, you must input the Run command again to operate the drive. When you deactivate the terminal set for Drive Enable while the drive is operating, the drive will use the stopping method set in *b1-03 [Stopping Method Selection]* to stop the motor.

ON : Run command is accepted.

OFF : Run command is disabled. When the drive is running, it stops according to *b1-03* setting.

■ 75: Up 2 Command

Setting Value	Function	Description
75	Up 2 Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to increase the frequency reference bias value to accelerate the motor when the terminal is activated. Set this function and <i>H1-xx = 76 [Down 2 Command]</i> together.

When you activate the terminal set for Up2 Command, the bias will increase. When you activate the terminal set for Down 2 Command, the bias will decrease. When you activate or deactivate the two commands, the drive will hold the frequency reference. [Table 12.42](#) gives information about the relation between operation of the Up/Down 2 Command and *d4-01*, *d4-03*, and *4-05*.

Note:

- When you use this function, set the optimal bias limit values with *d4-08* and *d4-09 [Up/Down 2 Bias Upper Limit/Lower Limit]*.
- Refer to [d4: Frequency Ref Up/Down & Hold on page 555](#) for more information.

Table 12.42 Up 2 Command, Down 2 Command

Function	Frequency Reference Source	d4-03	d4-05	d4-01	Operation	Storing the Frequency Reference or Frequency Bias
1	Multi-step speed reference	0.00	0	0	• When the Up 2 Command is active, the drive accelerates the motor (increases the bias value).	Not stored.
2				1	• When the Down 2 Command is active, the drive decelerates the motor (decreases the bias value) • When the Up 2 Command and Down 2 Command are active or not active, the drive holds the output frequency. (holds the bias value). • When the frequency changes, it will reset the bias. • For all other statuses, the drive will follow the frequency reference.	When the bias value and frequency reference are constant for 5 seconds after the frequency reference hold starts, the drive will add the bias value to the enabled frequency reference, then reset.
3				-	• When the Up 2 Command is active, the drive accelerates the motor. • When the Down 2 Command is active, the drive decelerates the motor. • For all other statuses, the drive will follow the frequency reference.	Not stored.
4	Multi-step speed reference	> 0	-	0	• When the Up 2 Command is active, the drive accelerates the motor to "Frequency Reference + <i>d4-03</i>" (the bias value will increase to the value set in <i>d4-03</i>)	Not stored.
5				1	• When the Down 2 Command is active, the drive decelerates the motor to "Frequency Reference - <i>d4-03</i>" (the bias value will decrease to the value set in <i>d4-03</i>). • When the Up 2 Command and Down 2 Command are active or not active, the drive holds the output frequency. (holds the bias value). • When the frequency changes, it will reset the bias. • For all other statuses, the drive will follow the frequency reference.	When the bias value and frequency reference are constant for 5 seconds after the frequency reference hold starts, the drive will add the bias value to the enabled frequency reference, then reset.

12.8 H: Terminal Function Selection

Function	Frequency Reference Source	d4-03	d4-05	d4-01	Operation	Storing the Frequency Reference or Frequency Bias
6	Others (Analog input, transmission)	0	0	0	When the Up 2 Command is active, the drive accelerates the motor (increases the bias value).	Not stored.
7				1	- When the Down 2 Command is active, the drive decelerates the motor (decreases the bias value) - When the Up 2 Command and Down 2 Command are active or not active, the drive holds the output frequency (holds the bias value). - During acceleration or deceleration, when the frequency reference increases or decreases more than <i>d4-07</i>, the drive holds the bias value until the output frequency and the actual frequency reference agree (speed agreement).	When the bias value is constant for 5 seconds after the frequency reference hold starts, the drive will store the bias value in <i>d4-06</i> . You cannot rewrite the frequency reference is not possible. The drive will store only the bias value.
8	Others (Analog input, transmission)	0	1	-	- When the Up 2 Command is active, the drive accelerates the motor (increases the bias value). - When the Down 2 Command is active, the drive decelerates the motor (decreases the bias value) - For all other statuses, the drive will follow the frequency reference.	Not stored.
9		> 0	-	0	When the Up 2 Command is active, the drive accelerates the motor to "Frequency Reference + <i>d4-03</i>" (the bias value will increase to the value set in <i>d4-03</i>)	Not stored.
10				1	- When the Down 2 Command is active, the drive decelerates the motor to "Frequency Reference - <i>d4-03</i>" (the bias value will decrease to the value set in <i>d4-03</i>). - During acceleration or deceleration, when the frequency reference increases or decreases more than <i>d4-07</i>, the drive holds the bias value until the output frequency and the actual frequency reference agree (speed agreement).	When the bias value is constant for 5 seconds after the frequency reference hold starts, the drive will store the bias value in <i>d4-06</i> . You cannot rewrite the frequency reference is not possible. The drive will store only the bias value.

76: Down 2 Command

Setting Value	Function	Description
76	Down 2 Command	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to decrease the frequency reference bias value to decelerate the motor when the terminal is activated. Set this function and <i>H1-xx = 75 [Up 2 Command]</i> together.

When you activate the terminal set for Up2 Command, the bias will increase. When you activate the terminal set for Down 2 Command, the bias will decrease. When you activate or deactivate the two commands, the drive will hold the frequency reference.

Note:

- When you use this function, set the optimal bias limit values with *d4-08* and *d4-09 [Up/Down 2 Bias Upper Limit/Lower Limit]*.
- Refer to [d4: Frequency Ref Up/Down & Hold on page 555](#) for more information.

77: ASR Gain (C5-03) Select

Setting Value	Function	Description
77	ASR Gain (C5-03) Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to switch the ASR proportional gain to <i>C5-01 [ASR Proportional Gain 1]</i> or <i>C5-03 [ASR Proportional Gain 2]</i> .

ON : C5-03

Switches the proportional gain to *C5-03 [ASR Proportional Gain 2]*.

OFF : C5-01

Switches the proportional gain to *C5-01 [ASR Proportional Gain 1]*.

Note:

Refer to [C5: Auto Speed Regulator \(ASR\) on page 535](#) for more information.

78: Analog TorqueLim Polarity Invert

Setting Value	Function	Description
78	Analog TorqueLim Polarity Invert	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rotation direction of the TorqueLimit.

ON : TorqueLimit reverse direction

OFF : TorqueLimit forward direction

■ 7A: KEB Ride-Thru 2 Activate (N.C.)

Setting Value	Function	Description
7A	KEB Ride-Thru 2 Activate (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation of the KEB2 function through the KEB Ride-Thru 2 (N.C.).

ON : Normal operation

OFF : Deceleration during momentary power loss

When KEB Ride-Thru 2 is input, the drive will use Single Drive KEB Ride-Thru 2 for KEB operation. The *L2-29 [KEB Method Selection]* setting will not have an effect.

Note:

- If you set *KEB Ride-Thru 1 [H1-xx = 65, 66]* and *KEB Ride-Thru 2 [H1-xx = 7A, 7B]* at the same time, the drive will detect *oPE03 [Multi-Function Input Setting Err]*.
- Refer to [KEB Ride-Thru Function on page 664](#) for more information.

■ 7B: KEB Ride-Thru 2 Activate (N.O.)

Setting Value	Function	Description
7B	KEB Ride-Thru 2 Activate (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation of the KEB2 function through the KEB Ride-Thru 2 (N.O.).

ON : Deceleration during momentary power loss

OFF : Normal operation

When KEB Ride-Thru 2 is input, the drive will use Single Drive KEB Ride-Thru 2 for KEB operation. The *L2-29 [KEB Method Selection]* setting will not have an effect.

Note:

- If you set *KEB Ride-Thru 1 [H1-xx = 65, 66]* and *KEB Ride-Thru 2 [H1-xx = 7A, 7B]* at the same time, the drive will detect *oPE03 [Multi-Function Input Setting Err]*.
- Refer to [KEB Ride-Thru Function on page 664](#) for more information.

■ 7C: Short Circuit Braking (N.O.)

Setting Value	Function	Description
7C	Short Circuit Braking (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation of Short Circuit Braking (N.O.).

⚠ WARNING Incorrect Operation

Yaskawa recommends that you use *H1-xx = 7D [Short Circuit Braking (N.C.)]*.

If a circuit error occurs in the MFDI, the motor can take longer than expected to stop when the terminal set to *H1-xx = 7C [Short Circuit Braking (N.O.)]* turns ON.

The drive will short circuit the three phases of a PM motor to cause braking torque in the spinning motor.

Note:

- When *A1-02 = 8 [Control Method Selection = EZOLV]*, this function is available only when you use a PM motor.
- Refer to [b2: DC Injection Braking and Short Circuit Braking on page 488](#) for more information.

ON : Short Circuit Braking is enabled.

OFF : Normal operation

■ 7D: Short Circuit Braking (N.C.)

Setting Value	Function	Description
7D	Short Circuit Braking (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation of Short Circuit Braking (N.C.).

The drive will short circuit the three phases of a PM motor to cause braking torque in the spinning motor.

Note:

- When $A1-02 = 8$ [Control Method Selection = EZOLV], this function is available only when you use a PM motor.
- Refer to [b2: DC Injection Braking and Short Circuit Braking on page 488](#) for more information.

ON : Normal operation**OFF : Short Circuit Braking is enabled.****■ 90 to 96: DWEZ Digital Inputs 1 to 7**

Setting Value	Function	Description
90 - 96	DWEZ Digital Inputs 1 to 7	V/f OLV OLV/PM AOLV/PM EZOLV Sets digital inputs used with DriveWorksEZ. Refer to the DriveWorksEZ online manual for more information.

Note:

You cannot set values 90 to 96 for inverse output.

■ 9F: DWEZ Disable

Setting Value	Function	Description
9F	DWEZ Disable	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation of the DriveWorksEZ program saved in the drive.

Note:

Set $A1-07 = 2$ [DriveWorksEZ Function Selection = Enabled/Disabled wDigital Input] to use this function.

ON : Disabled**OFF : Enabled****■ 101 to 19F: Inverse Input of 1 to 9F**

Setting Value	Function	Description
101 to 19F	Inverse Input of 1 to 9F	Sets the function of the selected MFDI to operate inversely. To select the function, enter "1xx", where the "xx" is the function setting value.

For example, to use the inverse input of E [ASR Integral Reset], set $H1-xx = 10E$.

Note:

You cannot use inverse input for all functions. Refer to [Table 12.37](#) for more information.

◆ H2: Digital Outputs

$H2$ parameters set the MFDO terminal functions.

■ H2-01 to H2-03 Terminal MA/MB-MC, Ethernet DO1, Ethernet DO2 Function Selection

The drive has four MFDO terminals. [Table 12.43](#) shows the default function settings for the terminals.

Table 12.43 MFDO Terminals Default Function Settings

No.	Name	Default	Function
H2-01	Term MA/MB-MC Function Selection (Contact)	E	Fault
H2-02	Ethernet DO1 Function Selection	0	During Run
H2-03	Ethernet DO2 Function Selection	2	Speed Agree 1

Refer to [Table 12.44](#) to set $H2-xx$ [MFDO Function Select].

Table 12.44 MFDO Setting Values

Setting Value	Function	Reference	Setting Value	Function	Reference
0	During Run	627	4	Frequency Detection 1	629
1	Zero Speed	628	5	Frequency Detection 2	630
2	Speed Agree 1	628	6	Drive Ready	630
3	User-Set Speed Agree 1	629	7	DC Bus Undervoltage	631

Setting Value	Function	Reference	Setting Value	Function	Reference
8	During Baseblock (N.O.)	631	2F	Maintenance Notification	636
9	Frequency Reference from Keypad	631	30	During Torque Limit	637
A	Run Command Source	631	37	During Frequency Output	637
B	Torque Detection 1 (N.O.)	631	38	Drive Enabled	637
C	Frequency Reference Loss	631	39	Watt Hour Pulse Output	637
D	Braking Resistor Fault	632	3C	LOCAL Control Selected	638
E	Fault	632	3D	During Speed Search	638
F *1	Not Used	632	3E	PID Feedback Low	638
10	Alarm	632	3F	PID Feedback High	638
11	Fault Reset Command Active	632	4A	During KEB Ride-Thru	638
12	Timer Output	632	4B	During Short Circuit Braking	638
13	Speed Agree 2	632	4C	During Fast Stop	639
14	User-Set Speed Agree 2	633	4D	oH Pre-Alarm Time Limit	639
15	Frequency Detection 3	633	4E	Braking Transistor Fault (rr)	639
16	Frequency Detection 4	634	4F	Braking Resistor Overheat (rH)	639
17	Torque Detection 1 (N.C.)	634	61	Pole Position Detection Complete	639
18	Torque Detection 2 (N.O.)	634	62	Modbus Reg 1 Status Satisfied	639
19	Torque Detection 2 (N.C.)	635	63	Modbus Reg 2 Status Satisfied	639
1A	During Reverse	635	66	Comparator1	639
1B	During Baseblock (N.C.)	635	67	Comparator2	640
1C	Motor 2 Selection	635	6A	Data Logger Error	640
1E	Executing Auto-Restart	636	90 to 92	DWEZ Digital Output 1 to 3	640
1F	Motor Overload Alarm (oL1)	636	100 to 192	Inverse output of 0 to 92 Sets an inverse output of the function for the MFDO. Put a 1 at the front of the function setting to set inverse output. For example, set 138 for inverse output of 38 [Drive Enabled].	641
20	Drive Overheat Pre-Alarm (oH)	636			
21	Safe Torque OFF	636			
22	Mechanical Weakening Detection	636			

*1 Inverse output is not available.

Extended MFDO1 to MFDO3 Function Selection

You can set MFDO functions to *bit 0 to bit 2* [MEMOBUS MFDO1 to 3] of Modbus register 15E0 (Hex.). Use *H2-40 to H2-42* [Mbus Reg 15E0h bit0 to bit2 Output Func] to select the function.

Figure 12.60 Functional Block Diagram of Modbus Multi-function Output

Table 12.45 Modbus MFDO Registers

Register number (Hex.)	Name	
15E0	bit0	Modbus MFDO 1
	bit1	Modbus MFDO 2
	bit2	Modbus MFDO 3

Note:

- Refer to *MFDO Setting Values on page 627* for more information about MFDO setting values.
- When you do not set functions to *H2-40 to H2-42*, set them to *F*.

■ Output of Logical Operation Results of MFDO

This enables the logical operation results of two MFDOs to be output to one MFDO terminal.

Use H2-60, H2-63, and H2-66 [Term MA,MB,MC Secondary Function, Ethernet DO1 Function Select 2, and Ethernet DO2 Secondary Function2] to set the function of the output signal for which you will perform logical operations.

Use H2-61, H2-64, and H2-67 [Term MA,MB,MC Logical Operation, Ethernet DO1 Logical Operation, and Ethernet DO2 Logical Operation] to set the logical operation.

Figure 12.61 Functional Block Diagram of Logical Operation Output for MFDO 1

Table 12.46 MFDO Logical Operation Table

Logical Operation Selection	Logical Operation Expression	Logical Operation Notation
H2-61, H2-64, H2-67		
0	$A=B=1$	
1	$A=1 \text{ or } B=1$	
2	$A=0 \text{ or } B=0$	
3	$A=B=0$	
4	$A=B$	$A=B$
5	$A \neq B$	
6	$\text{AND}(A, \bar{B})$	
7	$\text{OR}(A, \bar{B})$	
8	-	On

Note:

- If you use the function to output logical calculation results, you cannot set H2-01 to H2-03 = 1xx [Inverse Output of xx]. If you do, the drive will detect oPE33 [Digital Output Selection Error].
- When you do not use H2-60, H2-63, and H2-66, set them to F. The through mode function is not supported.

◆ H2 MFDO Parameters

■ H2-01: Term MA/MB-MC Function Selection

No. (Hex.)	Name	Description	Default (Range)
H2-01 (040B)	Term MA/MB-MC Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function set for MFDO terminal MA-MC or MB-MC.	E (0 - 1FF)

Note:

Set this parameter to F when the terminal is not being used or to use the terminal in through mode.

■ H2-02: Ethernet DO1 Function Selection

No. (Hex.)	Name	Description	Default (Range)
H2-02 (040C)	Ethernet DO1 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the MFDO for bit 1 of Modbus register 002D (Hex.).	0 (0 - 1FF)

Note:

Set this parameter to *F* when the terminal is not being used or to use the terminal in through mode.

■ H2-03: Ethernet DO2 Function Selection

No. (Hex.)	Name	Description	Default (Range)
H2-03 (040D)	Ethernet DO2 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the MFDO for bit 2 of Modbus register 002D (Hex.).	2 (0 - 1FF)

Note:

Set this parameter to *F* when the terminal is not being used or to use the terminal in through mode.

■ H2-06: Watt Hour Output Unit Selection

No. (Hex.)	Name	Description	Default (Range)
H2-06 (0437)	Watt Hour Output Unit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the unit for the output signal when H2-01 to H2-03 = 39 [MFDO Function Selection = Watt Hour Pulse Output].	0 (0 - 4)

This output is input to the Watt hour meter or PLC through a 200 ms pulse signal. The drive triggers a 200 ms pulse each time the KWh data is at the value set in H2-06. This parameter sets the kWh unit for each pulse output.

Figure 12.62 Example MFDO when Configured for Watt Hours

Note:

- When the power value is a negative value (regenerative state), the drive does not count Watt hours.
- When the control power supply to the drive is operating, the drive will keep the Watt hours. If a momentary power loss causes the drive to lose control power, the Watt hour count will reset.

0 : 0.1 kWh units

1 : 1 kWh units

2 : 10 kWh units

3 : 100 kWh units

4 : 1000 kWh units

■ H2-07: Modbus Register 1 Address Select

No. (Hex.)	Name	Description	Default (Range)
H2-07 (0B3A)	Modbus Register 1 Address Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the address of the Modbus register output to the MFDO terminal.	0001 (0001 - 1FFF)

Sets the address of the register that is output to *Modbus Reg 1 Status Satisfied* [H2-01 to H2-03 = 62] and uses the bit in H2-08 [Modbus Register 1 Bit Select].

■ H2-08: Modbus Register 1 Bit Select

No. (Hex.)	Name	Description	Default (Range)
H2-08 (0B3B)	Modbus Register 1 Bit Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bit of the Modbus register output to the MFDO terminal.	0000 (0000 - FFFF)

Sets the bit of the register that is output to *Modbus Reg 1 Status Satisfied* [H2-01 to H2-03 = 62] and uses the address in H2-07 [Modbus Register 1 Address Select].

■ H2-09: Modbus Register 2 Address Select

No. (Hex.)	Name	Description	Default (Range)
H2-09 (0B3C)	Modbus Register 2 Address Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the address of the Modbus register output to the MFDO terminal.	0001 (0001 - 1FFF)

Sets the address of the register that is output to *Modbus Reg 2 Status Satisfied* [H2-01 to H2-03 = 63] and uses the bit in H2-10 [Modbus Register 2 Bit Select].

■ H2-10: Modbus Register 2 Bit Select

No. (Hex.)	Name	Description	Default (Range)
H2-10 (0B3D)	Modbus Register 2 Bit Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bit of the Modbus register output to the MFDO terminal.	0000 (0000 - FFFF)

Sets the bit of the register that is output to *Modbus Reg 2 Status Satisfied* [H2-01 to H2-03 = 63] and uses the address in H2-09 [Modbus Register 2 Address Select].

■ H2-20: Comparator 1 Monitor Selection

No. (Hex.)	Name	Description	Default (Range)
H2-20 (1540)	Comparator 1 Monitor Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor number for comparator 1. Set the x-xx part of the <i>Ux-xx</i> [Monitor]. For example, set H2-20 = 102 to monitor U1-02 [Output Frequency].	102 (000 - 999)

Note:

- For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).
- The configurable monitor changes when the control method changes.

■ H2-21: Comparator 1 Lower Limit

No. (Hex.)	Name	Description	Default (Range)
H2-21 (1541)	Comparator 1 Lower Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit detection level for comparator 1 when the full scale analog output for the monitor selected in H2-20 [Comparator 1 Monitor Selection] is the 100% value.	0.0% (0.0 - 300.0%)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-22: Comparator 1 Upper Limit

No. (Hex.)	Name	Description	Default (Range)
H2-22 (1542)	Comparator 1 Upper Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit detection level for comparator 1 when the full scale analog output for the monitor selected in H2-20 [Comparator 1 Monitor Selection] is the 100% value.	0.0% (0.0 - 300.0%)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-23: Comparator 1 Hysteresis

No. (Hex.)	Name	Description	Default (Range)
H2-23 (1543)	Comparator 1 Hysteresis	V/f OLV OLV/PM AOLV/PM EZOLV Sets the hysteresis level for comparator 1 as a percentage of the full scale analog output for the monitor selected in H2-20 [Comparator 1 Monitor Selection].	0.0% (0.0 - 10.0%)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-24: Comparator 1 On-Delay Time

No. (Hex.)	Name	Description	Default (Range)
H2-24 (1544)	Comparator 1 On-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the on-delay time for comparator 1.	0.0 s (0.0 - 600.0 s)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-25: Comparator 1 Off-Delay Time

No. (Hex.)	Name	Description	Default (Range)
H2-25 (1545)	Comparator 1 Off-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the off-delay time for comparator 1.	0.0 s (0.0 - 600.0 s)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-26: Comparator 2 Monitor Selection

No. (Hex.)	Name	Description	Default (Range)
H2-26 (1546)	Comparator 2 Monitor Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor number for comparator 2. Set the x-xx part of the Ux-xx [Monitor]. For example, set H2-26 = 103 to monitor U1-03 [Output Current].	103 (000 - 999)

Note:

- The configurable monitor changes when the control method changes.
- When you use the terminal in through mode, set this parameter to 000 or 031. You can set the terminal output level from the PLC through Modbus communications Ethernet.
- For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-27: Comparator 2 Lower Limit

No. (Hex.)	Name	Description	Default (Range)
H2-27 (1547)	Comparator 2 Lower Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit detection level for comparator 2 as a percentage of the full scale analog output for the monitor selected in H2-26 [Comparator 2 Monitor Selection].	0.0% (0.0 - 300.0%)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-28: Comparator 2 Upper Limit

No. (Hex.)	Name	Description	Default (Range)
H2-28 (1548)	Comparator 2 Upper Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit detection level for comparator 2 as a percentage of the full scale analog output for the monitor selected in H2-26 [Comparator 2 Monitor Selection].	0.0% (0.0 - 300.0%)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-29: Comparator 2 Hysteresis

No. (Hex.)	Name	Description	Default (Range)
H2-29 (1549)	Comparator 2 Hysteresis	V/f OLV OLV/PM AOLV/PM EZOLV Sets the hysteresis level for comparator 2 as a percentage of the full scale analog output for the monitor selected in H2-26 [Comparator 2 Monitor Selection].	0.0% (0.0 - 10.0%)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-30: Comparator 2 On-Delay Time

No. (Hex.)	Name	Description	Default (Range)
H2-30 (154A)	Comparator 2 On-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the on-delay time for comparator 2.	0.0 s (0.0 - 600.0 s)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-31: Comparator 2 Off-Delay Time

No. (Hex.)	Name	Description	Default (Range)
H2-31 (154B)	Comparator 2 Off-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the off-delay time for comparator 2.	0.0 s (0.0 - 600.0 s)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-32: Comparator 1 Filter Time

No. (Hex.)	Name	Description	Default (Range)
H2-32 (159A)	Comparator 1 Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant that is applied to the primary delay filter used for the analog output of the monitor selected with H2-20 [Comparator 1 Monitor Selection].	0.0s (0.0 - 10.0 s)

Note:

For information on the comparator function, refer to [66: Comparator1 on page 639](#) and [67: Comparator2 on page 640](#).

■ H2-33: Comparator1 Protection Selection

No. (Hex.)	Name	Description	Default (Range)
H2-33 (159B)	Comparator1 Protection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive operation when it detects CPI [Comparator1 Limit Fault].	4 (0 - 4)

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

2 : Fast Stop (Use C1-09)

The drive stops the motor in the deceleration time set in C1-09 [Fast Stop Time]. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

3 : Alarm Only

The keypad shows CPI and the drive continues operation at the current frequency reference.

Note:

The output terminal set to *Alarm* [H2-01 to H2-03 = 10] activates.

4 : Digital Output Only

■ H2-34: Comparator 2 Filter Time

No. (Hex.)	Name	Description	Default (Range)
H2-34 (159C)	Comparator 2 Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant that is applied to the primary delay filter used for the analog output of the monitor selected with H2-26 [Comparator 2 Monitor Selection].	0.0s (0.0 - 10.0 s)

■ H2-35: Comparator2 Protection Selection

No. (Hex.)	Name	Description	Default (Range)
H2-35 (159D)	Comparator2 Protection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive operation when it detects CP2 [Comparator2 Limit Fault].	4 (0 - 4)

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

2 : Fast Stop (Use C1-09)

The drive stops the motor in the deceleration time set in C1-09 [Fast Stop Time]. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

3 : Alarm Only

The keypad shows CP2 and the drive continues operation at the current frequency reference.

Note:

The output terminal set to *Alarm* [H2-01 to H2-03 = 10] activates.

4 : Digital Output Only

■ H2-36: Comparator 1 Ineffective Time

No. (Hex.)	Name	Description	Default (Range)
H2-36 (159E)	Comparator 1 Ineffective Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that CP1 [Comparator1 Limit Fault] is disabled.	0.0 s (0.0 - 1000.0 s)

Note:

- After you enter a Run command and wait for the time set in this parameter, the drive will monitor operation and make sure that it is in the Comparator 1 range until you enter the Stop command.
- When CP1 detection is disabled, the drive will activate the output terminal set for *Comparator 1* [H2-xx = 66].

■ H2-37: Comparator 2 Ineffective Time

No. (Hex.)	Name	Description	Default (Range)
H2-37 (159F)	Comparator 2 Ineffective Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that CP2 [Comparator2 Limit Fault] is disabled.	0.0 s (0.0 - 1000.0 s)

Note:

- After you enter a Run command and wait for the time set in this parameter, the drive will monitor operation and make sure that it is in the Comparator 2 range until you enter the Stop command.
- When CP2 detection is disabled, the drive will activate the output terminal set for *Comparator 2* [H2-xx = 67].

■ H2-40: Mbus Reg 15E0h bit0 Output Func

No. (Hex.)	Name	Description	Default (Range)
H2-40 (0B58)	Mbus Reg 15E0h bit0 Output Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets the MFDO for bit 0 of Modbus register 15E0 (Hex.).	F (0 - 1FF)

■ H2-41: Mbus Reg 15E0h bit1 Output Func

No. (Hex.)	Name	Description	Default (Range)
H2-41 (0B59)	Mbus Reg 15E0h bit1 Output Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets the MFDO for bit 1 of Modbus register 15E0 (Hex.).	F (0 - 1FF)

■ H2-42: Mbus Reg 15E0h bit2 Output Func

No. (Hex.)	Name	Description	Default (Range)
H2-42 (0B5A)	Mbus Reg 15E0h bit2 Output Func	V/f OLV OLV/PM AOLV/PM EZOLV Sets the MFDO for bit 2 of Modbus register 15E0 (Hex.).	F (0 - 1FF)

■ H2-60: Term MA,MB,MC Secondary Function

No. (Hex.)	Name	Description	Default (Range)
H2-60 (1B46) Expert	Term MA,MB,MC Secondary Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second function for terminal MA/MB-MC. Outputs the logical calculation results of the terminals set to functions by <i>H2-01 [Term MA,MB,MC Function Selection]</i> .	F (0 - FF)

■ H2-61: Term MA,MB,MC Logical Operation

No. (Hex.)	Name	Description	Default (Range)
H2-61 (1B47) Expert	Term MA,MB,MC Logical Operation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the logical operation for the functions set in <i>H2-01 [Term MA,MB,MC Function Selection]</i> and <i>H2-60 [Term MA,MB,MC Secondary Function]</i> .	0 (0 - 8)

Note:

Refer to [Output of Logical Operation Results of MFDO on page 620](#) for more information about the relation between parameter settings and logical operations.

■ H2-62: Term MA,MB,MC Minimum ON Time

No. (Hex.)	Name	Description	Default (Range)
H2-62 (1B48) Expert	Term MA,MB,MC Minimum ON Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum ON time that the drive uses to output the logical calculation results from terminal MA/MB-MC.	0.1 s (0.0 - 25.0 s)

■ H2-63: Ethernet DO1 Function Select 2

No. (Hex.)	Name	Description	Default (Range)
H2-63 (1B49) Expert	Ethernet DO1 Function Select 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second function to MFDO for bit 1 of Modbus register 002D (Hex.).	F (0 - FF)

■ H2-64: Ethernet DO1 Logical Operation

No. (Hex.)	Name	Description	Default (Range)
H2-64 (1B4A) Expert	Ethernet DO1 Logical Operation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the logical operation for the functions set in H2-02 [Ethernet DO1 Function Selection] and H2-63 [Ethernet DO1 Function Select 2].	0 (0 - 8)

Note:

Refer to [Output of Logical Operation Results of MFDO on page 620](#) for more information about the relation between parameter settings and logical operations.

■ H2-65: Ethernet DO1 Minimum ON Time

No. (Hex.)	Name	Description	Default (Range)
H2-65 (1B4B) Expert	Ethernet DO1 Minimum ON Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum ON time used to output the logical calculation results from Ethernet DO1.	0.1 s (0.0 - 25.0 s)

■ H2-66: Ethernet DO2 Secondary Function2

No. (Hex.)	Name	Description	Default (Range)
H2-66 (1B4C) Expert	Ethernet DO2 Secondary Function2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the second function to MFDO for bit 2 of Modbus register 002D (Hex.).	F (0 - FF)

■ H2-67: Ethernet DO2 Logical Operation

No. (Hex.)	Name	Description	Default (Range)
H2-67 (1B4D) Expert	Ethernet DO2 Logical Operation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the logical operation for the functions set in H2-03 [Ethernet DO2 Function Selection] and H2-66 [Ethernet DO2 Secondary Function2].	0 (0 - 8)

Note:

Refer to [Output of Logical Operation Results of MFDO on page 620](#) for more information about the relation between parameter settings and logical operations.

■ H2-68: Ethernet DO2 Minimum ON Time

No. (Hex.)	Name	Description	Default (Range)
H2-68 (1B4E) Expert	Ethernet DO2 Minimum ON Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum ON time used to output the logical calculation results from Ethernet DO2.	0.1 s (0.0 - 25.0 s)

◆ MFDO Setting Values

Selects the function configured to MFDO.

■ 0: During Run

Setting Value	Function	Description
0	During Run	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when you input a Run command and when the drive is outputting voltage.

Figure 12.63 Drive Running Time Chart

ON : Drive is running

The drive is receiving a Run command or outputting voltage.

OFF : Drive is stopping

■ 1: Zero Speed

Setting Value	Function	Description
1	Zero Speed	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is less than <i>E1-09 [Minimum Output Frequency]</i> or <i>b2-01 [DC Injection/Zero SpeedThreshold]</i> .

Note:

Parameter *A1-02 [Control Method Selection]* selects which parameter is the reference.

A1-02 Setting	Control Method Selection	Parameter Used as the Reference
0	V/f	<i>E1-09</i>
2	OLV	<i>b2-01</i>
5	OLV/PM	<i>E1-09</i>
6	AOLV/PM	<i>E1-09</i>
8	EZOLV	<i>E1-09</i>

Figure 12.64 Zero Speed Time Chart

ON : Output frequency < value of *E1-09* or *b2-01*.

OFF : Output frequency ≥ value of *E1-09* or *b2-01*.

■ 2: Speed Agree 1

Setting Value	Function	Description
2	Speed Agree 1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is in the range of the frequency reference ± <i>L4-02 [Speed Agree Detection Width]</i> .

Note:

The detection function operates in the two motor rotation directions.

Figure 12.65 Speed Agree 1 Time Chart

ON : The output frequency is in the range of “frequency reference $\pm$ L4-02”.

OFF : The output frequency does not align with the frequency reference although the drive is running.

3: User-Set Speed Agree 1

Setting Value	Function	Description
3	User-Set Speed Agree 1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is in the range of L4-01 [Speed Agree Detection Level] $\pm$ L4-02 [Speed Agree Detection Width] and in the range of the frequency reference $\pm$ L4-02.

Note:

The detection function operates in the two motor rotation directions. The drive uses the L4-01 value as the forward/reverse detection level.

ON : The output frequency is in the range of “L4-01 $\pm$ L4-02” and the range of frequency reference $\pm$ L4-02.

OFF : The output frequency is not in the range of “L4-01 $\pm$ L4-02” nor the range of frequency reference $\pm$ L4-02.

Figure 12.66 User-Defined Speed Agree 1 Time Chart

4: Frequency Detection 1

Setting Value	Function	Description
4	Frequency Detection 1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is higher than the value of L4-01 [Speed Agree Detection Level] + L4-02 [Speed Agree Detection Width]. After the terminal deactivates, the terminal stays deactivated until the output frequency = L4-01.

Note:

The detection function operates in the two motor rotation directions. The drive uses the L4-01 value as the forward/reverse detection level.

ON : The output frequency is less than the value of *L4-01* or does not exceed the value of *L4-01* + *L4-02*.
OFF : The output frequency is higher than the value of *L4-01* + *L4-02*.

Figure 12.67 Frequency Detection 1 Time Chart

Note:

Figure 12.67 shows the result of the configuration when *L4-07* = 1 [*Speed Agree Detection Selection* = *Detection Always Enabled*]. The default setting of *L4-07* is 0 [*No detection during baseblock*]. When the speed agreement detection selection is “No Detection during Baseblock”, the terminal is deactivated when the drive output stops.

■ **5: Frequency Detection 2**

Setting Value	Function	Description
5	Frequency Detection 2	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is higher than the value of <i>L4-01</i> [<i>Speed Agree Detection Level</i>]. After the terminal activates, the terminal stays activated until the output frequency is at the value of <i>L4-01</i> - <i>L4-02</i>.

Note:

The detection function operates in the two motor rotation directions. The drive uses the *L4-01* value as the forward/reverse detection level.

ON : The output frequency is higher than the value of *L4-01*.
OFF : The output frequency is less than the value of “*L4-01* - *L4-02*,” or it is not more than the value of *L4-01*.

Figure 12.68 Frequency Detection 2 Time Chart

■ **6: Drive Ready**

Setting Value	Function	Description
6	Drive Ready	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive is ready and running.

The terminal deactivates in these conditions:

- When the power supply is OFF
- During a fault
- When there is problem with the control power supply
- When there is a parameter setting error and the drive cannot operate although there is a Run command
- When you enter a Run command and it immediately triggers an overvoltage or undervoltage fault because the drive has an overvoltage or undervoltage fault during stop
- When the drive is in Programming Mode and will not accept a Run command

- When the Safe Disable function is active

■ 7: DC Bus Undervoltage

Setting Value	Function	Description
7	DC Bus Undervoltage	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the DC bus voltage or control circuit power supply is at the voltage set in <i>L2-05 [Undervoltage Detection Lvl (Uv1)]</i> or less. The terminal also activates when there is a fault with the DC bus voltage.

ON : The DC bus voltage $\leq L2-05$

OFF : The DC bus voltage $> L2-05$

■ 8: During Baseblock (N.O.)

Setting Value	Function	Description
8	During Baseblock (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates during baseblock. When the drive is in baseblock, the drive output transistor stops switching and does not make DC bus voltage.

ON : During baseblock

OFF : The drive is not in baseblock.

■ 9: Frequency Reference from Keypad

Setting Value	Function	Description
9	Frequency Reference from Keypad	V/f OLV OLV/PM AOLV/PM EZOLV Shows the selected frequency reference source.

ON : The keypad is the frequency reference source.

OFF : *b1-01* or *b1-15 [Frequency Reference Selection 1 or 2]* is the frequency reference source.

■ A: Run Command from Keypad

Setting Value	Function	Description
A	Run Command Source	V/f OLV OLV/PM AOLV/PM EZOLV Shows the selected Run command source.

ON : The keypad is the Run command source.

OFF : *b1-02* or *b1-16 [Run Command Selection 1 or 2]* is the Run command source.

■ B: Torque Detection 1 (N.O.)

Setting Value	Function	Description
B	Torque Detection 1 (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects overtorque or undertorque.

ON : The output current/torque $> L6-02$ [*Torque Detection Level 1*], or the output current/torque $< L6-02$ for longer than the time set in *L6-03 [Torque Detection Time 1]*.

Note:

- When *L6-01* ≥ 5 , the drive will detect when the output current/torque is less than *L6-02* for longer than *L6-03*.
- Refer to [L6: Torque Detection on page 689](#) for more information.

■ C: Frequency Reference Loss

Setting Value	Function	Description
C	Frequency Reference Loss	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects a loss of frequency reference.

Note:

Refer to [L4-05: Fref Loss Detection Selection on page 684](#) for more information.

■ D: Braking Resistor Fault

Setting Value	Function	Description
D	Braking Resistor Fault	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the mounting-type braking resistor is overheating or when there is a braking transistor fault.

■ E: Fault

Setting Value	Function	Description
E	Fault	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects a fault.

Note:

The terminal will not activate for *CPF00* and *CPF01* [Control Circuit Error] faults.

■ F: Not Used

Setting Value	Function	Description
F	Not Used	V/f OLV OLV/PM AOLV/PM EZOLV Use this setting for unused terminals or to use terminals in through mode. Also use this setting as the PLC contact output. This signal does not function if you do not configure signals from the PLC.

■ 10: Alarm

Setting Value	Function	Description
10	Alarm	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects a minor fault.

■ 11: Fault Reset Command Active

Setting Value	Function	Description
11	Fault Reset Command Active	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive receives the Reset command from the control circuit terminal, serial communications, or PLC.

■ 12: Timer Output

Setting Value	Function	Description
12	Timer Output	V/f OLV OLV/PM AOLV/PM EZOLV Sets the terminal as the timer output. Use this setting with the timer input set in <i>H1-xx = 18</i> [MFDI Function Selection = Timer Function].

Note:

Refer to [Timer Function Operation on page 500](#) for more information.

■ 13: Speed Agree 2

Setting Value	Function	Description
13	Speed Agree 2	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is in the range of the frequency reference $\pm L4-04$ [Speed Agree Detection Width (+/-)].

Note:

The detection function operates in the two motor rotation directions.

ON : The output frequency is in the range of “frequency reference $\pm L4-04$ ”.

OFF : The output frequency is not in the range of “frequency reference $\pm L4-04$ ”.

Figure 12.69 Speed Agree 2 Time Chart

14: User-Set Speed Agree 2

Setting Value	Function	Description
14	User-Set Speed Agree 2	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is in the range of $L4-03$ [Speed Agree Detection Level(+/-)] $\pm L4-04$ [Speed Agree Detection Width(+/-)] and in the range of the frequency reference $\pm L4-04$.

Note:

The detection level set with $L4-03$ is a signed value. The drive will only detect in one direction.

ON : The output frequency is in the range of “ $L4-03 \pm L4-04$ ” and the range of frequency reference $\pm L4-04$.

OFF : The output frequency is not in the range of “ $L4-03 \pm L4-04$ ” nor the range of frequency reference $\pm L4-04$.

Figure 12.70 Example of User-set Speed Agree 2 (L4-03 Is Positive)

15: Frequency Detection 3

Setting Value	Function	Description
15	Frequency Detection 3	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the output frequency is more than “ $L4-03$ [Speed Agree Detection Level(+/-)] + $L4-04$ [Speed Agree Detection Width(+/-)]”. After the terminal deactivates, the terminal stays deactivated until the output frequency is at the value of $L4-03$.

Note:

The detection level set with $L4-03$ is a signed value. The drive will only detect in one direction.

ON : The output frequency is less than the value of $L4-03$ or it is not more than the value of $L4-03 + L4-04$.

OFF : The output frequency is higher than the value of $L4-03 + L4-04$.

Figure 12.71 Example of Frequency Detection 3 (value of L4-03 Is Positive)

Note:

Figure 12.71 shows the result of the configuration when $L4-07 = 1$ [Speed Agree Detection Selection = Detection Always Enabled]. The default setting of $L4-07$ is 0 [No detection during baseblock]. When the speed agreement detection selection is “No Detection during Baseblock”, the terminal is deactivated when the drive output stops.

16: Frequency Detection 4

Setting Value	Function	Description
16	Frequency Detection 4	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the output frequency is higher than the value of $L4-03$ [Speed Agree Detection Level(+/-)]. After the terminal activates, the terminal stays activated until the output frequency = $L4-03 - L4-04$.

Note:

The detection level set with $L4-03$ is a signed value. The drive will only detect in one direction.

ON : The output frequency is higher than the value of $L4-03$.

OFF : The output frequency is less than the value of “ $L4-03 - L4-04$,” or it is not more than the value of $L4-03$.

Figure 12.72 Example of Frequency Detection 4 (value of L4-03 Is Positive)

17: Torque Detection 1 (N.C.)

Setting Value	Function	Description
17	Torque Detection 1 (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive detects overtorque or undertorque.

Use the $L6$ [Torque Detection] parameters to set torque detection.

OFF : The output current/torque > $L6-02$ [Torque Detection Level 1], or the output current/torque < $L6-02$ for longer than the time set in $L6-03$ [Torque Detection Time 1].

Note:

- When $L6-01 \geq 5$, the drive will detect when the output current/torque is less than $L6-02$ for longer than $L6-03$.
- Refer to [L6: Torque Detection on page 689](#) for more information.

18: Torque Detection 2 (N.O.)

Setting Value	Function	Description
18	Torque Detection 2 (N.O.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects overtorque or undertorque.

Use the *L6 [Torque Detection]* parameters to set torque detection.

ON : The output current/torque > *L6-05 [Torque Detection Level 2]*, or the output current/torque < *L6-05* for longer than the time set in *L6-06 [Torque Detection Time 2]*.

Note:

- When $L6-04 \geq 5$, the drive will detect when the output current/torque is less than *L6-05* for longer than *L6-06*.
- Refer to [L6: Torque Detection on page 689](#) for more information.

■ 19: Torque Detection 2 (N.C.)

Setting Value	Function	Description
19	Torque Detection 2 (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates when the drive detects overtorque or undertorque.

Use the *L6 [Torque Detection]* parameters to set torque detection.

OFF : The output current/torque > *L6-05 [Torque Detection Level 2]*, or the output current/torque < *L6-05* for longer than the time set in *L6-06 [Torque Detection Time 2]*.

Note:

- When $L6-04 \geq 5$, the drive will detect when the output current/torque is less than *L6-05* for longer than *L6-06*.
- Refer to [L6: Torque Detection on page 689](#) for more information.

■ 1A: During Reverse

Setting Value	Function	Description
1A	During Reverse	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the motor operates in the reverse direction.

ON : The motor is operating in the reverse direction.

OFF : The motor is operating in the forward direction or the motor stopped.

Figure 12.73 Reverse Operation Output Time Chart

■ 1B: During Baseblock (N.C.)

Setting Value	Function	Description
1B	During Baseblock (N.C.)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal deactivates during baseblock. When the drive is in baseblock, the drive output transistor stops switching and does not make DC bus voltage.

ON : The drive is not in baseblock.

OFF : During baseblock

■ 1C: Motor 2 Selected

Setting Value	Function	Description
1C	Motor 2 Selected	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when you select motor 2.

ON : Motor 2 Selected

OFF : Motor 1 Selected

■ 1E: Executing Auto-Restart

Setting Value	Function	Description
1E	Executing Auto-Restart	V/f OLV OLV/IPM AOLV/IPM EZOLV The terminal activates when the Auto Restart function is trying to restart after a fault.

The terminal deactivates when the Auto Restart function automatically resets a fault. The terminal deactivates when the Auto Restart function detects the fault again because there were too many restart attempts as specified by *L5-01 [Number of Auto Restart Attempts]*.

Note:

Refer to *L5: Fault Restart on page 686* for more information.

■ 1F: Motor Overload Alarm (oL1)

Setting Value	Function	Description
1F	Motor Overload Alarm (oL1)	V/f OLV OLV/IPM AOLV/IPM EZOLV The terminal activates when the electronic thermal protection value of the motor overload protective function is a minimum of 90% of the detection level.

Note:

Refer to *L1-01: Motor Overload (oL1) Protection on page 658* for more information.

■ 20: Drive Overheat Pre-Alarm (oH)

Setting Value	Function	Description
20	Drive Overheat Pre-Alarm (oH)	V/f OLV OLV/IPM AOLV/IPM EZOLV The terminal activates when the drive heatsink temperature is at the level set with <i>L8-02 [Overheat Alarm Level]</i>.

Note:

Refer to *L8-02: Overheat Alarm Level on page 698* for more information.

■ 21: Safe Torque OFF

Setting Value	Function	Description
21	Safe Torque OFF	V/f OLV OLV/IPM AOLV/IPM EZOLV The terminal activates (safety stop state) when the safety circuit and safety diagnosis circuit are operating correctly and when terminals H1-HC and H2-HC are OFF (Open).

Note:

EDM = External Device Monitor

ON : Safety stop state

Terminals H1-HC and H2-HC are OFF (Open) (safety stop state).

OFF : Safety circuit fault or RUN/READY

Terminal H1-HC or terminal H2-HC is OFF (Open) (safety circuit fault), or the two terminals are ON or have short circuited (RUN/READY).

■ 22: Mechanical Weakening Detection

Setting Value	Function	Description
22	Mechanical Weakening Detection	V/f OLV OLV/IPM AOLV/IPM EZOLV The terminal activates when the drive detects mechanical weakening.

Note:

Refer to *Mechanical Weakening Detection on page 690* for more information.

■ 2F: Maintenance Notification

Setting Value	Function	Description
2F	Maintenance Notification	V/f OLV OLV/IPM AOLV/IPM EZOLV The terminal activates when drive components are at their estimated maintenance period.

Tells you about the maintenance period for these items:

- IGBT
- Cooling Fan
- Capacitor
- Soft charge bypass relay

Note:

Refer to [Maintenance on page 297](#) for more information.

30: During Torque Limit

Setting Value	Function	Description
30	During Torque Limit	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the torque reference is the torque limit set with <i>L7 parameters</i> or <i>H3-02 [MFAI Function Selection]</i>. When you set <i>L7-42 = 1 [Current Lim Sel = Enabled]</i>, the terminal activates when the current value is at the current limit set in <i>L7-43 [Current Lim Val]</i>.

Note:

Refer to [L7: Torque/Current Limit on page 694](#) for more information.

37: During Frequency Output

Setting Value	Function	Description
37	During Frequency Output	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive outputs frequency.

ON : The drive is outputting frequency.

OFF : The drive is not outputting frequency.

Note:

The terminal deactivates in these conditions:

- During Stop
- During Baseblock
- During DC Injection Braking (initial excitation)
- During Short Circuit Braking
- Pole Position Detection Complete

Figure 12.74 Active Frequency Output Time Chart

38: Drive Enabled

Setting Value	Function	Description
38	Drive Enabled	V/f OLV OLV/PM AOLV/PM EZOLV This terminal activates when the <i>H1-xx = 6A [Drive Enable]</i> terminal activates.

39: Watt Hour Pulse Output

Setting Value	Function	Description
39	Watt Hour Pulse Output	V/f OLV OLV/PM AOLV/PM EZOLV Outputs the pulse that shows the watt hours.

Note:

Refer to [H2-06: Watt Hour Output Unit Selection on page 621](#) for more information.

■ 3C: LOCAL Control Selected

Setting Value	Function	Description
3C	LOCAL Control Selected	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the Run command source or frequency reference source is LOCAL.

ON : LOCAL

The keypad is the Run command source or the frequency reference source.

OFF : REMOTE

The Run command source or frequency reference source is an external source set with *b1-01 [Frequency Reference Selection 1]*, *b1-15 [Frequency Reference Selection 2]*, *b1-02 [Run Command Selection 1]*, or *b1-16 [Run Command Selection 2]*.

■ 3D: During Speed Search

Setting Value	Function	Description
3D	During Speed Search	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive is doing speed search.

Note:

Refer to [b3: Speed Search on page 490](#) for more information.

■ 3E: PID Feedback Low

Setting Value	Function	Description
3E	PID Feedback Low	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects <i>FbL [PID Feedback Loss]</i>.

The drive detects *FbL [PID Feedback Loss]* when the PID feedback value < *b5-13 [PID Feedback Loss Detection Lvl]* for longer than *b5-14 [PID Feedback Loss Detection Time]*.

Note:

Refer to [PID Feedback Loss Detection on page 503](#) for more information.

■ 3F: PID Feedback High

Setting Value	Function	Description
3F	PID Feedback High	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the drive detects <i>FbH [Excessive PID Feedback]</i>.

The drive detects *FbH [Excessive PID Feedback]* when the PID feedback value > *b5-36 [PID High Feedback Detection Lvl]* for longer than *b5-37 [PID High Feedback Detection Time]*.

Note:

Refer to [PID Feedback Loss Detection on page 503](#) for more information.

■ 4A: During KEB Ride-Thru

Setting Value	Function	Description
4A	During KEB Ride-Thru	V/f OLV OLV/PM AOLV/PM EZOLV The activates during KEB Ride-Thru.

Note:

Refer to [KEB Ride-Thru Function on page 664](#) for more information.

■ 4B: During Short Circuit Braking

Setting Value	Function	Description
4B	During Short Circuit Braking	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates during Short Circuit Braking.

Note:

- When $A1-02 = 8$ [Control Method Selection = EZOLV], this function is available only when you use a PM motor.
- Refer to [b2: DC Injection Braking and Short Circuit Braking on page 488](#) for more information.

■ 4C: During Fast Stop

Setting Value	Function	Description
4C	During Fast Stop	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the fast stop is in operation.

■ 4D: oH Pre-Alarm Time Limit

Setting Value	Function	Description
4D	oH Pre-Alarm Time Limit	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when $L8-03 = 4$ [Overheat Pre-Alarm Selection = Operate at Reduced Speed (L8-19)] and oH [Heatsink Overheat] does not clear after the drive decreases the frequency for 10 cycles.

Note:

Refer to [L8-03: Overheat Pre-Alarm Selection on page 698](#) for more information.

■ 4E: Braking Transistor Fault (rr)

Setting Value	Function	Description
4E	Braking Transistor Fault (rr)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the internal braking transistor overheats and the drive detects an rr [Dynamic Braking Transistor Fault] fault.

■ 4F: Braking Resistor Overheat (rH)

Setting Value	Function	Description
4F	Braking Resistor Overheat (rH)	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the braking resistor overheats and the drive detects an rH [Braking Resistor Overheat] fault.

The braking resistor overheats when the deceleration time is short and there is too much motor regeneration energy.

■ 61: Pole Position Detection Complete

Setting Value	Function	Description
61	Pole Position Detection Complete	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when drive receives a Run command and the drive detects the motor magnetic pole position of the PM motor.

■ 62: Modbus Reg 1 Status Satisfied

Setting Value	Function	Description
62	Modbus Reg 1 Status Satisfied	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the bit specified by H2-08 [Modbus Register 1 Bit Select] for the Modbus register address set with H2-07 [Modbus Register 1 Address Select] activates.

■ 63: Modbus Reg 2 Status Satisfied

Setting Value	Function	Description
63	Modbus Reg 2 Status Satisfied	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates when the bit specified by H2-10 [Modbus Register 2 Bit Select] for the Modbus register address set with H2-09 [Modbus Register 2 Address Select] activates.

■ 66: Comparator1

Setting Value	Function	Description
66	Comparator1	V/f OLV OLV/PM AOLV/PM EZOLV The terminal activates if the monitor value set with H2-20 [Comparator 1 Monitor Selection] is in range of the values of H2-21 [Comparator 1 Lower Limit] and H2-22 [Comparator 1 Upper Limit] for the time set in H2-24 [Comparator 1 On-Delay Time].

Figure 12.75 Comparator 1 Output Time Chart

Note:
The drive compares the monitors set with H2-20 as absolute values.

67: Comparator2

Setting Value	Function	Description
67	Comparator2	V/fOLVOLV/PM AOLV/PM EZOLV The terminal activates if the monitor value set with H2-26 [Comparator 2 Monitor Selection] is not in the range of the values of H2-27 [Comparator 2 Lower Limit] and H2-28 [Comparator 2 Upper Limit] for the time set in H2-30 [Comparator 2 On-Delay Time].

Figure 12.76 Comparator 2 Output Time Chart

Note:
The drive compares the monitors set with H2-26 as absolute values.

6A: Data Logger Error

Setting Value	Function	Description
6A	Data Logger Error	V/fOLVOLV/PM AOLV/PM EZOLV The terminal activates when the drive detects a LoG [Com Error / Abnormal SD card].

90 to 92: DWEZ Digital Output 1 to 3

Setting Value	Function	Description
90 - 92	DWEZ Digital Output 1 to 3	V/fOLVOLV/PM AOLV/PM EZOLV Sets the DriveWorksEZ digital output. Refer to the DriveWorksEZ online manual for more information.

■ 100 to 192: Inverse output of 0 to 92

Setting Value	Function	Description
100 - 192	Inverse output of 0 to 92	V/f OLV OLV/PM AOLV/PM EZOLV Causes inverse output of the function for the selected MFDO. Uses the last two digits of 1xx to select which function to inversely output.

For example, set $H2-xx = 10E$ for the inverse output of E [Fault].

◆ H3: Analog Inputs

⚠ WARNING Sudden Movement Hazard

Do test runs and examine the drive to make sure that the command references are correct. If you set the command reference incorrectly, it can cause damage to the drive or serious injury or death.

Use *H3 parameters* to set the functions to analog input terminal A1 and adjust signal levels.

Table 12.47 shows the functions that you can set to analog input terminals. Use *H3-02 [MFAI Function Select]* to set functions.

Table 12.47 Multi-Function Analog Input Terminal Settings

Setting Value	Function	Reference	Setting Value	Function	Reference
0	Frequency Reference	645	E	Motor Temperature (PTC Input)	648
1	Frequency Gain	645	F	Through Mode	648
2	Auxiliary Frequency Reference 1	645	10	Forward Torque Limit	648
3	Auxiliary Frequency Reference 2	645	11	Reverse Torque Limit	649
4	Output Voltage Bias	645	12	Regenerative Torque Limit	650
5	Accel/Decel Time Gain	646	13	General Torque Limit 1	650
6	DC Injection Braking Current	646	14	Torque Compensation	650
7	Torque Detection Level	646	15	General Torque Limit 2	650
8	Stall Prevent Level during Run	647	16	PID Differential Fdbk	650
9	Output Frequency Lower Limit	647	1F	Through Mode	650
B	PID Feedback	647	30	DWEZ Analog Input 1	650
C	PID Setpoint	647	31	DWEZ Analog Input 2	650
D	Frequency Bias	647	41	V/f Out Gain	651

Note:

All analog input scaling uses gain and bias for adjustment. Set the gain and bias values correctly.

Example Analog Input Settings	Terminal A1 Setting	Frequency Reference
Frequency Reference When You Adjust the Gain Setting	- H3-02 = 0 [Terminal A1 Function Selection = Frequency Reference] - H3-03 = 200.0 [Terminal A1 Gain Setting = 200%] - H3-04 = 0.0 [Terminal A1 Bias Setting = 0.0%]	- When you input a 10 V signal, the frequency reference will be 200%. - When you input a 5 V signal, the frequency reference will be 100%. When you input a 5 V or more signal, <i>E1-04 [Maximum Output Frequency]</i> will limit the drive output and the frequency reference will be 100%. H3-01 = 0 Frequency reference Gain = 200% 100 % E1-04 Bias = 0% 0 V 5 V 10 V H3-01 = 4 Gain = 200% 100 % E1-04 0 V 5 V 10 V -10 V -5 V -100 % E1-04 Gain = -200%

Note:

- Refer to [Multi-Function Analog Input Terminal Settings on page 645](#) for the analog input setting values.
- When you will not use the terminal, set H3-40 to H3-42 = F. Parameters H3-40 to H3-42 do not support the through mode.
- You cannot use H3-40 to H3-42 to set these MFAI functions:

H3-xx Setting Value	Function
0	Frequency Reference
1	Frequency Gain
2	Auxiliary Frequency Reference 1
3	Auxiliary Frequency Reference 2
30	DWEZ Analog Input 1
31	DWEZ Analog Input 2

◆ H3: MFAI Parameters

■ H3-01: Terminal A1 Signal Level Select

No. (Hex.)	Name	Description	Default (Range)
H3-01 (0410)	Terminal A1 Signal Level Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the input signal level for MFAI terminal A1.	0 (0, 1)

0 : 0 to 10V (Lower Limit at 0)

The voltage signal is 0 Vdc to 10 Vdc. The minimum input level limit is 0%. The drive will read a negative input signal caused by gain and bias settings as 0%.

1 : 0 V to 10 V (Without Lower Limit)

The voltage signal is 0 Vdc to 10 Vdc. When this setting is used as the frequency reference, the motor runs reverse when the Forward run command is input, or runs forward when the Reverse run signal is input, while the signal is a negative number due to gain and bias.

■ H3-02: Terminal A1 Function Selection

No. (Hex.)	Name	Description	Default (Range)
H3-02 (0434)	Terminal A1 Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function for MFAI terminal A1.	0 (0 - 32)

■ H3-03: Terminal A1 Gain Setting

No. (Hex.)	Name	Description	Default (Range)
H3-03 (0411) RUN	Terminal A1 Gain Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain of the analog signal input to MFAI terminal A1.	100.0% (-999.9 - +999.9%)

This parameter sets the quantity of reference for the function set for terminal A1 as a percentage when 10 V (or 20 mA) is input.

Use this parameter and H3-04 [Terminal A1 Bias Setting] to adjust the characteristics of the analog input signal to terminal A1.

■ H3-04: Terminal A1 Bias Setting

No. (Hex.)	Name	Description	Default (Range)
H3-04 (0412) RUN	Terminal A1 Bias Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the bias of the analog signal input to MFAI terminal A1.	0.0% (-999.9 - +999.9%)

This parameter sets the bias for the function set for terminal A1 as a percentage when 0 V (4 mA or 0 mA) is input. Use this parameter and *H3-03 [Terminal A1 Gain Setting]* to adjust the characteristics of the analog input signal to terminal A1.

■ H3-13: Analog Input FilterTime Constant

No. (Hex.)	Name	Description	Default (Range)
H3-13 (041B)	Analog Input FilterTime Constant	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant for primary delay filters on MFAI terminals.	0.03 s (0.00 - 2.00 s)

Apply the primary delay filter to the analog input to enable an analog input signal without the use of high-frequency noise components. An analog input filter prevents irregular drive control. Drive operation becomes more stable as the programmed time becomes longer, but it also becomes less responsive to quickly changing analog signals.

■ H3-16: Terminal A1 Offset

No. (Hex.)	Name	Description	Default (Range)
H3-16 (02F0)	Terminal A1 Offset	V/f OLV OLV/PM AOLV/PM EZOLV Sets the offset level for analog signals input to terminal A1. Usually it is not necessary to change this setting.	0 (-500 - +500)

Adds the offset value for the analog input value. For voltage input, this parameter will set the offset when a signal of 0 V is input.

■ H3-40: Mbus Reg 15C1h Input Function

No. (Hex.)	Name	Description	Default (Range)
H3-40 (0B5C)	Mbus Reg 15C1h Input Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus AI1 function.	F (4 - 2F)

You can use the MFAI function from Modbus communications. Use this parameter to set the function. Sets the function for Modbus register 15C1h.

Refer to [H3: Analog Inputs on page 641](#) for the setting values.

■ H3-41: Mbus Reg 15C2h Input Function

No. (Hex.)	Name	Description	Default (Range)
H3-41 (0B5F)	Mbus Reg 15C2h Input Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus AI2 function.	F (4 - 2F)

You can use the MFAI function from Modbus communications. Use this parameter to set the function. Sets the function for Modbus register 15C2h.

Refer to [H3: Analog Inputs on page 641](#) for the setting values.

■ H3-42: Mbus Reg 15C3h Input Function

No. (Hex.)	Name	Description	Default (Range)
H3-42 (0B62)	Mbus Reg 15C3h Input Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Modbus AI3 function.	F (4 - 2F)

You can use the MFAI function from Modbus communications. Use this parameter to set the function. Sets the function for Modbus register 15C3h.

Refer to [H3: Analog Inputs on page 641](#) for the setting values.

■ H3-43: Mbus Reg Inputs FilterTime Const

No. (Hex.)	Name	Description	Default (Range)
H3-43 (117F)	Mbus Reg Inputs FilterTime Const	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant to apply a primary delay filter to the Modbus analog input register values.	0.00 s (0.00 - 2.00 s)

◆ Multi-Function Analog Input Terminal Settings

This section gives information about the functions set with *H3-02*, and *H3-40* to *H3-42*.

■ 0: Frequency Reference

Setting Value	Function	Description
0	Frequency Reference	V/f OLV OLV/PM AOLV/PM EZOLV The input value from the MFAI terminal set with this function becomes the master frequency reference.

If you use this function to set the analog input value as the master frequency reference, set *b1-01* = 1 [*Frequency Reference Selection 1 = Analog Input*]. This setting value is the default value for terminal A1.

■ 1: Frequency Gain

Setting Value	Function	Description
1	Frequency Gain	V/f OLV OLV/PM AOLV/PM EZOLV The drive multiplies the analog frequency reference with the input value from the MFAI set with this function.

■ 2: Auxiliary Frequency Reference 1

Setting Value	Function	Description
2	Auxiliary Frequency Reference 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets Reference 2 through multi-step speed reference to enable the command reference (Auxiliary Frequency Reference 1) from the analog input terminal set here. This value is a percentage where the Maximum Output Frequency setting is a setting value of 100%.

■ 3: Auxiliary Frequency Reference 2

Setting Value	Function	Description
3	Auxiliary Frequency Reference 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets Reference 3 through multi-step speed reference to enable the command reference (Auxiliary Frequency Reference 2) from the analog input terminal set here. This value is a percentage where the Maximum Output Frequency setting is a setting value of 100%.

■ 4: Output Voltage Bias

Setting Value	Function	Description
4	Output Voltage Bias	V/f OLV OLV/PM AOLV/PM EZOLV Set this parameter to input a bias signal to amplify the output voltage.

The gain (%) for the MFAI terminal A1 is 100% of the voltage class standard, which is 200 V for 200 V class drives and 400 V for 400 V class drives. The bias (%) for MFAI terminal A1 is 100% of the voltage configured for *E1-05* [*Maximum Output Voltage*].

Note:

The gain for terminal A1 is set with *H3-03* [*Terminal A1 Gain Setting*]. The bias for terminal A1 is set with *H3-04* [*Terminal A1 Bias Setting*].

Figure 12.78 Output Voltage Bias through Analog Input

■ 5: Accel/Decel Time Gain

Setting Value	Function	Description
5	Accel/Decel Time Gain	V/f OLV OLV/PM AOLV/PM EZOLV Enters a signal to adjust the gain used for C1-01 to C1-08 [Acceleration/Deceleration Times 1 to 4] and C1-09 [Fast Stop Time] when the full scale analog signal (10 V or 20 mA) is 100%.

When you enable C1-01 [Acceleration Time 1], the acceleration time is:

Acceleration Time 1 = Setting value of C1-01 × acceleration and deceleration time gain / 100

Figure 12.79 Acceleration/Deceleration Time Gain through Analog Input

■ 6: DC Injection Braking Current

Setting Value	Function	Description
6	DC Injection Braking Current	V/f OLV OLV/PM AOLV/PM EZOLV Enters a signal to adjust the current level used for DC Injection Braking when the drive rated output current is 100%.

Note:

When you set this function, it will disable the setting value of b2-02 [DC Injection Braking Current].

Figure 12.80 DC Injection Braking Current through Analog Input

■ 7: Torque Detection Level

Setting Value	Function	Description
7	Torque Detection Level	V/f OLV OLV/PM AOLV/PM EZOLV Enters a signal to adjust the overtorque/undertorque detection level.

When $A1-02 = 0, 5$ [Control Method Selection = V/f , OLV/PM], the drive rated current is 100%. When $A1-02 = 2, 6, 8$ [OLV , $AOLV/PM$, or $EZOLV$], the motor rated current is 100%.

Note:

Use this function with $L6-01$ [Torque Detection Selection 1]. This parameter functions as an alternative to $L6-02$ [Torque Detection Level 1].

8: Stall Prevent Level during Run

Setting Value	Function	Description
8	Stall Prevent Level during Run	V/f OLV OLV/PM AOLV/PM EZOLV Enters a signal to adjust the stall prevention level during run if the drive rated current is 100%.

Note:

The drive will use the smaller value of these values for Stall Prevent Level during Run:

- Multi-function analog input terminal analog input value
- $L3-06$ [Stall Prevent Level during Run]

Figure 12.81 Stall Prevention Level during Run with Analog Input

9: Output Frequency Lower Limit

Setting Value	Function	Description
9	Output Frequency Lower Limit	V/f OLV OLV/PM AOLV/PM EZOLV Enters a signal to adjust the output frequency lower limit level as a percentage of the maximum output frequency.

B: PID Feedback

Setting Value	Function	Description
B	PID Feedback	V/f OLV OLV/PM AOLV/PM EZOLV Enter the PID feedback value as a percentage of the maximum output frequency.

When you use this function, set $b5-01 = 1$ to 8 [PID Mode Setting = Enabled].

C: PID Setpoint

Setting Value	Function	Description
C	PID Setpoint	V/f OLV OLV/PM AOLV/PM EZOLV Enters the PID setpoint as a percentage of the maximum output frequency.

When you use this function, set $b5-01 = 1$ to 8 [PID Mode Setting = Enabled].

Note:

Configuring this function disables the frequency reference set with $b1-01$ [Frequency Reference Selection 1].

D: Frequency Bias

Setting Value	Function	Description
D	Frequency Bias	V/f OLV OLV/PM AOLV/PM EZOLV Enters the bias value added to the frequency reference as a percentage of the maximum output frequency.

The drive adds the input value from the MFAI terminal set with this function to the frequency reference as the bias value.

Note:

When you select *d1-01 to d1-16 or d1-17 [Reference 1 to 16 or JOG Frequency Reference]* as the frequency reference, it will disable this function.

■ E: Motor Temperature (PTC Input)

Setting Value	Function	Description
E	Motor Temperature (PTC Input)	V/f OLV OLV/PM AOLV/PM EZOLV Uses the motor Positive Temperature Coefficient (PTC) thermistor to prevent heat damage to the motor as a percentage of the current value when the 10 V analog signal is input.

- You can use the Positive Temperature Coefficient (PTC) thermistor as an auxiliary or alternative detection function for *oL1 [Motor Overload]* problems to help prevent heat damage to motors. If the PTC input signal is more than the overload alarm level, *oH3 [Motor Overheat (PTC Input)]* will flash on the keypad.
- When the drive detects *oH3*, the motor stops with the setting in *L1-03*. When the drive detects *oH4*, the motor stops with the setting in *L1-04*. When the drive incorrectly detects motor overheating problems, set *L1-05*.

■ F: Not Used

Setting Value	Function	Description
F	Not Used	V/f OLV OLV/PM AOLV/PM EZOLV Use this setting for unused terminals or to use terminals in through mode.

When you set a terminal that is not in use to F, you can use the signal input to the terminal as PLC analog signal input through Modbus communications or the communication Ethernet. This input signal does not have an effect on drive operation. This functions the same as setting 1F (Through Mode).

■ 10: Forward Torque Limit

Setting Value	Function	Description
10	Forward Torque Limit	V/f OLV OLV/PM AOLV/PM EZOLV Enters the forward torque limit if the motor rated torque is 100%.

⚠ WARNING Sudden Movement Hazard

Set correct torque limits for applications, for example elevator applications.
If you set torque limits incorrectly, motor torque that is not sufficient can cause damage to equipment and cause serious injury or death.

Torque Limit Configuration Method

Use one of these methods to set torque limits:

- Individually set the four torque limit quadrants using *L7-01 to L7-04 [Torque Limit]*.
- Use MFAI to individually set the four torque limit quadrants. Set *H3-02 = 10, 11, 12 [MFAI Function Select = Forward/Reverse/Regenerative Torque Limit]*.
- Use MFAI to set all four torque limit quadrants together. Set *H3-02 = 15 [General Torque Limit]*.
- Use Ethernet to set all four torque limit quadrants together.

Figure 12.82 shows the configuration method for each quadrant.

Figure 12.82 Torque Limits and Analog Input Setting Parameters

Note:

- When *L7-01* to *L7-04* and analog inputs or Ethernet torque limits set torque limits for the same quadrant, the lower value is enabled. In this example of parameter settings, the torque limit for quadrant 1 is 130% and the torque limit for quadrants 2, 3, and 4 is 150%. Settings: *L7-01* = 130%, *L7-02* to *L7-04* = 200%, and MFAI torque limit = 150%
- The drive output current limits maximum output torque. The torque limit is 150% of the rated output current for HD and to 120% of the rated output current for ND. The actual output torque is not more than the limits of the drive rated output current when you set the torque limit to a high value.
- If both *H1-xx* = 13 and 15 are set, the lower value will be valid.

If you use drives in applications where the vertical axis can fall, make sure that you know these items:

- Correctly configure drives and motors.
- Correctly set parameters.
- You can change parameter values after you do Auto-Tuning.
- Use a system that will not let the vertical axis fall if the drive fails.

Figure 12.83 shows the relation between torque limits from parameters and torque limits from analog input.

Figure 12.83 Torque Limits from Parameters and Analog Inputs

■ 11: Reverse Torque Limit

Setting Value	Function	Description
11	Reverse Torque Limit	☐ V/f ☒ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Enters the load torque limit if the motor rated torque is 100%.

Note:

When you use *L7-01 to L7-04* and analog inputs to set torque limits for the same quadrant, it will enable the lower torque limit.

■ 12: Regenerative Torque Limit

Setting Value	Function	Description
12	Regenerative Torque Limit	V/f OLV OLV/PM AOLV/PM EZOLV Enters the regenerative torque limit if the motor rated torque is 100%.

Note:

When you use *L7-01 to L7-04* and analog inputs to set torque limits for the same quadrant, it will enable the lower torque limit.

■ 13: General Torque Limit 1

Setting Value	Function	Description
13	General Torque Limit 1	V/f OLV OLV/PM AOLV/PM EZOLV Enters the torque limit if the motor rated torque is 100%.

Note:

When you use *L7-01 to L7-04* and analog inputs to set torque limits for the same quadrant, it will enable the lower torque limit.

■ 14: Torque Compensation

Setting Value	Function	Description
14	Torque Compensation	V/f OLV OLV/PM AOLV/PM EZOLV Enters the torque compensation value if the motor rated torque is 100%.

■ 15: General Torque Limit 2

Setting Value	Function	Description
15	General Torque Limit 2	V/f OLV OLV/PM AOLV/PM EZOLV Enters the torque limit that is the same for all quadrants for forward, reverse, and regenerative operation if the motor rated torque is 100%.

■ 16: Differential PID Feedback

Setting Value	Function	Description
16	Differential PID Feedback	V/f OLV OLV/PM AOLV/PM EZOLV Enters the PID differential feedback value if the full scale analog signal (10 V) is 100%.

The drive uses the deviation between the PID feedback and the differential feedback value signals to calculate the PID input.

■ 1F: Not Used

Setting Value	Function	Description
1F	Not Used	V/f OLV OLV/PM AOLV/PM EZOLV Use this setting for unused terminals or to use terminals in through mode.

When you set a terminal that you do not use to 1F, you can use the signal that is input to that terminal as the PLC analog signal input from Modbus communications or Ethernet. This input signal does not have an effect on drive operation. This signal functions the same as F (Through Mode).

■ 30: DWEZ Analog Input 1

Setting Value	Function	Description
30	DWEZ Analog Input 1	V/f OLV OLV/PM AOLV/PM EZOLV Use with DriveWorksEZ. Refer to the DriveWorksEZ online manual for more information.

■ 31: DWEZ Analog Input 2

Setting Value	Function	Description
31	DWEZ Analog Input 2	V/f OLV OLV/PM AOLV/PM EZOLV Use with DriveWorksEZ. Refer to the DriveWorksEZ online manual for more information.

■ 41: V/f Out Gain

Setting Value	Function	Description
41	V/f Out Gain	V/f OLV OLV/PM AOLV/PM EZOLV You can change the output voltage when you adjust the voltage reference via one of the analog input terminals or controller. An internal 0.3 s delay has been added to prevent sudden, drastic change to the V/f pattern.

You can change the output voltage when you adjust the voltage reference via one of the analog input terminals or controller. An internal 0.3 s delay has been added to prevent sudden, drastic change to the V/f pattern.

Note:

When you set $H3\text{-}xx = 41$ to adjust the Output voltage gain, the drive ignores a voltage reference from the controller.

◆ H5: Modbus Communication

H5 parameters configure the drive to use Modbus communications.

You can use the Ethernet protocol by connecting the Ethernet communication cable to connectors CN1A and CN1B in the drive to use serial communication with programmable controllers (PLC).

■ H5-11: Comm ENTER Command Mode

No. (Hex.)	Name	Description	Default (Range)
H5-11 (043C) RUN	Comm ENTER Command Mode	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to make the Enter command necessary to change parameters through Modbus communications.	1 (0, 1)

0 : ENTER Command Required

Make all parameter changes then input the Enter command. You must use the Enter command to enable changes to parameters.

1 : ENTER Command Not Required

It is not necessary to input the Enter command to change parameters.

■ H5-12: Run Command Method Selection

No. (Hex.)	Name	Description	Default (Range)
H5-12 (043D)	Run Command Method Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the input method for the Run command when $b1\text{-}02 = 2$ [Run Command Selection 1 = Modbus Communications] or $b1\text{-}16 = 2$ [Run Command Selection 2 = Modbus Communications].	0 (0, 1)

0 : FWD/Stop, REV/Stop

The drive uses bit 0 in command data 0001H of the Modbus register in the motor forward Run command (bit 0 = 1) and the stop command (bit 0 = 0). The drive uses bit 1 in the motor reverse Run command (bit 1 = 1) and the stop command (bit 1 = 0).

1 : Run/Stop, FWD/REV

The drive uses bit 0 in command data 0001H of the Modbus register in the motor Run command (bit 0 = 1) and the stop command (bit 0 = 0). The drive uses bit 1 in the direction of motor rotation command (Forward run (bit1 = 0) or Reverse run (bit 1 = 1)).

■ H5-17: ENTER command response @CPU BUSY

No. (Hex.)	Name	Description	Default (Range)
H5-17 (11A1) Expert	ENTER command response @CPU BUSY	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation when the EEPROM write command is sent without EEPROM write available. Usually it is not necessary to change this setting.	0 (0, 1)

0 : Ignore Command(No ROM/RAM Write)

1 : Write to RAM Only

■ H5-18: Motor Speed Filter over Comms

No. (Hex.)	Name	Description	Default (Range)
H5-18 (11A2)	Motor Speed Filter over Comms	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant used when monitoring motor speed during PLC.	0 ms (0 - 100 ms)

Sets the filter time constant when you monitor the output frequency or motor speed during Modbus communications or use of Ethernet.

These are the Modbus registers:

- 003EH (Output Frequency)
- 003FH (Output Frequency)
- 0044H (U1-05: Motor Speed)
- 00ACH (U1-05: Motor Speed)
- 00ADH (U1-05: Motor Speed)

■ H5-20: Communication Parameters Reload

No. (Hex.)	Name	Description	Default (Range)
H5-20 (0B57)	Communication Parameters Reload	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to immediately enable updated Modbus communications parameters.	0 (0, 1)

0 : Reload at Next Power Cycle

1 : Reload Now

Note:

The setting value automatically returns to $H5-20 = 0$ after you enable Modbus communications parameter changes.

■ H5-22: Speed Search from Ethernet

No. (Hex.)	Name	Description	Default (Range)
H5-22 (11CF)	Speed Search from Ethernet	V/f OLV OLV/PM AOLV/PM EZOLV Enables the Modbus communication register Speed Search function (bit0 of 15DFH).	0 (0, 1)

0 : Disabled

1 : Enabled

If you set $H5-22 = 1$ and $H1-xx = 62$ [Speed Search from Fref] at the same time, the drive will detect $oPE03$ [Multi-Function Input Setting Err].

■ H5-25: Function 5A Register 1 Selection

No. (Hex.)	Name	Description	Default (Range)
H5-25 (1589) RUN	Function 5A Register 1 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Returns the contents of the specified Modbus communications register when responding to the master device.	0044H (U1-05) (0000H - FFFFH)

■ H5-26: Function 5A Register 2 Selection

No. (Hex.)	Name	Description	Default (Range)
H5-26 (158A) RUN	Function 5A Register 2 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Returns the contents of the specified Modbus communications register when responding to the master device.	0045H (U1-06) (0000H - FFFFH)

■ H5-27: Function 5A Register 3 Selection

No. (Hex.)	Name	Description	Default (Range)
H5-27 (158B) RUN	Function 5A Register 3 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Returns the contents of the specified Modbus communications register when responding to the master device.	0042H (U1-03) (0000H - FFFFH)

■ H5-28: Function 5A Register 4 Selection

No. (Hex.)	Name	Description	Default (Range)
H5-28 (158C) RUN	Function 5A Register 4 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Returns the contents of the specified Modbus communications register when responding to the master device.	0049H (U1-10) (0000H - FFFFH)

◆ H7: Virtual MFIO Selection

The virtual I/O function performs the following.

- Inputs the result of the output from the MFDO terminal to the MFDI terminal without external wiring.
- Inputs the result of the output from the MFAO terminal to the MFAI terminal without external wiring.

⚠ WARNING Sudden Movement Hazard

Make sure that the setting values for virtual input and output function parameters are correct before you do a test run. Virtual input and output function settings and actual input and output terminal settings can be different.

If function settings are incorrect, sudden movement of the machine can cause death or serious injury.

Figure 12.84 Virtual Analog I/O Functional Block Diagram

Figure 12.85 Virtual Digital I/O Functional Block Diagram

Note:

- Refer to [MFDI Setting Values on page 600](#) for more information on the virtual digital input functions.
- Refer to [MFDO Setting Values on page 627](#) for more information on the virtual digital output functions.
- Refer to [Multi-Function Analog Input Terminal Settings on page 645](#) for more information on the virtual analog input functions.
- You cannot set 20 or 2F [External Fault] to H7-01 to H7-04 [Virtual Multi-Function Input 1 to 4].
- If you do not use virtual I/O, set H7-01 to H7-04 = F. This does not support the through mode.

■ H7-00: Virtual MFIO selection

No. (Hex.)	Name	Description	Default (Range)
H7-00 (116F) Expert	Virtual MFIO selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable the virtual I/O function. Set this parameter to 1 to operate the virtual I/O function.	0 (0, 1)

0 : Disabled

1 : Enabled

■ H7-01: Virtual Multi-Function Input 1

No. (Hex.)	Name	Description	Default (Range)
H7-01 (1185) Expert	Virtual Multi-Function Input 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enters the virtual input set in H7-10 [Virtual Multi-Function Output 1].	F (1 - 19F)

Note:

1B [Programming Lockout] and 11B [Inverse Input of 1B] are not available.

■ H7-02: Virtual Multi-Function Input 2

No. (Hex.)	Name	Description	Default (Range)
H7-02 (1186) Expert	Virtual Multi-Function Input 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enters the virtual input set in H7-12 [Virtual Multi-Function Output 2].	F (1 - 19F)

Note:

1B [Programming Lockout] and 11B [Inverse Input of 1B] are not available.

■ H7-03: Virtual Multi-Function Input 3

No. (Hex.)	Name	Description	Default (Range)
H7-03 (1187) Expert	Virtual Multi-Function Input 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enters the virtual input set in H7-14 [Virtual Multi-Function Output 3].	F (1 - 19F)

Note:

1B [Programming Lockout] and 11B [Inverse Input of 1B] are not available.

■ H7-04: Virtual Multi-Function Input 4

No. (Hex.)	Name	Description	Default (Range)
H7-04 (1188) Expert	Virtual Multi-Function Input 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that enters the virtual input set in H7-16 [Virtual Multi-Function Output 4].	F (1 - 19F)

Note:

1B [Programming Lockout] and 11B [Inverse Input of 1B] are not available.

■ H7-10: Virtual Multi-Function Output 1

No. (Hex.)	Name	Description	Default (Range)
H7-10 (11A4) Expert	Virtual Multi-Function Output 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function for virtual digital output 1.	F (0 - 192)

■ H7-11: Virtual Output 1 Delay Time

No. (Hex.)	Name	Description	Default (Range)
H7-11 (11A5) Expert	Virtual Output 1 Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum ON time for virtual digital output 1.	0.1 s (0.0 - 25.0 s)

■ H7-12: Virtual Multi-Function Output 2

No. (Hex.)	Name	Description	Default (Range)
H7-12 (11A6) Expert	Virtual Multi-Function Output 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function for virtual digital output 2.	F (0 - 192)

■ H7-13: Virtual Output 2 Delay Time

No. (Hex.)	Name	Description	Default (Range)
H7-13 (11A7) Expert	Virtual Output 2 Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum ON time for virtual digital output 2.	0.1 s (0.0 - 25.0 s)

■ H7-14: Virtual Multi-Function Output 3

No. (Hex.)	Name	Description	Default (Range)
H7-14 (11A8) Expert	Virtual Multi-Function Output 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function for virtual digital output 3.	F (0 - 192)

■ H7-15: Virtual Output 3 Delay Time

No. (Hex.)	Name	Description	Default (Range)
H7-15 (11A9) Expert	Virtual Output 3 Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum ON time for virtual digital output 3.	0.1 s (0.0 - 25.0 s)

■ H7-16: Virtual Multi-Function Output 4

No. (Hex.)	Name	Description	Default (Range)
H7-16 (11AA) Expert	Virtual Multi-Function Output 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function for virtual digital output 4.	F (0 - 192)

■ H7-17: Virtual Output 4 Delay Time

No. (Hex.)	Name	Description	Default (Range)
H7-17 (11AB) Expert	Virtual Output 4 Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum ON time for virtual digital output 4.	0.1 s (0.0 - 25.0 s)

■ H7-30: Virtual Analog Input Selection

No. (Hex.)	Name	Description	Default (Range)
H7-30 (1177) Expert	Virtual Analog Input Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the virtual analog input function.	F (0 - 32)

■ H7-31: Virtual Analog Input Gain

No. (Hex.)	Name	Description	Default (Range)
H7-31 (1178) RUN Expert	Virtual Analog Input Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the virtual analog input gain.	100.0% (-999.9 - 999.9%)

■ H7-32: Virtual Analog Input Bias

No. (Hex.)	Name	Description	Default (Range)
H7-32 (1179) RUN Expert	Virtual Analog Input Bias	V/f OLV OLV/PM AOLV/PM EZOLV Sets the virtual analog input bias.	0.0% (-999.9 - 999.9%)

■ H7-40: Virtual Analog Out Signal Select

No. (Hex.)	Name	Description	Default (Range)
H7-40 (1163)	Virtual Analog Out Signal Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the signal level of the virtual analog output.	0 (0 - 2)

0 : 0 to 100% (Absolute Value)

1 : -100 to 100%

2 : 0 to 100% (Lower Limit at 0)

■ H7-41: Virtual Analog Output Function

No. (Hex.)	Name	Description	Default (Range)
H7-41 (1164)	Virtual Analog Output Function	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor to be output from the virtual analog output.	102 (0 - 999)

Set the $x-xx$ part of the $Ux-xx$ [Monitor]. For example, set $H7-41 = 102$ to monitor $U1-02$ [Output Frequency].

■ H7-42: Virtual Analog Output FilterTime

No. (Hex.)	Name	Description	Default (Range)
H7-42 (1165)	Virtual Analog Output FilterTime	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant for a primary filter of the virtual analog output.	0.00 s (0.00 - 2.00 s)

12.9 L: Protection Functions

L parameters set the following functions.

- Motor Overload Protection
- Operation During Momentary Power Loss
- Stall Prevention
- Speed Detection
- Auto Restart
- Detection of Overtorque/Undertorque
- Torque Limit
- Hardware Protection

◆ L1: Motor Protection

L1 parameters set the motor overload protection function.

■ Motor Protection Using Positive Temperature Coefficient (PTC) Thermistors

Connect the PTC thermistor input from the motor to analog input terminal on the drive.

The temperature resistance characteristics of three PTC thermistors in the motor stator winding protect the motor from overheat.

A PTC thermistor must have the characteristics shown in [Figure 12.86](#) for each motor phase.

Figure 12.86 PTC Thermistor Temperature and Resistance

If the PTC input signal input to the drive is more than the overload alarm level, the drive detects *oH3* [*Motor Overheat (PTC Input)*]. The drive continues the operation set in *L1-03* [*Motor Thermistor oH Alarm Select*]. By default, the keypad shows *oH3* and the drive continues operation.

The overheat fault level triggers an *oH4* [*Motor Overheat Fault (PTC Input)*] fault, and outputs a fault signal. The drive outputs a fault signal and uses the stop method set in *L1-04* [*Motor Thermistor oH Fault Select*] to stop the motor.

Note:

PTC is an acronym for Positive Temperature Coefficient.

The following steps show the configuration procedure when you use terminal A1.

1. Connect the PTC thermistor input from the motor to analog input terminal A1 on the drive.

Figure 12.87 Connect Motor to PTC Thermistor Input

- 2. Set $H3-01 = 0$ [Terminal A1 Signal Level Select = 0 to 10V (Lower Limit at 0)] and $H3-02 = E$ [Terminal A1 Function Selection = Motor Temperature (PTC input)].
- 3. Set these L1 parameters:
 - L1-03 [Motor Thermistor oH Alarm Select]
 - L1-04 [Motor Thermistor oH Fault Select]
 - L1-05 [Motor Thermistor Filter Time]

■ L1-01: Motor Overload (oL1) Protection

No. (Hex.)	Name	Description	Default (Range)
L1-01 (0480)	Motor Overload (oL1) Protection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor overload protection with electronic thermal protectors.	Determined by A1-02 (0 - 6)

This parameter enables and disables the motor overload protection with electronic thermal protectors. The cooling capability of the motor changes when the speed control range of the motor changes. Use an electronic thermal protector that aligns with the permitted load characteristics of the motor to select motor protection. The electronic thermal protector of the drive uses these items to calculate motor overload tolerance and supply overload protection for the motor:

- Output current
- Output frequency
- Motor thermal characteristics
- Time characteristics

If the drive detects motor overload, the drive will trigger an oL1 [Motor Overload] and stop drive output. Set $H2-01 = 1F$ [Term MA/MB-MC Function Selection = Motor Overload Alarm (oL1)] to set a motor overload alarm. If the motor overload level is more than 90% of the oL1 detection level, the output terminal activates and triggers an overload alarm.

0 : Disabled

Disable motor protection when motor overload protection is not necessary or when the drive is operating more than one motor. Refer to [Figure 12.88](#) for an example of the circuit configuration to connect more than one motor to one drive.

Figure 12.88 Protection Circuit Configuration to Connect More than One Motor to One Drive

NOTICE

When you connect more than one motor to one drive or when the motor amp rating is higher than the drive amp rating, set L1-01 =0 [Motor Overload (oL1) Protection = Disabled] and install thermal overload relays for each motor. The electronic thermal protection of the drive will not function and it can cause damage to the motor.

1 : Variable Torque

Use this setting for general-purpose motors with a 60 Hz base frequency.

The overload tolerance decreases as motor speed decreases because the cooling fan speed decreases and the ability of the motor to cool decreases in the low speed range.

The overload tolerance characteristics of the motor change the trigger point for the electronic thermal protector. This provides motor overheat protection from low speed to high speed across the full speed range.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to operate with commercial line power. Operate at a 60 Hz base frequency to maximize the motor cooling ability.	If the motor operates at frequencies less than 60 Hz, the drive will detect oL1. The drive triggers a fault relay output and the motor coasts to stop.

2 : Constant Torque 10:1 Speed Range

Use this setting for drive-dedicated motors with a speed range for constant torque of 1:10.

The speed control for this motor is 10% to 100% when at 100% load. Operating slower than 10% speed at 100% load will cause motor overload.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to withstand increased temperatures during continuous operation in the low speed range (10% base frequency).	The motor operates continuously at 10% to 100% base frequency. Operating slower than 10% speed at 100% load will cause motor overload.

3 : Constant Torque 100:1 SpeedRange

Use this setting for vector motors with a speed range for constant torque of 1:100.

The speed control for this motor is 1% to 100% when at 100% load. Operating slower than 1% speed at 100% load will cause motor overload.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to withstand increased temperatures during continuous operation in the low speed range (1% base frequency).	The motor operates continuously at 1% to 100% base frequency. Operating slower than 1% speed at 100% load will cause motor overload.

4 : PM Variable Torque

Use this setting for PM motors with derated torque characteristics.

The overload tolerance decreases as motor speed decreases because the cooling fan speed decreases and the ability of the motor to cool decreases in the low speed range.

The overload tolerance characteristics of the motor change the trigger point for the electronic thermal protector. This provides motor overheat protection from low speed to high speed across the full speed range.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to withstand increased temperatures during continuous operation at rated speed and rated torque.	If the motor operates continuously at lower speed than rated rotation speed at more than 100% torque, the drive will detect <i>oL1</i>. The drive triggers a fault relay output and the motor coasts to stop.

5 : PM Constant Torque

Use this setting with a PM motor for constant torque that has a speed range for constant torque of 1:500.

The speed control for this motor is 0.2% to 100% when at 100% load. Operating slower than 0.2% speed at 100% load will cause motor overload.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to withstand increased temperatures during continuous operation in the low speed range (0.2% base frequency).	The motor operates continuously at 0.2% to 100% rated speed. Operating slower than 0.2% speed at 100% load will cause motor overload.

6 : Variable Torque (50Hz)

Use this setting for general-purpose motors with a 50 Hz base frequency.

The overload tolerance decreases as motor speed decreases because the cooling fan speed decreases and the ability of the motor to cool decreases in the low speed range.

The overload tolerance characteristics of the motor change the trigger point for the electronic thermal protector. This provides motor overheat protection from low speed to high speed across the full speed range.

Load Tolerance	Cooling Capability	Overload Characteristics (at 100% motor load)
	This motor is designed to operate with commercial line power. Operate at a 50 Hz base frequency to maximize the motor cooling ability.	If the motor operates at frequencies less than commercial line power, the drive will detect <i>oLL</i>. The drive triggers a fault relay output and the motor coasts to stop.

■ L1-02: Motor Overload Protection Time

No. (Hex.)	Name	Description	Default (Range)
L1-02 (0481)	Motor Overload Protection Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the operation time for the electronic thermal protector of the drive to prevent damage to the motor. Usually it is not necessary to change this setting.	1.0 min (0.1 - 5.0 min)

Set the overload tolerance time to the length of time that the motor can operate at 150% load from continuous operation at 100% load.

When the motor operates at 150% load continuously for one minute after continuous operation at 100% load (hot start), the default setting triggers the electronic thermal protector.

Figure 12.89 shows an example of the electronic thermal protector operation time. Motor overload protection operates in the range between a cold start and a hot start.

This example shows a general-purpose motor operating at the base frequency with *L1-02* set to 1.0 min.

- **Cold start**
Shows the motor protection operation time characteristics when the overload occurs immediately after starting operation from a complete stop.
- **Hot start**
Shows the motor protection operation time characteristics when overload occurs from continuous operation below the motor rated current.

Figure 12.89 Protection Operation Time for a General-purpose Motor at Rated Output Frequency

■ L1-03: Motor Thermistor oH Alarm Select

No. (Hex.)	Name	Description	Default (Range)
L1-03 (0482)	Motor Thermistor oH Alarm Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive operation when the PTC input signal entered into the drive is at the <i>oH3 [Motor Overheat Alarm]</i> detection level.	3 (0 - 3)

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

2 : Fast Stop

The drive stops the motor in the deceleration time set in *C1-09 [Fast Stop Time]*. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

3 : Alarm Only

The keypad shows *oH3* and the drive continues operation. The output terminal set for *Alarm [H2-01 to H2-03 = 10]* activates.

■ L1-04: Motor Thermistor oH Fault Select

No. (Hex.)	Name	Description	Default (Range)
L1-04 (0483)	Motor Thermistor oH Fault Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive operation when the PTC input signal to the drive is at the <i>oH4 [Motor Overheat Fault (PTC Input)]</i> detection level.	1 (0 - 2)

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

2 : Fast Stop

The drive stops the motor in the deceleration time set in *C1-09 [Fast Stop Time]*. The output terminal set for *Fault [H2-01 to H2-03 = E]* activates.

■ L1-05: Motor Thermistor Filter Time

No. (Hex.)	Name	Description	Default (Range)
L1-05 (0484)	Motor Thermistor Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the primary delay time constant for the PTC input signal entered to the drive. This parameter prevents accidental motor overheating faults.	0.20 s (0.00 - 10.00 s)

■ L1-08: oL1 Current Level

No. (Hex.)	Name	Description	Default (Range)
L1-08 (1103)	oL1 Current Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the reference current for the motor 1 thermal overload detection. When the current level > 0.0 A, you cannot set this value < 10% of drive rated current.	0.0 A (0.0 A or 10% to 150% of the drive rated current)

When $L1-08 = 0.0\text{ A}$, the drive uses $E2-01$ [Motor Rated Current (FLA)] to detect the motor overload protection. In PM control mode, the drive uses $E5-03$ [PM Motor Rated Current (FLA)] to detect the motor overload protection.

When $L1-08 \neq 0.0\text{ A}$, the set value is the reference for motor overload protection.

Note:

- Display is in these units:
 –0.01 A: B001 to B018, 2001 to 2042, 4001 to 4023
 –0.1 A: 2056 to 2082, 4031 to 4060
- When the current level > 0.0 A, you cannot set this value < 10% of drive rated current.

■ L1-09: oL1 Current Level for Motor 2

No. (Hex.)	Name	Description	Default (Range)
L1-09 (1104)	oL1 Current Level for Motor 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the reference current for the motor 2 thermal overload detection. When the current level > 0.0 A, you cannot set this value < 10% of drive rated current.	0.0 A (0.0 A or 10 to 150% of the drive rated current)

When $L1-09 = 0.0\text{ A}$, the drive uses $E4-01$ [Motor 2 Rated Current] to detect the motor overload protection.

When $L1-09 \neq 0.0\text{ A}$, the set value is the reference for motor overload protection.

Note:

- Display is in these units:
 –0.01 A: B001 to B018, 2001 to 2042, 4001 to 4023
 –0.1 A: 2056 to 2082, 4031 to 4060
- When the current level > 0.0 A, you cannot set this value < 10% of drive rated current.

■ L1-13: Motor Overload Memory Selection

No. (Hex.)	Name	Description	Default (Range)
L1-13 (046D)	Motor Overload Memory Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that keeps the current electronic thermal protector value when the drive stops receiving power.	1 (0, 1)

0 : Disabled

1 : Enabled

Sets if the drive will calculate the motor again when the drive is energized again.

■ L1-22: Leakage Current Filter Time1

No. (Hex.)	Name	Description	Default (Range)
L1-22 (0768) RUN	Leakage Current Filter Time1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the leakage current detection reduction filter time constant during constant speed run.	Determined by C6-02 (0.0 - 60.0 s)

Note:

You can set this parameter when $C6-02 = B$ [*Carrier Frequency Selection = Leakage Current Detection Reduction Rate PWM*].

If incorrect detection of alarms, for example *oL1* [*Motor Overload*], occur or errors occur in the values on the current monitor because of a leakage current, increase the setting value.

■ L1-23: Leakage Current Filter Time2

No. (Hex.)	Name	Description	Default (Range)
L1-23 (0769) RUN	Leakage Current Filter Time2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the leakage current detection reduction filter time constant during acceleration/deceleration.	Determined by C6-02 (0.0 - 60.0 s)

Note:

- You can set this parameter when $C6-02 = B$ [*Carrier Frequency Selection = Leakage Current Detection Reduction Rate PWM*].
- When the setting value increases, the current monitor will start up slowly. Examine the relevant sequence for problems.

If errors occur in the values on the current monitor during acceleration/deceleration, increase the setting value.

◆ L2: Power Loss Ride Through

L2 parameters set the drive operation during momentary power loss and the KEB Ride-Thru function method of operation.

■ KEB Ride-Thru Function

KEB is an acronym for Kinetic Energy Backup. If the drive detects a power loss or momentary power loss, it will quickly decelerate the motor. The drive uses regenerative energy from the motor to keep the main circuit operating. When you return power during motor deceleration, the drive returns operation to the status before the power loss. The KEB Ride-Thru function is different than other functions for continuous operation. If the drive detects momentary power loss, the motor will ramp to stop. It will not coast to stop. This function is applicable for applications in which it is necessary to prevent materials from running out, for example control for film and fiber lines.

The KEB Ride-Thru function has 4 methods of operation. Parameter *L2-29* [*Kinetic Energy Backup Method*] sets the method.

When you use the KEB Ride-Thru function with one drive, set $L2-29 = 0, 1$ [*Single Drive KEB Ride-Thru 1, Single Drive KEB Ride-Thru 2*].

If deceleration in coordination with more than one drive is necessary, for example textile machinery line systems, set $L2-29 = 2, 3$ [*System KEB Ride-Thru 1, System KEB Ride-Thru 2*].

Table 12.49 KEB Ride-Thru Function Operation Method

L2-29	Kinetic Energy Backup Method	Operation	Configuration Precautions
0	Single Drive KEB Ride-Thru 1	The drive uses regenerative energy from the motor to keep the DC bus voltage at the level set in <i>L2-11</i> [<i>KEB DC Bus Voltage Setpoint</i>] while it adjusts the rate of deceleration. The KEB operation continues while the drive adjusts the deceleration rate with the setting of <i>C1-09</i> [<i>Fast Stop Time</i>].	- Set <i>C1-09</i> correctly to prevent <i>Uv1</i> [<i>DC Bus Undervoltage</i>] and <i>ov</i> [<i>Overvoltage</i>]. - If the drive detects <i>Uv1</i> during the KEB operation, decrease the value set in <i>C1-09</i>. - If the drive detects <i>ov</i> during the KEB operation, increase the value set in <i>C1-09</i>.
1	Single Drive KEB Ride-Thru 2	The drive uses information about the inertia of the connected machinery to find the deceleration rate necessary to keep the DC bus voltage at the level set in parameter <i>L2-11</i> . The drive uses system inertia to calculate the deceleration time. You cannot adjust this value.	- If the drive detects <i>Uv1</i> during the KEB operation, increase the setting value of <i>L3-20</i> [<i>DC Bus Voltage Adjustment Gain</i>] and <i>L3-21</i> [<i>OV/Suppression Accel/Decel P Gain</i>]. - If the drive detects <i>ov</i> during the KEB operation, decrease the setting values of <i>L3-20</i> and <i>L3-21</i>.
2	System KEB Ride-Thru 1	The drive does not monitor the DC bus voltage. The drive decelerates at the KEB deceleration time set in <i>L2-06</i> . Use <i>L2-06</i> to set the time necessary to decelerate from the current frequency reference to 0 Hz. More than one drive can decelerate and keep a constant speed ratio between drives.	Use the dynamic braking option with System KEB Ride-Thru 1.
3	System KEB Ride-Thru 2	The drive uses the KEB deceleration time set in <i>L2-06</i> to decelerate and it also monitors the DC bus voltage. If the voltage level increases, the drive momentarily holds the frequency to prevent an <i>ov</i> before it continues to decelerate.	If you cannot use the dynamic braking option, use System KEB Ride-Thru 2.

■ KEB Ride Thru Start

When $L2-01 = 3, 4, 5$ [*Power Loss Ride Through Select = Kinetic Energy Backup: L2-02, Kinetic Energy Backup: CPU Power, Kinetic Energy Backup: DecelStop*], the drive starts the KEB operation immediately after it detects a momentary power loss. When one of these conditions occur, the drive will activate KEB Ride-Thru:

- KEB Ride-Thru 1 set for the MFDI terminal becomes enabled (terminal is deactivated when $H1-xx = 65$ or terminal is activated when $H1-xx = 66$).
The drive uses the mode selected $L2-29$ [*Kinetic Energy Backup Method*] to start KEB operation.
- KEB Ride-Thru 2 set for the MFDI terminal becomes enabled (terminal is deactivated when $H1-xx = 7A$ or terminal is activated when $H1-xx = 7B$).
The drive automatically starts Single KEB Ride-Thru 2 and it ignores the setting of $L2-29$.
- The DC bus voltage is less than the level set in $L2-05$ [*Undervoltage Detection Lvl (Uv1)*].
The KEB operation will start as specified in $L2-29$.

Note:

If you try to set KEB Ride-Thru 1 and 2 to the MFDI terminals at the same time, it will trigger $oPE03$ [*Multi-Function Input Setting Err*].

In this example, the drive detects that the DC bus voltage is less than the level set in $L2-05$ and starts the KEB operation. When you return power during KEB operation, the drive will continue KEB operation when the KEB Ride-Thru is input, although the time set in $L2-10$ [*Minimum KEB Time*] expired. The motor accelerates again after you cancel the KEB Ride-Thru.

Figure 12.90 KEB Operation through KEB Ride-Thru Input

■ KEB Ride-Thru End Detection

Parameter $L2-01$ [*Power Loss Ride Through Select*] and a digital input programmed for KEB set the KEB function end detection.

Use the Momentary Power Loss Ride-Thru Time to Cancel KEB Operation

shows an example with this configuration:

- $L2-01 = 3$ [*Kinetic Energy Backup: L2-02*] is set.
- KEB Ride-Thru is not used.

The drive starts deceleration through KEB operation. When the time set in $L2-10$ [*Minimum KEB Time*] expires, the drive stops the KEB operation and then it accelerates the motor again until it is at the frequency reference value used before the power loss.

If you do not return the DC bus voltage in the time set in $L2-02$ [*Power Loss Ride Through Time*], the drive detects $Uv1$ [*DC Bus Undervoltage*] and the drive turns off its output.

Figure 12.91 Cancel the KEB Operation after the Momentary Power Loss Ride-Thru Time Is Expired without KEB Ride-Thru

*1 When $L2-07 = 0.00$ [Kinetic Energy Backup Accel Time = 0.00 s], the drive accelerates again as specified by the applicable Acceleration Time [C1-01, C1-03, C1-05, C1-07], and usual operation continues.

Use the Momentary Power Loss Ride-Thru Time and KEB Ride-Thru to Cancel KEB Operation

shows an example with this configuration:

- $L2-01 = 3$.
- Use KEB Ride-Thru 1 [H1-xx = 65, 66] or KEB Ride-Thru 2 [H1-xx = 7A, 7B].

The drive starts deceleration through KEB operation. The drive decelerates for the time set in parameter $L2-10$, then it measures the DC bus voltage and the status of the digital input terminal set for KEB Ride-Thru. When the DC bus voltage is less than the level set in $L2-11$ [KEB DC Bus Voltage Setpoint], or if the KEB digital input is active, KEB deceleration continues. When the DC bus voltage is more than the level set in $L2-11$, the drive ends KEB operation. The drive accelerates the motor to the frequency reference value before the power loss, and usual operation continues. If the time set in $L2-02$ is expired, the drive detects $Uv1$. When you cancel the KEB Ride-Thru, the motor accelerates again, and usual operation continues.

Figure 12.92 Use the Momentary Power Loss Ride-Thru Time and KEB Ride-Thru to Cancel KEB Operation

*1 When $L2-07 = 0.00$, the drive accelerates again as specified by the applicable Acceleration Time [C1-01, C1-03, C1-05, C1-07], and usual operation continues.

Cancel KEB Operation When Restoration of Power Occurs while the Control Power (Power Supply to the Control Board) is Maintained

shows an example with this configuration:

- $L2-01 = 4$ [Kinetic Energy Backup: CPU Power] is set.
- KEB Ride-Thru is not used.

The drive starts deceleration through KEB operation. The drive decelerates for the time set in parameter *L2-10*, and then measures the DC bus voltage level. When the DC bus voltage is lower than the level set in *L2-11*, the drive uses the KEB Ride-Thru function to continue deceleration. When the DC bus voltage is more than the level set in *L2-11*, usual operation continues. The drive accelerates the motor to the frequency reference value before the power loss, and usual operation continues.

Figure 12.93 Cancel KEB Operation without Using the KEB Ride-Thru if Restoration of Power Occurs while the Control Power (Power Supply to the Control Board) is Maintained

*1 When *L2-07* = 0.00 s, the drive accelerates again as specified by the applicable *Acceleration Time* [*C1-01*, *C1-03*, *C1-05*, *C1-07*], and usual operation continues.

Use the KEB Ride-Thru to Cancel KEB Operation when Restoration of Power Occurs while the Control Power (Power Supply to the Control Board) is Maintained

shows an example with this configuration:

- *L2-01* = 4.
- Use *KEB Ride-Thru 1* [*H1-xx* = 65, 66] or *KEB Ride-Thru 2* [*H1-xx* = 7A, 7B].

The drive starts deceleration through KEB operation. When the motor decelerates for the time set in *L2-10*, the drive measures the DC bus voltage and the status of the digital input set for KEB Ride-Thru. When the DC bus voltage is less than the level set in *L2-11*, or if the digital input set to KEB Ride-Thru is active, deceleration continues. When the DC bus voltage is more than the level set in *L2-11*, the drive ends KEB operation. The drive accelerates the motor to the frequency reference value before the power loss, and usual operation continues. When the KEB Ride-Thru continues to be input after the time set in *L2-02* is expired, the drive uses the KEB Ride-Thru function to continue to decelerate. When you cancel the KEB Ride-Thru, the motor accelerates again, and usual operation continues.

Figure 12.94 Use the KEB Ride-Thru to Cancel KEB Operation when Restoration of Power Occurs while the Control Power (Power Supply to the Control Board) is Maintained

*1 When *L2-07* = 0.00 s, the drive accelerates again as specified by the applicable *Acceleration Time* [*C1-01*, *C1-03*, *C1-05*, *C1-07*], and usual operation continues.

KEB Operation when L2-01 = 5 [Kinetic Energy Backup: DecelStop]

The drive starts deceleration through KEB operation. If you do not input the Run command, the motor cannot restart. The drive will continue to decelerate until the motor comes to the minimum output frequency or a complete stop. If you return power during deceleration, the drive continues to decelerate.

KEB Operation Wiring Example

Figure 12.95 shows an example that uses an undervoltage relay to trigger the KEB Ride-Thru at power loss. When a power loss occurs, the undervoltage relay triggers *KEB Ride-Thru* [H1-06 = 65, 66, 7A, 7B] at terminal S2.

Note:

- Set the drive to activate the Run command while the KEB function is operating. If you turn off the Run command, the drive will not accelerate back to speed when you return power.
- When you set L2-29 = 2 [Kinetic Energy Backup Method = System KEB Ride-Thru 1], install a dynamic braking option.

Figure 12.95 KEB Function Wiring Example

Parameters for KEB Ride-Thru

Table 12.50 shows the parameters that adjust the KEB Ride-Thru function. Parameter settings are different for the different KEB methods set in L2-29 [KEB Energy Backup Method].

Table 12.50 Parameters for KEB Ride-Thru

No.	Name	Configuring Settings	L2-29 [Kinetic Energy Backup Method]			
			0	1	2	3
C1-09	Fast Stop Time	- If <i>ov</i> [Overvoltage] occurs during KEB deceleration, increase the setting value. - If <i>Uv1</i> [DC Bus Undervoltage] occurs during KEB deceleration, decrease the setting value.	x ^{*1}	-	-	-
C2-03	S-Curve Time @ Start of Decel	- If <i>ov</i> occurs immediately after you start KEB deceleration, increase the setting value. - If <i>Uv1</i> occurs immediately after you start operation, decrease the setting value.	x	-	x	x
L2-05	Undervoltage Detection Lvl (Uv1)	If <i>Uv1</i> occurs immediately after you start KEB deceleration, increase the setting value to detect power loss more quickly.	x	x	x	x
L2-06	Kinetic Energy Backup Decel Time	- Does KEB Tuning. - If <i>ov</i> or <i>Uv1</i> occur during KEB deceleration after the KEB Tuning, set L2-06 in these conditions: - If <i>ov</i> occurs, increase the setting value - If <i>Uv1</i> occurs, decrease the setting value.	-	-	x ^{*2}	x ^{*2}
L2-07	Kinetic Energy Backup Accel Time	Sets the acceleration time to return to the frequency reference value before a power loss, after you cancel the KEB operation. When L2-07 = 0, the drive uses the standard acceleration times set in C1-01, C1-03, C1-05, and C1-07 [Acceleration Time].	x	x	x	x

No.	Name	Configuring Settings	L2-29 [Kinetic Energy Backup Method]			
			0	1	2	3
L2-08	Frequency Gain at KEB Start	- If <i>ov</i> occurs immediately after you start operation, decrease the setting value. - If <i>Uv1</i> occurs immediately after you start KEB deceleration, increase the setting value.	x	-	x	x
L2-10	Minimum KEB Time	- With KEB Ride-Thru There is <i>Uv1</i> because you set a digital input for KEB Ride-Thru and the device that controls the input operated too slowly after power loss. - Without KEB Ride-Thru If the DC bus voltage overshoots immediately after KEB Ride-Thru starts, increase L2-10 to longer than the overshoot.	x	x	x	x
L2-11	KEB DC Bus Voltage Setpoint	- Single Drive KEB Ride-Thru 2 Set to approximately 1.22 x input voltage. - Single Drive KEB Ride-Thru 1, System KEB Ride-Thru 1, or System KEB Ride-Thru 2 Set to approximately 1.4 x input voltage.	x	x	x	x
L3-20	DC Bus Voltage Adjustment Gain	- If <i>ov</i> or <i>Uv1</i> occurs at the start of deceleration when you use KEB operation, increase this value in 0.1-unit increments. - If there is torque ripple during deceleration when you use KEB Ride-Thru, decrease the value.	-	x	-	-
L3-21	OVSuppression Accel/Decel P Gain	If there is large speed or current ripple, decrease the value in 0.05 unit increments. Note: If the setting value is too low, then the drive will have unsatisfactory DC bus voltage control response. The drive can detect <i>ov</i> or <i>Uv1</i>.	-	x	-	-
L3-24	Motor Accel Time @ Rated Torque	Set the motor acceleration time to the maximum frequency at the motor rated torque.	-	x	-	-
L3-25	Load Inertia Ratio	Sets the ratio between motor inertia and machine inertia.	-	x *3	-	-

- *1 When L2-29 = 0 [KEB Energy Backup Method = Single Drive KEB Ride-Thru 1] and you do KEB Auto-Tuning, the drive will automatically set C1-09. If you must not change the Fast Stop time, do not do KEB Tuning.
- *2 If you do KEB Tuning when L2-29 = 1, 2, or 3 [KEB Energy Backup Method = Single Drive KEB Ride-Thru 2, System KEB Ride-Thru 1 or System KEB Ride-Thru 2], the drive will automatically set L2-06 [KEB Decel Time].
- *3 The drive sets this value automatically when KEB Tuning completes correctly.

■ L2-01: Power Loss Ride Through Select

No. (Hex.)	Name	Description	Default (Range)
L2-01 (0485)	Power Loss Ride Through Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive operation after a momentary power loss.	0 (0 - 5)

The drive detects momentary power loss when the drive DC bus voltage is less than the value set in L2-05 [Undervoltage Detection Lvl (*Uv1*)].

0 : Disabled

A momentary power loss triggers *Uv1* [DC Bus Undervoltage].

If you do not restore power in 15 ms, a *Uv1* is triggered and the drive shuts off the output. The motor coasts to stop.

1 : Enabled

This setting will enable for the time set in L2-02 [Power Loss Ride Through Time] or until the CPU is inactive. When the CPU is inactive, b1-17 [Run Command at Power Up] sets operation at power up.

When power returns in the time set in L2-02, the drive will restart. If power does not return in the time set in L2-02, the drive will detect *Uv1*.

The drive momentarily turns OFF its output after a power loss. If the power returns in the time set to L2-02, the drive will do Speed Search and try to continue operation.

If the DC bus voltage is less than or equal to the *Uv1* detection level for the time set in L2-02, the drive will detect *Uv1* and output a fault signal.

Note:

- The necessary time for the drive to restart after power returns is different for different drive capacities.
- The upper limit of the possible momentary power loss Ride-Thru time is different for different drive models.

2 : Enabled while CPU Power Active

This setting will enable for the time set in *L2-02 [Power Loss Ride Through Time]* or until the CPU is inactive. When the CPU is inactive, *b1-17 [Run Command at Power Up]* sets operation at power up.

When power returns and the drive control circuit has power, the drive will restart. This will not trigger *Uv1*.

When there is a momentary power loss, the drive output will turn OFF. If the power returns and the drive control circuit has power, the drive will do Speed Search and try to continue operation. This will not trigger a *Uv1*. This function lets the drive lose power for longer than when *L2-01 = 1*.

3 : Kinetic Energy Backup: L2-02

If power does not return in the time set in *L2-02*, the drive will detect *Uv1*.

If the drive detects momentary power loss, the drive will use regenerative energy from the motor and ramp to stop.

When you return power in the time set in *L2-02*, the drive will accelerate to the frequency reference value that the drive used before the power loss. If you do not return power in the time set to *L2-02*, the drive will detect *Uv1* and the drive output will turn OFF. *L2-29 [Kinetic Energy Backup Method]* sets the type of KEB operation.

4 : Kinetic Energy Backup: CPU Power

When power returns and the drive control circuit has power, the drive will restart.

The drive decelerates using regenerative energy from the motor until the power returns and then restarts when a momentary power loss is detected. When power is restored during deceleration, the drive accelerates the motor again to the frequency reference value used before the power loss. If the motor comes to a stop before the power returns, the drive loses control power and the drive output shuts off. A *Uv1* is not triggered when power is restored while power to the CPU in the drive is maintained. *L2-29* sets the type of KEB operation.

5 : Kinetic Energy Backup: DecelStop

When power returns, the drive will continue to decelerate until the motor fully stops.

If the drive detects momentary power loss, the drive will use regenerative energy from the motor and ramp to stop.

When you return power to the drive, the drive will continue to decelerate until the motor comes to a full stop. After you return power, the drive will ramp to stop in the set deceleration time. *L2-29* sets the type of KEB operation.

Note:

When you set *L2-01*, make sure that you know these items:

- You can use a Momentary Power Loss Unit on models 2001 to 2042 and 4001 to 4023 for a longer momentary power loss ride through time. A Momentary Power Loss Unit makes it possible to continue operation of the drive after a maximum of 2 seconds of power loss.
- When you set *L2-01 = 1 to 4*, keep the magnetic contactor on the drive input side ON and keep the control signal while the drive does KEB operation.
- When *L2-01 = 1 to 5*, *Uv [DC Bus Undervoltage]* will flash on the keypad while the drive is attempting to recover from a momentary power loss. The drive will not output a fault signal at this time.
- When you use a magnetic contactor between the motor and the drive, keep the magnetic contactor closed while the drive does KEB operation or tries to restart with Speed Search.
- Keep the Run command active during KEB operation. The drive cannot accelerate back to the frequency reference when the power returns.
- When *L2-01 = 3 to 5*, if the control power supply voltage is less than the CPU operation level during KEB Ride-Thru, it will trigger *Uv1*.

■ L2-02: Power Loss Ride Through Time

No. (Hex.)	Name	Description	Default (Range)
L2-02 (0486)	Power Loss Ride Through Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will wait before it tries to restart if the DC bus voltage is less than <i>L2-05 [Undervoltage Detection Lvl (Uv1)]</i> after a momentary power loss.	Determined by o2-04, C6-01 (0.0 - 25.5 s)

This function is applicable when *L2-01 = 1, 3 [Power Loss Ride Through Select = Enabled, Kinetic Energy Backup: L2-02]*.

After a power loss, if these conditions are satisfied, the drive detects *Uv1 [DC Bus Undervoltage]*, shuts off the output, and the motor coasts to stop:

- After the DC bus voltage decreases less than the level of *L2-05 [Undervoltage Detection Lvl (Uv1)]*, the time set in *L2-02* is expired.
- The drive does not detect a *Uv2 [Control Power Undervoltage]*.

Depending on use conditions, if the time set in *L2-02* is long, the drive may detect *Uv2* before *Uv1*. If this is a problem, decrease the time set in *L2-02* to prevent *Uv2*.

Note:

- The length of time that the drive can recover after a power loss changes when drive capacity changes.
- The upper limit of the possible momentary power loss Ride-Thru time changes when drive capacity changes.

■ L2-03: Minimum Baseblock Time

No. (Hex.)	Name	Description	Default (Range)
L2-03 (0487)	Minimum Baseblock Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the minimum time to continue the drive output block (baseblock) after a baseblock.	Determined by o2-04, C6-01 (0.1 - 5.0 s)

Sets the length of time that the drive will wait for the residual voltage in the motor to dissipate in estimation to the secondary circuit time constant of the motor. If *oC* [Overcurrent] or *ov* [DC Bus Overvoltage] occur at the start of Speed Search, after power returns, or during DC Injection Braking, increase this setting.

■ L2-04: Powerloss V/f Recovery Ramp Time

No. (Hex.)	Name	Description	Default (Range)
L2-04 (0488)	Powerloss V/f Recovery Ramp Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time for the drive output voltage to go back to correct voltage after completing speed searches.	Determined by o2-04, C6-01 (0.0 - 5.0 s)

Sets the time for voltage to recover from 0 V to the value set in *E1-05* [Maximum Output Voltage].

■ L2-05: Undervoltage Detection Lvl (Uv1)

No. (Hex.)	Name	Description	Default (Range)
L2-05 (0489)	Undervoltage Detection Lvl (Uv1)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage at which a <i>Uv1</i> [DC Bus Undervoltage] fault is triggered or at which the KEB function is activated. Usually it is not necessary to change this setting.	Determined by o2-04 and E1-01 (200 V Class: 150 - 210 V, 400 V Class: 300 - 420 V)

NOTICE Damage to Equipment

When you set this parameter to a value lower than the default, you must install an AC reactor on the input side of the power supply.

If you do not install an AC reactor, it will cause damage to the drive circuitry.

Note:

If the low voltage detection level is near the lower limit value of *L2-05*, the drive will detect *Uv1* during KEB Ride-Thru operation. Do not set the value too low when you use the KEB Ride-Thru function.

■ L2-06: Kinetic Energy Backup Decel Time

No. (Hex.)	Name	Description	Default (Range)
L2-06 (048A) Expert	Kinetic Energy Backup Decel Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the deceleration time during KEB operation used to decrease the maximum output frequency to 0.	0.0 s (0.0 - 6000.0 s)

Set *L2-29* = 2 or 3 [Kinetic Energy Backup Method = System KEB Ride-Thru 1 or System KEB Ride-Thru 2] to enable this function. When *L2-29* = 1, 2, 3 [Kinetic Energy Backup Method = Single Drive KEB Ride-Thru 2, System KEB Ride-Thru 1, System KEB Ride-Thru 2] and you do KEB Auto-Tuning, the drive will automatically set this value.

Sets the deceleration time necessary to decelerate from the frequency reference to 0 Hz when the drive detects a momentary power loss. If a *Uv1* [DC Bus Undervoltage] fault occurs during KEB operation, decrease the deceleration time. If an *ov* [Overvoltage] fault occurs, increase the deceleration time.

- *L2-06* = 0
The drive automatically decreases *C1-09* [Fast Stop Time] to the base value to keep the DC bus voltage above the low voltage detection level. The drive ignores *L2-02* [Momentary Power Loss Ride-Thru Time] in this condition.
- *L2-06* ≠ 0

As shown in Figure 12.96, the frequency reference decelerates to the KEB frequency level as specified by the deceleration rate set in *L2-06* and then returns to the initial frequency reference as specified by *C1-01* [Acceleration Time 1]. The drive uses the setting value of the KEB frequency rate as shown in the this formula to set the KEB frequency level:

$$\text{KEB frequency level} = \text{Output frequency before power loss} \times (1 - (L2-02) / (L2-06))$$

Figure 12.96 Kinetic Energy Backup Decel Time

■ L2-07: Kinetic Energy Backup Accel Time

No. (Hex.)	Name	Description	Default (Range)
L2-07 (048B) Expert	Kinetic Energy Backup Accel Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the acceleration time to return the frequency to the frequency reference before a power loss after canceling KEB operation.	0.0 s (0.0 - 6000.0 s)

Set this parameter to 0.0 to disable the function. The drive uses the acceleration time in *C1-01*, *C1-03*, *C1-05*, and *C1-07* to accelerate again after KEB operation completes.

■ L2-08: Frequency Gain at KEB Start

No. (Hex.)	Name	Description	Default (Range)
L2-08 (048C) Expert	Frequency Gain at KEB Start	V/f OLV OLV/PM AQLV/PM EZOLV Sets the quantity of output frequency reduction used when KEB operation starts as a percentage of the motor rated slip before starting KEB operation.	100% (0 - 300%)

Decreases the output frequency in steps to quickly set the motor to a regenerative condition. Use this formula to calculate the value:

$$\text{Output frequency reduction} = \text{Motor rated slip before KEB operation} \times (L2-08/100) \times 2$$

■ L2-09: KEB Minimum Frequency Level

No. (Hex.)	Name	Description	Default (Range)
L2-09 (048D) Expert	KEB Minimum Frequency Level	V/f OLV OLV/PM AQLV/PM EZOLV Sets the quantity of output frequency reduction used as a percentage of <i>E2-02</i> [Motor Rated Slip] when KEB operation starts.	20% (0 - 100%)

These conditions set the quantity of decrease:

- Motor rated slip $\times (L2-09/100)$
- The larger value between the value calculated with *L2-08* and the value calculated with *L2-09*

■ L2-10: Minimum KEB Time

No. (Hex.)	Name	Description	Default (Range)
L2-10 (048E) Expert	Minimum KEB Time	V/f OLV OLV/PM AQLV/PM EZOLV Sets the minimum length of time to operate the KEB after the drive detects a momentary power loss.	50 ms (0 - 25500 ms)

When you return power while KEB is operating, the drive continues KEB operation until the time set in *L2-10* is expired. When the DC bus voltage is less than the level of *L2-05* [*Undervoltage Detection Lvl (Uv1)*] in one of these conditions, KEB operation continues until the time set in *L2-10* is expired:

- *L2-01* = 3 [*Power Loss Ride Through Select = Kinetic Energy Backup: L2-02*]
- *L2-01* = 4 [*Kinetic Energy Backup: CPU Power*]
- *L2-01* = 5 [*Kinetic Energy Backup: DecelStop*]
- *KEB Ride-Thru 1/2* [*H1-xx* = 65, 66, 7A, or 7B] is input into the drive.

When you input KEB Ride-Thru, KEB operation continues after the time set in *L2-10* is expired. When you cancel KEB Ride-Thru, the motor accelerates again. When you do not input KEB Ride-Thru during the time set in *L2-10*, the drive accelerates to the frequency reference that the drive had before power loss in the applicable acceleration time.

When *L2-01* = 3, 4, or 5, and the DC bus voltage is a minimum of the value of *L2-11* [*KEB DC Bus Voltage Setpoint*], the drive accelerates again after the time set in *L2-10* is expired. When the DC bus voltage is less than the *L2-11* value, KEB operation continues after the time set in *L2-10* is expired.

Note:

- When *L2-01* = 0, 1, or 2 [*Disabled, Enabled for L2-02 Time, or Enabled while CPU Power Active*], increase the value of *L2-10*. Set *L2-10* to cancel KEB operation if the KEB Ride-Thru is not input.
- Setting *L2-10* to 0 ms disables the function of *L2-10*.

■ L2-11: KEB DC Bus Voltage Setpoint

No. (Hex.)	Name	Description	Default (Range)
L2-11 (0461) Expert	KEB DC Bus Voltage Setpoint	V/f OLV OLV/PM AOLV/PM EZOLV Sets the target value that controls the DC bus voltage to a constant level in Single Drive KEB Ride-Thru 2. Sets the DC bus voltage level that completes the KEB operation for all other KEB methods.	Determined by E1-01 (Determined by E1-01)

■ L2-29: Kinetic Energy Backup Method

No. (Hex.)	Name	Description	Default (Range)
L2-29 (0475) Expert	Kinetic Energy Backup Method	V/f OLV OLV/PM AOLV/PM EZOLV Sets the KEB function operation mode.	0 (0 - 3)

Set *L2-01* = 3, 4, or 5 [*Power Loss Ride Through Select = Kinetic Energy Backup: L2-02, Kinetic Energy Backup: CPU Power, or Kinetic Energy Backup: DecelStop*] or *KEB Ride-Thru 1/2* [*H1-xx* = 65, 66, 7A, or 7B], to enable the KEB function.

0 : Single Drive KEB Ride-Thru 1

The drive monitors the DC bus voltage and uses regenerative energy from the motor to hold the DC bus voltage at the level set in *L2-11* [*KEB DC Bus Voltage Setpoint*].

The KEB operation continues and the deceleration rate changes as specified by *C1-09* [*Fast Stop Time*].

Note:

- If the drive detects *Uv1* [*DC Bus Undervoltage*] during KEB operation, decrease the value of *C1-09*.
- If the drive detects *ov* [*Overvoltage*] during KEB operation, increase the value of *C1-09*.

1 : Single Drive KEB Ride-Thru 2

The drive does KEB operation and automatically calculates the deceleration rate to make sure that the main circuit electrical energy and main current voltage from motor regenerative energy is equal to *L2-11*.

2 : System KEB Ride-Thru 1

The drive does not monitor the DC bus voltage and decelerates as specified by the KEB deceleration time set in *L2-06*.

Use *L2-06* to set the time necessary to decelerate from the current frequency reference to 0 Hz. More than one drive can decelerate and keep a constant speed ratio between drives.

Note:

If you keep constant deceleration rates for more than one drive, it can trigger *ov* faults. Use the dynamic braking option with System KEB Ride-Thru 1.

3 : System KEB Ride-Thru 2

The drive uses the KEB deceleration time set in *L2-06* to decelerate and it also monitors the DC bus voltage.

If the voltage level increases, the drive momentarily holds the frequency to prevent an *ov* before it continues to decelerate.

Note:

When you cannot use a dynamic braking option, use System KEB Ride-Thru.

■ L2-30: KEB Zero Speed Operation

No. (Hex.)	Name	Description	Default (Range)
L2-30 (045E) Expert	KEB Zero Speed Operation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the operation when the output frequency decreases below the zero level (DC braking injection starting frequency) during KEB deceleration when <i>L2-01</i> = 3 to 5 [<i>Power Loss Ride Through Select</i> = <i>Kinetic Energy Backup</i>: <i>L2-02</i>, <i>Kinetic Energy Backup</i>: <i>CPU Power</i>, or <i>Kinetic Energy Backup</i>: <i>DecelStop</i>].	0 (0, 1)

0 : Baseblock

1 : DC/SC Braking

Does DC injection braking and short circuit braking as specified by *b2-04* [*DC Inject Braking Time at Stop*] and *b2-13* [*Short Circuit Brake Time @ Stop*].

■ L2-31: KEB Start Voltage Offset Level

No. (Hex.)	Name	Description	Default (Range)
L2-31 (045D) Expert	KEB Start Voltage Offset Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the KEB start voltage offset.	Determined by A1-02 (200 V Class: 0 - 100 V, 400 V Class: 0 - 200 V)

The drive uses this formula to calculate the KEB start voltage:

KEB start voltage = *L2-05* [*Undervoltage Detect Level (Uv1)*] + *L2-31*

◆ L3: Stall Prevention

L3 parameters set the Stall Prevention function and overvoltage suppression function.

■ Stall Prevention

If the load is too heavy or the acceleration and deceleration times are too short, the motor can slip too much because it cannot work at the same rate as the frequency reference. If the motor stalls during acceleration, current increases as the slip increases to cause an *oC* [*Overcurrent*], *oL2* [*Drive Overload*], or *oL1* [*Motor Overload*] and the drive will stop. If the motor stalls during deceleration, too much regenerative power will flow back into the DC bus capacitors, and cause the drive to detect an *ov* [*Overvoltage*] fault and stop.

The stall prevention function will let the motor get to the set speed without stalling and it is not necessary for you to change the acceleration or deceleration time settings. You can set a separate stall prevention functions for acceleration, operating at constant speeds, and deceleration.

■ Overvoltage Suppression Function

Decreases the regenerative torque limit and increases the output frequency when the DC bus voltage increases to prevent *ov*. This function can drive loads with cyclic regenerative operation, for example punch presses or other applications with repeated crank movements. When you use this function, set *L3-11* = 1 [*Overvoltage Suppression Select* = *Enabled*].

The drive adjusts the regenerative torque limit and the output frequency during overvoltage suppression to make sure that the DC bus voltage is not more than the level set in *L3-17* [*DC Bus Regulation Level*].

Set these parameters as necessary when you use the overvoltage suppression function:

- *L3-20* [*DC Bus Voltage Adjustment Gain*]
- *L3-21* [*OVSuppression Accel/Decel P Gain*]

- *L3-24 [Motor Accel Time @ Rated Torque]*
- *L3-25 [Load Inertia Ratio]*

Note:

- When overvoltage suppression is triggered, the motor speed is more than the frequency reference. Do not use overvoltage suppression for applications where the frequency reference and the motor speed must align.
- When you use a braking resistor, set *L3-11 = 0 [Disabled]*.
- The overvoltage suppression function is enabled only when you operate immediately below the maximum frequency. Overvoltage suppression does not increase the output frequency to more than the maximum frequency. Make sure that the motor and machine specifications are correct for the application, then increase the maximum frequency.
- If there is a sudden increase to a regenerative load, *ov* can occur.

■ L3-01: Stall Prevention during Accel

No. (Hex.)	Name	Description	Default (Range)
L3-01 (048F)	Stall Prevention during Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method of the Stall Prevention During Acceleration.	1 (0 - 3)

Note:

When *A1-02 = 5 [Control Method Selection = OLV/PM]*, the setting range is 0 and 1.

Stall prevention during acceleration prevents the stalling and stopping of motors when the drive detects *oC* [Overcurrent], *oL2* [Drive Overloaded], or *oL1* [Motor Overload] when you apply a large load during acceleration or when you set sudden acceleration times related to load inertia.

0 : Disabled

The Stall Prevention function does not operate during acceleration, and acceleration occurs for the set acceleration time. If the acceleration time is too short, the motor does not fully accelerate during the set time, which causes the drive to detect *oL1* or *oL2* and the motor to stop.

1 : Enabled

Enables the Stall Prevention During Acceleration function. Operation is different for different control methods.

• V/f Control, Open Loop Vector Control, or EZ Open Loop Vector Control

When the output current is more than *L3-02 [Stall Prevent Level during Accel]*, the drive stops acceleration. The drive stops deceleration when the output current is less than *L3-02 - 15%*. The Stall Prevention function level automatically decreases for constant output ranges.

Figure 12.97 Stall Prevention During Acceleration when Using Induction Motors

• Open Loop Vector Control for PM

When the output current is more than *L3-02*, the drive stops acceleration. When the time set in *L3-27 [Stall Prevention Detection Time]* is expired and the output current = *L3-02*, the drive will start deceleration as specified

by the value set in *L3-22 [PM Stall Prevention Decel Time]*. The drive starts acceleration again when the output current is less than *L3-02* - 15%. When the time set in *L3-27* is expired, the drive starts acceleration again.

Figure 12.98 Stall Prevention During Acceleration Function in OLV/PM

2 : Intelligent (Ignore Accel Ramp)

The drive ignores the acceleration time setting and the drive starts to accelerate in the minimum length of time. The drive automatically adjusts the acceleration rate to make sure that the output current is not more than *L3-02*.

3 : Current Limit Acceleration

This function uses the *L3-02* value to limit the output current and automatically adjust the acceleration rate. When the load (output current) increases to more than the current limit level during acceleration, the drive automatically adjusts the acceleration rate.

Figure 12.99 Current Limit Acceleration

■ L3-02: Stall Prevent Level during Accel

No. (Hex.)	Name	Description	Default (Range)
L3-02 (0490)	Stall Prevent Level during Accel	V/fOLVOLV/PMAOLV/PMEZOLV Sets the output current level at which the Stall Prevention function operates during acceleration where the drive rated output current is 100%.	Determined by C6-01 (0 - 150%)

Note:

- If you use a motor that is small compared to the drive and the motor stalls, decrease the setting value.
- When you operate the motor in the constant power range, set *L3-03 [Stall Prevent Limit during Accel]*.
- The upper limit to the setting range changes when the setting for *C6-01 [Normal / Heavy Duty Selection]* changes.
 - 150% when *C6-01* = 0 [*Heavy Duty Rating*]
 - 120% when *C6-01* = 1 [*Normal Duty Rating*]

■ L3-03: Stall Prevent Limit during Accel

No. (Hex.)	Name	Description	Default (Range)
L3-03 (0491)	Stall Prevent Limit during Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the lower limit for the stall prevention level used in the constant output range as a percentage of the drive rated output current.	50% (0 - 100%)

The stall prevention level set in L3-02 [Stall Prevent Level during Accel] is automatically reduced when the motor is running within the constant output range. Parameter L3-03 is the limit value used to prevent the stall prevention level during constant output ranges to fall below the minimum required level.

Note:

The function to automatically reduce the stall prevention level does not operate when L3-01 = 3 [Stall Prevention during Accel = Current Limit Method].

Figure 12.100 Stall Prevent Level during Accel/Limit

■ L3-04: Stall Prevention during Decel

No. (Hex.)	Name	Description	Default (Range)
L3-04 (0492)	Stall Prevention during Decel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method that the drive will use to prevent overvoltage faults when decelerating.	1 (Determined by A1-02)

Note:

- To connect a dynamic braking option (braking resistor or braking resistor unit) to the drive, set this parameter to 0 or 3. Parameter settings 1, 2, 4, 5, and 7 will enable Stall Prevention function during deceleration, and the dynamic braking option will not function.
- The setting range changes when the A1-02 [Control Method Selection] value changes:
 - When A1-02 = 5 [OLV/PM], the setting range is 0 to 2.
 - When A1-02 = 6 or 8 [AOLV/PM or EZOLV], the setting range is 0 or 1.

Stall Prevention during deceleration controls the deceleration as specified by the DC bus voltage and does not let high inertia or fast deceleration cause *ov* [Overvoltage] faults.

0 : Disabled

The drive decelerates as specified by the deceleration time. If the deceleration time is too short, the drive can detect an *ov* fault.

Note:

If an *ov* fault occurs, connect a dynamic braking option to the drive. If an *ov* fault occurs when you connect a dynamic braking option and A1-02 = 0 or 2 [Control Method Selection = V/f or OLV] and L3-04 = 0, set L3-04 = 3.

1 : General Purpose

The drive decelerates as specified by the deceleration time. When the DC bus voltage is more than the Stall Prevention level, the drive stops deceleration until the DC bus voltage is less than the Stall Prevention Level. The drive then starts to decelerate at the set deceleration time. Frequent use of Stall Prevention will help prevent *ov* faults when the deceleration time is shorter than the drive can usually accept.

Note:

The Decel Stall Prevention function will increase the deceleration time to stop and the deceleration time will be longer than the setting. This function is not applicable for conveyor applications because the precision of the stop position is very important. As an alternative, use a dynamic braking option in these applications.

The input voltage setting of *E1-01 [Input AC Supply Voltage]* sets the DC bus voltage level for Stall Prevention.

Table 12.51 Stall Prevention Level during Deceleration

Drive Input Voltage	Stall Prevention Level during Deceleration
200 V Class	377 V
400 V Class	754 V

Figure 12.101 shows the Stall Prevention during deceleration function.

Figure 12.101 Stall Prevention Operation during Deceleration

2 : Intelligent (Ignore Decel Ramp)

The drive adjusts the deceleration rate to keep the DC bus voltage at the *L3-17 [DC Bus Regulation Level]* level. This makes the shortest possible deceleration time and will not let the motor stall. The drive ignores the selected deceleration time and the possible deceleration time cannot be less than 1/10 of the set deceleration time.

This function uses these parameters to adjust the deceleration rate:

- *L3-20 [DC Bus Voltage Adjustment Gain]*
- *L3-21 [OVSuppression Accel/Decel P Gain]*
- *L3-24 [Motor Accel Time @ Rated Torque]*
- *L3-25 [Load Inertia Ratio]*

Note:

The deceleration time is not constant. For applications where the precision of the stop position is very important, use a dynamic braking option and set *L3-04 = 0*. If an *ov* occurs, set *L3-04 = 3*.

3 : General Purpose w/ DB resistor

A braking resistor is necessary for this setting. The braking resistor and the drive work together for the Stall Prevention during deceleration function.

4 : Overexcitation/High Flux 1

Enables Overexcitation/High Flux and enables a shorter deceleration time than when *L3-04 = 0*.

Note:

- If the overexcitation time is long and you decelerate frequently, the drive can detect *oL1 [Motor Overload]* faults. If the drive detects *oL1*, decrease the deceleration time or install a braking resistor to the drive.
- The deceleration time during Overexcitation Deceleration changes when the motor characteristics and machine inertia change. Adjust the *n3-13 [OverexcitationBraking (OEB) Gain]* and *n3-23 [Overexcitation Braking Operation]* levels. Refer to [Overexcitation Deceleration on page 709](#) for more information.

5 : Overexcitation/High Flux 2

Enables Overexcitation/High Flux 2. This function decreases the possible deceleration time more than *Overexcitation/High Flux*.

The drive decreases motor speed and tries to keep the DC bus voltage at the *L3-17* level.

If the drive detects *oL1*, decrease the values set in *n3-13* and *n3-21*. If the drive detects *ov*, increase the values set in *C1-02*, *C1-04*, *C1-06*, and *C1-08 [Deceleration Times]*.

Note:

- During Overexcitation/High Flux 2, the drive disables Hunting Prevention in V/f Control and also disables Speed Control that uses torque limit in OLV Control.
- Refer to [Overexcitation Deceleration on page 709](#) for more information.

7 : Overexcitation/High Flux 3

If you set $L3-04 = 7$ [*Overexcitation Braking 3*], the overexcitation increases compared with 4 [*Overexcitation/High Flux*]. This can decrease the deceleration time.

Note:

When $L3-04 = 7$, the overexcitation current increases as compared with 4. Motor load becomes larger, and it can cause $oL1$ [*Motor Overload*]. When you can use $L3-04 = 4$ to operate the drive, set $L3-04 = 4$.

■ L3-05: Stall Prevention during RUN

No. (Hex.)	Name	Description	Default (Range)
L3-05 (0493)	Stall Prevention during RUN	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable Stall Prevention During Run.	2 (0 - Determined by A1-02)

Stall Prevention function during run prevents the motor from stalling by automatically reducing the speed when an $oL1$ [*Motor Overload*] occurs while the motor is running at constant speed.

Note:

- An output frequency less than 6 Hz disables Stall Prevention during Run. The setting values of $L3-05$ and $L3-06$ [*Stall Prevent Level during Run*] do not have an effect.
- The setting range changes when the $A1-02$ [*Control Method Selection*] value changes:
 - $A1-02 = 0, 5$ [*V/f, OLV/PM*] : 0 to 2
 - $A1-02 = 8$ [*EZOLV*] : 0, 3

0 : No

The drive runs at the set frequency reference. A heavy load can cause the motor to stall and trip the drive with oC [*Overcurrent*] or $oL1$.

1 : Deceleration Time 1 (C1-02)

The drive will decelerate for the time set in $C1-02$ [*Deceleration Time 1*] when the current is more than the Stall Prevention level set in $L3-06$. When the current level is less than the “ $L3-06$ setting value - 2%” for 100 ms, the drive accelerates again for the acceleration time applicable at that time until it is at the set frequency.

2 : Deceleration Time 2 (C1-04)

This setting functions the same as *Setting 1* [*Deceleration Time 1 (C1-02)*]. When you enable the Stall Prevention function, the drive decelerates in the time set in $C1-04$ [*Deceleration Time 2*].

3 : Intelligent (Ignore Decel Ramp)

Enabled when $A1-02 = 8$ [*EZOLV*]. The drive operates with the largest possible output current to prevent motor stalling.

■ L3-06: Stall Prevent Level during Run

No. (Hex.)	Name	Description	Default (Range)
L3-06 (0494)	Stall Prevent Level during Run	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output current level at which the Stall Prevention function is enabled during run when the drive rated output current is 100%.	Determined by C6-01 (5 - 150%)

Note:

- This parameter is applicable when $L3-05 = 1, 2$ [*Stall Prevention during RUN = Deceleration Time 1 (C1-02), Deceleration Time 2 (C1-04)*].
- When $L3-23 = 1$ [*Stall P Reduction at Constant HP = Automatic Reduction @ CHP Region*], the drive will automatically decrease the level in the constant output range.
- The upper limit to the setting range changes when the setting for $C6-01$ [*Normal / Heavy Duty Selection*] changes.
 - 150% when $C6-01 = 0$ [*Heavy Duty Rating*]
 - 120% when $C6-01 = 1$ [*Normal Duty Rating*]

Use an Analog Input to Change the Stall Prevent Level during Run

When $H3-xx = 8$ [*MFAI Function Select = Stall Prevent Level During Run*], you can use the input gain and bias settings for terminal A1 to change the stall prevention level during run.

If you set the input level for terminal A1 [$H3-xx = 8$] and $L3-06$, the drive will use the smaller value for Stall Prevent Level during Run.

Figure 12.102 Stall Prevention Level during Run with Analog Input

■ L3-11: Overvoltage Suppression Select

No. (Hex.)	Name	Description	Default (Range)
L3-11 (04C7)	Overvoltage Suppression Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the overvoltage suppression function.	0 (0, 1)

0 : Disabled

The drive does not adjust the regenerative torque limit or the output frequency. If you apply a regenerative load, the drive can detect an *ov* [Overvoltage] fault. Use this setting with a dynamic braking option.

1 : Enabled

When a regenerative load increases the DC bus voltage, the drive decreases the regenerative torque limit and increases the output frequency to prevent *ov*

■ L3-17: DC Bus Regulation Level

No. (Hex.)	Name	Description	Default (Range)
L3-17 (0462)	DC Bus Regulation Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the target value for the DC bus voltage when the overvoltage suppression function and the Decel Stall Prevention function (Intelligent Stall Prevention) are active.	200 V Class: 375 V, 400 V Class: 750 V (200 V Class: 150 to 400 V, 400 V Class: 300 to 800 V)

Note:

This value is initialized when *E1-01* [Input AC Supply Voltage] is changed.

Sets this parameter for any of the following circumstances.

- *L3-11 = 1* [OV Suppression Function Select = Enabled].
- *L3-04 = 2* [Decel Stall Prevention Selection = Automatic Decel Reduction].

■ L3-20: DC Bus Voltage Adjustment Gain

No. (Hex.)	Name	Description	Default (Range)
L3-20 (0465) Expert	DC Bus Voltage Adjustment Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain used to control the DC bus voltage.	Determined by A1-02 (0.00 - 5.00)

Set one of these parameters to enable L3-20:

- *L2-29 = 1* [Kinetic Energy Backup Method = Single Drive KEB Ride-Thru 2]
- *L3-04 = 2* [Stall Prevention during Decel = Intelligent (Ignore Decel Ramp)]
- *L3-11 = 1* [Overvoltage Suppression Select = Enabled]
- *H1-xx = 7A or 7B* [MFDI Function Selection = KEB Ride-Thru 2 Activate (N.O./N.C.)]

Note:

- If stall prevention during deceleration function causes *ov* [Overvoltage] and *Uv1* [DC Bus Undervoltage] faults when you start deceleration and *L2-29* = 1, *H1-xx* = 7A or 7B, or *L3-04* = 2, gradually increase this parameter in 0.1-unit increments. If the setting value is too high, it can cause large speed or current ripples.
- If sudden increases in the regenerative load cause *ov* faults and *L3-11* = 1, gradually increase this parameter in 0.1-unit increments. If the setting value is too high, it can cause large speed or current ripples.

■ L3-21: OVSUPPRESSION ACCEL/DECEL P GAIN

No. (Hex.)	Name	Description	Default (Range)
L3-21 (0466) Expert	OVSUPPRESSION ACCEL/DECEL P GAIN	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain to calculate acceleration and deceleration rates.	Determined by A1-02 (0.10 - 10.00)

Set one of these parameters to enable L3-20:

- *L2-29* = 1 [Kinetic Energy Backup Method = Single Drive KEB Ride-Thru 2]
- *L3-04* = 2 [Stall Prevention during Decel = Intelligent (Ignore Decel Ramp)]
- *L3-11* = 1 [Overvoltage Suppression Select = Enabled]
- *H1-xx* = 7A or 7B [MFDI Function Selection = KEB Ride-Thru 2 Activate (N.O./N.C.)]

Note:

- If stall prevention during deceleration function causes large speed or current ripples and *L2-29* = 1, *H1-xx* = 7A or 7B, or *L3-04* = 2, gradually decrease this parameter in 0.05-unit increments. If the drive detects *ov* [Overvoltage] or *oC* [Overcurrent], decrease *L3-21*. If you decrease the gain too much, it can cause a delay in control in the DC bus voltage or the deceleration time could be longer than the best deceleration time.
- If sudden increases in the regenerative load cause *ov* faults and *L3-11* = 1, gradually increase this parameter in 0.1-unit increments. If there are large speed ripples, gradually decrease this parameter in 0.05-unit increments.

■ L3-22: PM STALL PREVENTION DECEL TIME

No. (Hex.)	Name	Description	Default (Range)
L3-22 (04F9)	PM Stall Prevention Decel Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the momentary deceleration time that the drive will use when it tries to accelerate a PM motor and detected motor stalls. This function is applicable when <i>L3-01</i> = 1 [Stall Prevention during Accel = Enabled].	0.0 s (0.0 - 6000.0 s)

Set this parameter to 0.0 s to disable this function. The drive will decelerates in the deceleration time applicable at the time when a motor stall occurs.

■ L3-23: STALL P REDUCTION AT CONSTANT HP

No. (Hex.)	Name	Description	Default (Range)
L3-23 (04FD)	STALL P REDUCTION AT CONSTANT HP	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to automatically decrease the Stall Prevention Level during Run for constant output ranges.	0 (0, 1)

0 : Use L3-06 for Entire Speed Range

The drive uses the level set in *L3-06* [Stall Prevent Level during Run] through the full speed range.

1 : Automatic Reduction @ CHP Region

The drive decreases the Stall Prevention level during run in the constant power range. The lower limit is 40% of *L3-06* value.

■ L3-24: Motor Accel Time @ Rated Torque

No. (Hex.)	Name	Description	Default (Range)
L3-24 (046E) Expert	Motor Accel Time @ Rated Torque	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor acceleration time to reach the maximum frequency at the motor rated torque for stopped single-drive motors.	Determined by o2-04, C6-01, E2-11, and E5-01 (0.001 - 10.000 s)

Set one of these parameters to enable L3-20:

12.9 L: Protection Functions

- $L2-29 = 1$ [Kinetic Energy Backup Method = Single Drive KEB Ride-Thru 2]
- $L3-04 = 2$ [Stall Prevention during Decel = Intelligent (Ignore Decel Ramp)]
- $L3-11 = 1$ [Overvoltage Suppression Select = Enabled]
- $H1-xx = 7A$ or $7B$ [MFDI Function Select = KEB Ride-Thru 2 Activate (N.O./N.C.)]

Note:

When Auto-Tuning changes the value of $E2-11$ [Motor Rated Power (kW)], the drive will automatically set *this parameter* to the value for a Yaskawa standard motor (4 poles). When you use a PM motor, the drive uses the value in $E5-01$ [PM Motor Code Selection] to change $L3-24$.

■ L3-25: Load Inertia Ratio

No. (Hex.)	Name	Description	Default (Range)
L3-25 (046F) Expert	Load Inertia Ratio	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the ratio between motor inertia and machine inertia.	1.0 (0.1 - 1000.0)

Set one of these parameters to enable L3-20:

- $L2-29 = 1$ [Kinetic Energy Backup Method = Single Drive KEB Ride-Thru 2]
- $L3-04 = 2$ [Stall Prevention during Decel = Intelligent (Ignore Decel Ramp)]
- $L3-11 = 1$ [Overvoltage Suppression Select = Enabled]
- $H1-xx = 7A$ or $7B$ [MFDI Function Select = KEB Ride-Thru 2 Activate (N.O./N.C.)]

Note:

- If you set this value incorrectly when $L2-29 = 1$, $H1-xx = 7A$ or $7B$, or $L3-11 = 1$, it can cause large current ripples and *ov* [Overvoltage], *Uv1* [DC Bus Undervoltage], or *oC* [Overcurrent] faults.
- KEB Tuning will automatically set this value.

■ L3-26: Additional DC Bus Capacitors

No. (Hex.)	Name	Description	Default (Range)
L3-26 (0455) Expert	Additional DC Bus Capacitors	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the capacity for external main circuit capacitors. Usually it is not necessary to change this setting. Sets this parameter when you use the KEB Ride-Thru function.	0 μ F (0 to 65000 μ F)

■ L3-27: Stall Prevention Detection Time

No. (Hex.)	Name	Description	Default (Range)
L3-27 (0456)	Stall Prevention Detection Time	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets a delay time between reaching the Stall Prevention level and starting the Stall Prevention function.	60 ms (0 - 5000 ms)

■ L3-34: Torque Limit Delay Time

No. (Hex.)	Name	Description	Default (Range)
L3-34 (016F) Expert	Torque Limit Delay Time	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the filter time constant that returns the torque limit to its initial value when KEB operation operates in Single Drive KEB Ride-Thru mode.	Determined by A1-02 (0.000 - 1.000 s)

When vibration occurs during operation of Single Drive KEB Ride-Thru 2, increase this parameter in 0.010-unit increments.

Note:

The Single Drive KEB Ride-Thru 2 mode operates when $L2-29 = 1$ [KEB Method Selection = Single Drive KEB Ride-Thru 2] and $H1-xx = 7A$ or $7B$ [Terminal Sx Function Selection = KEB Ride-Thru 2 (N.C./N.O.)].

■ L3-35: Speed Agree Width for Auto Decel

No. (Hex.)	Name	Description	Default (Range)
L3-35 (0747) Expert	Speed Agree Width for Auto Decel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width for speed agreement when $L3-04 = 2$ [Stall Prevention during Decel = Intelligent (Ignore Decel Ramp)]. Usually it is not necessary to change this setting.	0.00 Hz (0.00 - 1.00 Hz)

Set this parameter when hunting occurs while you use a frequency reference through an analog input.

■ L3-36: Current Suppression Gain@Accel

No. (Hex.)	Name	Description	Default (Range)
L3-36 (11D0)	Current Suppression Gain@Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain to suppress current and motor speed hunting during operation when $L3-01 = 3$ [Stall Prevention during Accel = Current Limit Method]. Usually it is not necessary to change this setting.	Determined by A1-02 (0.0 - 100.0)

If there is vibration in the output current during acceleration, increase the setting value.

Note:

Set $L3-01 = 3$ [Stall Prevention during Accel = Current Limit Method] to enable this function.

■ L3-37: Current Limit P Gain @Accel

No. (Hex.)	Name	Description	Default (Range)
L3-37 (11D1) Expert	Current Limit P Gain @Accel	V/f OLV OLV/PM AOLV/PM EZOLV Suppresses current hunting during acceleration. Usually it is not necessary to change this setting.	5 ms (0 - 100 ms)

Note:

Set $L3-01 = 3$ [Stall Prevention during Accel = Current Limit Acceleration] to enable this function.

■ L3-38: Current Limit I Time @ Accel

No. (Hex.)	Name	Description	Default (Range)
L3-38 (11D2) Expert	Current Limit I Time @ Accel	V/f OLV OLV/PM AOLV/PM EZOLV Suppresses current hunting and overshooting that occurs when the drive stalls during acceleration. Usually it is not necessary to change this setting.	10.0 (0.0 - 100.0)

Note:

Set $L3-01 = 3$ [Stall Prevention during Accel = Current Limit Method] to enable this function.

■ L3-39: Current Limit Filter Time@Accel

No. (Hex.)	Name	Description	Default (Range)
L3-39 (11D3)	Current Limit Filter Time@Accel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant to adjust the acceleration rate when $L3-01 = 3$ [Stall Prevention during Accel = Current Limit Acceleration]. Usually it is not necessary to change this setting.	100.0 ms (1.0 - 1000.0 ms)

Note:

Set $L3-01 = 3$ [Stall Prevention during Accel = Current Limit Acceleration] to enable this function.

■ L3-40: Current Limit S-Curve @ Acc/Dec

No. (Hex.)	Name	Description	Default (Range)
L3-40 (11D4)	Current Limit S-Curve @ Acc/Dec	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable the best S-curve characteristic used for current-limited acceleration.	0 (0, 1)

Makes the best motor acceleration rate for start up. If you set this parameter to 1, it will make acceleration smoother, but it can also increase the acceleration time to be longer than the set time. If the drive detects *oC* [Overcurrent] faults immediately after acceleration starts, set this parameter.

0 : Disabled

1 : Enabled

Note:

Set *L3-01 = 3* [Stall Prevention during Accel = Current Limit Acceleration] to enable this function.

◆ L4: Speed Detection

L4 parameters set the output of signals to the MFDO terminals, for example frequency agree and speed detection.

■ L4-01: Speed Agree Detection Level

No. (Hex.)	Name	Description	Default (Range)
L4-01 (0499)	Speed Agree Detection Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level to detect speed agree or motor speed.	Determined by A1-02 (Determined by A1-02)

Sets the level to detect speed agree or motor speed when *H2-01 to H2-03 = 2, 3, 4, 5* [MFDO Function Selection = Speed Agree 1, User-set Speed Agree 1, Frequency Detection 1, Frequency Detection 2].

■ L4-02: Speed Agree Detection Width

No. (Hex.)	Name	Description	Default (Range)
L4-02 (049A)	Speed Agree Detection Width	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width to detect speed agree or motor speed.	Determined by A1-02 (Determined by A1-02)

Sets the width to detect speed agree or motor speed when *H2-01 to H2-03 = 2, 3, 4, 5* [MFDO Function Selection = Speed Agree 1, User-set Speed Agree 1, Frequency Detection 1, Frequency Detection 2].

■ L4-03: Speed Agree Detection Level(+/-)

No. (Hex.)	Name	Description	Default (Range)
L4-03 (049B)	Speed Agree Detection Level(+/-)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level to detect speed agree or motor speed.	Determined by A1-02 (Determined by A1-02)

Sets the level to detect speed agree or motor speed when *H2-01 to H2-03 = 13, 14, 15, 16* [MFDO Function Selection = Speed Agree 2, User-set Speed Agree 2, Frequency Detection 3, Frequency Detection 4].

■ L4-04: Speed Agree Detection Width(+/-)

No. (Hex.)	Name	Description	Default (Range)
L4-04 (049C)	Speed Agree Detection Width(+/-)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the width to detect speed agree or motor speed.	Determined by A1-02 (Determined by A1-02)

Sets the width to detect speed agree or motor speed when *H2-01 to H2-03 = 13, 14, 15, 16* [MFDO Function Selection = Speed Agree 2, User-set Speed Agree 2, Frequency Detection 3, Frequency Detection 4].

■ L4-05: Fref Loss Detection Selection

No. (Hex.)	Name	Description	Default (Range)
L4-05 (049D)	Fref Loss Detection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the operation when the drive detects a loss of frequency reference.	0 (0, 1)

Enables the detection of a loss of an analog frequency reference when MFAI terminal (A1) inputs the frequency reference. Set *H2-01 to H2-03 = C* [MFDO Function Selection = Frequency Reference Loss] to enable this function.

If the frequency reference is less than 10% in 400 ms, the drive detects frequency reference loss.

Figure 12.103 Detection of Frequency Reference Loss

0 : Stop

The drive follows the frequency reference and stops the motor.

1 : Run at (L4-06 x Last Reference)

The drive continues to operate at the frequency reference value set in L4-06 [FreqReference at Reference Loss]. When you return the external frequency reference value, the drive continues to operate with the frequency reference.

■ L4-06: Frequency Reference @Loss of Ref

No. (Hex.)	Name	Description	Default (Range)
L4-06 (04C2)	Frequency Reference @Loss of Ref	V/f OLV OLV/PM AOLV/PM EZOLV Sets the frequency reference as a percentage to continue drive operation after it detects a frequency reference loss. The value is a percentage of the frequency reference before the drive detected the loss.	80.0% (0.0 - 100.0%)

Set L4-05 = 1 [FreqLoss Detection Selection = Run at (L4-06 x Last Reference)] to enable this parameter.

■ L4-07: Speed Agree Detection Selection

No. (Hex.)	Name	Description	Default (Range)
L4-07 (0470)	Speed Agree Detection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the condition that activates speed detection.	0 (0, 1)

0 : No Detection during Baseblock

Detects the frequency while the drive is operating. When the drive turns off its output, it will not detect frequency.

1 : Detection Always Enabled

■ L4-08: Speed Agree Source Selection

No. (Hex.)	Name	Description	Default (Range)
L4-08 (047F)	Speed Agree Source Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the drive to use the soft starter output frequency or the motor speed (estimation value) for speed detection.	0 (0, 1)

0 : Softstarter Output (Reference)

1 : Motor Speed (Actual Speed)

The setting for L4-08 has an effect:

- When you set detection conditions for oL3 [Overtorque 1], oL3 [Overtorque Detection 1], oL4 [Overtorque 2], and oL4 [Overtorque Detection 2]:
 - L6-01 = 1, 3, 5, 7 [Torque Detection Selection 1 = UL @ Speed Agree]
 - L6-04 = 1, 3, 5, 7 [Torque Detection Selection 2 = UL @ Speed Agree]
- When you use speed agreement with DriveWorksEZ.
- When the MFDI terminals set for H1-xx = 75, 76 [Up/Down 2 command] activate.
- When you set H2-xx [MFDO Function Select] to these functions:

Setting Value	Function
2	Speed Agree 1
3	User-Set Speed Agree 1
4	Frequency Detection 1
5	Frequency Detection 2

Setting Value	Function
13	Speed Agree 2
14	User-Set Speed Agree 2
15	Frequency Detection 3
16	Frequency Detection 4

- When you use these functions for Modbus monitor data:

Register No.	Description
002CH	Drive Status 2
	bit2 Speed agreement 1: During agreement
	bit3 User-defined speed agreement 1: During agreement
	bit4 Frequency Detection 1 1: Output frequency $\leq$ L4-01
	bit5 Frequency Detection 2 1: Output frequency $\geq$ L4-01
004BH	U1-12 [Drive Status]
	bit4 1: During speed agreement

- When you use these functions for monitor parameters:

No. (Hex.)	Name	Description
U1-12 (004B)	Drive Status	bit 4: During speed agreement

◆ L5: Fault Restart

The Auto Restart function tries to keep machines operating when the drive detects a transient fault.

The drive can do a self-diagnostic check and continue the operation after a fault. If the cause of the fault goes away, the drive does speed search and restarts. It will not stop and the drive will not record a fault history. Use *L5-02 [Fault Contact at Restart Select]* to select the operation of fault relay signals during Auto Restart operation.

Sets if the drive will do Auto Restart and the number of times the drive will try to do Auto Restart in a set time. If the number of Auto Restart tries is more than the set value during the set time, drive output shuts off and operation stops. If this happens, remove the cause of the fault and manually restart the drive.

The drive can do Auto Restart when these faults occur:

Note:

You can disable Auto Restart for some faults if you must not restart the machine after the fault with parameters *L5-07* and *L5-08*.

Table 12.52 List of Faults during which Auto Restart is Available

Fault	Name	Parameters to Disable Auto Restart	Fault	Name	Parameters to Disable Auto Restart
GF	Ground Fault	L5-08	ov	Overvoltage	L5-08
LF	Output Phase Loss	-	PF	Input Phase Loss	-
oC	Overcurrent	-	rH	Braking Resistor Overheat	-
oH1	Heatsink Overheat	L5-08	rr	Dynamic Braking Transistor Fault	-
oL1	Motor Overload	L5-07	STPo	Motor Step-Out Detected	-
oL2	Drive Overload	L5-07	Uv1	DC Bus Undervoltage <i>*/</i>	L5-08
oL3	Overtorque Detection 1	L5-07			
oL4	Overtorque Detection 2	L5-07			

*1 *Uv1* is the target for the auto restart process when *L2-01* = 1, 2, 3, or 4 [*Power Loss Ride Through Select* = Enabled for *L2-02* Time, Enabled while CPU Power Active, Kinetic Energy Backup: *L2-02*, or Kinetic Energy Backup: CPU Power].

■ L5-01: Number of Auto-Restart Attempts

No. (Hex.)	Name	Description	Default (Range)
L5-01 (049E)	Number of Auto-Restart Attempts	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of times that the drive will try to restart.	0 (0 - 10 times)

The drive resets the number of Auto Restart attempts to 0 in these conditions:

- The drive operates correctly for 10 minutes after a fault restart.
- When you manually clear a fault after the drive triggers protective functions.
- When you re-energize the drive.

■ L5-02: Fault Contact at Restart Select

No. (Hex.)	Name	Description	Default (Range)
L5-02 (049F)	Fault Contact at Restart Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that sends signals to the MFDO terminal set for <i>Fault</i> [<i>H2-xx</i> = <i>E</i>] while the drive is automatically restarting.	0 (0, 1)

0 : Active Only when Not Restarting

1 : Always Active

■ L5-04: Interval Method Restart Time

No. (Hex.)	Name	Description	Default (Range)
L5-04 (046C)	Interval Method Restart Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time interval between each Auto Restart attempt. This function is enabled when <i>L5-05</i> = 1 [<i>Auto Restart Operation Selection</i> = Use <i>L5-04</i> Time].	10.0 s (0.5 - 600.0 s)

■ L5-05: Auto-Restart Method

No. (Hex.)	Name	Description	Default (Range)
L5-05 (0467)	Auto-Restart Method	V/f OLV OLV/PM AOLV/PM EZOLV Sets the count method for the Auto Restart operation.	0 (0, 1)

0 : Continuous/Immediate Attempts

Counts the number of successful fault resets through Auto Restart.

When this value > *L5-01*, the drive will send a fault signal and fault code to the keypad and the motor will coast to stop.

1 : Interval/Attempt after L5-04 sec

Counts the number of all fault resets (successful and unsuccessful) through Auto Restart. The drive repeats the Auto Restart process in the intervals set in *L5-04* [*Interval Method Restart Time*].

When this value > *L5-01*, the drive will send a fault signal and fault code to the keypad and the motor will coast to stop.

■ L5-07: Fault Reset Enable Select Grp1

No. (Hex.)	Name	Description	Default (Range)
L5-07 (0B2A)	Fault Reset Enable Select Grp1	V/f OLV OLV/PM AOLV/PM EZOLV Use these 4 digits to set the Auto Restart function for <i>oL1</i> to <i>oL4</i> . From left to right, the digits set <i>oL1</i> , <i>oL2</i> , <i>oL3</i> , and <i>oL4</i> , in order.	1111 (0000 - 1111)

0000 : Disabled

0001 : Enabled (—/—/—/oL4)

- 0010 : Enabled (—/—/oL3/—)
- 0011 : Enabled (—/—/oL3/oL4)
- 0100 : Enabled (—/oL2/—/—)
- 0101 : Enabled (—/oL2/—/oL4)
- 0110 : Enabled (—/oL2/oL3/—)
- 0111 : Enabled (—/oL2/oL3/oL4)
- 1000 : Enabled (oL1/—/—/—)
- 1001 : Enabled (oL1/—/—/oL4)
- 1010 : Enabled (oL1/—/oL3/—)
- 1011 : Enabled (oL1/—/oL3/oL4)
- 1100 : Enabled (oL1/oL2/—/—)
- 1101 : Enabled (oL1/oL2/—/oL4)
- 1110 : Enabled (oL1/oL2/oL3/—)
- 1111 : Enabled (oL1/oL2/oL3/oL4)

Figure 12.104 Setting Digits and Fault Code

■ L5-08: Fault Reset Enable Select Grp2

No. (Hex.)	Name	Description	Default (Range)
L5-08 (0B2B)	Fault Reset Enable Select Grp2	V/f OLV OLV/PM AOLV/PM EZOLV Use these 4 digits to set the Auto Restart function for <i>UvI</i>, <i>ov</i>, <i>oHI</i>, and <i>GF</i>. From left to right, the digits set <i>UvI</i>, <i>ov</i>, <i>oHI</i>, and <i>GF</i>, in order.	1111 (0000 - 1111)

- 0000 : Disabled
- 0001 : Enabled (—/—/—/GF)
- 0010 : Enabled (—/—/oH1/—)
- 0011 : Enabled (—/—/oH1/GF)
- 0100 : Enabled (—/ov/—/—)
- 0101 : Enabled (—/ov/—/GF)
- 0110 : Enabled (—/ov/oH1/—)
- 0111 : Enabled (—/ov/oH1/GF)
- 1000 : Enabled (Uv1/—/—/—)
- 1001 : Enabled (Uv1/—/—/GF)
- 1010 : Enabled (Uv1/—/oH1/—)
- 1011 : Enabled (Uv1/—/oH1/GF)
- 1100 : Enabled (Uv1/ov/—/—)
- 1101 : Enabled (Uv1/ov/—/GF)
- 1110 : Enabled (Uv1/ov/oH1/—)
- 1111 : Enabled (Uv1/ov/oH1/GF)

Figure 12.105 Setting Digits and Fault Code

◆ L6: Torque Detection

The overtorque/undertorque detection function prevents damage to machinery and loads.

Overtorque is when there is too much load on the machine. If the motor current or output torque is at the overtorque detection level for the overtorque detection time, the drive will output an alarm and turn off the output.

Undertorque is when a load suddenly decreases. When the motor current or output torque is at the undertorque detection level for the undertorque detection time, the drive will output an alarm and turn off the output.

You can use the undertorque detection function to detect these conditions, for example:

- Machine belt cuts
- Unusual operation of the electromagnetic contactor on the drive output side
- Clogged output side air filters in fans and blowers
- Damage to blade tips and broken string

Note:

If there is *oC* [Overcurrent] or *oL1* [Motor Overload], the drive can stop during overtorque conditions. Use torque detection to identify overload conditions before the drive detects *oC* or *oL1* and stops. Use this function to detect issues that occur in the application.

■ Parameter Settings

You can individually set the two overtorque/undertorque detection functions with the drive. Use the information in [Table 12.53](#) to set the parameters.

Table 12.53 Overtorque/Undertorque Detection Parameters

Configuration Parameter	Overtorque/Undertorque Detection 1	Overtorque/Undertorque Detection 2
MFDO Function Select	H2-01, H2-02, and H2-03 = B	H2-01, H2-02, and H2-03 = 18
• Terminal MA-MC	N.O.: Activated when detected	N.O.: Activated when detected
• Ethernet DO1	H2-01, H2-02, and H2-03 = 17	H2-01, H2-02, and H2-03 = 19
• Ethernet DO2	N.C.: Disactivated when detected	N.C.: Disactivated when detected
Detection conditions and selection of operation after detection	L6-01	L6-04
Detection Level	L6-02	L6-05
	Analog Input Terminal */ H3-xx = 7	-
Detection Time	L6-03	L6-06

*1 You can also use an analog input terminal to supply the torque detection level. To enable this function, set *H3-xx = 7* [MFAI Function Selection = Overtorque/Undertorque DetectLvl]. If both *L6-02* and *H3-xx = 7* are set, the analog input has priority and the setting of *L6-02* is disabled.

You cannot use Overtorque/Undertorque Detection 2 to set the detection level for the analog input terminals.

Note:

In V/f Control, the drive uses the current level (100% of the drive rated output current) to detect overtorque/undertorque. In vector control, the drive uses the motor torque (100% of the motor rated torque) to detect overtorque/undertorque. When you enable the mechanical weakening detection function, the overtorque/undertorque detection level for all control modes is the current level (100% of the drive rated output current).

■ Time Chart for Detection of Overtorque/Undertorque

Overtorque Detection Time Chart

When you use Overtorque/Undertorque Detection 1, the drive detects overtorque if the motor current or motor torque is at the detection level set in *L6-02* [Torque Detection Level 1] for the time set in *L6-03* [Torque Detection Time 1]. Parameter *L6-01* [Torque Detection Selection 1] sets the operation after detection.

When you use Overtorque/Undertorque Detection 2, set *L6-04* [Torque Detection Selection 2], *L6-05* [Torque Detection Level 2], and *L6-06* [Torque Detection Time 2].

Set the terminal that outputs the alarm in *H2-01* to *H2-03* [MFDO Function Select].

Figure 12.106 Overtorque Detection Time Chart

Note:

The drive applies a hysteresis of approximately 10% of the drive rated output current or the motor rated torque to the overtorque/undertorque detection function.

Undertorque Detection Time Chart

When you use Overtorque/Undertorque Detection 1, the drive detects undertorque if the motor current or motor torque is less than or equal to the detection level set in *L6-02* for the time set in *L6-03*. Parameter *L6-01* sets the operation after detection.

When you use Overtorque/Undertorque Detection 2, set the operation in *L6-04*, *L6-05*, and *L6-06*.

Set the terminal that outputs an alarm in *H2-01* to *H2-03*.

Figure 12.107 Undertorque Detection Time Chart

Note:

The drive applies a hysteresis of approximately 10% of the drive rated output current or the motor rated torque to the overtorque/undertorque detection function.

■ Mechanical Weakening Detection

The Mechanical Weakening Detection function detects the mechanical weakening of a machine that can cause overtorque or undertorque because of motor speed and total drive operation time.

The drive activates the function if the drive total operation time is longer than the time set in *L6-11* [*Mech Fatigue Hold Off Time*]. You can use *U4-01* [*Cumulative Ope Time*] to monitor the total operation time.

Parameter Settings

If overtorque or undertorque occur during the speed range set in *L6-08* [*Mechanical Fatigue Detect Select*] and *L6-09* [*Mech Fatigue Detect Speed Level*] for the length of time set in *L6-10* [*Mech Fatigue Detect Delay Time*], the drive will detect Mechanical Weakening. The drive uses *L6-01* to *L6-03* [*Torque Detection 1 Setting Parameter*] to detect *oL5* [*Mechanical Weakening Detection 1*] or *UL5* [*Mechanical Weakening Detection 2*]. Parameter *L6-08* sets the operation after detection.

Set the terminal that outputs the fault in *H2-01* to *H2-03* [*MFDO Function Selection*].

Table 12.54 Mechanical Weakening Detection Settings Parameters

Configuration Parameter	Mechanical Deterioration Detection
MFDO Function Select - Terminal MA-MC - Ethernet DO1 - Ethernet DO2	H2-01, H2-02, and H2-03 = 22
Operation Selection after Detection	L6-08

Configuration Parameter		Mechanical Deterioration Detection
Detection Start Time		L6-11
Speed Range	Detection Criteria	L6-08
	Detection Level	L6-09
	Detection Time	L6-10
Overtorque	Detection Criteria	L6-01
	Detection Level	L6-02
	Detection Time	L6-03

■ L6-01: Torque Detection Selection 1

No. (Hex.)	Name	Description	Default (Range)
L6-01 (04A1)	Torque Detection Selection 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets torque detection conditions that will trigger an overtorque or undertorque response from the drive.	0 (0 - 8)

The drive detects overtorque if the motor current or output torque is more than the level set in *L6-02 [Torque Detection Level 1]* for the length of time set in *L6-03 [Torque Detection Time 1]*. The drive detects undertorque if the motor current or output torque is less than the level set in *L6-02* for the length the time set in *L6-03*.

0 : Disabled

The drive will not detect overtorque or undertorque.

1 : oL @ Speed Agree - Alarm only

The drive detects overtorque when the output frequency aligns with the frequency reference. Detection does not occur during acceleration/deceleration. The drive outputs an *oL3 [Overtorque Detection 1]* and operation continues.

2 : oL @ RUN - Alarm only

When the Run command is enabled, the drive constantly detects overtorque. The drive outputs an *oL3* and operation continues.

3 : oL @ Speed Agree - Fault

The drive detects overtorque when the output frequency aligns with the frequency reference. Detection does not occur during acceleration/deceleration. The drive outputs an *oL3* and operation stops.

4 : oL @ RUN - Fault

When the Run command is enabled, the drive constantly detects overtorque. The drive outputs an *oL3* and operation stops.

5 : UL @ Speed Agree - Alarm only

The drive detects undertorque when the output frequency aligns with the frequency reference. Detection does not occur during acceleration/deceleration. The drive outputs a *UL3 [Undertorque Detection 1]* and operation continues.

6 : UL @ RUN - Alarm only

When the Run command is enabled, the drive constantly detects undertorque. The drive outputs a *UL3* and operation continues.

7 : UL @ Speed Agree - Fault

The drive detects undertorque when the output frequency aligns with the frequency reference. Detection does not occur during acceleration/deceleration. The drive outputs a *UL3* and operation stops.

8 : UL @ RUN - Fault

When the Run command is enabled, the drive constantly detects undertorque. The drive outputs a *UL3* and operation stops.

■ L6-02: Torque Detection Level 1

No. (Hex.)	Name	Description	Default (Range)
L6-02 (04A2)	Torque Detection Level 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level for Overtorque/Undertorque Detection 1. In V/f control, drive rated output current = 100% value. In vector control, motor rated torque = 100% value.	150% (0 - 300%)

Note:

- Set the torque detection level as a percentage of the drive rated output current in all control methods to set the mechanical weakening detection level.
- You can also use an analog input terminal to supply the torque detection level. To enable this function, set $H3-xx = 7$ [*MFAI Function Select = Overtorque/Undertorque DetectLvl*]. If you set L6-02 and $H3-x = 7$, the analog input is most important and the drive disables L6-02.

■ L6-03: Torque Detection Time 1

No. (Hex.)	Name	Description	Default (Range)
L6-03 (04A3)	Torque Detection Time 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection time for Overtorque/Undertorque Detection 1.	0.1 s (0.0 - 10.0 s)

■ L6-04: Torque Detection Selection 2

No. (Hex.)	Name	Description	Default (Range)
L6-04 (04A4)	Torque Detection Selection 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed range that detects overtorque and undertorque and the operation of drives (operation status) after detection.	0 (0 - 8)

The drive detects overtorque if the motor current or output torque is more than the level set in L6-05 [*Torque Detection Level 2*] for the length of time set in L6-06 [*Torque Detection Time 2*]. The drive detects undertorque if the motor current or output torque is less than the level set in L6-05 for the length the time set in L6-06.

0 : Disabled

The drive will not detect overtorque or undertorque.

1 : oL @ Speed Agree - Alarm only

The drive detects overtorque when the output frequency aligns with the frequency reference. Detection does not occur during acceleration/deceleration. The drive outputs an *oL4* [*Overtorque Detection 2*] and operation continues.

2 : oL @ RUN - Alarm only

When the Run command is enabled, the drive constantly detects overtorque. The drive outputs an *oL4* and operation continues.

3 : oL @ Speed Agree - Fault

The drive detects overtorque when the output frequency aligns with the frequency reference. Detection does not occur during acceleration/deceleration. The drive outputs an *oL4* [*Overtorque Detection 2*] and operation stops.

4 : oL @ RUN - Fault

When the Run command is enabled, the drive constantly detects overtorque. The drive outputs an *oL4* and operation stops.

5 : UL @ Speed Agree - Alarm only

The drive detects undertorque when the output frequency aligns with the frequency reference. Detection does not occur during acceleration/deceleration. The drive outputs a *UL4* [*Undertorque Detection 2*] and operation continues.

6 : UL @ RUN - Alarm only

When the Run command is enabled, the drive constantly detects undertorque. The drive outputs a *UL4* and operation continues.

7 : UL @ Speed Agree - Fault

The drive detects undertorque when the output frequency aligns with the frequency reference. Detection does not occur during acceleration/deceleration. The drive outputs a *UL4* and operation stops.

8 : UL @ RUN - Fault

When the Run command is enabled, the drive constantly detects undertorque. The drive outputs a *UL4* and operation stops

■ L6-05: Torque Detection Level 2

No. (Hex.)	Name	Description	Default (Range)
L6-05 (04A5)	Torque Detection Level 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level for Overtorque/Undertorque Detection 2. In V/f control, drive rated output current = 100% value. In vector control, motor rated torque = 100% value.	150% (0 - 300%)

Note:

Overtorque/Undertorque Detection 2 cannot set the detection level for the analog input terminal.

■ L6-06: Torque Detection Time 2

No. (Hex.)	Name	Description	Default (Range)
L6-06 (04A6)	Torque Detection Time 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection time for Overtorque/Undertorque Detection 2.	0.1 s (0.0 - 10.0 s)

■ L6-07: Torque Detection Filter Time

No. (Hex.)	Name	Description	Default (Range)
L6-07 (04E5)	Torque Detection Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant for a primary filter to the torque reference or to the output current used to detect overtorque/undertorque.	0 ms (0 - 1000 ms)

■ L6-08: Mechanical Fatigue Detect Select

No. (Hex.)	Name	Description	Default (Range)
L6-08 (0468)	Mechanical Fatigue Detect Select	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed where the drive detects mechanical deterioration and how the drive operates (operation status) after detection.	0 (0 - 8)

The drive detects mechanical weakening through overtorque or undertorque as specified by the conditions set in *L6-08 to L6-11* [*Mechanical Deterioration Detection Settings Parameters*]. Set overtorque/undertorque detection conditions in *L6-01 to L6-03* [*Torque Detection 1 Settings Parameters*]. The drive disables the operation selection set in *L6-01* [*Torque Detection Selection 1*].

0 : Disabled

The drive does not detect mechanical weakening.

1 : oL5 @ Speed > L6-09 - Alarm

When the speed (signed) $\geq$ *L6-09* [*Mech Fatigue Detect Speed Level*], the drive detects mechanical weakening. The drive will detect *oL5* [*Mechanical Weakening Detection 1*] and continue operation.

2 : oL5 @ |Speed| > L6-09 - Alarm

When the speed (absolute value) $\geq$ *L6-09*, the drive detects mechanical weakening. The drive will detect *oL5* and continue operation.

3 : oL5 @ Speed > L6-09 - Fault

When the speed (signed) $\geq$ *L6-09*, the drive detects mechanical weakening. The drive will detect *oL5* and stop operation.

4 : oL5 @ |Speed| > L6-09 - Fault

When the speed (absolute value) $\geq$ *L6-09*, the drive detects mechanical weakening. The drive will detect *oL5* and stop operation.

5 : UL5 @ Speed < L6-09 - Alarm

When the speed (signed) $\leq$ *L6-09*, the drive detects mechanical weakening. The drive will detect *UL5* [*Mechanical Weakening Detection 2*] and continue operation.

6 : UL5 @ |Speed| < L6-09 - Alarm

When the speed (absolute value) $\leq L6-09$, the drive detects mechanical weakening. The drive will detect *UL5* and continue operation.

7 : UL5 @ Speed < L6-09 - Fault

When the speed (signed) $\leq L6-09$, the drive detects mechanical weakening. The drive will detect *UL5* and stop operation.

8 : UL5 @ |Speed| < L6-09 - Fault

When the speed (absolute value) $\leq L6-09$, the drive detects mechanical weakening. The drive will detect *UL5* and stop operation.

■ L6-09: Mech Fatigue Detect Speed Level

No. (Hex.)	Name	Description	Default (Range)
L6-09 (0469)	Mech Fatigue Detect Speed Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed level where the drive will operate the mechanical deterioration detection function, as a percentage of the Maximum Output Frequency.	110.0% (-110.0 - 110.0%)

Parameters *L6-01 to L6-03 [Torque Detection 1 Settings Parameters]* set the overtorque/undertorque detection conditions.

When *L6-08 = 2, 4, 6, 8 [Mechanical Fatigue Detect Select = Speed : unsigned]*, the setting value of *L6-09* is the absolute value. When *L6-09* is set to a negative number, the drive processes this value as a positive number.

■ L6-10: Mech Fatigue Detect Delay Time

No. (Hex.)	Name	Description	Default (Range)
L6-10 (046A)	Mech Fatigue Detect Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time for mechanical deterioration detection.	0.1 s (0.0 - 10.0 s)

When the detection conditions set in *L6-08 [Mechanical Weakening Detect Ope]* continue for the time set in *L6-10*, the drive will detect mechanical weakening.

■ L6-11: Mech Fatigue Hold Off Time

No. (Hex.)	Name	Description	Default (Range)
L6-11 (046B)	Mech Fatigue Hold Off Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time that the drive will start mechanical deterioration detection triggered by the cumulative operation time of the drive.	0 h (0 - 65535 h)

When the total operation time of the drive is more than the value set in *L6-11*, the drive will detect mechanical weakening. Use *U4-01 [Cumulative Ope Time]* to monitor the drive total operation time.

◆ L7: Torque/Current Limit**■ Torque Limit**

The torque limit function limits the internal torque reference for the drive to and keeps the torque from the motor constant. This function limits the torque applied to loads and regenerative torque to a value less than a set quantity. This function also prevents damage to machinery and increases the reliability of continuous operation. You can set torque limits individually for the four quadrants, which include torque direction (motoring/regeneration) and direction of motor rotation (forward/reverse). When the torque reference value is at the set torque limit, the MFDO terminal set for *During Torque Limit [H2-xx = 30]* activates.

Note:

- The drive output current limits maximum output torque. The drive limits torque to 150% of the rated output current for Heavy Duty Rating (HD) and to 110% of the rated output current for Normal Duty Rating (ND). The actual output torque is not more than the limits of the drive rated output current when you set the torque limit to a high value.
- When you use torque limits for lifting applications, do not lower the torque limit value too much. When the torque limit function is triggered, falls and rollbacks can occur because of sudden acceleration stops and stalls of the motor.

■ Configuring Settings

Use one of these methods to set torque limits:

- Individually set the four torque limit quadrants using *L7-01 to L7-04 [Torque Limit]*.
- Use MFAI to individually set the four torque limit quadrants. Set *H3-02 = 10, 11, 12 [MFAI Function Select = Forward Torque Limit, Reverse Torque Limit, Regenerative Torque Limit]*.
- Use MFAI to set all four torque limit quadrants together. Set *H3-02 = 15 [General Torque Limit]*.
- Use Ethernet communications to set all four torque limit quadrants together.

Figure 12.108 shows the configuration method for each quadrant.

Figure 12.108 Torque Limits and Analog Input Setting Parameters

Note:

- When *L7-01 to L7-04* and analog inputs or Ethernet communications torque limits set torque limits for the same quadrant, the drive enables the lowest value.

In this example of parameter settings, the torque limit for quadrant 1 is 130% and the torque limit for quadrants 2, 3, and 4 is 150%.

Settings: *L7-01 = 130%*, *L7-02 to L7-04 = 200%*, and MFAI torque limit = 150%

- The drive output current limits maximum output torque. The torque limit is 150% of the rated output current for HD and to 120% of the rated output current for ND. The actual output torque is not more than the limits of the drive rated output current when you set the torque limit to a high value.

■ Current Limit

The current limit function limits the drive output current to a value less than a set quantity. This function also prevents damage to machinery and increases the reliability of continuous operation. To use the current limit function, set *L7-42 = 1 [Current Lim Sel = Enabled]*. When *L7-42 = 1*, the drive limits the output current at the value set in *L7-43 [Current Lim Val]*. When the current value is at the set current limit, the MFDO terminal set for *During Torque Limit [H2-xx = 30]* activates.

■ L7-01: Forward Torque Limit

No. (Hex.)	Name	Description	Default (Range)
L7-01 (04A7) RUN	Forward Torque Limit	☐ V/f ☒ OLV ☐ OLV/PM ☐ AOL/PM ☐ EZOLV Sets the torque limit value for forward motoring as a percentage, where motor rated torque is the 100% value.	200% (0 - 300%)

Note:

- The lower torque limit is enabled when you set the torque limit by the following method.
 - Set *H3-02 = 10, 15 [MFAI Function Selection = Forward Torque Limit, General Torque Limit]*.
 - Use Ethernet communications to set torque limits.
- You must think about drive capacity when a large quantity of torque is necessary. If you set the value too high, the drive can detect *oC [Overcurrent]*.
- If you set the value too low with large loads, the motor can stall.
- When you set *L7-42 = 1 [Current Lim Sel = Enabled]*, the drive disables *L7-01 to L7-04 [Torque Limits]* and limits the output current at the value set in *L7-43 [Current Lim Val]*.

■ L7-02: Reverse Torque Limit

No. (Hex.)	Name	Description	Default (Range)
L7-02 (04A8) RUN	Reverse Torque Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque limit value for reversed motoring as a percentage, where motor rated torque is the 100% value.	200% (0 - 300%)

Note:

- The lower torque limit is enabled when you set the torque limit by the following method.
 –Set $H3-02 = 10, 15$ [MFAI Function Selection = Forward, Reverse/Regenerative Torque Limit].
 –Use Ethernet communications to set torque limits.
- You must think about drive capacity when a large quantity of torque is necessary. If you set the value too high, the drive can detect oC [Overcurrent].
- If you set the value too low with large loads, the motor can stall.
- When you set $L7-42 = 1$ [Current Lim Sel = Enabled], the drive disables $L7-01$ to $L7-04$ [Torque Limits] and limits the output current at the value set in $L7-43$ [Current Lim Val].

■ L7-03: Forward Regenerative Trq Limit

No. (Hex.)	Name	Description	Default (Range)
L7-03 (04A9) RUN	Forward Regenerative Trq Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque limit value for forward regenerative conditions as a percentage of the motor rated torque.	200% (0 - 300%)

Note:

- The lower torque limit is enabled when you set the torque limit by the following method.
 –Set $H3-02 = 10, 15$ [MFAI Function Selection = Forward, Reverse/Regenerative Torque Limit].
 –Use Ethernet communications to set torque limits.
- You must think about drive capacity when a large quantity of torque is necessary. If you set the value too high, the drive can detect oC [Overcurrent].
- If you set the value too low with large loads, the motor can stall.
- When you set $L7-42 = 1$ [Current Lim Sel = Enabled], the drive disables $L7-01$ to $L7-04$ [Torque Limits] and limits the output current at the value set in $L7-43$ [Current Lim Val].

■ L7-04: Reverse Regenerative Trq Limit

No. (Hex.)	Name	Description	Default (Range)
L7-04 (04AA) RUN	Reverse Regenerative Trq Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque limit value for reversed regenerative conditions as a percentage of the motor rated torque.	200% (0 - 300%)

Note:

- Use this method to set the torque limit and enable the lower torque limit:
 –Set $H3-02 = 10, 15$ [MFAI Function Selection = Forward, Reverse/Regenerative Torque Limit].
 –Use Ethernet communications to set torque limits.
- You must think about drive capacity when a large quantity of torque is necessary. If you set the value too high, the drive can detect oC [Overcurrent].
- If you set the value too low with large loads, the motor can stall.
- When you set $L7-42 = 1$ [Current Lim Sel = Enabled], the drive disables $L7-01$ to $L7-04$ [Torque Limits] and limits the output current at the value set in $L7-43$ [Current Lim Val].

■ L7-06: Torque Limit Integral Time

No. (Hex.)	Name	Description	Default (Range)
L7-06 (04AC)	Torque Limit Integral Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time constant for the torque limit function.	200 ms (5 - 10000 ms)

Decrease the setting value to increase torque limit responsiveness when you use torque limits and $L7-07 = 1$ [Torque Limit during Accel/Decel = Proportional & Integral control].

If there is hunting when torque limits are active, increase the setting value.

■ L7-07: Torque Limit during Accel/Decel

No. (Hex.)	Name	Description	Default (Range)
L7-07 (04C9)	Torque Limit during Accel/ Decel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the torque limit function during acceleration and deceleration.	0 (0, 1)

0 : Proportional only

The torque limit function works with proportional control during acceleration and deceleration, and switches to integral control at constant speed. Use this setting when quickly reaching the target speed is more important than the torque limit during speed changes.

1 : Proportional & Integral control

The torque limit function always uses integral control. Use this setting when a very accurate torque limit is necessary during speed changes, for example in winding machine applications.

If you make the torque limit the most important, it can:

- Increase the acceleration and deceleration times.
- Not let the motor speed reach the frequency reference value during run at constant speed.

■ L7-16: Torque Limit Process at Start

No. (Hex.)	Name	Description	Default (Range)
L7-16 (044D)	Torque Limit Process at Start	V/f OLV OLV/PM AOLV/PM EZOLV Assigns a time filter to allow the torque limit to build at start.	1 (0, 1)

0 : Disabled

There is torque limit at start without a delay time.

Use this setting to maximize the response time when sudden acceleration or deceleration at start is necessary.

1 : Enabled

There is a delay time of 64 ms at start to build the torque limit.

■ L7-42: Current Lim Sel

No. (Hex.)	Name	Description	Default (Range)
L7-42 (0D47)	Current Lim Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable the current limit function.	0 (0, 1)

0 : Disabled

1 : Enabled

Note:

- When you set $L7-42 = 1$, the drive disables $L7-01$ to $L7-04$ [Torque Limits] and limits the output current at the value set in $L7-43$ [Current Lim Val].
- If you set $L7-42 = 1$ and $b8-01 = 2$ [Energy Saving Control Selection = Automatic Optimization], the drive detects $oPE16$ [Energy Saving Constants Error].
- When $L7-42 = 1$, the MFDO terminal set for $H2-xx = 30$ [During Torque Limit] shows the current limit status.

■ L7-43: Current Lim Val

No. (Hex.)	Name	Description	Default (Range)
L7-43 (0D48)	Current Lim Val	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current limit value when $L7-42 = 1$ [Current Lim Sel = Enabled].	0.0 A (0.0 A, 10% to 150% of the drive rated current)

Note:

When you set $L7-43 = 0.0$ A, the drive limits the output current at the value set in $E5-03$ [PM Motor Rated Current (FLA)].

◆ L8: Drive Protection

L8 parameters set protective functions that prevent faults such as overheating, phase loss, and ground faults.

■ L8-01: 3% ERF DB Resistor Protection

No. (Hex.)	Name	Description	Default (Range)
L8-01 (04AD)	3% ERF DB Resistor Protection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable braking resistor protection with a Yaskawa ERF series braking resistor (3% ED) installed on the heatsink.	0 (0, 1)

0 : No

Disables braking resistor protection. Use this setting for dynamic braking options that are not Yaskawa ERF series braking resistors.

1 : Yes

Enables protection for Yaskawa ERF series braking resistors.

Note:

Set *L8-01* = 1 and *H2-01* to *H2-03* = *D* [*MFDO Function Select* = *Braking Resistor Fault*]. Use a sequence to turn OFF power with MFDO.

■ L8-02: Overheat Alarm Level

No. (Hex.)	Name	Description	Default (Range)
L8-02 (04AE)	Overheat Alarm Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the <i>oH</i> detection level in temperature.	Determined by o2-04, C6-01 (50 - 150 °C)

If the heatsink temperature is more than the temperature set in this parameter, the drive detects an overheat pre-alarm. To enable this function, set one of *H2-01* to *H2-03* [*MFDO Function Select*] to 20 [*Drive Overheat Pre-Alarm (oH)*].

If the temperature increases to the overheat fault level, the drive will trigger an *oH1* [*Heatsink Overheat*] fault and stop operation.

■ L8-03: Overheat Pre-Alarm Selection

No. (Hex.)	Name	Description	Default (Range)
L8-03 (04AF)	Overheat Pre-Alarm Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation after the drive detects an <i>oH</i> alarm.	3 (0 - 4)

0 : Ramp to Stop

The drive ramps the motor to stop in the deceleration time. The output terminal set for *Fault* [*H2-01* to *H2-03* = *E*] activates.

1 : Coast to Stop

The output turns off and the motor coasts to stop. The output terminal set for *Fault* [*H2-01* to *H2-03* = *E*] activates.

2 : Fast Stop (Use C1-09)

The drive stops the motor in the deceleration time set in *C1-09* [*Fast Stop Time*]. The output terminal set for *Fault* [*H2-01* to *H2-03* = *E*] activates.

3 : Alarm Only

The keypad shows *oH* and the drive continues operation. The output terminal set for *Alarm* [*H2-01* to *H2-03* = 10] activates.

4 : Operate at Reduced Speed (L8-19)

The drive decelerates to the level set in *L8-19* [*Freq Reduction @ oH Pre-Alarm*] and continues operation. *oH* flashes on the keypad.

If the overheat pre-alarm is still ON after 10 s, the drive decelerates again. When the alarm is output, the drive decelerates each 10 seconds. If the drive decelerates 10 times and the alarm continues to be output, the output terminal set for *oH Pre-Alarm Reduction Limit* [*H2-01* to *H2-03* = 4D] activates. When the alarm is not output during

deceleration, the drive accelerates until it is at the frequency reference that was applicable before the alarm was turned off. Figure 12.109 shows the output of the alarm and the drive operation at a decreased output frequency.

Figure 12.109 Drive Operation at a Decreased Output Frequency when the Overheat Alarm is Output

■ L8-05: Input Phase Loss Protection Sel

No. (Hex.)	Name	Description	Default (Range)
L8-05 (04B1)	Input Phase Loss Protection Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable input phase loss detection.	Determined by o2-04 (Determined by o2-04)

0 : Disabled

1 : Enabled

The drive measures ripples in DC bus voltage to detect input phase loss.

The drive detects phase loss when power supply phase loss occurs or the main circuit capacitor becomes unusable, which causes *PF [Input Phase Loss]* to show on the keypad.

Disable the detection of the input power supply phase loss function in these conditions:

- During deceleration
- The run command is not input
- The output current is less than 30% of the drive rated current.

■ L8-07: Output Phase Loss Protection Sel

No. (Hex.)	Name	Description	Default (Range)
L8-07 (04B3)	Output Phase Loss Protection Sel	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable output phase loss detection. The drive starts output phase loss detection when the output current decreases to less than 5% of the drive rated current.	1 (0 - 2)

Note:

The drive can incorrectly start output phase loss detection in these conditions:

- The motor rated current is very small compared to the drive rating.
- The drive is operating a PM motor with a small load.

0 : Disabled

1 : Fault when one phase is lost

If the drive loses one output phase, it will trigger *LF [Output Phase Loss]*.

The output turns off and the motor coasts to stop.

2 : Fault when two phases are lost

If the drive loses more than one output phase, it will trigger *LF* [Output Phase Loss].

The output turns off and the motor coasts to stop.

■ L8-09: Output Ground Fault Detection

No. (Hex.)	Name	Description	Default (Range)
L8-09 (04B5)	Output Ground Fault Detection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable and disable ground fault protection.	Determined by o2-04 (0, 1)

0 : Disabled

The drive will not detect ground faults.

1 : Enabled

If there is high leakage current or a ground short circuit in one or two output phases, the drive will detect *GF* [Ground Fault].

Note:

If the ground path impedance is low, the drive can detect *oC* [Overcurrent], *SC* [Short Circuit/IGBT Failure], or *ov* [Overvoltage] instead of *GF*.

■ L8-10: Heatsink Fan Operation Selection

No. (Hex.)	Name	Description	Default (Range)
L8-10 (04B6)	Heatsink Fan Operation Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets operation of the heatsink cooling fan.	0 (0 - 2)

0 : During Run, w/ L8-11 Off-Delay

The drive turns on the fan when a Run command is active.

When you release the Run command and the delay time set in *L8-11* [Heatsink Fan Off-Delay Time] is expired, the fan stops. This setting extends the fan lifetime.

1 : Always On

The fan turns on when you supply power to the drive.

2 : Temperature-Dependent Fan Ctrl.

The fan turns on when the drive detects that the main circuit is overheating.

■ L8-11: Heatsink Fan Off-Delay Time

No. (Hex.)	Name	Description	Default (Range)
L8-11 (04B7)	Heatsink Fan Off-Delay Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time that the drive will wait before it stops the cooling fan after it cancels the Run command when <i>L8-10</i> = 0 [Heatsink Fan Operation Selection = During Run, w/ L8-11 Off-Delay].	60 s (0 - 300 s)

■ L8-12: Ambient Temperature Setting

No. (Hex.)	Name	Description	Default (Range)
L8-12 (04B8)	Ambient Temperature Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the surrounding air temperature of the drive installation area.	40 °C (-10 °C - +60 °C)

Note:

The setting range changes when the *L8-35* [Installation Method Selection] value changes:

- 0 [IP20/UL Open Type]: -10 °C to +60 °C
- 1 [Side-by-Side Mounting]: -10 °C to +50 °C
- 3 [External Heatsink]: -10 °C to +50 °C

The drive automatically adjusts the drive rated current to the best value as specified by the set temperature. Set the surrounding air temperature of the area where you install the drive to a value that is more than the drive rating.

Refer to [Derating Depending on Surrounding Air Temperature on page 329](#) for information about derating as specified by surrounding air temperature.

■ L8-15: Drive oL2 @ Low Speed Protection

No. (Hex.)	Name	Description	Default (Range)
L8-15 (04BB)	Drive oL2 @ Low Speed Protection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to decrease the drive overload level at which the drive will trigger <i>oL2</i> [Drive Overload] during low speed operation (6 Hz or slower) to prevent damage to the main circuit transistors.	1 (0, 1)

Note:

Contact Yaskawa or your nearest sales representative before disabling this function at low speeds. If you frequently operate drives with high output current in low speed ranges, it can cause heat stress and decrease the life span of drive IGBTs.

0 : Disabled (No Additional Derate)

The drive does not decrease the overload protection level.

1 : Enabled (Reduced oL2 Level)

When the drive detects *oL2* during low speed operation, it automatically decreases the overload detection level.

At zero speed, the drive derates the overload by 50%.

■ L8-18: Software Current Limit Selection

No. (Hex.)	Name	Description	Default (Range)
L8-18 (04BE)	Software Current Limit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Set the software current limit selection function to prevent damage to the main circuit transistor caused by too much current.	0 (0, 1)

0 : Disabled

When the output current is at the software current limit value, the drive does not restrict the output voltage.

Note:

The drive may detect an *oC* [Overcurrent] when loads are particularly heavy or the acceleration time is particularly short.

1 : Enabled

When the output current is at the software current limit value, the drive decreases output voltage to decrease output current.

When the output current decreases to the software current limit level, the drive starts usual operation.

■ L8-19: Freq Reduction @ oH Pre-Alarm

No. (Hex.)	Name	Description	Default (Range)
L8-19 (04BF)	Freq Reduction @ oH Pre-Alarm	V/f OLV OLV/PM AOLV/PM EZOLV Sets the ratio at which the drive derates the frequency reference during an <i>oH</i> alarm.	0.8 (0.1 - 0.9)

When these two conditions are correct, this function is enabled:

- *L8-03* = 4 [Overheat Pre-Alarm Ope Selection = Run@L8-19 Rate]
- *oH* alarm is output

■ L8-27: Overcurrent Detection Gain

No. (Hex.)	Name	Description	Default (Range)
L8-27 (04DD)	Overcurrent Detection Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the PM motor overcurrent detection level as a percentage of the motor rated current value.	300.0% (0.0 - 1000.0%)

Note:

- If the setting value for *L8-27* is the same or almost the same as the setting value for *L7-xx* [*Torque Limit*], the drive can detect *oC2* [*Overcurrent2*].
- Set *L8-27* = 0.0 Hz to disable this function. Usually do not set *L8-27* = 0.0.
- If the drive rated current is much higher than the motor rated current, PM motor magnets can demagnetize when current flows at the drive overcurrent detection level. When you set a low overcurrent detection level to prevent PM motor demagnetization, make sure that you adjust *L8-27*.

■ L8-29: Output Unbalance Detection Sel

No. (Hex.)	Name	Description	Default (Range)
L8-29 (04DF)	Output Unbalance Detection Sel	☐ V/f ☐ OLV ☒ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the function to detect <i>LF2</i> [Output Current Imbalance].	1 (0, 1)

This function prevents damage to PM motors. Current unbalance can heat a PM motor and demagnetize the magnets. When the current is unbalanced, the drive will detect *LF2* to stop the motor and prevent damage to the motor.

0 : Disabled

1 : Enabled

Note:

You must set *E9-01* = 1 [*Motor Type Selection* = Permanent Magnet (PM)] and *A1-02* = 8 [*EZOLV*] to show *L8-29*.

■ L8-31: LF2 Detection Time

No. (Hex.)	Name	Description	Default (Range)
L8-31 (04E1)	LF2 Detection Time	☐ V/f ☐ OLV ☒ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the <i>LF2</i> [Output Current Imbalance] detection time.	3 (1 – 100)

When the output current is unbalanced for longer than the time set in *L8-31*, the drive detects *LF2*.

Note:

- Set *L8-29* = 1 [*Output Unbalance Detection Sel* = Enabled] to enable *L8-31*.
- If the drive incorrectly detects *LF2*, increase *L8-31* in 5-unit increments.
- The keypad shows *L8-31* when *E9-01* = 1 [*Motor Type Selection* = Permanent Magnet (PM)] in EZ Vector Control.

■ L8-35: Installation Method Selection

No. (Hex.)	Name	Description	Default (Range)
L8-35 (04EC)	Installation Method Selection	☒ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the type of drive installation.	0 (0 - 3)

Note:

- Parameter *A1-03* [*Initialize Parameters*] does not initialize this parameter.
- This parameter is set to the correct value when the drive is shipped. Change the value only in these conditions:
 - Side-by-Side installation
 - Mounting a standard drive with the heatsink outside the enclosure panel.

The drive automatically adjusts the overload protection detection level to the best value for each setting value. Refer to [Derating Depending on Surrounding Air Temperature on page 329](#) for information about derating as specified by surrounding air temperature.

0 : IP20/UL Open Type

Use this setting to install IP20/UL Open Type drives.

Make sure that there is 30 mm (1.18 in) minimum of space between drives or between the drive and side of the enclosure panel.

1 : Side-by-Side Mounting

Use this setting to install more than one drive side-by-side.

3 : External Heatsink

Use this setting when the heatsink (cooling fin) is outside the enclosure panel.

■ L8-40: Carrier Freq Reduction Off-Delay

No. (Hex.)	Name	Description	Default (Range)
L8-40 (04F1)	Carrier Freq Reduction Off-Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time until the automatically reduced carrier frequency returns to the condition before the reduction.	Determined by A1-02 (0.00 - 2.00 s)

Set $L8-40 \neq 0.00$ to enable the carrier frequency reduction function during start-up. When operation starts, the drive automatically decreases the carrier frequency. When the time set in $L8-40$ is expired, the carrier frequency returns to the value set in $C6-02$ [Carrier Frequency Selection].

■ L8-41: High Current Alarm Selection

No. (Hex.)	Name	Description	Default (Range)
L8-41 (04F2)	High Current Alarm Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to cause an <i>HCA</i> [Current Alarm] when the output current is more than 150% of the drive rated current.	0 (0, 1)

0 : No

The drive will not detect *HCA*.

1 : Yes

If the output current is more than 150% of the drive rated current, the drive will detect *HCA*.

The MFDO terminal set for an *Alarm* [$H2-01$ to $H2-03 = 10$] activates.

■ L8-51: STPo I Detection Level

No. (Hex.)	Name	Description	Default (Range)
L8-51 (0471) Expert	STPo I Detection Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the <i>STPo</i> [Motor Step-Out Detected] detection level as a percentage of the motor rated current.	0.0% (0.0 - 300.0%)

Note:

The detection level is automatically calculated when $L8-51 = 0$.

■ L8-52: STPo Integration Level

No. (Hex.)	Name	Description	Default (Range)
L8-52 (0472) Expert	STPo Integration Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level for <i>STPo</i> [Motor Step-Out Detected] related to the ACR integral value.	1.0 (0.1 - 2.0)

■ L8-53: STPo Integration Time

No. (Hex.)	Name	Description	Default (Range)
L8-53 (0473) Expert	STPo Integration Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time until the drive detects <i>STPo</i> after it is more than the value of $L8-51$ [STPo I Detection Level].	1.0 s (1.0 - 10.0 s)

■ L8-54: STPo Id Diff Detection

No. (Hex.)	Name	Description	Default (Range)
L8-54 (0474) Expert	STPo Id Diff Detection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Id deviation detection function for <i>STPo</i> [Motor Step-Out Detected].	1 (0, 1)

0 : Disabled

1 : Enabled**■ L8-55: Internal DB TransistorProtection**

No. (Hex.)	Name	Description	Default (Range)
L8-55 (045F)	Internal DB TransistorProtection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the protection function for the internal braking transistor.	1 (0, 1)

0 : Disable

Disables braking transistor protection.

Use this setting, if enabling the braking transistor can cause an *rF* [*Braking Resistor Fault*] in these conditions:

- With a regenerative converter, for example D1000.
- With a regenerative unit, for example R1000.
- When connecting braking resistor options to the drive, for example CDBR units.
- Without an internal braking transistor.

1 : Protection Enabled

Protects internal braking transistor when using a braking transistor or optional braking resistors.

■ L8-56: Stall P @ Accel Activation Time

No. (Hex.)	Name	Description	Default (Range)
L8-56 (047D) Expert	Stall P @ Accel Activation Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length time that the acceleration stall prevention function can continue to operate before the drive detects an <i>STPo</i> [<i>Motor Step-Out Detected</i>].	5000 ms (100 - 5000 ms)

Note:

If this value is too small, it can cause incorrect detection of *STPo*. If this value is too large, the drive will not detect *STPo*.

■ L8-57: Stall Prevention Retry Counts

No. (Hex.)	Name	Description	Default (Range)
L8-57 (047E) Expert	Stall Prevention Retry Counts	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of times the acceleration stall prevention function can operate until speeds agree before the drive detects an <i>STPo</i> [<i>Motor Step-Out Detected</i>].	10 (1 - 10 times)

Note:

If this value is too small, it can cause incorrect detection of *STPo*. If this value is too large, the drive will not detect *STPo*.

■ L8-90: STPo Detection Level (Low Speed)

No. (Hex.)	Name	Description	Default (Range)
L8-90 (0175) Expert	STPo Detection Level (Low Speed)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level that the control fault must be equal to or more than to cause an <i>STPo</i> [<i>Motor Step-Out Detected</i>].	Determined by A1-02 (0 - 5000 times)

This function detects when PM motors are not synchronized.

The drive cannot detect when motors are not synchronized because the frequency reference is low during start up and the motor is locked. If fault detection is necessary in these conditions, set the control fault detection level to enable detection of desynchronization because of motor locking. Increase the setting in 5-unit increments.

■ L8-93: Low Speed Pull-out DetectionTime

No. (Hex.)	Name	Description	Default (Range)
L8-93 (073C) Expert	Low Speed Pull-out DetectionTime	V/f OLV OLV/PM AOLV/PM EZOLV Sets the length of time the drive will wait to start baseblock after detecting <i>LSo</i> [<i>Low Speed Motor Step-Out</i>].	1.0 s (0.0 - 10.0 s)

Set this parameter to 0.0 to disable the function.

■ L8-94: Low Speed Pull-out Detect Level

No. (Hex.)	Name	Description	Default (Range)
L8-94 (073D) Expert	Low Speed Pull-out Detect Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the detection level for <i>LSO</i> [Low Speed Motor Step-Out] as a percentage of <i>E1-04</i> [Maximum Output Frequency].	3% (0 - 10%)

■ L8-95: Low Speed Pull-out Amount

No. (Hex.)	Name	Description	Default (Range)
L8-95 (077F) Expert	Low Speed Pull-out Amount	V/f OLV OLV/PM AOLV/PM EZOLV Sets the average count of <i>LSO</i> [Low Speed Motor Step-Out] detections.	10 (1 - 50 times)

12.10 n: Special Adjustment

n parameters set these functions:

- Function to prevent hunting
- High-slip braking
- Motor line-to-line resistance online tuning
- Fine-tune the parameters that adjust motor control

◆ n1: Hunting Prevention

The Hunting Prevention function will not let low inertia or operation with a light load cause hunting. Hunting frequently occurs when you have a high carrier frequency and an output frequency less than 30 Hz.

■ n1-01: Hunting Prevention Selection

No. (Hex.)	Name	Description	Default (Range)
n1-01 (0580)	Hunting Prevention Selection	☒ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the function to prevent hunting.	0 (0, 1)

Note:

When you replace a V1000-series drive with a GA500 drive, set *n1-01* = 1 [*Hunting Prevention Selection* = Enabled].

When drive response is more important than the decrease of motor vibration, disable this function.

0 : Disabled

1 : Enabled

■ n1-02: Hunting Prevention Gain Setting

No. (Hex.)	Name	Description	Default (Range)
n1-02 (0581) Expert	Hunting Prevention Gain Setting	☒ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the performance of the hunting prevention function. Usually it is not necessary to change this parameter.	1.00 (0.00 - 2.50)

Adjust this parameter in these conditions:

- When *n1-01* = 1 [*Hunting Prevention Selection* = Enabled (Normal)], if oscillation occurs when you operate a motor with a light load, increase the setting value in 0.1-unit increments.
- When *n1-01* = 2, if the motor stalls, decrease the setting value in 0.1-unit increments.

■ n1-03: Hunting Prevention Time Constant

No. (Hex.)	Name	Description	Default (Range)
n1-03 (0582) Expert	Hunting Prevention Time Constant	☒ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the primary delay time constant of the hunting prevention function. Usually it is not necessary to change this parameter.	Determined by o2-04 (0 - 500 ms)

Adjust this parameter in these conditions:

- Load inertia is large: Increase the setting value. If the setting value is too high, response will be slower. Also, there will be oscillation when the frequency is low.
- Oscillation occurs at low frequencies: Decrease the setting value.

■ n1-05: Hunting Prevent Gain in Reverse

No. (Hex.)	Name	Description	Default (Range)
n1-05 (0530) Expert	Hunting Prevent Gain in Reverse	☒ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the performance of the hunting prevention function. This parameter adjusts Reverse run. Usually it is not necessary to change this parameter.	0.00 (0.00 - 2.50)

Note:

When you set $n1-05 = 0$, the value set in $n1-02$ [*Hunting Prevention Gain Setting*] is effective when the motor rotates in reverse.

Adjust this parameter in these conditions:

- When $n1-01 = 1$ [*Hunting Prevention Selection = Enabled (Normal)*], if oscillation occurs when you operate a motor with a light load, increase the setting value in 0.1-unit increments.
- When $n1-01 = 2$, if the motor stalls, decrease the setting value in 0.1-unit increments.

■ n1-13: DC Bus Stabilization Control

No. (Hex.)	Name	Description	Default (Range)
n1-13 (1B59) Expert	DC Bus Stabilization Control	V/f OLV OLV/PM AOLV/PM EZOLV Sets the oscillation suppression function for the DC bus voltage.	0 (0, 1)

0 : Disabled

1 : Enabled

Note:

If the DC bus voltage does not become stable with light loads and the drive detects *ov* [*Overvoltage*], set this parameter to 1.

■ n1-14: DC Bus Stabilization Time

No. (Hex.)	Name	Description	Default (Range)
n1-14 (1B5A) Expert	DC Bus Stabilization Time	V/f OLV OLV/PM AOLV/PM EZOLV Adjusts the responsiveness of the oscillation suppression function for the DC bus voltage. Set $n1-13 = 1$ [<i>DC Bus Stabilization Control = Enabled</i>] to enable this parameter.	100.0 ms (50.0 - 500.0 ms)

Note:

Adjust this parameter in 100 ms increments.

◆ n2: Auto Freq Regulator (AFR)

The speed feedback detection reduction function (or AFR: Automatic Frequency Regulator) helps the speed become stable when you suddenly apply or remove a load.

Note:

Before you change $n2-xx$ parameters, do one of these procedures:

- Set the motor parameters and V/f pattern correctly.
- Do Rotational Auto-Tuning.

■ n2-01: Automatic Freq Regulator Gain

No. (Hex.)	Name	Description	Default (Range)
n2-01 (0584)	Automatic Freq Regulator Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain of the AFR function as a magnification value. Usually it is not necessary to change this setting.	1.00 (0.00 - 10.00)

Adjust this parameter in these conditions:

- If hunting or oscillation occurs with light loads, increase the setting value in 0.05-unit increments and examine the response.
- When torque is not sufficient with heavy loads or to make the torque or speed response better, decrease the setting value in 0.05-unit increments and examine the response.

■ n2-02: Automatic Freq Regulator Time 1

No. (Hex.)	Name	Description	Default (Range)
n2-02 (0585)	Automatic Freq Regulator Time 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant that sets the rate of change for the AFR function. Usually it is not necessary to change this setting.	50 ms (0 - 2000 ms)

Adjust this parameter in these conditions:

- If there is hunting or oscillation with a light load, increase the setting value in 50 ms increments and examine the response. If the load inertia is large, increase the setting value in 50 ms increments and examine the response.
- If torque is not sufficient with a heavy load or if you must increase torque or speed responsiveness, decrease the setting value in 10 ms increments and examine the response.

Note:

- Set $n2-02 \leq n2-03$ [Automatic Freq Regulator Time 2]. If $n2-02 > n2-03$, the drive will detect *oPE08* [Parameter Selection Error].
- When you change the value in *n2-02*, also change the value in *C4-02* [Torque Compensation Delay Time] by the same ratio.

■ n2-03: Automatic Freq Regulator Time 2

No. (Hex.)	Name	Description	Default (Range)
n2-03 (0586)	Automatic Freq Regulator Time 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant that sets the speed difference of the AFR function. Use this parameter for speed searches or regeneration. Usually it is not necessary to change this setting.	750 ms (0 - 2000 ms)

Adjust this parameter in these conditions:

- If the drive detects *ov* [Overvoltage] when acceleration stops under high-inertia loads, increase the setting value in 50 ms increments.
If the drive detects *ov* when the load changes suddenly, increase the setting value in 50 ms increments.
- To increase the responsiveness of torque and speed, decrease the setting value in 10 ms increments and examine the response.

Note:

- Set $n2-02 \leq n2-03$ [Automatic Freq Regulator Time 2]. If $n2-02 > n2-03$, the drive will detect *oPE08* [Parameter Selection Error].
- When you change the value in *n2-03*, also change the value in *C4-06* [Motor 2 Torque Comp Delay Time] by the same ratio.

◆ n3: High Slip Braking (HSB) and Overexcitation Braking

n3 parameters configure High Slip Braking and Overexcitation Deceleration.

■ High Slip Braking (HSB)

High slip braking quickly decelerates motors without braking resistors.

This lets you stop a motor more quickly than with the ramp to stop processes. This function is best for applications that do not frequently stop the motor, for example the fast stop function for high-inertia loads. Braking starts when the MFDI for *High Slip Braking (HSB) Activate* [*H1-xx = 68*] activates.

Figure 12.110 High Slip Braking Time Chart

An induction motor is necessary to use high slip braking. Set *A1-02 = 0* [Control Method Selection = *V/f Control*] to enable high slip braking:

Principles of Operation

HSB increases motor slip by significantly decreasing the frequency supplied to the motor at the same time that deceleration starts. A large quantity of current flows through the motor to increase the motor loss, and the motor decelerates while the motor windings consume the regenerative energy.

The drive keeps the motor current at a constant level during deceleration to prevent overvoltage and do automatic braking and it also keeps a slip level that causes the maximum quantity of deceleration torque.

High Slip Braking Precautions

- Do not use the high slip braking function in these applications:
 - Frequent deceleration
 - Deceleration time differences
 - Continuous regenerative loads
 - It is necessary to accelerate again during deceleration
- Motor loss increases during high slip braking. Use this function when the duty time factor is 5% ED or less and the braking time is 90 seconds or less. The load inertia and motor characteristics have an effect on the braking time.
- The drive ignores the configured deceleration time during high slip braking. To stop motors in the configured deceleration time, set $L3-04 = 4$ [*Stall Prevention during Decel = Overexcitation/High Flux*].
- You cannot use high slip braking to decelerate deceleration at user-defined speeds. To decelerate at user-defined speeds, use the overexcitation deceleration function.
- You cannot accelerate the motor again during high slip braking until you fully stop the motor and input the Run command again.
- You cannot use high slip braking and the KEB Ride-Thru function at the same time. If you enable those two functions, the drive will detect *oPE03* [*Multi-Function Input Setting Err*].

Overexcitation Deceleration

Overexcitation deceleration quickly decelerates motors without braking resistors.

This lets you stop a motor more quickly than with the ramp to stop processes.

Overexcitation deceleration increases excitation current during deceleration to cause a large quantity of braking torque through motor overexcitation.

You can set the deceleration speed to adjust the deceleration time for overexcitation deceleration. Overexcitation deceleration lets you accelerate the motor again during deceleration. Enter the Run command during overexcitation deceleration to cancel overexcitation deceleration and accelerate the drive to the specified speed.

To enable this function, set $L3-04 = 4, 5$ [*Stall Prevention during Decel = Overexcitation/High Flux, Overexcitation/High Flux 2*].

When $L3-04 = 4$, the motor will decelerate for the *Deceleration Times* [*C1-02, C1-04, C1-06, or C1-08*]. If the drive detects *ov* [*Overvoltage*], increase the deceleration time.

When $L3-04 = 5$, the drive uses the value in *C1-02, C1-04, C1-06, or C1-08* to decelerate and it adjusts the deceleration rate to keep the DC bus voltage at the level set in $L3-17$ [*DC Bus Regulation Level*]. The load inertia and motor characteristics have an effect on the braking time.

Notes on Overexcitation Deceleration

- Do not use Overexcitation Deceleration with a braking resistor.
- Do not use Overexcitation Deceleration for these applications. Connect a braking resistor to the drive as an alternative to Overexcitation Deceleration.
 - Frequent sudden decelerations
 - Continuous regenerative loads
 - Low inertia machines
 - Machines that have no tolerance for torque ripples
- Motor loss increases during overexcitation deceleration. Use this function when the duty time factor is 5% ED or less and the braking time is 90 seconds or less. The load inertia and motor characteristics have an effect on the braking time.

- You can use overexcitation deceleration in OLV control, but this control method decreases the precision of torque control and braking efficiency. Use V/f control for the best results.
- The drive disables these functions during braking with Overexcitation Deceleration 2:
 - Hunting Prevention Function (V/f Control)
 - Torque Limit Speed Control (OLV Control)

■ n3-01: HSB Deceleration Frequency Width

No. (Hex.)	Name	Description	Default (Range)
n3-01 (0588) Expert	HSB Deceleration Frequency Width	V/f OLV OLV/PM AOLV/PM EZOLV Sets the amount by which the output frequency is to be lowered during high-slip braking, as a percentage of <i>E1-04 [Maximum Output Frequency]</i> , which represents the 100% value.	5% (1 - 20%)

When you must detect *ov [DC Bus Overvoltage]* during high-slip braking, set this parameter to a large value.

■ n3-02: HSB Current Limit Level

No. (Hex.)	Name	Description	Default (Range)
n3-02 (0589) Expert	HSB Current Limit Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum current output during high-slip braking as a percentage, where <i>E2-01 [Motor Rated Current (FLA)]</i> is 100%. Also set the current suppression to prevent exceeding drive overload tolerance.	Determined by C6-01 (0 - 150%)

Note:

The upper limit to the setting range changes when the setting for *C6-01 [Normal / Heavy Duty Selection]* changes.

- 150% when *C6-01 = 0 [Heavy Duty Rating]*
- 120% when *C6-01 = 1 [Normal Duty Rating]*

When you decrease the setting value for current suppression, it will make the deceleration time longer.

- When you must detect *ov [DC Bus Overvoltage]* during high-slip braking, set this parameter to a low value.
- If the motor current increases during high-slip braking, decrease the setting value to prevent burn damage in the motor.
- The overload tolerance for the drive is 150% for Heavy Duty Rating (HD) and 110% for Normal Duty Rating (ND).

■ n3-03: HSB Dwell Time at Stop

No. (Hex.)	Name	Description	Default (Range)
n3-03 (058A) Expert	HSB Dwell Time at Stop	V/f OLV OLV/PM AOLV/PM EZOLV Sets the dwell time, a length of time when high-slip braking is ending and during which the motor speed decreases and runs at a stable speed. For a set length of time, the drive will hold the actual output frequency at the minimum output frequency set in <i>E1-09</i> .	1.0 s (0.0 - 10.0 s)

If there is too much inertia or when the motor is coasting to a stop after high-slip braking is complete, increase the setting value. If the setting value is too low, machine inertia can cause the motor to rotate after high-slip braking is complete.

■ n3-04: HSB Overload Time

No. (Hex.)	Name	Description	Default (Range)
n3-04 (058B) Expert	HSB Overload Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time used to detect <i>oL7 [High Slip Braking Overload]</i> , which occurs when the output frequency does not change during high-slip braking. Usually it is not necessary to change this parameter.	40 s (30 - 1200 s)

If a force on the load side is rotating the motor or if there is too much load inertia connected to the motor, the drive will detect *oL7*.

The current flowing to the motor from the load can overheat the motor and cause burn damage to the motor. Set this parameter to prevent burn damage to the motor.

■ n3-13: OverexcitationBraking (OEB) Gain

No. (Hex.)	Name	Description	Default (Range)
n3-13 (0531)	OverexcitationBraking (OEB) Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain value that the drive multiplies by the V/f pattern output value during overexcitation deceleration to calculate the overexcitation level.	1.10 (1.00 - 1.40)

The V/f pattern output value goes back to its usual level after the motor stops or accelerates again to the frequency reference speed.

The best value of this parameter changes when the flux saturation characteristics of the motor change.

- Gradually increase the value of *n3-13* to 1.25 or 1.30 to increase the braking power of Overexcitation Deceleration. If the gain is too much, the motor can have flux saturation and cause a large quantity of current to flow.
- This can increase the deceleration time. Decrease the setting value if flux saturation causes overcurrent. If you increase the setting value, the drive can detect *oC* [Overcurrent], *oL1* [Motor Overload], and *oL2* [Drive Overload]. Decrease the value of *n3-21* [HSB Current Suppression Level] to prevent *oC* and *oL*.
- If you use overexcitation deceleration frequently or if you use overexcitation deceleration for an extended period of time, it can increase motor temperature. Decrease the setting value in these conditions.
- If *ov* [Overvoltage] occurs, increase the deceleration time.

■ n3-14: OEB High Frequency Injection

No. (Hex.)	Name	Description	Default (Range)
n3-14 (0532) Expert	OEB High Frequency Injection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that injects harmonic signals during overexcitation deceleration.	0 (0, 1)

Enable this parameter to set a shorter deceleration time.

Note:

- If you frequently use overexcitation deceleration on a motor, the motor loss will increase the risk of burn damage.
- When you set this parameter to 1, the motor can make a loud excitation sound during overexcitation deceleration. If the excitation sound is unwanted, set this parameter to 0 to disable the function.

0 : Disabled

1 : Enabled

The drive injects harmonic signals at the time of overexcitation deceleration. You can decrease the deceleration time because motor loss increases.

■ n3-21: HSB Current Suppression Level

No. (Hex.)	Name	Description	Default (Range)
n3-21 (0579)	HSB Current Suppression Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the upper limit of the current that is suppressed at the time of overexcitation deceleration as a percentage of the drive rated current.	100% (0 - 150%)

If flux saturation during Overexcitation Deceleration makes the motor current become more than the value set in *n3-21*, the drive will automatically decrease the overexcitation gain. If *oC* [Overcurrent], *oL1* [Motor Overload], or *oL2* [Drive Overload] occur during overexcitation deceleration, decrease the setting value.

If repetitive or long overexcitation deceleration cause the motor to overheat, decrease the setting value.

■ n3-23: Overexcitation Braking Operation

No. (Hex.)	Name	Description	Default (Range)
n3-23 (057B)	Overexcitation Braking Operation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the direction of motor rotation where the drive will enable overexcitation.	0 (0 - 2)

0 : Disabled

1 : Enabled Only when Rotating FWD

2 : Enabled Only when Rotating REV

Note:
When $n3-23 = 1, 2$, the drive enables overexcitation only in the direction of motor rotation in which a regenerative load is applied. Increased motor loss can decrease *ov* [Overvoltage] faults.

◆ n5: Feed Forward Control

Feed forward control increases the responsiveness of acceleration and deceleration as specified by the speed reference.

Increase the values set in *C5-01* and *C5-03* [ASR Proportional Gain] to apply feed forward control to machines that have low rigidity and are possible to have hunting and vibration or to machines that have a large quantity of inertia. Refer to [Figure 12.111](#) for more information about parameters related to feed forward control.

Set *A1-02* = 6 [Control Method Selection = Advanced Open Loop Vector Control for PM] to enable feed forward control.

- Note:**
- You cannot use feed forward control to increase responsiveness in applications where you apply loads externally during run at constant speed.
 - You cannot use feed forward control with motor 2.

Figure 12.111 Configure Feed Forward Control

■ Before You Use Feed Forward Control

Do one of these procedures before you use feed forward control.

- Run Auto-Tuning to set motor parameters.
When you cannot do Auto-Tuning, manually set motor parameters with the information on the motor nameplate or test reports. Set the *E2 parameters* for induction motors. Set the *E5 parameters* for PM motors.
- Set *C5 parameters* [Automatic Speed Regulator (ASR)] individually to adjust the speed control loop (ASR).
- If you can connect a motor to a machine and rotate it during Auto-Tuning, do Inertia Tuning.
The drive automatically adjusts feed forward parameters during Inertia Tuning.
- If you cannot do Inertia Tuning, refer to [Figure 12.111](#) and set the parameters related to feed forward control individually.

■ n5-01: Feed Forward Control Selection

No. (Hex.)	Name	Description	Default (Range)
n5-01 (05B0)	Feed Forward Control Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the feed forward function.	0 (0, 1)

0 : Disabled

1 : Enabled

■ n5-02: Motor Inertia Acceleration Time

No. (Hex.)	Name	Description	Default (Range)
n5-02 (05B1)	Motor Inertia Acceleration Time	V/f OLV OLV/PM AOLLV/PM EZOLV Sets the length of time for the motor to accelerate from the stopped to the maximum frequency with a single motor at the rated torque. Inertia Tuning automatically sets the motor acceleration time.	Determined by C6-01, E5-01, and o2-04 (0.001 - 10.000 s)

If you cannot do Inertia Tuning, calculate the motor acceleration time as shown here or measure the motor acceleration time and set *n5-02* to this value.

Calculate the Motor Acceleration Time

Use this formula to find the motor acceleration time:

$$n5-02 = \frac{2\pi \cdot J_{\text{Motor}} \cdot n_{\text{rated}}}{60 \cdot T_{\text{rated}}}$$

- J_{Motor} = Moment of inertia of motor (kg m²)
- n_{rated} = Motor rated speed (min⁻¹, r/min)
- T_{rated} = Motor rated torque (N m)

You can also use this formula to find the motor acceleration time:

$$n5-02 = \frac{4\pi \cdot J_{\text{Motor}} \cdot f_{\text{rated}}}{p \cdot T_{\text{rated}}}$$

- f_{rated} = Motor rated frequency (Hz)
- P = Number of motor poles

Calculate the Motor Acceleration Time

Use this procedure to calculate the motor acceleration time:

1. Use *A1-02 [Control Method Selection]* to set the control method.
2. Disconnect the motor and load.
3. Run Auto-Tuning to set motor parameters.
When you cannot do Auto-Tuning, manually set motor parameters with the information on the motor nameplate or test reports. Set the *E2 parameters* for induction motors. Set the *E5 parameters* for PM motors.
4. Set *C5 parameters [Automatic Speed Regulator (ASR)]*.
5. Set *C1-01 [Acceleration Time 1] = 0*.
6. Set *L7-01 [Forward Torque Limit]* to 100%.
7. Set the frequency reference to the same value as the motor rated speed.
8. Measure the length of time for the motor to reach the rated speed.
Show *U1-05 [Motor Speed]* on the keypad and enter the Run command (forward run).
9. Stop the motor.
10. Set *n5-02* to the measured motor acceleration time value.

Reset all of the parameters that you changed to the previous setting values.

■ n5-03: Feed Forward Control Gain

No. (Hex.)	Name	Description	Default (Range)
n5-03 (05B2)	Feed Forward Control Gain	V/f OLV OLV/PM AOLLV/PM EZOLV Sets the ratio between load inertia and motor inertia. Inertia Tuning automatically sets the Feedforward Control Gain value.	1.00 (0.00 - 100.00)

When you cannot do Inertia Tuning, use this procedure to set *n5-03*:

Set *n5-02 [Motor Inertia Acceleration Time]*.

1. Connect the motor and load.
2. Set *C1-01 [Acceleration Time 1] = 0*.
3. Use *L7-01 to L7-04 [Torque Limit]* to set the expected test run torque limit levels.

4. Set the frequency reference as specified by the high speed range of the machine.
5. Measure the length of time for the motor to reach the command reference speed.
Show *U1-05 [Motor Speed]* on the keypad and enter the Run command.
6. Stop the motor.
7. Replace the values in the this formula and set *n5-03* to the value of the formula.

$$n5-03 = \frac{t_{\text{accel}} \cdot T_{\text{Lim\_Test}} \cdot f_{\text{rated}}}{n5-02 \cdot f_{\text{ref\_Test}} \cdot 100} - 1$$

- t_{accel} = Acceleration time (s)
- f_{rated} = Motor rated frequency (Hz)
- $T_{\text{Lim\_Test}}$ = Test run torque limit (%)
- $f_{\text{ref\_Test}}$ = Test run frequency reference (Hz)

⚠ WARNING Sudden Movement Hazard

**Machinery can accelerate suddenly. Do not use this function with machinery that must not accelerate suddenly.
Sudden starts can cause serious injury or death.**

Reset all of the parameters that you changed to the previous setting values.

Note:

- If response to the speed reference is slow, increase the value set in *n5-03*.
- Increase the value set in *n5-03* when response to the speed reference is slow.
–The speed is overshooting.
- A negative torque reference is output when acceleration ends.

■ **n5-04: Speed Response Frequency**

No. (Hex.)	Name	Description	Default (Range)
n5-04 (05B3) RUN Expert	Speed Response Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the response frequency for the speed reference. Usually it is not necessary to change this parameter.	Determined by A1-02 (0.00 - 500.00 Hz)

If you set *n5-03 [Feed Forward Control Gain]* too high, the motor speed will momentarily increase to more than the set frequency.

◆ **n6: Online Tuning**

n6 parameters are used to set the online tuning function for motor line-to-line resistance.

The Online Tuning for motor line-to-line resistance is used to prevent degradation of speed control accuracy due to motor temperature fluctuation and motor stalls due to insufficient torque.

■ **n6-01: Online Tuning Selection**

No. (Hex.)	Name	Description	Default (Range)
n6-01 (0570)	Online Tuning Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of motor data that Online Tuning uses for OLV control.	0 (0 - 2)

0 : Disabled

1 : Line-to-Line Resistance Tuning

The drive adjusts the motor line-to-line resistance during run. This procedure is applicable for speed values 6 Hz and less. It also adjusts the motor resistance value to increase the overload capacity in the low speed range.

2 : Voltage Correction Tuning

The drive adjusts the output voltage during run to increase overload tolerance and minimize the effects of high temperatures on speed precision.

Note:

Setting 2 is enabled only when $b8-01 = 0$ [Energy Saving Control Selection = Disabled].

■ n6-05: Online Tuning Gain

No. (Hex.)	Name	Description	Default (Range)
n6-05 (05C7) Expert	Online Tuning Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the compensation gain when $n6-01 = 2$ [Online Tuning Selection = Voltage Correction Tuning]. Usually it is not necessary to change this parameter.	1.0 (0.1 - 50.0)

When you use a motor that has a large secondary circuit time constant, decrease the setting value.

If the drive detects *oL1* [Motor Overload], increase the setting value in 0.1-unit increments.

◆ n7: EZ Drive

The *n7* parameters provide special adjustments for EZ Vector Control.

■ n7-01: Damping Gain for Low Frequency

No. (Hex.)	Name	Description	Default (Range)
n7-01 (3111) Expert	Damping Gain for Low Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the oscillation suppression gain for the low speed range.	1.0 (0.1 - 10.0)

Note:

- If oscillation occurs in the low speed range, increase the acceleration time or increase the setting value in 0.5-unit increments.
- To get starting torque with the setting for *C4-01* [Torque Compensation Gain], decrease the setting value in 0.3-unit increments.

■ n7-05: Response Gain for Load Changes

No. (Hex.)	Name	Description	Default (Range)
n7-05 (3115) Expert	Response Gain for Load Changes	V/f OLV OLV/PM AOLV/PM EZOLV Sets the response gain related to changes in the load.	50 (10 - 1000)

Note:

To make tracking related to load changes better, increase the setting value in 5-unit increments. If oscillation occurs during load changes, decrease the setting value in 5-unit increments.

■ n7-07: Speed Calculation Gain1

No. (Hex.)	Name	Description	Default (Range)
n7-07 (3117) Expert	Speed Calculation Gain1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed calculation gain during usual operation. Usually it is not necessary to change this setting.	15.0 (1.0 - 50.0)

■ n7-08: Speed Calculation Gain2

No. (Hex.)	Name	Description	Default (Range)
n7-08 (3118) Expert	Speed Calculation Gain2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed calculation gain during a speed search.	25.0 (1.0 - 50.0)

Note:

When you increase the setting value, you can do a speed search of a motor rotating at a high frequency. If the setting value is too high, the calculated speed will oscillate and a restart will fail. Decrease the setting value in these conditions.

■ n7-10: Pull-in Current Switching Speed

No. (Hex.)	Name	Description	Default (Range)
n7-10 (311A) Expert	Pull-in Current Switching Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed range to operate with the pull-in current command. Drive rated frequency = 100% value. If there is a large quantity of oscillation when you operate in the low speed range, increase the setting value.	10.0% (0.0 - 100.0%)

Note:

- When the drive accelerates, it enables these settings:
 - Motor speed $\leq n7-10 + n7-11$ [Drv Mode Switch Hysteresis Band]: $n8-51$ [Pull-in Current @ Acceleration]
 - Motor speed $> n7-10 + n7-11$: $b8-01$ [Energy Saving Control Selection]
- When the drive decelerates, it enables these settings:
 - Motor speed $\leq n7-10$: $n8-51$ [Pull-in Current @ Acceleration]
 - Motor speed $> n7-10$: $b8-01$ [Energy Saving Control Selection]
- If there is a large quantity of oscillation when you operate in the low speed range, increase the setting value.
- When it is most important to save energy in the low speed range, decrease the setting value.

■ n7-17: Resistance TemperatureCorrection

No. (Hex.)	Name	Description	Default (Range)
n7-17 (3122)	Resistance TemperatureCorrection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to adjust for changes in the motor resistance value caused by changes in the temperature.	1 (0 to 2)

0 : Invalid

1 : Valid (Only 1 time)

2 : Valid (Every time)

Note:

- For settings 1 and 2, the adjustment time can cause a delay before startup.
- For settings 1 and 2, the drive can set the line-to-line resistance value of $E9-10$ [Motor Line-to-Line Resistance].
- When the temperature will change at startup, use setting 2.
- To decrease the startup time, set this parameter to 0, then do line-to-line resistance tuning.
- If you will start from coasting, set this parameter to 0, then do line-to-line resistance tuning.

■ n7-19: Flux Error Compensation Gain

No. (Hex.)	Name	Description	Default (Range)
n7-19 (3128) Expert	Flux Error Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for magnetic flux compensation. Usually it is not necessary to change this setting.	5000% (0 - 50000%)

◆ n8: PM Motor Control Tuning

$n8$ parameters are used to make adjustments when controlling PM motors.

■ n8-01: Pole Position Detection Current

No. (Hex.)	Name	Description	Default (Range)
n8-01 (0540)	Pole Position Detection Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Initial Rotor Position Estimated Current as a percentage where $E5-03$ [PM Motor Rated Current (FLA)] = 100%. Usually it is not necessary to change this setting.	50% (0 - 100%)

The drive uses the Initial Rotor Position Estimated Current to detect the initial position of rotors.

Use the "Si" value on the motor nameplate, if available.

Note:

When $A1-02 = 7$ [CLV/PM], this parameter takes effect only in Expert Mode.

■ n8-02: Pole Alignment Current Level

No. (Hex.)	Name	Description	Default (Range)
n8-02 (0541)	Pole Alignment Current Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current at the time of polar attraction as a percentage where <i>E5-03 [motor rated current]</i> is 100%. Usually it is not necessary to change this setting.	80% (0 - 150%)

The drive uses the polar pull-in current to attract the rotor after it detects the initial rotor position. When you increase the value of *n8-02*, the starting torque also increases.

- If the motor does not track correctly at the time of the polar attraction, increase the value in 10% increments.
- If the motor oscillates at the time of the polar attraction, decrease the value in 10% increments.

■ n8-11: Observer Calculation Gain 2

No. (Hex.)	Name	Description	Default (Range)
n8-11 (054A) Expert	Observer Calculation Gain 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for speed estimation. Usually it is not necessary to change this setting.	Determined by n8-72 (0.0 - 1000.0)

Note:

When *n8-72 = 0 [Speed Estimation Method Select = Method 1]*, the default value is 50.0. When *n8-72 = 1 [Method 2]*, the default value is 150.0.

■ n8-14: Polarity Compensation Gain 3

No. (Hex.)	Name	Description	Default (Range)
n8-14 (054D) Expert	Polarity Compensation Gain 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for speed estimation. Usually it is not necessary to change this setting.	1.000 (0.000 - 10.000)

■ n8-15: Polarity Compensation Gain 4

No. (Hex.)	Name	Description	Default (Range)
n8-15 (054E) Expert	Polarity Compensation Gain 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for speed estimation. Usually it is not necessary to change this setting.	0.500 (0.000 - 10.000)

■ n8-21: Motor Back-EMF (Ke) Gain

No. (Hex.)	Name	Description	Default (Range)
n8-21 (0554) Expert	Motor Back-EMF (Ke) Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for speed estimation. Usually it is not necessary to change this setting.	0.90 (0.80 - 1.00)

■ n8-23: ACR q Gain @PoleEst

No. (Hex.)	Name	Description	Default (Range)
n8-23 (0556) Expert	ACR q Gain @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain for current regulator q-axis control when the drive estimates the initial pole. Usually it is not necessary to change this setting.	0 (0 - 2000)

■ n8-24: ACR q Integral Time @PoleEst

No. (Hex.)	Name	Description	Default (Range)
n8-24 (0557) Expert	ACR q Integral Time @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time for current regulator q-axis control when the drive estimates the initial pole. Usually it is not necessary to change this setting.	0.0 ms (0.0 - 100.0 ms)

■ n8-25: ACR q Limit @PoleEst

No. (Hex.)	Name	Description	Default (Range)
n8-25 (0558) Expert	ACR q Limit @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the q-axis limit of the current regulator when the drive estimates the initial pole. Usually it is not necessary to change this setting.	0% (0 - 150%)

■ n8-26: ACR d Gain @PoleEst

No. (Hex.)	Name	Description	Default (Range)
n8-26 (0559) Expert	ACR d Gain @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain for current regulator d-axis control when the drive estimates the initial pole. Usually it is not necessary to change this setting.	500 (0 - 2000)

■ n8-27: ACR d Integral Time @PoleEst

No. (Hex.)	Name	Description	Default (Range)
n8-27 (055A) Expert	ACR d Integral Time @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time for current regulator d-axis control when the drive estimates the initial pole. Usually it is not necessary to change this setting.	0.0 ms (0.0 - 100.0 ms)

■ n8-28: ACR d Lim @PoleEst

No. (Hex.)	Name	Description	Default (Range)
n8-28 (055B) Expert	ACR d Lim @PoleEst	V/f OLV OLV/PM AOLV/PM EZOLV Sets the d-axis limit of the current regulator when the drive estimates the initial pole. Usually it is not necessary to change this setting.	100% (0 - 150%)

■ n8-35: Initial Pole Detection Method

No. (Hex.)	Name	Description	Default (Range)
n8-35 (0562)	Initial Pole Detection Method	V/f OLV OLV/PM AOLV/PM EZOLV Sets how the drive detects the position of the rotor when the motor starts.	Determined by A1-02 (0 - 2)

Note:

- When you use an SPM motor, set $n8-35 = 0$. When you use an IPM motor, set $n8-35 = 0$ to 2 .
- When you set $n8-35 = 1$, do High Frequency Injection Auto-Tuning.
- When you set $n8-35 = 0$ or 2 , always evaluate the drive with the equipment being used for the application. If the drive incorrectly detects the polarity, the motor can rotate in the direction opposite of the Run command.

0 : Pull-in

Starts the rotor with pull-in current.

1 : High Frequency Injection

Injects high frequency to detect the rotor position. This setting can cause a loud excitation sound when the motor starts.

Note:

When you set 1 , do High Frequency Injection Auto-Tuning.

2 : Pulse Injection

Inputs the pulse signal to the motor to detect the rotor position.

■ n8-36: HFI Frequency Level for L Tuning

No. (Hex.)	Name	Description	Default (Range)
n8-36 (0563)	HFI Frequency Level for L Tuning	V/f OLV OLV/PM AOLV/PM EZOLV Sets the injection frequency for high frequency injection.	500 Hz (200 - 1000 Hz)

Note:

- Set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] or $n8-57 = 1$ [HFI Overlap Selection = Enabled] to enable this parameter.
- The drive automatically calculates this value when High Frequency Injection Auto-Tuning completes successfully.

■ n8-37: HFI Voltage Amplitude Level

No. (Hex.)	Name	Description	Default (Range)
n8-37 (0564) Expert	HFI Voltage Amplitude Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the high frequency injection amplitude as a percentage where 200 V = 100% for 200 V class drives and 400 V = 100% for a 400 V class drives. Usually it is not necessary to change this setting.	20.0% (0.0 - 50.0%)

Note:

- Set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] or $n8-57 = 1$ [HFI Overlap Selection = Enabled] to enable this parameter.
- The drive automatically calculates this value when High Frequency Injection Auto-Tuning completes successfully.

■ n8-39: HFI LPF Cutoff Freq

No. (Hex.)	Name	Description	Default (Range)
n8-39 (0566)	HFI LPF Cutoff Freq	V/f OLV OLV/PM AOLV/PM EZOLV Sets the low-pass filter shut-off frequency for high frequency injection.	250 Hz (0 - 1000 Hz)

Note:

- Set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] or $n8-57 = 1$ [HFI Overlap Selection = Enabled] to enable this parameter.
- The drive automatically calculates this value when High Frequency Injection Auto-Tuning completes successfully.

■ n8-41: HFI P Gain

No. (Hex.)	Name	Description	Default (Range)
n8-41 (0568) Expert	HFI P Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the response gain for the high frequency injection speed estimation.	2.5 (-10.0 - +10.0)

Note:

- Set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] or $n8-57 = 1$ [HFI Overlap Selection = Enabled] to enable this parameter.
- When $A1-02 = 6$ [Control Method Selection = AOLV/PM] and you do High Frequency Injection Auto-Tuning, the drive automatically sets this parameter.
- Set $n8-41 > 0.0$ for IPM motors.

Set this parameter as follows.

- If there is oscillation or hunting, decrease the setting in units of 0.5.
- When it is necessary to track load changes, increase the setting in units of 0.5.

■ n8-42: HFI I Time

No. (Hex.)	Name	Description	Default (Range)
n8-42 (0569) Expert	HFI I Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time constant for the high frequency injection speed estimation. Usually it is not necessary to change this setting.	0.10 s (0.00 - 9.99 s)

Note:

Set $n8-35 = 1$ [Initial Pole Detection Method = High Frequency Injection] or $n8-57 = 1$ [HFI Overlap Selection = Enabled] to enable this parameter.

■ n8-45: Speed Feedback Detection Gain

No. (Hex.)	Name	Description	Default (Range)
n8-45 (0538)	Speed Feedback Detection Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the internal speed feedback detection reduction unit gain as a magnification value. Usually it is not necessary to change this setting.	0.80 (0.00 - 10.00)

Adjust this parameter in these conditions:

- If vibration or hunting occur, increase the setting value in 0.05 unit increments.
- If the responsiveness of torque and speed is unsatisfactory, decrease the setting value 0.05 unit increments and examine the response.

■ n8-46: PM Phase Compensation Gain

No. (Hex.)	Name	Description	Default (Range)
n8-46 (0539) Expert	PM Phase Compensation Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain to compensate for phase differences. Usually it is not necessary to change this setting.	0.3 (0.0 - 10.0)

If there is vibration in the motor, increase the value. When you must detect *oC* [Overcurrent] or *ov* [DC Bus Overvoltage], set this parameter to a low value.

■ n8-47: Pull-in Current Comp Filter Time

No. (Hex.)	Name	Description	Default (Range)
n8-47 (053A)	Pull-in Current Comp Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant the drive uses to align the pull-in current reference value with the actual current value. Usually it is not necessary to change this setting.	5.0 s (0.0 - 100.0 s)

Adjust this parameter in these conditions:

- If the time for the reference value of the pull-in current to align with the target value is too long, increase the setting value.
- If vibration or hunting occur, decrease the setting value in 0.2 unit increments.
- If the motor stalls during run at constant speed, decrease the setting value in 0.2 unit increments.

■ n8-48: Pull-in/Light Load Id Current

No. (Hex.)	Name	Description	Default (Range)
n8-48 (053B) RUN	Pull-in/Light Load Id Current	V/f OLV OLV/PM AOLV/PM EZOLV On the basis that parameter <i>E5-03</i> [Motor Rated Current (FLA)] is the 100% value, this parameter sets the d-axis current that flows to the motor during run at constant speed as a percentage.	30% (0 - 200%)

Adjust in the following situations.

- Slightly reduce this value if there is too much current when driving a light load at a constant speed.
- Increase the setting value in steps of 5% when hunting or vibration occurs during run at constant speed.
- Increase the setting value in steps of 5% if the motor stalls during run at constant speed.

■ n8-49: Heavy Load Id Current

No. (Hex.)	Name	Description	Default (Range)
n8-49 (053C) RUN Expert	Heavy Load Id Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the d-axis current to that the drive will supply to the motor to run it at a constant speed with a heavy load. Considers <i>E5-03 [PM Motor Rated Current (FLA)]</i> to be 100%. Usually it is not necessary to change this setting.	Determined by E5-01 (-200.0 - +200.0%)

When you use an IPM motor, you can use the reluctance torque of the motor to make the motor more efficient and help conserve energy.

When you operate an SPN motor, set this parameter to 0.

Adjust in the following situations.

- If the load is large and motor rotation is not stable, decrease the setting value.
- When you change the *E5 parameters [PM Motor Settings]*, set $n8-49 = 0$, then adjust this parameter.

■ n8-50: Medium Load Iq Level (High)

No. (Hex.)	Name	Description	Default (Range)
n8-50 (053D) Expert	Medium Load Iq Level (High)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the load current level at which heavy load control starts where <i>E5-03 [Motor Rated Current (FLA)]</i> is 100%. Usually it is not necessary to change this setting.	80% (50 - 255)

■ n8-51: Pull-in Current @ Acceleration

No. (Hex.)	Name	Description	Default (Range)
n8-51 (053E)	Pull-in Current @ Acceleration	V/f OLV OLV/PM AOLV/PM EZOLV Sets the pull-in current allowed to flow during acceleration/deceleration as a percentage of the motor rated current.	Determined by A1-02 (0 - 200%)

Adjust in the following situations.

- When the motor does not smoothly because of large loads, increase the setting value in 5% increments.
- If too much current flows during acceleration, decrease the setting value.

Note:

When $A1-02 = 8$ [Control Method Selection = EZOLV], this parameter will always be in effect for speed ranges less than $n7-10$ [Pull-in Current Switching Speed].

■ n8-54: Voltage Error Compensation Time

No. (Hex.)	Name	Description	Default (Range)
n8-54 (056D) Expert	Voltage Error Compensation Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant that the drive uses when adjusting for voltage errors.	1.00 s (0.00 - 10.00 s)

Adjust this parameter in these conditions:

- If oscillation occurs at the time of start up, increase the setting value.
- If hunting occurs when operating at low speed, increase the setting value.
- If fast changes in the load cause hunting, increase the setting value in 0.1-unit increments. If you cannot stop hunting, set *n8-51 [Pull-in Current @ Acceleration]* to 0% and set *n8-54* to 0.00 s, and disable compensation for voltage errors.

■ n8-55: Motor to Load Inertia Ratio

No. (Hex.)	Name	Description	Default (Range)
n8-55 (056E)	Motor to Load Inertia Ratio	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the ratio between motor inertia and machine inertia.	0 (0 - 3)

Sets the ratio between motor inertia and machine inertia to adjust the ACR.

Adjust in the following situations.

- If torque and speed response are unsatisfactory, gradually increase the setting from 0.
- If the motor does not run smoothly, gradually increase the setting from 0.
- If the motor stalls during run at constant speed, gradually increase the setting from 0.
- If there is vibration or hunting, decrease the setting.

Note:

- If the value too low, the drive will detect *STPo* [*Motor Step-Out Detected*].
- If you use one motor or more than motor at low inertia and the value is too high, there can be vibration in the motor.

0 : Below 1:10

Use this setting in these conditions:

- The ratio between the motor inertia and machine inertia is less than 1:10
- There are large current ripples

1 : Between 1:10 and 1:30

Use this setting in these conditions:

- The ratio between the motor inertia and machine inertia is approximately 1:10 to 1:30
- Parameter *n8-55* = 0 and the drive detects *STPo* because of an impact load or sudden acceleration/deceleration.

2 : Between 1:30 and 1:50

Use this setting in these conditions:

- The ratio between the motor inertia and machine inertia is approximately 1:30 to 1:50
- Parameter *n8-55* = 1 and the drive detects *STPo* because of an impact load or sudden acceleration/deceleration.

3 : Beyond 1:50

Adjust this parameter in these conditions:

- The ratio between the motor inertia and machine inertia is more than 1:50
- Parameter *n8-55* = 2 and the drive detects *STPo* because of an impact load or sudden acceleration/deceleration.

■ n8-56: PM High Performance Selection

No. (Hex.)	Name	Description	Default (Range)
n8-56 (056F) Expert	PM High Performance Selection	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the high efficiency control method for IPM motors. Usually it is not necessary to change this setting.	1 (0 - 2)

0 : Disabled

1 : Enabled (Vd)

2 : Enabled (Vd & Vq)

■ n8-57: HFI Overlap Selection

No. (Hex.)	Name	Description	Default (Range)
n8-57 (0574)	HFI Overlap Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that detects motor speed with high frequency injection.	0 (0, 1)

Note:

- When you set $n8-57 = 1$, do High Frequency Injection Auto-Tuning.
- When there is high frequency injection, the motor will make an excitation sound.
- When you use Zero Speed Control, set $E1-09 = 0.0$ [Minimum Output Frequency = 0.0 Hz].

0 : Disabled

Use this setting with SPM motors. The speed control range is approximately 1:20.

When $n8-57 = 0$, you cannot set $E1-09$ [Minimum Output Frequency] $\leq 1/20$ of the value of $E1-06$ [Base Frequency].

1 : Enabled

The speed control range is 1:100. It gives sufficient speed detection at low speeds.

Note:

- It is not available with an SPM motor.
- The speed control range 1:100 is the momentary operation area. When you operate the motor continuously, make sure that the drive capacity and motor capacity are acceptable.

■ n8-62: Output Voltage Limit Level

No. (Hex.)	Name	Description	Default (Range)
n8-62 (057D) Expert	Output Voltage Limit Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the output voltage limit to prevent saturation of the output voltage. Usually it is not necessary to change this parameter.	200 V Class: 200.0 V, 400 V: 400.0 V (200 V Class: 0.0 to 240.0 V, 400 V Class: 0.0 to 480.0 V)

Set this parameter lower than the input power supply voltage.

Note:

- When $A1-02 = 8$ [EZOLV], the default settings are:
–200 V class: 230.0 V
–400 V class: 460.0 V

■ n8-63: Output Voltage Limit P Gain

No. (Hex.)	Name	Description	Default (Range)
n8-63 (057E) Expert	Output Voltage Limit P Gain	V/f OLV OLV/PM AOLV/PM EZOLV Sets the proportional gain for output voltage control. Usually it is not necessary to change this setting.	1.00 (0.00 - 100.00)

■ n8-64: Output Voltage Limit I Time

No. (Hex.)	Name	Description	Default (Range)
n8-64 (057F) Expert	Output Voltage Limit I Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the integral time for output voltage control. Usually it is not necessary to change this setting.	0.040 s (0.000 - 5.000)

■ n8-65: Speed Fdbk Gain @ oV Suppression

No. (Hex.)	Name	Description	Default (Range)
n8-65 (065C) Expert	Speed Fdbk Gain @ oV Suppression	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain of internal speed feedback detection suppression while the overvoltage suppression function is operating as a magnification value. Usually it is not necessary to change this parameter.	1.50 (0.00 - 10.00)

Adjust this parameter in these conditions:

- If there is resonance or hunting when you use the overvoltage suppression function, increase the setting value.
- If motor response is low when you use the overvoltage suppression function, decrease the setting value in 0.05-unit increments.

■ n8-66: Output Voltage Limit Filter Time

No. (Hex.)	Name	Description	Default (Range)
n8-66 (0235) Expert	Output Voltage Limit Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant for output voltage control. Usually it is not necessary to change this setting.	0.020 s (0.000 - 5.000)

■ n8-68: Output Voltage Limit Level 1

No. (Hex.)	Name	Description	Default (Range)
n8-68 (0237) Expert	Output Voltage Limit Level 1	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage tuning gain for the voltage limit suppression setting.	0.95 (0.50 - 1.50)

■ n8-69: Speed Observer Control P Gain

No. (Hex.)	Name	Description	Default (Range)
n8-69 (065D) Expert	Speed Observer Control P Gain	V/f OLV OLV/PM AOLV/PM EZOLV Usually it is not necessary to change this setting. Sets the Proportional gain that the drive uses for speed estimation.	1.00 (0.00 - 20.00)

■ n8-70: Speed Observer Control I Time

No. (Hex.)	Name	Description	Default (Range)
n8-70 (065E) Expert	Speed Observer Control I Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed estimator integral time constant. It is available when $n8-72 = 1$ [Speed Estimation Method Select = Method 2]. Usually it is not necessary to change this setting.	0.0 s (0.0 - 100.0)

■ n8-71: Speed Observer Control D Gain

No. (Hex.)	Name	Description	Default (Range)
n8-71 (065F) Expert	Speed Observer Control D Gain	V/f OLV OLV/PM AOLV/PM EZOLV Set the speed estimator differential gain. It is available when $n8-72 = 1$ [Speed Estimation Method Select = Method 2]. Usually it is not necessary to change this setting.	5.00 (0.00 - 50.00)

■ n8-72: Speed Estimation Method Select

No. (Hex.)	Name	Description	Default (Range)
n8-72 (0655) Expert	Speed Estimation Method Select	V/f OLV OLV/PM AOLV/PM EZOLV Selects the speed estimation method. Usually it is not necessary to change this setting.	1 (0, 1)

0 : Method 1

1 : Method 2

■ n8-73: Observer Mode Switch-Over Speed

No. (Hex.)	Name	Description	Default (Range)
n8-73 (0656) Expert	Observer Mode Switch-Over Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed level for pull-in current control at motor start as a percentage of $E1-06$ [Base Frequency]. Usually it is not necessary to change this setting.	10% (0 - 100)

■ n8-74: Light Load Iq Level

No. (Hex.)	Name	Description	Default (Range)
n8-74 (05C3) Expert	Light Load Iq Level	V/f OLV OLV/PM AOLV/PM EZOLV Set n8-48 [Pull-in/Light Load Id Current] to the percentage of load current (q-axis current) that you will apply, where E5-03 [Motor Rated Current (FLA)] = a setting value of 100%.	30% (0 - 255%)

Note:

- If $n8-74 > n8-75$ [Medium Load Iq Level (low)], the drive will detect oPE08 [Parameter Selection Error].
- The change is linear between $n8-74$ and $n8-75$ and the level of the pull-in current from $n8-48$ to $n8-78$ [Medium Load Id Current].

■ n8-75: Medium Load Iq Level (low)

No. (Hex.)	Name	Description	Default (Range)
n8-75 (05C4) Expert	Medium Load Iq Level (low)	V/f OLV OLV/PM AOLV/PM EZOLV Set n8-78 [Medium Load Id Current] to the percentage of load current (q-axis current) that you will apply, where E5-03 [Motor Rated Current (FLA)] = a setting value of 100%.	50% (0 - 255%)

Note:

- If $n8-74$ [Light Load Iq Level] $> n8-75$, the drive will detect oPE08 [Parameter Selection Error].
- The change is linear between $n8-74$ and $n8-75$ and the level of the pull-in current from $n8-48$ to $n8-78$ [Medium Load Id Current].

■ n8-76: Id Switching Filter Time

No. (Hex.)	Name	Description	Default (Range)
n8-76 (05CD) Expert	Id Switching Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the filter time constant for the d-axis current reference. Usually it is not necessary to change this setting.	200 ms (0 - 5000 ms)

■ n8-77: Heavy Load Iq Level

No. (Hex.)	Name	Description	Default (Range)
n8-77 (05CE) Expert	Heavy Load Iq Level	V/f OLV OLV/PM AOLV/PM EZOLV Set n8-49 [Heavy Load Id Current] to the percentage of load current (q-axis current) that you will apply, where E5-03 [Motor Rated Current (FLA)] = a setting value of 100%.	90% (0 - 255%)

Note:

The change is linear between $n8-75$ [Medium Load Iq Level (low)] and $n8-77$ and the level of the pull-in current from $n8-78$ [Medium Load Id Current] to $n8-49$ [Heavy Load Id Current].

■ n8-78: Medium Load Id Current

No. (Hex.)	Name	Description	Default (Range)
n8-78 (05F4) RUN Expert	Medium Load Id Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level of the pull-in current as a percentage, where E5-03 [PM Motor Rated Current (FLA)] = 100%.	0% (-100.0 - 200.0)

■ n8-79: Pull-in Current @ Deceleration

No. (Hex.)	Name	Description	Default (Range)
n8-79 (05FE)	Pull-in Current @ Deceleration	V/f OLV OLV/PM AOLV/PM EZOLV Sets the pull-in current that can flow during deceleration as a percentage of the E5-03 [PM Motor Rated Current (FLA)].	50% (0 - 200%)

If overcurrent occurs during deceleration, slowly decrease the setting in 5% increments.

Note:

When $n8-79 = 0$, the drive will use the value set in $n8-51$ [Pull-in Current @ Acceleration].

■ n8-84: Polarity Detection Current

No. (Hex.)	Name	Description	Default (Range)
n8-84 (02D3) Expert	Polarity Detection Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current that the drive uses to estimate the initial motor magnetic pole as a percentage where $E5-03 [PM \text{ Motor Rated Current (FLA)}] = 100\%$.	100% (0 - 150%)

⚠ WARNING Sudden Movement Hazard

Make sure that the polarity is correct before you send a Run command.

If the drive incorrectly detects the polarity, the drive can rotate in the direction opposite of the Run command and cause serious injury or death.

When you use a Yaskawa motor, check the motor nameplate for an "Si" value and set this parameter $\geq "Si \times 2"$. Consult the motor manufacturer for information about maximum setting values.

Find the Polarity of Magnetic Poles

When you start operation, the drive estimates the magnetic poles and finds the polarity of the magnetic poles.

Use *U6-57 [PolePolarityDeterVal]* to make sure that the magnetic pole estimate was correct.

When you do High Frequency Injection Auto-Tuning, the drive automatically sets *n8-84*.

■ n8-87: Output Voltage Limit Method

No. (Hex.)	Name	Description	Default (Range)
n8-87 (02DA)	Output Voltage Limit Method	V/f OLV OLV/PM AOLV/PM EZOLV Sets the method of output voltage limit. If there is vibration in the constant output range, set Feedforward Method. Usually it is not necessary to change this setting.	0 (0, 1)

0 : Feedback Method

1 : Feedforward Method

■ n8-88: Vout Limit Switching Level

No. (Hex.)	Name	Description	Default (Range)
n8-88 (02BD)	Vout Limit Switching Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the current level at which output voltage limit sequence selection occurs as a percentage where the motor rated current is 100%. Normally there is no need to change this setting.	400% (0 - 400%)

■ n8-89: Vout Limit Switching Hysteresis

No. (Hex.)	Name	Description	Default (Range)
n8-89 (02BE)	Vout Limit Switching Hysteresis	V/f OLV OLV/PM AOLV/PM EZOLV Sets the hysteresis width of the current level at which output voltage limit sequence selection occurs as a percentage where the motor rated current is 100%. Normally there is no need to change this setting.	3% (0 - 400%)

■ n8-90: Vout Limit Switching Speed

No. (Hex.)	Name	Description	Default (Range)
n8-90 (02BF)	Vout Limit Switching Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the speed level at which output voltage limit sequence selection occurs as a percentage where the maximum output frequency is 100%. Usually it is not necessary to change this setting.	200% (0 - 200%)

■ n8-91: Id Limit at Voltage Saturation

No. (Hex.)	Name	Description	Default (Range)
n8-91 (02F7)	Id Limit at Voltage Saturation	V/f OLV OLV/PM AOLV/PM EZOLV Sets the limit value of feedback output voltage limit Id operation. Enabled when $n8-87 = 0$ [Output Voltage Control Selection = Speed Feedback Form]. Usually it is not necessary to change this setting.	-50% (-200 - 0%)

■ n8-94: Flux Position Estimation Method

No. (Hex.)	Name	Description	Default (Range)
n8-94 (012D) Expert	Flux Position Estimation Method	V/f OLV OLV/PM AOLV/PM EZOLV Sets the criteria that the drive uses to find changes in speed or load. Usually it is not necessary to change this setting.	1 (0, 1)

0 : Softstarter

1 : Speed Feedback

Set $n8-57 = 1$ [HFI Overlap Selection = Enabled] to enable this parameter. Increases the stability when the speed or load suddenly change, for example with rapid acceleration/deceleration or impact loads.

■ n8-95: Flux Position Est Filter Time

No. (Hex.)	Name	Description	Default (Range)
n8-95 (012E) Expert	Flux Position Est Filter Time	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time constant of the filter used for the recognition criteria value for speed and load changes. Usually it is not necessary to change this setting.	30 ms (0 - 100 ms)

Note:

Enabled when $n8-94 = 1$ [Flux Position Estimation Method = Speed Feedback].

◆ nA: PM Motor Control Tuning

nA parameters make adjustments for controlling PM motors.

■ nA-01: Observer Calc Gain 3

No. (Hex.)	Name	Description	Default (Range)
nA-01 (3129) Expert	Observer Calc Gain 3	V/f OLV OLV/PM AOLV/PM EZOLV Sets the gain for speed estimation. Usually it is not necessary to change this setting.	30.0 (0.0 - 1000.0)

■ nA-04: Output Voltage Limit q-Axis Current Command Reference Switch Hysteresis

No. (Hex.)	Name	Description	Default (Range)
nA-04 (1BF5) Expert	Output Voltage Limit q-Axis Current Command Reference Switch Hysteresis	V/f OLV OLV/PM AOLV/PM EZOLV Sets the switch hysteresis of the q-axis current command referenced to the (-20% - 0%) d-axis current command to suppress shock at the output voltage limit. Sets the switch hysteresis of the q-axis current command as a percentage of motor rated current. Usually it is not necessary to change this parameter.	-10% (-20% - 0%)

■ nA-07: Drive Method Switching Speed

No. (Hex.)	Name	Description	Default (Range)
nA-07 (3170) Expert	Drive Method Switching Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the switching speed width level. Usually it is not necessary to change this setting.	0.0% (0.0 - 100.0)

■ nA-08: Drive Method Switching Width

No. (Hex.)	Name	Description	Default (Range)
nA-08 (3171) Expert	Drive Method Switching Width	V/f OLV OLV/PM AOLV/PM EZOLV Sets the switching speed width level. Usually it is not necessary to change this setting.	10.0 (1.0 - 100.0)

■ nA-09: Stop Condition Selection

No. (Hex.)	Name	Description	Default (Range)
nA-09 (3172) Expert	Stop Condition Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the criteria for determining stoppage. Usually it is not necessary to change this setting.	0 (0, 1)

0 : Output Frequency

1 : SFS Output Frequency

■ nA-10: Minimum Output Frequency Limit

No. (Hex.)	Name	Description	Default (Range)
nA-10 (3173) Expert	Minimum Output Frequency Limit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable or disable the minimum output frequency limit. When you enable this parameter, the drive sets the lower limit of <i>E1-09 [Minimum Output Frequency]</i> to the 5% of <i>E1-06 [Base Frequency]</i>. Usually you do not need to change it.	1 (0, 1)

0 : Disabled

1 : Enabled

■ nA-11: Output Voltage Limit Level 2

No. (Hex.)	Name	Description	Default (Range)
nA-11 (1BF8) Expert	Output Voltage Limit Level 2	V/f OLV OLV/PM AOLV/PM EZOLV Sets the voltage limit level for output voltage limit control. Usually it is not necessary to change this setting.	1.00 (0.50 - 1.50)

12.11 o: Keypad-Related Settings

o parameters set keypad functions.

Note:

You cannot use the optional LED keypad to set these parameters.

Table 12.55 Parameters You Cannot Set with the LED Keypad

No.	Name	No.	Name
o1-05	LCD Contrast Adjustment	o3-04	Select Backup/Restore Location
o1-24 to o1-35	Custom Monitor 1 to 12	o3-05	Select Items to Backup/Restore
o1-36	LCD Backlight Brightness	o3-06	Auto Parameter Backup Selection
o1-37	LCD Backlight ON/OFF Selection	o3-07	Auto Parameter Backup Interval
o1-38	LCD Backlight Off-Delay	o4-22	Time Format
o1-39	Show Initial Setup Screen	o4-23	Date Format
o1-40	Home Screen Display Selection	o4-24	bAT Detection Selection
o1-41 to o1-46	1st to 3rd Monitor Area Selections/Settings	o5-01	Log Start/Stop Selection
o1-47 to o1-51	Trend Plot 1 or 2 Scale Settings	o5-02	Log Sampling Interval
o1-55 to o1-56	Analog Gauge Area Selection/Setting	o5-03 to o5-12	Log Monitor Data 1 to 10
o2-27	bCE Detection Selection		

◆ o1: Keypad Display Selection

o1 parameters select the parameters shown on the initial keypad screen and to configure the parameter setting units and display units. These parameters also adjust the backlight and contrast of the LCD display.

■ Home Screen Display Format

o1-40 [Home Screen Display Selection] changes the display of the monitor shown on the Home screen. You can show numerical values or one of these three displays on the Home screen monitor:

A - Set *Ux-xx* [Monitors] to o1-24, o1-25, and o1-26.

C - Set display ranges to o1-42, o1-44, and o1-46.

B - Set display regions to o1-41, o1-43, and o1-45.

Figure 12.112 Bar Graph Display

A - Set *Ux-xx* [Monitors] to o1-24.

C - Set display ranges to o1-55.

B - Set display regions to o1-56.

Figure 12.113 Analog Gauge Display

A - Set $Ux-xx$ [Monitors] (Monitor 1) to $o1-24$.

B - Set $Ux-xx$ [Monitors] (Monitor 2) to $o1-25$.

C - Set the maximum value of Monitor 2 to $o1-50$.

D - Set the minimum value of Monitor 2 to $o1-49$.

E - Set the time scale to $o1-51$.

F - Set the minimum value of Monitor 1 to $o1-47$.

G - Set the maximum value of Monitor 1 to $o1-48$.

Figure 12.114 Trend Plot Display

■ o1-01: User Monitor Selection

No. (Hex.)	Name	Description	Default (Range)
o1-01 (0500) RUN	User Monitor Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the U monitor for the Drive Mode. This parameter is only available with an LED keypad.	106 (104 - 855)

When the drive is in Drive Mode, push  on the keypad to cycle through this data: frequency reference → rotational direction → output frequency → output current → $o1-01$ selection.

Set the $x-xx$ part of $Ux-xx$ that is shown in the fifth position in Drive Mode. For example, to show $U1-05$ [Motor Speed], set $o1-01 = 105$.

Note:

The monitors that you can select are different for different control methods.

■ o1-02: Monitor Selection at Power-up

No. (Hex.)	Name	Description	Default (Range)
o1-02 (0501) RUN	Monitor Selection at Power-up	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor item that the keypad screen shows after you energize the drive. Refer to "U: Monitors" for information about the monitor items that the keypad screen can show. This parameter is only available with an LED keypad.	1 (1 - 5)

1 : Frequency Reference (U1-01)

2 : Direction

3 : Output Frequency (U1-02)

4 : Output Current (U1-03)

5 : User Monitor (o1-01)

Shows the monitor item selected in $o1-01$ [User Monitor Selection].

■ o1-03: Frequency Display Unit Selection

No. (Hex.)	Name	Description	Default (Range)
o1-03 (0502)	Frequency Display Unit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the display units for the frequency reference and output frequency.	Determined by A1-02 (0 - 3)

Note:

- Select the setting unit of these parameters:
 –d1-01 to d1-17 [Reference 1 to 17]
 –U1-01 [Frequency Reference]
 –U1-02 [Output Frequency]
 –U1-05 [Motor Speed]
 –U1-16 [SFS Output Frequency]
 –U4-14 [PeakHold Output Freq]
- For monitor 2, the setting value is always 0 [Hz Unit].

0 : 0.01 Hz**1 : 0.01% (100% = E1-04)**

The maximum output frequency is 100%.

2 : min⁻¹ (r/min) units

The drive uses the maximum output frequency and number of motor poles to calculate this value automatically.

Note:

When you set *o1-03* = 2 [min⁻¹ (r/min) units], make sure that you set the number of motor poles in these parameters:

- E2-04 [Motor Pole Count]
- E4-04 [Motor 2 Motor Poles]
- E5-04 [PM Motor Pole Count]
- E9-08 [Number of Poles]

3 : User Units (o1-10 & o1-11)

Uses *o1-10* and *o1-11* to set the unit of measure. The value of parameter *o1-10* is the value when you remove the decimal point from the maximum output frequency. Parameter *o1-11* is to the number of digits after the decimal point in the maximum output frequency.

To display a maximum output frequency of 100.00, set parameters to these values:

- *o1-10* = 10000
- *o1-11* = 2 [User Units Decimal Position = 2 Dec (XXX.XX)]

■ o1-04: V/f Pattern Display Unit

No. (Hex.)	Name	Description	Default (Range)
o1-04 (0503)	V/f Pattern Display Unit	V/f OLV OLV/PM AOLV/PM EZOLV Sets the setting unit for parameters that set the V/f pattern frequency.	Determined by A1-02 (0, 1)

Note:

- Select the setting unit of these parameters:
 –E1-04 [Maximum Output Frequency]
 –E1-06 [Base Frequency]
 –E1-07 [Mid Point A Frequency]
 –E1-09 [Minimum Output Frequency]
 –E1-11 [Mid Point B Frequency]
 –E9-02 [Maximum Speed]
 –E9-04 [Base Frequency]
- For monitor 2, the setting value is always 0 [Hz Unit].

0 : Hz**1 : min⁻¹ (r/min) units**

When you set *o1-04* = 1, make sure that you set the number of motor poles in these parameters:

- E5-04 [PM Motor Pole Count]
- E9-08 [Motor Pole Count]

■ o1-05: LCD Contrast Adjustment

No. (Hex.)	Name	Description	Default (Range)
o1-05 (0504) RUN	LCD Contrast Adjustment	V/f OLV OLV/PM AOLV/PM EZOLV Sets the contrast of the LCD display on the keypad.	5 (0 - 10)

When you decrease the setting value, the contrast of the LCD display decreases. When you increase the setting value, the contrast increases.

■ o1-10: User Units Maximum Value

No. (Hex.)	Name	Description	Default (Range)
o1-10 (0520)	User Units Maximum Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value that the drive shows as the maximum output frequency.	Determined by o1-03 (1 - 60000)

To display a maximum output frequency of 100.00, set parameters to these values:

- $o1-10 = 10000$
- $o1-11 = 2$ [User Units Decimal Position = Two Decimal Places (XXX.XX)]

Note:

Set $o1-03 = 3$ [Frequency Display Unit Selection = User Units (o1-10 & o1-11)] before you set o1-10 and o1-11.

■ o1-11: User Units Decimal Position

No. (Hex.)	Name	Description	Default (Range)
o1-11 (0521)	User Units Decimal Position	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of decimal places for frequency reference and monitor values.	Determined by o1-03 (0 - 3)

0 : No Decimal Places (XXXXX)

1 : One Decimal Places (XXXX.X)

2 : Two Decimal Places (XXX.XX)

3 : Three Decimal Places (XX.XXX)

Note:

Set $o1-03 = 3$ [Frequency Display Unit Selection = User Units (o1-10 & o1-11)] before you set o1-10 [User Units Maximum Value] and o1-11.

■ o1-24 to o1-35: Custom Monitor 1 to 12

No. (Hex.)	Name	Description	Default (Range)
o1-24 to o1-35: (11AD - 11B8) RUN	Custom Monitor 1 to 12	V/f OLV OLV/PM AOLV/PM EZOLV Sets a maximum of 12 monitors as user monitors. This parameter is only available when using an LCD keypad.	o1-24: 101 o1-25: 102 o1-26: 103 o1-27 to o1-35: 0 (0, 101 - 999)

These parameters save the monitor items selected by the LCD keypad [Custom Monitor].

Note:

- You can show a maximum of three selected monitors on one LCD keypad screen.
 - When you select only one monitor, the text size of this monitor increases. For example, when *o1-25 to o1-35* = 0, the text size of the monitor saved in *o1-24* increases.
 - When you select two monitors, the text size of these monitors increase.
 - When you select four or more monitors, the fourth monitor and all additional monitors are shown on the next screens.
- Monitors selected with *o1-24 to o1-26* can be displayed as a bar graph, analog gauge, or trend plot.
 - Bar graph display: 3 monitors maximum
Select with *o1-24*, *o1-25*, and *o1-26*.
 - Analog gauge display: 1 monitor
Select with *o1-24*.
 - Trend plot display: 2 monitors
Select with *o1-24* and *o1-25*.
- You can only set parameters *o1-24 to o1-26* with analog output monitors.
- You can set all monitors to parameters *o1-27 to o1-35*.

■ o1-36: LCD Backlight Brightness

No. (Hex.)	Name	Description	Default (Range)
o1-36 (11B9) RUN	LCD Backlight Brightness	V/f OLV OLV/PM AOLV/PM EZOLV Sets the intensity of the LCD keypad backlight.	5 (1 - 5)

When you decrease the setting value, the intensity of the backlight decreases.

■ o1-37: LCD Backlight ON/OFF Selection

No. (Hex.)	Name	Description	Default (Range)
o1-37 (11BA) RUN	LCD Backlight ON/OFF Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the automatic shut off function for the LCD backlight.	1 (0, 1)

Note:

Use *o1-36* [LCD Backlight Brightness] to adjust the intensity of the LCD backlight.

0 : OFF

The backlight will automatically turn off after the time set in *o1-38* [LCD Backlight Off-Delay] is expired.

When the backlight is off, push a key on the keypad to temporarily turn the backlight on. After the backlight turns on, it will turn off automatically after the time set in *o1-38* is expired.

Note:

When the backlight is off, push a key on the keypad to temporarily turn the backlight on. Push any key to start keypad operation. Push  to turn the backlight on, then push  again to enter a Run command to the drive.

1 : ON

The backlight will always be ON.

■ o1-38: LCD Backlight Off-Delay

No. (Hex.)	Name	Description	Default (Range)
o1-38 (11BB) RUN	LCD Backlight Off-Delay	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time until the LCD backlight automatically turns off.	60 s (10 - 300 s)

When *o1-37* = 0 [LCD Backlight ON/OFF Selection = OFF], the backlight will automatically turn off after the time set in *o1-38* expires.

When the backlight is off, push a key on the keypad to temporarily turn the backlight on. After the backlight turns on, it will turn off automatically after the time set in *o1-38* is expired.

■ o1-39: Show Initial Setup Screen

No. (Hex.)	Name	Description	Default (Range)
o1-39 (11BC) RUN	Show Initial Setup Screen	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to show the LCD keypad initial setup screen each time you energize the drive. This parameter is only available with an LCD keypad.	1 (0, 1)

The initial setup screen shows a menu where you can select the display language, set the date, time, and other basic settings. When you set this parameter to 0, the drive will not show this screen each time you energize the drive.

0 : No

The drive will not show the initial setup display screen each time you energize the drive. The drive will show the Home screen.

1 : Yes

When you input the Run command before you energize the drive or when you turn on the Run command while the drive shows the initial setup screen, the drive will replace the initial setup screen with the Home screen.

■ o1-40: Home Screen Display Selection

No. (Hex.)	Name	Description	Default (Range)
o1-40 (11BD) RUN	Home Screen Display Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor display mode for the Home screen. This parameter is only available with an LCD keypad.	0 (0 - 3)

0 : Custom Monitor

1 : Bar Graph

2 : Analog Gauge

3 : Trend Plot

■ o1-41: 1st Monitor Area Selection

No. (Hex.)	Name	Description	Default (Range)
o1-41 (11C1) RUN	1st Monitor Area Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis value used to display the monitor set in o1-24 [Custom Monitor 1] as a bar graph. This parameter is only available with an LCD keypad.	0 (0 - 1)

0 : +/- Area (- o1-42 ~ o1-42)

1 : + Area (0 ~ o1-42)

■ o1-42: 1st Monitor Area Setting

No. (Hex.)	Name	Description	Default (Range)
o1-42 (11C2) RUN	1st Monitor Area Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis value used to display the monitor set in o1-24 [Custom Monitor 1] as a bar graph. This parameter is only available with an LCD keypad.	100.0% (0.0 - 100.0%)

■ o1-43: 2nd Monitor Area Selection

No. (Hex.)	Name	Description	Default (Range)
o1-43 (11C3) RUN	2nd Monitor Area Selection	V/f OLV OLV/PM AOLV/PM EZOLV Selects the horizontal range used to display the monitor set in o1-25 [Custom Monitor 2] as a bar graph. This parameter is only available with an LCD keypad.	0 (0 - 1)

0 : +/- Area (- o1-44 ~ o1-44)

1 : + Area (0 ~ o1-44)

■ o1-44: 2nd Monitor Area Setting

No. (Hex.)	Name	Description	Default (Range)
o1-44 (11C4) RUN	2nd Monitor Area Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis value used to display the monitor set in o1-25 [Custom Monitor 2] as a bar graph. This parameter is only available with an LCD keypad.	100.0% (0.0 - 100.0%)

■ o1-45: 3rd Monitor Area Selection

No. (Hex.)	Name	Description	Default (Range)
o1-45 (11C5) RUN	3rd Monitor Area Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis value used to display the monitor set in o1-26 [Custom Monitor 3] as a bar graph. This parameter is only available with an LCD keypad.	0 (0 - 1)

0 : +/- Area (- o1-46 ~ o1-46)

1 : + Area (0 ~ o1-46)

■ o1-46: 3rd Monitor Area Setting

No. (Hex.)	Name	Description	Default (Range)
o1-46 (11C6) RUN	3rd Monitor Area Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis value used to display the monitor set in o1-26 [Custom Monitor 3] as a bar graph. This parameter is only available with an LCD keypad.	100.0% (0.0 - 100.0%)

■ o1-47: Trend Plot 1 Scale Minimum Value

No. (Hex.)	Name	Description	Default (Range)
o1-47 (11C7) RUN	Trend Plot 1 Scale Minimum Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis minimum value used to display the monitor set in o1-24 [Custom Monitor 1] as a trend plot. This parameter is only available with an LCD keypad.	-100.0% (-300.0 - +299.9%)

Note:

Parameter o1-48 [Trend Plot 1 Scale Maximum Value] sets the upper limit. The upper limit is (o1-48 - 0.1)%.

■ o1-48: Trend Plot 1 Scale Maximum Value

No. (Hex.)	Name	Description	Default (Range)
o1-48 (11C8) RUN	Trend Plot 1 Scale Maximum Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum value for the vertical axis used to display the monitor that was set in o1-24 [Custom Monitor 1] as a trend plot. This parameter is only available with an LCD keypad.	100.0% (-299.9 - +300.0%)

Note:

Parameter o1-47 [Trend Plot 1 Scale Minimum Value] sets the lower limit. The lower limit is (o1-47 + 0.1)%.

■ o1-49: Trend Plot 2 Scale Minimum Value

No. (Hex.)	Name	Description	Default (Range)
o1-49 (11C9) RUN	Trend Plot 2 Scale Minimum Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the horizontal axis minimum value used to display the monitor set in o1-25 [Custom Monitor 2] as a trend plot. This parameter is only available with an LCD keypad.	-100.0% (-300.0 - +299.9%)

Note:

Parameter o1-50 [Trend Plot 2 Scale Maximum Value] sets the upper limit. The upper limit is (o1-50 - 0.1)%.

■ o1-50: Trend Plot 2 Scale Maximum Value

No. (Hex.)	Name	Description	Default (Range)
o1-50 (11CA) RUN	Trend Plot 2 Scale Maximum Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the maximum value for the vertical axis used to display the monitor that was set in o1-25 [Custom Monitor 2] as a trend plot. This parameter is only available with an LCD keypad.	100.0% (-299.9 - +300.0%)

Note:

Parameter o1-49 [Trend Plot 2 Scale Minimum Value] sets the lower limit. The lower limit is (o1-49 + 0.1)%.

■ o1-51: Trend Plot Time Scale Setting

No. (Hex.)	Name	Description	Default (Range)
o1-51 (11CB) RUN	Trend Plot Time Scale Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time scale (horizontal axis) to display the trend plot. When you change this setting, the drive automatically adjusts the data sampling time. This parameter is only available with an LCD keypad.	300 s (1 - 3600 s)

■ o1-55: Analog Gauge Area Selection

No. (Hex.)	Name	Description	Default (Range)
o1-55 (11EE) RUN	Analog Gauge Area Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the range used to display the monitor set in o1-24 [Custom Monitor 1] as an analog gauge. This parameter is only available with an LCD keypad.	1 (0, 1)

0 : +/- Area (- o1-56 ~ o1-56)

1 : + Area (0 ~ o1-56)

■ o1-56: Analog Gauge Area Setting

No. (Hex.)	Name	Description	Default (Range)
o1-56 (11EF) RUN	Analog Gauge Area Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value used to display the monitor set in o1-24 [Custom Monitor 1] as an analog meter. This parameter is only available with an LCD keypad.	100.0% (0.0 - 100.0%)

■ o1-58: Motor Power Unit Selection

No. (Hex.)	Name	Description	Default (Range)
o1-58 (3125)	Motor Power Unit Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the setting unit for parameters that set the motor rated power.	1 (0, 1)

The drive shows these parameter values in the set units:

- E2-11 [Motor Rated Power]
- E4-11 [Motor 2 Rated Power]
- E5-02 [PM Motor Rated Power]
- E9-07 [Motor Rated Power]
- T1-02 [Motor Rated Power]
- T2-04 [PM Motor Rated Power]
- T4-08 [Motor Rated Capacity]

0 : kW

Shows the motor output in kW units.

1 : HP

Shows the motor output in HP units.

Note:

When you use an LED keypad, use o1-58 to make sure that the units for the monitors and parameters are correct.

o1-88: Connected LED keypad selection

No. (Hex.)	Name	Description	Default (Range)
o1-88 (31C2) RUN	Connected LED keypad Selection	V/f OLV OLV/PM AOLV/PM EZOLV Set the type of LED keypad you are using.	0 (0, 1)

0 : Standard LED Keypad

1 : Optional LED Keypad

Indicator	Half-size LED keypad	Indicator	LED Keypad (optional)
LO/RE LED	• Illuminated: The keypad controls the Run command (LOCAL Mode). • OFF: The control circuit terminal or serial transmission device controls the Run command (REMOTE Mode).	LOCAL/REMOTE indicator	• Illuminated: The keypad controls the Run command (LOCAL Mode). • OFF: The control circuit terminal or serial transmission device controls the Run command (REMOTE Mode).
ALM/ERR LED	• Illuminated: The drive detects a fault • Flashing: – Alarm – Operation Errors – An Auto-Tuning error • OFF: There are no drive faults or alarms.	ALM Indicator	• Illuminated: The drive detects a fault • Flashing: – Alarm – Operation Errors – An Auto-Tuning error • OFF: There are no drive faults or alarms.
READY LED	• Illuminated: The drive is operating or is ready for operation. • Flashing: The drive is in <i>STo</i> [Safe Torque OFF] condition. • Flashing quickly: The voltage of the main circuit power supply is not in the drive nameplate specifications, and the external 24 V power supply is providing the only power to the drive. • OFF: – The drive detects a fault. – There is no fault and the drive received a Run command, but the drive cannot run. For example, in Programming Mode.	-	• Illuminated: Can be substituted by lighting of DRV indicator. • Flashing: Can be substituted by ALM indicator and keypad display. • Flashing quickly: Cannot be substituted.
RUN LED	• Illuminated: The drive is in normal operation. • Flashing: – The drive is decelerating to stop. – The drive received a Run command with a frequency reference of 0 Hz, but the drive is not set for zero speed control. • Flashing quickly: – The drive received a Run command from the MFDI terminals and is switching to REMOTE Mode while the drive is in LOCAL Mode. – The drive received a Run command from the MFDI terminals when the drive is not in Drive Mode. – The drive received a Fast Stop command. – The safety function shut off the drive output. – You pushed [STOP key] on the keypad while the drive was operating in REMOTE Mode. – The drive is energized with an active Run command and <i>b1-17</i> = 0 [Run Command at Power Up = Disregard Existing RUN Command]. • OFF: The drive is stopped.	RUN indicator	• Illuminated: The drive is in normal operation. • Flashing: – The drive is decelerating to stop. – The drive received a Run command with a frequency reference of 0 Hz, but the drive is not set for zero speed control. • Flashing quickly: – The drive received a Run command from the MFDI terminals and is switching to REMOTE Mode while the drive is in LOCAL Mode. – The drive received a Run command from the MFDI terminals when the drive is not in Drive Mode. – The drive received a Fast Stop command. – The safety function shut off the drive output. – You pushed [STOP key] on the keypad while the drive was operating in REMOTE Mode. – The drive is energized with an active Run command and <i>b1-17</i> = 0 [Run Command at Power Up = Disregard Existing RUN Command]. • OFF: The drive is stopped.
REV LED	• Illuminated: The drive received a Reverse run command. • OFF: The drive received a Reverse run command.	REV indicator	• Illuminated: The drive received a Reverse run command. • OFF: The drive received a Reverse run command.
DWEZ LED	• Illuminated: The drive is in DriveWorksEZ operation. • OFF: The drive is in DriveWorksEZ operation.	-	Illuminated: Can be substituted by flashing of DRV indicator.
-	• Illuminated: Can be substituted by lighting of Ready indicator. • Flashing: Can be substituted by lighting of DWEZ LED.	DRV LED	• Illuminated: The drive is in Drive Mode. • Flashing: When you are using DriveWorksEZ Note: Refer to the DriveWorksEZ manual for details. • OFF: When the drive is in Programming Mode

◆ o2: Keypad Operation

■ o2-01: LO/RE Key Function Selection

No. (Hex.)	Name	Description	Default (Range)
o2-01 (0505)	LO/RE Key Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that lets you use  to switch between LOCAL and REMOTE Modes.	1 (0, 1)

0 : Disabled

You cannot use  to switch between LOCAL and REMOTE Modes.

1 : Enabled

You can use  to switch between LOCAL and REMOTE Modes when the drive is stopped. When LOCAL Mode is selected,  on the keypad will come on.

⚠ WARNING Sudden Movement Hazard

If you change the control source when **b1-07 = 1 [LOCAL/REMOTE Run Selection = Accept Existing RUN Command]**, the drive can start suddenly. Before you change the control source, remove all personnel from the area around the drive, motor, and load. Sudden starts can cause serious injury or death.

⚠ WARNING Sudden Movement Hazard

Fully examine all mechanical and electrical connections before you change **o2-01 [LO/RE Key Function Selection]** or **b1-07 [LOCAL/REMOTE Run Selection]**. Sudden starts can cause serious injury or death. If **b1-07 = 1 [Accept Existing RUN Command]** and there is an active Run command when you switch from LOCAL to REMOTE Mode, the drive can start suddenly.

Table 12.56 Function Settings with o2-01 and b1-07

 Function Selection	LOCAL/REMOTE Run Selection	Switching from LOCAL Mode to REMOTE Mode	Switching from REMOTE Mode to LOCAL Mode
o2-01 = 0 [Disabled]	b1-07 = 0 [Disregard Existing RUN Command]	The drive will not switch modes.	The drive will not switch modes.
	b1-07 = 1 [Accept Existing RUN Command]		
o2-01 = 1 [Enabled]	b1-07 = 0 [Disregard Existing RUN Command]	The drive will not start operating although the Run command is active. When you set Run command to active again, the drive will start to run.	The drive cannot operate because the Run command is not enabled.
	b1-07 = 1 [Accept Existing RUN Command]	When the Run command is active, the drive will start to run immediately when the mode switches from LOCAL to REMOTE.	The drive cannot operate because the Run command is not enabled.

■ o2-02: STOP Key Function Selection

No. (Hex.)	Name	Description	Default (Setting Range)
o2-02 (0506)	STOP Key Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to use  on the keypad to stop the drive when the Run command source for the drive is REMOTE (external) and not assigned to the keypad.	1 (0, 1)

0 : Disabled

1 : Enabled

 stays enabled when the Run command source has not been assigned to the keypad.

To start the drive again after you push  to stop operation, turn the external Run command OFF and ON again.

■ o2-03: User Parameter Default Value

No. (Hex.)	Name	Description	Default (Range)
o2-03 (0507)	User Parameter Default Value	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to keep the settings of changed parameters as user parameter defaults to use during initialization.	0 (0 - 2)

When you set $o2-03 = 1$ [*Set defaults*], the drive saves changed parameter settings as user parameter setting values in a part of the memory that is isolated from drive parameters.

When you set $A1-03 = 1110$ [*Initialize Parameters = User Initialization*] to initialize the drive, the drive resets the internal parameter setting values to those user parameter setting values.

0 : No change

1 : Set defaults

Saves changed parameter setting values as user default settings.

Set $o2-03 = 1$ then push  to save the user parameter setting values. After the drive saves the setting value, $o2-03$ automatically resets to 0.

2 : Clear all

Deletes all of the saved user parameter setting values.

Set $o2-03 = 2$ then push  to clear the user parameter setting values. The drive will automatically reset $o2-03$ to 0. If you delete the user parameter setting values, you cannot set $A1-03 = 1110$ to initialize parameters.

■ o2-04: Drive Model (KVA) Selection

No. (Hex.)	Name	Description	Default (Setting Range)
o2-04 (0508)	Drive Model (KVA) Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the Drive Model code. Set this parameter after replacing the control board.	Determined by the drive (-)

NOTICE

Set $o2-04$ [*Drive Model (KVA) Selection*] correctly.

If you set this parameter incorrectly, it will decrease drive performance, cause the protection function to operate incorrectly, and cause damage to the drive.

Note:

When the setting value of $o2-04$ changes, related parameter setting values also change. Refer to [Defaults by Drive Model and Duty Rating ND/HD on page 453](#) for more information.

Table 12.57 lists the relation between $o2-04$ setting values and drive models.

Table 12.57 Drive Models and o2-04 Settings

Drive Model	o2-04 Setting	Drive Model	o2-04 Setting
B001	30	2010	65
B002	31	2012	66
B004	32	2021	68
B006	33	2030	6A
B010	34	2042	6B
B012	35	2056	6D
B018	37	2070	6E
2001	60	2082	6F
2002	61	4001	91
2004	62	4002	92
2006	63	4004	93

Drive Model	o2-04 Setting
4005	94
4007	95
4009	96
4012	97
4018	99

Drive Model	o2-04 Setting
4023	9A
4031	19C
4038	19D
4044	9E
4060	19F

■ o2-05: Home Mode Freq Ref Entry Mode

No. (Hex.)	Name	Description	Default (Setting Range)
o2-05 (0509)	Home Mode Freq Ref Entry Mode	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that makes it necessary to push  to use the keypad to change the frequency reference value while in Drive Mode.	0 (0, 1)

0 : ENTER Key Required

You must push  to use the keypad to change the frequency reference value.

1 : Immediate / MOP-style

The frequency reference changes when you enter it with the keypad. This then changes the output frequency. It is not necessary to push . The drive keeps the frequency reference for 5 seconds after you use  and  on the keypad to change the frequency reference value.

■ o2-06: Keypad Disconnect Detection

No. (Hex.)	Name	Description	Default (Range)
o2-06 (050A)	Keypad Disconnect Detection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that stops the drive if you disconnect the keypad connection cable from the drive or if you damage the cable while the keypad is the Run command source.	1 (0, 1)

This parameter continues to operate if the keypad installed to the drive becomes disconnected.

This parameter is enabled in these conditions:

- When $b1-02 = 0$ [Run Command Selection 1 = Keypad] or $b1-16 = 0$ [Run Command Selection 2 = Keypad]
- In LOCAL Mode

0 : Disabled

The drive continues operation when it detects a keypad disconnection.

1 : Enabled

The drive stops operation, detects *oPr* [Keypad Connection Fault], and the motor coasts to stop when the drive detects a keypad disconnection.

■ o2-07: Keypad RUN Direction @ Power-up

No. (Hex.)	Name	Description	Default (Range)
o2-07 (0527)	Keypad RUN Direction @ Power-up	V/f OLV OLV/PM AOLV/PM EZOLV Sets the direction of motor rotation when the drive is energized and the keypad is the Run command source.	0 (0, 1)

This parameter is enabled in these conditions:

- When $b1-02 = 0$ [Run Command Selection 1 = Keypad] or $b1-16 = 0$ [Run Command Selection 2 = Keypad]
- In LOCAL Mode

0 : Forward

1 : Reverse

■ o2-09: Reserved

No. (Hex.)	Name	Description	Default (Range)
o2-09 (050D)	Reserved	-	-

■ o2-19: Parameter Write during Uv

No. (Hex.)	Name	Description	Default (Range)
o2-19 (061F) Expert	Parameter Write during Uv	V/f OLV OLV/PM AOLV/PM EZOLV Lets you change parameters during <i>Uv</i> [Undervoltage].	0 (0, 1)

0 : Disabled

1 : Enabled

■ o2-27: bCE Detection Selection

No. (Hex.)	Name	Description	Default (Range)
o2-27 (1565)	bCE Detection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets drive operation if the Bluetooth device is disconnected when you operate the drive in Bluetooth Mode.	3 (0 - 4)

0 : Ramp to Stop

1 : Coast to Stop

2 : Fast Stop (Use C1-09)

3 : Alarm Only

4 : No Alarm Display

◆ o3: Copy Function

o3 parameters set the operation of the parameter backup function.

■ o3-01: Copy Keypad Function Selection

No. (Hex.)	Name	Description	Default (Range)
o3-01 (0515)	Copy Keypad Function Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that saves and copies drive parameters to a different drive with the keypad.	0 (0 - 4)

0 : Copy Select

1 : Backup (drive → keypad)

The parameter setting values are read from the drive and saved in the keypad.

2 : Restore (keypad → drive)

Copies the parameter setting values saved in the keypad to a different drive.

3 : Verify (check for mismatch)

Makes sure that the parameter setting values in the drive agree with the parameters saved in the keypad.

4 : Erase (backup data of keypad)

Deletes the parameter setting values saved in the keypad.

■ o3-02: Copy Allowed Selection

No. (Hex.)	Name	Description	Default (Range)
o3-02 (0516)	Copy Allowed Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the copy function when <i>o3-01</i> = 1 [<i>Copy Keypad Function Selection</i> = Backup (drive → keypad)].	0 (0, 1)

Note:

When you select [Parameter Backup] on the keypad menu screen to do the backup function, the drive automatically sets *o3-02* = 1.

0 : Disabled

1 : Enabled

■ o3-04: Select Backup/Restore Location

No. (Hex.)	Name	Description	Default (Range)
o3-04 (0B3E)	Select Backup/Restore Location	V/f OLV OLV/PM AOLV/PM EZOLV Sets the storage location for drive parameters when you back up and restore parameters. This parameter is only available when using an LCD keypad.	0 (0 - 3)

You can use the LCD keypad to make a maximum of 4 parameter backup sets.

0 : Memory Location 1

1 : Memory Location 2

2 : Memory Location 3

3 : Memory Location 4

■ o3-05: Select Items to Backup/Restore

No. (Hex.)	Name	Description	Default (Range)
o3-05 (0BDA)	Select Items to Backup/Restore	V/f OLV OLV/PM AOLV/PM EZOLV Sets which parameters are backed up, restored, and referenced. This parameter is only available when using an LCD keypad.	1 (0, 1)

0 : Standard Parameters

1 : Standard + DWEZ Parameters

Note:

- Parameters *qx-xx* [*DriveWorksEZ Parameters*] and *rx-xx* [*DriveWorksEZ Connections*] show when *A1-07* = 1 or 2 [*DriveWorksEZ Function Selection* = DWEZ Enabled or Enabled/Disabled wDigital Input].
- The password for DriveWorksEZ PC software is necessary to back up *qx-xx* and *rx-xx*. If you enter an incorrect password, the drive detects *PWEr* [*DWEZ Password Mismatch*].

■ o3-06: Auto Parameter Backup Selection

No. (Hex.)	Name	Description	Default (Range)
o3-06 (0BDE)	Auto Parameter Backup Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function that automatically backs up parameters. This parameter is only available when using an LCD keypad.	1 (0, 1)

When you connect the drive and keypad, parameters set to the drive are automatically backed up to the keypad as specified by the setting of parameters *o3-06* and *o3-07*.

0 : Disabled

1 : Enabled

Note:

When you replace the LCD keypad then energize the drive, the keypad shows the restore operation screen automatically to restore the drive configuration with the parameters backed up to the LCD keypad. If you connect an LCD keypad that does not have parameter backup data, the keypad will not show the restore operation screen.

■ o3-07: Auto Parameter Backup Interval

No. (Hex.)	Name	Description	Default (Range)
o3-07 (0BDF)	Auto Parameter Backup Interval	V/f OLV OLV/PM AOLV/PM EZOLV Sets the interval at which the automatic parameter backup function saves parameters from the drive to the keypad.	1 (0 - 3)

The drive saves parameter settings to the keypad at these times:

1. After you energize the drive and the auto backup period passes.
2. When you use ROM enter or the keypad to change parameters, the drive saves those changes in the drive, waits for the auto backup period to pass, then saves those parameters in the keypad.

Note:

The drive can write data to the keypad a maximum of 100,000 times. If you write data to the keypad more than 100,000 times, you must replace the keypad.

0 : Every 10 minutes

1 : Every 30 minutes

2 : Every 60 minutes

3 : Every 12 hours

◆ o4: Maintenance Mon Settings

o4 parameters set the expected service life to help you know when to replace parts. The drive will show an alarm to tell you when the replacement part interval is near.

■ o4-01: Elapsed Operating Time Setting

No. (Hex.)	Name	Description	Default (Range)
o4-01 (050B)	Elapsed Operating Time Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the initial value of the cumulative drive operation time in 10-hour units.	0 h (0 - 9999 h)

When you select *o4-01* on the keypad, it will show the current value of *U4-01* in units of 10 hours (h). When you change the setting of *o4-01* through the monitor, the *U4-01* count starts again as specified by the setting of *o4-01*.

Note:

Set this parameter in 10-hour (h) units. When *o4-01* = 30, *U4-01* [Cumulative Ope Time] = 300 h.

■ o4-02: Elapsed Operating Time Selection

No. (Hex.)	Name	Description	Default (Range)
o4-02 (050C)	Elapsed Operating Time Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the condition that counts the cumulative operation time.	0 (0, 1)

0 : U4-01 Shows Total Power-up Time

Counts the time from when the drive is energized to when it is de-energized.

1 : U4-01 Shows Total RUN Time

Counts the time that the drive outputs voltage.

■ o4-03: Fan Operation Time Setting

No. (Hex.)	Name	Description	Default (Range)
o4-03 (050E)	Fan Operation Time Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the value from which to start the cumulative drive cooling fan operation time in 10-hour units.	0 h (0 - 9999 h)

Use monitor *U4-03 [Cooling Fan Ope Time]* to view the total operation time of the cooling fan. When you replace a cooling fan, set *o4-03 = 0* to reset *U4-03*. Select *o4-03* on the keypad to show the current value of *U4-03* in 10-hour (h) units. If you use the monitor to change *o4-03*, the recount of *U4-03* starts with the *o4-03* setting.

Note:

The drive sets *o4-03* in 10-hour (h) units. When *o4-03 = 30*, *U4-03 [Cooling Fan Ope Time]* will show "300 h".

■ o4-05: Capacitor Maintenance Setting

No. (Hex.)	Name	Description	Default (Range)
o4-05 (051D)	Capacitor Maintenance Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the <i>U4-05 [CapacitorMaintenance]</i> monitor value.	0% (0 - 150%)

When you replace a drive, set *o4-05 = 0* to reset *U4-05*. When the *o4-05* setting changes, the count of *U4-05* starts again as specified by the setting of *o4-05*. After you complete the configuration, *o4-05* automatically resets to 0.

Note:

The maintenance period changes for different operating environments.

■ o4-07: Softcharge Relay Maintenance Set

No. (Hex.)	Name	Description	Default (Range)
o4-07 (0523)	Softcharge Relay Maintenance Set	V/f OLV OLV/PM AOLV/PM EZOLV Sets the <i>U4-06 [PreChargeRelayMainte]</i> monitor value.	0% (0 - 150%)

When you replace a drive, set *o4-07 = 0* to reset *U4-06*. When the *o4-07* setting changes, the count of *U4-06* starts again as specified by the setting of *o4-07*. After you complete the configuration, *o4-07* automatically resets to 0.

Note:

The maintenance period changes for different operating environments.

■ o4-09: IGBT Maintenance Setting

No. (Hex.)	Name	Description	Default (Range)
o4-09 (0525)	IGBT Maintenance Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the <i>U4-07 [IGBT Maintenance]</i> monitor value.	0% (0 - 150%)

When you replace a drive, set *o4-09 = 0* to reset *U4-07*. When the *o4-09* setting changes, the count of *U4-07* starts again as specified by the setting of *o4-09*. After you complete the configuration, *o4-09* automatically resets to 0.

Note:

The maintenance period changes for different operating environments.

■ o4-11: Fault Trace/History Init (U2/U3)

No. (Hex.)	Name	Description	Default (Range)
o4-11 (0510)	Fault Trace/History Init (U2/U3)	V/f OLV OLV/PM AOLV/PM EZOLV Resets the records of Monitors <i>U2-xx [Fault Trace]</i> and <i>U3-xx [Fault History]</i> .	0 (0, 1)

Note:

When you initialize the drive with *A1-03 [Initialize Parameters]*, the drive will not reset the records for *U2-xx* and *U3-xx*.

0 : Disabled

Keeps the records of Monitors *U2-xx* and *U3-xx*.

1 : Enabled

Resets the records for Monitors *U2-xx* and *U3-xx*. After the reset, the drive automatically resets *o4-11* to 0.

■ o4-12: kWh Monitor Initialization

No. (Hex.)	Name	Description	Default (Range)
o4-12 (0512)	kWh Monitor Initialization	V/f OLV OLV/PM AOLV/PM EZOLV Resets the monitor values for <i>U4-10 [kWh, Lower 4 Digits]</i> and <i>U4-11 [kWh, Upper 5 Digits]</i> .	0 (0, 1)

Note:

When you initialize the drive with *A1-03 [Initialize Parameters]*, the drive will not reset *U4-10* and *U4-11*.

0 : No Reset

Keeps the monitor values for *U4-10* and *U4-11*.

1 : Reset

Resets the values of *U4-10* and *U4-11*. After the reset, the drive automatically resets *o4-12* to 0.

■ o4-13: RUN Command Counter @ Initialize

No. (Hex.)	Name	Description	Default (Range)
o4-13 (0528)	RUN Command Counter @ Initialize	V/f OLV OLV/PM AOLV/PM EZOLV Resets the monitor values for <i>U4-02 [Num of Run Commands]</i> , <i>U4-24 [Number of Runs (Low)]</i> , and <i>U4-25 [Number of Runs (High)]</i> .	0 (0, 1)

0 : No Reset

Keeps the monitor values for *U4-02*, *U4-24*, and *U4-25*.

1 : Reset

Resets the values of *U4-02*, *U4-24*, and *U4-25*. After the reset, the drive automatically resets *o4-13* to 0.

■ o4-22: Time Format

No. (Hex.)	Name	Description	Default (Range)
o4-22 (154F) RUN	Time Format	V/f OLV OLV/PM AOLV/PM EZOLV Sets the time display format. This parameter is only available when using an LCD keypad.	1 (0 - 2)

Sets the display of the time shown in the upper-left of the LCD keypad screen.

0 : 24 Hour Clock

1 : 12 Hour Clock

2 : 12 Hour JP Clock

■ o4-23: Date Format

No. (Hex.)	Name	Description	Default (Range)
o4-23 (1550) RUN	Date Format	V/f OLV OLV/PM AOLV/PM EZOLV Sets the date display format. This parameter is only available when using an LCD keypad.	2 (0 - 2)

Sets the date format that the drive uses for the fault history and other records.

0 : YYYY/MM/DD

1 : DD/MM/YYYY

2 : MM/DD/YYYY

■ o4-24: bAT Detection Selection

No. (Hex.)	Name	Description	Default (Range)
o4-24 (310F) RUN	bAT Detection Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the operation when the drive detects <i>bAT</i> [Keypad Battery Low Voltage] and <i>TiM</i> [Keypad Time Not Set]. This parameter is only available when you use an LCD keypad.	0 (0 - 2)

0 : Disabled

The drive will not detect *bAT* or *TiM*.

1 : Enable (Alarm Detected)

The keypad shows *bAT* or *TiM* and the drive continues operation. The output terminal set to *Alarm* [H2-01 to H2-03 = 10] activates.

2 : Enable (Fault Detected)

The output turns off and the motor coasts to stop. The output terminal set for *Fault* [H2-01 to H2-03 = E] activates.

◆ o5: Log Function

The data log function saves drive status information as a CSV file in the microSD memory card in the keypad. Monitors *Ux-xx* are the source of data log information.

There are two types of data log functions:

- Long-term data log: Saves data continuously over an extended time period.
- Short-term data log: Saves data over a set length of time before and after the drive detects a trigger event with a short sampling cycle.

You can record a maximum of 10 monitors for long-term data logs and a maximum of four monitors for short-term data logs.

Table 12.58 shows the keypads that support the short-term data log function.

Note:

- The short-term data log function is available in drive software versions PRG: 01034 and later.
- The “PRG” column on the nameplate on the right side of the drive identifies the software version. You can also use *U1-25* [SoftwareNumber Flash] to identify the software version.

Table 12.58 Compatible Keypads with Short-term Data Log Function

Keypad	Version ^[*]
LCD Keypad (Model: JVOP-KPLCA04xxx)	REV: H or later
Bluetooth LCD Keypad (Model: JVOP-KPLCC04xxx)	REV: H or later

*1 Refer to “REV” on the keypad nameplate for the keypad version.

Change the LCD keypad screen from the main menu to the Diagnostic Tools screen and select the data log function. Set the number of the monitor to record and the sampling time, then start to record the data log.

Table 12.59 Setting Parameters for Data Log Items

No.	Name	Default	Data Log Monitors
o5-03	Log Monitor Data 1	101	U1-01 [Frequency Reference]
o5-04	Log Monitor Data 2	102	U1-02 [Output Frequency]
o5-05	Log Monitor Data 3	103	U1-03 [Output Current]
o5-06	Log Monitor Data 4	107	U1-07 [DC Bus Voltage]
o5-07	Log Monitor Data 5	108	U1-08 [Output Power]
o5-08	Log Monitor Data 6	A1-02 = 0, 5: 000 A1-02 ≠ 0, 5: 105	A1-02 = 0, 5: Not selected A1-02 ≠ 0, 5: U1-05
o5-09	Log Monitor Data 7	110	U1-10
o5-10	Log Monitor Data 8	112	U1-12

No.	Name	Default	Data Log Monitors
<i>o5-11</i>	Log Monitor Data 9	000	Not selected
<i>o5-12</i>	Log Monitor Data 10	000	Not selected

Note:

- *o5-xx* is only available when you use an LCD keypad.
- Do not de-energize the drive or disconnect the keypad from the drive during log transfer communication. A loss of connection can cause the log function to fail after you restore power or connect the keypad.
- You can use a microSDHC card that has a maximum of 32 GB capacity.
- For a short-term data log, the drive enables parameters *o5-03* [Log Monitor Data 1] to *o5-06* [Log Monitor Data 4] .

■ Log File Specifications

Item	Specification
File storage location	A folder called [Log_File] is created in the root directory of the microSD card.
Filename	• Long-term data log: GLOG0xxx.csv • Short-term data log: SLOG0xxx.csv Note: [xxx] identifies a 3-digit decimal number
Maximum number of files	Long-term data log: 999 (GLOG0001.csv to GLOG0999.csv) Short-term data log: 999 (SLOG0001.csv to SLOG0999.csv)
Character code	ASCII code
Line break code	<CR><LF>
Separating character	[,] (Commas)
Header rows	First Row: Drive information including the drive model, software version, control method, and sampling time Second Row: Log data information including the monitor number, number decimal points, and unit code

■ Log File Configuration

The [Log_Files] folder is created in the root directory of the microSD memory card. This is where the log data is stored as CSV files. Log data files are created in this configuration. The number of rows changes when the number of selected monitors change.

First Row	Drive information
Second Row	Log data information
Third Row	Log data 1
:	Log data 2
:	Log data 3
:	:
Last Row	Log data n

First Row: Drive Information

This example shows the data text strings and data generated for the first row of log data.

Example of generated data: 00,0012,160107111230,GA501,VSVA02010,2,62,1000,000001

No.	Item	Number of Characters	Example	Description
1	Attribute	2	00	[00] shows that the record is a drive information record.
2	File number	4	0012	Long-term data log: Log data file name Shows the [xxx] part (a 3-digit number) of the [GLOG0xxx.csv] filename Short-term data log: Log data file name Shows the [xxx] part (a 3-digit number) of the [SLOG0xxx.csv] filename + 1000
3	Time stamp ^{*1}	12	160107111230	Date file was generated (YYMMDDHHMMSS) • Date: 20YY/MM/DD • Time in 24-hour format: HH:MM:SS Example data of [160107111230]: 11:12:30 on January 7, 2016

12.11 o: Keypad-Related Settings

No.	Item	Number of Characters	Example	Description
4	Model	5	GA501	Drive model information
5	Software number	9	VSVA02010	Drive software number
6	Control Method Selection	1	2	Setting value (Hex.) of <i>A1-02 [Control Method Selection]</i>
7	Drive capacity	2	62	Setting value (Hex.) of <i>o2-04 [Drive Model (KVA) Selection]</i>
8	Sampling time	5 (Maximum)	1000	Setting value (Dec.) of <i>o5-02 [Log Sampling Interval]</i> Unit: ms
9	Log data type *2	1	1	1: Short-term data log (trend log disabled) 2: Short-term log for short-term data log (trend log enabled) 3: Trend log for short-term data log (trend log enabled)
10	Trend log sampling cycle *2	5 (Maximum)	1000	Sampling cycle (Dec.) selected by <i>o5-21 [Trend Log Sampling Time Selection]</i> Unit: ms
11	Trigger type *2	1	1	Setting value (Dec.) of <i>o5-15 [Trigger Type Selection]</i>
12	Digital trigger target *2	2 (Maximum)	E	Setting value (Hex.) of <i>o5-16 [Digital Trigger Object]</i>
13	Analog trigger target *2	3	102	Setting value (Dec.) of <i>o5-17 [Analog Trigger Object]</i>
14	Analog trigger level *2	6 (Maximum)	50.0	Setting value (Dec.) of <i>o5-18 [Analog Trigger Level]</i> Unit: %
15	Trigger condition *2	1	1	Setting value (Dec.) of <i>o5-19 [Trigger Condition]</i>
16	Pre-trigger *2	3 (Maximum)	50	Setting value (Dec.) of <i>o5-20 [Pre-Trigger Setting]</i> Unit: %
17	Offset between data *2	6 (Maximum)	5020	Time offset (Dec.) between the trend log and short-term log for short-term data log (trend log enabled) Unit: ms
18	Row number	6	000001	Row number (Hex.) in the data log file

*1 If you do not set the time in the keypad, the text string of [000000000000] is generated to show the time.

*2 The drive generates these items for a short-term data log only.

Second Row: Log Data Information

This example shows the data text strings and data generated for the second row of log data.

Example of generated data:

01,0012,160107111230,0101,0201,0102,0201,0103,0206,0107,0005,0108,0209,0000,0000,0000,0000,0000,0
000,0000,0000,0000,0000,0000,0000,0000,0000,000002

No.	Item	Number of Characters	Description
1	Attribute	2	[01] shows that the record is a log data information record.
2	File number	4	Long-term data log: Shows the [xxx] part (a 3-digit number) of the [GLOG0xxx.csv] filename. Short-term data log: Shows the [xxx] part (a 3-digit number) of the [SLOG0xxx.csv] filename + 1000.
3	Time stamp	12	Date file was generated (YYMMDDHHMMSS)
4	Monitor Number 1 *1	4	Monitor number selected by <i>o5-03 [Log Monitor Data 1]</i> Example: 0101 (Dec.) for <i>U1-01</i>
5	Monitor Unit 1 *2	4	Unit code and number of decimal places used for the monitor selected with <i>o5-03</i> Example when <i>U1-01 = 30.00 Hz</i> : Number of decimal places = 2, Hz unit code = 01, monitor unit 1 = 0201 (Hex.)
6	Monitor number 2	4	Monitor number (Dec.) set to <i>o5-04 [Log Monitor Data 2]</i>
7	Monitor Unit 2	4	Unit code and number of decimal places used for the monitor selected with <i>o5-04</i>
:	:	:	:
22	Monitor number 10	4	Monitor number (Dec.) set to <i>o5-12 [Log Monitor Data10]</i>
23	Monitor Unit 10	4	Unit code and number of decimal places used for the monitor selected with <i>o5-12</i>
24 - 27	Reserved	4	-
28	Row number	6	Row number (Hex.) in the data log file

- *1 If there is no data log monitor selected, the text string of [0000] is generated.
 *2 Refer to [Table 12.60](#) for information about unit codes.

Table 12.60 Unit Codes

Unit Code (Hex.)	Unit	Unit Code (Hex.)	Unit	Unit Code (Hex.)	Unit	Unit Code (Hex.)	Unit
00	–	08	PPR	10	H	18	0H
01	Hz	09	kW	11	V	19	–
02	RPM	0A	Ω	12	us	1A	–
03	%	0B	ms	13	min	1B	–
04	VAC	0C	kHz	14	°C	1C	–
05	VDC	0D	PSI	15	W	1D	–
06	A	0E	MPM	16	kWH	1E	–
07	sec	0F	FPM	17	MWH	1F	–

Third and Subsequent Rows: Log Data

This example shows the data text strings and data generated for the third row of log data.

Example of generated data:

02,0012,160107111239,1770,1770,00BE,0118,0028,0000,0000,0000,0000,0000,0000,00000C

No.	Item	Number of Characters	Description
1	Attribute	2	[02] shows that the record is a monitor data record for a long-term data log. [03] shows that the record is a monitor data record for a short-term data log. [04] shows that the record is a monitor data record for a trend log.
2	File number	4	Long-term data log: Shows the [xxx] part (a 3-digit number) of the [GLOG0xxx.csv] filename. Short-term data log: Shows the [xxx] part (a 3-digit number) of the [SLOG0xxx.csv] filename + 1000.
3	Time stamp	12	Data log data was generated (YYMMDDHHMMSS) Trigger detection time for a short-term data log (common to all data)
4	Log Monitor Data 1	4	Log monitor data (Hex.) of the monitor selected with o5-03 [Log Monitor Data 1]
5	Log Monitor Data 2	4	Log monitor data (Hex.) of the monitor selected with o5-04 [Log Monitor Data 2]
:	:	:	:
13	Log Monitor Data 10	4	Log monitor data (Hex.) of the monitor selected with o5-12 [Log Monitor Data 10]
14	Reserved	4	–
15	Encoding data	4	Log Monitor Data 1 to 10 Code Data (Hex.) Bits 0 to 9 show the encoding of log monitor data 1 to 10. A bit value of 1 shows that the data represents a negative value. (Log monitor data 1 to 10 is absolute value data without encoding) Example: When log monitor data 2, 5, and 8 show negative values, bits 1, 4, and 7 have values of 1, and the encoding data = 0010010010 (Bin.) = 0092 (Hex.)
16	Row number	6	Row number (Hex.) in the data log file

■ o5-00: Log Type

No. (Hex.)	Name	Description	Default (Range)
o5-00 (1E81) RUN	Log Type	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of data log function. This parameter is only available when you use an LCD keypad.	0 (0, 1)

0 : Long Term Log

Saves data continuously over a long time period.

1 : Short Term Log

Saves data over a set length of time before and after the drive detects a trigger event with a short sampling cycle.

■ o5-01: Log Start/Stop Selection

No. (Hex.)	Name	Description	Default (Range)
o5-01 (1551) RUN	Log Start/Stop Selection	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the data log function. This parameter is only available when using an LCD keypad.	0 (0, 1)

0 : OFF

Stops the data log.

1 : ON

Starts the data log as specified by the sampling cycle set in o5-02 [*Log Sampling Interval*].

■ o5-02: Log Sampling Interval

No. (Hex.)	Name	Description	Default (Range)
o5-02 (1552) RUN	Log Sampling Interval	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the data log sampling cycle. This parameter is only available when using an LCD keypad.	Determined by o5-00 (Determined by o5-00 and C5-29)

■ o5-03: Log Monitor Data 1

No. (Hex.)	Name	Description	Default (Range)
o5-03 (1553) RUN	Log Monitor Data 1	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	101 (000, 101 - 999)

Note:

Set the number of the *U monitor* to record the data log.

For example, to show *U1-01 [Frequency Reference]*, set o5-03 = 101. When it is not necessary to set data log monitors, set this parameter to 000. You cannot set *U2 monitor [Fault Trace]* or *U3 Monitor [Fault History]*.

■ o5-04: Log Monitor Data 2

No. (Hex.)	Name	Description	Default (Range)
o5-04 (1554) RUN	Log Monitor Data 2	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the data log monitor. This parameter is only available when using an LCD keypad.	102 (000, 101 - 999)

Note:

Set the *U monitor* number you will log.

For example, to show *U1-02 [Output Frequency]*, set o5-04 = 102. When it is not necessary to set data log monitor, set this parameter to 000.

■ o5-05: Log Monitor Data 3

No. (Hex.)	Name	Description	Default (Range)
o5-05 (1555) RUN	Log Monitor Data 3	V/f OLV OLV/IPM AOLV/IPM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	103 (000, 101 - 999)

Note:

Sets the number of the *U monitor* you will log.

For example, to show *U1-03 [Output Current]*, set o5-05 = 103. When it is not necessary to set data log monitors, set this parameter to 000. You cannot select *U2 monitor [Fault Trace]* or *U3 Monitor [Fault History]*.

■ o5-06: Log Monitor Data 4

No. (Hex.)	Name	Description	Default (Range)
o5-06 (1556) RUN	Log Monitor Data 4	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	107 (000, 101 - 999)

Note:

Sets the number of the *U monitor* you will log.

For example, to show *U1-07 [DC Bus Voltage]*, set *o5-06 = 107*. When it is not necessary to set data log monitors, set this parameter to *000*. You cannot select *U2 monitor [Fault Trace]* or *U3 Monitor [Fault History]*.

■ o5-07: Log Monitor Data 5

No. (Hex.)	Name	Description	Default (Range)
o5-07 (1557) RUN	Log Monitor Data 5	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	108 (000, 101 - 999)

Note:

Sets the number of the *U monitor* you will log.

For example, to show *U1-08 [Output Power]*, set *o5-07 = 108*. When it is not necessary to set data log monitors, set this parameter to *000*. You cannot select *U2 monitor [Fault Trace]* or *U3 Monitor [Fault History]*.

■ o5-08: Log Monitor Data 6

No. (Hex.)	Name	Description	Default (Setting Range)
o5-08 (1558) RUN	Log Monitor Data 6	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available when using an LCD keypad.	V/f, OLV/PM : 000, OLV, AOLV/PM, EZOLV : 105 (000, 101 - 999)

Note:

Set the *U monitor* number you want to log.

For example, to display *U1-01 [Frequency Reference]*, set *o5-08 = 101*. When it is not necessary to set a data log monitor, set this parameter to *000*. You cannot set *U2 Monitors [Fault Trace]* or *U3 Monitors [Fault History]*.

■ o5-09: Log Monitor Data 7

No. (Hex.)	Name	Description	Default (Range)
o5-09 (1559) RUN	Log Monitor Data 7	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available when using an LCD keypad.	110 (000, 101 - 999)

Note:

Set the *U monitor* number you will log.

For example, to show *U1-01 [Frequency Reference]*, set *o5-09 = 101*. When it is not necessary to set data log monitor, set this parameter to *000*.

■ o5-10: Log Monitor Data 8

No. (Hex.)	Name	Description	Default (Range)
o5-10 (155A) RUN	Log Monitor Data 8	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	112 (000, 101 - 999)

Note:

Sets the number of the *U monitor* you will log.

For example, to show *U1-01 [Frequency Reference]*, set *o5-10 = 101*. When it is not necessary to set data log monitors, set this parameter to *000*. You cannot select *U2 monitor [Fault Trace]* or *U3 Monitor [Fault History]*.

■ o5-11: Log Monitor Data 9

No. (Hex.)	Name	Description	Default (Range)
o5-11 (155B) RUN	Log Monitor Data 9	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	000 (000, 101 - 999)

Note:

Sets the number of the *U monitor* you will log.

For example, to show *U1-01 [Frequency Reference]*, set *o5-11 = 101*. When it is not necessary to set data log monitors, set this parameter to *000*. You cannot select *U2 monitor [Fault Trace]* or *U3 Monitor [Fault History]*.

■ o5-12: Log Monitor Data 10

No. (Hex.)	Name	Description	Default (Range)
o5-12 (155C) RUN	Log Monitor Data 10	V/f OLV OLV/PM AOLV/PM EZOLV Sets the data log monitor. This parameter is only available with an LCD keypad.	000 (000, 101 - 999)

Note:

Sets the number of the *U monitor* you will log.

For example, to show *U1-01 [Frequency Reference]*, set *o5-12 = 101*. When it is not necessary to set data log monitors, set this parameter to *000*. You cannot select *U2 monitor [Fault Trace]* or *U3 Monitor [Fault History]*.

■ o5-15: Trigger Type Selection

No. (Hex.)	Name	Description	Default (Range)
o5-15 (1B82) RUN	Trigger Type Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of trigger for the short-term data log. This parameter is only available when you use an LCD keypad.	0 (0, 1)

0 : Digital Trigger

A digital signal inside the drive will act as the trigger.

1 : Analog Trigger

An analog signal inside the drive will act as the trigger.

Note:

There are no detection width and detection time settings for the analog trigger in the data log function. If variations in the analog signal are a problem, set *o5-15 = 0* and *o5-16 = 66, 67 [Digital Trigger Object = Comparator 1, 2]*. Use *H2-20 [Comparator 1 Monitor Selection]* to *H2-32 [Comparator 1 Filter Time]* to set the conditions for the comparator function.

■ o5-16: Digital Trigger Object

No. (Hex.)	Name	Description	Default (Range)
o5-16 (1B83) RUN	Digital Trigger Object	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function for the digital trigger target from the setting values for multi-function digital outputs. This parameter is only available when you use an LCD keypad.	E (0 - FF)

■ o5-17: Analog Trigger Object

No. (Hex.)	Name	Description	Default (Range)
o5-17 (1B84) RUN	Analog Trigger Object	V/f OLV OLV/PM AOLV/PM EZOLV Sets the monitor for the analog trigger target. This parameter is only available when you use an LCD keypad.	102 (0 - 999)

Note:

- Set the *x-xx* part of the *Ux-xx [Monitor]*. For example, set *o5-17 = 101* to monitor *U1-01 [Frequency Reference]*.
- When it is not necessary to set a data log monitor, set this parameter to *000*.

■ o5-18: Analog Trigger Level

No. (Hex.)	Name	Description	Default (Range)
o5-18 (1B85) RUN	Analog Trigger Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level to compare with the analog trigger target. This parameter is only available when using an LCD keypad.	0.0% (-999.9% - +999.9%)

■ o5-19: Trigger Condition

No. (Hex.)	Name	Description	Default (Range)
o5-19 (1B86) RUN	Trigger Condition	V/f OLV OLV/PM AOLV/PM EZOLV Sets the condition with which to detect the trigger. This parameter is only available when you use an LCD keypad.	0 (0, 1)

0 : Rising Edge

- Digital trigger: The drive detects the trigger when the digital trigger target switches from OFF to ON.
- Analog trigger: The drive detects the trigger when the analog trigger target changes from “less than” to “equal or more than” the trigger level set in o5-18 [Analog Trigger Level].

1 : Falling Edge

- Digital trigger: The drive detects the trigger when the digital trigger target switches from ON to OFF
- Analog trigger: The drive detects the trigger when the analog trigger target changes from “equal to or more than” to “less than” the trigger level set in o5-18 [Analog Trigger Level].

■ o5-20: Pre-Trigger Setting

No. (Hex.)	Name	Description	Default (Range)
o5-20 (1B87) RUN	Pre-Trigger Setting	V/f OLV OLV/PM AOLV/PM EZOLV Sets the percentage of data to save before the drive detects the trigger for the short-term data log. This parameter is only available when you use an LCD keypad.	90% (0 - 100%)

■ o5-21: Trend Log Sampling Selection

No. (Hex.)	Name	Description	Default (Range)
o5-21 (1B88) RUN	Trend Log Sampling Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the sampling cycle for the trend log to save data before the drive detects the trigger. The trend log works at the same time as the short-term data log. This parameter is only available when you use an LCD keypad.	0 (0 - 4)

0 : Trend Log Disabled

The drive does not save the trend log.

1 : 0.1 s (About 1 hour)

Saves a trend log with a sampling cycle of 0.1 s. The drive saves a maximum of approximately one hour of data before it detects the trigger.

2 : 1 s (About 10 hours)

Saves a trend log with a sampling cycle of 1 s. The drive saves a maximum of approximately 10 hours of data before it detects the trigger.

3 : 10 s (About 100 hours)

Saves a trend log with a sampling cycle of 10 s. The drive saves a maximum of approximately 100 hours of data before it detects the trigger.

4 : 60 s (About 600 hours)

Saves a trend log with a sampling cycle of 60 s. The drive saves a maximum of approximately 600 hours of data before it detects the trigger.

12.12 T: Auto-Tuning

Numbers identifying the *T parameters* are displayed when an LED keypad is used. The names of the parameters are displayed on the LCD screen of the LCD keypad. Set the following.

- Induction Motor Auto-Tuning
- PM Motor Auto-Tuning
- ASR and Inertia Tuning

◆ T0: Tuning Mode Selection

■ T0-00: Tuning Mode Selection

No. (Hex.)	Name	Description	Default (Range)
T0-00 (1197)	Tuning Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of Auto-Tuning.	0 (0, 1)

When you use an LED keypad to do Control Tuning, set the tuning mode in this order:

1. Set *T0-00* = 1.
2. Set *T3-00* [*Control Loop Tuning Selection*] to set the tuning mode.

Note:

The available tuning modes are different for different control methods.

0 : Motor Parameter Tuning

1 : Control Tuning

◆ T1: Induction Motor Auto-Tuning

T1 parameters set the Auto-Tuning input data for induction motor tuning.

Note:

- The base frequency of drive dedicated motors and special motors for use with vector control may be lower than the base frequency of general-purpose motors, which is 50 Hz or 60 Hz. In such cases, this lower frequency is used as the value for *E1-06* [*Base Frequency*] and *E1-04* [*Maximum Output Frequency*] after Auto-Tuning completes. If the maximum output frequency is too low and causes problems, change the setting of *E1-04* after Auto-Tuning completes.
- The following induction motor parameters are set automatically.
 - E1-xx* [*V/f Pattern for Motor 1*]
 - E2-xx* [*Motor Parameters*]
 - E3-xx* [*V/f Pattern for Motor 2*]
 - E4-xx* [*Motor 2 Parameters*]

■ T1-00: Motor 1/Motor 2 Selection

No. (Hex.)	Name	Description	Default (Range)
T1-00 (0700)	Motor 1/Motor 2 Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets which motor to tune when motor 1/2 switching is enabled.	1 (1, 2)

Note:

Set *H1-xx* = 16 [*Motor 2 Selection*] to enable this parameter. When *H1-xx* ≠ 16 the keypad will not show this parameter.

1 : Motor 1

Auto-Tuning automatically sets parameters *E1-xx* and *E2-xx* for motor 1.

2 : Motor 2

Auto-Tuning automatically sets parameters *E3-xx* and *E4-xx* for motor 2. Make sure that you connect motor 2 to the drive for Auto-Tuning.

■ T1-01: Auto-Tuning Mode Selection

No. (Hex.)	Name	Description	Default (Range)
T1-01 (0701)	Auto-Tuning Mode Selection	☒ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the type of Auto-Tuning.	Determined by A1-02 (Determined by A1-02)

0 : Rotational Auto-Tuning

1 : Stationary Auto-Tuning 1

2 : Stationary Line-Line Resistance

■ T1-02: Motor Rated Power

No. (Hex.)	Name	Description	Default (Range)
T1-02 (0702)	Motor Rated Power	☒ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Uses the units set in <i>o1-58 [Motor Power Unit Selection]</i> to set the motor rated output power.	Determined by o2-04, C6-01 (0.00 - 650.00 HP)

■ T1-03: Motor Rated Voltage

No. (Hex.)	Name	Description	Default (Range)
T1-03 (0703)	Motor Rated Voltage	☒ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the rated voltage (V) of the motor. Enter the base speed voltage for constant output motors.	Determined by o2-04, C6-01 (200 V Class: 0.0 - 255.5 V, 400 V Class: 0.0 - 511.0 V)

If you do Auto-Tuning on a drive-dedicated motor or a specialized motor for vector control, the voltage or frequency can be lower than that of a general-purpose motor. Always compare the data from the nameplate or test report with the Auto-Tuning results and check for differences. Enter the voltage necessary to operate the motor in no-load conditions at rated speed for better control precision around rated speed. If the motor test report or the motor nameplate is not available, enter approximately 90% of the motor rated voltage.

If the drive input power supply voltage is low, enter approximately 90% of the input voltage. When the input power supply voltage is low, the current will increase. Make sure that the main power supply capacity is correct and use a molded-case circuit breaker for the drive.

■ T1-04: Motor Rated Current

No. (Hex.)	Name	Description	Default (Range)
T1-04 (0704)	Motor Rated Current	☒ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the rated current (A) of the motor.	Determined by o2-04 (10% to 200% of the drive rated current)

Set the motor rated current between 50% and 100% of the drive rated current for the best performance. Enter the current at the motor base speed.

■ T1-05: Motor Base Frequency

No. (Hex.)	Name	Description	Default (Range)
T1-05 (0705)	Motor Base Frequency	☒ V/f ☐ OLV ☐ OLV/PM ☐ AOLV/PM ☐ EZOLV Sets the base frequency (Hz) of the motor.	60.0 Hz (0.0 - 590.0 Hz)

When Auto-Tuning is carried out, the value of *T1-05* is set to *E1-04 [Maximum Output Frequency]*. If *T1-05* < 40 Hz, *E1-04* = 40 Hz. If you operate the drive at a speed that is higher than the base frequency, or if you operate in the field weakening range, set *E1-04* (*E3-04* for motor 2) to the maximum output frequency after you complete Auto-Tuning.

■ T1-06: Number of Motor Poles

No. (Hex.)	Name	Description	Default (Range)
T1-06 (0706)	Number of Motor Poles	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of motor poles.	4 (2 to 120)

■ T1-07: Motor Base Speed

No. (Hex.)	Name	Description	Default (Range)
T1-07 (0707)	Motor Base Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor base speed for Auto-Tuning (min ⁻¹ (r/min)).	1750 min ⁻¹ (r/min) (0 - 35400 min ⁻¹ (r/min))

■ T1-09: Motor No-Load Current

No. (Hex.)	Name	Description	Default (Range)
T1-09 (0709)	Motor No-Load Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the no-load current of the motor.	- (0A - T1-04; max. of 2999.9)

Note:

The display units are different for different models:

- 0.01 A: B001 - B018, 2001 - 2042, 4001 - 4023
- 0.1 A: 2056 - 2082, 4031 - 4060

The value shown is the no-load current that the drive automatically calculates from the values set in *T1-02 [Motor Rated Power]* and *T1-04 [Motor Rated Current]*. Set the no-load current shown on the motor test report. If the motor test report is not available, do not change this parameter.

■ T1-10: Motor Rated Slip Frequency

No. (Hex.)	Name	Description	Default (Range)
T1-10 (070A)	Motor Rated Slip Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets motor rated slip.	- (0.000 - 20.000 Hz)

Shows 0.000 Hz as the default value. Set the rated slip shown on the motor test report. If the motor test report is not available, do not change this parameter.

■ T1-11: Motor Iron Loss

No. (Hex.)	Name	Description	Default (Range)
T1-11 (070B)	Motor Iron Loss	V/f OLV OLV/PM AOLV/PM EZOLV Sets the iron loss to calculate the energy-saving coefficient.	Determined by E2-10 or E4-10 (0 - 65535 W)

Note:

The default setting is different for different motor codes and motor parameter settings.

The value shown is *E2-10 [Motor Iron Loss]* or *E4-10 [Motor 2 Iron Loss]* for the motor output set in *T1-02 [Motor Rated Power]*. If the motor test report is available, enter the motor iron loss value to *T1-11*.

■ T1-12: Test Mode Selection

No. (Hex.)	Name	Description	Default (Range)
T1-12 (0BDB)	Test Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the function to enable Test Mode after Stationary Auto-Tuning. When you can operate the motor with a light load attached after Stationary Auto-Tuning is complete, enable this parameter.	0 (0, 1)

0 : No

1 : Yes

After Auto-Tuning, the drive automatically sets *E2-02 [Motor Rated Slip]* and *E2-03 [Motor No-Load Current]* when you operate the motor for the first time in Drive Mode.

Note:

After Auto-Tuning is complete and you set the drive to Drive Mode, operate the motor in these conditions:

- Make sure that you connect all wiring between the drive and motor
- Make sure that a mechanical brake on the motor shaft is not locked
- Keep the motor-load ratio at 30%
- Hold constant speed for longer than 1 second at a minimum of 30% of the speed set in *E1-06 [Base Frequency]* (the default setting is the same as the maximum frequency).

■ T1-13: No-load voltage

No. (Hex.)	Name	Description	Default (Range)
T1-13 (0BDC)	No-load voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the no-load voltage of the motor. When the no-load voltage at rated speed is available, for example on the motor test report, set the voltage in this parameter. If the no-load voltage is not available, do not change this parameter.	T1-03 × 0.9 (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)

Note:

- To get the same qualities as a Yaskawa 1000-series drive or previous series drive, set this parameter = *T1-03 [Motor Rated Voltage]*.
- The default setting is different for different models.
 - B001 - B006, 2001 - 2008, 4001 - 4004: $T1-03 \times 0.85$
 - B010 - B018, 2010 - 2082, 4005 - 4060: $T1-03 \times 0.90$

◆ T2: PM Motor Auto-Tuning

T2 parameters set the Auto-Tuning input data for PM motor tuning.

Note:

The drive automatically sets these PM motor parameters:

- E1-xx [V/f Pattern for Motor 1]
- E5-xx [V/f Pattern for Motor 1]

■ T2-01: PM Auto-Tuning Selection

No. (Hex.)	Name	Description	Default (Range)
T2-01 (0750)	PM Auto-Tuning Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of Auto-Tuning for PM motors.	0 (Determined by A1-02)

Note:

Yaskawa recommends PM Rotational Auto-Tuning for specialized motors. Rotational Auto-Tuning rotates the motor to measure the actual induction voltage constants for more accurate control than Stationary Auto-Tuning.

0 : Manual Entry w/ Motor Data Sheet

1 : Stationary (Ld, Lq, R)

2 : Stationary (R Only)

4 : Rotational (Ld, Lq, R, back-EMF)

5 : High Frequency Injection

■ T2-02: PM Motor Code Selection

No. (Hex.)	Name	Description	Default (Range)
T2-02 (0751)	PM Motor Code Selection	V/f OLV OLV/PM AOLV/PM EZOLV If the drive is operating an SMRD, SMRA, or SSR1 series Yaskawa PM motor, enter the PM motor code in to align with the rotation speed and motor output.	FFFF (0000 - FFFF)

Enter the motor code to automatically set parameters *T2-03 to T2-14*. When you are operating a specialized motor or a non-Yaskawa motor, set *T2-02 = FFFF* and enter the data from the motor nameplate or the motor test report.

You can only enter the permitted PM motor codes. Different drive control methods will accept different PM motor codes.

■ T2-03: PM Motor Type

No. (Hex.)	Name	Description	Default (Range)
T2-03 (0752)	PM Motor Type	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of PM motor the drive will operate.	1 (0, 1)

0 : IPM motor

IPM motors have magnets in the rotor, and $L_d \neq L_q$.

1 : SPM motor

SPM motors have magnets attached to the surface of the rotor with adhesive material, and $L_d = L_q$.

■ T2-04: PM Motor Rated Power

No. (Hex.)	Name	Description	Default (Range)
T2-04 (0730)	PM Motor Rated Power	V/f OLV OLV/PM AOLV/PM EZOLV Uses the units set in o1-58 [Motor Power Unit Selection] to set the PM motor rated output power.	Determined by o2-04, C6-01 (0.00 - 650.00 HP)

■ T2-05: PM Motor Rated Voltage

No. (Hex.)	Name	Description	Default (Range)
T2-05 (0732)	PM Motor Rated Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated voltage (V) of the motor.	200 V Class: 230.0 V, 400 V Class: 460.0 V (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)

■ T2-06: PM Motor Rated Current

No. (Hex.)	Name	Description	Default (Range)
T2-06 (0733)	PM Motor Rated Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated current (A) of the motor.	Determined by o2-04 (10% to 200% of the drive rated current)

■ T2-07: PM Motor Base Frequency

No. (Hex.)	Name	Description	Default (Range)
T2-07 (0753)	PM Motor Base Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the base frequency (Hz) of the motor.	60.0 Hz (0.0 - 590.0 Hz)

■ T2-08: Number of PM Motor Poles

No. (Hex.)	Name	Description	Default (Range)
T2-08 (0734)	Number of PM Motor Poles	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of motor poles.	4 (2 - 120)

■ T2-09: PM Motor Base Speed

No. (Hex.)	Name	Description	Default (Range)
T2-09 (0731)	PM Motor Base Speed	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor base speed (min^{-1} (r/min)).	1750 min^{-1} (r/min) (0 - 34500 min^{-1} (r/min))

■ T2-10: PM Motor Stator Resistance

No. (Hex.)	Name	Description	Default (Range)
T2-10 (0754)	PM Motor Stator Resistance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the stator resistance for each motor phase.	Determined by T2-02 (0.000 - 65.000 Ω)

Note:

This parameter does not set line-to-line resistance.

■ T2-11: PM Motor d-Axis Inductance

No. (Hex.)	Name	Description	Default (Range)
T2-11 (0735)	PM Motor d-Axis Inductance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the d-axis inductance of the motor on a per phase basis.	Determined by T2-02 (0.00 - 600.00 mH)

■ T2-12: PM Motor q-Axis Inductance

No. (Hex.)	Name	Description	Default (Range)
T2-12 (0736)	PM Motor q-Axis Inductance	V/f OLV OLV/PM AOLV/PM EZOLV Sets the q-Axis inductance of the motor on a per phase basis.	Determined by T2-02 (0.00 - 600.00 mH)

■ T2-13: Back-EMF Units Selection

No. (Hex.)	Name	Description	Default (Range)
T2-13 (0755)	Back-EMF Units Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the units that the drive uses to set the induced voltage constant.	0 (0, 1)

0 : mV/(rev/min)

1 : mV/(rad/s)

Note:

- When $T2-13 = 0$, the drive will use $E5-24$ [PM Back-EMF L-L V_{rms} (mV/rpm)] and will automatically set $E5-09$ [PM Back-EMF V_{peak} (mV/(rad/s))] = 0.0.
- When $T2-13 = 1$, the drive will use $E5-09$ and will automatically set $E5-24 = 0.0$.

■ T2-14: Back-EMF Voltage Constant (Ke)

No. (Hex.)	Name	Description	Default (Range)
T2-14 (0737)	Back-EMF Voltage Constant (Ke)	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor induced voltage constant (Ke).	Determined by T2-13 (0.0 - 2000.0)

■ T2-15: Pull-In Current Level

No. (Hex.)	Name	Description	Default (Range)
T2-15 (0756)	Pull-In Current Level	V/f OLV OLV/PM AOLV/PM EZOLV Sets the level of the pull-in current as a percentage of $E5-03$ [PM Motor Rated Current (FLA)]. Usually it is not necessary to change this setting.	30% (0 - 120%)

If the load inertia is high, increase the setting value.

◆ T3: ASR and Inertia Tuning

■ T3-00: Control Loop Tuning Selection

No. (Hex.)	Name	Description	Default (Range)
T3-00 (1198)	Control Loop Tuning Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of Control Auto-Tuning.	2 (2, 3)

2 : Deceleration Rate Tuning

3 : KEB Tuning

◆ T4: EZ Tuning

Use *T4 parameters* to input the data necessary for motor parameter Auto-Tuning when *A1-02 = 8 [Control Method Selection = EZ Vector Control]*. These two modes are available:

T4-01 Setting	Operational overview	Items input for tuning	Items tuned
0	Follow the instructions in the setup wizard on the keypad to manually enter the necessary motor parameters.	- T4-02 [Motor Type Selection] - T4-03 [Motor Max Revolutions] - T4-04 [Motor Rated Revolutions] - T4-05 [Motor Rated Frequency] <i>*/</i> - T4-06 [Motor Rated Voltage] - T4-07 [Motor Rated Current] - T4-08 [Motor Rated Capacity] - T4-09 [Number of Poles]	- E9-01 [Motor Type Selection] - E9-02 [Maximum Speed] - E9-03 [Rated Speed] - E9-04 [Base Frequency] - E9-05 [Base Voltage] - E9-06 [Motor Rated Current (FLA)] - E9-07 [Motor Rated Power] - E9-08 [Motor Pole Count] - E9-09 [Motor Rated Slip] - E9-10 [Motor Line-to-Line Resistance]
1	Do only line-to-line resistance tuning.	Motor Rated Current	E9-10 [Motor Line-to-Line Resistance]

*1 When you use a PM motor or a synchronous reluctance motor, it is not necessary to enter the rated frequency. The drive will use the rated rotation speed and number of motor poles to automatically calculate the rated frequency.

■ T4-01: EZ Tuning Mode Selection

No. (Hex.)	Name	Description	Default (Range)
T4-01 (3130)	EZ Tuning Mode Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of Auto-Tuning for EZOLV control.	0 (0, 1)

0 : Motor Parameter Setting

1 : Line-to-Line Resistance

■ T4-02: Motor Type Selection

No. (Hex.)	Name	Description	Default (Range)
T4-02 (3131)	Motor Type Selection	V/f OLV OLV/PM AOLV/PM EZOLV Sets the type of motor.	0 (0, 1, 2)

0 : Induction (IM)

1 : Permanent Magnet (PM)

2 : Synchronous Reluctance (SynRM)

■ T4-04: Motor Rated Revolutions

No. (Hex.)	Name	Description	Default (Range)
T4-04 (3133)	Motor Rated Revolutions	V/f OLV OLV/PM AOLV/PM EZOLV Sets rated rotation speed (min ⁻¹) of the motor.	- ((40 Hz to 120 Hz) × 60 × 2/ E9-08)

■ T4-05: Motor Rated Frequency

No. (Hex.)	Name	Description	Default (Range)
T4-05 (3134)	Motor Rated Frequency	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated frequency (Hz) of the motor.	Determined by E9-01 and o2-04 (40.0 - 120.0 Hz)

Note:

When $T4-02 = 1, 2$ [Motor Type Selection = Permanent Magnet (PM), Synchronous Reluctance (SynRM)], input is not necessary because it assumes: Motor Rated Revolutions/60 $\times$ Number of Motor Poles/2.

■ T4-06: Motor Rated Voltage

No. (Hex.)	Name	Description	Default (Range)
T4-06 (3135)	Motor Rated Voltage	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated voltage (V) of the motor.	200 V Class: 230.0 V, 400 V Class: 460.0 V (200 V Class: 0.0 - 255.0 V, 400 V Class: 0.0 - 510.0 V)

■ T4-07: Motor Rated Current

No. (Hex.)	Name	Description	Default (Range)
T4-07 (3136)	Motor Rated Current	V/f OLV OLV/PM AOLV/PM EZOLV Sets the rated current (A) of the motor.	Determined by o2-04, C6-01 (10% to 200% of the drive rated current)

Note:

The value set here becomes the base value for motor protection, the torque limit, and torque control.

■ T4-08: Motor Rated Capacity

No. (Hex.)	Name	Description	Default (Range)
T4-08 (3137)	Motor Rated Capacity	V/f OLV OLV/PM AOLV/PM EZOLV Sets the motor rated power in the units set in o1-58 [Motor Power Unit Selection].	Determined by E9-10 (0.10 - 650.00 HP)

■ T4-09: Number of Poles

No. (Hex.)	Name	Description	Default (Range)
T4-09 (3138)	Number of Poles	V/f OLV OLV/PM AOLV/PM EZOLV Sets the number of motor poles.	Determined by E9-01 (2 - 120)
