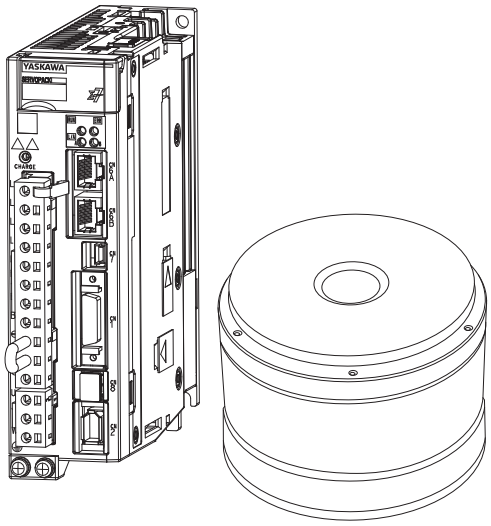
YASKAWA

Σ-7-Series AC Servo Drive

Σ-7S SERVOPACK with FT/EX Specification for Application with Special Motor, SGM7D Motor

Product Manual

Model: SGD7S-□□□□□□A0□□F82



MANUAL NO. SIEP S800002 26L

About this Manual

This manual describes the SGM7D motor drive application option for the Σ-7-Series AC Servo Drive Σ-7S SERVOPACKs for special motors.

Read and understand this manual to ensure correct usage of the Σ-7-Series AC Servo Drives.

Keep this manual in a safe place so that it can be referred to whenever necessary.

Outline of Manual

The contents of the chapters of this manual are described in the following table.

When you drive an SGM7D motor with a Σ-7-Series AC Servo Drive Σ-7S SERVOPACK for application with special motors, use this manual together with the relevant Σ-7-Series product manual.

Item		This Manual	Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)
Basic Information on SERVOPACKs	The Σ-7 Series	–	1.1
	Product Introduction	1.1	–
	Introduction to EtherCAT	–	1.2
	Interpreting the Nameplates	–	1.3
	Part Names	–	1.4
	Model Designations	1.2	–

Using This Manual

◆ Technical Terms Used in This Manual

The following terms are used in this manual.

Term	Meaning
Servomotor	A Σ-7-Series Direct Drive Servomotor.
SERVOPACK	A Σ-7-Series Σ-7S Servo Amplifier with EtherCAT Communications References.
Servo Drive	The combination of a Servomotor and SERVOPACK.
Servo System	A servo control system that includes the combination of a Servo Drive with a host controller and peripheral devices.
servo ON	Supplying power to the motor.
servo OFF	Not supplying power to the motor.
Servo ON command (Enable Operation command)	A command that is used to turn ON the servo (i.e., supply power to the motor) when bit 3 of *controlword* (6040h) is changed to 1 (ON) while the control power supply and main circuit power supply are ON. Refer to the following manual for details. 🕮 Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)
Servo OFF command (Disable Operation command)	A command that is used to turn OFF the servo (i.e., power not supplied to the motor) when bit 3 of *controlword* (6040h) is changed to 0 (OFF) while the control power supply and main circuit power supply are ON. Refer to the following manual for details. 🕮 Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)
base block (BB)	Shutting OFF the power supply to the motor by shutting OFF the base current to the power transistor in the SERVOPACK.
servo lock	A state in which the motor is stopped and is in a position loop with a position reference of 0.
Main Circuit Cable	One of the cables that connect to the main circuit terminals, including the Main Circuit Power Supply Cable, Control Power Supply Cable, and Servomotor Main Circuit Cable.
SigmaWin+	The Engineering Tool for setting up and tuning Servo Drives or a computer in which the Engineering Tool is installed.

◆ Notation Used in this Manual

■ Notation for Reverse Signals

The names of reverse signals (i.e., ones that are valid when low) are written with a forward slash (/) before the signal abbreviation.

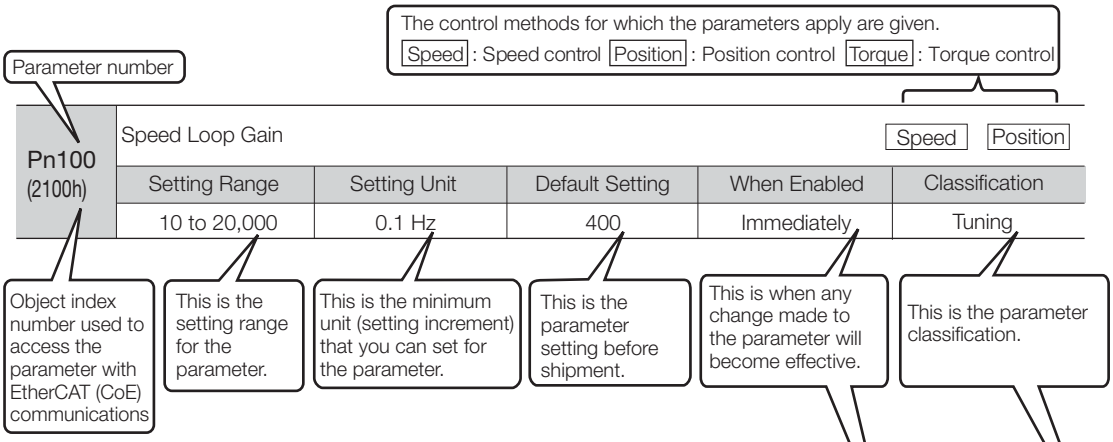
Notation Example

$\overline{BK}$ is written as /BK.

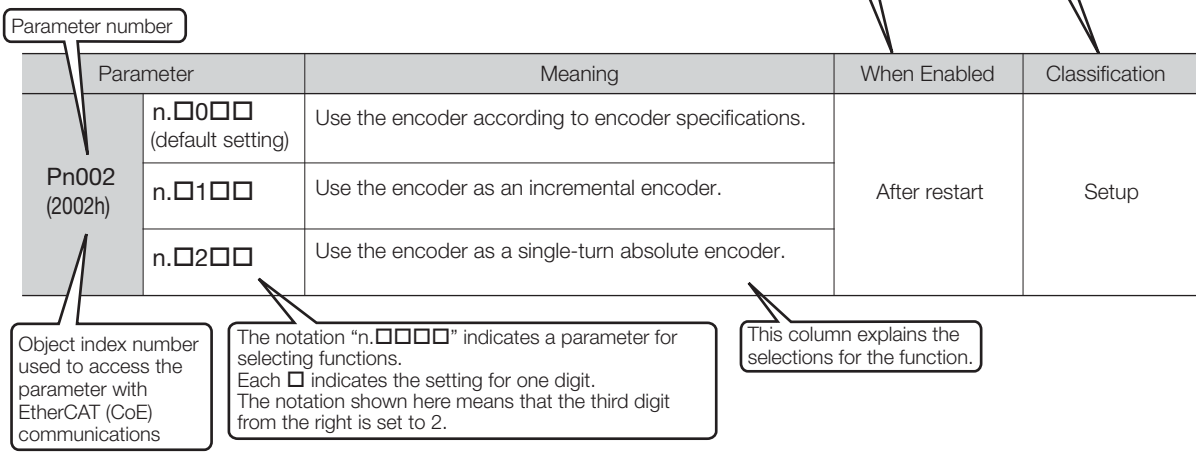
■ Notation for Parameters

The notation depends on whether the parameter requires a numeric setting (parameter for numeric setting) or requires the selection of a function (parameter for selecting functions).

- Parameters for Numeric Settings



- Parameters for Selecting Functions



Notation Example

Notation Examples for Pn002

n . 0 0 0 0

Digit Notation		Numeric Value Notation	
Notation	Meaning	Notation	Meaning
Pn002 = n.□□□X	Indicates the first digit from the right in Pn002.	Pn002 = n.□□□1	Indicates that the first digit from the right in Pn002 is set to 1.
Pn002 = n.□□X□	Indicates the second digit from the right in Pn002.	Pn002 = n.□□1□	Indicates that the second digit from the right in Pn002 is set to 1.
Pn002 = n.□X□□	Indicates the third digit from the right in Pn002.	Pn002 = n.□1□□	Indicates that the third digit from the right in Pn002 is set to 1.
Pn002 = n.X□□□	Indicates the fourth digit from the right in Pn002.	Pn002 = n.1□□□	Indicates that the fourth digit from the right in Pn002 is set to 1.

◆ Engineering Tools Used in This Manual

This manual uses the interfaces of the SigmaWin+ for descriptions.

◆ Trademarks

- EtherCAT® is a registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.
- QR code is a trademark of Denso Wave Inc.
- Other product names and company names are the trademarks or registered trademarks of the respective company. “TM” and the ® mark do not appear with product or company names in this manual.

◆ Visual Aids

The following aids are used to indicate certain types of information for easier reference.

Important

Indicates precautions or restrictions that must be observed.
Also indicates alarm displays and other precautions that will not result in machine damage.

Term

Indicates definitions of difficult terms or terms that have not been previously explained in this manual.

Example Indicates operating or setting examples.

Information Indicates supplemental information to deepen understanding or useful information.

Safety Precautions

◆ Safety Information

To prevent personal injury and equipment damage in advance, the following signal words are used to indicate safety precautions in this document. The signal words are used to classify the hazards and the degree of damage or injury that may occur if a product is used incorrectly. Information marked as shown below is important for safety. Always read this information and heed the precautions that are provided.

⚠ DANGER

- Indicates precautions that, if not heeded, are likely to result in loss of life, serious injury, or fire.

⚠ WARNING

- Indicates precautions that, if not heeded, could result in loss of life, serious injury, or fire.

⚠ CAUTION

- Indicates precautions that, if not heeded, could result in relatively serious or minor injury, or in fire.

NOTICE

- Indicates precautions that, if not heeded, could result in property damage.

◆ Safety Precautions That Must Always Be Observed

■ General Precautions

⚠ DANGER

- Read and understand this manual to ensure the safe usage of the product.
- Keep this manual in a safe, convenient place so that it can be referred to whenever necessary. Make sure that it is delivered to the final user of the product.
- Do not remove covers, cables, connectors, or optional devices while power is being supplied to the SERVOPACK.
  There is a risk of electric shock, operational failure of the product, or burning.

⚠ WARNING

- Use a power supply with specifications (number of phases, voltage, frequency, and AC/DC type) that are appropriate for the product.
  There is a risk of burning, electric shock, or fire.
- Connect the ground terminals on the SERVOPACK and Servomotor to ground poles according to local electrical codes (100 Ω or less for a SERVOPACK with a 100-VAC or 200-VAC power supply, and 10 Ω or less for a SERVOPACK with a 400-VAC power supply).
  There is a risk of electric shock or fire.
- Do not attempt to disassemble, repair, or modify the product.
  There is a risk of fire or failure.
  The warranty is void for the product if you disassemble, repair, or modify it.

⚠ CAUTION

- The SERVOPACK heat sinks, regenerative resistors, External Dynamic Brake Resistors, Servomotors, and other components can be very hot while power is ON or soon after the power is turned OFF. Implement safety measures, such as installing covers, so that hands and parts such as cables do not come into contact with hot components.
  There is a risk of burn injury.
- For a 24-VDC power supply, use a power supply device with double insulation or reinforced insulation.
  There is a risk of electric shock.
- Do not damage, pull on, apply excessive force to, place heavy objects on, or pinch cables.
  There is a risk of failure, damage, or electric shock.
- The person who designs the system that uses the hard wire base block safety function must have a complete knowledge of the related safety standards and a complete understanding of the instructions in this document.
  There is a risk of injury, product damage, or machine damage.
- Do not use the product in an environment that is subject to water, corrosive gases, or flammable gases, or near flammable materials.
  There is a risk of electric shock or fire.

NOTICE

- Do not attempt to use a SERVOPACK or Servomotor that is damaged or that has missing parts.
- Install external emergency stop circuits that shut OFF the power supply and stops operation immediately when an error occurs.
- In locations with poor power supply conditions, install the necessary protective devices (such as AC reactors) to ensure that the input power is supplied within the specified voltage range.
  There is a risk of damage to the SERVOPACK.
- Use a Noise Filter to minimize the effects of electromagnetic interference.
  Electronic devices used near the SERVOPACK may be affected by electromagnetic interference.
- Always use a Servomotor and SERVOPACK in one of the specified combinations.
- Do not touch a SERVOPACK or Servomotor with wet hands.
  There is a risk of product failure.

■ Storage Precautions

⚠ CAUTION

- Do not place an excessive load on the product during storage. (Follow all instructions on the packages.)
  There is a risk of injury or damage.

NOTICE

- Do not install or store the product in any of the following locations.
  - Locations that are subject to direct sunlight
  - Locations that are subject to ambient temperatures that exceed product specifications
  - Locations that are subject to relative humidities that exceed product specifications
  - Locations that are subject to condensation as the result of extreme changes in temperature
  - Locations that are subject to corrosive or flammable gases
  - Locations that are near flammable materials
  - Locations that are subject to dust, salts, or iron powder
  - Locations that are subject to water, oil, or chemicals
  - Locations that are subject to vibration or shock that exceeds product specifications
  - Locations that are subject to radiation

  If you store or install the product in any of the above locations, the product may fail or be damaged.

■ Transportation Precautions

⚠ CAUTION

- Transport the product in a way that is suitable to the mass of the product.
- Do not use the eyebolts on a SERVOPACK or Servomotor to move the machine.
  There is a risk of damage or injury.
- When you handle a SERVOPACK or Servomotor, be careful of sharp parts, such as the corners.
  There is a risk of injury.
- Do not place an excessive load on the product during transportation. (Follow all instructions on the packages.)
  There is a risk of injury or damage.

NOTICE

- Do not hold onto the front cover or connectors when you move a SERVOPACK.
  There is a risk of the SERVOPACK falling.
- A SERVOPACK or Servomotor is a precision device. Do not drop it or subject it to strong shock.
  There is a risk of failure or damage.
- Do not subject connectors to shock.
  There is a risk of faulty connections or damage.
- If disinfectants or insecticides must be used to treat packing materials such as wooden frames, plywood, or pallets, the packing materials must be treated before the product is packaged, and methods other than fumigation must be used.
  Example: Heat treatment, where materials are kiln-dried to a core temperature of 56°C for 30 minutes or more.
  If the electronic products, which include stand-alone products and products installed in machines, are packed with fumigated wooden materials, the electrical components may be greatly damaged by the gases or fumes resulting from the fumigation process. In particular, disinfectants containing halogen, which includes chlorine, fluorine, bromine, or iodine can contribute to the erosion of the capacitors.
- Do not overtighten the eyebolts on a SERVOPACK or Servomotor.
  If you use a tool to overtighten the eyebolts, the tapped holes may be damaged.

■ Installation Precautions

⚠ CAUTION

- Install the Servomotor or SERVOPACK in a way that will support the mass given in technical documents.
- Install SERVOPACKs, Servomotors, regenerative resistors, and External Dynamic Brake Resistors on nonflammable materials.
  Installation directly onto or near flammable materials may result in fire.
- Provide the specified clearances between the SERVOPACK and the control panel as well as with other devices.
  There is a risk of fire or failure.
- Install the SERVOPACK in the specified orientation.
  There is a risk of fire or failure.
- Do not step on or place a heavy object on the product.
  There is a risk of failure, damage, or injury.
- Do not allow any foreign matter to enter the SERVOPACK or Servomotor.
  There is a risk of failure or fire.

NOTICE

- Do not install or store the product in any of the following locations.
  - Locations that are subject to direct sunlight
  - Locations that are subject to ambient temperatures that exceed product specifications
  - Locations that are subject to relative humidities that exceed product specifications
  - Locations that are subject to condensation as the result of extreme changes in temperature
  - Locations that are subject to corrosive or flammable gases
  - Locations that are near flammable materials
  - Locations that are subject to dust, salts, or iron powder
  - Locations that are subject to water, oil, or chemicals
  - Locations that are subject to vibration or shock that exceeds product specifications
  - Locations that are subject to radiation

  If you store or install the product in any of the above locations, the product may fail or be damaged.
- Use the product in an environment that is appropriate for the product specifications.
  If you use the product in an environment that exceeds product specifications, the product may fail or be damaged.
- A SERVOPACK or Servomotor is a precision device. Do not drop it or subject it to strong shock.
  There is a risk of failure or damage.
- Always install a SERVOPACK in a control panel.
- Do not allow any foreign matter to enter a SERVOPACK or a Servomotor with a Cooling Fan and do not cover the outlet from the Servomotor's cooling fan.
  There is a risk of failure.

■ Wiring Precautions

⚠ DANGER

- Do not change any wiring while power is being supplied.
  There is a risk of electric shock or injury.

⚠ WARNING

- Wiring and inspections must be performed only by qualified engineers.
  There is a risk of electric shock or product failure.
- Check all wiring and power supplies carefully.
  Incorrect wiring or incorrect voltage application to the output circuits may cause short-circuit failures. If a short-circuit failure occurs as a result of any of these causes, the holding brake will not work. This could damage the machine or cause an accident that may result in death or injury.
- Connect the AC and DC power supplies to the specified SERVOPACK terminals.
  - Connect an AC power supply to the L1, L2, and L3 terminals and the L1C and L2C terminals on the SERVOPACK.
  - Connect a DC power supply to the B1/⊕ and ⊖2 terminals and the L1C and L2C terminals on the SERVOPACK.

  There is a risk of failure or fire.
- If you use a SERVOPACK that supports a Dynamic Brake Option, connect an External Dynamic Brake Resistor that is suitable for the machine and equipment specifications to the specified terminals.
  There is a risk of unexpected operation, machine damage, burning, or injury when an emergency stop is performed.

⚠ CAUTION

- Wait for six minutes after turning OFF the power supply and then make sure that the CHARGE indicator is not lit before starting wiring or inspection work. Do not touch the power supply terminals while the CHARGE lamp is lit after turning OFF the power supply because high voltage may still remain in the SERVOPACK.
  There is a risk of electric shock.
- Observe the precautions and instructions for wiring and trial operation precisely as described in this document.
  Failures caused by incorrect wiring or incorrect voltage application in the brake circuit may cause the SERVOPACK to fail, damage the equipment, or cause an accident resulting in death or injury.
- Check the wiring to be sure it has been performed correctly.
  Connectors and pin layouts are sometimes different for different models. Always confirm the pin layouts in technical documents for your model before operation.
  There is a risk of failure or malfunction.
- Connect wires to power supply terminals and motor connection terminals securely with the specified methods and tightening torque.
  Insufficient tightening may cause wires and terminal blocks to generate heat due to faulty contact, possibly resulting in fire.
- Use shielded twisted-pair cables or screened unshielded multi-twisted-pair cables for I/O Signal Cables and Encoder Cables.
- The maximum wiring length is 3 m for I/O Signal Cables, and 50 m for Encoder Cables or Servomotor Main Circuit Cables.
- Observe the following precautions when wiring the SERVOPACK's main circuit terminals.
  - Turn ON the power supply to the SERVOPACK only after all wiring, including the main circuit terminals, has been completed.
  - If a connector is used for the main circuit terminals, remove the main circuit connector from the SERVOPACK before you wire it.
  - Insert only one wire per insertion hole in the main circuit terminals.
  - When you insert a wire, make sure that the conductor wire (e.g., whiskers) does not come into contact with adjacent wires.
- Install molded-case circuit breakers and other safety measures to provide protection against short circuits in external wiring.
  There is a risk of fire or failure.

NOTICE

- Whenever possible, use the Cables specified by Yaskawa.
  If you use any other cables, confirm the rated current and application environment of your model and use the wiring materials specified by Yaskawa or equivalent materials.
- Securely tighten connector screws and lock mechanisms.
  Insufficient tightening may result in connectors falling off during operation.
- Do not bundle power lines (e.g., the Main Circuit Cable) and low-current lines (e.g., the I/O Signal Cables or Encoder Cables) together or run them through the same duct. If you do not place power lines and low-current lines in separate ducts, separate them by at least 30 cm.
  If the cables are too close to each other, malfunctions may occur due to noise affecting the low-current lines.
- Install a battery at either the host controller or on the Encoder Cable.
  If you install batteries both at the host controller and on the Encoder Cable at the same time, you will create a loop circuit between the batteries, resulting in a risk of damage or burning.
- When connecting a battery, connect the polarity correctly.
  There is a risk of battery rupture or encoder failure.

■ Operation Precautions

⚠ WARNING

- Before starting operation with a machine connected, change the settings of the switches and parameters to match the machine.
  Unexpected machine operation, failure, or personal injury may occur if operation is started before appropriate settings are made.
- Do not radically change the settings of the parameters.
  There is a risk of unstable operation, machine damage, or injury.
- Install limit switches or stoppers at the ends of the moving parts of the machine to prevent unexpected accidents.
  There is a risk of machine damage or injury.
- For trial operation, securely mount the Servomotor and disconnect it from the machine.
  There is a risk of injury.
- Forcing the motor to stop for overtravel is disabled when the Jog, Origin Search, or Easy FFT utility function is executed. Take necessary precautions.
  There is a risk of machine damage or injury.
- When an alarm occurs, the Servomotor will coast to a stop or stop with the dynamic brake according to the SERVOPACK Option specifications and settings. The coasting distance will change with the moment of inertia of the load and the resistance of the External Dynamic Brake Resistor. Check the coasting distance during trial operation and implement suitable safety measures on the machine.
- Do not enter the machine's range of motion during operation.
  There is a risk of injury.
- Do not touch the moving parts of the Servomotor or machine during operation.
  There is a risk of injury.

⚠ CAUTION

- Design the system to ensure safety even when problems, such as broken signal lines, occur. For example, the P-OT and N-OT signals are set in the default settings to operate on the safe side if a signal line breaks. Do not change the polarity of this type of signal.
- When overtravel occurs, the power supply to the motor is turned OFF and the brake is released. If you use the Servomotor to drive a vertical load, set the Servomotor to enter a zero-clamped state after the Servomotor stops. Also, install safety devices (such as an external brake or counterweight) to prevent the moving parts of the machine from falling.
- Always turn OFF the servo before you turn OFF the power supply. If you turn OFF the main circuit power supply or control power supply during operation before you turn OFF the servo, the Servomotor will stop as follows:
  - If you turn OFF the main circuit power supply during operation without turning OFF the servo, the Servomotor will stop abruptly with the dynamic brake.
  - If you turn OFF the control power supply without turning OFF the servo, the stopping method that is used by the Servomotor depends on the model of the SERVOPACK. For details, refer to the manual for the SERVOPACK.
  - If you use a SERVOPACK that supports a Dynamic Brake Option, the Servomotor stopping methods will be different from the stopping methods used without the Option or for other Hardware Option specifications. For details, refer to the *Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual*.
- Do not use the dynamic brake for any application other than an emergency stop.
  There is a risk of failure due to rapid deterioration of elements in the SERVOPACK and the risk of unexpected operation, machine damage, burning, or injury.

NOTICE

- When you adjust the gain during system commissioning, use a measuring instrument to monitor the torque waveform and speed waveform and confirm that there is no vibration.
  If a high gain causes vibration, the Servomotor will be damaged quickly.
- Do not frequently turn the power supply ON and OFF. After you have started actual operation, allow at least one hour between turning the power supply ON and OFF (as a guideline).
  Do not use the product in applications that require the power supply to be turned ON and OFF frequently.
  The elements in the SERVOPACK will deteriorate quickly.
- An alarm or warning may occur if communications are performed with the host controller while the SigmaWin+ or Digital Operator is operating.
  If an alarm or warning occurs, it may interrupt the current process and stop the system.
- After you complete trial operation of the machine and facilities, use the SigmaWin+ to back up the settings of the SERVOPACK parameters. You can use them to reset the parameters after SERVOPACK replacement.
  If you do not copy backed up parameter settings, normal operation may not be possible after a faulty SERVOPACK is replaced, possibly resulting in machine or equipment damage.

■ Maintenance and Inspection Precautions

⚠ DANGER

- Do not change any wiring while power is being supplied.
  There is a risk of electric shock or injury.

⚠ WARNING

- Wiring and inspections must be performed only by qualified engineers.
  There is a risk of electric shock or product failure.

⚠ CAUTION

- Wait for six minutes after turning OFF the power supply and then make sure that the CHARGE indicator is not lit before starting wiring or inspection work. Do not touch the power supply terminals while the CHARGE lamp is lit after turning OFF the power supply because high voltage may still remain in the SERVOPACK.
  There is a risk of electric shock.
- Before you replace a SERVOPACK, back up the settings of the SERVOPACK parameters. Copy the backed up parameter settings to the new SERVOPACK and confirm that they were copied correctly.
  If you do not copy backed up parameter settings or if the copy operation is not completed normally, normal operation may not be possible, possibly resulting in machine or equipment damage.

NOTICE

- Discharge all static electricity from your body before you operate any of the buttons or switches inside the front cover of the SERVOPACK.
  There is a risk of equipment damage.

■ Troubleshooting Precautions

⚠ DANGER

- If the safety device (molded-case circuit breaker or fuse) installed in the power supply line operates, remove the cause before you supply power to the SERVOPACK again. If necessary, repair or replace the SERVOPACK, check the wiring, and remove the factor that caused the safety device to operate.
  There is a risk of fire, electric shock, or injury.

⚠ WARNING

- The product may suddenly start to operate when the power supply is recovered after a momentary power interruption. Design the machine to ensure human safety when operation restarts.
  There is a risk of injury.

⚠ CAUTION

- When an alarm occurs, remove the cause of the alarm and ensure safety. Then reset the alarm or turn the power supply OFF and ON again to restart operation.
  There is a risk of injury or machine damage.
- If the Servo ON signal is input to the SERVOPACK and an alarm is reset, the Servomotor may suddenly restart operation. Confirm that the servo is OFF and ensure safety before you reset an alarm.
  There is a risk of injury or machine damage.
- Always insert a magnetic contactor in the line between the main circuit power supply and the main circuit power supply terminals on the SERVOPACK so that the power supply can be shut OFF at the main circuit power supply.
  If a magnetic contactor is not connected when the SERVOPACK fails, a large current may flow, possibly resulting in fire.
- If an alarm occurs, shut OFF the main circuit power supply.
  There is a risk of fire due to a regenerative resistor overheating as the result of regenerative transistor failure.
- Install a ground fault detector against overloads and short-circuiting or install a molded-case circuit breaker combined with a ground fault detector.
  There is a risk of SERVOPACK failure or fire if a ground fault occurs.
- The holding brake on a Servomotor will not ensure safety if there is the possibility that an external force (including gravity) may move the current position and create a hazardous situation when power is interrupted or an error occurs. If an external force may cause movement, install an external braking mechanism that ensures safety.

■ Disposal Precautions

- Correctly discard the product as stipulated by regional, local, and municipal laws and regulations. Be sure to include these contents in all labelling and warning notifications on the final product as necessary.

■ General Precautions

- Figures provided in this document are typical examples or conceptual representations. There may be differences between them and actual wiring, circuits, and products.
- The products shown in illustrations in this document are sometimes shown without covers or protective guards. Always replace all covers and protective guards before you use the product.
- If you need a new copy of this document because it has been lost or damaged, contact your nearest Yaskawa representative or one of the offices listed on the back of this document.
- This document is subject to change without notice for product improvements, specifications changes, and improvements to the manual itself.
  We will update the document number of the document and issue revisions when changes are made.
- Any and all quality guarantees provided by Yaskawa are null and void if the customer modifies the product in any way. Yaskawa disavows any responsibility for damages or losses that are caused by modified products.

Warranty

◆ Details of Warranty

■ Warranty Period

The warranty period for a product that was purchased (hereinafter called the “delivered product”) is one year from the time of delivery to the location specified by the customer or 18 months from the time of shipment from the Yaskawa factory, whichever is sooner.

■ Warranty Scope

Yaskawa shall replace or repair a defective product free of charge if a defect attributable to Yaskawa occurs during the above warranty period.
This warranty does not cover defects caused by the delivered product reaching the end of its service life and replacement of parts that require replacement or that have a limited service life.

This warranty does not cover failures that result from any of the following causes.

- Improper handling, abuse, or use in unsuitable conditions or in environments not described in product catalogs or manuals, or in any separately agreed-upon specifications
- Causes not attributable to the delivered product itself
- Modifications or repairs not performed by Yaskawa
- Use of the delivered product in a manner in which it was not originally intended
- Causes that were not foreseeable with the scientific and technological understanding at the time of shipment from Yaskawa
- Events for which Yaskawa is not responsible, such as natural or human-made disasters

◆ Limitations of Liability

- Yaskawa shall in no event be responsible for any damage or loss of opportunity to the customer that arises due to failure of the delivered product.
- Yaskawa shall not be responsible for any programs (including parameter settings) or the results of program execution of the programs provided by the user or by a third party for use with programmable Yaskawa products.
- The information described in product catalogs or manuals is provided for the purpose of the customer purchasing the appropriate product for the intended application. The use thereof does not guarantee that there are no infringements of intellectual property rights or other proprietary rights of Yaskawa or third parties, nor does it construe a license.
- Yaskawa shall not be responsible for any damage arising from infringements of intellectual property rights or other proprietary rights of third parties as a result of using the information described in catalogs or manuals.

◆ Suitability for Use

- It is the customer's responsibility to confirm conformity with any standards, codes, or regulations that apply if the Yaskawa product is used in combination with any other products.
- The customer must confirm that the Yaskawa product is suitable for the systems, machines, and equipment used by the customer.
- Consult with Yaskawa to determine whether use in the following applications is acceptable. If use in the application is acceptable, use the product with extra allowance in ratings and specifications, and provide safety measures to minimize hazards in the event of failure.
    - Outdoor use, use involving potential chemical contamination or electrical interference, or use in conditions or environments not described in product catalogs or manuals
    - Nuclear energy control systems, combustion systems, railroad systems, aviation systems, vehicle systems, medical equipment, amusement machines, and installations subject to separate industry or government regulations
    - Systems, machines, and equipment that may present a risk to life or property
    - Systems that require a high degree of reliability, such as systems that supply gas, water, or electricity, or systems that operate continuously 24 hours a day
    - Other systems that require a similar high degree of safety
- Never use the product for an application involving serious risk to life or property without first ensuring that the system is designed to secure the required level of safety with risk warnings and redundancy, and that the Yaskawa product is properly rated and installed.
- The circuit examples and other application examples described in product catalogs and manuals are for reference. Check the functionality and safety of the actual devices and equipment to be used before using the product.
- Read and understand all use prohibitions and precautions, and operate the Yaskawa product correctly to prevent accidental harm to third parties.

◆ Specifications Change

The names, specifications, appearance, and accessories of products in product catalogs and manuals may be changed at any time based on improvements and other reasons. The next editions of the revised catalogs or manuals will be published with updated code numbers. Consult with your Yaskawa representative to confirm the actual specifications before purchasing a product.

Compliance with UL Standards, EU Directives, UK Regulations, and Other Safety Standards

Certification marks for the standards for which the product has been certified by certification bodies are shown on nameplate. Products that do not have the marks are not certified for the standards. Refer to the Servomotor manual for compliant standards of Servomotors.

◆ North American Safety Standards (UL)

Product	Model	North American Safety Standards (UL File No.)
SERVOPACK	SGD7S	UL 61800-5-1 (E147823), CSA C22.2 No.274

Basic Information on SERVOPACKs

1

This chapter provides basic information, including an introduction to the product, and describes how to interpret model numbers and combinations with Servomotors.

1.1 Product Introduction

The SERVOPACKs described in this manual were developed to drive SGM7D motors.

The SGM7D motors were designed for applications that require high torque, easy operation, and high precision. The SERVOPACK will make the most of machine performance in the shortest time possible, thus contributing to improving productivity.

1.2 Model Designations

1.2.1 Interpreting SERVOPACK Model Numbers

SGD7S - 2R8 A A0 A 001 F82

- SGD7S: Σ-7-Series Σ-7S SERVOPACKs
- 2R8: 1st+2nd+3rd digits
- A: 4th digit
- A0: 5th+6th digits
- A: 7th digit
- 001: 8th+9th+10th digits
- F82: 11th+12th+13th digits

1st+2nd+3rd digits Maximum Applicable Motor Capacity

Voltage	Code	Specification
Three-Phase, 200 VAC	2R8*1	0.4 kW
	120*2	1.5 kW
Single-Phase, 100 VAC	2R8	0.4 kW

4th digit Voltage

Code	Specification
A	200 VAC
F	100 VAC

5th+6th digits Interface

Code	Specification
A0	EtherCAT communications reference

7th digit Design Revision Order

A

8th+9th+10th digits Hardware Options Specification

Code	Specification	Applicable Models
000	Without options	All models
001	Rack-mounted	All models
002	Varnished	All models
008	Single-phase, 200-VAC power supply input	SGD7S-120A
020*3	No dynamic brake	SGD7S-2R8A and -2R8F
	External dynamic brake resistor	SGD7S-120A

11th+12th+13th digits FT/EX Specification

Code	Specification
F82	Application function option for special motors, SGM7D motor drive

*1. You can use these models with either a single-phase or three-phase input.

*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model: SGD7S-120A00A008).

*3. Refer to the following manual for details.
Σ-7-Series Σ-7S/Σ-7W SERVOPACK with Dynamic Brake Hardware Option Specifications Product Manual (Manual No.: SIEP S800001 73)

1.2.2 Interpreting Direct Drive Servomotor Model Numbers

SGM7D - 30 F 7 C 4 1

Direct Drive Servomotors: SGM7D

1st+2nd digits | 3rd digit | 4th digit | 5th digit | 6th digit | 7th digit

1st+2nd digits Rated Torque

Code	Specification	Code	Specification	Code	Specification
01	1.30 N·m	18	18.0 N·m	58	58.0 N·m
02	2.06 N·m	20	20.0 N·m	70	70.0 N·m
03	3.00 N·m	24	24.0 N·m	90	90.0 N·m
05	5.00 N·m	28	28.0 N·m	1Z	100 N·m
06	6.00 N·m	30	30.0 N·m	1A	110 N·m
08	8.00 N·m	34	34.0 N·m	1C	130 N·m
09	9.00 N·m	38	38.0 N·m	2B	220 N·m
12	12.0 N·m	45	45.0 N·m	2D	240 N·m

3rd digit Servomotor Outer Diameter

Code	Specification	Code	Specification
F	264-mm dia.	J	150-mm dia.
G	160-mm dia.	K	107-mm dia.
H	116-mm dia.	L	224 mm × 224 mm
I	264-mm dia.		

Note: 1. Direct Drive Servomotors are not available with holding brakes.
2. This information is provided to explain model numbers. It is not meant to imply that models are available for all combinations of codes.

4th digit Serial Encoder

Code	Specification
7	24-bit multiturn absolute encoder
F	24-bit incremental encoder

5th digit Design Revision Order

C

6th digit Flange

Code	Mounting		Servomotor Outer Diameter Code (3rd Digit)						
			F	G	H	I	J	K	L
4	Non-load side	With cable on side	✓	✓	✓	-	-	-	✓
5	Non-load side	With cable on bottom	✓	✓*	-	✓	✓	✓	-

✓: Applicable models.
* SGM7D-01G and -05G are not available with a cable extending from the bottom.

7th digit Options

Code	Specification
1	Standard mechanical precision
2	High mechanical precision*

* The SGM7D-01G, -05G, and -03H are available only with high mechanical precision.

◆ Manufactured Models

Rated Torque N·m	Servomotor Outer Diameter						
	F (264-mm dia.)	G (160-mm dia.)	H (116-mm dia.)	I (264-mm dia.)	J (150-mm dia.)	K (107-mm dia.)	L (224 mm × 224 mm)

1.3 Combinations of SERVOPACKs and Servomotors

Direct Drive Servomotor Model	Capacity	SERVOPACK Model
		SGD7S-
SGM7D-30F	188 W	120A
SGM7D-58F	364 W	
SGM7D-90F	565 W	
SGM7D-1AF	691 W	
SGM7D-01G	16 W	2R8A and 2R8F
SGM7D-05G	63 W	
SGM7D-08G	101 W	120A
SGM7D-18G	226 W	
SGM7D-24G	302 W	
SGM7D-34G	320 W	
SGM7D-45G	565 W	
SGM7D-03H	38 W	2R8A and 2R8F
SGM7D-28I	264 W	120A
SGM7D-70I	440 W	
SGM7D-1ZI	628 W	
SGM7D-1CI	817 W	
SGM7D-2BI	691 W	
SGM7D-2DI	754 W	
SGM7D-06J	75 W	
SGM7D-09J	113 W	
SGM7D-18J	226 W	
SGM7D-20J	251 W	
SGM7D-38J	358 W	
SGM7D-02K	52 W	2R8A and 2R8F
SGM7D-06K	151 W	
SGM7D-08K	201 W	
SGM7D-06L	113 W	
SGM7D-12L	226 W	
SGM7D-30L	565 W	120A

1.4 Functions

This section lists the functions provided by SERVOPACKs. Refer to the following manuals for details on the functions.
Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)
Functions in bold boxes in the functions tables are restricted if the above SERVOPACKs are used. Refer to the following section for details on restrictions to these functions.
1.4.2 Function Application Restrictions on page 1-8

1.4.1 SERVOPACK Functions

- Functions Related to the Machine

Functions
Power Supply Type Settings for the Main Circuit and Control Circuit
Automatic Detection of Connected Motor
Motor Direction Setting
Setting the Linear Encoder Pitch
Writing Linear Servomotor Parameters
Selecting the Phase Sequence for a Linear Servomotor
Polarity Sensor Setting
Polarity Detection
Overtravel Function and Settings
Holding Brake
Motor Stopping Method for Servo OFF and Alarms
Resetting the Absolute Encoder
Setting the Origin of the Absolute Encoder
Setting the Regenerative Resistor Capacity
Operation for Momentary Power Interruptions
SEMI F47 Function
Motor Maximum Speed Setting
Software Limits
Multiturn Limit Setting
Adjustment of Motor Current Detection Signal Offset
Forcing the Motor to Stop
Overheat Protection
Speed Ripple Compensation
Current Control Mode Selection
Current Gain Level Setting
Speed Detection Method Selection
Fully-closed Loop Control
Safety Function

- Functions Related to the Host Controller

Function
Electronic Gear Settings
I/O Signal Allocations
ALM (Servo Alarm) Signal
/WARN (Warning) Signal
/TGON (Rotation Detection) Signal
/S-RDY (Servo Ready) Signal
/V-CMP (Speed Coincidence Detection) Signal
/COIN (Positioning Completion) Signal

Continued on next page.

Continued from previous page.

Function
/NEAR (Near) Signal
Speed Limit during Torque Control
/VLT (Speed Limit Detection) Signal
Encoder Divided Pulse Output
Selecting Torque Limits
Vibration Detection Level Initialization
Alarm Reset
Replacing the Battery
Setting the Position Deviation Overflow Alarm Level

- Functions to Achieve Optimum Motions

Function
Tuning-less Function
Autotuning without a Host Reference
Autotuning with a Host Reference
Custom Tuning
Anti-Resonance Control Adjustment
Vibration Suppression
Gain Selection
Friction Compensation
Gravity Compensation
Backlash Compensation
Model Following Control
Compatible Adjustment Functions
Mechanical Analysis
Easy FFT

- Functions for Trial Operation during Setup

Function
Software Reset
Trial Operation for the Servomotor without a Load
Program Jogging
Origin Search
Test without a Motor
Monitoring Machine Operation Status and Signal Waveforms

- Functions for Inspection and Maintenance

Function
Write Prohibition Setting for Parameters
Initializing Parameter Settings
Automatic Detection of Connected Motor
Monitoring Product Information
Monitoring Product Life

Alarm Tracing

1.4.2 Function Application Restrictions

The following functional restrictions apply when you use the SERVOPACKs.

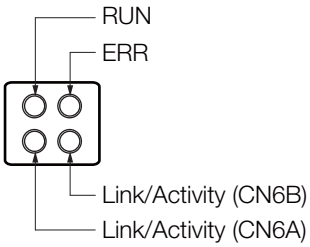
Function	Restriction
Setting the Linear Encoder Pitch	Cannot be used.
Writing Linear Servomotor Parameters	Cannot be used.
Selecting the Phase Sequence for a Linear Servomotor	Cannot be used.
Polarity Sensor Setting	Cannot be used.
Polarity Detection	Cannot be used.
Speed Ripple Compensation	Cannot be used. Do not change the following default setting: Pn423 = n.□□□0.
Tuning-less Function	Cannot be used if the load moment of inertia ratio is 10 or greater.

1.5 SigmaWin+

To use the SigmaWin+, a model information file for the SERVOPACK must be added to SigmaWin+ version 7.

1.6 EtherCAT Communications LED Indicators

This diagram shows details of the EtherCAT communications LED indicators.



1.6.1 RUN

The RUN indicator shows the status of EtherCAT communications.

LED Indicator		Description
Status	Pattern	
Off	Constantly off.	EtherCAT communications are in INIT state.
Blinking		EtherCAT communications are in PRE-OPERATIONAL state.
Single flash		EtherCAT communications are in SAFE-OPERATIONAL state.
On	Constantly on.	EtherCAT communications are in OPERATIONAL state.
Flickering		EtherCAT communications have been started but are not yet in INIT state.

1.6.2 ERR

The ERR indicator shows the error status of EtherCAT communications.

LED Indicator		Description
Status	Pattern	
Off	Constantly off.	The EtherCAT communications are in working condition.
Flickering		Booting Error was detected.
Blinking		State change commanded by master is impossible due to register or object settings.
Single flash		Synchronization Error, the EtherCAT Network Module enters SAFE-OPERATIONAL state automatically.
Double flash		An application (Sync Manager) watchdog timeout has occurred.
On	Constantly on.	A PDI Watchdog timeout has occurred.

1.6.3 Link/Activity

The Link/Activity indicators show whether Communications Cables are connected to the CN6A and CN6B connectors and whether communications are active.

LED Indicator		Description
Status	Pattern	
Off	Constantly off.	A Communications Cable is not physically connected. A EtherCAT controller is not started up.
Flickering		Data are being exchanged.
On	Constantly on.	A Communications Cable is physically connected, but no data being exchanged.

1.6.3 Link/Activity

SERVOPACK Ratings and Specifications

2

This chapter provides information required to select SERVOPACKs, such as specifications.

2.1 Ratings

This section gives the ratings of SERVOPACKs.

2.1.1 Three-Phase, 200 VAC

Model SGD7S-			2R8A	120A
Maximum Applicable Motor Capacity [kW]			0.4	1.5
Continuous Output Current [Arms]			2.8	11.6
Instantaneous Maximum Output Current [Arms]			9.3	28
Main Circuit	Power Supply		200 VAC to 240 VAC, 50 Hz/60 Hz	
	Permitted Voltage Fluctuation		-15% to +10%	
	Input Current [Arms]*		2.5	7.3
Control	Power Supply		200 VAC to 240 VAC, 50 Hz/60 Hz	
	Permitted Voltage Fluctuation		-15% to +10%	
	Input Current [Arms]*		0.2	0.2
Power Supply Capacity [kVA]*			1.0	3.2
Power Loss*	Main Circuit Power Loss [W]		22.5	72.6
	Control Circuit Power Loss [W]		12	15
	Built-in Regenerative Resistor Power Loss [W]		–	12
	Total Power Loss [W]		34.5	97.6
Regenerative Resistor	Built-In Regenerative Resistor	Resistance [Ω]	–	20
		Capacity [W]	–	60
	Minimum Allowable External Resistance [Ω]		40	20
Overvoltage Category			III	

* This is the net value at the rated load.

2.1.2 Single-Phase, 200 VAC

Model SGD7S-			2R8A	120A
Maximum Applicable Motor Capacity [kW]			0.4	1.5
Continuous Output Current [Arms]			2.8	11.6
Instantaneous Maximum Output Current [Arms]			9.3	28
Main Circuit	Power Supply		200 VAC to 240 VAC, 50 Hz/60 Hz	
	Permitted Voltage Fluctuation		-15% to +10%	
	Input Current [Arms]*		5.0	16
Control	Power Supply		200 VAC to 240 VAC, 50 Hz/60 Hz	
	Permitted Voltage Fluctuation		-15% to +10%	
	Input Current [Arms]*		0.2	0.25
Power Supply Capacity [kVA]*			1.2	4.0
Power Loss*	Main Circuit Power Loss [W]		23.7	71.8
	Control Circuit Power Loss [W]		12	16
	Built-in Regenerative Resistor Power Loss [W]		–	12
	Total Power Loss [W]		35.7	103.8
Regenerative Resistor	Built-In Regenerative Resistor	Resistance [Ω]	–	12
		Capacity [W]	–	60
	Minimum Allowable External Resistance [Ω]		40	12
Overvoltage Category			III	

* This is the net value at the rated load.

2.1.3 Single-Phase, 100 VAC

SGD7S-		2R8F
Maximum Applicable Motor Capacity [kW]		0.4
Continuous Output Current [Arms]		2.8
Instantaneous Maximum Output Current [Arms]		9.3
Main Circuit	Power Supply	100 VAC to 120 VAC, 50 Hz/60 Hz
	Permitted Voltage Fluctuation	-15% to +10%
	Input Current [Arms]*	10
Control	Power Supply	100 VAC to 120 VAC, 50 Hz/60 Hz
	Permitted Voltage Fluctuation	-15% to +10%
	Input Current [Arms]*	0.38
Power Supply Capacity [kVA]*		1.4
Power Loss*	Main Circuit Power Loss [W]	26.2
	Control Circuit Power Loss [W]	12
	Total Power Loss [W]	38.2
Regenerative Resistor	Minimum Allowable Resistance [Ω]	40
Overvoltage Category		III

* This is the net value at the rated load.

2.2 SERVOPACK Overload Protection Characteristics

The overload protection characteristics of the SERVOPACKs are the same as the standard Σ-7-Series SERVOPACKs. Refer to the following manual for details.

📖 Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)

2.3 Specifications

The product specifications are given below.

Item		Specification
Control Method		IGBT-based PWM control, sine wave current drive
Feedback		Serial encoder: 24 bits (Incremental encoder/absolute encoder)
Environmental Conditions	Surrounding Air Temperature*1	-5°C to 55°C (With derating, usage is possible between 55°C and 60°C.) Refer to the following manual for derating specifications. Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)
	Storage Temperature	-20°C to 85°C
	Surrounding Air Humidity	95% relative humidity max. (with no freezing or condensation)
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s^2
	Shock Resistance	19.6 m/s^2
	Degree of Protection	Degree: IP20 — SERVOPACK Model: SGD7S-: 2R8A, 120A (Three-phase, 200VAC input), 2R8F Degree: IP10 — SERVOPACK Model: SGD7S-: 120A00A008 (Single-phase, 200VAC)
	Pollution Degree	2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
	Altitude*1	1,000 m max. (With derating, usage is possible between 1,000 m and 2,000 m.) Refer to the following manual for derating specifications. Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity, noise, strong electromagnetic/magnetic fields, or radioactivity
Compliant Standards		Refer to the following section for details. *Compliance with UL Standards, EU Directives, UK Regulations, and Other Safety Standards* on page xxvii
Mounting		Base-mounted
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*2	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)
		0% of rated speed max. (for a load fluctuation of ±10%)
		±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)
	Torque Control Precision (Repeatability)	±1%
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)

Continued on next page.

Continued from previous page.

Item			Specification
I/O Signals	Encoder Divided Pulse Output		Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.
	Sequence Input Signals	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 7 (Input method: Sink inputs or source inputs)
			Input Signals • P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals • /Probe1 (Probe 1 Latch Input) signal • /Probe2 (Probe 2 Latch Input) signal • /Home (Home Switch Input) signal • /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals • FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.
	Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 (A photocoupler output (isolated) is used.)
			Output signal: ALM (Servo Alarm) signal
		Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 3 (A photocoupler output (isolated) is used.)
			Output Signals • /COIN (Positioning Completion) signal • /V-CMP (Speed Coincidence Detection) signal • /TGON (Rotation Detection) signal • /S-RDY (Servo Ready) signal • /CLT (Torque Limit Detection) signal • /VLT (Speed Limit Detection) signal • /BK (Brake) signal • /WARN (Warning) signal • /NEAR (Near) signal A signal can be allocated and the positive and negative logic can be changed.
Communications	RS-422A Communications (CN502)	Interfaces	Digital Operator (JUSP-OP05A-1-E) A JUSP-JC001 Communications Unit is required to connect to a Digital Operator (JUSP-OP05A-1-E).
		1:N Communications	Up to N = 15 stations possible for RS-422A port
		Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interface	Personal computer (with SigmaWin+)
		Communications Standard	Conforms to USB2.0 standard (12 Mbps).
Displays/Indicators			CHARGE, PWR, CN, RUN, ERR, and L/A (A and B) indicators, and one-digit seven-segment display
EtherCAT Communications Setting Switches			EtherCAT secondary address (S1 and S2), 16 positions

Continued on next page.

Continued from previous page.

Item		Specification
EtherCAT Communications	Compliant Communications Standards	IEC 61158 Type 12, IEC 61800-7 CiA402 Drive Profile
	Physical Layer	100BASE-TX (IEEE 802.3)
	Communications Connectors	CN6A (RJ45): ETHERCAT IN (EtherCAT signal input connector) CN6B (RJ45): ETHERCAT OUT (EtherCAT signal output connector)
	Cable	Category 5, 4 shielded twisted pairs The cable is automatically detected with AUTO MDIX.
	Sync Manager	SM0: Mailbox output, SM1: Mailbox input, SM2: Process data output, and SM3: Process data input
	FMMU	FMMU 0: Mapped in process data output (RxPDO) area. FMMU 1: Mapped in process data input (TxPDO) area. FMMU 2: Mapped to mailbox status.
	EtherCAT Commands (Data Link Layer)	APRD, FPRD, BRD, LRD, APWR, FPWR, BWR, LWR, ARMW, and FRMW (APRW, FPRW, BRW, and LRW commands are not supported.)
	Process Data	Assignments can be changed with PDO mapping.
	Mailbox (CoE)	Emergency messages, SDO requests, SDO responses, and SDO information (TxPDO/RxPDO and remote TxPDO/RxPDO are not supported.)
	Distributed Clocks	Free-Run Mode and DC Mode (Can be switched.) Applicable DC cycles: 125 µs to 4 ms in 125-µs increments
	Slave Information Interface	256 bytes (read-only)
	Indicators	EtherCAT communications in progress: Link/Activity x 2 EtherCAT communications status: RUN x 1 EtherCAT error status: ERR x 1
CiA402 Drive Profile		• Homing Mode • Profile Position Mode • Interpolated Position Mode • Profile Velocity Mode • Profile Torque Mode • Cyclic Synchronous Position Mode • Cyclic Synchronous Velocity Mode • Cyclic Synchronous Torque Mode • Touch Probe Function • Torque Limit Function
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in Refer to the following catalog for details. AC Servo Drives Σ-7-Series (Manual No.: KAEP S800001 23)
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Compliant Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-Closed Modules

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable surrounding range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed - Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

Maintenance

3

This chapter provides information on the meaning of, causes of, and corrections for alarms and warnings.
In this chapter, the object index number (2□□□h) for EtherCAT communications is given after the SERVOPACK parameter number (Pn□□□).

3.1 Alarm Displays

To check an alarm that occurs in the SERVOPACK, use one of the following methods. However, if no alarm number appears on the panel display, this indicates a SERVOPACK system error. Replace the SERVOPACK.

Panel display on SERVOPACK	If there is an alarm, the code will be displayed one character at a time, as shown below. Example: Alarm A.020 Digital Operator	The alarm code will be displayed.
Statusword (6041h)	Bit 3 (*fault*) in the *statusword* will change to 1. (Bit 3 is 0 during normal operation.)
Error Code (603Fh)	A current alarm code is stored in object 603Fh.
Emergency message	The Controller is notified of any alarm that occurs. (Notification may not be possible if EtherCAT communications are unstable.)

This section provides a list of the alarms that may occur and the causes of and corrections for those alarms.

3.1.1 List of Alarms

The following alarm tables gives the alarm name, alarm meaning, alarm stopping method, and alarm reset possibility in order of the alarm codes.

Servomotor Stopping Method for Alarms

Refer to the following manual for information on the Servomotor stopping method for alarms.

Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)

Alarm Reset Possibility

Yes: You can use an alarm reset to clear the alarm. However, this assumes that the cause of the alarm has been removed.
No: You cannot clear the alarm.

List of Alarms

Alarm Code	Alarm Name	Alarm Meaning	Servomotor Stopping Method	Alarm Reset Possible?
020h	Parameter Checksum Error	There is an error in the parameter data in the SERVOPACK.	Gr.1	No
021h	Parameter Format Error	There is an error in the parameter data format in the SERVOPACK.	Gr.1	No
022h	System Checksum Error	There is an error in the parameter data in the SERVOPACK.	Gr.1	No
024h	System Alarm	An internal program error occurred in the SERVOPACK.	Gr.1	No
025h	System Alarm	An internal program error occurred in the SERVOPACK.	Gr.1	No

Continued on next page.

Continued from previous page.

Alarm Code	Alarm Name	Alarm Meaning	Servomotor Stopping Method	Alarm Reset Possible?
030h	Main Circuit Detector Error	There is an error in the detection data for the main circuit.	Gr.1	Yes
040h	Parameter Setting Error	A parameter setting is outside of the setting range.	Gr.1	No
041h	Encoder Output Pulse Setting Error	The setting of Pn212 (2212h) (Encoder Output Pulses) or Pn281 (2281h) (Encoder Output Resolution) is outside of the setting range or does not satisfy the setting conditions.	Gr.1	No
042h	Parameter Combination Error	The combination of some parameters exceeds the setting range.	Gr.1	No
044h	Semi-Closed/Fully-Closed Loop Control Parameter Setting Error	The settings of the Option Module and Pn002 = n.X□□□ (External Encoder Usage) do not match.	Gr.1	No
050h	Combination Error	The capacities of the SERVOPACK and Servomotor do not match.	Gr.1	Yes
051h	Unsupported Device Alarm	An unsupported device was connected.	Gr.1	No
070h	Motor Type Change Detected	The connected motor is a different type of motor from the previously connected motor.	Gr.1	No
0b0h	Invalid Servo ON Command Alarm	The Servo ON command (Enable Operation command) was sent from the host controller after a utility function that turns ON the Servomotor was executed.	Gr.1	Yes
100h	Overcurrent Detected	An overcurrent flowed through the power transformer or the heat sink overheated.	Gr.1	No
101h	Motor Overcurrent Detected	The current to the motor exceeded the allowable current.	Gr.1	No
300h	Regeneration Error	There is an error related to regeneration.	Gr.1	Yes
320h	Regenerative Overload	A regenerative overload occurred.	Gr.2	Yes
330h	Main Circuit Power Supply Wiring Error	• The AC power supply input setting or DC power supply input setting is not correct. • The power supply wiring is not correct.	Gr.1	Yes
400h	Overvoltage	The main circuit DC voltage is too high.	Gr.1	Yes
410h	Undervoltage	The main circuit DC voltage is too low.	Gr.2	Yes
510h	Overspeed	The motor exceeded the maximum speed.	Gr.1	Yes
511h	Encoder Output Pulse Overspeed	The pulse output speed for the setting of Pn212 (2212h) (Number of Encoder Output Pulses) was exceeded.	Gr.1	Yes
520h	Vibration Alarm	Abnormal oscillation was detected in the motor speed.	Gr.1	Yes
521h	Autotuning Alarm	Vibration was detected during autotuning for the tuning-less function.	Gr.1	Yes
550h	Maximum Speed Setting Error	The setting of Pn385 (2385h) (Maximum Motor Speed) is greater than the maximum motor speed.	Gr.1	Yes
710h	Instantaneous Overload	The Servomotor was operating for several seconds to several tens of seconds under a torque that largely exceeded the rating.	Gr.2	Yes
720h	Continuous Overload	The Servomotor was operating continuously under a torque that exceeded the rating.	Gr.1	Yes
730h	Dynamic Brake Overload	When the dynamic brake was applied, the rotational or linear kinetic energy exceeded the capacity of the dynamic brake resistor.	Gr.1	Yes
731h				

Continued on next page.

Continued from previous page.

Alarm Code	Alarm Name	Alarm Meaning	Servomotor Stopping Method	Alarm Reset Possible?
740h	Inrush Current Limiting Resistor Overload	The main circuit power supply was frequently turned ON and OFF.	Gr.1	Yes
7A1h	Internal Temperature Error 1 (Control Board Temperature Error)	The surrounding temperature of the control PCB is abnormal.	Gr.2	Yes
7A2h	Internal Temperature Error 2 (Power Board Temperature Error)	The surrounding temperature of the power PCB is abnormal.	Gr.2	Yes
7A3h	Internal Temperature Sensor Error	An error occurred in the temperature sensor circuit.	Gr.2	No
7Abh	SERVOPACK Built-in Fan Stopped	The fan inside the SERVOPACK stopped.	Gr.1	Yes
810h	Encoder Backup Alarm	The power supplies to the encoder all failed and the position data was lost.	Gr.1	No
820h	Encoder Checksum Alarm	There is an error in the checksum results for encoder memory.	Gr.1	No
830h	Encoder Battery Alarm	The battery voltage was lower than the specified level after the control power supply was turned ON.	Gr.1	Yes
840h	Encoder Data Alarm	There is an internal data error in the encoder.	Gr.1	No
850h	Encoder Overspeed	The encoder was operating at high speed when the power was turned ON.	Gr.1	No
860h	Encoder Overheated	The internal temperature of encoder is too high.	Gr.1	No
8A0h	External Encoder Error	An error occurred in the external encoder.	Gr.1	Yes
8A1h	External Encoder Module Error	An error occurred in the Serial Converter Unit.	Gr.1	Yes
8A2h	External Incremental Encoder Sensor Error	An error occurred in the external encoder.	Gr.1	Yes
8A3h	External Absolute Encoder Position Error	An error occurred in the position data of the external encoder.	Gr.1	Yes
8A5h	External Encoder Overspeed	An overspeed error occurred in the external encoder.	Gr.1	Yes
8A6h	External Encoder Overheated	An overheating error occurred in the external encoder.	Gr.1	Yes
A10h	EtherCAT DC Synchronization Error *1	The SERVOPACK and Sync0 events cannot be synchronized.	Gr.2*2	Yes
A11h	EtherCAT State Error	The EtherCAT AL does not move to the Operational state when the DS402 drive is in Operation Enabled state.	Gr.2*2	Yes
A12h	EtherCAT Outputs Data Synchronization Error *1	The process data reception events and Sync0 events cannot be synchronized. (Process data communications failed.)	Gr.2	Yes
A20h	Parameter Setting Error	A parameter setting exceeds the setting range.	Gr.1	No
A40h	System Initialization Error	Initialization failed when the power supply was turned ON.	Gr.1	No
A41h	Communication Device Initialization Error	An error occurred during ESC initialization.	Gr.1	No
A47h	Loading Servo Information Error	Loading SERVOPACK information failed.	Gr.1	No
A48h	EEPROM Parameter Data Error	A checksum error occurred in the EEPROM.	Gr.1	No
b33h	Current Detection Error 3	An error occurred in the current detection circuit.	Gr.1	No

Continued on next page.

Continued from previous page.

Alarm Code	Alarm Name	Alarm Meaning	Servomotor Stopping Method	Alarm Reset Possible?
bF0h	System Alarm 0	Internal program error 0 occurred in the SERVOPACK.	Gr.1	No
bF1h	System Alarm 1	Internal program error 1 occurred in the SERVOPACK.	Gr.1	No
bF2h	System Alarm 2	Internal program error 2 occurred in the SERVOPACK.	Gr.1	No
bF3h	System Alarm 3	Internal program error 3 occurred in the SERVOPACK.	Gr.1	No
bF4h	System Alarm 4	Internal program error 4 occurred in the SERVOPACK.	Gr.1	No
bF5h	System Alarm 5	Internal program error 5 occurred in the SERVOPACK.	Gr.1	No
bF6h	System Alarm 6	Internal program error 6 occurred in the SERVOPACK.	Gr.1	No
bF7h	System Alarm 7	Internal program error 7 occurred in the SERVOPACK.	Gr.1	No
bF8h	System Alarm 8	Internal program error 8 occurred in the SERVOPACK.	Gr.1	No
C10h	Servomotor Out of Control	The Servomotor ran out of control.	Gr.1	Yes
C80h	Encoder Clear Error or Multiturn Limit Setting Error	The multiturn data for the absolute encoder was not correctly cleared or set.	Gr.1	No
C90h	Encoder Communications Error	Communications between the encoder and SERVOPACK is not possible.	Gr.1	No
C91h	Encoder Communications Position Data Acceleration Rate Error	An error occurred in calculating the position data of the encoder.	Gr.1	No
C92h	Encoder Communications Timer Error	An error occurred in the communications timer between the encoder and SERVOPACK.	Gr.1	No
CA0h	Encoder Parameter Error	The parameters in the encoder are corrupted.	Gr.1	No
Cb0h	Encoder Echoback Error	The contents of communications with the encoder are incorrect.	Gr.1	No
CC0h	Multiturn Limit Disagreement	Different multiturn limits have been set in the encoder and the SERVOPACK.	Gr.1	No
CF1h	Reception Failed Error in Feedback Option Module Communications	Receiving data from the Feedback Option Module failed.	Gr.1	No
CF2h	Timer Stopped Error in Feedback Option Module Communications	An error occurred in the timer for communications with the Feedback Option Module.	Gr.1	No
d00h	Position Deviation Overflow	The setting of Pn520 (2520h) (Excessive Position Deviation Alarm Level) was exceeded by the position deviation.	Gr.1	Yes
d01h	Position Deviation Overflow Alarm at Servo ON	The servo was turned ON after the position deviation exceeded the setting of Pn526 (2526h) (Excessive Position Deviation Alarm Level at Servo ON) while the servo was OFF.	Gr.1	Yes

Continued on next page.

Continued from previous page.

Alarm Code	Alarm Name	Alarm Meaning	Servomotor Stopping Method	Alarm Reset Possible?
d02h	Position Deviation Overflow Alarm for Speed Limit at Servo ON	If position deviation remains in the deviation counter, the setting of Pn529 (2529h) or Pn584 (2584h) (Speed Limit Level at Servo ON) will limit the speed when the servo is turned ON. This alarm occurs if a position reference is input and the setting of Pn520 (2520h) (Excessive Position Deviation Alarm Level) is exceeded before the limit is cleared.	Gr.2	Yes
d10h	Motor-Load Position Deviation Overflow	There was too much position deviation between the motor and load during fully-closed loop control.	Gr.2	Yes
E00h	EtherCAT Module Interface Initialization Timeout Error	Communications initialization failed between the SERVOPACK and the EtherCAT Module.	Gr.2	Yes
E02h	EtherCAT Internal Synchronization Error 1	A synchronization error occurred during EtherCAT communications with the SERVOPACK.	Gr.1	Yes
E03h	EtherCAT Module Interface Communications Data Error	There is an error in the communications data between the SERVOPACK and the EtherCAT Module.	Gr.1	Yes
E72h	Feedback Option Module Detection Failure	Detection of the Feedback Option Module failed.	Gr.1	No
E75h*2	Unsupported Feedback Option Module Alarm	An unsupported Feedback Option Module was connected.	Gr.1	No
EA0h	Command-Option IF Servo Unit Initial Error	Communications could not be initialized between the SERVOPACK and EtherCAT (CoE) Network Module within 10 seconds.	Gr.1	No
EA1h	Command-Option IF Memory Check Error	An error occurred in communications memory between the SERVOPACK and EtherCAT (CoE) Network Module.	Gr.1	No
EA2h	Command-Option IF Servo Synchronization Error *1	Communications could not be synchronized between the SERVOPACK and EtherCAT (CoE) Network Module.	Gr.1	Yes
EA3h	Command-Option IF Servo Data Error *1	An error occurred in communications data between the SERVOPACK and EtherCAT (CoE) Network Module.	Gr.1	Yes
Eb1h	Safety Function Signal Input Timing Error	An error occurred in the input timing of the safety function signal.	Gr.1	No
Ed1h	Command Execution Timeout	A timeout error occurred for a EtherCAT command.	Gr.2	Yes
F10h	Power Supply Line Open Phase	The voltage was low for more than one second for phase R, S, or T when the main power supply was ON.	Gr.2	Yes
FL-1*3	System Alarm	An internal program error occurred in the SERVOPACK.	–	No
FL-2*3				
FL-3*3				
FL-4*3				
FL-5*3				
FL-6*3				

Continued on next page.

Continued from previous page.

Alarm Code	Alarm Name	Alarm Meaning	Servomotor Stopping Method	Alarm Reset Possible?
CPF00	Digital Operator Communications Error 1	Communications were not possible between the Digital Operator (model: JUSP-OP05A-1-E) and the SERVOPACK (e.g., a CPU error occurred).	–	No
CPF01	Digital Operator Communications Error 2			

*1. The EtherCAT communications state moved to SAFEOP after an alarm was detected.
*2. This alarm can occur when a Fully-Close Option Module is mounted.
*3. These alarms are not stored in the alarm history. They are only displayed on the panel display.

3.1.2 Troubleshooting Alarms

The causes of and corrections for the alarm are given in the following table. Contact your Yaskawa representative if you cannot solve a problem with the correction given in the table.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
020h: Parameter Checksum Error (There is an error in the parameter data in the SERVOPACK.)	The power supply voltage suddenly dropped.	Measure the power supply voltage.	Set the power supply voltage within the specified range, and initialize the parameter settings.	*1
	The power supply was shut OFF while writing parameter settings.	Check the timing of shutting OFF the power supply.	Initialize the parameter settings and then set the parameters again.	
	The number of times that parameters were written exceeded the limit.	Check to see if the parameters were frequently changed from the host controller.	The SERVOPACK may be faulty. Replace the SERVOPACK. Reconsider the method for writing the parameters.	–
	A malfunction was caused by noise from the AC power supply, ground, static electricity, or other source.	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, noise may be the cause.	Implement countermeasures against noise.	*1
	Gas, water drops, or cutting oil entered the SERVOPACK and caused failure of the internal components.	Check the installation conditions.	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
	A failure occurred in the SERVOPACK.	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may have failed.	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
021h: Parameter Format Error (There is an error in the parameter data format in the SERVOPACK.)	The software version of the SERVOPACK that caused the alarm is older than the software version of the parameters specified to write.	Read the product information to see if the software versions are the same. If they are different, it could be the cause of the alarm.	Write the parameters from another SERVOPACK with the same model and the same software version, and then turn the power OFF and ON again.	*1
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
022h: System Checksum Error (There is an error in the parameter data in the SERVOPACK.)	The power supply voltage suddenly dropped.	Measure the power supply voltage.	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
	The power supply was shut OFF while setting a utility function.	Check the timing of shutting OFF the power supply.	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
	A failure occurred in the SERVOPACK.	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may have failed.	The SERVOPACK may be faulty. Replace the SERVOPACK.	–

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
024h: System Alarm (An internal program error occurred in the SERVOPACK.)	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
025h: System Alarm (An internal program error occurred in the SERVOPACK.)	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
030h: Main Circuit Detector Error	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
	The jumper between the DC Reactor terminals (⊖1 and ⊖2) was removed or there is faulty contact.	–	Correct the wiring between the DC Reactor terminals.	–
	The cable between the DC Reactor and SERVOPACK is not wired correctly or there is a faulty contact.			
040h: Parameter Setting Error (A parameter setting is outside of the setting range.)	The SERVOPACK and Servomotor capacities do not match each other.	Check the combination of the SERVOPACK and Servomotor capacities.	Select a proper combination of SERVOPACK and Servomotor capacities.	page 1-5
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
	A parameter setting is outside of the setting range.	Check the setting ranges of the parameters that have been changed.	Set the parameters to values within the setting ranges.	–
041h: Encoder Output Pulse Setting Error	The setting of Pn212 (2212h) (Number of Encoder Output Pulses) is outside of the setting range or does not satisfy the setting conditions.	Check the setting of Pn212 (2212h).	Correct the setting of Pn212 (2212h).	*1
042h: Parameter Combination Error	The speed of program jogging went below the setting range when Pn533 (2533h) (Program Jogging Movement Speed) was changed.	Check to see if the detection conditions*2 are satisfied.	Increase the setting of Pn533 (2533h).	*1
044h: Semi-Closed/ Fully-Closed Loop Control Parameter Setting Error	The setting of the Fully-closed Module does not match the setting of Pn002 (2002h) = n.X□□□ (External Encoder Usage).	Check the setting of Pn002 (2002h) = n.X□□□.	Make sure that the setting of the Fully-closed Module agrees with the setting of Pn002 (2002h) = n.X□□□.	*1

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
050h: Combination Error (The capacities of the SERVOPACK and Servomotor do not match.)	The SERVOPACK and Servomotor capacities do not match each other.	Confirm that the following condition is met: 1/4 ≤ (Servomotor capacity/SERVOPACK capacity) ≤ 4	Select a proper combination of the SERVOPACK and Servomotor capacities.	page 1-5
	A failure occurred in the encoder.	Replace the encoder and check to see if the alarm still occurs.	Replace the Servomotor or encoder.	–
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
051h: Unsupported Device Alarm	An unsupported Serial Converter Unit or encoder (e.g., an external encoder) is connected to the SERVOPACK.	Check the product combination specifications.	Change to a correct combination of models.	–
070h: Motor Type Change Detected (The connected motor is a different type of motor from the previously connected motor.)	A Rotary Servomotor was removed and a Linear Servomotor was connected.	–	Execute a Reset Motor Type Alarm operation. Then, turn the power supply to the SERVOPACK OFF and ON again.	*1
	A Linear Servomotor was removed and a Rotary Servomotor was connected.	–	Set the parameters for a Rotary Servomotor and reset the motor type alarm. Then, turn the power supply to the SERVOPACK OFF and ON again.	*1
0b0h: Invalid Servo ON Command Alarm	The Servo ON command (Enable Operation command) was sent from the host controller after a utility function that turns ON the Servomotor was executed.	–	Turn the power supply to the SERVOPACK OFF and ON again. Or, execute a software reset.	*1

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
100h: Overcurrent Detected (An overcurrent flowed through the power transformer or the heat sink overheated.)	The Main Circuit Cable is not wired correctly or there is faulty contact.	Check the wiring.	Correct the wiring.	*1
	There is a short-circuit or ground fault in a Main Circuit Cable.	Check for short-circuits across Servomotor phases U, V, and W, or between the ground and Servomotor phases U, V, and W.	The cable may be short-circuited. Replace the cable.	
	There is a short-circuit or ground fault inside the Servomotor.	Check for short-circuits across Servomotor phases U, V, and W, or between the ground and Servomotor phases U, V, or W.	The Servomotor may be faulty. Replace the Servomotor or encoder.	
	There is a short-circuit or ground fault inside the SERVOPACK.	Check for short-circuits across the Servomotor connection terminals U, V, and W on the SERVOPACK, or between the ground and terminals U, V, or W.	The SERVOPACK may be faulty. Replace the SERVOPACK.	
	The regenerative resistor is not wired correctly or there is faulty contact.	Check the wiring.	Correct the wiring.	
	The dynamic brake (DB, emergency stop executed from the SERVOPACK) was frequently activated, or a DB overload alarm occurred.	Check the power consumed by the DB resistor to see how frequently the DB is being used. Or, check the alarm display to see if a DB overload alarm (A.730 or A.731) has occurred.	Change the SERVOPACK model, operating methods, or the mechanisms so that the dynamic brake does not need to be used so frequently.	–

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
100h: Overcurrent Detected (An overcurrent flowed through the power transformer or the heat sink overheated.)	The regenerative processing capacity was exceeded.	Check the regenerative load ratio in the SigmaWin+ Motion Monitor Tab Page to see how frequently the regenerative resistor is being used.	Recheck the operating conditions and load.	*3
	The SERVOPACK regenerative resistance is too small.	Check the regenerative load ratio in the SigmaWin+ Motion Monitor Tab Page to see how frequently the regenerative resistor is being used.	Change the regenerative resistance to a value larger than the SERVOPACK minimum allowable resistance.	–
	A heavy load was applied while the Servomotor was stopped or running at a low speed.	Check to see if the operating conditions exceed Servo Drive specifications.	Reduce the load applied to the Servomotor. Or, increase the operating speed.	–
	A malfunction was caused by noise.	Improve the noise environment, e.g. by improving the wiring or installation conditions, and check to see if the alarm still occurs.	Implement countermeasures against noise, such as correct wiring of the FG. Use an FG wire size equivalent to the SERVOPACK's main circuit wire size.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
300h: Regeneration Error	When using the built-in regenerative resistor, the jumper between the regenerative resistor terminals (B2 and B3) was removed.	Check to see if the jumper is connected between power supply terminals B2 and B3.*4	Correctly connect a jumper.	*1
	The External Regenerative Resistor is not wired correctly, or was removed or disconnected.	Check the wiring of the External Regenerative Resistor.*4	Correct the wiring of the External Regenerative Resistor.	
	A failure occurred in the SERVOPACK.	–	While the main circuit power supply is OFF, turn the control power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
320h: Regenerative Overload	The power supply voltage exceeded the specified range.	Measure the power supply voltage.	Set the power supply voltage within the specified range.	–
	The external regenerative resistance value or regenerative resistor capacity is too small, or there has been a continuous regeneration state.	Check the operating conditions and capacity again.	Change the regenerative resistance value or capacity. Recheck the operating conditions.	*3
	There was a continuous regeneration state because a negative load was continuously applied.	Check the load applied to the Servomotor during operation.	Reconsider the system including the servo, machine, and operating conditions.	–
	The setting of Pn600 (2600h) (Regenerative Resistor Capacity) is smaller than the capacity of the External Regenerative Resistor.	Check to see if a Regenerative Resistor is connected and check the setting of Pn600 (2600h).	Correct the setting of Pn600 (2600h).	*1
	The setting of Pn603 (2603h) (Regenerative Resistance) is smaller than the capacity of the External Regenerative Resistor.	Check to see if a Regenerative Resistor is connected and check the setting of Pn603 (2603h).	Correct the setting of Pn603 (2603h).	*1
	The external regenerative resistance is too high.	Check the regenerative resistance.	Change the regenerative resistance to a correct value or use an External Regenerative Resistor of an appropriate capacity.	*3
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
330h: Main Circuit Power Supply Wiring Error (Detected when the main circuit power supply is turned ON.)	The regenerative resistor was disconnected when the SERVOPACK power supply voltage was high.	Measure the resistance of the regenerative resistor using a measuring instrument.	If you are using the regenerative resistor built into the SERVOPACK, replace the SERVOPACK. If you are using an External Regenerative Resistor, replace the External Regenerative Resistor.	–
	DC power was supplied when an AC power supply input was specified in the settings.	Check the power supply to see if it is a DC power supply.	Correct the power supply setting to match the actual power supply.	*1
	AC power was supplied when a DC power supply input was specified in the settings.	Check the power supply to see if it is an AC power supply.	Correct the power supply setting to match the actual power supply.	
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
400h: Overvoltage (Detected in the main circuit power supply section of the SERVOPACK.)	The power supply voltage exceeded the specified range.	Measure the power supply voltage.	Set the AC/DC power supply voltage within the specified range.	–
	The power supply is not stable or was influenced by a lightning surge.	Measure the power supply voltage.	Improve the power supply conditions, install a surge absorber, and then turn the power supply OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
	The voltage for AC power supply was too high during acceleration or deceleration.	Check the power supply voltage and the speed and torque during operation.	Set the AC power supply voltage within the specified range.	–
	The external regenerative resistance is too high for the operating conditions.	Check the operating conditions and the regenerative resistance.	Select a regenerative resistance value that is appropriate for the operating conditions and load.	*3
	The moment of inertia ratio or mass ratio exceeded the allowable value.	Check to see if the moment of inertia ratio or mass ratio is within the allowable range.	Increase the deceleration time, or reduce the load.	–
	A failure occurred in the SERVOPACK.	–	While the main circuit power supply is OFF, turn the control power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
410h: Undervoltage (Detected in the main circuit power supply section of the SERVOPACK.)	The power supply voltage went below the specified range.	Measure the power supply voltage.	Set the power supply voltage within the specified range.	–
	The power supply voltage dropped during operation.	Measure the power supply voltage.	Increase the power supply capacity.	–
	A momentary power interruption occurred.	Measure the power supply voltage.	If you have changed the setting of Pn509 (2509h) (Momentary Power Interruption Hold Time), decrease the setting.	*1
	The SERVOPACK fuse is blown out.	Check the power supply wiring.	Correct the power supply wiring and replace the SERVOPACK.	–
	The SERVOPACK fuse is blown out.	–	Replace the SERVOPACK and connect a reactor to the DC reactor terminals (⊖1 and ⊖2) on the SERVOPACK.	–
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
	The jumper between the DC Reactor terminals (⊖1 and ⊖2) was removed or there is faulty contact.	–	Correct the wiring between the DC Reactor terminals.	–
	The cable between the DC Reactor and SERVOPACK is not wired correctly or there is a faulty contact.			
510h: Overspeed (The motor exceeded the maximum speed.)	The order of phases U, V, and W in the motor wiring is not correct.	Check the wiring of the Servomotor.	Make sure that the Servomotor is correctly wired.	–
	A reference value that exceeded the overspeed detection level was input.	Check the input reference.	Reduce the reference value. Or, adjust the gain.	–
	The motor exceeded the maximum speed.	Check the waveform of the motor speed.	Reduce the speed reference input gain and adjust the servo gain. Or, reconsider the operating conditions.	
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
511h: Encoder Output Pulse Overspeed	The encoder output pulse frequency exceeded the limit.	Check the encoder output pulse setting.	Decrease the setting of Pn212 (2212h) (Number of Encoder Output Pulses).	*1
	The encoder output pulse frequency exceeded the limit because the motor speed was too high.	Check the encoder output pulse setting and the motor speed.	Reduce the motor speed.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
520h: Vibration Alarm	Abnormal oscillation was detected in the motor speed.	Check for abnormal Servomotor noise, and check the speed and torque waveforms during operation.	Reduce the motor speed. Or, reduce the setting of Pn100 (2100h) (Speed Loop Gain).	*1
	The setting of Pn103 (2103h) (Moment of Inertia Ratio) is greater than the actual moment of inertia or was greatly changed.	Check the moment of inertia ratio or mass ratio.	Correct the setting of Pn103 (2103h).	*1
	The vibration detection level (Pn312) is not suitable.	Check that the vibration detection level (Pn312) is suitable.	Set a suitable vibration detection level (Pn312).	*1
521h: Autotuning Alarm (Vibration was detected while executing the custom tuning, Easy FFT, or the tuning-less function.)	The Servomotor vibrated considerably while performing the tuning-less function.	Check the waveform of the motor speed.	Reduce the load so that the moment of inertia ratio is within the allowable value. Or increase the load level or reduce the rigidity level in the tuning-less level settings.	*1
	The Servomotor vibrated considerably while performing custom tuning or EasyFFT.	Check the waveform of the motor speed.	Check the operating procedure of corresponding function and implement corrections.	*1
550h: Maximum Speed Setting Error	The setting of Pn316 (2316h) (Maximum Motor Speed) is greater than the maximum speed.	Check the setting of Pn316 (2316h), and the upper limits of the maximum motor speed setting and the encoder output resolution setting.	Set Pn316 (2316h) to a value that does not exceed the maximum motor speed.	*1
710h: Instantaneous Overload 720h: Continuous Overload	The wiring is not correct or there is a faulty connection in the motor or encoder wiring.	Check the wiring.	Make sure that the Servomotor and encoder are correctly wired.	*1
	Operation was performed that exceeded the overload protection characteristics.	Check the Servomotor overload characteristics and operation reference.	Consider the following: • Reconsider the load and operating conditions. • Select a Servomotor again.	–
	An excessive load was applied during operation because the Servomotor was not driven because of mechanical problems.	Check the operation reference and motor speed.	Correct the mechanical problem.	–
	Operation was performed with a load applied to the shaft of the servomotor that exceeded the allowable value.	Check the condition of the machine to determine if a load was applied to the shaft of the servomotor that exceeded the allowable value.	Correct the condition of the machine so that the load on the shaft during servomotor operation does not exceed the allowable value.	–
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
730h and 731h: Dynamic Brake Overload (An excessive power consumption by the dynamic brake was detected.)	The Servomotor was rotated by an external force.	Check the operation status.	Implement measures to ensure that the Servomotor will not be rotated by an external force.	–
	When the Servomotor or Actuator was stopped with the dynamic brake, the rotational or linear kinetic energy exceeded the capacity of the dynamic brake resistor.	Check the power consumed by the DB resistor to see how frequently the DB is being used.	Reconsider the following: • Reduce the Servomotor command speed. • Decrease the moment of inertia ratio or mass ratio. • Reduce the frequency of stopping with the dynamic brake.	–
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
740h: Inrush Current Limiting Resistor Overload (The main circuit power supply was frequently turned ON and OFF.)	The allowable frequency of the inrush current limiting resistor was exceeded when the main circuit power supply was turned ON and OFF.	–	Reduce the frequency of turning the main circuit power supply ON and OFF.	–
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
7A1h: Internal Temperature Error 1 (Control Board Temperature Error)	The surrounding temperature is too high.	Check the surrounding temperature using a thermometer. Or, check the operating status with the SERVOPACK installation environment monitor.	Decrease the surrounding temperature by improving the SERVOPACK installation conditions.	*1
	An overload alarm was reset by turning OFF the power supply too many times.	Check the alarm display to see if there is an overload alarm.	Change the method for resetting the alarm.	–
	There was an excessive load or operation was performed that exceeded the regenerative processing capacity.	Use the accumulated load ratio to check the load during operation, and use the regenerative load ratio to check the regenerative processing capacity.	Reconsider the load and operating conditions.	–
	The SERVOPACK installation orientation is not correct or there is insufficient space around the SERVOPACK.	Check the SERVOPACK installation conditions.	Install the SERVOPACK according to specifications.	*1
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
7A2h: Internal Temperature Error 2 (Power Board Temperature Error)	The surrounding temperature is too high.	Check the surrounding temperature using a thermometer. Or, check the operating status with the SERVOPACK installation environment monitor.	Decrease the surrounding temperature by improving the SERVOPACK installation conditions.	*1
	An overload alarm was reset by turning OFF the power supply too many times.	Check the alarm display to see if there is an overload alarm.	Change the method for resetting the alarm.	–
	There was an excessive load or operation was performed that exceeded the regenerative processing capacity.	Use the accumulated load ratio to check the load during operation, and use the regenerative load ratio to check the regenerative processing capacity.	Reconsider the load and operating conditions.	–
	The SERVOPACK installation orientation is not correct or there is insufficient space around the SERVOPACK.	Check the SERVOPACK installation conditions.	Install the SERVOPACK according to specifications.	*1
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
7A3h: Internal Temperature Sensor Error (An error occurred in the temperature sensor circuit.)	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
7Abh: SERVOPACK Built-in Fan Stopped	The fan inside the SERVOPACK stopped.	Check for foreign matter inside the SERVOPACK.	Remove foreign matter from the SERVOPACK. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
810h: Encoder Backup Alarm (Detected at the encoder, but only when an absolute encoder is used.)	The power to the absolute encoder was turned ON for the first time.	Check to see if the power supply was turned ON for the first time.	Set up the encoder.	*1
	The Encoder Cable was disconnected and then connected again.	Check to see if the power supply was turned ON for the first time.	Check the encoder connection and set up the encoder.	
	Power is not being supplied both from the control power supply (+5 V) from the SERVOPACK and from the battery power supply.	Check the encoder connector battery and the connector status.	Replace the battery or implement similar measures to supply power to the encoder, and set up the encoder.	
	A failure occurred in the encoder.	–	If the alarm still occurs after setting up the encoder again, replace the Servomotor.	–
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
820h: Encoder Checksum Alarm (Detected at the encoder.)	A failure occurred in the encoder.	–	Set up the encoder again. If the alarm still occurs, the Servomotor may be faulty. Replace the Servomotor.	*1
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
830h: Encoder Battery Alarm (The absolute encoder battery voltage was lower than the specified level.)	The battery connection is faulty or a battery is not connected.	Check the battery connection.	Correct the battery connection.	*1
	The battery voltage is lower than the specified value.	Measure the battery voltage.	Replace the battery.	*1
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
840h: Encoder Data Alarm (Detected at the encoder.)	The encoder malfunctioned.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the Servomotor may be faulty. Replace the Servomotor or encoder.	–
	The encoder malfunctioned due to noise.	–	Correct the wiring around the encoder by separating the Encoder Cable from the Servomotor Main Circuit Cable or by grounding the encoder.	–
850h: Encoder Overspeed (Detected at the encoder.)	The Servomotor speed was 200 min^{-1} or higher when the control power supply was turned ON.	Check the motor speed when the power supply is turned ON.	Reduce the Servomotor speed to a value less than 200 min^{-1}, and turn ON the control power supply.	–
	A failure occurred in the encoder.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the Servomotor or encoder may be faulty. Replace the Servomotor or encoder.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
860h: Encoder Overheated (Detected at the encoder.)	The surrounding air temperature around the Servomotor is too high.	Measure the surrounding air temperature around the Servomotor.	Reduce the surrounding air temperature of the Servomotor to 40° or less.	–
	The Servomotor is operating outside the continuous duty zone.	Use the accumulated load ratio to check the load.	Operate the Servomotor within the continuous duty zone.	*1
	A failure occurred in the encoder.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the Servomotor or encoder may be faulty. Replace the Servomotor or encoder.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
8A0h: External Encoder Error	A failure occurred in the external encoder.	–	Replace the external encoder.	–
8A1h: External Encoder Module Error	A failure occurred in the external encoder.	–	Replace the external encoder.	–
	A failure occurred in the Serial Converter Unit.	–	Replace the Serial Converter Unit.	–
8A2h: External Incremental Encoder Sensor Error	A failure occurred in the external encoder.	–	Replace the external encoder.	–
8A3h: External Absolute Encoder Position Error	A failure occurred in the external absolute encoder.	–	The external absolute encoder may be faulty. Refer to the encoder manufacturer's instruction manual for corrections.	–
8A5h: External Encoder Overspeed	An overspeed error was detected in the external encoder.	Check the maximum speed of the external encoder.	Keep the external encoder below its maximum speed.	–
8A6h: External Encoder Overheated	An overheating error was detected in the external encoder.	–	Replace the external encoder.	–
A10h: EtherCAT DC Synchronization Error	The synchronization timing (Sync0) for EtherCAT communications fluctuated.	–	Turn the power supply OFF and ON again and re-establish communications.	–
A11h: EtherCAT State Error	The EtherCAT communications state left the Operational state during motor operation.	–	Reset the alarm and then re-establish communications.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
A12h: EtherCAT Output Data Synchronization Error	Noise caused an error in EtherCAT communications.	–	Check the EtherCAT wiring and implement noise countermeasures.	–
	The controller did not update the process data during the fixed period.	Check the process data specified by the controller.	Correct the controller so that the process data is updated during the fixed period.	–
	The EtherCAT Communications Cable or connector wiring is faulty.	Check the EtherCAT Communications Cable and connector wiring.	Wire the connections correctly.	–
A20h: Parameter Setting Error	The position unit is outside of the setting range.	Make sure it is within the following range. 1/4,096 < Numerator (2701h: 1)/Denominator (2701h: 2) < 65,536	Correct the setting of *position user unit* (2701h).	–
	The speed unit is outside of the setting range.	Make sure it is within the following range. 1/128 ≤ Numerator (2702h: 1)/Denominator (2702h: 2) ≤ 8,388,608	Correct the setting of *velocity user unit* (2702h).	–
	The acceleration unit is outside of the setting range.	Make sure it is within the following range. 1/128 ≤ Numerator (2703h: 1)/Denominator (2703h: 2) ≤ 262,144	Correct the setting of *acceleration user unit* (2703h).	–
A40h: System Initialization Error	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–
A41h: Communications Device Initialization Error	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–
A47h: Loading Servo Information Error	*User parameter configuration* (2700h) was executed while a utility function (Fn□□□) was being executed from the Digital Operator or SigmaWin+.	–	Turn the power supply OFF and ON again.	–
	The power supply was turned ON or *user parameter configuration* (2700h) was executed when an encoder was not connected.	Check the wiring of the encoder.	Turn OFF the power supply, correct the encoder connection, and then turn the power supply back ON.	–
	The power supply was turned ON or *user parameter configuration* (2700h) was executed when there was a Parameter Setting Error (alarm 040h).	Check the parameter settings.	Correct the parameter settings and turn the power supply OFF and ON again.	–
	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
A48h: EEPROM Parameter Data Error	The power supply was shut OFF while writing parameter settings.	Check the timing of shutting OFF the power supply.	Initialize the parameter settings (*restore default parameters* (1011h)) and then set the parameters again.	–
	The number of times that parameters were written exceeded the limit.	–	Repair or replace the SERVOPACK. Reconsider the method for writing the parameters.	–
	The power supply voltage suddenly dropped.	Measure the power supply voltage.	Set the power supply voltage within the specified range, and initialize the parameter settings (*restore default parameters* (1011h)).	–
	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–
b33h: Current Detection Error 3	A failure occurred in the current detection circuit.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
bF0h: System Alarm 0	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
bF1h: System Alarm 1	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
bF2h: System Alarm 2	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
bF3h: System Alarm 3	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
bF4h: System Alarm 4	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
bF5h: System Alarm 5	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
bF6h: System Alarm 6	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
bF7h: System Alarm 7	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
bF8h: System Alarm 8	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
C10h: Servomotor Out of Control (Detected when the servo is turned ON.)	The order of phases U, V, and W in the motor wiring is not correct.	Check the Servomotor wiring.	Make sure that the Servomotor is correctly wired.	–
	A failure occurred in the encoder.	–	If the motor wiring is correct and the alarm still occurs after turning the power supply OFF and ON again, the Servomotor or encoder may be faulty. Replace the Servomotor or encoder.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
C80h: Encoder Clear Error or Multiturn Limit Setting Error	A failure occurred in the encoder.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the Servomotor or encoder may be faulty. Replace the Servomotor or encoder.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
C90h: Encoder Communications Error	There is a faulty contact in the connector or the connector is not wired correctly for the encoder.	Check the condition of the encoder connector.	Reconnect the encoder connector and check the encoder wiring.	*1
	There is a cable disconnection or short-circuit in the encoder. Or, the cable impedance is outside the specified values.	Check the condition of the Encoder Cable.	Use the Encoder Cable within the specified specifications.	–
	One of the following has occurred: corrosion caused by improper temperature, humidity, or gas, a short-circuit caused by entry of water drops or cutting oil, or faulty contact in connector caused by vibration.	Check the operating environment.	Improve the operating environment, and replace the cable. If the alarm still occurs, replace the SERVOPACK.	*1
	A malfunction was caused by noise.	–	Correct the wiring around the encoder by separating the Encoder Cable from the Servomotor Main Circuit Cable or by grounding the encoder.	*1
	A failure occurred in the SERVOPACK.	–	Connect the Servomotor to another SERVOPACK, and turn ON the control power supply. If no alarm occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
	A failure occurred in the encoder.	–	Connect the Servomotor to another SERVOPACK, and turn ON the control power supply. If the alarm occurs, the Servomotor may be faulty. Replace the Servomotor.	–
C91h: Encoder Communications Position Data Acceleration Rate Error	Noise entered on the signal lines because the Encoder Cable is bent or the sheath is damaged.	Check the condition of the Encoder Cable and connectors.	Check the Encoder Cable to see if it is installed correctly.	*1
	The Encoder Cable is bundled with a high-current line or installed near a high-current line.	Check the installation condition of the Encoder Cable.	Confirm that there is no surge voltage on the Encoder Cable.	–
	There is variation in the FG potential because of the influence of machines on the Servomotor side, such as a welder.	Check the installation condition of the Encoder Cable.	Properly ground the machine to separate it from the FG of the encoder.	–

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
C92h: Encoder Communications Timer Error	Noise entered on the signal line from the encoder.	–	Implement countermeasures against noise for the encoder wiring.	*1
	Excessive vibration or shock was applied to the encoder.	Check the operating conditions.	Reduce machine vibration. Correctly install the Servomotor or encoder.	–
	A failure occurred in the encoder.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the Servomotor or encoder may be faulty. Replace the Servomotor or encoder.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
CA0h: Encoder Parameter Error	A failure occurred in the encoder.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the Servomotor or encoder may be faulty. Replace the Servomotor or encoder.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
Cb0h: Encoder Echo-back Error	The encoder is wired incorrectly or there is faulty contact.	Check the wiring of the encoder.	Make sure that the encoder is correctly wired.	*1
	The specifications of the Encoder Cable are not correct and noise entered on it.	–	Use a shielded twisted-pair wire cable or a screened twisted-pair cable with conductors of at least 0.12 mm^2.	–
	The Encoder Cable is too long and noise entered on it.	–	The Encoder Cable wiring distance must be 20 m max.	–
	There was variation in the FG potential because of the influence of machines on the Servomotor or Actuator side, such as a welder.	Check the condition of the Encoder Cable and connectors.	Properly ground the machine to separate it from the FG of the encoder.	–
	Excessive vibration or shock was applied to the encoder.	Check the operating conditions.	Reduce machine vibration. Correctly install the Servomotor or encoder.	–
	A failure occurred in the encoder.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the Servomotor or encoder may be faulty. Replace the Servomotor or encoder.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
CC0h: Multiturn Limit Disagreement	When using a Direct Drive Servomotor, the setting of Pn205 (2205h) (Multiturn Limit) does not agree with the encoder.	Check the setting of Pn205 (2205h).	Correct the setting of Pn205 (2205h) (0 to 65,535).	*1
	The multiturn limit of the encoder is different from that of the SERVOPACK. Or, the multiturn limit of the SERVOPACK has been changed.	Check the setting of Pn205 (2205h) (Multiturn Limit).	Change the setting if the alarm occurs.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
CF1h: Reception Failed Error in Feedback Option Module Communications	The cable between the Serial Converter Unit and SERVOPACK is not wired correctly or there is a faulty contact.	Check the wiring of the external encoder.	Correctly wire the cable between the Serial Converter Unit and SERVOPACK.	*1
	A specified cable is not being used between Serial Converter Unit and SERVOPACK.	Check the wiring specifications of the external encoder.	Use a specified cable.	–
	The cable between the Serial Converter Unit and SERVOPACK is too long.	Measure the length of the cable that connects the Serial Converter Unit.	The length of the cable between the Serial Converter Unit and SERVOPACK must be 20 m or less.	–
	The sheath on cable between the Serial Converter Unit and SERVOPACK is broken.	Check the cable that connects the Serial Converter Unit.	Replace the cable between the Serial Converter Unit and SERVOPACK.	–
CF2h: Timer Stopped Error in Feedback Option Module Communications	Noise entered the cable between the Serial Converter Unit and SERVOPACK.	–	Correct the wiring around the Serial Converter Unit, e.g., separate I/O signal lines from the Main Circuit Cables or ground.	–
	A failure occurred in the Serial Converter Unit.	–	Replace the Serial Converter Unit.	–
	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–
d00h: Position Deviation Overflow (The setting of Pn520 (2520h) (Excessive Position Error Alarm Level) was exceeded by the position deviation.)	The Servomotor U, V, and W wiring is not correct.	Check the wiring of the Servomotor's Main Circuit Cables.	Make sure that there are no faulty contacts in the wiring for the Servomotor and encoder.	–
	The position command speed is too fast.	Reduce the position command speed and try operating the SERVOPACK.	Reduce the position reference speed or the reference acceleration rate, or reconsider the electronic gear ratio.	*1
	The acceleration of the position reference is too high.	Reduce the reference acceleration and try operating the SERVOPACK.	Reduce the acceleration of the position reference using an EtherCAT command.	–
	The setting of Pn520 (2520h) (Excessive Position Deviation Alarm Level) is too low for the operating conditions.	Check the setting of Pn520 (2520h) to see if it is appropriate.	Optimize the setting of Pn520 (2520h).	*1
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
d01h: Position Deviation Overflow Alarm at Servo ON	The servo was turned ON after the position deviation exceeded the setting of Pn526 (2526h) (Excessive Position Deviation Alarm Level at Servo ON) while the servo was OFF.	Check the position deviation while the servo is OFF.	Optimize the setting of Pn526 (2526h).	*1
d02h: Position Deviation Overflow Alarm for Speed Limit at Servo ON	If position deviation remains in the deviation counter, the setting of Pn529 (2529h) (Speed Limit Level at Servo ON) will limit the speed when the servo is turned ON. This alarm occurs if a position reference is input and the setting of Pn520 (2520h) (Position Deviation Overflow Alarm Level) is exceeded.	–	Optimize the setting of Pn520 (2520h). Or, set Pn529 (2529h) to an appropriate value.	*1
d10h: Motor-Load Position Deviation Overflow	The motor direction and external encoder installation orientation are backward.	Check the motor direction and the external encoder installation orientation.	Install the external encoder in the opposite direction, or change the setting of Pn002 (2002h) = n.X□□□ (External Encoder Usage) to reverse the direction.	*1
	There is an error in the connection between the load (e.g., stage) and external encoder coupling.	Check the coupling of the external encoder.	Check the mechanical coupling.	–
E00h: EtherCAT Module Interface Initialization Timeout Error	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–
E02h: EtherCAT Internal Synchronization Error 1	The EtherCAT transmission cycle fluctuated.	–	Remove the cause of transmission cycle fluctuation at the host controller.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
E03h: EtherCAT Module Interface Communications Data Error	Noise caused an error in communications between the SERVOPACK and EtherCAT Network Module.	–	Implement countermeasures against noise.	–
	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
E72h: Feedback Option Module Detection Failure	There is a faulty connection between the SERVOPACK and the Feedback Option Module.	Check the connection between the SERVOPACK and the Feedback Option Module.	Correctly connect the Feedback Option Module.	–
	The Feedback Option Module was disconnected.	–	Reset the Option Module configuration error and turn the power supply to the SERVOPACK OFF and ON again.	*1
	A failure occurred in the Feedback Option Module.	–	Replace the Feedback Option Module.	–
	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–
E75h: Unsupported Feedback Option Module Alarm	A failure occurred in the Feedback Option Module.	–	Replace the Feedback Option Module.	–
	An unsupported Feedback Option Module was connected.	Refer to the catalog for the connected Feedback Option Module or the SERVOPACK manual.	Connect a supported Feedback Option Module.	–
EA0h: Command-Option IF Servo Unit Initial Error	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–
EA1h: Command-Option IF Memory Check Error	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–
EA2h: Command-Option IF Servo Synchronization Error	Fluctuation in the EtherCAT communications synchronization timing (Sync0) caused the synchronization timing in the SERVOPACK to fluctuate.	–	Turn the power supply OFF and ON again and re-establish communications.	–
	A failure occurred in the SERVOPACK.	–	Repair or replace the SERVOPACK.	–
EA3h: Command-Option IF Servo Data Error	Noise caused an error in communications in the SERVOPACK.	–	Implement countermeasures against noise.	–
	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–
Eb1h: Safety Function Signal Input Timing Error	The delay between activation of the /HWBB1 and /HWBB2 input signals for the HWBB was ten second or longer.	Measure the time delay between the /HWBB1 and /HWBB2 signals.	The output signal circuits or devices for /HWBB1 and /HWBB2 or the SERVOPACK input signal circuits may be faulty. Alternatively, the input signal cables may be disconnected. Check to see if any of these items are faulty or have been disconnected.	–
	A failure occurred in the SERVOPACK.	–	Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
EC8h: Gate Drive Error 1 (An error occurred in the gate drive circuit.) EC9h: Gate Drive Error 2 (An error occurred in the gate drive circuit.)	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
Ed1h: Command Execution Timeout	A timeout error occurred for an EtherCAT command.	Check the Servomotor status when the command is executed.	Execute the Servo ON command (Enable Operation command) only when the Servomotor is not operating.	–
F10h: Power Supply Line Open Phase (The voltage was low for more than one second for phase R, S, or T when the main power supply was ON.)	The three-phase power supply wiring is not correct.	Check the power supply wiring.	Make sure that the power supply is correctly wired.	*1
	The three-phase power supply is unbalanced.	Measure the voltage for each phase of the three-phase power supply.	Balance the power supply by changing phases.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
FL-1:*5 System Alarm FL-2:*5 System Alarm FL-3:*5 System Alarm FL-4:*5 System Alarm FL-5:*5 System Alarm FL-6:*5 System Alarm	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
CPF00: Digital Operator Communications Error 1	There is a faulty connection between the Digital Operator and the SERVOPACK.	Check the connector contact.	Disconnect the connector and insert it again. Or, replace the cable.	–
	A malfunction was caused by noise.	–	Keep the Digital Operator or the cable away from sources of noise.	–

Continued on next page.

Continued from previous page.

Alarm Code: Alarm Name	Possible Cause	Confirmation	Correction	Reference
CPF01: Digital Operator Communications Error 2	A failure occurred in the Digital Operator.	–	Disconnect the Digital Operator and then connect it again. If the alarm still occurs, the Digital Operator may be faulty. Replace the Digital Operator.	–
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–

*1. Refer to the following manual for details.
Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)

*2. Detection Conditions
If either of the following conditions is detected, an alarm will occur.

- $\text{Pn533 [min}^{-1}\text{]} \times \dfrac{\text{Encoder resolution}}{6 \times 10^5} \leq \dfrac{\text{Pn20E}}{\text{Pn210}}$

- $\text{Maximum motor speed [min}^{-1}\text{]} \times \dfrac{\text{Encoder resolution}}{\text{Approx. } 3.66 \times 10^{12}} \geq \dfrac{\text{Pn20E}}{\text{Pn210}}$

*3. For details, refer to the following manual.
Σ-7-Series Peripheral Device Selection Manual (Manual.No.: SIEP S800001 32)

*4. The SERVOPACK will fail if the External Regenerative Resistor or Regenerative Resistor Unit is connected while the jumper is connected between the B2 and B3 terminals.

*5. These alarms are not stored in the alarm history. They are only displayed on the panel display.

3.2 Warning Displays

To check a warning that occurs in the SERVOPACK, use one of the following methods. Warnings are displayed to warn you before an alarm occurs.

Panel display on SERVOPACK	If there is a warning, the code will be displayed one character at a time, as shown below. Example: Alarm A.910 Digital Operator	The warning code is displayed.
Statusword (6041h)	Bit 7 (*warning*) in the *statusword* will change to 1. (Bit 7 is 0 during normal operation.)
Error code (603Fh)	A current warning code is stored in *error code* (603Fh).
Emergency message	The Controller is notified of any warning that occurs. (Notification may not be possible if EtherCAT communications are unstable.)

This next section provides a list of warnings and the causes of and corrections for warnings.

3.2.1 List of Warnings

The warning table gives the warning name and warning meaning in order of the warning codes.

Warning Code	Warning Name	Meaning
900h	Position Deviation Overflow	The position deviation exceeded the percentage set with the following formula: (Pn520 (2520h) × Pn51E (251Eh/100)
901h	Position Deviation Overflow Alarm at Servo ON	The position deviation when the servo was turned ON exceeded the percentage set with the following formula: (Pn526 (2526h) × Pn528 (2528h)/100)
910h	Overload	This warning occurs before an overload alarm (A.710 or A.720) occurs. If the warning is ignored and operation is continued, an alarm may occur.
911h	Vibration	Abnormal vibration was detected during motor operation. The detection level is the same as A.520. Set whether to output an alarm or a warning by setting Pn310 (2310h) (Vibration Detection Switch).
912h	Internal Temperature Warning 1 (Control Board Temperature Error)	The surrounding temperature of the control PCB is abnormal.
913h	Internal Temperature Warning 2 (Power Board Temperature Error)	The surrounding temperature of the power PCB is abnormal.
920h	Regenerative Overload	This warning occurs before an A.320 alarm (Regenerative Overload) occurs. If the warning is ignored and operation is continued, an alarm may occur.
921h	Dynamic Brake Overload	This warning occurs before an A.731 alarm (Dynamic Brake Overload) occurs. If the warning is ignored and operation is continued, an alarm may occur.
923h	SERVOPACK Built-in Fan Stopped	The fan inside the SERVOPACK stopped.
930h	Absolute Encoder Battery Error	This warning occurs when the voltage of absolute encoder's battery is low.

Continued on next page.

Continued from previous page.

Warning Code	Warning Name	Meaning
942h	Speed Ripple Compensation Information Disagreement	The speed ripple compensation information stored in the encoder does not agree with the speed ripple compensation information stored in the SERVOPACK.
971h	Undervoltage	This warning occurs before an A.410 alarm (Undervoltage) occurs. If the warning is ignored and operation is continued, an alarm may occur.
9A0h	Overtravel	Overtravel was detected while the servo was ON.
9b0h	Preventative Maintenance Warning	One of the consumable parts has reached the end of its service life.

Note: Use Pn008 (2008h) = n.□X□□ (Warning Detection Selection) to control warning detection.
However, the following warnings are not affected by the setting of Pn008 (2008h) = n.□X□□, and other parameter settings are required in addition to Pn008 = n.□X□□.

Warning	Parameters That Must Be Set to Select Warning Detection	Reference
911h	Pn310 (2310h) = n.□□□X (Vibration Detection Selection)	*
930h	Pn008 (2008h) = n.□□□X (Low Battery Voltage Alarm/Warning Selection)	*
942h	Pn423 (2423h) = n.□□X□ (Speed Ripple Compensation Information Disagreement Warning Detection Selection)	*
971h	Pn008 (2008h) = n.□□□X (Low Battery Voltage Alarm/Warning Selection) (Not affected by the setting of Pn008 (2008h) = n.□X□□.)	page 4-3
9A0h	Pn00D (200Dh) = n.X□□□ (Overtravel Warning Detection Selection) (Not affected by the setting of Pn008 (2008h) = n.□X□□.)	*
9b0h	Pn00F (200Fh) = n.□□□X (Preventative Maintenance Warning Selection)	*

* Refer to the following manual for details.
Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)

3.2.2 Troubleshooting Warnings

The causes of and corrections for the warning are given in the following table. Contact your Yaskawa representative if you cannot solve a problem with the correction given in the table.

Warning Number: Warning Name	Possible Cause	Confirmation	Correction	Reference
900h: Position Deviation Overflow	The Servomotor U, V, and W wiring is not correct.	Check the wiring of the Servomotor's Main Circuit Cables.	Make sure that there are no faulty connections in the wiring for the Servomotor and encoder.	–
	A SERVOPACK gain is too low.	Check the SERVOPACK gains.	Increase the servo gain, e.g., by using autotuning without a host reference.	*
	The acceleration of the position reference is too high.	Reduce the reference acceleration and try operating the SERVOPACK.	Reduce the acceleration of the position reference using an EtherCAT command.	–
	The excessive position deviation alarm level (Pn520 (2520h) × Pn51E (251Eh)/100) is too low for the operating conditions.	Check excessive position deviation alarm level (Pn520 (2520h) × Pn51E (251Eh)/100) to see if it is set to an appropriate value.	Optimize the settings of Pn520 (2520h) and Pn51E (251Eh).	*
	A failure occurred in the SERVOPACK.	–	Turn the power supply to the SERVOPACK OFF and ON again. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
901h: Position Deviation Overflow Alarm at Servo ON	The position deviation when the servo was turned ON exceeded the percentage set with the following formula: (Pn526 (2526h) × Pn528 (2528h)/100)	–	Optimize the setting of Pn528 (2528h) (Excessive Position Error Warning Level at Servo ON).	–

Continued on next page.

Continued from previous page.

Warning Number: Warning Name	Possible Cause	Confirmation	Correction	Reference
910h: Overload (warning before an A.710 or A.720 alarm occurs)	The wiring is not correct or there is a faulty connection in the motor or encoder wiring.	Check the wiring.	Make sure that the Servomotor and encoder are correctly wired.	–
	Operation was performed that exceeded the overload protection characteristics.	Check the motor overload characteristics and Run command.	Consider the following: • Reconsider the load and operating conditions. • Select a Servomotor again.	–
	An excessive load was applied during operation because the Servomotor was not driven because of mechanical problems.	Check the operation reference and motor speed.	Remove the mechanical problem.	–
	The overload warning level (Pn52B (252Bh)) is not suitable.	Check that the overload warning level (Pn52B (252Bh)) is suitable.	Set a suitable overload warning level (Pn52B (252Bh)).	*
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
911h: Vibration	Abnormal vibration was detected during Servomotor operation.	Check for abnormal Servomotor noise, and check the speed and torque waveforms during operation.	Reduce the motor speed. Or, reduce the servo gain with custom tuning.	*
	The setting of Pn103 (2103h) (Moment of Inertia Ratio) is greater than the actual moment of inertia or was greatly changed.	Check the moment of inertia ratio or mass ratio.	Correct the setting of Pn103 (2103h).	*
	The vibration detection level (Pn312 (2312h)) is not suitable.	Check that the vibration detection level (Pn312 (2312h)) is suitable.	Set a suitable vibration detection level (Pn312 (2312h)).	*

Continued on next page.

Continued from previous page.

Warning Number: Warning Name	Possible Cause	Confirmation	Correction	Reference
912h: Internal Temperature Warning 1 (Control Board Temperature Error)	The surrounding temperature is too high.	Check the surrounding temperature using a thermometer. Or, check the operating status with the SERVOPACK installation environment monitor.	Decrease the surrounding temperature by improving the SERVOPACK installation conditions.	*
	An overload alarm was reset by turning OFF the power supply too many times.	Check the alarm display to see if there is an overload alarm.	Change the method for resetting the alarm.	–
	There was an excessive load or operation was performed that exceeded the regenerative processing capacity.	Use the accumulated load ratio to check the load during operation, and use the regenerative load ratio to check the regenerative processing capacity.	Reconsider the load and operating conditions.	–
	The SERVOPACK installation orientation is not correct or there is insufficient space around the SERVOPACK.	Check the SERVOPACK installation conditions.	Install the SERVOPACK according to specifications.	*
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
913h: Internal Temperature Warning 2 (Power Board Temperature Error)	The surrounding temperature is too high.	Check the surrounding temperature using a thermometer. Or, check the operating status with the SERVOPACK installation environment monitor.	Decrease the surrounding temperature by improving the SERVOPACK installation conditions.	*
	An overload alarm was reset by turning OFF the power supply too many times.	Check the alarm display to see if there is an overload alarm.	Change the method for resetting the alarm.	–
	There was an excessive load or operation was performed that exceeded the regenerative processing capacity.	Use the accumulated load ratio to check the load during operation, and use the regenerative load ratio to check the regenerative processing capacity.	Reconsider the load and operating conditions.	–
	The SERVOPACK installation orientation is not correct or there is insufficient space around the SERVOPACK.	Check the SERVOPACK installation conditions.	Install the SERVOPACK according to specifications.	*
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Warning Number: Warning Name	Possible Cause	Confirmation	Correction	Reference
920h: Regenerative Overload (warning before an A.320 alarm occurs)	The power supply voltage exceeded the specified range.	Measure the power supply voltage.	Set the power supply voltage within the specified range.	–
	There is insufficient external regenerative resistance, regenerative resistor capacity, or SERVOPACK capacity, or there has been a continuous regeneration state.	Check the operating conditions and capacity again.	Change the regenerative resistance value, regenerative resistance capacity, or SERVOPACK capacity. Recheck the operating conditions.	–
	There was a continuous regeneration state because a negative load was continuously applied.	Check the load applied to the Servomotor during operation.	Reconsider the system including the servo, machine, and operating conditions.	–
921h: Dynamic Brake Overload (warning before an A.731 alarm occurs)	The Servomotor was rotated by an external force.	Check the operation status.	Implement measures to ensure that the Servomotor will not be rotated by an external force.	–
	When the Servomotor was stopped with the dynamic brake, the rotational or linear kinetic energy exceeded the capacity of the dynamic brake resistor.	Check the power consumed by the DB resistor to see how frequently the DB is being used.	Reconsider the following: • Reduce the Servomotor command speed. • Decrease the moment of inertia or mass. • Reduce the frequency of stopping with the dynamic brake.	–
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
923h: SERVOPACK Built-in Fan Stopped	The fan inside the SERVOPACK stopped.	Check for foreign matter inside the SERVOPACK.	Remove foreign matter from the SERVOPACK. If the alarm still occurs, the SERVOPACK may be faulty. Replace the SERVOPACK.	–
930h: Absolute Encoder Battery Error (The absolute encoder battery voltage was lower than the specified level.)	The battery connection is faulty or a battery is not connected.	Check the battery connection.	Correct the battery connection.	*
	The battery voltage is lower than the specified value.	Measure the battery voltage.	Replace the battery.	*
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Warning Number: Warning Name	Possible Cause	Confirmation	Correction	Reference
942h: Speed Ripple Compensation Information Disagreement	The speed ripple compensation information stored in the encoder does not agree with the speed ripple compensation information stored in the SERVOPACK.	–	Set Pn423 (2423h) to n.□□□0 (Disable speed ripple compensation).	–
971h: Undervoltage	For a 200-V SERVOPACK, the AC power supply voltage dropped below 140 V.	Measure the power supply voltage.	Set the power supply voltage within the specified range.	–
	The power supply voltage dropped during operation.	Measure the power supply voltage.	Increase the power supply capacity.	–
	A momentary power interruption occurred.	Measure the power supply voltage.	If you have changed the setting of Pn509 (2509h) (Momentary Power Interruption Hold Time), decrease the setting.	*
	The SERVOPACK fuse is blown out.	–	Replace the SERVOPACK and connect a reactor.	*
	A failure occurred in the SERVOPACK.	–	The SERVOPACK may be faulty. Replace the SERVOPACK.	–
9A0h: Overtravel (Overtravel status was detected.)	Overtravel was detected while the servo was ON.	Check the status of the overtravel signals on the input signal monitor.	Even if an overtravel signal is not shown by the input signal monitor, momentary overtravel may have been detected. Take the following precautions. • Do not specify movements that would cause overtravel from the host controller. • Check the wiring of the overtravel signals. • Implement countermeasures against noise.	*
9b0h: Preventative Maintenance Warning	One of the consumable parts has reached the end of its service life.	–	Replace the part. Contact your Yaskawa representative for replacement.	*

* Refer to the following manual for details.
Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)

3.3 Troubleshooting Based on the Operation and Conditions of the Servomotor

This section provides troubleshooting based on the operation and conditions of the Servomotor, including causes and corrections.

Problem	Possible Cause	Confirmation	Correction	Reference
Servomotor Does Not Start	The control power supply is not turned ON.	Measure the voltage between control power supply terminals.	Turn OFF the power supply to the servo system. Correct the wiring so that the control power supply is turned ON.	–
	The main circuit power supply is not turned ON.	Measure the voltage across the main circuit power input terminals.	Turn OFF the power supply to the servo system. Correct the wiring so that the main circuit power supply is turned ON.	–
	The I/O signal connector (CN1) pins are not wired correctly or are disconnected.	Turn OFF the power supply to the servo system. Check the wiring condition of the I/O signal connector (CN1) pins.	Correct the wiring of the I/O signal connector (CN1) pins.	*1
	The wiring for the Servomotor Main Circuit Cables or Encoder Cable is disconnected.	Check the wiring conditions.	Turn OFF the power supply to the servo system. Wire the cable correctly.	–
	There is an overload on the Servomotor.	Operate the Servomotor with no load and check the load status.	Turn OFF the power supply to the servo system. Reduce the load or replace the Servomotor with a larger capacity.	–
	There is a mistake in the input signal allocations (Pn50A (250Ah), Pn50B (250Bh), Pn511 (2511h), and Pn516 (2516h)).	Check the input signal allocations (Pn50A (250Ah), Pn50B (250Bh), Pn511 (2511h), Pn516 (2516h)).	Correctly allocate the input signals (Pn50A (250Ah), Pn50B (250Bh), Pn511 (2511h), Pn516 (2516h)).	*1
	The Servo ON command (Enable Operation command) was not sent.	Make sure the Servo ON command (Enable Operation command) is set to Operation Enabled.	Set the correct value for the Servo ON command (Enable Operation command).	–
	The torque limit reference is too small.	Check the torque limit reference.	Increase the torque limit reference.	–
	The operation mode is not set.	Check to see if *modes of operation* (6060h) is set.	Set *modes of operation* (6060h) correctly.	–
	A software limit is active.	Check to see if the target position exceeds a software limit.	Specify a target position that is within the software limits.	–
	EtherCAT communications are not established.	Check to see if the EtherCAT indicator shows the Operational state.	Place the EtherCAT communications in the Operational state.	–
	The P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal is still OFF.	Check the P-OT and N-OT signals.	Turn ON the P-OT and N-OT signals.	*1

Continued on next page.

Continued from previous page.

Problem	Possible Cause	Confirmation	Correction	Reference
Servomotor Does Not Start	The safety input signals (/HWBB1 or /HWBB2) were not turned ON.	Check the /HWBB1 and /HWBB2 input signals.	Turn ON the /HWBB1 and /HWBB2 input signals. If you are not using the safety function, connect the Safety Jumper Connector (provided as an accessory) to CN8.	*1
	The FSTP (Forced Stop Input) signal is still OFF.	Check the FSTP signal.	• Turn ON the FSTP signal. • If you will not use the function to force the motor to stop, set Pn516 (2516h) = n.□□□X (FSTP (Forced Stop Input) Signal Allocation) to disable the signal.	*1
	A failure occurred in the SERVOPACK.	–	Turn OFF the power supply to the servo system. Replace the SERVOPACK.	–
Servomotor Moves Instantaneously, and Then Stops	There is a mistake in the Servomotor wiring.	Turn OFF the power supply to the servo system. Check the wiring.	Wire the Servomotor correctly.	–
	There is a mistake in the encoder wiring.	Turn OFF the power supply to the servo system. Check the wiring.	Wire the cable correctly.	–
Servomotor Operation Is Unstable	There is a faulty connection in the Servomotor wiring.	The connector connections for the power line (U, V, and W phases) and the encoder may be unstable. Turn OFF the power supply to the servo system. Check the wiring.	Tighten any loose terminals or connectors and correct the wiring.	–
Servomotor Moves without a Reference Input	A failure occurred in the SERVOPACK.	–	Turn OFF the power supply to the servo system. Replace the SERVOPACK.	–
Dynamic Brake Does Not Operate	The setting of Pn001 (2001h) = n.□□□X (Servo OFF or Alarm Group 1 Stopping Method) is not suitable.	Check the setting of Pn001 (2001h) = n.□□□X.	Set Pn001 (2001h) = n.□□□X correctly.	–
	The dynamic brake resistor is disconnected.	Check the moment of inertia, motor speed, and dynamic brake frequency of use. If the moment of inertia, motor speed, or dynamic brake frequency of use is excessive, the dynamic brake resistance may be disconnected.	Turn OFF the power supply to the servo system. Replace the SERVOPACK. To prevent disconnection, reduce the load.	–
	There was a failure in the dynamic brake drive circuit.	–	There is a defective component in the dynamic brake circuit. Turn OFF the power supply to the servo system. Replace the SERVOPACK.	–

Continued on next page.

Continued from previous page.

Problem	Possible Cause	Confirmation	Correction	Reference
Abnormal Noise from Servomotor	The Servomotor vibrated considerably while performing the tuning-less function with the default settings.	Check the waveform of the motor speed.	Reduce the load so that the moment of inertia ratio or mass ratio is within the allowable value, or increase the load level or reduce the rigidity level in the tuning-less level settings. If the situation is not improved, disable the tuning-less function (i.e., set Pn170 (2170h) to n.□□□0) and execute autotuning either with or without a host reference.	*1
	The machine mounting is not secure.	Turn OFF the power supply to the servo system. Check the mounting state of the Servomotor.	Tighten the mounting screws.	–
		Turn OFF the power supply to the servo system. Check to see if there is misalignment in the coupling.	Align the coupling.	–
		Turn OFF the power supply to the servo system. Check to see if the coupling is balanced.	Balance the coupling.	–
	The bearings are defective.	Turn OFF the power supply to the servo system. Check for noise and vibration around the bearings.	Replace the Servomotor.	–
	There is a vibration source at the driven machine.	Turn OFF the power supply to the servo system. Check for any foreign matter, damage, or deformation in the machine's moving parts.	Consult with the machine manufacturer.	–

Continued on next page.

Continued from previous page.

Problem	Possible Cause	Confirmation	Correction	Reference
Abnormal Noise from Servomotor	Noise interference occurred because of incorrect I/O signal cable specifications.	Turn OFF the power supply to the servo system. Check the I/O signal cables to see if they satisfy specifications. Use shielded twisted-pair cables or screened twisted-pair cables with conductors of at least 0.12 mm^2 (stranded wire).	Use cables that satisfy the specifications.	–
	Noise interference occurred because an I/O signal cable is too long.	Turn OFF the power supply to the servo system. Check the lengths of the I/O signal cables.	The I/O signal cables must be no longer than 3 m.	–
	Noise interference occurred because of incorrect Encoder Cable specifications.	Turn OFF the power supply to the servo system. Check the Encoder Cable to see if it satisfies specifications. Use shielded twisted-pair cables or screened twisted-pair cables with conductors of at least 0.12 mm^2 (stranded wire).	Use cables that satisfy the specifications.	–
	Noise interference occurred because the Encoder Cable is too long.	Turn OFF the power supply to the servo system. Check the length of the Encoder Cable.	The Encoder Cable must be no longer than 20 m.	–
	Noise interference occurred because the Encoder Cable is damaged.	Turn OFF the power supply to the servo system. Check the Encoder Cable to see if it is pinched or the sheath is damaged.	Replace the Encoder Cable and correct the cable installation environment.	–
	The Encoder Cable was subjected to excessive noise interference.	Turn OFF the power supply to the servo system. Check to see if the Encoder Cable is bundled with a high-current line or installed near a high-current line.	Correct the cable layout so that no surge is applied by high-current lines.	–
	There is variation in the FG potential because of the influence of machines on the Servomotor side, such as a welder.	Turn OFF the power supply to the servo system. Check to see if the machines are correctly grounded.	Properly ground the machines to separate them from the FG of the encoder.	–
	There is a SERVOPACK pulse counting error due to noise.	Check to see if there is noise interference on the signal line from the encoder.	Turn OFF the power supply to the servo system. Implement countermeasures against noise for the encoder wiring.	–
	The encoder was subjected to excessive vibration or shock.	Turn OFF the power supply to the servo system. Check to see if vibration from the machine occurred. Check the Servomotor installation (mounting surface precision, securing state, and alignment).	Reduce machine vibration. Or, improve the mounting state of the Servomotor.	–
	A failure occurred in the encoder.	–	Turn OFF the power supply to the servo system. Replace the Servomotor.	–

Continued on next page.

Continued from previous page.

Problem	Possible Cause	Confirmation	Correction	Reference
Servomotor Vibrates at Frequency of Approx. 200 Hz to 400 Hz.	The servo gains are not balanced.	Check to see if the servo gains have been correctly tuned.	Perform autotuning without a host reference.	*1
	The setting of Pn100 (2100h) (Speed Loop Gain) is too high.	Check the setting of Pn100 (2100h). The default setting is Kv = 40.0 Hz.	Set Pn100 (2100h) to an appropriate value.	–
	The setting of Pn102 (2102h) (Position Loop Gain) is too high.	Check the setting of Pn102 (2102h). The default setting is Kp = 40.0/s.	Set Pn102 (2102h) to an appropriate value.	–
	The setting of Pn101 (2101h) (Speed Loop Integral Time Constant) is not appropriate.	Check the setting of Pn101 (2101h). The default setting is Ti = 20.0 ms.	Set Pn101 (2101h) to an appropriate value.	–
	The setting of Pn103 (2103h) (Moment of Inertia Ratio or Mass Ratio) is not appropriate.	Check the setting of Pn103 (2103h).	Set Pn103 (2103h) to an appropriate value.	–
Large Motor Speed Overshoot on Starting and Stopping	The servo gains are not balanced.	Check to see if the servo gains have been correctly tuned.	Perform autotuning without a host reference.	*1
	The setting of Pn100 (2100h) (Speed Loop Gain) is too high.	Check the setting of Pn100 (2100h). The default setting is Kv = 40.0 Hz.	Set Pn100 (2100h) to an appropriate value.	–
	The setting of Pn102 (2102h) (Position Loop Gain) is too high.	Check the setting of Pn102 (2102h). The default setting is Kp = 40.0/s.	Set Pn102 (2102h) to an appropriate value.	–
	The setting of Pn101 (2101h) (Speed Loop Integral Time Constant) is not appropriate.	Check the setting of Pn101 (2101h). The default setting is Ti = 20.0 ms.	Set Pn101 (2101h) to an appropriate value.	–
	The setting of Pn103 (2103h) (Moment of Inertia Ratio or Mass Ratio) is not appropriate.	Check the setting of Pn103 (2103h).	Set Pn103 (2103h) to an appropriate value.	–
	The torque reference is saturated.	Check the waveform of the torque reference.	Use the mode switch.	–

Continued from previous page.

Problem	Possible Cause	Confirmation	Correction	Reference
Absolute Encoder Position Deviation Error (The position that was saved in the host controller when the power was turned OFF is different from the position when the power was next turned ON.)	Noise interference occurred because of incorrect Encoder Cable specifications.	Turn OFF the power supply to the servo system. Make sure that the rotary or Linear Encoder Cable satisfies the specifications. Use a shielded twisted-pair wire cable or a screened twisted-pair cable with a conductors of at least 0.12 mm^2.	Use cables that satisfy the specifications.	–
	Noise interference occurred because the Encoder Cable is too long.	Turn OFF the power supply to the servo system. Check the length of the Encoder Cable.	The Encoder Cable must be no longer than 20 m.	–
	Noise interference occurred because the Encoder Cable is damaged.	Turn OFF the power supply to the servo system. Check the Encoder Cable to see if it is pinched or the sheath is damaged.	Replace the Encoder Cable and correct the cable installation environment.	–
	The Encoder Cable was subjected to excessive noise interference.	Turn OFF the power supply to the servo system. Check to see if the Encoder Cable is bundled with a high-current line or installed near a high-current line.	Correct the cable layout so that no surge is applied by high-current lines.	–
	There is variation in the FG potential because of the influence of machines on the Servomotor side, such as a welder.	Turn OFF the power supply to the servo system. Check to see if the machines are correctly grounded.	Properly ground the machines to separate them from the FG of the encoder.	–
	There is a SERVOPACK pulse counting error due to noise.	Turn OFF the power supply to the servo system. Check to see if there is noise interference on the signal line from the encoder.	Implement countermeasures against noise for the encoder wiring.	–
	The encoder was subjected to excessive vibration or shock.	Turn OFF the power supply to the servo system. Check to see if vibration from the machine occurred. Check the Servomotor installation (mounting surface precision, securing state, and alignment).	Reduce machine vibration. Or, improve the mounting state of the Servomotor.	–
	A failure occurred in the encoder.	–	Turn OFF the power supply to the servo system. Consult Harmonic Drive Systems Inc.	–
	A failure occurred in the SERVOPACK.	–	Turn OFF the power supply to the servo system. Replace the Servomotor.	–

Continued on next page.

Continued from previous page.

Problem	Possible Cause	Confirmation	Correction	Reference
Absolute Encoder Position Deviation Error (The position that was saved in the host controller when the power was turned OFF is different from the position when the power was next turned ON.)	Host Controller Multiturn Data or Absolute Encoder Position Data Reading Error	Check the error detection section of the host controller.	Correct the error detection section of the host controller.	–
		Check to see if the host controller is executing data parity checks.	Perform parity checks for the multiturn data or absolute encoder position data.	–
		Check for noise interference in the cable between the SERVOPACK and the host controller.	Implement countermeasures against noise and then perform parity checks again for the multiturn data or absolute encoder position data.	–
	The multiturn limit settings do not agree between the host controller and Pn205.	Check the multiturn limit settings on the host controller and in Pn205.	Set the same the multiturn limit setting on the host controller and in Pn205.	*
Overtravel Occurred	The P-OT/N-OT (Forward Drive Prohibit or Reverse Drive Prohibit) signal was input.	Check the external power supply (+24 V) voltage for the input signals.	Correct the external power supply (+24 V) voltage for the input signals.	–
		Check the operating condition of the overtravel limit switches.	Make sure that the overtravel limit switches operate correctly.	–
		Check the wiring of the overtravel limit switches.	Correct the wiring of the overtravel limit switches.	*
		Check the settings of the overtravel input signal allocations (Pn50A/ Pn50B).	Set the parameters to correct values.	*
	The P-OT/N-OT (Forward Drive Prohibit or Reverse Drive Prohibit) signal malfunctioned.	Check for fluctuation in the external power supply (+24 V) voltage for the input signals.	Eliminate fluctuation from the external power supply (+24 V) voltage for the input signals.	–
		Check to see if the operation of the overtravel limit switches is unstable.	Stabilize the operating condition of the overtravel limit switches.	–
		Check the wiring of the overtravel limit switches (e.g., check for cable damage and loose screws).	Correct the wiring of the overtravel limit switches.	–
	There is a mistake in the allocation of the P-OT or N-OT (Forward Drive Prohibit or Reverse Drive Prohibit) signal in Pn50A (250Ah) = n.X□□□ or Pn50B (250Bh) = n.□□□X.	Check to see if the P-OT signal is allocated in Pn50A (250Ah) = n.X□□□.	If another signal is allocated in Pn50A (250Ah) =n.X□□□, allocate the P-OT signal instead.	*
		Check to see if the N-OT signal is allocated in Pn50B (250Bh) = n.□□□X.	If another signal is allocated in Pn50B (250Bh) =n.□□□X, allocate the N-OT signal instead.	
	The selection of the Servomotor stopping method is not correct.	Check the servo OFF stopping method set in Pn001 (2001h) = n.□□□X or Pn001 (2001h) = n.□□X□.	Select a Servomotor stopping method other than coasting to a stop.	*
		Check the torque control stopping method set in Pn001 (2001h) = n.□□□X or Pn001 (2001h) = n.□□X□.	Select a Servomotor stopping method other than coasting to a stop.	

Continued on next page.

Continued from previous page.

Problem	Possible Cause	Confirmation	Correction	Reference
Improper Stop Position for Overtravel (OT) Signal	The limit switch position and dog length are not appropriate.	–	Install the limit switch at the appropriate position.	–
	The overtravel limit switch position is too close for the coasting distance.	–	Install the overtravel limit switch at the appropriate position.	–
Position Deviation (without Alarm)	Noise interference occurred because of incorrect Encoder Cable specifications.	Turn OFF the power supply to the servo system. Make sure that the rotary or Linear Encoder Cable satisfies the specifications. Use a shielded twisted-pair wire cable or a screened twisted-pair cable with a conductors of at least 0.12 mm^2.	Use cables that satisfy the specifications.	–
	Noise interference occurred because the Encoder Cable is too long.	Turn OFF the power supply to the servo system. Check the length of the Encoder Cable.	The Encoder Cable must be no longer than 20 m.	–
	Noise interference occurred because the Encoder Cable is damaged.	Turn OFF the power supply to the servo system. Check the Encoder Cable to see if it is pinched or the sheath is damaged.	Replace the Encoder Cable and correct the cable installation environment.	–
	The Encoder Cable was subjected to excessive noise interference.	Turn OFF the power supply to the servo system. Check to see if the Encoder Cable is bundled with a high-current line or installed near a high-current line.	Correct the cable layout so that no surge is applied by high-current lines.	–
	There is variation in the FG potential because of the influence of machines on the Servomotor side, such as a welder.	Turn OFF the power supply to the servo system. Check to see if the machines are correctly grounded.	Properly ground the machines to separate them from the FG of the encoder.	–
	The encoder was subjected to excessive vibration or shock.	Turn OFF the power supply to the servo system. Check to see if vibration from the machine occurred. Check the Servomotor installation (mounting surface precision, securing state, and alignment).	Reduce machine vibration. Or, improve the mounting state of the Servomotor.	–
	The coupling between the machine and Servomotor is not suitable.	Turn OFF the power supply to the servo system. Check to see if position offset occurs at the coupling between machine and Servomotor.	Correctly secure the coupling between the machine and Servomotor.	–
	Noise interference occurred because of incorrect I/O signal cable specifications.	Turn OFF the power supply to the servo system. Check the I/O signal cables to see if they satisfy specifications. Use shielded twisted-pair cables or screened twisted-pair cables with conductors of at least 0.12 mm^2 (stranded wire).	Use cables that satisfy the specifications.	–

Continued on next page.

Continued from previous page.

Problem	Possible Cause	Confirmation	Correction	Reference
Position Deviation (without Alarm)	Noise interference occurred because an I/O signal cable is too long.	Turn OFF the power supply to the servo system. Check the lengths of the I/O signal cables.	The I/O signal cables must be no longer than 3 m.	–
	An encoder fault occurred. (The pulse count does not change.)	–	Turn OFF the power supply to the servo system. Replace the Servomotor.	–
	A failure occurred in the SERVOPACK.	–	Turn OFF the power supply to the servo system. Replace the Servomotor.	–
Servomotor Overheated	The surrounding air temperature is too high.	Measure the surrounding air temperature around the Servomotor.	Reduce the surrounding air temperature to 40°C or less.	–
	The Servomotor surface is dirty.	Turn OFF the power supply to the servo system. Visually check the surface for dirt.	Clean dirt, dust, and oil from the surface.	–
	There is an overload on the Servomotor.	Check the load status with a monitor.	If there is an overload, reduce the load or select SERVOPACK and Servomotor models with larger capacities.	–

* Refer to the following manual for details.
Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)

Parameter and Object Lists

4

This chapter provides information on parameters and objects.

4.1 List of Parameters

4.1.1 Interpreting the Parameter Lists

Indicates when a change to the parameter will be effective.

Parameter No.	Size	Name	Setting Range	Setting Unit	Default Setting	When Enabled	Classification	Reference
Pn000 (2000h)	2	Basic Function Selections 0	0000h to 10B1h	–	0000h	After restart	Setup	–

There are the following two classifications.
- Setup
- Tuning

Refer to the following manual for details.
Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)

			Reference
n.□□□X	Rotation Direction Selection		
	0	Use CCW as the forward direction.	*1
	1	Use CW as the forward direction. (Reverse Rotation Mode)	

n.□□X□	Reserved parameter (Do not change.)

n.□X□□	Reserved parameter (Do not change.)

			Reference
n.X□□□	Rotary/Linear Servomotor Startup Selection When Encoder Is Not Connected		
	0	When an encoder is not connected, start as SERVOPACK for Rotary Servomotor.	*1
	1	Reserved setting (Do not use.)	

4.1.2 List of Parameters

The following table lists the parameters.

Note: Do not change the following parameters from their default settings.
- Reserved parameters
- Parameters not given in this manual

Parameter No.	Size	Name	Setting Range	Setting Unit	Default Setting	When Enabled	Classification	Reference
Pn000 (2000h)	2	Basic Function Selections 0	0000h to 10B1h	–	0000h	After restart	Setup	–

n.□□□X	Rotation Direction Selection		Reference
	0	Use CCW as the forward direction.	*1
	1	Use CW as the forward direction. (Reverse Rotation Mode)	

n.□□X□	Reserved parameter (Do not change.)

n.□X□□	Reserved parameter (Do not change.)

n.X□□□	Rotary/Linear Servomotor Startup Selection When Encoder Is Not Connected		Reference
	0	When an encoder is not connected, start as SERVOPACK for Rotary Servomotor.	*1
	1	Reserved setting (Do not use.)	

Parameter No.	Size	Name	Setting Range	Setting Unit	Default Setting	When Enabled	Classification	Reference
Pn001 (2001h)	2	Application Function Selections 1	0000h to 1142h	–	0000h	After restart	Setup	–

n.□□□X	Motor Stopping Method for Servo OFF and Group 1 Alarms		Reference
	0	Stop the motor by applying the dynamic brake.	*1
	1	Stop the motor by the applying dynamic brake and then release the dynamic brake.	
	2	Coast the motor to a stop without the dynamic brake.	

n.□□X□	Overtravel Stopping Method		Reference
	0	Apply the dynamic brake or coast the motor to a stop.	*1
	1	Decelerate the motor to a stop using the torque set in Pn406 as the maximum torque and then servo-lock the motor.	
	2	Decelerate the motor to a stop using the torque set in Pn406 as the maximum torque and then let the motor coast.	
	3	Decelerate the motor to a stop using the deceleration time set in Pn30A and then servo-lock the motor.	
	4	Decelerate the motor to a stop using the deceleration time set in Pn30A and then let the motor coast.	

n.□X□□	Main Circuit Power Supply AC/DC Input Selection		Reference
	0	Input AC power as the main circuit power supply using the L1, L2, and L3 terminals (do not use shared converter).	*1
	1	Input DC power as the main circuit power supply using the B1/⊕ and ⊖ 2 terminals or the B1 and ⊖ 2 terminals (use an external converter or the shared converter).	

n.X□□□	Reserved parameter (Do not change.)

Parameter No.	Size	Name	Setting Range	Setting Unit	Default Setting	When Enabled	Classification	Reference
Pn002 (2002h)	2	Application Function Selections 2	0000h to 4213h	–	0001h	After restart	Setup	–

n.□□□X	EtherCAT (CoE) Module Torque Limit Command Usage Selection		Reference
	0	Reserved setting (Do not use.)	–
	1	Enable torque limit commands from EtherCAT (CoE). (Automatically set by the EtherCAT (CoE) Module.)	
	2	Reserved setting (Do not use.)	
	3	Reserved setting (Do not use.)	

n.□□X□	EtherCAT (CoE) Module Speed Limit Command Usage Selection		Reference
	0	Disable speed limit commands from EtherCAT (CoE) during torque control.	–
	1	Reserved setting (Do not use.)	

n.□X□□	Encoder Usage		Reference
	0	Use the encoder according to encoder specifications.	*1
	1	Use the encoder as an incremental encoder.	
	2	Use the encoder as a single-turn absolute encoder.	

n.X□□□	External Encoder Usage		Reference
	0	Do not use an external encoder.	*1
	1	The external encoder moves in the forward direction for CCW motor rotation.	
	2	Reserved setting (Do not use.)	
	3	The external encoder moves in the reverse direction for CCW motor rotation.	
	4	Reserved setting (Do not use.)

Pn61B *8 (261Bh)	2	Overheat Alarm Level	0 to 500	0.01 V	250	Immediately	Setup	*1
Pn61C *8 (261Ch)	2	Overheat Warning Level	0 to 100	1%	100	Immediately	Setup	*1
Pn61D *8 (261Dh)	2	Overheat Alarm Filter Time	0 to 65,535	1 s	0	Immediately	Setup	*1
Pn621 (2621h) to Pn628 (2628h)*4	–	Safety Module-Related Parameters	–	–	–	–	–	–

*1. Refer to the following manual for details.
Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)

*2. Set a percentage of the motor rated torque.

*3. Normally set this parameter to 0. If you use an External Regenerative Resistor, set the capacity (W) of the External Regenerative Resistor.

*4. The upper limit is the maximum output capacity (W) of the SERVOPACK.

*5. These parameters are for SERVOPACKs with a Safety Module. Refer to the following manual for details.
Σ-V-Series/Σ-V-Series for Large-Capacity Models/Σ-7-Series User's Manual Safety Module (Manual No.: SIEP C720829 06)

*6. With EtherCAT (CoE), this is automatically set when the power supply is turned ON. For setting the electronic gear ratio, use objects 2701h to 2704h. Refer to the following manual for details.
Σ-7-Series Σ-7S SERVOPACK with EtherCAT (CoE) Communications References Product Manual (Manual No.: SIEP S800001 55)

*7. These parameters are for SERVOPACKs that support the dynamic brake hardware option specifications. Refer to the following manual for details.
Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Dynamic Brake Hardware Option Specifications Product Manual (Manual No.: SIEP S800001 73)

*8. Enabled only when Pn61A is set to n.□□□2 or n.□□□3.

*1. Write “Save” to object 1010h to save all of the current parameter data to EEPROM.
If the objects are modified by the Digital Operator or SigmaWin+, the data will be directly saved in EEPROM.

*2. The parameter numbers given in the table are the parameter numbers that are used with the Digital Operator and SigmaWin+.

*3. These parameters cannot be written by the Digital Operator.

*4. These parameters are not displayed on the SigmaWin+.

*5. For SGD7S-□□□□E0: 0x02200301.

*6. Refer to the following section for details on the parameter.

☞ *4.1.2 List of Parameters* on page 4-3

Parameter numbers that are not on the list will not be displayed on the SigmaWin+ and Digital Operator.

4.3 SDO Abort Code List

The following table gives the SDO abort codes for SDO communications errors.

Value	Meaning
0x05 03 00 00	Toggle bit did not change.
0x05 04 00 00	SDO protocol timeout
0x05 04 00 01	Client/server command specifier is not valid or is unknown.
0x05 04 00 05	Out of memory
0x06 01 00 00	Unsupported access to an object
0x06 01 00 01	Attempt to read to a write-only object
0x06 01 00 02	Attempt to write to a read-only object
0x06 02 00 00	The object does not exist in the object directory.
0x06 04 00 41	The object cannot be mapped to the PDO.
0x06 04 00 42	The number and length of the objects to be mapped would exceed the PDO length.
0x06 04 00 43	General parameter incompatibility
0x06 04 00 47	General internal incompatibility in the device
0x06 06 00 00	Access failed due to a hardware error.
0x06 07 00 10	Data type does not match: length of service parameter does not match.
0x06 07 00 12	Data type does not match: service parameter too long.
0x06 07 00 13	Data type does not match: service parameter too short.
0x06 09 00 11	Subindex does not exist.
0x06 09 00 30	Value range of parameter was exceeded (only for write access).
0x06 09 00 31	Value of parameter that was written is too high.
0x06 09 00 32	Value of parameter that was written is too low.
0x06 09 00 36	The maximum value is less than the minimum value.
0x08 00 00 00	General error
0x08 00 00 20	Data cannot be transferred or stored to the application.
0x08 00 00 21	Data cannot be transferred or stored to the application because of local control.
0x08 00 00 22	Data cannot be transferred or stored to the application because of the present device state.

4.4 Parameter Recording Table

Use the following table to record the settings of the parameters.

Parameter No.	Default Setting						Name	When Enabled
Pn000 (2000h)	0000h						Basic Function Selections 0	After restart
Pn001 (2001h)	0000h						Application Function Selections 1	After restart
Pn002 (2002h)	0001h						Application Function Selections 2	After restart
Pn006 (2006h)	0002h						Application Function Selections 6	Immediately
Pn007 (2007h)	0000h						Application Function Selections 7	Immediately
Pn008 (2008h)	4000h						Application Function Selections 8	After restart
Pn009 (2009h)	0010h						Application Function Selections 9	After restart
Pn00A (200Ah)	0001h						Application Function Selections A	After restart
Pn00B (200Bh)	0000h						Application Function Selections B	After restart
Pn00C (200Ch)	0000h						Application Function Selections C	After restart
Pn00D (200Dh)	0000h						Application Function Selections D	Immediately
Pn00F (200Fh)	0000h						Application Function Selections F	After restart
Pn022 (2022h)	0000h						Application Function Selection 22	After restart
Pn081 (2081h)	0000h						Application Function Selections 81	After restart
Pn100 (2100h)	400						Speed Loop Gain	Immediately
Pn101 (2101h)	2000						Speed Loop Integral Time Constant	Immediately
Pn102 (2102h)	400						Position Loop Gain	Immediately

Pn507 (2507h)	100						Brake Reference Output Speed Level	Immediately
Pn508 (2508h)	50						Servo OFF-Brake Command Waiting Time	Immediately
Pn509 (2509h)	20						Momentary Power Interruption Hold Time	Immediately
Pn50A (250Ah)	1881h						Input Signal Selections 1	After restart
Pn50B (250Bh)	8882h						Input Signal Selections 2	After restart
Pn50E (250Eh)	0000h						Output Signal Selections 1	After restart
Pn50F (250Fh)	0100h						Output Signal Selections 2	After restart
Pn510 (2510h)	0000h						Output Signal Selections 3	After restart
Pn511 (2511h)	6543h						Input Signal Selections 5	After restart

Parameter No.	Default Setting						Name	When Enabled
Pn512 (2512h)	0000h						Output Signal Inverse Settings	After restart
Pn514 (2514h)	0000h						Output Signal Selections 4	After restart
Pn516 (2516h)	8888h						Input Signal Selections 7	After restart
Pn51B (251Bh)	1000						Motor-Load Position Deviation Overflow Detection Level	Immediately
Pn51E (251Eh)	100						Position Deviation Overflow Warning Level	Immediately
Pn520 (2520h)	5242880						Position Deviation Overflow Alarm Level	Immediately
Pn522 (2522h)	7						Positioning Completed Width	Immediately
Pn524 (2524h)	1073741824						Near Signal Width	Immediately
Pn526 (2526h)	5242880						Position Deviation Overflow Alarm Level at Servo ON	Immediately
Pn528 (2528h)	100						Position Deviation Overflow Warning Level at Servo ON	Immediately
Pn529 (2529h)	10000						Speed Limit Level at Servo ON	Immediately
Pn52A (252Ah)	20						Multiplier per Fully-closed Rotation	Immediately
Pn52B (252Bh)	20						Overload Warning Level	Immediately
Pn52C (252Ch)	100						Base Current Derating at Motor Overload Detection	After restart
Pn530 (2530h)	0000h						Program Jogging-Related Selections	Immediately
Pn531 (2531h)	32768						Program Jogging Travel Distance	Immediately
Pn533 (2533h)	500						Program Jogging Movement Speed	Immediately
Pn534 (2534h)	100						Program Jogging Acceleration/Deceleration Time	Immediately
Pn535 (2535h)	100						Program Jogging Waiting Time	Immediately
Pn536 (2536h)	1						Program Jogging Number of Movements	Immediately
Pn550 (2550h)	0						Analog Monitor 1 Offset Voltage	Immediately
Pn551 (2551h)	0						Analog Monitor 2 Offset Voltage	Immediately
Pn552 (2552h)	100						Analog Monitor 1 Magnification	Immediately
Pn553 (2553h)	100						Analog Monitor 2 Magnification	Immediately
Pn55A (255Ah)	1						Power Consumption Monitor Unit Time	Immediately
Pn560 (2560h)	400						Residual Vibration Detection Width	Immediately
Pn561 (2561h)	100						Overshoot Detection Level	Immediately

Continued on next page.

Continued from previous page.

Parameter No.	Default Setting						Name	When Enabled
Pn600 (2600h)	0						Regenerative Resistor Capacity	Immediately
Pn601 (2601h)	0						Dynamic Brake Resistor Capacity	Immediately
Pn603 (2603h)	0						Regenerative Resistance	Immediately
Pn604 (2604h)	0						Dynamic Brake Resistance	Immediately
Pn61A (261Ah)	0000h						Overheat Protection Selections	After restart
Pn61B (261Bh)	250						Overheat Alarm Level	Immediately
Pn61C (261Ch)	100						Overheat Warning Level	Immediately
Pn61D (261Dh)	0						Overheat Alarm Filter Time	Immediately

* The timing for enabling changes to parameter settings depends on the parameter. Refer to the following section for details on the enable timing.

☞ *4.1 List of Parameters* on page 4-2

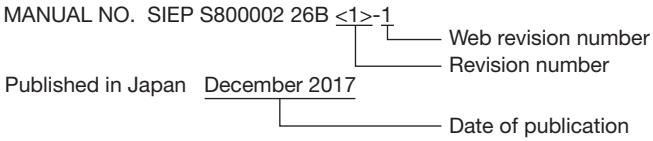
Revision History

The revision dates and numbers of the revised manuals are given on the bottom of the back cover.



Date of Publication	Rev. No.	Web Rev. No.	Section	Revised Contents
November 2024	<11>	0	3.1.2, 4.1.2, 4.4	Partly revised.
April 2024	<10>	0	Preface, 2.3	Partly revised.
September 2023	<9>	0	2.1.1, 2.1.2, 2.1.3, 3.1.2	Partly revised.
			Back cover	Revision: Address
February 2023	<8>	0	Preface, 1.2, 3.1.2	Partly revised.
			Back cover	Revision: Address
February 2022	<7>	0	Preface, 1.6.1, 4.2	Partly revised.
			Back cover	Revision: Address
September 2021	<6>	0	All chapters	Partly revised.
August 2020	<5>	0	Preface	Partly revised.
February 2020	<4>	0	Preface	Partly revised.
			4.1.2	Revision: Setting Range of Pn00A (200Ah)
			Back cover	Revision: Address
October 2019	<3>	0	All chapters	Partly revised.
			Back cover	Revision: Address
October 2018	<2>	0	Preface	Partly revised.
			1.6	Newly added.
			4.2	Addition: Footnote 4
			Back cover	Revision: Address
December 2017	<1>	0	Preface	Partly revised
			Chapter 3	Deletion: F50h
			4.1, 4.4	Addition: Pn022 (2022h)
August 2017	–	–	–	First edition

Σ-7-Series AC Servo Drive

Σ-7S SERVOPACK with FT/EX Specification for Application with Special Motor, SGM7D Motor
