

Y-Term Changes from Version 7.01 to 7.07

1. Implemented opening of an SMC program file by drag and drop in programming window.
2. Added application launch and SMC program opening by double clicking program file in explorer.
3. Implemented hotkey functionality for:
 - a. Select All – Ctrl-A
 - b. Find – Ctrl-F
 - c. Go To (line) – Ctrl-G
4. Added Selected Block comment / uncomment.
 - a. With text selected, pressing the “/” key will make all lines selected toggle the comment mode (add or remove “//”).
 - b. With text selected, pressing the “N” key will make all lines selected toggle the no-operation mode (add or remove “NO”).
5. Modified firmware download to allow downloading of newer, larger, firmware files to the controllers. Previous versions would freeze at 5% download for SMC 4000.
6. Fixed an issue with having Functions keys working only once under certain conditions.
7. Clicking on Terminal tab now allows immediate typing in the terminal window. Previously a click in the window was required.
8. Added ability to use USB serial port adapter by expanding the port number to port 15.
