

## **PRODUCT NOTE**

MOTION PRODUCT AND ENGINEERING GROUP

**Subject: SMCGUI1, YTerm software release**

**Product:** SMCGUI1, SMC Development Environment, YTerm software

---

**Summary:** The YTerm software is being released with Windows 2000 compatibility and also with the ability to work with the LEGEND-MC controller as well as the SMC2000 controllers. This version of YTerm is Version 5.1 Revision 5.

- 1) This is the first YTerm version that will run under the Windows 2000 operating system. The operating systems now supported are Windows 95, 98, NT, and 2000.
- 2) This is the first YTerm version to work with the LEGEND-MC (SMC3010) controller as well as the SMC2000 series controllers.
- 3) The software is now packaged on a CDROM. The material number SMCGUI1 is the SMC Development Environment kit. It is a box that includes the YTerm software on CDROM, the serial programming cable (SMCCBL7), a software registration card for the customer to fill in and mail back to YEA, and a printed copy of the YTerm software manual.
- 4) The CDROM includes the YTerm software and also some example programs for both the SMC2000 and LEGEND-MC controllers. There is an installation file for Acrobat Reader 4.05 on the CD. There are also PDF format files of the following documents:

YEA-SIA-SMC1.1A	YTerm Software Manual
YEA-SIA-SMC1.2A	LEGEND-MC User's Manual

- 5) A new Ethernet Utilities package is also included on the CDROM. This provides a user-friendly software interface for Ethernet communications. There is software called VComm to send and receive Ethernet commands to a controller. It is similar in use to the Telnet software tool. There is also a BootP utility to set an IP address in a controller.
