

Plasma & Laser Cutting OEM Servo Solutions

Shape cutting applications are going through a revolution in capability.

That's why the industry pros are choosing Sigma-7, the motion controls that run rings around the competition in performance.

- Servo Motors with high resolution encoders that eliminate cogging at low speeds
- Direct Drive servos for more compact, precise bevel cutting assemblies
- Factory assembled and tested Gear Motors for assured reliability
- Amplifiers with built-in backlash compensation and vibration suppression for smoother motion

If today's motion solutions aren't making the cut, talk to a Yaskawa representative about Sigma-7, the servo systems for the next revolution.
