

YASKAWA

Case Study

Ontario Canada Museum

Highlights:

- Qty 3 – 60hp Drives
- 600VAC NEMA 1
- Application: Fans

Site Brief:

The Ontario Royal Museum had a number of installed 60hp drives and was continuously being confronted with nuisance trip problems.

Yaskawa's claim that their variable frequency drive would not be susceptible to these same problems was immediately challenged.

Yaskawa responded with the assurance that if their drives did not perform as claimed, the drives could be returned. It's been years since the installation; the drives continue to perform flawlessly.
