# TRANSISTOR INVERTER Varispeed-616GII 

When properly installed, operated and maintained, this equipment will provide a lifetime of service. It is mandatory that the person who operates, inspects, or maintains this equipment thoroughly read and understand this manual, before proceeding.

This manual applies to VS-616GII Model CIMR-18.5G2, -22G2, -30 G 2 .

The VS-616GII Drive is an AC variable speed drive system for high-precision variable speed applications. It basically consists of a three-phase squirrelcage induction motor, a VS-616GII controller (VS-616GI), an operator control station, and optional control units. This manual primarily describes VS616GII, but contains basic information for operator control station as well. For details of the operation of individual units, refer to their respective manuals.

Model CIMR-22G2

## DANGER

- Do not touch circuit components until "CHARGE" lamp is extinguished after turning off the AC main circuit power supply. The capacitors are still charged and can be quite dangerous.
- Do not connect or disconnect wires and connectors while power is applied to the circuit.
- Do not check signals during operation.

## IMPORTANT

- Be sure to ground VS-616GII using the ground terminal (G) ( (E)). See par. 4.4.3 on page 10.
- Never connect main circuit output terminals (T1) (U)), (T2) ( (V) ), T3) ( (W) to AC main circuit power supply.
- All the potentiometers of VS-616GII have been adjusted at the factory. Do not change their settings unnecessarily.
- Do not make withstand voltage test on any part of the VS-616GI unit, because it is electronic equipment using semi-conductors and vulnerable to high voltage.
- Control PC board employs CMOS IC's which are easily damaged by static electricity. Take care not to touch the CMOS elements inadvertently.

## 1. RECEIVING

This VS-616GII has been put through demanding tests at the factory before shipment. After unpacking, check for the following.

- Verify the part numbers with the purchase order sheet and/or packing slip.
- Transit damage.

If any part of VS-616GII is damaged or lost, immediately notify the shipper.

## 2. VS-616GII MAJOR CONTROL COMPONENT LAYOUT

VS-616GII major control component is shown in Fig. 1.

Fig. 1 Major Control Component Layout of VS-616GII Model CIMR-22G2 with ETL Certification

| II | 12 |  | 13 | , | 14 | 15 | 16 | i) | 7 | 18 |  | 19 |  | 20 |

| 1 |  | $\underline{2}$ |  | 3 | 4 | 4. | 5) | 6' | 7 | ' | 8 | I | 9. | . 10 |

## 3. INSTALLATION

### 3.1 LOCATION

Location of the equipment is important to achieve proper performance and normal operating life. The VS-616GII units should be installed in areas where the following conditions exist.

- Ambient temperature: -10 to $+40^{\circ} \mathrm{C}$ (For enclosed type),

$$
-10 \text { to }+50^{\circ} \mathrm{C} \text { (For open chassis type) }
$$

- Protected from rain or moisture.
- Protected from direct sunlight.
- Protected from corrosive gases or liquids.
- Free from airborne dust or metallic particles.
- Free from vibration.

## CAUTION

Never move, lift or handle the VS-616GII cabinet by the front cover.
Note: To house multiple VS-616GIIs in a switchgear, install a cooling fan or some other means to cool the air to enter the inverter below $45^{\circ} \mathrm{C}$.

## 3. 2 POSITIONING

For cooling and maintenance purposes, make sure that there is sufficient clearance around the equipment, as shown in Fig. 2.

To keep effective cooling conditions, it must be installed vertically to the ground using the four mounting screws.

(a) Front View

(b) Side View

Fig. 2 VS-616GII Clearance Requirements for Proper Cooling and Maintenance

## 3. 3 MOUNTING DIMENSIONS

The mounting dimensions for the VS-616GI are given in Fig. 3. and Table 1.

Fig. 3 Cabinet Mounting Holes

Table 1 Cabinet Mounting Dimensions

| Dimensions Model |  | 200 to 230 V |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | CIMR-185 G 2 | CIMR-22 G 2 | CIMR-30 G 2 |
| W1 | Open Chassis Type | $\begin{gathered} 275 \\ (1083) \end{gathered}$ |  | $\begin{gathered} 375 \\ (1476) \end{gathered}$ |
|  | Enclosed Type (NEMA 1) | $\begin{gathered} 445 \\ (1752) \end{gathered}$ |  | $\begin{array}{r} 595 \\ (2343) \end{array}$ |

## 4. WIRING

### 4.1 INTERCONNECTIONS

Fig. 4 shows the connection diagram for combination of VS-616GII with only digital operator. Remove the front cover before wiring. Connections should be made correctly, referring to Fig. 4.

(DIGITAL OPERATOR)

Fig. 4 Example of Interconnections for Operation with Digital Operator

Fig. 5 shows the connection diagram of VS-616GII for operation by external signals.

Fig. 5 Example of Interconnections for Operation by External Signals

## Notes:

1. $\frac{\square}{\frac{\square}{J}}$ indicates shielded leads and $\frac{\bar{T}}{\frac{\square}{\square}}$ twisted-pair shielded
2. External terminal (15) of +15 V has maximum output current capacity of 20 mA .
3. Either external terminal (13) or (14) can be used.
4. Terminal symbols: © shows main circuit: Oshows control circuit.

## 4. 2 MOLDED-CASE CIRCUIT BREAKER (MCCB) AND POWER SUPPLY MAGNETIC CONTACTOR (MC)

Be sure to connect MCCBs between power supply and VS-616GII input terminals (L1) ( $\mathbb{R}$ ), (L2) ( (S) ), (L3) ( (T) ). Recommended MCCBs are listed in Table 2.

When a ground fault interrupter is used to prevent malfunction, setting current should be 200 mA or over and operating time, 0.1 sec or over.

Table 2 Molded-Case Circuit Breakers and Magnetic Contactors

| VS-616GII | Model CIMR- | 185 G 2 | 22 G 2 | 30G2 |
| :--- | :--- | :---: | :---: | :---: |
|  | Capacity | 34 | 41 | 54 |
|  | Rated Output Current A | 90 | 108 | 144 |
| Mitsubishi <br> Molded-Case <br> Circuit Breaker | Model and Rated Current* | NF225 150.A | NF225 150A | NF225 225A |
| Yaskawa Magnetic Contactors Model |  |  |  |  |

*Comply with NEMA AB1.

## 4. 3 SURGE ABSORBER

For the surge absorbers to be connected to the coils of relays, magnetic contactors, magnetic valves, or magnetic relays, select types from the ones listed in Table 3.

Table 3 Surge Absorbers

| Coils of Magnetic Contactor and Control Relay | Surge Absorber* |  |  |
| :---: | :---: | :---: | :---: |
|  | Model | Specifications | Code No |
| Large-size Magnetic Contactors | DCR2- <br> 50A22E | $\begin{aligned} & 250 \mathrm{VAC} \\ & 05 \mu \mathrm{~F}+200 \Omega \end{aligned}$ | C002417 |
| Control Relay LY-2. -3(OMRON) HH-22. -23(Fuji) MM-2. -4 (OMRON) | $\begin{aligned} & \text { DCR2- } \\ & \text { 10A25C } \end{aligned}$ | $\begin{aligned} & 250 \mathrm{VAC} \\ & 01 \mu \mathrm{~F}+100 \Omega \end{aligned}$ | C002482 |

*Made by MARCON Electronics.

## IMPORTANT

Lead size should be determined considering voltage drop of leads. Refer to APPENDIX 10 "WIRE SIZE".

### 4.4 WIRING INSTRUCTIONS

## 4. 4. 1 Control Circuit

The external interconnection wiring must be performed with following procedures.

After completing VS-616GII interconnections, be sure to check that connections are correct. Never use control circuit buzzer check.
(1) Separation of control circuit leads and main circuit leads

Signal leads 1 through 20 must be separated from main circuit leads (L1) ( (R) ), (L2) ( (S) , L3) ( T ), $\Theta, \oplus$, (T1) ( (U) ), (T2) ( (V) , (T3) ( (W) ), ( $\ell_{1}$ ( r$\left.), \ell_{2}\right)$ (S) , and other power cables to prevent erroneous operation caused by noise interference.
(2) Control circuit leads (9) (10) (18) (19) (20) (contact output) must be separated from leads (1) to (8) and (11) to (17).
Use the twisted shielded or twisted-pair shielded lead for the control circuit line and connect the shield sheath to the inverter terminal (12). See Fig. 6.

Fig. 6 Shielded Lead Termination
(3) Wiring distance

It is recommended that the wiring distance of the signal leads (1) - (20) ) be 50 meters ( 164 feet) or below.

## 442 Main Circuit Input/Output

- Phase rotation of power is available in either direction, clockwise and counterclockwise.
- When inverter output terminals TP (©) ), T2 (V) , and T3 (W) are connected to motor terminals (T1) (U) ), (T2) (V), and (T3) ( (W) , respectively, motor rotates counterclockwise, viewed from opposite drive end, upon forward operation command. To reverse the rotation interchange any two of motor leads.
(2) Never connect AC main circuit power supply to output terminals (T1) (U) ), (T2) (V), and (T3) (W).
(3) Care should be taken to prevent contact of wiring leads with VS-616GII cabinet, for short-circuit may result.
(4) Never connect power factor correction capacitor or noise filter to VS-616GII output.
(5) For the operation to feed DC power supply from terminals $\oplus$ and be sure to remove the leads (L1) ( R ) to $\ell_{1}$ ( (r) and (L2) (S) to ( $\ell_{2}$ (S), then connect the cooling fan or MC power supply ( $200 \mathrm{~V} 50 / 60 \mathrm{~Hz}, 220 \mathrm{~V} 60 \mathrm{~Hz}$ ) to $\ell_{1}$ ( ( r ) or $\ell_{2}$ (S) terminal.

### 4.4.3 Grounding

Make a positive grounding using ground terminal (G) (E) on the casing of VS-616GII.
(1) Ground resistance should be $100 \Omega$ or less.
(2) Never ground VS-616GII in common with welding machines, motors, and other large-current electrical equipment, or ground pole. Run the ground lead in a separate conduit from leads for large-current electrical equipment.
(3) Use ground lead listed in Table 17 (page 53) and make the length as short as possible.
(4) Where several VS-616GII units are used side by side, all the units should preferably be grounded directly to the ground poles. However, connecting all the ground terminals of VS-616GII in parallel, and ground only one of VS-616GII to the ground pole is also permissible (Fig. 7). However, do not form a loop with the ground leads.

Fig. 7 Grounding of Three VS-616GII Units

## 5. TEST RUN

## 5. 1 CHECKS BEFORE TEST RUN

After mounting and connection are completed, check for:

- Correct connections
- Short-circuit conditions
- Loose screw terminals (Check especially for loose wire clippings.)
- Proper load condition

## 5. 2 SIMPLE OPERATION USING DIGITAL OPERATOR

The following description is for the operation of a standard motor running at 60 Hz .

Wire according to Fig. 4 "Sample of Mutual Wiring" (operation using the digital operator).

Data set with the digital operator is stored after the power is turned off.

Fig. 8 Functions of digital operator keys

### 5.2.1 Set and Operate Frequency Command

## Set frequency command in drive mode ( $\frac{\text { DRIVE }}{\text { PRG }}$

Setting:
(1) Depress $\Delta$ while depressing $\begin{gathered}\text { DSPL } \\ \text { ENTR ; then the frequency }\end{gathered}$ command appears. When this is repeated, the display changes as follows. See (3) for details.

(2) Using $\begin{gathered}\triangleright \\ R E S E T\end{gathered}$ cursor can be moved to the digit to be set, and the numeric set with $\triangle \Delta$ key.
(3) Depress $\begin{gathered}\text { DSPL } \\ \text { ENTR }\end{gathered}$ to store the frequency command value.
(Stored data is maintained when the power is off.)
(4) Depress $\Delta$ while depressing $\begin{gathered}\text { OSPL } \\ \text { ENTR }\end{gathered}$ to select the output frequency to be indicated.

## Operation

(5) Depress $\frac{F W D / R E V}{M O D E}$ to select the motor rotating direction.
(6) Depress RUN to give run command. The motor accelerates according to the specified acceleration time (10 s) and holds the speed at the specified frequency.

Stop operation

(7) Depress | STOP |
| :---: |
| SET | to stop the motor. The motor decelerates according to the specified deceleration time (10 s).

### 52.2 Monitor Function of Digital Operator

(a) Output frequency display

The output frequency appears in units of 0.1 Hz .

(b) Frequency command display

The following display appears in units of 0.1 Hz , depending on the operation performed with the frequency command either from the external terminal or digital operator.
(1) Operation by frequency command from the external terminal

The frequency command specified from the external terminal appears.

(2) Operation by frequency command from the digital operator.

The frequency command specified from the digital operator appears. The digit which is flashing can be changed.
A frequency command can also be set.

(c) Output current display

The inverter output current appears in units of 0.1 A.

Inclicates current is flowing

## 5. 3 ADJUSTMENT AND SETTING

The VS-616GII has the following two constants to select the function and change the characteristics. Before starting operation, set these constants to meet the operation condition.

- System constants ( $\mathrm{Sn}-01$ to $\mathrm{Sn}-12$ ) : Mainly used to select $\mathrm{V} / \mathrm{f}$ and the function of external terminals (Table 4).
- Control constants (Cn-01 to Cn-30): Mainly used to change characteristics (Table 5).

## 5. 3 ADJUSTMENT AND SETTING (Cont'd)

Table 4 System Constants (5n-i)

| $\qquad$ Constant No. | Name |  | Function |  |  | Setting Value at Factory Shipment |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

### 5.3 ADJUSTMENT AND SETTING (Cont'd)

[Example: Adjusting acceleration and deceleration time]
An example to set the acceleration/deceleration time using control constants 8 and 9 ( $\mathrm{Cn}^{-08}$ and $\mathrm{Cn}-09$ ) is described below. This must be carried out while the inverter is not running.

Setting acceleration time:

(3) Using | $\triangleright$ |
| :---: |
| RESET | , move the flashing digit, select the numeric with

$\Delta$ and indicate [ $n-88$ (control constant 8).

(4) Depress | RUN |
| :--- |
| DATA | to indicate the internal data of control constant 8.

(5) Set the required acceleration time by operating $\frac{\square}{\square R E S E T}$ and $\Delta$. The time can be set up to 1800 seconds at 0.1 second intervals.

(6) Depress | STOP |
| :---: |
| SET |
| (to | to temporarily store data.

Setting deceleration time:

(8) Depress $\Delta$ to indicate $[m$ (control constant 9).
(9) Operate the same as setting of acceleration time, and depress $\underset{\substack{\text { DSPL } \\ \text { ENTR }}}{ }$ to store data.
 Light on.)

## 6. OPERATION AT LOAD

After the no-load operation, turn off the AC main circuit power, and connect the driven machine to the motor. Make sure that the driven machine is in running condition, and that proper safety precaution are followed, then run the motor under load in exactly the same way as the test run.

For preset starting (one-touch operation after setting the frequency) perform the following beforehand:
(1) Set the frequency and depress $\frac{\text { RUN }}{\text { DATA }}$ to accelerate the motor in the determined time, as described earlier, and to maintain the rpm at the preset frequency. If the acceleration time is set short relative to the load and if the rpm of the accelerating motor is not smooth (anti-stalling function during acceleration is functioning) ; or if trouble is displayed on the digital operator, set the acceleration time longer.

(2) To decelerate the motor in the preset time and to stop it, depress | STOP |
| :--- |
| SET |

while the motor is rotating. If the deceleration time is set short relative to the load and if the rpm of the decelerating motor is not smooth (anti-stalling function during deceleration is functioning); or if trouble is displayed on the digital operator, set the deceleration time longer.

## PRECAUTION

(1) Start the motor after making sure that the motor is stopped. If the operation is started during motor coasting, use the control constant ( $\mathrm{Cn}-12$ ) DC Braking Time at start in table 5.
(2) When a standard motor is driven with the inverter, there is a slight increase in motor temperature, noise, and vibration as compared to the operation from the commercial power supply.
(3) The motor cooling effect lowers during low-speed running. The torque needs to be reduced in accordance with the frequency. (For the reduction ratio, refer to the catalog or technical sheet.)
(4) Even with small load, never use a motor whose current exceeds the inverter rating.
(5) When two or more motors are operated, check to be sure that the total motor current is not larger than inverter rating.
(6) When starting and stopping the motor, be sure to use the operation signals (FWD/REV), not the magnetic contactor on the power supply side.

## 7. MAINTENANCE

VS-616GII requires almost no routine checks. It will function efficiently and longer if it is kept clean, cool and dry, observing precautions listed in 3.1 Location, on page 4. Especially check for tightness of electrical connections, discoloration or other signs of overheating. Use Table 6 as the inspection guide. Before servicing or inspection, turn off AC main circuit power and be sure that CHARGE lamp is off.

Table 6 Periodical Inspection

| Component | Check | Corrective Action | Inspection Period |
| :---: | :---: | :---: | :---: |
| External terminals, unit mounting bolts, connectors, etc. | Loosened screws | Tighten | $\text { Once } / \text { Year }$ |
|  | Loosened connectors | Tighte |  |
| Cooling fins | Build-up of dust and dirt | Blow with a dry compressed air of 4 to $6 \mathrm{~kg} \cdot \mathrm{~cm}^{2}$ ( 57 to $85 \mathrm{lbs} \cdot \mathrm{In}^{2}$ ) pressure |  |
| Printed circuit board | Accumulation of conductive dust and oil mist | Clean the board If dust and oil cannot be removed, replace the board |  |
|  | Discoloratıon to brown | Replace the board |  |
| Cooling fan | For abnormal noise and vibration Whether the cummulative operation time exceeds 20,000 hours or not | Replace the cooling fan | Once Month |
| Power elements | Accumulation of dust and dirt | Blow with a dry compressed air of 4 to $6 \mathrm{~kg} \cdot \mathrm{~cm}^{2}\left(57\right.$ to $85 \mathrm{lbs} \cdot \mathrm{In}^{2}$ ) pressure | Once/Year |
| Smoothing capacitor | Discoloration or odor | Replace the capacitor or inverter unit |  |

## 8. FAILURE INDICATION AND DETAILS

As Table 7 shows, the failures that the VS-616GII detect are classified into trouble and alarm. When trouble occurs, the failur contact is output and the operation stops after coasting. When an alarm is issued, the digital operator indicates the alarm for warning. (An alarm is not stored in the inverter.)

Table 7 Falure Indication and Detalls

| Indication | Falure Indication Item | Description | Fallure Classification |
| :---: | :---: | :---: | :---: |
| UU Blink | A low voltage being detected | Two seconds are being counted after the detection of low voltage | Alarm |
| OU Bink | Overvoltage during stop | The DC voltage is higher than the specified value | Alarm |
| OH 2 Blnk | Inverter overheat is predicted | An overheat signal is entered from the external termınal | Alarm |
| OL3 Blink | Overtorque being detected | Operation continues despite overtorque | Alarm |
| Eb Blink | Both forward run and reverse run commands are closed | Deceleration stop (Not stored internally) | Alarm |
| UU | Low voltage | The DC voltage is lower than the specified value | Trouble |
| FU | Fuse blown | The main circuit fuse is blown | Trouble |
| OC | Overcurrent | A current surge of about $200 \%$ or more occurs | Trouble |
| OU | Overvoltage | The DC voltage is higher than the specified value | Trouble |
| OH | The radiation fin overheated | The thermo-switch for the radiation fin operates | Trouble |
| OL 1 | Overload | Protect the motor | Trouble |
| OL 2 | Overload | Protect the inverter | Trouble |
| OL 3 | Overtorque | Overtorque causes the operation to stop after coasting | Trouble |
| Eb | External fallure | An external fallure signal stops operation | Trouble |
| CPF | Control function self-diagnosis function is faulty | When DSPL/ENTR key is depressed. CPF content appears | Trouble |
| OPE | Illegal constant is set | Constant logic is in conflict | Trouble |
| -••• | Control function hardware is faulty | Watchdog error | Trouble |

## 8. 1 DISPLAYING THE SEQUENCE OF FAILURE OCCURRENCE

Failure items that currently occur and that occurred before the power was turned off can be sequentially indicated by the following procedure:
(1) To indicate the sequence of failure items that currently occur

When $\Delta$ is depressed, the sequence of trouble occurrence appears (up to four faults), except for OPE (illegal constant setting) and control function hardware fault.
[Example of Indication]

(2) To indicate the sequence of failure items that occurred before the power was turned off

The VS-616GII uses NV-RAM to store the sequence of failure items that occurred before the power was turned off (when low voltage is detected). Therefore, when the power is turned on again, the sequence of such failure items (up to four) appears on the digital operator display.

## [Example of Indication]

After the power is turned on:

1) The first failure item that occurred before the power was turned off appears: Ul OC .... Blinks 5 seconds
2) The first display:
[The type of display selected before turning off the power]
3) Depress $\triangle+$ DSPL/ENTR to display the sequence of failure occurrence: Ul OC
4) Depress $\Delta$ U2 OH
5) Depress $\Delta$ U OC Returns to 2)
6) Return to the display type selected before depressing $\triangle$ + DSPL/ENTR to display the sequence of failure occurrence: $\square$
Note: If no failure item occurred before the power was turned off, U1-- appears in step 3).

## 8. 2 STORAGE FUNCTION AT POWER LOSS

The VS-616GII uses the internal NV-RAM to store the following items after the power has been turned off. Therefore, when the power is turned on again, the operation can begin with the same state as when the power was turned off.

- Display items in drive mode
- Frequency command from the digital operator
- The sequence of failure items that occurred before the power was turned off (including the content of CPF failure).

## 9. TROUBLESHOOTING

If the VS-616GII malfunctions, find the cause and take the corrective action by following the flowcharts given in this section.

If the cause cannot still be located by the flowcharts, the inverter or some parts are damaged, or any other problem occurs, contact Yaskawa representative.

## 9. 1 TROUBLESHOOTING FOR MOTOR SYMPTOM

(1) Motor will not run.

For operation from extenal command through external terminals (Digital or Analog operator not used.)

(2) Motor stalls during acceleration

## APPENDIX 1 STANDARD SPECIFICATIONS

| G (E) | Ground termınal | - |

## A2-2 Terminals of Control Circuit

Table 10 Terminal Functions and Signals of Control Circuit

| Terminals | Functions |  |  | Levels |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Forward operation-stop signal |  | Ruri at closed stop at open |  |
| 2 | Reverse operation-stop sıgnal |  | Run at closed stop at open |  |
| 3 | External fault input |  | Fault at closed |  |
| 4 | Fault reset input (external) |  | Fault reset at closed |  |
| 5 | Following sequence control commands available to select 5 -step speed setting. Master/Aux selector, Master/Aux selector at forward run Mastet/Aux selector at reverse run Energy saving operation Override External coasting stop command. Forward inching operation. Reverse inching operation Coasting stop command Speed search from top speed. Speed search from setting value. Accel/decel time selection |  |  |  |
| 6 |  |  |  |  |
| 7 |  |  |  |  |
| 8 |  |  |  |  |
| 9 | One of the following signals available to select During running. Zero speed, Synchronized speed Over-torque Under voltage (NO) |  |  |  |
| 10 |  |  |  |  |
| 11 | Sequence control input common terminal |  | Sequence control input OV |  |
| 12 | Connection to shield sheath of signal lead |  | - |  |
| 13 | Master speed frequency reference input |  | 0 to $+10 \mathrm{~V}(20 \mathrm{k} \Omega)$ |  |
| 14 |  |  | $4-20 \mathrm{~mA}(250 \Omega)$ |  |
| 15 | Aux frequency reference input |  | +15 V (Control power supply for frequency setting $\max 20 \mathrm{~mA})$ |  |
| 16 |  |  | 0 to $+10 \mathrm{~V} / 100 \%(20 \mathrm{k} \Omega$ ) |  |
| 17 |  |  | OV |  |
| 18 | Fault contact output (NONC) | Common | $\begin{array}{rr}\text { Contact capacity } & 250 \mathrm{VAC} \text { at } 1 \mathrm{~A} \text { or below } \\ 30 \mathrm{VDC} \text { at } 1 \mathrm{~A} \text { or below }\end{array}$ |  |
| 19 |  | Open at fault |  |  |
| 20 |  | Closed at fault |  |  |

(1) Terminals(1), (2) (Forward run command, reverse run command)

Status signals shown in Table 11.
Table 11 Forward/Reverse run command

| Forward run command | Reverse run command | Description |
| :---: | :---: | :--- |
| Open | Open | Deceleration and stop (Stop indication is delayed 100 ms ) |
| Closed | Open | Forward run |
| Open | Closed | Reverse run |
| Closed | Closed | The digital operator flashes Eb and when both are closed for <br> 500 ms or more, it decelerates and stops the motor (not <br> stored internally) |

Note: Time chart at forward run is shown in Fig. 9.

Fig. 9 Time chart at forward run
Note: Parenthesized values indicate the number of control constant. (See page 15.)

## (2) Terminal (3) (external fault input)

When an external fault is input, the inverter coasts to a stops and the digital operator indicates Eb . Data is stored in the inverter until a fault reset is input.
(3) Terminal(4) (reset fault)

Used to reset fault. This is effective when both forward and reverse comand are open.
(4) Terminals (5), (6), (7), and (8) (sequence functional terminals)

The function of terminal(5) is selected by the value set to system constant 8 . Similarly, the function of terminal (6) is selected by the value set to system constant 9; the function of terminal (7) by the value set to system constant 10; the function of terminal (8) by the value set to sytem constant 11. (See Par. A 4.7 Terminal Function).
(5) Terminals (9)- (10) (multifunctional contact output)

The output items from terminals (9)- (10) are selected by constant 12. (See Par. A4.8 Contact Output Selection Function)

Contact capacity: 250 VAC, 1 A or less 30 VDC, 1 A or less
(6) Terminals (13) and (14) (main speed frequency command)

Used to connect the master speed frequency command. When the master speed frequency command is set with a voltage, connect terminal (13) when set with a current, connect terminal (14).
(7) Terminal (16) (auxiliary frequency command)

Used to connect auxiliary frequency command. The function may differ depending on the values set to system constants 8 and 9 .
(8) Terminals (18) - (20) (fault contact output)

When a fault occurs, terminals (18) - 20 close and terminals (19) - open.
Contact capacity: 250 VAC, 1 A or less 30 VDC, 1 A or less

## APPENDIX 3 INTERNAL CIRCUIT AND INTERCONNECTION DIAGRAMS

## A3-1 With Braking Unit and Braking Resistor Unit

## A3-2 With Transistor(Open-Collector) For Start/Stop Operation

Notes:

1. $\frac{\square}{I}$ indicates shielded leads and $\frac{\Gamma_{j}}{I}$ twisted-parr shielded leads.
2. External terminal (15) of +15 V has maximum output current capacity of 20 mA .
3. Either external terminal (13) or (14) can be used.
4. Terminal symbols: © shows main circuit; Oshows control circuit.

## APPENDIX 4 SYSTEM CONSTANTS

## A4-1 Inverter Capacity Selection (Sn-01)

As Table 12 shows, the inverter capacity has been set already. To use a spare printed circuit board, set the desired capacity.

Table 12 Inverter Capacity Selection

| Sn-01 <br> Data | Model <br> (CIMR-i. -i) | Max Applicable <br> Motor Output <br> kW (HP) | Inverter Reted <br> Current A | Motor Rated <br> Current A <br> (Factory setting) | Reference Current <br> for Constant <br> Setting ${ }^{*}$ A |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 8 | 185 G 2 | $185(25)$ | 90 | 668 | 75 |
| 9 | 22 G 2 | $22(30)$ | 108 | 770 | 90 |
| A | 30 G 2 | $30(40)$ | 144 | 105 | 120 |

* The reference current for setting the overtorque detection level ( $\mathrm{Cn}-23$ ) and stall prevention during operation. (On-18). (See page 51.)

Table 12. A Model and Code No. of Control PC Board

| Inverter Model (CIMR-i. - ${ }^{\text {I }}$ ) | Control PC Board |  |
| :---: | :---: | :---: |
|  | Model | Code No. |
| 18 5G2 | JPAC-405 [-T, ${ }^{\text {a }}$ | ETC00938X-S'didx ${ }^{+}$ |
| 22G2 |  |  |
| 30G2 |  |  |

*-Uidindicates the contents of function. Use the PC board with same model or code No. as spare parts.
${ }^{+} \times x$ indicates the number of design change. Use the PC board with same number or more as spare parts.

## A4-2 Setting of V/f Pattern Selector Switch (Sn-02)

The V/f pattern constant ( $\mathrm{Sn}-02$ ) has been factory-set at data (1) for most applications. For specific applications such as fans and pumps, high-starting torques, or machine tools, select the optimum V/f pattern for motor running, according to the load characteristics. (See Table 13.) If $\mathrm{Sn}-02$ is set to (E), arbitrary V/f pattern can be selected with control constants 1 to 7.

Table $13 \mathrm{~V} / \mathrm{f}$ Pattern Selection (15 Patterns)

* See APPENDIX 5 page 42 to change $V / f$ pattern

Notes
1 Take account of the following conditions and others when selecting $V / f$ pattern

- Pattern matching the voltage-frequency characteristic of the motor
- According to the maximum motor speed
$2 \mathrm{~V} / \mathrm{f}$ pattern for high starting torque should be selected for
- Long wiring distance
- Large voltage drop at start
- AC reactor connected to input or output of the inverter
- Use of motor of the rating below the max

For details, contact Yaskawa representative

## A4-3 Run Signal Selection (Sn-04)

The run command and frequency command that are validated by a combination of the lst and 2nd digits differ (See Table 14).
(1) lst digit (frequency command selection)

0 : Runs by the frequency command from the external terminal.
l: Runs by the frequency command from the digital operator.
(2) 2nd digit (run command selection)

0 : Runs by the run command from the external terminal.
l: Runs by the run command from the digital operator.
Table 14 Combination of Frequency and Run Commands

| Command | System Constant 4 | Setting Value (1st and 2nd digits) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 00 | 01 | 10 | 11 |
|  | Forward run command | $\bigcirc$ | $\bigcirc$ | $\times$ | $\times$ |
|  | Reverse run command | 0 | $\bigcirc$ | $\times$ | $\times$ |
|  | External fault | $\bigcirc$ | $\bigcirc$ | 0 | $\bigcirc$ |
|  | Fault reset | Note 2 | Note 2 | 0 | $\bigcirc$ |
|  | Command of termınal (5) | $\bigcirc$ | Note 1 | $\times$ | $\times$ |
|  | Command of termınal (6) | $\bigcirc$ | Note 1 | $\times$ | $\times$ |
|  | Command of termınal (7) | $\bigcirc$ | Note 1 | $\times$ | $\times$ |
|  | Command of termınal (8) | $\bigcirc$ | Note 1 | $\times$ | $\times$ |
|  | Master freq command | $\bigcirc$ | $\times$ | $\bigcirc$ | $\times$ |
|  | Aux input | $\bigcirc$ | $\times$ | $\times$ | $\times$ |
|  | Fault contact output | $\bigcirc$ | 0 | $\bigcirc$ | $\bigcirc$ |
|  | Contact of termınals (9)-(10) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| $\begin{aligned} & \bar{o} \\ & \stackrel{0}{0} \\ & \stackrel{0}{\circ} \end{aligned}$ | Freq command | $\times$ | $\bigcirc$ | $\times$ | $\bigcirc$ |
|  | Run key | $\times$ | $\times$ | $\bigcirc$ | $\bigcirc$ |
|  | Jog key | $\times$ | $\times$ | $\bigcirc$ | $\bigcirc$ |
|  | Stop key | Note 3 | Note 3 | $\bigcirc$ | $\bigcirc$ |
|  | FWD/REV key | $\times$ | $\times$ | $\bigcirc$ | $\bigcirc$ |
|  | $\triangle /$ RESET key | Note 2 | Note 2 | $\bigcirc$ | $\bigcirc$ |
|  | DRIVE/PRG key | Effective duinrg stop | Effective during stop | Effective during stop | Effective during stop |
|  | REMOTE LED | ON | ON | OFF | OFF |
|  | MONITOR indication | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |

Notes 1: Multi-step speed run, master speed/auxiliary switching, forward master speed/auxiliary switching, reverse master speed/auxiliary switching, override, and inching run commands are invalid.
2. Valid when the forward run command, reverse run command, and DB command are open.
3. When $\triangle$ key and STOP/SET key are depressed at the same time, the motor decelerates and stops while STOP LED flashes. This stop command is stored in the inverter. Therefore, to resume operation, open both the forward run command and reverse run command of the external terminal.

## (3) 3rd digit (master-speed frequency command)

Depending on the 3 rd-digit value, the input method of the master-speed frequency command differs as shown in Fig. 10.

Fig. 10 Input method of Master Frequency Command
(4) 4th digit (reverse prohibit)

4th digit $=1:$ Disregards the reverse run command from the external terminal or digital operator.

A4-4 Protective Characteristics Selection (Sn-05)
(1) lst digit (operation continues at momentary power failure)
lst digit $=0:$ A momentary power failure, when detected, is regarded as a fault in power supply and the operation stops after coasting.
lst digit $=1$ : When a momentary power failure is within 2 seconds, the operation continues; if longer than 2 seconds, the operation stops after coasting.
(2) 2nd digit (stall or no stall during deceleration)

2nd digit $=0$ : Stall during deceleration.
2nd digit $=1$ : No stall during deceleration.
(3) 3rd digit (motor protection)

3rd digit $=0$ : The electronic thermal protector protects the inverter and motor from overheat.

3rd digit $=1:$ The electronic thermal protector protects only the inverter from overload.
(4) 4th digit (motor selection)

4th digit $=0:$ Protection is made with the overload characteristics of a standard motor.

4th digit $=1:$ Protection is made with the overload characteristics of the constant-torque characteristic motor.
(1) lst digit
lst digit $=0:$ No overtorque is detected.
lst digit $=1$ : Overtorque is detected (different function from the stall during operation).
The overtorque detection function detects the following condition:
Inverter output current $\geqq$ overtorque detection level (control constant 23, set to $160 \%$ prior to shipment from the factory).
(2) 2nd digit

2nd digit $=0$ : Overtorque is only detected during speed synchronization.
2nd digit $=1$ : Overtorque is always detected (except during stopping and DB).
(3) 3rd digit

3 rd digit $=0$ : When overtorque is detected, the digital operator flashes OL3 and continues the operation.

3rd digit $=1:$ When overtorque is detected, the digital operator flashes OL3 and the operation stops after coasting (regarded as trouble and fault contact is output).

## A4-6 Optional Function Selection (Sn-07)

(1) lst and 2nd digits

Sets multiples of the output frequency that is output in the pulse monitor (JOGB-C0l type).

00: Outputs $6 \times F$ (F: output frequency)
01: Outputs $10 \times F$ (F: output frequency)
10: Outputs $12 \times \mathrm{F}$ (F: output frequency)
11: Outputs $36 \times \mathrm{F}$ (F: output frequency)
(2) 3rd and 4th digits

Select either 2-digit BCD or 8-bit binary to input the digital speed command by means of the input interface (model JOGB-C04).

00: Digital speed command input from the input interface is not used.
01: 8-bit binary input ( $100 \% / 255$ )
10: 2-digit $B C D$ input in unjts of 1 Hz .
11: 2-digit BCD input in units of $1 \%$.
In $B C D$ input, lower 4 bits are effective for 0 to 9 , and higher 4 bits for $F$.

## A4-7 Terminal Function (Sn-08 to $\mathrm{Sn}-11$ )

The function of terminal (5) is selected by the value set to system constant 8. Similarly, the function of terminal (6) is selected by the value set to system constant (9) the function of terminal (7) by the value set to system constant 10 ; the function of terminal (8) by the value set to system constant 11. Note each of these is independently selected.

When set values 0 to 3 are not set to system constants 8 to 11 , the masterspeed frequency command is applied for operation.

Table 15 Termınal Functions

| Setting Value | Function | Description $\left(\begin{array}{ll}0 & \text { state signal } \\ 1 & \text { pulse signal }\end{array}\right)$ |
| :---: | :---: | :---: |
| 0 | Master/Aux selector | Open 0 Master freq command Closed 0 Aux freq command |
| 1 | Master/Aux selector for forward run | When forward run command on. Open 0 Master freq command Closed 0 Aux freq command |
| 2 | Master/Aux selector for reverse run | When reverse run command on Open 0 Master freq command Closed 0 Aux freq command |
| 3 | Multi-step speed setting | - |
| 4 | Override | Closed 0 Override |
| 5 | Inching operation | Closed 0 Inching frea selection |
| 6 | External coasting stop command | Closed 0 Coastıng stop |
| 7 | Speed search | Closed 1 Speed search from top freq * |
| 8 | Speed search | Closed 1 Speed search from setting value** |
| 9 | Energy saving operation | Closed 0 Energy savirg operation |
| 10 | External fault | Open 0 Stops coasting and outputs fallure contact |
| 11 | Operation mode selector (effective during stop) | Open 0 Operates in accordance with settıngof 1 st ang 2 nd digits of system constant 4 <br> Closed 0 Operates in accordance with frequency command and operation command from the digital operator |
| 12-17 | Not used | - - |
| 18 | Forward run/reverse run selector <br> (3 wire control) | When 18 is set in constant Sn -11, operation is carried out in the sequence of start (terminal 1), stop (terminal 2), and forward run/reverse run selector (terminal 8) <br> Open 0 Forward run <br> Closed 0 Reverse run |
| A | Accel/Decel time selector | Open 0 Accel/decel is executed by control constants 8 and 9 Closed 0 Accel/decel is executed by control constant 29 |
| B | Inverter overheat prediction | OH 2 blinks on digital operator |
| C | DC dymamic brake command | Closed $O$ Dynamic brake activates if DC dynamic brake command is closed under the conditions of min output freq and below at deceleration stop |
| D | Not used |  |
| E |  |  |
| F | No operation | Any signal inputs to the setting terminals not function |

*The search function of setting values 7 and 8 works even by pulse input signal of 20 ms and above.

## Precautions for combination of system constants 8 to 11

When the following combination is set to system constants 8 to 11 , this is regarded as a constant set value error (OPE), OPE is checked when power is supplied and when ENTRY is keyed in.
(1) The set values are not placed in order from small to large. (Except for F , two or more values cannot be set.) (Sn-08 < Sn-09 < Sn-10 < Sn-11)
(2) Both search commands of set values 7 and 8 are set.

## A4-7 Terminal Function (Sn-08 to Sn -11) (Cont'd)

(3) The forward master speed/auxiliary switching and the reverse master speed/ auxiliary switching are not set in pairs.
(Set the forward master speed/auxiliary switching to constant 8 and the reverse master speed/auxiliary switching to constant 9.)
(4) Multispeed setup is set and master speed/auxiliary switching is not set. (Set the master speed/auxiliary switching to constant 8 and the multispeed setup to constant 9.)
(5) Forward run/reverse run selection of setting value 18 is set to constant 8 to 10. (Set the forward run/reverse run selection to constant 11.)
(6) Overide of setting value 4 is set to constant 9 to 11 . (Set the override command to constant 8.)

## A4-7-1 Description of Functions

(1) Master speed/auxiliary switching function

In both forward and reverse operations, this contact-input signal enables switching the master speed and auxiliary.

Open: The master speed frequency command is made the frequency command.
Close: The auxiliary frequency command is made the frequency command.
(2) The forward master speed/auxiliary switching and the reverse master speed/auxiliary switching functions
The main speed and auxiliary can be switched separately in forward and reverse operations. The forward master speed/auxiliary switching function and the reverse master speed/auxiliary switching function must be used in pairs.

Open: The master speed frequency command is made the frequency command
Close: The auxiliary frequency command is made the frequency command.
(3) Multispeed setup function.

The multispeed setup function must be used in a pair with the master speed/ auxiliary switching function. A combination of these terminals makes the frequency command as shown in Table 16.

Table 16 4-step Speed Setting Method

| Master/Aux Selector Command | Multi-step Speed Setting | Frequency Command |
| :---: | :---: | :---: |
| Open | Open | Master freq command |
| Closed | Open | Aux freq command |
| Open | Closed | Freq command $1^{*}$ <br> for mult-step speed settıng |
| Closed | Closed | Freq command 2* <br> for multi-step speed setting |

[^1]
## (4) Override function

Open: The operation is made by the master speed frequency command (override cut).
Close: Override is carried out as shown in Fig. 11. The overrride gain is given by an auxiliary frequency command ( 0 to $+10 \mathrm{~V} / 0$ to $200 \%$ ).

Fig. 11 Block Diagram of Override
(5) Inching function

Close: Only during close, the inching operation with control constant 26 (Setting to 6 Hz prior to shipment from the factory) as the frequency command is carried out. The rotating direction is given by the forward run command or reverse run command. The timing chart in forward and reverse operations are shown in Fig. 12.

Fig. 12 Time chart at Forward and Inching Operations

Note: Parenthesized values indicate the number of control constant.

## (6) External coasting stop command function

When the external coasting stop command is closed, the operation depends on the input state of the forward run command and reverse run command.

- When either the forward run command or reverse run command is closed, and the external coasting stop command is also closed, only coasting stop is accomplished and the frequency is maintained.
- When both the forward run command and reverse run commands are open, and the external coasting stop command is closed, coasting stop is accomplished and the frequency is changed to 0 Hz .

## (7) Search function (rise detection)

When the search command is made to close, the base is blocked for $0.5^{\circ}$ second, then the speed search is made. The operation depends on the selected function either 7 or 8 . Note: functions 7 and 8 cannot be simultaneously selected.

- When 7 is set, the speed search begins with the highest set frequency.
- When 8 is set, the speed search begins with the frequency command that has been set after the search command was input.

Fig. 13 Time chart at Speed search command Input
Note: When using this function by continuous operation mode at momentary stop, hold speed search command externally.
(8) Energy-saving operation function

When the energy-saving operation command is made to close during speed synchronization, energy-saving operation shown in Fig. 14 is carried out. In the energy-saving operation, the output voltage is the value of the energy-saving gain (control constant 30, set to $80 \%$ at shipment from the factory) multiplied by the V/f constant set with control constants 1 to 7.

ENERGY SAVING RUN COMMAND

Fig. 14 Time Chart of Energy Saving Run

## (9) Acceleration/deceleration time switching function

When the acceleration/deceleration time switching command is input, the acceleration/deceleration time changes. This function is also effective during inching operation.

Open: Operation made with accel/decel time of control constants 8 and 9 .
Close: Operation made with acceleration/deceleration time of control constant 29.

## (10) Inverter overheat prediction/display function

When the inverter overheat prediction/display command is input, the inverter flashes only OH 2 on the digital operator's display. No other operation is carried out.
(11) DC injection braking.(DB) function

When both the forward run command and reverse run command are open, and the DC injection braking command is closed, DC injection braking operation is carried out.

MIN OUTPUT FREQUENCY(CONTROL CONSTANT 6)
Fig. 15.1 Time Chart of DC Injection Braking

## A4-7-1 Description of Functions (Cont'd)

(12) External failure

Open: Operation stops with coasting and the digital operator indicates Eb. This condition is stored in the inverter until fault reset is input.
(13) Operation mode selection

When operation mode selection is input during stop, the operation mode changes.

Open: Operates in accordance with the setting of the lst and the 2nd digits of system constant 4.
Closed: Operates in accordance with the frequency command and Run command from the digital operator.
(Operation corresponds to the following mode of system constant 4: lst digit=l; 2nd digit=1)
(14) When 18 is set to system constant 11 , operation is carried out in the 3-WIRE sequence of start (terminal 1), stop (terminal 2), and forward run/reverse run selector (terminal 8).

Fig 152 3-WIRE Sequence

## A4-8 Contact Output Selection Function (Sn-12 to Sn -16)

Set the content to be output through external terminals (9)- (10) to constant 12. Set the contents to be output through terminals (1) to (4)(open collector output) of the output interface (model JOGB-C03) to constants (13) to (16) , respectively. Table 17 shows the relationship between the set value of constant 12 and the content to be output.

Table 17 Contact Output Function

| Setting Value | Description |  |  |
| :---: | :---: | :---: | :---: |
|  | Name |  | Signal Level (Closed) |
| 0 | Contact durıng run | Closed | During run |
| 1 | Contact at zero speed | Closed | Zero speed |
| 2 | Speed synchronized contact | Closed | Speed synchronization |
| 3 | Overtorque detected contact | Closed | Overtorque detection |
| 4 | Contact during UV | Closed | During UV |
| 5 | Contact for speed-synchroization at any set speed | Closed | Output frequency $=\mathrm{Cn}-33$ |
| 6 | Output frequency detection contact | Closed | Output frequency $\geq \mathrm{Cn}-33$ |
| 7 | Output frequency detection contact | Closed | Output frequency $\leq \mathrm{Cn}$-33 |

(1) Contact during operation

The contact is closed when either the forward run command or the reverse run command is closed, or when the inverter is outputting a voltage.
(2) Zero-speed contact

The contact is closed when the inverter output frequency is 0 Hz .
(3) Speed-synchronization contact

The contact is closed when either the forward run command or the reverse run command is closed, and the speeds are synchronized.

Speed-synchronization set condition:
$\mid$ Frequency command input - Output frequency $\mid \leqq 0.5 \%$
Speed-synchronization reset condition:
$\mid$ Frequency command input - Output frequency $\mid \geqq 3 \%$
(4) Overtorque detection contact

The contact is closed when the inverter detects an overtorque.
(5) During low voltage (UV) contact

The contact is closed while the inverter is measuring momentary power failure time when the mode is selected for operation to continue during momentary power failure. The contact is open when the inverter is stopping for a period exceeding the momentary power failure time-compensation period. Use this contact combined with the abnormality contact output.
(6) Contact for speed-synchronization at any set speed

The contact is closed when either the forward run command or the reverse run command is closed, and speed-synchronization occurs at the input frequency set by control constant 33.

Conditions of speed-synchronization setting and resetting are the same as stated in (3).
(7) Output frequency detection contact

The contact is closed when the output frequency is greater than or equal to the frequency set by control constant 33.
(8) Output frequency detection contact

The contact is closed when the output frequency is less than or equal to the frequency set by control constant 33.

## APPENDIX 5 CONTROL CONSTANTS

(1) V/f constants ( $\mathrm{Cn}-01$ to $\mathrm{Cn}-07$ )

Sets V/f. Fig. 16 shows the relationship between constants 1 to 7 . $\mathrm{V}_{\mathrm{max}}$,
VC , and $\mathrm{V}_{\text {min }}$ is standardized with the input voltage of 200 V in $200-\mathrm{V}$. Use the following formula to convert and set $\mathrm{V}_{\mathrm{MAX}}, \mathrm{V}_{\mathrm{C}}$, and $\mathrm{V}_{\mathrm{MIN}}$.

```
V MAX = Vmax }\times(200V)/Vi
Vc}=Vc\times(200V)/Vi
V
[Vmax, Vc, and Vmin are the actual output voltages; Vin is input voltage.]
```

## To straighten V/f pattern

When $\mathrm{F}_{\mathrm{b}}=\mathrm{F}_{\text {min }}$ is set. Vc setup is invalidated and the output voltages of $F_{A}$ to $F_{\text {min }}$ become straight under the conditions of $V_{C} \geqq V_{M N}$.

Fig. 16 V/f Characteristics by Control Constants 1 to 7

Notes: 1. Parenthesized values indicate the number of control constant.
2. Control constants 1 to 7 can be set only when system constant 2 is F .
3. When constants not satisfying the condition $F_{M A X} \geqq F_{A}$ $>F_{B} \geqq F_{\text {MIN }}$ and $V_{\text {MAX }}>V_{C} \geqq V_{\text {MIN }}$ are set, an OPE (set value error) ocours. This is checked when power is supplied and when DSPL/ENTR is keyed in.
(2) Acceleration constants (Tace) (Cn-08)

Sets the acceleration time during which the inverter output frequency reaches from $0 \%$ to $100 \%$.
(3) Deceleration constants (Tdec) ( $\mathrm{Cn}=09$ )

Sets the deceleration time during which the inverter output frequency changes from $100 \%$ to $0 \%$.
(4) DC injection braking voltage (DBVOL) (Cn-10)

Sets the DC voltage that the inverter outputs at DC braking time in units of 0.1 V .
(5) DC injection braking time at stopping (DBTIM) (Cn-ll)

Sets the braking time in units of 0.1 second during which DC braking is applied at stopping. When the DC braking time is 0 , the operation stops after coasting, with the minimum output frequency (constant 6).
(6) DC injection braking time at starting (DBTWM) (Cn-12)

Sets the braking time in units of 0.1 second during which DC braking is applied at starting (by inputting a forward run command or reverse run command). When the DC braking time is 0 , acceleration begins with the minimum output frequency.
(7) Frequency command gain (FGAIN) (Cn-13)

Sets the main-speed frequency command gain in units of 0.01. (See Fig. 17).
(8) Frequency command bias (FBIAS) (Cn-14)

Sets the main-speed frequency command bias in units of $0.1 \%$, (See Fig. 17).
(9) Frequency command upper limit (FOUL) (Cn-15)

Sets the upper limit of the frequency command in ratio to the maximum frequency in units of $1 \%$. (See Fig. 17).
(10) Frequency command lower limit (FOLL) ( $\mathrm{Cn}-16$ )

Sets the lower limit of the frequency command in ratio to the maximum frequency in units of $1 \%$. (See Fig. 17).
(11) Troublesome frequencies can be blocked by setting in $\mathrm{Cn}-17$ to $\mathrm{Cn}-19$ in units of 0.1 Hz . All frequencies $\pm 1 \mathrm{~Hz}$ of the blocked setting are not available for frequency commands. See page 44 for more frequency reference conditioning.

Fig. 17 Block Diagram of Frequency Command
(12) Motor rated current (Im100) (Cn-20)

Sets the motor rated current in units of 0.1 A . (The motor rated current is used in the electronic thermal protector to protect the motor.) (See Table 12).

Setting $\leq 30$ of reference current for constant setting shown in Table 5 is not effective and the current will be limited to $30 \%$.
(13) Carrier frequency lower limit (CARRIER) (Cn-12)

Sets the lower limit of the inverter's carrier frequency in units of 1 Hz . Although the carrier frequency depends on the output frequency and load, the minimum carrier frequency is set here.
Fig. 18 shows the relationship between the carrier frequency and the output frequency.

Fig. 18 Carrier Frequency and Output Frequency
(14) Torque compensation gain ( $\mathrm{K}_{\mathrm{T}}$ ) ( $\mathrm{Cn}-22$ )

Sets the torque compensation gain in units of 0.1 .
When the maximum applicable inverter motor has the same capacity as that of the motor actually used, this gain is 1 . When a smaller motor is actually used, the gain is set to 1.0 or more.
(15) Overtorque detection level (Cn-23)

Sets the overtorque detection level in ratio to the reference current (See Table 11) for setting constants in units of $1 \%$. Note the overtorque detection function differs from the stall during operation function.
(16) Frequency monitor gain ( $\mathrm{K}_{\mathrm{F}}$ ) ( $\mathrm{Cn}-24$ )

Sets in units of 0.01 the gain of the frequency-meter output that the F-I monitor (JOGB-C02) outputs. (See Fig. 19).

## APPENDIX 5 CONTROL CONSTANTS (Cont'd)

(17) Current monitor gain ( $\mathrm{K}_{\mathrm{I}}$ ) ( $\mathrm{Cn}-25$ )

Sets in units of 0.01 the gain of the ammeter output that the F-I monitor (JOGB-C02) outputs. (See Fig. 19).

INVERTER

Fig. 19 Block Diagram of F-I Monitor
Calibrate the meter as follows:
In PRG mode, when control constant 24 is selected, the maximum frequency (about 10 V ) is available at F-I monitor terminal l; when control constant 25 is selected, the inverter rated current (about 6V) is available at F-I monitor terminal 2.

Maximum frequency: About 10V (1) to (3)
Inverter rated current: About 6 V (2) to (3)
(18) Inching frequency (NFJOG) (Cn-26)

Sets inching frequency in units of 0.1 Hz .
(19) Multispeed-run-frequency commands 1 and 2 (FRKF1 and FREF2) (Cn-27 and $\mathrm{Cn}-28$ )
Sets multispeed-run-frequency commands in units of 0.1 Hz .
(20) Acceleration/deceleration time ( $\mathrm{Cn}-29$ )

Sets the acceleration/deceleration time in units of 0.1 second when the acceleration/deceleration time switching command is closed.

## (21) Energy-saving gain (KSENG) (Cn-30)

Sets in units of $1 \%$ the level to which the output voltage is controlled in the energy-saving operation.

In the energy-saving operation, the output voltage is given by (V/f set by control constants 1 to 7 x energy-saving gain). (See Fig. 20.)

Fig. 20 Output Voltage During Energy-Saving Run
(22) Slip compensation gain (Cn-31)

Sets the slip compensation gain in units of 0.1 . When the slip compensation gain is 1.0 , the rated current of the inverter compensates $1 \%$ slip.

Fig 21 Block Diagram of Slip Compensation
(23) Frequency indication gain ( $\mathrm{Cn}-32$ )

Sets the gain for frequency indication. Depending on setting values, the output frequency indication on the digital operator varies as shown in Table 18.

Table 18 Relation between Gain Setting and Frequency Indication

| Setting Value | Output Frequency Indication |
| :---: | :---: |
| 0 | Indicates output frequency in units of 01 Hz |
| 1 to 10 | Indicates motor rpm (output frequency $\times 120 / \mathrm{Cn}-32$ ) <br> However. fractions are disregarded, and the indication for motor rpm over 9999 remains 9999 |
| 11 to 39999 | 1 st to 4 th digits set a numeric to be indicated at $100 \%$ speed 5th digit set the position of the decimal point <br> Set value 0 indicates 0000 <br> Set value 1 indicates 0000 <br> Set value 2 indicates 0000 <br> Set value 3 indicates 0000 $\left(\begin{array}{l} \text { Example } \\ \text { when Cn-32 }=10055 \\ 55 \text { is indicated at } 100 \% \text { speed } \\ 22 \text { is indicated at } 40 \% \text { speed } \end{array}\right)$ |

(24) Frequency for speed-synchronization at any set speed (Cn-33)

Sets the frequency for speed-synchronization at any set speed in units of 0.1 Hz .

## APPENDIX 6 OTHER CONSTANTS (FUNCTIONS)

## A6-1 Retry Operation at Fault

When fault occurs ( $F U, E b$, and CPF excluded) during operation, a retry operation can be carried out by automatically resetting the fault.

Automatic resetting can be tried up to 10 times. Fig. 22 shows the timing chart for retry operation in case of fault.

Fig 22 Time Chart of Retry Operation at fault
The operation procedure for retry operation in case of fault is shown below.

(2) Depress $\underset{\substack{\text { FWO/REV } \\ \text { MODE }}}{ }$ to select system constant $5 n-\boldsymbol{i}$.
(3) Select the numeric with $\Delta$ and indicate $\operatorname{Sn}-53$ (system constant 3).
(4) Depress $\begin{aligned} & \text { RUN } \\ & \text { DATA } \\ & \text { (3) }\end{aligned}$ to indicate the internal data of system constant 3.

(5) Set in in by operating | $\triangleright$ |
| :---: |
| RESET | and $\Delta$.

(6) Depress $\frac{\text { STOP }}{\text { SET }}$ to temporarily store data.

(8) Depress $\frac{\text { RUN }}{\text { DATA }}$ to indicate the internal data of $A n-83$
(9) Set the number of times to reset faults by operating
 (When 5 times is set, it appears as 85. )
(10) Depress $\square$ to temporarily store data.
(11) Operate steps
(2) to (6) to return the internal data of
$5 n-53$ to OBOD
(12) Depress DSPL ENTR to store data.

## A6-2 Full Range DC Injection Braking Stop (DB)

The use of the full range DC injection braking stop (DB) function permits a quick stop without using a braking registor.

When a stop command is input, DC injection braking stop is carried out. The DB time at stop is set with control constant 11.

The time chart is shown in Fig. 23.

Fig 23 Time Chart at DB Stop

The operation procedure for full range DC injection braking stop function is shown below.
(1) Depress $\frac{\text { DRIVE }}{\text { PRG }}$ to select the program mode. $\frac{\text { DRIVE }}{\text { PRG }}$ Light off
(2) Depress $\underset{\substack{\text { FWD/REV } \\ M O D E}}{ }$ to select system constant 5 nin it
(3) Select the numeric with $\triangle$ and indicate $5 \pi-03$ (system constant 3).

(4) Depress | RUN |
| :--- |
| DATA |
| (3) | to indicate the internal data of system constant 3.

(5) Set 4

(6) Depress | STOP |
| :---: |
| SET |
|  | to temporarily store data.

(7) Depress $\frac{\text { FWD/REV }}{\text { MODE }}$ to indicate Min-

(8) Depress | RUN |
| :--- |
| DATA | to indicate the internal data of 0 An-

(9) Indicate $\quad \bar{U}$ by operating $\begin{gathered}\triangleright \\ \text { RESET }\end{gathered}$ and $\Delta$.

(10) Depress | STOP |
| :---: |
| SET |
| to | temporarily store data.

(11) Operate steps (2) to (6) to return the internal data of $5 n-03$ to 0000.
(12) Depress $\frac{\text { DSPL }}{\text { ENTR }}$ to store data.

## A6-3 Range to Prohibit Frequency Setting

Frequency is not permitted to be set in a range usually within $\pm 1 \mathrm{~Hz}$ of the frequency set with constants 17 to 19 . In this range, frequency command cannot be set (see page 43).

The value of this $\pm 1 \mathrm{~Hz}$ range where frequency setting is prohibited can be changed, in a range of 0.0 to 10.0 Hz , in units of 0.1 Hz .

The operation procedure for this purpose is shown below. Operation steps (1) to (6) and (11) to (13) are the same as in A6-1. So, steps (7) to (10) are shown.
(1) Depress $\left.\begin{array}{c}\text { DRive } \\ \hline \text { PRG } \\ \text { (1.." } \\ \text { to }\end{array}\right]$
(2) Depress $\underset{\substack{\text { FWD/REV } \\ \text { MODE }}}{ }$ to select system constant $\left.5 r_{i}-\right]_{0}$.
(3) Select the numeric with $\Delta$ and indicate $5 n-93$ (system constant 3 ).
(4) Depress $\frac{\text { RUN }}{\text { DATA }}$ to indicate the internal data of system constant 3.
(5) Set 4 S is by operating $\begin{gathered}\square \\ \text { RESET }\end{gathered}$ and $\Delta$.

(6) Depress | STOP |
| :---: |
| SET |
| to | to temporarily store data.

(7) Indicate $\operatorname{Bn}-\hat{\square}$ by operating $\frac{\text { FWD/REV }}{\text { MODE }}$ and $\Delta$.

(9) Set the required range to prohibit frequency setting by operating $\begin{gathered}\square \\ \text { RESET }\end{gathered}$ and $\triangle$.
(When 2.0 Hz is set, it appears as OC. S.)

(10) Depress | STOP |
| :---: |
| SET | to temporarily store data.

(11) Operate steps (2) to (6) to return the internal data of 5n-83|to $O B C D$.
(12) Depress $\frac{\substack{\text { DSPL } \\ \text { ENTR }}}{}$ to store data.
(13) After setting, depress $\begin{array}{|c}\hline \text { DRVE } \\ \hline \text { PRG } \\ \hline\end{array}$ to resume the drive mode. [ $\left.\begin{array}{c}\text { Divive } \\ \hline \text { PRG } \\ \hline\end{array}\right]$

## A6-4 Stall Prevention During Operation

During operation (while the speed is being synchronized), if the inverter output current exceeds the stall prevention during operation level (setting to $160 \%$ at shipment from the factory), the output frequency is dropped at a rate of half the predetermined deceleration time.

When the output current drops below the stall prevention during operation level, the output frequency is accelerated to the set value at the specified acceleration time.

The stall prevention during operation level can be set, in units of $1 \%$, in ratio to the reference current for setting constants. (See Table 12 on page 29).

The operation procedure to set or change the stall prevention during operation level is shown below. Operation steps (1) to (6) and (11) to (13) are the same as in Par. A 6.1.

(2) Depress $\frac{\text { FWD/REv }}{\text { MODE }}$ to select system constant 5in-B!.
(3) Select the numeric with $\square$ and indicate 5 (system constant 3).
(4) Depress $\frac{\text { RUN }}{\text { DATA }}$ to indicate the internal data of system constant 3.
(5) Set in in by operating $\begin{gathered}\square \\ R E S E T\end{gathered}$ and $\Delta$.

(6) Depress | STOP |
| :---: |
| SET |
| ST | to temporarily store data.

(9) Set the stall level during run by operating | $\square$ |
| :---: |
| $R E S E T$ | and $\quad \dot{\square}$. (When $120 \%$ is set, it appears as $[\overline{C D}$.)

(10) Depress STOP to temporarily store data.
(11) Operate steps (2) to (6) to return the internal data of $5 n-83$ to 0800.
(12) Depress $\frac{\text { DSPL }}{\text { ENTR }}$ to store data.

## To remove the function to prevent stall during operation

To remove the function to prevent stall during operation, set the stall prevention during operation level to $200 \%$.

A6-5 Multispeed Setting Method (5-speed operation by internal constants)
All-digital 5-speed opertion is possible as shown below by the use of combinations of SW1 to SW3.

Moreover, any multistep (2-to 5-step) operation is possible by applying this sequence to set internal constants.

In this case, the analog frequency command (voltage/current) need not be input to the master/aux frequency command terminals.

Fig 24 Multispeed Setting Method

(2) Depress $\underset{\substack{\text { FWO/REV } \\ \text { MODE }}}{ }$ to select the system constant
(3) Select the numeric with $\triangle \Delta$ and indicate $5, \square-18$ (system constant
4).
(4) Depress $\frac{\text { RUN }}{\text { DATA }}$ to indicate the internal data of system constant 4.

(6) Depress $\frac{\text { STOP }}{}$ SET to temporarily store data.

(8) Depress $\frac{\text { RUN }}{\text { DATA }}$ to indicate the internal data of $6 \pi-9$
(9) Set output frequency (F5) in *percentage of the highest frequency ( $\mathrm{Cn}-01$ ) by operating $\begin{gathered}\square \\ \text { RESET }\end{gathered}$ and $A$.
(10) Depress STOP to temporarily store data.
(11) Operate steps (7) to (10) to set output frequencies (F4, F3, F2) to [rin, [r-28, and $2 \pi-28$ in units of 1 Hz , respectively.
(12) Operate steps (7) to (10) to set output frequency F1 to $\boldsymbol{F} \boldsymbol{F} \boldsymbol{m}$ in units of $1 \%$.
(13) Finally depress $\frac{\text { DSPL }}{\text { ENTR }}$ to store data.

(14) After completing all the steps, depress $\frac{D^{\text {DIVE }}}{}$ PRG to return to the drive mode. [ | DRIVE |
| :---: |
| PRG |
| blinks ] |

|  | Brakıng unit | CDBR- ${ }^{-}$ | For motor decel time reduction, use this with braking resistor unit | Separately-mounted | TOE-C730-40•6 |  |
|  | Brakıng Resistor Unit | LKEB- ${ }^{\text {a }}$, | Motor regenerative energy dissipation by the resistor reduces the decel time | Separately-mounted | $\begin{array}{\|l\|} \hline \text { TOE-C730-40•4 } \\ \text { TOE-C730-40-6 } \\ \hline \end{array}$ |  |

Notes 1 More than twn-unit such as JVOP-91 and 94 installation at a time on the front cover of inverter is not allowed and remove the existing digital operator JVOP-90 (Provided as standard)

## APPENDIX 8 CHECK FUNCTION

By selecting constants ( $\mathrm{CH}-01$ and $\mathrm{CH}-02$ ) in PRG mode, both the digital operator LED and external terminals (1) to (8) can be checked.
(1) CH-01 (Checks the digital operator LED)

Select CH-0l and depress RUN/DATA key. Then, all LEDs light.
(2) CH-02 (Checks external terminals (1) to (8)

Select CH-02 and depress RUN/DATA key. Then, the state of external terminals (1) to (8) appears.

Sample display when external terminals (1), (3), (5) and (6) are open and (2), (4), (7) and (8) are closed is shown below.

## APPENDIX 9 CHECKING OF DIODE AND TRANSISTOR MODULES

## A9-1 Diode Module

Measure the resistance across the module terminals with a volt-ohm meter. Use the meter by setting at $\times 1 \Omega$ range. The measured resistance should be within the reference value listed in Table 20.

Table 20 Diode Module Resistances

| Diode <br> Module Terminals Volt-ohm Meter <br> Terminals | $\theta$ | $\oplus$ | Reference Resistances | Abnormal Resistances |
| :---: | :---: | :---: | :---: | :---: |
| Model CIMR-185G2 TO -30G2 | (2) | (1) | $\infty$ | Approx several 10 ohms |
|  | (1) | (3) |  |  |
|  | (1) | (2) | Approx several 10 ohms | $\infty$ or $0 \Omega$ |
|  | (3) | (1) |  |  |

## A9-2 Transistor Module

Measure the resistance across the module terminals with a volt-ohm meter. Use the meter by setting at $\times 1 \Omega$ range. The measured resistance should be within the reference value listed in Table 21.

Table 21 Transistor Module Resistances

|  | $\Theta$ | $\oplus$ | Reference Resistances | Abnormal Resistances |
| :---: | :---: | :---: | :---: | :---: |
|  | $E_{1} C_{2}$ | C | Several ohms to several 10 ohms | $0 \Omega$ or $\infty$ |
|  | $C_{1}$ | $\mathrm{E}_{1} \mathrm{C}_{2}$ | $\infty$ | $0 \Omega$ |
|  | B, | $\mathrm{E}_{1} \mathrm{C}_{2}$ | Several 10 ohms | Several 10 klioohms or above |
|  | $E_{1} C_{2}$ | $\mathrm{B}_{1}$ | Several 10 ohms to several 100 ohms | $0 \Omega$ or $\infty$ |
|  | $E_{2}$ | $\mathrm{E}_{1} \mathrm{C}_{2}$ | Several ohms to several 10 ohms | $0 \Omega$ or $\infty$ |
|  | $E_{1} C_{2}$ | $\mathrm{E}_{2}$ | $\infty$ | $0 \Omega$ |
|  | $\mathrm{B}_{2}$ | $\mathrm{E}_{2}$ | Several 10 ohms | Several 10 kiloohms or above |
|  | $\mathrm{E}_{2}$ | $\mathrm{B}_{2}$ | Several 10 ohms to several 100 ohms | $0 \Omega$ or $\infty$ |
|  | E | C | Several ohms to several 10 ohms | $0 \Omega$ or $\infty$ |
|  | C | E | $\infty$ | $0 \Omega$ |
|  | B(B1) | E | Several 10 ohms | Several kiloohms |
|  | E | B(B1) | Several 10 ohms to | $0 \Omega$ or $\infty$ |

Note Measure the resistance after conforming the discharge of capacitor

## CAUTION

When installing the diode module and transistor module, apply the Thermal Compound "JOINTAL Z" (manufactured by NIPPON KEIKINZOKU) on the mounting surface of modules. This increases the adhesion of mounting surface and cooling effect.

## APPENDIX 10 WIRE SIZE

Table 22 shows the wire sizes used for wiring, Table 23 shows the setup of round pressure terminals.

Table 22 Wire Size

| Circuit | VS-616GII Model | Inverter <br> Capacity <br> kVA$\|$ | Terminal Symbol | Termınal Screw | Wire Size* |  | Wire Type |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | $\mathrm{mm}^{2}$ | AWG |  |
| Main | CIMR-185G2 | 34 |  | M8 | 22-38 | 4-1 | Power cable 600V vinylsheathed lead or equivalent |
|  | CIMR-22G2 | 41 |  |  |  |  |  |
|  | CIMR-30G2 | 54 |  | M10 | 38-100 | 1-4/0 |  |
|  | Common to all models |  | (G) (®) | M3 5 | 2-5 5 | 14-10 |  |
| Control | Common to all models |  | (11) ( $(1)$, (12) (S) | M3 5 | 05-2 | 20-14 |  |
|  |  |  | (1) to (20) | M3 5 | 0 5-2 | 20-14 | Twisted shieded lead for instrumentation |

Table 23 Round Pressure Terminals

| Wire Size |  | Terminal Screw | Round Pressure Terminal |
| :---: | :---: | :---: | :---: |
| $\mathrm{mm}^{2}$ | AWG |  |  |
| 05 | 20 | $\begin{gathered} \text { M3 } 5 \\ \text { M4 } \end{gathered}$ | $\begin{gathered} 125-35 \\ 125-4 \end{gathered}$ |
| 075 | 18 |  |  |
| 125 | 16 |  |  |
| 2 | 14 | M4 | 2-4 |
| 3.5 | 10 | M4 | 5-4 |
| 55 | 8 | M4 | 5-4 |
| 22 | 8 | M8 | 22-8 |
| 38 | 6 | M8 | 38-8 |
| 38 | 6 | M10 | 38-10 |
| 60 | 2/0 |  | 60-10 |
| 80 | 3/0 |  | 80-10 |
| 100 | 4/0 |  | 100-10 |

## APPENDIX 11 SPARE PARTS

As insurance against costly downtime, it is strongly recommended that spare parts to be kept on hand in accordance with the table below. When ordering spare parts, please specify to Yaskawa Electric office or representative with: Parts Name, Parts Code No. and Quantity.

Table 24 Spare Parts

|  |  | Main Circuit Transistor | Main Circuit Diode | Main Circuit Fuse | Base Drive PC Board | Control * ${ }^{+}$ PC Board | Cooling Fan |

: $\therefore$, of the control PC board type name shows the type of function
Renewal board should have the same type name suffix as that of the board in use
+XX of Code No for the control PC board indicates the revision number of the control PC board
New board should have the same code suffix number or larger than that of the board being replaced
