## This Page Intentionally Blank

## Quick Reference

| Easily Set Parameters for Specific Applications |  |  |
| :--- | :--- | :---: |
| Preset parameter defaults are available for setting up applications. Refer to Application Selection on <br> page 134. |  |  |

## Run a Motor One Frame Larger

This drive can operate a motor one frame size larger when running variable torque loads such as fans and pumps. Refer to C6-01: Drive Duty Mode Selection on page 144.
Drive a Synchronous PM Motor
The drive can operate synchronous PM motors. Refer to Subchart A-3: Operation with Permanent
Magnet Motors on page 131.

| Perform Auto-Tuning |
| :--- |
| Automatic tuning sets motor parameters. Refer to Auto-Tuning on page 164. |
| Maintenance Check Using Drive Monitors |
| Use drive monitors to check if fans, capacitors, or other components require maintenance. Refer to Performance Life Monitors Maintenance <br> Monitors on page 217. |

## Fault Display and Troubleshooting

Refer to Drive Alarms, Faults, and Errors on page 178.
Standards Compliance

## This Page Intentionally Blank

## Preface \& General Safety

This section provides safety messages pertinent to this product that, if not heeded, may result in fatality, personal injury, or equipment damage. Yaskawa is not responsible for the consequences of ignoring these instructions.
i. 1 PREFACE. ..... 12
i. 2 GENERAL SAFETY ..... 13

## i. 1 Preface

Yaskawa manufactures products used as components in a wide variety of industrial systems and equipment. The selection and application of Yaskawa products remain the responsibility of the equipment manufacturer or end user. Yaskawa accepts no responsibility for the way its products are incorporated into the final system design. Under no circumstances should any Yaskawa product be incorporated into any product or design as the exclusive or sole safety control. Without exception, all controls should be designed to detect faults dynamically and fail safely under all circumstances. All systems or equipment designed to incorporate a product manufactured by Yaskawa must be supplied to the end user with appropriate warnings and instructions as to the safe use and operation of that part. Any warnings provided by Yaskawa must be promptly provided to the end user. Yaskawa offers an express warranty only as to the quality of its products in conforming to standards and specifications published in the Yaskawa manual. NO OTHER WARRANTY, EXPRESS OR IMPLIED, IS OFFERED. Yaskawa assumes no liability for any personal injury, property damage, losses, or claims arising from misapplication of its products.
This manual is designed to ensure correct and suitable application of A1000-Series Drives. Read this manual before attempting to install, operate, maintain, or inspect a drive and keep it in a safe, convenient location for future reference. Be sure you understand all precautions and safety information before attempting application.

## Applicable Documentation

The following manuals are available for A1000 series drives:

| A1000 Series AC Drive Quick Start Guide (TOEPC71061641) |
| :--- |
| Read this guide first. This guide is packaged together with the product and contains basic information on <br> safety precautions, model list, and wiring. Use this manual for basic settings and trial operation. The <br> purpose of this guide is to prepare the drive for a trial run with an application and for basic operation. <br> This manual is available for download on our documentation website, www.yaskawa.com. |
| A1000 Series AC Drive Technical Manual (SIEPC71061641) |
| The manual contains information required to install and wire the drive, in addition to an overview of fault <br> diagnostics, maintenance safety, and parameter settings. Contact a Yaskawa representative to obtain the <br> manual. The most recent version of this manual is available for download on our documentation website, <br> www.yaskawa.com. |

## i. 2 General Safety

## Supplemental Safety Information

## General Precautions

- The diagrams in this manual may be indicated without covers or safety shields to show details. Replace the covers or shields before operating the drive and run the drive according to the instructions described in this manual.
- Any illustrations, photographs, or examples used in this manual are provided as examples only and may not apply to all products to which this manual is applicable.
- The products and specifications described in this manual or the content and presentation of the manual may be changed without notice to improve the product and/or the manual.
- When ordering a new copy of the manual due to damage or loss, contact Yaskawa or a Yaskawa representative and provide the manual number shown on the front cover.
- If nameplate becomes worn or damaged, order a replacement from Yaskawa or a Yaskawa representative.

## A WARNING

Read and understand this manual before installing, operating or servicing this drive. The drive must be installed according to this manual and local codes.
The following conventions are used to indicate safety messages in this manual. Failure to heed these messages could result in serious or fatal injury or damage to the products or to related equipment and systems.

## ! DANGER

Indicates a hazardous situation, which, if not avoided, will result in death or serious injury.

## A WARNING

Indicates a hazardous situation, which, if not avoided, could result in death or serious injury.
WARNING! may also be indicated by a bold key word embedded in the text followed by an italicized safety message.

## A CAUTION

Indicates a hazardous situation, which, if not avoided, could result in minor or moderate injury.
CAUTION! may also be indicated by a bold key word embedded in the text followed by an italicized safety message.

## NOTICE

## Indicates a property damage message.

NOTICE: may also be indicated by a bold key word embedded in the text followed by an italicized safety message.

## Safety Messages

## DANGER

Heed the safety messages in this manual.
Failure to comply will result in death or serious injury.
The operating company is responsible for any injuries or equipment damage resulting from failure to heed the warnings in this manual.

## Electrical Shock Hazard

## Before servicing, disconnect all power to the equipment.

The internal capacitor remains charged even after the power supply is turned off. The charge indicator LED will extinguish when the DC bus voltage is below 50 Vdc . To prevent electric shock, wait for at least the time specified on the warning label, once all indicators are OFF, measure for unsafe voltages to confirm the drive is safe prior to servicing.
Failure to comply will result in death or serious injury.

## WARNING

## Sudden Movement Hazard

System may start unexpectedly upon application of power, resulting in death or serious injury.
Clear all personnel from the drive, motor and machine area before applying power. Secure covers, couplings, shaft keys and machine loads before applying power to the drive.
When using DriveWorksEZ to create custom programming, the drive I/O terminal functions change from factory settings and the drive will not perform as outlined in this manual.
Unpredictable equipment operation may result in death or serious injury.
Take special note of custom I/O programming in the drive before attempting to operate equipment.

## Electrical Shock Hazard

Do not attempt to modify or alter the drive in any way not explained in this manual.
Failure to comply could result in death or serious injury.
Yaskawa is not responsible for any modification of the product made by the user. This product must not be modified.
Do not allow unqualified personnel to use equipment.
Failure to comply could result in death or serious injury.
Installation, maintenance, inspection, and service must be performed only by authorized personnel familiar with installation, adjustment and maintenance of AC drives.
Do not remove covers or touch circuit boards while the power is on.
Failure to comply could result in death or serious injury.
Make sure the protective earthing conductor complies with technical standards and local safety regulations.
Because the leakage current exceeds 3.5 mA in models 4A0414 and larger, IEC/EN 61800-5-1 states that either the power supply must be automatically disconnected in case of discontinuity of the protective earthing conductor or a protective earthing conductor with a cross-section of at least $10 \mathrm{~mm}^{2}(\mathrm{Cu})$ or $16 \mathrm{~mm}^{2}(\mathrm{Al})$ must be used. Failure to comply may result in death or serious injury.
Always use appropriate equipment for Ground Fault Circuit Interrupters (GFCIs).
The drive can cause a residual current with a DC component in the protective earthing conductor. Where a residual current operated protective or monitoring device is used for protection in case of direct or indirect contact, always use a type B GFCI according to IEC/EN 60755.

## Fire Hazard

Do not use an improper voltage source.
Failure to comply could result in death or serious injury by fire.
Verify that the rated voltage of the drive matches the voltage of the incoming power supply before applying power.

## A WARNING

Install adequate branch circuit protection according to applicable local codes and this Installation Manual. Failure to comply could result in fire and damage to the drive or injury to personnel.
The device is suitable for use on a circuit capable of delivering not more than 100,000 RMS symmetrical amperes, 240 Vac maximum ( 200 V class) and 480 Vac maximum ( 400 V class), and 600 Vac maximum ( 600 V class) when protected by branch circuit protection devices specified in this document.

## Crush Hazard

Do not use this drive in lifting applications without installing external safety circuitry to prevent accidental dropping of the load.
The drive does not possess built-in load drop protection for lifting applications.
Failure to comply could result in death or serious injury from falling loads.
Install electrical and/or mechanical safety circuit mechanisms independent of drive circuitry.

## A CAUTION

## Crush Hazard

Do not carry the drive by the front cover.
Failure to comply may result in minor or moderate injury from the main body of the drive falling.

## NOTICE

Observe proper electrostatic discharge procedures (ESD) when handling the drive and circuit boards. Failure to comply may result in ESD damage to the drive circuitry.
Do not perform a withstand voltage test or megger test on any part of the drive.
Failure to comply could result in damage to the sensitive devices within the drive.
Do not operate damaged equipment.
Failure to comply could result in further damage to the equipment. Do not connect or operate any equipment with visible damage or missing parts.
If a fuse is blown or a Ground Fault Circuit Interrupter (GFCI) is tripped, check the wiring and the selection of the peripheral devices.
Check for short circuits or ground faults on the secondary side of fuses and GFCIs and check the wiring and the selection of peripheral devices. Remove the cause of the problem and then turn the power supply off and on again. If the cause cannot be identified, do not turn on the power supply or attempt to operate the equipment.
Do not restart the drive immediately operate the peripheral devices if a fuse is blown or a GFCI is tripped.
Check the wiring and the selection of peripheral devices to identify the cause. Contact Yaskawa or a Yaskawa representative before restarting the drive or the peripheral devices if the cause cannot be identified.
Do not expose the drive to halogen group disinfectants.
Failure to comply may cause damage to the electrical components in the drive.
Do not pack the drive in wooden materials that have been fumigated or sterilized. Do not sterilize the entire package after the product is packed.

## General Application Precautions

## - Selection

## Installing a Reactor

Use an AC reactor or DC link choke in the following situations:

- to suppress harmonic current.
- to smooth peak current that results from capacitor switching.
- when the power supply is above 600 kVA .
- when the drive is running from a power supply system with thyristor converters.

Note: A DC link choke is built in to drive models 2A0110 to 2A0415, 4A0058 to 4A1200, and 5A0041 to 5A0242.

Figure i. 1 Installing a Reactor

## Drive Capacity

For specialized motors, make sure that the motor rated current is less than the rated output current for the drive.
When running more than one motor in parallel from a single drive, the capacity of the drive should be larger than [total motor rated current $\times 1.1]$.

## Starting Torque

The overload rating for the drive determines the starting and accelerating characteristics of the motor. Expect lower torque than when running from line power. To achieve a higher starting torque, use a larger drive or a drive and motor with larger capacity.

## Emergency Stop

During a drive fault condition, the output shuts off but the motor does not stop immediately. A mechanical brake may be required when it is necessary to stop the motor faster than the ability of the Fast Stop function of the drive.

## Options

NOTICE: The $B 1, B 2, ~ \ominus, \oplus 1, \oplus 2$, and $\oplus 3$ terminals are used to connect optional drive-specific compatible devices only. Connecting non-Yaskawa-approved devices to these terminals may damage the drive.

## Repetitive Starting/Stopping

Laundry machines, punching presses, and other applications with frequent starts and stops often approach $150 \%$ of their rated output current values. Heat stress generated from repetitive high current will shorten the life span of the IGBTs.
Yaskawa recommends lowering the carrier frequency, particularly when audible noise is not a concern. It is beneficial to reduce the load, increase the acceleration and deceleration times, or switch to a larger drive to help keep peak current levels under $150 \%$. Be sure to check the peak current levels when starting and stopping repeatedly during the initial test run, and make adjustments accordingly.

## Installation

## Enclosure Panels

Keep the drive in a clean environment by installing the drive in an enclosure panel or selecting an installation area free of airborne dust, lint, and oil mist. Be sure to leave the required space between drives to provide for cooling, and take proper measures so the ambient temperature remains within allowable limits and keep flammable materials away from the drive. Yaskawa offers protective designs for drives that must be used in areas subjected to oil mist and excessive vibration. Contact Yaskawa or a Yaskawa representative for details.

## Installation Direction

NOTICE: Install the drive upright as specified in the manual. Refer to the Mechanical Installation section for more information on installation. Failure to comply may damage the drive due to improper cooling.

Settings
Motor Code
When using OLV/PM, set the proper motor code to parameter E5-01 before performing a trial run.

## Upper Limits

NOTICE: The drive is capable of running the motor up to 400 Hz . Be sure to set the upper limit for the frequency of the drive to prevent the possible danger of accidentally operating equipment at higher than rated speed. The default setting for the maximum output frequency is 60 Hz .

## DC Injection Braking

NOTICE: Excessive current during DC Injection Braking and excessive duration of DC Injection Braking can cause motor overheat.

## Acceleration/Deceleration Times

Acceleration and deceleration times are affected by the amount of torque generated by the motor, the load torque, and the moment of inertia. Set a longer accel/decel time when Stall Prevention is enabled. The accel/decel times are lengthened for as long as the Stall Prevention function is in operation. Install one of the available braking options or increase the capacity of the drive for faster acceleration and deceleration.

## General Handling

## Wiring Check

NOTICE: Do not connect power supply lines to output terminals U/T1, V/T2, or W/T3. Failure to comply will destroy the drive. Be sure to perform a final check of all sequence wiring and other connections before turning on the power and also check for short circuits on the control terminals, which may damage the drive.

## Selecting a Circuit Breaker or Circuit Interrupter

Yaskawa recommends installing a Ground Fault Circuit Interrupter (GFCI) to the power supply side. The GFCI should be designed for use with AC drives (e.g., Type B according to IEC/EN 60755).
Select a Molded Case Circuit Breaker (MCCB) or GFCI with a rated current 1.5 to 2 times higher than the drive rated input current to avoid nuisance trips caused by harmonics in the drive input current.
NOTICE: Prevent Equipment Damage. Install a fuse and a GFCI in models 4A0930 and 4A1200. Failure to comply may result in serious damage to the facilities if the drive is defective. Refer to Wiring Fuses for Models 4A0930 and 4A1200 on page 93 for details.

## Magnetic Contactor Installation

WARNING! Fire Hazard. Shut off the drive with a magnetic contactor (MC) when a fault occurs in any external equipment such as braking resistors. Failure to comply may cause resistor overheating, fire, and injury to personnel.

NOTICE: To get the full performance life out of the electrolytic capacitors and circuit relays, refrain from switching the drive power supply off and on more than once every 30 minutes. Frequent use can damage the drive. Use the drive to stop and start the motor.

## Inspection and Maintenance

WARNING! Electrical Shock Hazard. Capacitors in the drive do not immediately discharge after shutting off the power. Wait for at least the amount of time specified on the drive before touching any components after shutting off the power. Failure to comply may cause injury to personnel from electrical shock.
WARNING! Electrical Shock Hazard. When a drive is running a PM motor, voltage continues to be generated at the motor terminals after the drive is shut off while the motor coasts to stop. Take the precautions described below to prevent shock and injury:

- In applications where the machine can still rotate after the drive has fully stopped a load, install a switch to the drive output side to disconnect the motor and the drive.
- Do not allow an external force to rotate the motor beyond the maximum allowable speed or to rotate the motor when the drive has been shut off.
- Wait for at least the time specified on the warning label after opening the load switch on the output side before inspecting the drive or performing any maintenance.
- Do not open and close the load switch while the motor is running.
- If the motor is coasting, make sure the power to the drive is turned on and the drive output has completely stopped before closing the load switch.
WARNING! Burn Hazard. Because the heatsink can get very hot during operation, take proper precautions to prevent burns. When replacing the cooling fan, shut off the power and wait at least 15 minutes to be sure that the heatsink has cooled down. Failure to comply may cause burn injury to personnel.

## Wiring

Yaskawa recommends using ring terminals on all drive models. Drive models 2A0069 to 2A0415 and 4A0058 to 4A1200 require the use of use ring terminals for UL/cUL compliance. Use only the tools recommended by the terminal manufacturer for crimping.

## Transporting the Drive

NOTICE: Never steam clean the drive. During transport, keep the drive from coming into contact with salts, fluorine, bromine, phthalate ester, and other such harmful chemicals.

## Motor Application Precautions

## Standard Induction Motors

## Low-Speed Range

The cooling fan of a standard motor should sufficiently cool the motor at the rated speed. As the self-cooling capability of such a motor decreases with the speed, applying full torque at low speed will possibly damage the motor. Reduce the load torque as the motor slows to prevent motor damage from overheat. Figure i. 2 shows the allowable load characteristics for a Yaskawa standard motor. Use a motor designed specifically for operation with a drive when $100 \%$ continuous torque is needed at low speeds.

Figure i. 2 Allowable Load Characteristics for a Yaskawa Motor

## Insulation Tolerance

NOTICE: Consider motor voltage tolerance levels and motor insulation in applications with an input voltage of over 440 V or particularly long wiring distances.

## High-Speed Operation

NOTICE: Problems may occur with the motor bearings and dynamic balance of the machine when operating a motor beyond its rated speed. Contact the motor or machine manufacturer.

## Torque Characteristics

Torque characteristics differ compared to operating the motor directly from line power. The user should have a full understanding of the load torque characteristics for the application.

## Vibration and Shock

The drive allows selection of high carrier PWM control and low carrier PWM. Selecting high carrier PWM can help reduce motor oscillation.

- Take particular caution when adding a variable speed drive to an application running a motor from line power at a constant speed. If resonance occurs, install shock-absorbing rubber around the base of the motor and enable the Jump frequency selection to prevent continuous operation in the resonant frequency range.
- Mechanical resonance can occur with long motor shafts and in applications such as turbines, blowers, and fans with high inertia loads. Use Closed Loop Vector Control when these applications experience mechanical resonance problems.

## Audible Noise

The audible noise of the motor varies based on the carrier frequency setting. However, drive current derating may be required. When using a high carrier frequency, audible noise from the motor is comparable to the motor noise generated when running from line power.

## Synchronous Motors

- Contact Yaskawa or a Yaskawa agent when planning to use a synchronous motor not endorsed by Yaskawa.
- Use a standard induction motor when running multiple synchronous motors simultaneously. A single drive does not have this capability.
- A synchronous motor may rotate slightly in the opposite direction of the Run command at start depending on parameter settings and rotor position.
- The amount of generated starting torque differs depending on the control mode and motor type. Set up the motor with the drive after verifying the starting torque, allowable load characteristics, impact load tolerance, and speed control range.

Contact Yaskawa or a Yaskawa agent when planning to use a motor that does not fall within these specifications:

- In Open Loop Vector Control for PM motors, braking torque is less than $125 \%$ when running between $20 \%$ and $100 \%$ speed, even with a braking resistor. Braking torque drops to less than $50 \%$ when running at less than $20 \%$ speed.
- In Open Loop Vector Control for PM motors, the allowable load inertia moment is approximately 50 times higher than the motor inertia moment.
Contact Yaskawa or a Yaskawa agent for questions concerning applications with a larger inertia moment.
- When using a holding brake in Open Loop Vector Control for PM motors, release the brake prior to starting the motor. Failure to set the proper timing can cause speed loss.
- To restart a coasting motor rotating over 200 Hz while in V/f Control, first use the Short Circuit Braking function to bring the motor to a stop. Short Circuit Braking requires a special braking resistor. Contact Yaskawa or a Yaskawa agent for details.
- To restart a coasting motor rotating below 200 Hz , use the Speed Search function if the motor cable is not too long. If the motor cable is relatively long, stop the motor using Short Circuit Braking.
- If oC (Overcurrent), STo (Pull-Out Detection), or LSo (LSo Fault) occur, retry Speed Search and use the Short Circuit Braking function when starting to adjust the motor.

## Specialized Motors

## Multi-Pole Motor

The rated current of a multi-pole motor differs from that of a standard motor, so be sure to check the maximum current when selecting a drive. Always stop the motor before switching between the number of motor poles. The motor will coast to stop if a regenerative overvoltage (ov) fault occurs or if overcurrent (oC) protection is triggered.

## Submersible Motor

The rated current of a submersible motor is greater than that of a standard motor, so select the drive accordingly. Use a motor cable large enough to avoid decreasing the maximum torque level from voltage drop caused by a long motor cable.

## Explosion-Proof Motor

The motor and the drive must be tested together to be certified as explosion-proof. The drive is not designed for explosionproof areas.
When attaching an encoder to an explosion-proof motor, make sure the encoder is also explosion-proof. Use an insulating signal converter to connect the encoder signal lines to the speed feedback option card.

## Geared Motor

Make sure that the gear and the lubricant are rated for the desired speed range to avoid gear damage when operating at low speeds or very high speeds. Consult with the manufacturer for applications that require operation outside the rated speed range of the motor or gear box.

## Single-Phase Motor

Variable speed drives are not designed to operate with single phase motors. Using capacitors to start the motor causes a highfrequency current to flow to the capacitors and can damage the capacitors. A split-phase start or a repulsion start can burn out the starter coils because the internal centrifugal switch is not activated. The drive is for use with three-phase motors only.

## Motor with Brake

Take caution when using the drive to operate a motor with a built-in holding brake. If the brake is connected to the output side of the drive, it may not release at start due to low voltage levels, so be sure to install a separate power supply for the motor brake. Note that motors with built-in brakes tend to generate a fair amount of noise when running at low speeds.

## - Notes on Power Transmission Machinery

Installing an AC drive in machinery that was previously connected directly to the power supply will allow the machine to operate at variable speeds. Continuous operation outside of the rated speeds can wear out lubrication material in gear boxes and other power transmission parts. Make sure that lubrication is sufficient within the entire speed range to avoid machine damage. Note that operation above the rated speed can increase the noise generated by the machine.

## Drive Label Warning Example

Always heed the warning information listed in Figure i.3 in the position shown in Figure i.4.

## $\triangle$ WARNING

Risk of electric shock.

- Read manual before installing.
- Wait 5 minutes for capacitor discharge after disconnecting power supply.
- To conform to ( $\in$ requirements, make sure to ground the supply neutral for 400 V class.
- After opening the manual switch between the drive and motor, please wait 5 minutes before' inspecting, performing maintenance or wiring the drive. Hot surfaces
- Top and Side surfaces may become hot. Do not touch.

Figure i. 3 Warning Information Example

Figure i. 4 Warning Information Position

## Warranty Information

## Restrictions

The drive is not designed or manufactured for use in devices or systems that may directly affect or threaten human lives or health.
Customers who intend to use the product described in this manual for devices or systems relating to transportation, health care, space aviation, atomic power, electric power, or in underwater applications must first contact Yaskawa or a Yaskawa representative.
WARNING! Injury to Personnel. This product has been manufactured under strict quality-control guidelines. However, if this product is to be installed in any location where failure of this product could involve or result in a life-and-death situation or loss of human life or in a facility where failure may cause a serious accident or physical injury, safety devices must be installed to minimize the likelihood of any accident.

## Receiving

This chapter explains how to inspect the drive upon receipt, and gives an overview of the different enclosure types and components.
1.1 MODEL NUMBER AND NAMEPLATE CHECK ..... 22

### 1.1 Model Number and Nameplate Check

Please perform the following tasks after receiving the drive:

- Inspect the drive for damage.

If the drive appears damaged upon receipt, contact the shipper immediately.

- Verify receipt of the correct model by checking the information on the nameplate.
- If you have received the wrong model or the drive does not function properly, contact Yaskawa or a Yaskawa representative.

## Nameplate

Figure 1.1 Nameplate Information Example
<1> Certification is model-dependent. Refer to UL and CSA Standards on page 340 for details.
<2> The address of the head office of Yaskawa Electric Corporation (responsible for product liability) is shown on the nameplate.

$<1>$ Refer to manual TOEP C710616 50 for information on 12-pulse models.
$<2>$ Refer to Mechanical Installation on page 28 for differences regarding enclosure protection types and component descriptions.
$<3>$ Provides method of mounting drive with backside (heatsink) external to enclosure, with NEMA 12, UL Type 12 integrity. $<4>$ Drives with these specifications do not guarantee complete protection for the environmental conditions indicated.

## Mechanical Installation

This chapter explains how to properly mount and install the drive.
2.1 MECHANICAL INSTALLATION ..... 28
2.2 FLANGE TYPE ENCLOSURE (NEMA 12 BACKSIDE) DIMENSIONS \& HEAT LOSS ..... 41

### 2.1 Mechanical Installation

This section outlines specifications, procedures, and the environment for proper mechanical installation of the drive.

## Installation Environment

Install the drive in an environment matching the specifications in Table 2.1 to help prolong the optimum performance life of the drive.

Table 2.1 Installation Environment

| Environment | Conditions |
| :--- | :--- |
| Installation Area | Indoors |
| Ambient Temperature | $\begin{array}{l}\text { IP20/NEMA 1, UL Type } 1 \text { enclosure: }-10^{\circ}{ }^{\circ} \mathrm{C} \text { to }+40^{\circ} \mathrm{C}\left(14^{\circ}{ }^{\circ} \mathrm{F} \text { to } 104^{\circ} \mathrm{F}\right) \\ \text { IP00/Open Type enclosure: }-10^{\circ} \mathrm{C} \text { to }+50^{\circ}{ }^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F} \text { to } 122^{\circ} \mathrm{F}\right) \\ \text { Finless Type: IP20/IP00 enclosure: }-10^{\circ}{ }^{\circ} \mathrm{C} \text { to }+45^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F} \text { to } 113^{\circ} \mathrm{F}\right) \\ \text { Drive reliability improves in environments without wide temperature fluctuations. } \\ \text { When using the drive in an enclosure panel, install a cooling fan or air conditioner in the area to ensure that the air } \\ \text { temperature inside the enclosure does not exceed the specified levels. } \\ \text { Do not allow ice to develop on the drive. }\end{array}$ |
| Humidity | $95 \%$ RH or less and free of condensation |$\}$

$<1>$ Models 4A0930 and 4A1200 are rated at $5.9 \mathrm{~m} / \mathrm{s}^{2}\left(19.36 \mathrm{ft} / \mathrm{s}^{2}\right)$
NOTICE: Avoid placing drive peripheral devices, transformers, or other electronics near the drive as the noise created can lead to erroneous operation. If such devices must be used in close proximity to the drive, take proper steps to shield the drive from noise.
NOTICE: Prevent foreign matter such as metal shavings and wire clippings from falling into the drive during installation. Failure to comply could result in damage to the drive. Place a temporary cover over the top of the drive during installation. Remove the temporary cover before drive start-up, as the cover will reduce ventilation and cause the drive to overheat.

## Installation Orientation and Spacing

NOTICE: Install the drive upright as illustrated in Figure 2.1. Failure to comply may damage the drive due to improper cooling.

Figure 2.1 Correct Installation Orientation
NOTICE: Install the drive upright as specified in the manual. Failure to comply may damage the drive due to improper cooling.

## Single Drive Installation

Figure 2.2 shows the installation distance required to maintain sufficient space for airflow and wiring. Install the heatsink against a closed surface to avoid diverting cooling air around the heatsink.

A -50 mm minimum B-30 mm minimum

## C- 120 mm minimum <br> D - Airflow direction

Figure 2.2 Correct Installation Spacing
Note: IP20/NEMA 1, UL Type 1 enclosure and IP00/Open Type enclosure models require the same amount of space above and below the drive for installation.

## Multiple Drive Installation (Side-by-Side Installation)

Models 2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032 can take advantage of Side-by-Side installation. When installing multiple drives into the same enclosure panel, mount the drives according to Figure 2.2 and set L8-35, Installation Method Selection, to 1 (Side-by-Side Mounting).
When mounting drives with the minimum clearance of 2 mm according to Figure 2.3, set parameter L8-35 to 1 while considering derating.

A-50 mm minimum
C-2 mm minimum
B- $\mathbf{3 0} \mathbf{~ m m}$ minimum
D-120 mm minimum
Figure 2.3 Space Between Drives (Side-by-Side Mounting)
Note: Align the tops of the drives when installing drives of different heights in the same enclosure panel. Leave space between the tops and bottoms of stacked drives for easier cooling fan replacement.

Remove the top protective covers of all drives as shown in Figure 2.4 when mounting IP20/NEMA 1, UL Type 1 enclosure drives side-by-side. Refer to Top Protective Cover on page 92 to remove and reattach the top protective cover.

Figure 2.4 IP20/NEMA 1, UL Type 1 Side-by-Side Mounting in Enclosure

## - Instructions on Installation Using the Eye Bolts

Eye bolts are used to install the drive or to temporarily lift the drive when replacing it. Using the eye bolts, the drive can be installed in an enclosure panel or on a wall. Do not leave the drive suspended by the wires in a horizontal or vertical position for long periods of time. Do not transport the drive over long distances. Read the following precautions and instructions before installing the drive.
WARNING! Crush Hazard. Observe the following instructions and precautions. Failure to comply could result in serious injury or death from falling equipment.
Only use vertical suspension to temporarily lift the drive during installation to an enclosure panel. Do not use vertical suspension to transport the drive.
Use screws to securely affix the drive front cover, terminal blocks, and other drive components prior to vertical suspension.
Do not subject the drive to vibration or impact greater than $1.96 \mathrm{~m} / \mathrm{s}^{2}(0.2 \mathrm{G})$ while it is suspended by the wires.
Do not leave the drive unattended while it is suspended by the wires.
Do not attempt to flip the drive over while it is suspended by the wires.

## Horizontal Suspension of Drive Models 2A0360, 2A0415, and 4A0250 to 4A0675

To make a wire hanger or frame for use when lifting the drive with a crane, lay the drive in a horizontal position and pass a wire through the holes of the four eye bolts.
NOTICE: Damage to Equipment. When lifting the drive, confirm that the spring washer is fully closed. Failure to comply may deform or damage the drive when lifted.

Figure 2.5 Spring Washer
Vertical Suspension of Drive Models 2A0360, 2A0415, and 4A0250 to 4A1200
Models 2A0360, 2A0415, and 4A0250 to 4A0675
When vertical suspension of the drive is required in an enclosure panel, change the orientation of the eye bolts for these models by turning the eye bolts counterclockwise 90 degrees.

Figure 2.6 Adjusting Angle of Eye Bolts

## Models 4A0930 and 4A1200

When suspending models 4A0930 or 4A1200 with wires, follow the procedure described below.
WARNING! Crush Hazard. Use an adequate length of wire to ensure a $50^{\circ}$ or wider suspension angle as illustrated in Figure 2.8. The maximum allowable load of the eye bolts cannot be guaranteed when the drive is suspended with the wires at angles less than $50^{\circ}$. Failure to comply may result in serious injury or death from falling equipment.

1. Remove the four eye bolts from the drive side panels and fix them securely on the top panel.

Figure 2.7 Eye Bolt Repositioning
2. Pass wire through the holes of all four eye bolts.

$$
\begin{aligned}
& \text { A - Eye bolt } \\
& \text { B - Wires }
\end{aligned}
$$

Figure 2.8 Suspension Wire Angle Example
3. Gradually take up the slack in the wires and hoist the drive after the wires are stretched tight.
4. Lower the drive when ready to install in the enclosure panel. Stop lowering the drive when it is near the floor then begin lowering the drive again very slowly until the drive is placed correctly.

## IP20/NEMA 1, UL Type 1 Enclosure Drives

Note: Removing the top protective cover or bottom conduit bracket from an IP20/NEMA 1, UL Type 1 enclosure drive voids NEMA 1, UL Type 1 protection while maintaining IP20 conformity.

$<1>$ Customers may convert these models to IP20/NEMA 1, UL Type 1 enclosures using an IP20/NEMA 1, UL Type 1 Kit.

IP20/NEMA 1, UL Type 1 Kit Selection
Customers may convert IP00/Open Type models to IP20/NEMA 1, UL Type 1 enclosures. Refer to Table 2.9 to select the appropriate IP20/NEMA 1, UL Type 1 Kit when performing the conversion.
Contact a Yaskawa representative for IP20/NEMA 1, UL Type 1 Kit availability for IP00/Open Type models not listed.

### 2.2 Flange Type Enclosure (NEMA 12 Backside) Dimensions \& Heat Loss

## NOTICE

Refer to the A1000 6-Phase/12-Pulse Input Installation Manual TOEPYAIA1U02 for information on 12-pulse Flange and non-Flange models. This manual is posted on the Yaskawa website, www.yaskawa.com.

Flange Type Models 2A0004 to 2A0012, 4A0002 to 4A0005, and 5A0003 and 5A0004
Flange Type Exterior and Mounting Dimensions

Figure 2.9 Models 2A0004 to 2A0012, 4A0002 to 4A0005, and 5A0003 and 5A0004

## Flange Type Heat Loss Data

Table 2.10 Models 2A0004 to 2A0012, 4A0002 to 4A0005, and 5A0003 and 5A0004

| Drive Model | Voltage Class | Heat Loss (W) |  |  |  |  |  | Wt. kg (lb) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | ND (Fc = 2 kHz ) |  |  | HD (Fc = 8 kHz ) |  |  |  |
|  |  | Internal | External | Total | Internal | External | Total |  |
| 2A0004 | 200 | 47.3 | 18.4 | 65.7 | 44.4 | 14.8 | 59.2 | 3.3 (7.3) |
| 2A0006 |  | 51.4 | 30.8 | 82.2 | 47.6 | 24.1 | 71.7 | 3.3 (7.3) |
| 2A0008 |  | 52.1 | 42.9 | 95.0 | 48.9 | 34.8 | 83.7 | 3.4 (7.5) |
| 2A0010 |  | 58.4 | 56.7 | 115.1 | 52.1 | 42.9 | 95.0 | 3.4 (7.5) |
| 2A0012 |  | 64.4 | 76.9 | 141.3 | 57.9 | 63.7 | 121.6 | 3.4 (7.5) |

| Drive Model | Voltage Class | Heat Loss (W) |  |  |  |  |  | Wt. kg (lb) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | ND (Fc = 2 kHz ) |  |  | HD (Fc = 8 kHz ) |  |  |  |
|  |  | Internal | External | Total | Internal | External | Total |  |
| 4A0002 | 400 | 47.9 | 19.8 | 67.7 | 44.7 | 15.9 | 60.6 | 3.4 (7.5) |
| 4A0004 |  | 49.2 | 32.1 | 81.3 | 45.7 | 24.6 | 70.3 | 3.4 (7.5) |
| 4A0005 |  | 52.8 | 44.6 | 97.4 | 49.4 | 37.4 | 86.8 | 3.4 (7.5) |

| Drive Model | Voltage Class | Heat Loss (W) |  |  |  |  |  | Wt. kg (lb) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | ND (Fc = 2 kHz ) |  |  | HD (Fc = 8 kHz ) |  |  |  |
|  |  | Internal | External | Total | Internal | External | Total |  |
| 5A0003 | 600 | 23.3 | 21.5 | 44.8 | 19.8 | 28.9 | 48.7 | 3.4 (7.5) |

3.9 CONNECT TO A PC ..... 115
3.10 WIRING CHECKLIST ..... 116

### 3.1 Standard Connection Diagram

### 3.1 Standard Connection Diagram

Connect the drive and peripheral devices as shown in Figure 3.1. It is possible to set and run the drive via the digital operator without connecting digital I/O wiring. This section does not discuss drive operation; Refer to Start-Up Programming \& Operation on page 119 for instructions on operating the drive.
NOTICE: Inadequate wiring could result in damage to the drive. Install adequate branch circuit short circuit protection per applicable codes. The drive is suitable for circuits capable of delivering not more than 100,000 RMS symmetrical amperes, 240 Vac maximum (200 V class), 480 Vac maximum (400 V class), 600 Vac maximum (600 V class).

NOTICE: When the input voltage is 440 V or higher or the wiring distance is greater than 100 meters, pay special attention to the motor insulation voltage or use a drive duty motor. Failure to comply could lead to motor insulation breakdown.

NOTICE: Do not connect AC control circuit ground to drive enclosure. Improper drive grounding can cause control circuit malfunction.
NOTICE: Route motor leads U/T1, V/T2, and W/T3 separate from all other leads to reduce possible interference related issues. Failure to comply may result in abnormal operation of drive and nearby equipment.

NOTICE: Correctly set Sink/Source jumper S3 for internal power supply. Failure to comply may result in damage to the drive. Refer to Control I/O Connections on page 110 for details.

Note: $\quad$ The minimum load for the relay outputs M1-M2, M3-M4, M5-M6, and MA-MB-MC is 10 mA .

Figure 3.1 Drive Standard Connection Diagram (example: model 2A0040)
<1> Remove the jumper when installing a DC link choke. Models 2A0110 to 2A0415 and 4A0058 to 4A1200 come with a built-in DC link choke.
<2> Set L8-55 to 0 to disable the protection function of the built-in braking transistor of the drive when using an optional regenerative converter or dynamic braking option. Leaving L8-55 enabled may cause a braking resistor fault (rF). Additionally, disable Stall Prevention (L3-04 = 0) when using an optional regenerative converter, regenerative or braking units, or dynamic braking option. Leaving If L3-04 enabled may prevent the drive from stopping within the specified deceleration time.
<3> Supplying power to the control circuit separately from the main circuit requires 24 V power supply (option).
<4> This figure illustrates an example of a sequence input to S1 through S8 using a non-powered relay or an NPN transistor. Install the wire link between terminals SC-SP for Sink mode, between SC-SN for Source mode, or leave the link out for external power supply. Never short terminals SP and SN, as it will damage the drive. Refer to Sinking/Sourcing Mode for Digital Inputs on page 110 for details.
<5> This voltage source supplies a maximum current of 150 mA when not using a digital input card DI-A3.
<6> The maximum output current capacity for the +V and -V terminals on the control circuit is 20 mA . Never short terminals $+\mathrm{V},-\mathrm{V}$, and $A C$, as it can cause erroneous operation or damage the drive.
$<7>$ Slide switch S6 selects N.C. or N.O. as the state of the DM+ and DM- terminals for EDM output. Slide switch S6 is available on removable terminal circuit boards ETC740300, ETC740301 and later.

$<8>$ Set DIP switch S1 to select between a voltage or current input signal to terminal A2. The default setting is for current input.
<9> Set DIP switch S4 to select between analog or PTC input for terminal A3.
$<10>$ Set DIP switch S2 to the ON position to enable the termination resistor in the last drive in a MEMOBUS/Modbus network.
<11> Use jumper S3 to select between Sink mode, Source mode, and external power supply for the Safe Disable inputs.
<12> Disconnect the wire jumper between $\mathrm{H} 1-\mathrm{HC}$ and $\mathrm{H} 2-\mathrm{HC}$ when utilizing the Safe Disable input.
<13> Monitor outputs work with devices such as analog frequency meters, ammeters, voltmeters, and wattmeters. They are not intended for use as a feedback-type signal.
<14> Use jumper S5 to select between voltage or current output signals at terminals AM and FM. Set parameters H4-07 and H4-08 accordingly.
<15> Self-cooling motors do not require the same wiring necessary for motors with cooling fans.
WARNING! Sudden Movement Hazard. Do not close the wiring for the control circuit unless the multifunction input terminal parameters are properly set. Improper sequencing of run/stop circuitry could result in death or serious injury from moving equipment.

WARNING! Sudden Movement Hazard. Ensure start/stop and safety circuits are wired properly and in the correct state before energizing the drive. Failure to comply could result in death or serious injury from moving equipment. When programmed for 3-Wire control, a momentary closure on terminal S1 may cause the drive to start.
WARNING! Sudden Movement Hazard. When using a 3-Wire sequence, set the drive to 3-Wire sequence prior to wiring the control terminals and set parameter b1-17 to 0 so the drive will not accept a Run command at power up (default). If the drive is wired for a 3 -Wire sequence but set up for a 2-Wire sequence (default), and parameter b1-17 is set to 1 so the drive accepts a Run command at power up, the motor will rotate in reverse direction at drive power up and may cause injury.

WARNING! Sudden Movement Hazard. Confirm the drive I/O signals and external sequence before executing the application preset function. Executing the application preset function or setting A1-06 $=0$ will change the drive I/O terminal functions and may cause unexpected equipment operation. Failure to comply may cause death or serious injury.

NOTICE: When using the automatic fault restart function with wiring designed to shut off the power supply upon drive fault, make sure the drive does not trigger a fault output during fault restart ( $L 5-02=0$, default). Failure to comply will prevent the automatic fault restart function from working properly.
NOTICE: Do not connect more than one multi-function input to one terminal. Improper wiring may result in drive malfunction. Use an external power supply when sharing a terminal with more than one input. Do not use the built-in +24 V power supply.

### 3.2 Main Circuit Connection Diagram

Refer to diagrams in this section when wiring the main circuit of the drive. Connections may vary based on drive capacity. The DC power supply for the main circuit also provides power to the control circuit.
NOTICE: Do not use the negative DC bus terminal "-" as a ground terminal. This terminal is at high DC voltage potential. Improper wiring connections could damage the drive.
NOTICE: Route motor leads U/T1, V/T2 and W/T3 separate from all other leads to reduce possible interference and noise related issues. Failure to comply may result in abnormal operation of drive and nearby equipment.

Figure 3.5 Connecting Main Circuit Terminals

## Three-Phase 400 V Class Models 4A0930, 4A1200

Figure 3.6 Connecting Main Circuit Terminals
Note: Models 4A0930 and 4A1200 are compatible for operation with 12-pulse rectification. Refer to 12-Pulse Rectification on page 85 for details.

## 12-Pulse Rectification

## Removing the Jumper

Models 4A0930 and 4A1200 are compatible for operation with 12-pulse rectification. Operation with 12-pulse rectification requires the user to separately prepare a 3-winding transformer for the power supply. Contact Yaskawa or your nearest sales representative for transformer specifications.
WARNING! Fire Hazard. Failure to remove jumpers shorting the power supply terminals on the main circuit when operating with 12-pulse rectification may cause death or serious injury by fire.

## Application Notes

Models 4A0930 and 4A1200 are shipped from the factory with jumpers short-circuiting terminals R/L1-R1/L11, S/L2-S1/ L21, and T/L3-T1/L31.
Remove M5 screws and jumpers as shown in Figure 3.7 to operate with 12-pulse rectification.

Figure 3.7 Removing the Jumper

### 3.2 Main Circuit Connection Diagram

## Connection Diagram

Figure 3.8 Connecting Main Circuit Terminals

### 3.3 Terminal Cover

Follow the procedure below to remove the terminal cover for wiring and to reattach the terminal cover after wiring is complete.

## Models 2A0004 to 2A0081, 4A0002 to 4A0044, 5A0003 to 5A0032 (IP20/NEMA 1, UL Type 1 Enclosure)

## Removing the Terminal Cover

1. Loosen the terminal cover screw using a \# 2 Phillips screwdriver. Screw sizes vary by drive model.

Figure 3.9 Removing the Terminal Cover on an IP20/NEMA 1, UL Type 1 Enclosure Drive
2. Push in on the tab located on the bottom of the terminal cover and gently pull forward to remove the terminal cover.

Figure 3.10 Removing the Terminal Cover on an IP20/NEMA 1, UL Type 1 Enclosure Drive

## Reattaching the Terminal Cover

Power lines and signal wiring should pass through the opening provided. Refer to Wiring the Main Circuit Terminal on page 104 and Wiring the Control Circuit Terminal on page 108 for details on wiring.
Reattach the terminal cover after completing the wiring to the drive and other devices.

Figure 3.11 Reattaching the Terminal Cover on an IP20/NEMA 1, UL Type 1 Enclosure Drive
$<1>$ Connect the ground wiring first, then the main circuit wiring, and finally the control circuit wiring.

Models 2A0110 to 2A0250, 4A0208 to 4A1200, and 5A0125 to 5A0242 (IP00/Open Type Enclosure)

## - Removing the Terminal Cover

1. Loosen the screws on the terminal cover, then pull down on the cover.

Note: The terminal cover and the number of terminal cover screws differ depending on the drive model.
CAUTION! Do not completely remove the cover screws, just loosen them. If the cover screws are removed completely, the terminal cover may fall off causing an injury.

Figure 3.12 Removing the Terminal Cover on an IP00/Open Type Enclosure Drive
2. Pull forward on the terminal cover to free it from the drive.

Figure 3.13 Removing the Terminal Cover on an IP00/Open Type Enclosure Drive

## Reattaching the Terminal Cover

After wiring the terminal board and other devices, double-check connections and reattach the terminal cover. Refer to Wiring the Main Circuit Terminal on page 104 and Wiring the Control Circuit Terminal on page 108 for details on wiring.

Figure 3.14 Reattaching the Terminal Cover on an IP00/Open Type Enclosure Drive
$<1>$ Connect the ground wiring first, then the main circuit wiring, and finally the control circuit wiring.

### 3.4 Digital Operator and Front Cover

Detach the digital operator from the drive for remote operation or when opening the front cover to install an option card.
NOTICE: Be sure to remove the digital operator prior to opening or reattaching the front cover. Leaving the digital operator plugged into the drive when removing the front cover can result in erroneous operation caused by a poor connection. Firmly fasten the front cover back into place before reattaching the digital operator.

## - Removing/Reattaching the Digital Operator

## Removing the Digital Operator

While pressing on the tab located on the right side of the digital operator, pull the digital operator forward to remove it from the drive.

Figure 3.15 Removing the Digital Operator

## Reattaching the Digital Operator

Insert the digital operator into the opening in the top cover while aligning it with the notches on the left side of the opening. Next, press gently on the right side of the operator until it clicks into place.

Figure 3.16 Reattaching the Digital Operator

## Removing/Reattaching the Front Cover <br> Removing the Front Cover

## Models 2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032

After removing the terminal cover and the digital operator, loosen the screw that affixes the front cover (models 2A0056, 4A0038, 5A0022, and 5A0027 do not use a screw to affix the front cover). Pinch in on the tabs found on each side of the front cover, then pull forward to remove it from the drive.

Figure 3.17 Remove the Front Cover (2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032)
Models 2A0110 to 2A0415 and 4A0058 to 4A1200

1. Remove the terminal cover and the digital operator.
2. Loosen the installation screw on the front cover.
3. Use a straight-edge screwdriver to loosen the hooks on each side of the cover that hold it in place.

Figure 3.18 Remove the Front Cover (2A0010 to 2A0415 and 4A0058 to 4A1200)
4. Unhook the left side of the front cover then swing the left side towards you as shown in Figure 3.19 until the cover comes off.

Figure 3.19 Remove the Front Cover (2A0010 to 2A0415 and 4A0058 to 4A1200)

## Reattaching the Front Cover

## Models 2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032

Reverse the instructions given in Remove the Front Cover (2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032) on page 89 to reattach the front cover. Pinch inwards on the hooks found on each side of the front cover while guiding it back into the drive. Make sure it clicks firmly into place.

## Models 2A0110 to $2 A 0415$ and 4A0058 to $4 A 1200$

1. Slide the front cover so the hooks on the top connect to the drive.

Figure 3.20 Reattach the Front Cover (2A0110 to 2A0415 and 4A0058 to 4A1200)
2. After connecting the hooks to the drive, press firmly on the cover to lock it into place.

### 3.5 Top Protective Cover

Drive models 2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032 are designed to IP20/NEMA 1, UL Type 1 specifications with a protective cover on the top. Removing this top protective cover or the bottom conduit bracket from an IP20/NEMA 1, UL Type 1 enclosure drive voids the NEMA 1, UL Type 1 protection while maintaining IP20 conformity.

## Removing the Top Protective Cover

Insert the tip of a straight-edge screwdriver into the small opening located on the front edge of the top protective cover. Gently apply pressure as shown in the figure below to free the cover from the drive.

Note: Removing the top protective cover or the bottom conduit bracket from an IP20/NEMA 1, UL Type 1 enclosure drive voids the NEMA 1, UL Type 1 protection while maintaining IP20 conformity.

Figure 3.21 Removing the Top Protective Cover

## Reattaching the Top Protective Cover

Insert the two small protruding hooks on the rear side of the top protective cover into the provided mounting holes near the back of the drive, then press down on the front side of the top protective cover to fasten the cover into place.

Figure 3.22 Reattaching the Protective Cover

### 3.6 Main Circuit Wiring

This section describes the functions, specifications, and procedures required to safely and properly wire the main circuit in the drive.
NOTICE: Do not solder the ends of wire connections to the drive. Soldered wiring connections can loosen over time. Improper wiring practices could result in drive malfunction due to loose terminal connections.
NOTICE: Do not switch the drive input to start or stop the motor. Frequently switching the drive on and off shortens the life of the DC bus charge circuit and the DC bus capacitors, and can cause premature drive failures. For the full performance life, refrain from switching the drive on and off more than once every 30 minutes.
Refer to Factory Recommended Branch Circuit Protection for UL Compliance on page 344 for details on fuse selection.

## Main Circuit Terminal Functions

Table 3.1 Main Circuit Terminal Functions

| Terminal |  | Type |  |  |  | Function | Page |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \hline 200 \mathrm{~V} \\ & \text { Class } \end{aligned}$ | Drive Model | $\begin{aligned} & \text { 2A0004 to } \\ & \text { 2A0081 } \end{aligned}$ | 2A0110, 2A0138 | $\begin{aligned} & \text { 2A0169 to } \\ & \text { 2A0415 } \end{aligned}$ | - |  |  |
| 400 V <br> Class |  | $\begin{aligned} & \text { 4A0002 to } \\ & \text { 4A0044 } \end{aligned}$ | 4A0058, 4A0072 | $\begin{aligned} & \text { 4A0088 to } \\ & \text { 4A0675 } \end{aligned}$ | 4A0930, 4A1200 |  |  |
| $\begin{aligned} & \hline 600 \mathrm{~V} \\ & \text { Class } \end{aligned}$ |  | $\begin{aligned} & \text { 5A0003 to } \\ & 5 A 0032 \end{aligned}$ | 5A0041, 5A0052 | $\begin{aligned} & \text { 5A0062 to } \\ & \text { 5A0242 } \end{aligned}$ | - |  |  |
| R/L1 |  | Main circuit power supply input |  |  |  | Connects line power to the drive | 81 |
|  | S/L2 |  |  |  |  |  |  |
|  | T/L3 |  |  |  |  |  |  |
|  | 21-L11 | Not available |  |  | Main circuit power supply input | Connects line power to the drive <br> Remove the shorting bars connecting R/L1-R1/L11, S/L2-S1/L21, T/L3-T1/L31 when using 12-pulse rectification. |  |
|  | S1-L21 |  |  |  |  |  |  |
| T1-L31 |  |  |  |  |  |  |  |
|  | U/T1 | Drive output |  |  |  | Connects to the motor | 81 |
|  | V/T2 |  |  |  |  |  |  |  |
|  | W/T3 |  |  |  |  |  |  |  |
|  | B1 | Braking resistor |  | Not available |  | Available for connecting a braking resistor or a braking resistor unit option | - |
|  | B2 |  |  |  |  |  |  |  |
|  | $\oplus 2$ | - DC link choke connection $(\oplus 1, \oplus 2)$ (remove the shorting bar between $\oplus 1$ and $\oplus 2$ ) <br> - DC power supply input $(\oplus 1, \ominus)$ | Not available |  |  | For connecting: <br> - the drive to a DC power supply <br> - dynamic braking options <br> - a DC link choke | - |
|  | $\oplus 1$ |  |  | DC power supply input $(\oplus 1, \ominus)$ <br> Braking unit connection $(\oplus 3, \ominus)$ |  |  |  |
|  | $\ominus$ |  | DC power supply input <br> $(\oplus 1, \ominus)$ |  |  |  |  |  |
|  | $\oplus 3$ | Not available |  |  |  |  |  |  |
| $\hat{} \dagger$ |  | For 200 V class: $100 \Omega$ or less For 400 V class: $10 \Omega$ or less For 600 V class: $10 \Omega$ or less |  |  |  | Grounding terminal | 103 |

Note: Use terminals B1 and $\ominus$ when installing a CDBR-type braking unit on drives with built-in braking transistors (Models 2A0004 to 2A0138, 4A0002 to 4A0072, and 5A0003 to 5A0052).

## Wiring Fuses for Models 4A0930 and 4A1200

NOTICE: If a fuse is blown or an Ground Fault Circuit Interrupter (GFCI) is tripped, check the wiring and the selection of peripheral devices to identify the cause. Contact Yaskawa before restarting the drive or the peripheral devices if the cause cannot be identified.
Install a fuse on the input side to protect drive wiring and prevent other secondary damage. Wire the fuse so that leakage current in the upper controller power supply will trigger the fuse and shut off the power supply.
Select the appropriate fuse from Table 3.2.

Table 3.2 Input Fuses for Models 4A0930 and 4A1200

| Voltage Class | Model | Selection |  |  | Input Fuse (Example) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Input Voltage | Current | Pre-arc $\mathrm{I}^{2} \mathrm{t}\left(\mathrm{~A}^{2} \mathrm{~s}\right)$ | Model | Manufacturer | Rating | Pre-arc <br> $1^{2} t\left(A^{2} s\right)$ |
| ThreePhase 400 V Class | 4A0930 | 480 V | 1500 A | $\begin{aligned} & 140000 \text { to } \\ & 3100000 \end{aligned}$ | CS5F-1200 | Fuji Electric | AC500 V, 1200 A | 276000 |
|  | 4A0930 with |  |  |  | FWH-1200A | Bussman | AC500 V, 1200 A | - |
|  | 12-pulse rectification |  |  |  | FWH-1000A | Bussman | AC500 V, 1000 A | - |
|  | 4A1200 | 480 V | 1500 A | $\begin{gathered} 320000 \text { to } \\ 3100000 \end{gathered}$ | CS5F-1500 | Fuji Electric | AC500 V, 1500 A | 351000 |
|  | 4A1200 with |  |  |  | FWH-1600A | Bussman | AC500 V, 1600 A | - |
|  | 12-pulse rectification |  |  |  | FWH-1200A | Bussman | AC500 V, 1200 A | - |

## - Protecting Main Circuit Terminals

## - Insulation Caps or Sleeves

Use insulation caps or sleeves when wiring the drive with crimp terminals. Take particular care to ensure that the wiring does not touch nearby terminals or the surrounding case.

## Insulation Barrier

Insulation barriers are packaged with drive models 4A0414 through 4A1200 to provide added protection between terminals. Yaskawa recommends using the provided insulation barriers to ensure proper wiring. Refer to Figure 3.23 for instructions on placement of the insulation barriers.

Figure 3.23 Installing Insulation Barriers

## Main Circuit Wire Gauges and Tightening Torques

Use the tables in this section to select the appropriate wires and crimp terminals.
Gauges listed in the tables are for use in the United States.
Note:

1. Wire gauge recommendations based on drive continuous current ratings (ND) using $75^{\circ} \mathrm{C} 600 \mathrm{Vac}$ vinyl-sheathed wire assuming ambient temperature within $40^{\circ} \mathrm{C}$ and wiring distance less than 100 m .
2. Terminals $\oplus 1, \oplus 2, \oplus 3, \ominus, \mathrm{~B} 1$ and B2 are for connecting optional power devices. Use caution to connect only approved devices to the correct terminal(s).

- Consider the amount of voltage drop when selecting wire gauges. Increase the wire gauge when the voltage drop is greater than $2 \%$ of motor rated voltage. Ensure the wire gauge is suitable for the terminal block. Use the following formula to calculate the amount of voltage drop:
Line drop voltage $(\mathrm{V})=\sqrt{ } \times \times$ wire resistance $(\Omega / \mathrm{km}) \times$ wire length $(\mathrm{m}) \times \operatorname{current}(\mathrm{A}) \times 10^{-3}$
- Refer to instruction manual TOBPC72060000 or TOBPC72060001 for braking transistor option or braking resistor option wire gauges.
- Use terminals $\oplus 1$ and $\ominus$ when connecting a regenerative converter or a regen unit.

NOTICE: Do not connect a braking resistor to terminals $\oplus 1$ or $\theta$. Failure to comply may cause damage to the drive circuitry.

- Use terminals B1 and $\ominus$ when installing a CDBR-type braking unit on drives with built-in braking transistors (models 2A0004 to 2A0138, 4A0002 to 4A0072, and 5A0003 to 5A0052).
NOTICE: Do not connect a braking resistor to terminals $\oplus 1$ or $\theta$. Failure to comply may cause damage to the drive circuitry.
- Refer to UL Standards Compliance on page 340 for information on UL compliance.

Yaskawa recommends using closed-loop crimp terminals on all drive models. UL/cUL approval requires the use of closedloop crimp terminals when wiring the drive main circuit terminals on models 2A0110 to 2A0415 and 4A0058 to 4A1200. Use only the tools recommended by the terminal manufacturer for crimping. Refer to Closed-Loop Crimp Terminal Size on page 340 for closed-loop crimp terminal recommendations.
The wire gauges listed in the following tables are Yaskawa recommendations. Refer to local codes for proper wire gauge selections.

■ Three-Phase 200 V Class
Table 3.3 Wire Gauge and Torque Specifications (Three-Phase 200 V Class)

| Drive Model | Terminal | Recomm. Gauge AWG, kcmil | Wire Range AWG, kcmil | Screw Size | Tightening Torque $\mathrm{N} \cdot \mathrm{m}$ (Ib.in.) |
| :---: | :---: | :---: | :---: | :---: | :---: |

Note: When connecting peripheral devices or options to terminals $\Theta, \oplus 1, \oplus 3, \mathrm{~B} 1$, and B 2 , refer to the instruction manual for each device. For more information, contact Yaskawa or your nearest sales representative.

## Main Circuit Terminal and Motor Wiring

This section outlines the various steps, precautions, and checkpoints for wiring the main circuit terminals and motor terminals. WARNING! Electrical Shock Hazard. Do not connect the AC power line to the output terminals of the drive. Failure to comply could result in death or serious injury by fire as a result of drive damage from line voltage application to output terminals.
NOTICE: When connecting the motor to the drive output terminals U/T1, V/T2, and W/T3, the phase order for the drive and motor should match. Failure to comply with proper wiring practices may cause the motor to run in reverse if the phase order is backward.

NOTICE: Route motor leads U/T1, V/T2, and W/T3 separate from all other leads to reduce possible interference related issues. Failure to comply may result in abnormal operation of drive and nearby equipment.

NOTICE: Do not connect phase-advancing capacitors or LC/RC noise filters to the output circuits. Failure to comply could result in damage to the drive, phase-advancing capacitors, LC/RC noise filters or ground fault circuit interrupters.

## Cable Length Between Drive and Motor

Voltage drop along the motor cable may cause reduced motor torque when the wiring between the drive and the motor is too long, especially at low frequency output. This can also be a problem when motors are connected in parallel with a fairly long motor cable. Drive output current will increase as the leakage current from the cable increases. An increase in leakage current may trigger an overcurrent situation and weaken the accuracy of the current detection.
Adjust the drive carrier frequency according to Table 3.6. If the motor wiring distance exceeds 100 m because of the system configuration, reduce the ground currents. Refer to C6-02: Carrier Frequency Selection on page 145.

Table 3.6 Cable Length Between Drive and Motor

| Cable Length | $\mathbf{5 0} \mathbf{~ m}$ or less | $\mathbf{1 0 0} \mathbf{~ m}$ or less | Greater than $\mathbf{1 0 0} \mathbf{~ m}$ |
| :---: | :---: | :---: | :---: |
| Carrier Frequency | 15 kHz or less | 5 kHz or less | 2 kHz or less |

Note: 1. When setting carrier frequency for drives running multiple motors, calculate cable length as the total wiring distance to all connected motors.
2. The maximum cable length when using $\operatorname{OLV} / \mathrm{PM}(\mathrm{A} 1-02=5)$ or $\mathrm{AOLV} / \mathrm{PM}(\mathrm{A} 1-02=6)$ is 100 m .

## Ground Wiring

Follow the precautions below when wiring the ground for one drive or a series of drives.
WARNING! Electrical Shock Hazard. Make sure the protective earthing conductor complies with technical standards and local safety regulations. Because the leakage current exceeds 3.5 mA in models 4A0414 and larger, IEC/EN 61800-5-1 states that either the power supply must be automatically disconnected in case of discontinuity of the protective earthing conductor or a protective earthing conductor with a cross-section of at least $10 \mathrm{~mm}^{2}(\mathrm{Cu})$ or $16 \mathrm{~mm}^{2}(\mathrm{Al})$ must be used. Failure to comply may result in death or serious injury.

WARNING! Electrical Shock Hazard. Always use a ground wire that complies with technical standards on electrical equipment and minimize the length of the ground wire. Improper equipment grounding may cause dangerous electrical potentials on equipment chassis, which could result in death or serious injury.

WARNING! Electrical Shock Hazard. Be sure to ground the drive ground terminal ( 200 V class: ground to $100 \Omega$ or less; 400 V class: ground to $10 \Omega$ or less; 600 V class: ground to $10 \Omega$ or less). Improper equipment grounding could result in death or serious injury by contacting ungrounded electrical equipment.
NOTICE: Do not share the ground wire with other devices such as welding machines or large-current electrical equipment. Improper equipment grounding could result in drive or equipment malfunction due to electrical interference.

NOTICE: When using more than one drive, ground multiple drives according to instructions. Improper equipment grounding could result in abnormal operation of drive or equipment.
Refer to Figure 3.24 when using multiple drives. Do not loop the ground wire.

Figure 3.24 Multiple Drive Wiring

### 3.6 Main Circuit Wiring

## Wiring the Main Circuit Terminal

WARNING! Electrical Shock Hazard. Shut off the power supply to the drive before wiring the main circuit terminals. Failure to comply may result in death or serious injury.
Wire the main circuit terminals after the terminal board has been properly grounded.
Models 2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032 have a cover placed over the DC bus and braking circuit terminals prior to shipment to help prevent miswiring. Use wire cutters to cut away covers as needed for terminals.

Figure 3.25 Protecting Cover to Prevent Miswiring (Model 5A0011)

## - Main Circuit Connection Diagram

Refer to Main Circuit Connection Diagram on page 83 when wiring terminals on the main power circuit of the drive.
WARNING! Fire Hazard. The braking resistor connection terminals are B1 and B2. Do not connect braking resistors to any other terminals. Improper wiring connections could cause the braking resistor to overheat and cause death or serious injury by fire. Failure to comply may result in damage to the braking circuit or drive.

### 3.7 Control Circuit Wiring

## Control Circuit Terminal Block Functions

Drive parameters determine which functions apply to the multi-function digital inputs ( S 1 to S 8 ), multi-function digital outputs (M1 to M6), multi-function analog inputs (A1 to A3), and multi-function analog monitor output (FM, AM). The default setting is listed next to each terminal in Figure 3.1 on page 81.
WARNING! Sudden Movement Hazard. A/ways check the operation and wiring of control circuits after being wired. Operating a drive with untested control circuits could result in death or serious injury.

WARNING! Sudden Movement Hazard. Confirm the drive I/O signals and external sequence before starting test run. Setting parameter A1-06 may change the I/O terminal function automatically from the factory setting. Refer to Application Selection on page 134. Failure to comply may result in death or serious injury.

## Input Terminals

Table 3.7 lists the input terminals on the drive. Text in parenthesis indicates the default setting for each multi-function input.
Table 3.7 Control Circuit Input Terminals

| Type | No. | Terminal Name (Function) | Function (Signal Level) Default Setting | Page |
| :---: | :---: | :---: | :---: | :---: |
| Multi-Function Digital Inputs | S1 | Multi-function input 1 (Closed: Forward run, Open: Stop) | - Photocoupler <br> - $24 \mathrm{Vdc}, 8 \mathrm{~mA}$ <br> - Refer to Sinking/Sourcing Mode for Digital Inputs on page 110. | 288 |
|  | S2 | Multi-function input 2 <br> (Closed: Reverse run, Open: Stop) |  |  |
|  | S3 | Multi-function input 3 (External fault, N.O.) |  |  |
|  | S4 | Multi-function input 4 (Fault reset) |  |  |
|  | S5 | Multi-function input 5 (Multi-step speed reference 1) |  |  |
|  | S6 | Multi-function input 6 (Multi-step speed reference 2) |  |  |
|  | S7 | Multi-function input 7 (Jog reference) |  |  |
|  | S8 | Multi-function input 8 (Baseblock command (N.O.)) |  |  |
|  | SC | Multi-function input common | Multi-function input common |  |
|  | SP | Digital input power supply +24 Vdc | 24 Vdc power supply for digital inputs, 150 mA max (only when not using digital input option DI-A3) <br> NOTICE: Do not jumper or short terminals SP and SN. Failure to comply will damage the drive. | 110 |
|  | SN | Digital input power supply 0 V |  | 110 |
| Safe Disable Inputs | H1 | Safe Disable input 1 | - $24 \mathrm{Vdc}, 8 \mathrm{~mA}$ <br> - One or both open: Output disabled <br> - Both closed: Normal operation <br> - Internal impedance: $3.3 \mathrm{k} \Omega$ <br> - Off time of at least 1 ms <br> - Disconnect the wire jumpers shorting terminals $\mathrm{H} 1, \mathrm{H} 2$, and HC to use the Safe Disable inputs. Set the S3 jumper to select between sinking, sourcing mode, and the power supply as explained on page 110. | 352 |
|  | H2 | Safe Disable input 2 |  |  |
|  | HC | Safe Disable function common | Safe disable function common |  |

| Type | No. | Terminal Name (Function) | Function (Signal Level) Default Setting | Page |
| :---: | :---: | :---: | :---: | :---: |
| Analog Inputs / <br> Pulse Train <br> Input | RP | Multi-function pulse train input (Frequency reference) | - Input frequency range: 0 to 32 kHz <br> - Signal Duty Cycle: 30 to $70 \%$ <br> - High level: 3.5 to 13.2 Vdc , low level: 0.0 to 0.8 Vdc <br> - Input impedance: $3 \mathrm{k} \Omega$ | 138298 |
|  | +V | Power supply for analog inputs | 10.5 Vdc (max allowable current 20 mA ) | 136 |
|  | -V | Power supply for analog inputs | -10.5 Vdc (max allowable current 20 mA ) | - |
|  | A1 | Multi-function analog input 1 (Frequency reference bias) | -10 to $10 \mathrm{Vdc}, 0$ to 10 Vdc (input impedance: $20 \mathrm{k} \Omega$ ) | 136155 |
|  | A2 | Multi-function analog input 2 (Frequency reference bias) | - -10 to $10 \mathrm{Vdc}, 0$ to 10 Vdc (input impedance: $20 \mathrm{k} \Omega$ ) <br> - 4 to $20 \mathrm{~mA}, 0$ to 20 mA (input impedance: $250 \Omega$ ) <br> - Voltage or current input must be selected by DIP switch S1 and H3-09. | 136157 |
|  | A3 | Multi-function analog input 3 <br> (Auxiliary frequency reference)/PTC Input | - -10 to $10 \mathrm{Vdc}, 0$ to 10 Vdc (input impedance: $20 \mathrm{k} \Omega$ ) <br> - Use DIP switch S4 on the terminal board to select between analog and PTC input. | 136 |
|  | AC | Frequency reference common | 0 V | 136 |
|  | E (G) | Ground for shielded lines and option cards | - | - |

## Output Terminals

Table 3.8 lists the output terminals on the drive. Text in parenthesis indicates the default setting for each multi-function output.
Table 3.8 Control Circuit Output Terminals

| Type | No. | Terminal Name (Function) | Function (Signal Level) Default Setting | Page |
| :---: | :---: | :---: | :---: | :---: |
| Fault Relay Output | MA | N.O. output (Fault) | $30 \mathrm{Vdc}, 10 \mathrm{~mA}$ to $1 \mathrm{~A} ; 250 \mathrm{Vac}, 10 \mathrm{~mA}$ to 1 A Minimum load: $5 \mathrm{Vdc}, 10 \mathrm{~mA}$ | 153 |
|  | MB | N.C. output (Fault) |  |  |
|  | MC | Fault output common |  |  |
| Multi-Function $\underset{<1>}{\text { Digital Output }}$ | M1 | Multi-function digital output (During run) | $30 \mathrm{Vdc}, 10 \mathrm{~mA}$ to $1 \mathrm{~A} ; 250 \mathrm{Vac}, 10 \mathrm{~mA}$ to 1 A Minimum load: $5 \mathrm{Vdc}, 10 \mathrm{~mA}$ | 153 |
|  | M2 |  |  |  |
|  | M3 | Multi-function digital output (Zero speed) |  |  |
|  | M4 |  |  |  |
|  | M5 | Multi-function digital output (Speed Agree 1) |  |  |
|  | M6 |  |  |  |
| Monitor Output | MP | Pulse train output (Output frequency) | 32 kHz (max) | 298 |
|  | FM | Analog monitor output 1 (Output frequency) | -10 to $+10 \mathrm{Vdc}, 0$ to +10 Vdc , or 4 to 20 mA . Refer to Terminal AM/FM Signal Selection on page 113 for details. | 296 |
|  | AM | Analog monitor output 2 (Output current) |  |  |
|  | AC | Monitor common | 0 V | - |
| Safety Monitor Output | DM + | Safety monitor output | Outputs status of Safe Disable function. Closed when both Safe Disable channels are closed. Up to +48 Vdc 50 mA | 353 |
|  | DM- | Safety monitor output |  |  |

$<1>$ Refrain from assigning functions to digital relay outputs that involve frequent switching, as doing so may shorten relay performance life. Switching life is estimated at 200,000 times (assumes 1 A , resistive load).

## Serial Communication Terminals

Table 3.9 Control Circuit Terminals: Serial Communications

| Type | No. | Signal Name | Function (Signal Level) |  |
| :---: | :---: | :---: | :---: | :---: |
| MEMOBUS/Modbus Communication ${ }^{<1>}$ | R+ | Communications input (+) | MEMOBUS/Modbus communication: Use an RS-422 or RS-485 cable to connect the drive. | RS-422/RS-485 <br> MEMOBUS/Modbus <br> communication protocol 115.2 kbps (max.) |
|  | R- | Communications input (-) |  |  |
|  | S+ | Communications output (+) |  |  |
|  | S- | Communications output (-) |  |  |
|  | IG | Shield ground | 0 V |  |

$<1>$ Enable the termination resistor in the last drive in a MEMOBUS/Modbus network by setting DIP switch S2 to the ON position. Refer to the manual section on Control I/O Connections for more information.

## Terminal Configuration

The control circuit terminals should be arranged as shown in Figure 3.26.

Figure 3.26 Control Circuit Terminal Arrangement

## Wire Size and Torque Specifications

Select appropriate wire type and gauges from Table 3.10. For simpler and more reliable wiring, use crimp ferrules on the wire ends.

Table 3.10 Wire Gauges

| Terminal Block | Terminal | Screw Size | Tightening Torque $\mathrm{N} \cdot \mathrm{m}$ (lb. in) | Bare Wire Terminal |  | Ferrule-Type Terminal |  | Wire Type |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Recomm. wire size $\mathbf{m m}^{2}$ (AWG) | Applicable wire size $\mathbf{m m}^{2}$ (AWG) | $\begin{gathered} \text { Recomm. } \\ \text { wire size } \\ \mathrm{mm}^{2} \text { (AWG) } \end{gathered}$ | $\begin{gathered} \text { Applicable } \\ \text { wire size } \\ \mathrm{mm}^{2} \text { (AWG) } \end{gathered}$ |  |
| $\begin{aligned} & \text { TB1, TB2, } \\ & \text { TB3, TB4 } \end{aligned}$ | S1-S8, SN, SC, <br> SP, MA, MB, <br> MC, M1-M6, V <br> +, V-, AC, A1, <br> A2, FM, AM, <br> P1, P2, C1, C2, <br> HC, H1, H2, <br> DM + , DM-, IG, <br> R+, R-, S+, S- | M3 | $\begin{gathered} 0.5 \text { to } 0.6 \\ (4.4 \text { to } 5.3) \end{gathered}$ | 0.75 (18) | Stranded wire: <br> 0.2 to 1.0 <br> (24 to 17) <br> Solid wire: <br> 0.2 to 1.5 <br> (24 to 16) | 0.5 (20) | $\begin{aligned} & 0.25 \text { to } 0.5 \\ & \text { (24 to } 20 \text { ) } \end{aligned}$ | Shielded wire, etc. |
|  | E(G) |  |  | 1.0 (16) |  |  |  |  |
| TB5 | E(G) | M3.5 | $\begin{gathered} 0.5 \text { to } 1.0 \\ (4.4 \text { to } 8.9) \\ \hline \end{gathered}$ | 1.25 (12) | $\begin{gathered} 0.5 \text { to } 2 \\ (20 \text { to } 14) \\ \hline \end{gathered}$ | - | - |  |

## Ferrule-Type Wire Terminals

Yaskawa recommends using CRIMPFOX 6, a crimping tool manufactured by PHOENIX CONTACT, to prepare wire ends with insulated sleeves before connecting to the drive. See Table 3.11 for dimensions.

Figure 3.27 Ferrule Dimensions
Table 3.11 Ferrule Terminal Types and Sizes

| Size mm² ${ }^{\text {(AWG) }}$ | Type | L mm (in) | d1 mm (in) | d2 mm (in) | Manufacturer |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0.25 (24) | AI 0.25-8YE | 12.5 (0.49) | 0.8 (0.03) | 2.0 (0.08) | PHOENIX CONTACT |
| 0.34 (22) | AI 0.34-8TQ | 12.5 (0.49) | 0.8 (0.03) | 2.0 (0.08) |  |
| 0.5 (20) | $\begin{aligned} & \text { AI } 0.5-8 \mathrm{WH} \\ & \text { AI } 0.5-8 \mathrm{OG} \end{aligned}$ | 14.0 (0.55) | 1.1 (0.04) | 2.5 (0.10) |  |

## Wiring the Control Circuit Terminal

This section describes the proper procedures and preparations for wiring the control terminals.
WARNING! Electrical Shock Hazard. Do not remove covers or touch the circuit boards while the power is on. Failure to comply could result in death or serious injury.
NOTICE: Separate control circuit wiring from main circuit wiring (terminals R/L1, S/L2, T/L3, B1, B2, U/T1, V/T2, W/T3, $\theta, \oplus 1, \oplus 2$ ) and other high-power lines. Improper wiring practices could result in drive malfunction due to electrical interference.
NOTICE: Separate wiring for digital output terminals MA, MB, MC, and M1 to M6 from wiring to other control circuit lines. Improper wiring practices could result in drive or equipment malfunction or nuisance trips.
NOTICE: Use a class 2 power supply when connecting to the control terminals. Improper application of peripheral devices could result in drive performance degradation due to improper power supply. Refer to NEC Article 725 Class 1, Class 2, and Class 3 Remote-Control, Signaling, and Power Limited Circuits for requirements concerning class 2 power supplies.

NOTICE: Insulate shields with tape or shrink tubing to prevent contact with other signal lines and equipment. Improper wiring practices could result in drive or equipment malfunction due to short circuit.
NOTICE: Connect the shield of shielded cable to the appropriate ground terminal. Improper equipment grounding could result in drive or equipment malfunction or nuisance trips.
NOTICE: Do not tighten screws beyond the specified tightening torque. Failure to comply may result in erroneous operation, damage to the terminal block, or cause a fire.

NOTICE: Use shielded twisted-pair cables as indicated to prevent operating faults. Improper wiring practices could result in drive or equipment malfunction due to electrical interference.
Wire the control circuit only after terminals have been properly grounded and main circuit wiring is complete. Refer to Terminal Board Wiring Guide on page 109 for details. Prepare the ends of the control circuit wiring as shown in Figure 3.30. Refer to Wire Gauges on page 107.

Connect control wires as shown in Figure 3.28 and Figure 3.29.

C - Avoid fraying wire strands when stripping insulation from wire. Strip length 5.5 mm .
D - Blade depth of 0.4 mm or less Blade width of 2.5 mm or less

Figure 3.28 Terminal Board Wiring Guide

Figure 3.29 Terminal Board Location Inside the Drive
When setting the frequency by analog reference from an external potentiometer, use shielded twisted-pair wires (preparing wire ends as shown in Figure 3.30) and connect the shield to the ground terminal of the drive.

## A - Drive side <br> B - Insulation C - Control device side

D - Shield sheath (insulate with tape)
E-Shield

Figure 3.30 Preparing the Ends of Shielded Cables
NOTICE: The analog signal wiring between the drive and the operator station or peripheral equipment should not exceed 50 meters when using an analog signal from a remote source to supply the frequency reference. Failure to comply could result in poor system performance.

### 3.8 Control I/O Connections

## Sinking/Sourcing Mode for Digital Inputs

Use the wire jumper between terminals SC and SP or SC and SN to select between Sink mode, Source mode or external power supply for the digital inputs S 1 to S 8 as shown in Table 3.12 (Default: Sink mode, internal power supply).
NOTICE: Do not short terminals SP and SN. Failure to comply will damage the drive.
Table 3.12 Digital Input Sink/Source/External Power Supply Selection

## Sinking/Sourcing Mode Selection for Safe Disable Inputs

Use jumper S3 on the terminal board to select between Sink mode, Source mode or external power supply for the Safe Disable inputs H1 and H2 as shown in Table 3.13 (Default: Source mode, internal power supply).
Remove the jumper wire connected to the HC terminals and connect terminals H 1 and H 2 as shown in Table 3.13 to use an external power supply for a sequence input without using a safety input.
WARNING! Electrical Shock Hazard. Be sure to remove the jumper wire connected to the HC terminals if using en external power supply for a sequence input without using a safety input. Failure to comply will short circuit the external power supply.

Table 3.13 Safe Disable Input Sink/Source/External Power Supply Selection

### 3.8 Control I/O Connections

## Using the Pulse Train Output

The pulse train output terminal MP can supply power or be used with an external power supply.
NOTICE: Connect peripheral devices in accordance with the specifications. Failure to comply may cause unexpected drive operation, and can damage the drive or connected circuits.

## Using Power from the Pulse Output Terminal (Source Mode)

The high voltage level of the pulse output terminal depends on the load impedance.

| Load Impedance $\mathbf{R}_{\mathbf{L}}(\mathbf{k} \boldsymbol{\Omega})$ | Output Voltage $\mathbf{V}_{\mathbf{M P}}(\mathbf{V})$ (insulated) |
| :---: | :---: |
| $1.5 \mathrm{k} \Omega$ | 5 V |
| $4 \mathrm{k} \Omega$ | 8 V |
| $10 \mathrm{k} \Omega$ | 10 V |

Note: $\quad$ The load resistance needed in order to get a certain high level voltage $V_{M P}$ can be calculated by: $R_{L}=V_{M P} \cdot 2 /\left(12-V_{M P}\right)$

Figure 3.31 Pulse Output Connection Using Internal Voltage Supply

## Using External Power Supply (Sink Mode)

The high voltage level of the pulse output signal depends on the external voltage applied. The voltage must be between 12 and 15 Vdc . The load resistance must be adjusted so that the current is lower than 16 mA .

| External Power Supply (V) | Load Impedance (k $\mathbf{(})$ |
| :---: | :---: |
| 12 to $15 \mathrm{Vdc} \pm 10 \%$ | $1.0 \mathrm{k} \Omega$ or higher |

Figure 3.32 Pulse Output Connection Using External Voltage Supply

## Terminal A2 Input Signal Selection

Terminal A2 can be used to input either a voltage or a current signal. Select the signal type using switch S1 as explained in Table 3.14. Set parameter H3-09 accordingly as shown in Table 3.15.

Note: If terminals A1 and A2 are both set for frequency bias ( $\mathrm{H} 3-02=0$ and $\mathrm{H} 3-10=0$ ), both input values will be combined to create the frequency reference.

Table 3.14 DIP Switch S1 Settings

| Setting |  |
| :---: | :---: |
| V (left position) | Description |
| I (right position) | Current input (4 to 20 mA or 0 to 20 mA ): default setting |

Table 3.15 Parameter H3-09 Details

| No. | Parameter Name | Description | Setting Range | Default Setting |
| :---: | :---: | :---: | :---: | :---: |
| H3-09 | Terminal A2 Signal Level Selection | Selects the signal level for terminal A2. 0: 0 to 10 Vdc <br> 1: -10 to 10 Vdc <br> 2: 4 to 20 mA <br> 3: 0 to 20 mA | 0 to 3 | 2 |

## Terminal A3 Analog/PTC Input Selection

Terminal A3 can be configured either as multi-function analog input or as PTC input for motor thermal overload protection. Use switch S4 to select the input function as described in Table 3.16.

Table 3.16 DIP Switch S4 Settings

| Setting | Description |
| :---: | :--- |
| AI (lower position) (default) | Analog input for the function selected in parameter H3-06 |
| PTC (upper position) | PTC input. Parameter H3-06 must be set to E (PTC input) |

## Terminal AM/FM Signal Selection

The signal type for terminals AM and FM can be set to either voltage or current output using jumper S5 on the terminal board as explained in Table 3.17. When changing the setting of jumper S5, parameters H4-07 and H4-08 must be set accordingly. The default selection is voltage output for both terminals.

Table 3.17 Jumper S5 Settings

| Terminal | Voltage Output | Current Output |
| :---: | :---: | :---: |
| Terminal AM |  | $\left[\begin{array}{cc} 0 & 0 \\ 0 & 0 \\ \hdashline \mathrm{OM} \\ \hline \text { AM } \end{array}\right.$ |
| Terminal FM |  | $\begin{gathered} 0 \\ 0 \\ 0 \\ 0 M \end{gathered}$ |

Table 3.18 Parameter H4-07 and H4-08 Details

| No. | Parameter Name | Description | Setting Range | Default Setting |
| :---: | :---: | :---: | :---: | :---: |
| H4-07 | Terminal FM signal level selection | $\begin{aligned} & 0: 0 \text { to } 10 \mathrm{Vdc} \\ & 1:-10 \text { to } 10 \mathrm{Vdc} \\ & 2: 4 \text { to } 20 \mathrm{~mA} \end{aligned}$ | 0 to 2 | 0 |
| H4-08 | Terminal AM signal level selection |  |  |  |

### 3.8 Control I/O Connections

## - Terminal DM+ and DM- Output Signal Selection

Slide switch S6 selects N.C. or N.O. as the state of the DM+ and DM- terminals for EDM output. The switch is initially set to N.C. Slide switch S6 is available on terminal board ETC74030D.

Table 3.19 EDM Switch Settings

| S2 Position |  |
| :---: | :---: |
| N.O. | Description |
| N.C. | Normally open |

Note: Refer to Safe Disable Input Function on page 352 for details on EDM.

### 3.9 Connect to a PC

This drive is equipped with a USB port (type-B).
The drive can connect to a USB port on a PC using a USB 2.0, AB-type cable (sold separately). After connecting the drive to a PC, Yaskawa DriveWizard Industrial software can be used to monitor drive performance and manage parameter settings. Contact Yaskawa for more information on DriveWizard Industrial.

Figure 3.33 Connecting to a PC (USB)

### 3.10 Wiring Checklist

| V | No. | Item | Page(s) |
| :---: | :---: | :---: | :---: |
| Drive, Peripherals, Option Cards |  |  |  |
| $\square$ | 1 | Check drive model number to ensure receipt of correct model. | 22 |
| $\square$ | 2 | Make sure you have the correct braking resistors, DC link chokes, noise filters, and other peripheral devices. | - |
| $\square$ | 3 | Check the option card model number. | - |
| Installation Area and Physical Setup |  |  |  |
| $\square$ | 4 | Ensure that the area surrounding the drive complies with specifications. | 28 |
| Power Supply Voltage, Output Voltage |  |  |  |
| $\square$ | 5 | The voltage from the power supply should be within the input voltage specification range of the drive. | 147 |
| $\square$ | 6 | The voltage rating for the motor should match the drive output specifications. | 22 |
| $\square$ | 7 | Verify that the drive is properly sized to run the motor. | 316 |
| Main Circuit Wiring |  |  |  |
| $\square$ | 8 | Confirm proper branch circuit protection as specified by national and local codes. | 80 |
| $\square$ | 9 | Properly wire the power supply to drive terminals R/L1, S/L2, and T/L3. <br> Note: Confirm the following when wiring models 4A0930 and 4A1200: <br> - Remove the jumpers shorting terminals R/L1-R1/L11, S/L2-S1/L21, and T/L3-T1/L31 when operating with 12 -phase rectification. <br> - When operating without 12-phase rectification, properly wire terminals R1/L11, S1/L21, and T1/L31 in addition to terminals R/L1, S/L2, and T/L3. | 83 |
| $\square$ | 10 | Properly wire the drive and motor together. <br> The motor lines and drive output terminals $\mathrm{U} / \mathrm{T} 1, \mathrm{~V} / \mathrm{T} 2$, and $\mathrm{W} / \mathrm{T} 3$ should match in order to produce the desired phase order. If the phase order is incorrect, the drive will rotate in the opposite direction. | 103 |
| $\square$ | 11 | Use 600 Vac vinyl-sheathed wire for the power supply and motor lines. | 94 |
| $\square$ | 12 | Use the correct wire gauges for the main circuit. Refer to Main Circuit Wire Gauges and Tightening Torques on page 94. <br> - Consider the amount of voltage drop when selecting wire gauges. Increase the wire gauge when the voltage drop is greater than $2 \%$ of motor rated voltage. Ensure the wire gauge is suitable for the terminal block. Use the following formula to calculate the amount of voltage drop: <br> Line drop voltage $(\mathrm{V})=\sqrt{3} \times$ wire resistance $(\Omega / \mathrm{km}) \times$ wire length $(\mathrm{m}) \times$ current $(\mathrm{A}) \times 10^{-3}$ <br> - If the cable between the drive and motor exceeds 50 m , adjust the carrier frequency set to C6-02 accordingly. | 94 <br> 103 |
| $\square$ | 13 | Properly ground the drive. Review page 103. | 103 |
| $\square$ | 14 | Tighten control circuit and grounding terminal screws. Refer to Main Circuit Wire Gauges and Tightening Torques on page 94. | 94 |
| $\square$ | 15 | Set up overload protection circuits when running multiple motors from a single drive. <br> Note: Close MC1 - MCn before operating the drive. $\mathrm{MC} 1-\mathrm{MCn}$ cannot be switched off during run. | - |
| $\square$ | 16 | Install a magnetic contactor when using a dynamic braking option. Properly install the resistor and ensure that overload protection shuts off the power supply using the magnetic contactor. | - |
| $\square$ | 17 | Verify phase advancing capacitors, input noise filters, or GFCIs are NOT installed on the output side of the drive. | - |
| Control Circuit Wiring |  |  |  |
| $\square$ | 18 | Use twisted-pair line for all drive control circuit wiring. | 108 |
| $\square$ | 19 | Ground the shields of shielded wiring to the GND $\Theta$ terminal. | 108 |
| $\square$ | 20 | For 3-Wire sequence, set parameters for multi-function contact input terminals S1-S8, and wire control circuits. | - |
| $\square$ | 21 | Properly wire any option cards. | 108 |
| $\square$ | 22 | Check for any other wiring mistakes. Only use a multimeter to check wiring. | - |
| $\square$ | 23 | Properly fasten drive control circuit terminal screws. Refer to Main Circuit Wire Gauges and Tightening Torques on page 94. | 94 |

| $\square$ | No. | Item | Page(s) |
| :---: | :---: | :--- | :---: |
| $\square$ | 24 | Pick up all wire clippings. | - |
| $\square$ | 25 | Ensure that no frayed wires on the terminal block are touching other terminals or connections. | - |
| $\square$ | 26 | Properly separate control circuit wiring and main circuit wiring. | - |
| $\square$ | 27 | Analog signal line wiring should not exceed 50 m. | - |
| $\square$ | 28 | Safe Disable input wiring should not exceed 30 m. | - |

## This Page Intentionally Blank

## Start-Up Programming \& Operation

This chapter explains the functions of the digital operator and how to program the drive for initial operation.
4.1 USING THE DIGITAL OPERATOR ..... 120
4.2 THE DRIVE AND PROGRAMMING MODES ..... 124
4.3 START-UP FLOWCHARTS ..... 127
4.4 POWERING UP THE DRIVE ..... 133
4.5 APPLICATION SELECTION ..... 134
4.6 BASIC DRIVE SETUP ADJUSTMENTS ..... 135
4.7 AUTO-TUNING ..... 164
4.8 NO-LOAD OPERATION TEST RUN ..... 171
4.9 TEST RUN WITH LOAD CONNECTED. ..... 173
4.10 TEST RUN CHECKLIST ..... 174

### 4.1 Using the Digital Operator

Use the digital operator to enter Run and Stop commands, edit parameters, and display data including fault and alarm information.

## Digital Operator Keys and Displays

Figure 4.1 Keys and Displays on the Digital Operator

| No. | Display | Name | Function |
| :---: | :---: | :---: | :---: |
| 1 | $\begin{aligned} & \text { F1 } \\ & \hline F 2 \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { Function Key } \\ & \text { (F1, F2) } \end{aligned}$ | The functions assigned to F1 and F2 vary depending on the currently displayed menu. The name of each function appears in the lower half of the display window. |
| 2 | Esc | ESC Key | - Returns to the previous display. <br> - Moves the cursor one space to the left. <br> - Pressing and holding this button will return to the Frequency Reference display. |
| 3 | $\underset{R \in S E T}{ }$ | RESET Key | - Moves the cursor to the right. <br> - Resets the drive to clear a fault situation. |
| 4 | (1)RUN | RUN Key | Starts the drive in LOCAL mode. |
| 5 | $\wedge$ | Up Arrow Key | Scrolls up to display the next item, selects parameter numbers, and increments setting values. |
| 6 | V | Down Arrow Key | Scrolls down to display the previous item, selects parameter numbers, and decrements setting values. |
| 7 | (1) STOP | STOP Key ${ }^{\text {<1> }}$ | Stops drive operation. |
| 8 | ENTER | ENTER Key | - Enters parameter values and settings. <br> - Selects a menu item to move between displays |
| 9 | $\frac{\square}{\text { RE }}$ | LO/RE Selection Key ${ }^{\text {<2> }}$ | Switches drive control and frequency setting between the operator (LOCAL) and an external source (REMOTE). |
| 10 |  | RUN Light | Lit while the drive is operating the motor. Refer to page 122 for details. |
| 11 | $\frac{10}{R E}$ | LO/RE Light | Lit while the operator is selected to run the drive (LOCAL mode). Refer to page 122 for details. |
| 12 | ALM | ALM LED Light | Refer to ALARM (ALM) LED Displays on page 122. |

$<1>$ The STOP key has highest priority. Pressing the STOP key will always cause the drive to stop the motor, even if a Run command is active at any external Run command source. To disable the STOP key priority, set parameter o2-02 to 0 .
$<2>$ The LO/RE key can only switch between LOCAL and REMOTE when the drive is stopped. To disable the LO/RE key to prohibit switching between LOCAL and REMOTE, set parameter o2-01 to 0 .

## LCD Display

Figure 4.2 LCD Display
Table 4.1 Display and Contents

| No. | Name | Display | Content |
| :---: | :---: | :---: | :---: |
| 1 | Operation Mode Menus | MODE | Displayed when in Mode Selection. |
|  |  | MONITR | Displayed when in Monitor Mode. |
|  |  | VERIFY | Indicates the Verify Menu. |
|  |  | PRMSET | Displayed when in Parameter Setting Mode. |
|  |  | A.TUNE | Displayed during Auto-Tuning. |
|  |  | SETUP | Displayed when in Setup Mode. |
| 2 | DriveWorksEZ Function Selection | DWEZ | Displayed when DriveWorksEZ is set to enable. (A1-07 = 1 or 2) |
| 3 | Mode Display Area | DRV | Displayed when in Drive Mode. |
|  |  | PRG | Displayed when in Programming Mode. |
| 4 | Ready | Rdy | Indicates the drive is ready to run. |
| 5 | Data Display | - | Displays specific data and operation data. |
| 6 | Frequency Reference Assignment ${ }^{<1>}$ | OPR | Displayed when the frequency reference is assigned to the LCD Operator Option. |
|  |  | AI | Displayed when the frequency reference is assigned to the Analog Input of the drive. |
|  |  | COM | Displayed when the frequency reference is assigned to the MEMOBUS/Modbus Communication Inputs of the drive. |
|  |  | OP | Displayed when the frequency reference is assigned to an Option Unit of the drive. |
|  |  | RP | Displayed when the frequency reference is assigned to the Pulse Train Input of the drive. |
| 7 | LO/RE <br> Display ${ }^{<2>}$ | RSEQ | Displayed when the run command is supplied from a remote source. |
|  |  | LSEQ | Displayed when the run command is supplied from the operator keypad. |
|  |  | RREF | Displayed when the frequency reference is supplied from a remote source. |
|  |  | LREF | Displayed when the frequency reference is supplied from the operator keypad. |
| 8 | $\text { Function Key } 2$(F2) | FWD/REV | Pressing F2 switches between forward and reverse. |
|  |  | DATA | Pressing F2 scrolls to the next display. |
|  |  | $\rightarrow$ |  |
|  |  | RESET | Pressing F2 resets the existing drive fault error. |
| 9 | FWD/REV | FWD | Indicates forward motor operation. |
|  |  | REV | Indicates reverse motor operation. |

| No. | Name | Display | Content |
| :---: | :---: | :---: | :---: |
| 10 | $\begin{aligned} & \text { Function Key } 1 \\ & \text { (F1) } \end{aligned}$ | JOG | Pressing F1 runs the motor at the Jog frequency. |
|  |  | HELP | Pressing F1 displays the Help menu. |
|  |  | $\leftarrow$ | Pressing F1 scrolls the cursor to the left. |
|  |  | HOME | Pressing F1 returns to the top menu (Frequency Reference). |
|  |  | ESC | Pressing F1 returns to the previous display. |

$<1>$ Displayed when in Frequency Reference Mode.
$<2>$ Displayed when in Frequency Reference Mode and Monitor Mode.

## - ALARM (ALM) LED Displays

Table 4.2 ALARM (ALM) LED Status and Contents

| State | Content | Display |
| :---: | :---: | :---: |
| Illuminated | When the drive detects an alarm or error. | $\overline{\overline{\mathrm{ALM}} \mid} \mid$ |
| Flashing | - When an alarm occurs. <br> - When an oPE is detected. <br> - When a fault or error occurs during Auto-Tuning. |  |
| Off | Normal operation (no fault or alarm). | $\overline{\overline{\mid \text { ALM }} \\|}$ |

## - LO/RE LED and RUN LED Indications

Table 4.3 LO/RE LED and RUN LED Indications

| LED | Lit | Flashing | Flashing Quickly ${ }^{\text {<1> }}$ | Off |
| :---: | :---: | :---: | :---: | :---: |
| $\frac{\mathrm{LO}}{\mathrm{RE}}$ | When the operator is selected for Run command and frequency reference control (LOCAL) | - | - | When a device other than the operator is selected for Run command and frequency reference control (REMOTE) |

$<1>$ The drive cannot start operation.

## Menu Structure for Digital Operator

Figure 4.3 Digital Operator Menu and Screen Structure
<1> Pressing (1) RUN will start the motor.
<2> Drive cannot operate motor.
<3> Flashing characters are shown as $\mathbf{0}$.
$<4>$ " $X$ " characters are used as examples in this manual. The LCD Operator will display the actual setting values.
<5> The Frequency Reference appears after the initial display that shows the product name.
$<6>$ The information that appears on the display will vary depending on the drive.

### 4.2 The Drive and Programming Modes

The drive has a Drive Mode to operate the motor and a Programming Mode to edit parameter settings.
Drive Mode: In Drive Mode the user can operate the motor and observe U Monitor parameters. Parameter settings cannot be edited or changed when in Drive Mode.
Programming Mode: In Programming Mode the user can edit and verify parameter settings and perform Auto-Tuning. When the drive is in Programming Mode it will not accept a Run command unless b1-08 is set to 1 .

Note: 1. If b1-08 is set to 0 , the drive will only accept a Run command in Drive Mode. After editing parameters, the user must exit the Programming Mode and enter Drive Mode before operating the motor.
2. Set b1-08 to 1 to allow motor operation from the drive while in Programming Mode.

## Changing Parameter Settings or Values

This example explains changing C1-02 (Deceleration Time 1) from 10.0 seconds (default) to 20.0 seconds.

|  | Step |  | Display/Result |
| :---: | :---: | :---: | :---: |
| 1. | Turn on the power to the drive. The initial display appears. | $\rightarrow$ | - MODE - DRV Rdy FREF (OPR U1-01 $=0.00 H z$ U1-02 $=0.00 \mathrm{~Hz}$ LSEQ U1-03 $=0.00 \mathrm{~A}$ LREF HOG FWD FWDIREV |
| 2. | Press or ${ }^{\text {d }}$ until the Parameter Setting Mode screen appears. | $\rightarrow$ |  |
| 3. | Press ENITR ${ }^{\text {a }}$ do enter the parameter menu tree. | $\rightarrow$ |  |
| 4. | ${ }_{\text {Press }}$ ¢ or ${ }_{\text {to select the } \mathrm{C}}$ parameter group. | $\rightarrow$ | -PRMSET- PRG <br> Basic Setup <br> C1-01= 10.0 sec <br> Accel Time 1 <br> - |
| 5. | Press Eñer two times. |  |  |
| 6. | Press $\boldsymbol{\wedge}$ or ${ }_{\text {to select parameter C1-02. }}$ | $\rightarrow$ |  |
| 7. | Press Enitre to view the current setting value (10.0 s). The leftmost digit flashes. | $\rightarrow$ |  |
| 8. |  | $\rightarrow$ | -PRMSET- PRG <br> Decel Time 1 <br> C1-02=0010.0Sec <br> $(0.0 \sim 6000.0)$ <br> $" 10.0$ sec" <br> F FWD $\rightarrow$ |
| 9. | Press $\lambda$ and enter 0020.0. | $\rightarrow$ | -PRMSET- PRG <br> Decel Time 1 <br> - C1-02=0020.0Sec <br> $(0.0 \sim 6000.0)$ <br> "10.0 sec" <br> F FWD $\quad \rightarrow$ |

| Step |  | Display/Result |  |
| :---: | :---: | :---: | :---: |
| 10. | $\text { Press } \underset{\text { ENTER }}{\int} \text { to confirm the change. }$ | $\rightarrow$ | Entry Accepted |
| 11. | The display automatically returns to the screen shown in Step 4. | $\rightarrow$ |  |
| 12. | Press ESC as many times as necessary to return to the initial display. | $\rightarrow$ |  |

## Setup Group Parameters

Table 4.4 lists the parameters available by default in the Setup Group. Selecting an Application Preset in parameter A1-06 or from the Application Selection Menu of the Setup Group automatically changes the parameters selected for the Setup Group. Refer to Application Selection on page 134 for more information.
Use the Programming Mode to access parameters not displayed in the Setup Group.
Table 4.4 Setup Group Parameters

| Parameter | Name | Parameter | Name |
| :---: | :---: | :---: | :---: |
| A1-02 | Control Method Selection | E1-01 | Input Voltage Setting |
| b1-01 | Frequency Reference Selection 1 | E1-03 | V/f Pattern Selection |
| b1-02 | Run Command Selection 1 | E1-04 | Maximum Output Frequency |
| b1-03 | Stopping Method Selection | E1-05 | Maximum Voltage |
| C1-01 | Acceleration Time 1 | E1-06 | Base Frequency |
| C1-02 | Deceleration Time 1 | E1-09 | Minimum Output Frequency |
| C6-01 | Drive Duty Mode | E1-13 | Base Voltage |
| C6-02 | Carrier Frequency Selection | E2-01 | Motor Rated Current |
| d1-01 | Frequency Reference 1 | E2-04 | Number of Motor Poles |
| d1-02 | Frequency Reference 2 | E2-11 | Motor Rated Power |
| d1-03 | Frequency Reference 3 | H4-02 | Multi-Function Analog Output Terminal FM Gain |
| d1-04 | Frequency Reference 4 | L1-01 | Motor Overload Protection Function Selection |
| d1-17 | Jog Frequency Reference | L3-04 | Stall Prevention Selection during Deceleration |

Note: 1. Parameter availability depends on the control mode set in A1-02; some parameters listed above may not be accessible in all control modes.
2. Parameters listed in Table 4.4 are set in alphanumeric order as User Parameters in A2-01 to A2-26.

## Switching Between LOCAL and REMOTE

LOCAL mode is when the drive is set to accept the Run command from the digital operator RUN key. REMOTE mode is when the drive is set to accept the Run command from an external device (i.e., input terminals or serial communications).
WARNING! Sudden Movement Hazard. The drive may start unexpectedly if the Run command is already applied when switching from LOCAL mode to REMOTE mode when b1-07 = 1, resulting in death or serious injury. Be sure all personnel are clear of rotating machinery.
Switch the operation between LOCAL and REMOTE using the LO/RE key on the digital operator or via digital input.
Note: 1. After selecting LOCAL, the LO/RE light will remain lit.
2. The drive will not allow the user to switch between LOCAL and REMOTE during run.

## Using the LO/RE Key on the Digital Operator

| Step |  |  | Display/Result |
| :---: | :---: | :---: | :---: |
| 1. | Turn on the power to the drive. The initial display appears. | $\rightarrow$ |  |
| 2. | Press $\frac{\sqrt{R E}}{R E}$. The LO/RE light will light up. The drive is now in LOCAL. To set the drive for REMOTE operation, press the $\square$ key again. | $\rightarrow$ |  |

## ■ Using Input Terminals S1 through S8 to Switch between LOCAL and REMOTE

It is possible to switch between LOCAL and REMOTE modes using one of the digital input terminals S1 through S8 (set the corresponding parameter $\mathrm{H} 1-\square \mathrm{\square}$ to " 1 ").
Setting H1- $\square$ to 1 disables the LO/RE key on the digital operator. Refer to H1: Multi-Function Digital Inputs on page 288 for details.

### 4.3 Start-Up Flowcharts

These flowcharts summarize steps required to start the drive. Use the flowcharts to determine the most appropriate start-up method for a given application. The charts are quick references to help familiarize the user with start-up procedures.

Note: 1. Refer to Application Selection on page 134 to set up the drive using one of the Application Presets.
2. Function availability differs for drive models 4A0930 and 4A1200. Refer to Parameter List on page 249 for details.

| Flowchart | Subchart | Objective | Page |
| :---: | :---: | :---: | :---: |
| A | - | Basic start-up procedure and motor tuning | 128 |
| - | A-1 | Simple motor setup using V/f mode | 129 |
|  | A-2 | High-performance operation using Open Loop Vector or Closed Loop Vector motor control | 130 |
|  | A-3 | Setting up the drive to run a permanent magnet (PM) motor | 131 |

### 4.3 Start-Up Flowcharts

## Flowchart A: Basic Start-Up and Motor Tuning

Flowchart A in Figure 4.4 describes a basic start-up sequence that varies slightly depending on the application. Use the drive default parameter settings in simple applications that do not require high precision.

Figure 4.4 Basic Start-Up
Note: 1. Execute Stationary Auto-Tuning for Line-to-Line Resistance if the drive has been Auto-Tuned and then moved to a different location where the motor cable length exceeds 50 m .
2. Perform Auto-Tuning again after installing an AC reactor or other such components to the output side of the drive.

## Subchart A-1: Simple Motor Setup Using V/f Control

Flowchart A1 in Figure 4.5 describes simple motor setup for V/f Control, with or without PG feedback. V/f Control is suited for more basic applications such as fans and pumps. This procedure illustrates Energy Savings and Speed Estimation Speed Search.

Figure 4.5 Simple Motor Setup with Energy Savings or Speed Search

## Subchart A-2: High Performance Operation Using OLV or CLV

Flowchart A2 in Figure 4.6 describes the setup procedure for high-performance with Open Loop Vector Control or Closed Loop Vector Control, which is appropriate for applications requiring high starting torque and torque limits.

Note: Although the drive sets parameters for the PG encoder during Auto-Tuning, sometimes the direction of the motor and direction of the PG get reversed. Use parameter F1-05 to switch the direction of the PG so that it matches the motor direction.

Figure 4.6 Flowchart A2: High Performance Operation Using OLV or CLV
<1> Decouple the load from the motor to properly perform Rotational Auto-Tuning.
$<2>$ Rotational Auto-Tuning can still be performed if the load is $30 \%$ or less, though Stationary Auto-Tuning may yield better control performance.
$<3>$ Make sure the motor and load can run freely (i.e., if a brake is mounted, make sure it is released).
<4> ASR Gain Tuning automatically performs Inertia Tuning and sets parameters related to Feed Forward and the KEB Ride-Thru function.

## Subchart A-3: Operation with Permanent Magnet Motors

Flowchart A3 in Figure 4.7 describes the setup procedure for running a PM motor in Open Loop Vector Control. PM motors can be used for more energy-efficient operation in reduced or variable torque applications.

Note:

1. Although the drive sets parameters for the PG encoder during Auto-Tuning, sometimes the direction of the motor and direction of the PG get reversed. Use parameter F1-05 to switch the direction of the PG so that it matches the motor direction.
2. Realign the $Z$ Pulse if the $P G$ encoder is replaced. Set T2-01 to 3 to recalibrate the drive for the new encoder.

### 4.3 Start-Up Flowcharts

Figure 4.7 Operation with Permanent Magnet Motors
<1> Enter the motor code to E5-01 when using a Yaskawa PM motor (SMRA Series, SSR1 Series, and SST4 Series). If using a motor from another manufacturer, enter "FFFF".
<2> Set E5-01 to the motor code to eliminate the need to perform tuning. Refer to Parameters Changed by Motor Code Selection (for PM Motors) in the drive Technical Manual for details.
<3> Make sure the motor and load can run freely (i.e., if a brake is mounted, make sure it is released).
<4> ASR Gain Tuning automatically performs Inertia Tuning and sets parameters related to Feed Forward and the KEB Ride-Thru function.
<5> Back EMF Constant Tuning automatically measures motor induced voltage and then sets E5-09 when the motor report or data sheets are not available.
<6> This type of Auto-Tuning is available in drive software versions PRG: 1015 and later.

### 4.4 Powering Up the Drive

## Powering Up the Drive and Operation Status Display

## Powering Up the Drive

Review the following checklist before turning the power on.

| Item to Check | Description |
| :--- | :--- |
| Power supply voltage | 200 V class: Three-phase 200 to $240 \mathrm{Vac} 50 / 60 \mathrm{~Hz}$ <br> 400 V class: Three-phase 3800 to $480 \mathrm{Vac} 50 / / 60 \mathrm{~Hz}$ <br> 600 V class: Three-phase 500 to 600 Vac $50 / 60 \mathrm{~Hz}$ |
|  | Properly wire the power supply input terminals (R/L1, S/L2, T/L3). |
|  | Check for proper grounding of drive and motor. |
|  | Properly wire drive output terminals U/T1, V/T2, and W/T3 with motor terminals U, V, and W. |
| Control circuit terminals | Check control circuit terminal connections. |
| Drive control terminal status | Open all control circuit terminals (off). |
| Status of the load and connected <br> machinery | Decouple the motor from the load. |

$<1>$ Confirm the following when connecting models CIMR-A $\square 4 \mathrm{~A} 0930$ and 4A1200: Remove the jumpers on R1/L11, S1/L21, and T1/L31 when using 12-phase rectification. When operating without 12-phase rectification, properly wire terminals R1/L11, S1/L21, and T1/L31 in addition to terminals R/L1, S/L2, and T/L3.

## Status Display

When the power supply to the drive is turned on, the digital operator lights will appear as follows:

| Status | Name | Description |
| :---: | :---: | :---: |
| Normal Operation |  | The data display area displays the frequency reference. $\overline{\text { ORV }}$ is lit. |
| Fault | External fault (example) | Data displayed varies by the type of fault. Refer to Fault Displays, Causes, and Possible Solutions on page 179 for more information. $\triangle \operatorname{ALM}$ and $\overline{D R V}$ are lit. |

### 4.5 Application Selection

### 4.5 Application Selection

Several Application Presets are available to facilitate drive setup for commonly used applications. Selecting one of these Application Presets automatically assigns functions to the input and output terminals and sets a predefined group of parameters to values appropriate for the selected application.
In addition, the parameters most likely to be changed are assigned to the group of User Parameters, A2-01 through A2-16. User Parameters are part of the Setup Group, which provides quicker access by eliminating the need to scroll through multiple menus.
An Application Preset can either be selected from the Application Selection menu in the Setup Group or in parameter A1-06. The following presets can be selected:

Note: 1. Application Presets can only be selected if all drive parameters are at their original default settings. It may be necessary to initialize the drive by setting A1-03 to " 2220 " or " 3330 " prior to selecting an Application Preset.
2. Do not set any value outside the allowable range for A1-06 (Application Presets). If an out-of-range value is set, "APPL" will be displayed flashing in the Setup group and the up and down arrow keys cannot be used. If this happens, press the ESC key to return to the Setup group. It will then be possible to switch to another mode using the up and down arrow keys. Setting values to A1-06 out of the setting range will not affect drive operation.
WARNING! Sudden Movement Hazard. Confirm the drive I/O signals and external sequence before performing a test run. Setting parameter A1-06 may automatically change the I/O terminal function from the default setting. Failure to comply may result in death or serious injury.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| A1-06 | Application Preset | 0: General-purpose <br> 1: Water supply pump <br> 2: Conveyor <br> 3: Exhaust fan <br> 4: HVAC fan <br> 5: Air compressor | 0 |

### 4.6 Basic Drive Setup Adjustments

This section explains the basic settings required for initial drive operation. Checking these basic parameter settings will help to ensure a successful drive start-up. Refer to Parameter List on page 249 for a complete listing of drive parameters if more information is required for parameters not listed in this section.

## A1-02: Control Method Selection

Selects the Control Method (also referred to as the control mode) that the drive uses to operate the motor. Parameter A1-02 determines the control mode for motor 1 when the drive is set up to run two motors.

Note: When changing control modes, all parameter settings depending upon the setting of A1-02 will be reset to the default.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| A1-02 | Control Method Selection | $0,1,2,3,5,6,7$ | 2 |

## Control Modes for Induction Motors (IM)

## Setting 0: V/f Control for Induction Motors

Use this mode for simple speed control and for multiple motor applications with low demands to dynamic response or speed accuracy. This control mode is also used when the motor parameters are unknown and Auto-Tuning cannot be performed. The speed control range is 1:40.

## Setting 1: V/f Control with PG Speed Feedback

Use this mode for general-purpose applications that require high speed accuracy but do not require high dynamic response. This control mode is also used when the motor parameters are unknown and Auto-Tuning cannot be performed. The speed control range is 1:40.

## Setting 2: Open Loop Vector Control

Use this mode for general, variable-speed applications with a speed control range of 1:200 that require precise speed control, quick torque response, and high torque at low speed without using a speed feedback signal from the motor.

## Setting 3: Closed Loop Vector Control

Use this mode for general, variable-speed applications that require precise speed control down to zero speed, quick torque response or precise torque control, and a speed feedback signal from the motor. The speed control range is up to 1:1500.

## Control Modes for Permanent Magnet Motors (SPM or IPM)

## Setting 5: Open Loop Vector Control for PM

Use this mode for general, variable-speed applications with low demands on dynamic response or speed accuracy. The drive can control an SPM or IPM motor with a speed range of 1:20 in this control mode.

## Setting 6: Advanced Open Loop Vector Control for PM

Use this mode for general, variable speed applications that require precise speed control and torque limit. Set High Frequency Injection parameter n8-57 to 1 to achieve a speed control range as high as 1:100. In this case, perform High Frequency Injection Parameter Tuning after setting the motor parameters. High Frequency Injection cannot be used with an SPM motor.

## Setting 7: Closed Loop Vector Control for PM

Use this mode for high-precision control of a PM motor in constant torque or variable torque applications. The speed control range reaches $1: 1500$. A speed feedback signal is required.

## ■ A1-03: Initialize Parameters

Resets parameters to default values. After initialization, the setting for A1-03 automatically returns to 0 .

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| A1-03 | Initialize Parameters | $0,1110,2220,3330,5550$ | 0 |

## Setting 0: No Initialize

## Setting 1110: User Initialize

Resets parameters to the values selected by the user as User Settings. User Settings are stored when parameter o2-03 is set to " 1 : Set defaults".

Note: User Initialization resets all parameters to a user-defined set of default values previously saved to the drive. Set parameter o2-03 to 2 to clear the user-defined default values.

## 4．6 Basic Drive Setup Adjustments

## Setting 2220：2－Wire Initialization

Resets parameters except parameters listed in Table 4.5 to default settings with digital inputs S1 and S2 configured as Forward run and Reverse run，respectively．

## Setting 3330：3－Wire Initialization

Resets parameters except parameters listed in Table 4.5 to default settings with digital inputs S1，S2，and S5 configured as Run，Stop，and Forward／Reverse respectively．

## Setting 5550：oPE04 Reset

An oPE04 error appears on the digital operator when a terminal block with settings saved to its built－in memory is installed in a drive that has edited parameters．Set A1－03 to 5550 to use the parameter settings saved to the terminal block memory．

## Notes on Parameter Initialization

The parameters shown in Table 4.5 will not be reset when the drive is initialized by setting A1－03 $=2220$ or 3330．Although the control mode in A1－02 is not reset when A1－03 is set to 2220 or 3330，it may change when an application preset is selected．

Table 4．5 Parameters Not Changed by Drive Initialization

| No． | Parameter Name |
| :---: | :---: |
| A1－00 | Language Selection |
| A1－02 | Control Method Selection |
| E1－03 | V／f Pattern Selection |
| E5－01 | Motor Code Selection（for PM Motors） |
| E5－02 | Motor Rated Power（for PM Motors） |
| E5－03 | Motor Rated Current（for PM Motors） |
| E5－04 | Number of Motor Poles（for PM Motors） |
| E5－05 | Motor Stator Resistance（r1）（for PM Motors） |
| E5－06 | Motor d－Axis Inductance（Ld）（for PM Motors） |
| E5－07 | Motor d－Axis Inductance（Lq）（for PM Motors） |
| E5－09 | Motor Induction Voltage Constant 1（Ke）（for PM Motors） |
| E5－24 | Motor Induction Voltage Constant 2（Ke）（for PM Motors） |
| F6－口D／F7－ロロ | Communication Parameters（Initialized when F6－08＝1） |
| L8－35 | Installation Method Selection |
| o2－04 | Drive Model Selection |

## b1－01：Frequency Reference Selection 1

Selects the frequency reference source 1 for the REMOTE mode．
Note：1．If a Run command is input to the drive but the frequency reference entered is 0 or below the minimum frequency，the RUN indicator LED on the digital operator will light and the STOP indicator will flash．However，the RUN indicator LED will light in zero speed control when A1－02 is set to 3,6 ，or 7 ．
2．Press the LO／RE key to set the drive to LOCAL and use the operator keypad to enter the frequency reference．

| No． | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| b1－01 | Frequency Reference Selection 1 | 0 to 4 | 1 |

## Setting 0：Operator keypad

Input the frequency reference using the operator keypad with this setting．

## Setting 1：Terminals（analog input terminals）

Using this setting，an analog frequency reference can be entered as a voltage or current signal from terminals A1，A2，or A3．

## Voltage Input

Voltage input can be used at any of the three analog input terminals．Make the settings as described in Table 4.6 for the input used．

Table 4.6 Analog Input Settings for Frequency Reference Using Voltage Signals

Figure 4.8 Setting the Frequency Reference as a Voltage Signal at Terminal A1
Use the wiring example shown in the figure above for any other analog input terminals. When using input A2 make sure DIP switch S1 is set for voltage input.

## Current Input

Input terminal A2 can accept a current input signal. Refer to Table 4.7 to set terminal A2 for current input.
Table 4.7 Analog Input Settings for Frequency Reference Using a Current Signal

| Terminal | Signal <br> Level | Signal Level <br> Selection | Function <br> Selection | Gain | Bias | Notes |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\mathrm{H} 3-09=2$ | H3-10 $=0$ <br> (Frequency Bias) | H3-11 | H3-12 |  |
|  | 0 to 20 mA | $\mathrm{H} 3-09=3$ |  |  |  |  |

Figure 4.9 Setting the Frequency Reference as a Current Signal to Terminal A2

## Switching between Main/Auxiliary Frequency References

The frequency reference input can be switched between the analog terminals A1, A2, and A3 using multi-speed inputs. Refer to Multi-Step Speed Selection on page 146 for details on using this function.

## Setting 2: MEMOBUS/Modbus Communications

This setting requires entering the frequency reference via the RS-485//RS-422 serial communications port (control terminals R+, R-, S+, S-).

## Setting 3: Option card

This setting requires entering the frequency reference via an option board plugged into connector $\mathrm{CN} 5-\mathrm{A}$ on the drive control board. Consult the option board manual for instructions on integrating the drive with the communication system.

Note: If the frequency reference source is set for Option PCB (b1-01 $=3$ ), but an option board is not installed, an oPE05 operation error will be displayed on the digital operator and the drive will not run.

## Setting 4: Pulse Train Input

This setting requires a pulse train signal to terminal RP to provide the frequency reference. Follow the directions below to verify that the pulse signal is working properly.

## Verifying the Pulse Train is Working Properly

- Set b1-01 to 4 and set H6-01 to 0 .
- Set the H6-02 to the pulse train frequency value that equals $100 \%$ of the frequency reference.
- Enter a pulse train signal to terminal RP and check for the correct frequency reference on the display.

## b1-02: Run Command Selection 1

Determines the Run command source 1 in the REMOTE mode.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| b1-02 | Run Command Selection 1 | 0 to 3 | 1 |

## Setting 0: Operator

This setting will illuminate the LO/RE light to indicate that the Run command source is assigned to the digital operator. Use the digital operator RUN and STOP keys to start and stop operation.

## Setting 1: Control Circuit Terminal

This setting requires entering the Run command via the digital input terminals using one of following sequences:

- 2-Wire sequence 1 :

Setting A1-03 to 2220 initializes the drive and presets terminals S1 and S2 to FWD/Stop and REV/Stop. These are the default settings of the drive.

- 2-Wire sequence 2:

Two inputs (Start/Stop-FWD/REV).

- 3 -Wire sequence:

Setting A1-03 to 3330 initializes the drive and presets terminals S1, S2, and S5 to Start, Stop, and FWD/REV.

## Setting 2: MEMOBUS/Modbus Communications

This setting requires entering the Run command via serial communications by connecting the RS-485/RS-422 serial communication cable to control terminals $\mathrm{R}+, \mathrm{R}-, \mathrm{S}+$, and S - on the removable terminal block.

## Setting 3: Option Card

This setting requires entering the Run command via the communication option board by plugging a communication option board into the CN5-A port on the control PCB. Refer to the option board manual for instructions on integrating the drive into the communication system.

Note: If b1-02 is set to 3, but an option board is not installed in CN5-A, an oPE05 operation error will be displayed on the digital operator and the drive will not run.

## b1-03: Stopping Method Selection

Selects how the drive stops the motor when the Run command is removed or when a Stop command is entered.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| b1-03 | Stopping Method Selection | 0 to $3^{<1>}$ | 0 |

[^0]
## Setting 0: Ramp to Stop

When the Run command is removed, the drive will decelerate the motor to stop. The deceleration rate is determined by the active deceleration time. The default deceleration time is set to parameter C1-02.
When the output frequency falls below the level set in parameter b2-01, the drive will start DC injection, Zero Speed Control, or Short Circuit Braking, depending on the selected control mode. Refer to b2-01: DC Injection Braking Start Frequency on page 141 for details.

## V/f, V/f w/PG and OLV (A1-02 = 0, 1, 2)

For these control modes, parameter b2-01 sets the starting frequency for DC Injection Braking at Stop. When the output frequency falls below the setting of b2-01, DC Injection Braking is enabled for the time set in parameter b2-04.

Figure 4.10 DC Injection Braking at Stop for V/f, V/f w/PG, and OLV
Note: If b2-01 is set to a smaller value than E1-09 (Minimum Frequency), then DC Injection Braking will begin when the frequency falls to the E1-09 value.

## OLV/PM and AOLV/PM (A1-02 = 5, 6)

For these control modes, parameter b2-01 sets the starting frequency for Short-Circuit Braking at Stop. When the output frequency falls below the setting of b2-01, Short-Circuit Braking is enabled for the time set in parameter b2-13.
If DC Injection Braking Time is enabled at stop, then DC Injection Braking is performed for the time set in b2-04 after ShortCircuit Braking is complete.

Figure 4.11 Short-Circuit Braking at Stop in OLV/PM and AOLV/PM

> Note: If b2-01 is set to a smaller value than E1-09 (Minimum Frequency), then DC Injection Braking will begin when the frequency falls to the E1-09 value.
> The drive will not perform short-circuit braking when $\mathrm{b} 2-01=\mathrm{E} 1-09=0 \mathrm{~Hz}$.

## CLV and CLV/PM (A1-02 = 3, 7)

For these control modes, parameter b2-01 sets the starting frequency for Zero Speed Control (not position lock) at Stop. When the output frequency falls below the setting of b2-01, Zero Speed Control is enabled for the time set in parameter b2-04.

Figure 4.12 Zero Speed Control at Stop in CLV and CLV/PM
Note: If b2-01 is set to lower than E1-09 (Minimum Frequency), then Zero Speed Control begins at the frequency set to E1-09.

## Setting 1: Coast to Stop

When the Run command is removed, the drive will shut off its output and the motor will coast (uncontrolled deceleration) to stop. The stopping time is determined by the inertia and the friction in the driven system.

### 4.6 Basic Drive Setup Adjustments

Figure 4.13 Coast to Stop
Note: After a stop is initiated, any subsequent Run command entered will be ignored until the minimum baseblock time (L2-03) has expired. Do not enter Run command until it has come to a complete stop. Use DC Injection at Start (Refer to b1-02: Run Command Selection 1 on page 138) or Speed Search (Refer to b3: Speed Search on page 253) to restart the motor before it has completely stopped.

## Setting 2: DC Injection Braking to Stop

When the Run command is removed, the drive will enter baseblock (turn off its output) for the minimum baseblock time (L2-03). When the minimum baseblock time has expired, the drive will inject the amount DC Injection Braking is set in parameter b2-02 into the motor windings to brake the motor. The stopping time in DC Injection Braking to Stop is significantly faster compared to Coast to Stop.

Note: This function is not available in CLV or in control modes for PM motors (A1-02 $=5,6,7$ ).

Figure 4.14 DC Injection Braking to Stop
DC Injection Braking time is determined by the value set to b2-04 and the output frequency at the time the Run command is removed. It can be calculated by:

$$
\text { DC Injection brake time }=\frac{(\mathrm{b} 2-04) \times 10 \times \text { Output frequency }}{\text { Maximum output frequency }(\mathrm{E} 1-04)}
$$

Figure 4.15 DC Injection Braking Time Depending on Output Frequency
Note: If an overcurrent (oC) fault occurs during DC Injection Braking to Stop, lengthen the minimum baseblock time (L2-03) until the fault no longer occurs.

## Setting 3: Coast to Stop with Timer

When the Run command is removed, the drive will turn off its output and the motor will coast to stop. The drive will not start if a Run command is input before the time $\mathrm{t}(\mathrm{C} 1-02)$ has expired. Cycle the Run command that was activated during time t after $t$ has expired to start the drive.

Figure 4.16 Coast to Stop with Timer
The wait time $t$ is determined by the output frequency when the Run command is removed and by the active deceleration time.

Figure 4.17 Run Wait Time Depending on Output Frequency

## b2-01: DC Injection Braking Start Frequency

Active when "Ramp to Stop" is selected as the stopping method (b1-03=0).

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| b2-01 | DC Injection Braking Start Frequency | 0.0 to 10.0 Hz | Determined by <br> A1-02 |

The function triggered by parameter b2-01 depends on the control mode that has been selected.

## V/f, V/f w/PG and OLV (A1-02 = 0, 1, 2)

For these control modes, parameter b2-01 sets the starting frequency for DC Injection Braking at Stop. When the output frequency falls below the setting of b2-01, DC Injection Braking is enabled for the time set in parameter b2-04.

Figure 4.18 DC Injection Braking at Stop for V/f, V/f w/PG, and OLV
Note: If b2-01 is set to a smaller value than E1-09 (Minimum Frequency), then DC Injection Braking will begin when the frequency falls to the E1-09 value.

## OLV/PM and AOLV/PM (A1-02 = 5, 6)

For these control modes, parameter b2-01 sets the starting frequency for Short-Circuit Braking at Stop. When the output frequency falls below the setting of b2-01, Short-Circuit Braking is enabled for the time set in parameter b2-13.
If DC Injection Braking Time is enabled at stop, then DC Injection Braking is performed for the time set in b2-04 after ShortCircuit Braking is complete.

### 4.6 Basic Drive Setup Adjustments

Figure 4.19 Short-Circuit Braking at Stop in OLV/PM and AOLV/PM
Note: If b2-01 is set to a smaller value than E1-09 (Minimum Frequency), then DC Injection Braking will begin when the frequency falls to the E1-09 value. The drive will not perform short-circuit braking when b2-01 $=\mathrm{E} 1-09=0 \mathrm{~Hz}$.

## CLV and CLV/PM (A1-02 = 3, 7)

For these control modes, parameter b2-01 sets the starting frequency for Zero Speed Control (not position lock) at Stop. When the output frequency falls below the setting of b2-01, Zero Speed Control is enabled for the time set in parameter b2-04.

Figure 4.20 Zero Speed Control at Stop in CLV and CLV/PM
Note: If b2-01 is set to lower than E1-09 (Minimum Frequency), then Zero Speed Control begins at the frequency set to E1-09.

## b3-01: Speed Search Selection at Start

Determines if Speed Search is automatically performed when a Run command is issued.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| b3-01 | Speed Search Selection at Start | 0,1 | Determined by <br> A1- 02 |

## Setting 0: Disabled

This setting starts operating the drive at the minimum output frequency when the Run command is entered. If external Speed Search 1 or 2 is already enabled by a digital input, the drive will start operating with Speed Search.

## Setting 1: Enabled

This setting performs Speed Search when the Run command is entered. The drive begins running the motor after Speed Search is complete.

## C1－01 to C1－08：Accel，Decel Times 1 to 4

Four different sets of acceleration and deceleration times can be set in the drive by digital inputs，motor selection，or switched automatically．
Acceleration time parameters always set the time to accelerate from 0 Hz to the maximum output frequency（E1－04）．
Deceleration time parameters always set the time to decelerate from maximum output frequency to 0 Hz ．C1－01 and C1－02 are the default active accel／decel settings．

| No． | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| C1－01 | Acceleration Time 1 |  |  |
| C1－02 | Deceleration Time 1 |  |  |
| C1－03 | Acceleration Time 2 |  | 10.0 s |
| C1－04 | Deceleration Time 2 |  |  |
| C1－05 | Acceleration Time 3（Motor 2 Accel Time 1） |  |  |
| C1－06 | Deceleration Time 3（Motor 2 Decel Time 1） |  |  |
| C1－07 | Acceleration Time 4（Motor 2 Accel Time 2） |  |  |
| C1－08 | Deceleration Time 4（Motor 2 Decel Time 2） |  |  |

$<1>$ The setting range for the acceleration and deceleration times is determined by the accel／decel time setting units in C1－10．For example，if the time is set in units of $0.01 \mathrm{~s}(\mathrm{C} 1-10=0)$ ，the setting range becomes 0.00 to 600.00 s ．

## Switching Acceleration Times by Digital Input

Accel／decel times 1 are active by default if no input is set．Activate accel／decel times 2，3，and 4 by digital inputs （ $\mathrm{H} 1-\mathrm{D}-7$ and 1A）as explained in Table 4．8．

Table 4．8 Accel／Decel Time Selection by Digital Input

| Accel／Decel Time Sel． 1 H1－$\square \square=7$ | Accel／Decel Time Sel． 2 H1－$\square \square=1 \mathrm{~A}$ | Active Times |  |
| :---: | :---: | :---: | :---: |
|  |  | Acceleration | Deceleration |
| 0 | 0 | C1－01 | C1－02 |
| 1 | 0 | C1－03 | C1－04 |
| 0 | 1 | C1－05 | C1－06 |
| 1 | 1 | C1－07 | C1－08 |

Figure 4.21 shows an operation example for changing accel／decel．times．The example below requires that the stopping method be set for＂Ramp to stop＂（b1－03＝0）．

Figure 4．21 Timing Diagram of Accel／Decel Time Change

## Switching Acceleration and Deceleration Times by Motor Selection

When switching between motor 1 and 2 using a digital input（H1－ロロ＝16），parameters C1－01 to C1－04 become accel／decel times 1 and 2 for motor 1，while C1－05 to C1－08 become accel／decel times 1 and 2 for motor 2 ．Accel／decel times 1 and 2 can be switched for each motor using a digital inputs set to H1－पロ＝7 like shown in Table 4．9．

Note：1．The motor 2 selection function cannot be used with PM motors．
2．Attempting to use the digital input setting＂Accel／Decel time 2 selection＂（H1－$\square \square=1 \mathrm{~A})$ together with motor $1 / 2$ switching triggers an oPE03 error，indicating contradictory multifunction input settings．

Table 4.9 Motor Switching and Accel/Decel Time Combinations

| Accel/Decel Time 1 (H1-प口 = 7) | Motor 1 Selected <br> (Terminal set to H1-ם口 = 16 OFF) |  | Motor 2 Selected <br> (Terminal set to H1- $\square \square=16 \mathrm{ON}$ ) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Accel | Decel | Accel | Decel |
| Open | C1-01 | C1-02 | C1-05 | C1-06 |
| Closed | C1-03 | C1-04 | C1-07 | C1-08 |

## Switching Accel/Decel Times by a Frequency Level

The drive can switch between different acceleration and deceleration times automatically. The drive will switch from accel/ decel time 4 in C1-07 and C1-08 to the default accel/decel time in C1-01 and C1-02 (C1-05 and C1-06 for motor 2) when the output frequency exceeds the frequency level set to parameter C1-11. When the frequency falls below this level, the accel/ decel times are switched back. Figure 4.22 shows an operation example.

Note: Acceleration and deceleration times selected by digital inputs have priority over the automatic switching by the frequency level set to C1-11. For example, if accel/decel time 2 is selected, the drive will use only accel/decel time 2 ; it will not switch from accel/decel time 4 to the selected one.

| $\mathrm{C} 1-03$ | $=\frac{(\text { accel time from } 0 \mathrm{~Hz} \text { to } \mathrm{C} 1-11) \times(\mathrm{E} 1-04)}{\mathrm{C} 1-11}$ |
| ---: | :--- |
| $\mathrm{C} 1-01$ | $=\frac{(\text { accel time between } \mathrm{C} 1-11 \text { and } \mathrm{E} 1-04) \times(\mathrm{E} 1-04)}{(\mathrm{E} 1-04-\mathrm{C} 1-11)}$ |
| $\mathrm{C} 1-02$ | $=\frac{(\text { decel time between } \mathrm{E} 1-04 \text { and } \mathrm{C} 1-11) \times(\mathrm{E} 1-04)}{(\mathrm{E} 1-04-\mathrm{C1}-11)}$ |
| $\mathrm{C} 1-04$ | $=\frac{\text { (decel time from } \mathrm{C} 1-11 \text { to } 0 \mathrm{~Hz}) \times(\mathrm{E} 1-04)}{\mathrm{C} 1-11}$ |

When the output frequency $\geq$ C1-11, drive uses Accel/Decel Time 1 (C1-01, -02) When the output frequency < C1-11, drive uses Accel/Decel Time 2 (C1-03, -04)

Figure 4.22 Accel/Decel Time Switching Frequency

## C6-01: Drive Duty Mode Selection

The drive has two different duty modes from which to select based on the load characteristics. The drive rated current, overload capacity, and maximum output frequency will change depending upon the duty mode selection. Use parameter C6-01 to select Heavy Duty (HD) or Normal Duty (ND) for the application. Refer to Heavy Duty and Normal Duty Ratings on page 234 for details about the rated current.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| C6-01 | Duty Mode Selection | 0,1 | 1 (ND) |

Table 4.10 Differences between Heavy Duty and Normal Duty

| Characteristics | Heavy Duty Rating (HD) | Normal Duty Rating (ND) |
| :---: | :---: | :---: |
| C6-01 | 0 | 1 |
| Performance |  |  |
| Application | Use Heavy Duty Rating for applications requiring a high overload tolerance with constant load torque, such as extruders and conveyors. | Use Normal Duty Rating for applications in which the torque requirements drop along with the speed, such as fans and pumps where a high overload tolerance is not required. |
| Overload capability (oL2) | 150\% of drive rated Heavy Duty current for 60 s | 120\% of drive rated Normal Duty current for 60 s |
| Stall Prevention during Acceleration (L3-02) | 150\% | 120\% |
| Stall Prevention during Run (L3-06) | 150\% | 120\% |
| Default Carrier Frequency | 2 kHz | 2 kHz Swing PWM |

Note: Changing the Duty Mode selection automatically changes the maximum size motor that the drive can run, sets the E2- $\square \square$ parameters to appropriate values (E4-D for motor 2), and recalculates parameter settings determined by motor capacity (e.g., b8-04, L2-03, n5-02, L3-24, C5-17, and C5-37).

## - C6-02: Carrier Frequency Selection

Sets the switching frequency of the drive output transistors. Changes to the switching frequency lower audible noise and reduce leakage current.

Note: 1. Increasing the carrier frequency above the default value automatically lowers the drive current rating.
2. When using a PM motor, the default carrier frequency is 5.0 kHz . The default is 2 kHz when the drive is set for Heavy Duty performance, and "Swing PWM1" when set for Normal Duty performance.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| C6-02 | Carrier Frequency Selection | Determined by A1-02 and o2-04 | Determined by A1-02, o2-04. <br> Reset when C6-01 is changed. |

## Settings:

| C6-02 | Carrier Frequency | C6-02 | Carrier Frequency | C6-02 | Carrier Frequency |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 2.0 kHz | 5 | $12.5 \mathrm{kHz}(10.0 \mathrm{kHz})$ | 9 | Swing PWM 3 |
| 2 | $5.0 \mathrm{kHz}(4.0 \mathrm{kHz})$ | 6 | $15.0 \mathrm{kHz}(12.0 \mathrm{kHz})$ | A | Swing PWM 4 |
| 3 | $8.0 \mathrm{kHz}(6.0 \mathrm{kHz})$ | 7 | Swing PWM 1 | F | User defined (C6-03 to C6-05) |
| 4 | $10.0 \mathrm{kHz}(8.0 \mathrm{kHz})$ | 8 | Swing PWM 2 |  |  |

Note: 1. Swing PWM uses a carrier frequency of 2.0 kHz as a base, then applies a special PWM pattern to reduce the audible noise.
2. The value in parenthesis indicates the carrier frequency for AOLV/PM.

Guidelines for Carrier Frequency Parameter Setup

| Symptom |  |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
| Speed and torque are unstable at low speeds | Remedy |  |  |  |
| Noise from the drive affects peripheral devices | Lower the carrier frequency. |  |  |  |
| Excessive leakage current from the drive |  |  |  |  |
| Wiring between the drive and motor is too long ${ }^{<1>}$ |  |  |  |  |
| Audible motor noise is too loud |  |  |  |  |

$<1>$ The carrier frequency may need to be lowered if the motor cable is too long. Refer to Table 4.11.
$<2>$ The default carrier frequency in ND is Swing PWM (C6-02 = 7), using a 2 kHz base. Increasing the carrier frequency is permissible when the drive is set for Normal Duty, however the drive rated current is reduced when the carrier frequency is increased.

Table 4.11 Wiring Distance and Carrier Frequency

| Wiring Distance | Up to $\mathbf{5 0} \mathbf{m}$ | Up to $\mathbf{1 0 0} \mathbf{m}$ | Greater than $\mathbf{1 0 0} \mathbf{~ m}$ |
| :---: | :---: | :---: | :---: |
| Recommended setting value for C6-02 | 1 to F (up to 15 kHz ) | 1 to 2 (up to 5 kHz ), | 1 (up to 2 kHz ), 7 (Swing PWM) |

Note: The maximum cable length is 100 m when using $\operatorname{OLV} / \mathrm{PM}(\mathrm{A} 1-02=5)$ or $\operatorname{AOLV} / \mathrm{PM}(\mathrm{A} 1-02=6)$.

## - d1-01 to d1-17: Frequency Reference 1 to 16 and Jog Frequency Reference

The drive lets the user switch between up to 17 preset frequency references during run (including the Jog reference) through the digital input terminals. The drive uses the acceleration and deceleration times that have been selected when switching between each frequency reference.
The Jog frequency overrides all other frequency references and must be selected by a separate digital input.
The multi-speed references 1,2 , and 3 can be provided by analog inputs.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| d1-01 to d1-16 | Frequency Reference 1 to 16 | 0.00 to $400.00 \mathrm{~Hz}{ }^{<1>}<2>$ | 0.00 Hz <2> |
| d1-17 | Jog Frequency Reference | 0.00 to $400.00 \mathrm{~Hz}{ }^{<1><2>}$ | $6.00 \mathrm{~Hz}^{<2>}$ |

$<1>$ The upper limit is determined by the maximum output frequency (E1-04) and upper limit for the frequency reference (d2-01).
$<2>$ Setting units are determined by parameter o1-03. The default is "Hz" $(o 1-03=0)$ in V/f, V/f w/PG, OLV, CLV, and OLV/PM control modes. The default for AOLV/PM and CLV/PM control modes expresses the frequency reference as a percentage ( $01-03=1$ ).

## Multi-Step Speed Selection

To use several speed references for a multi-step speed sequence, set the $\mathrm{H} 1-\square \square$ parameters to $3,4,5$, and 32 . To assign the Jog reference to a digital input, set H1-पロ to 6 .
Notes on using analog inputs as Multi-Speed 1, 2, and 3:

## - Multi-Step Speed 1

Set b1-01 to 1 to set terminal A1 analog input to Multi-Step Speed 1.
Set b1-01 to 0 when setting d1-01, Frequency Reference 1, to Multi-Step Speed 1.

## - Multi-Step Speed 2

Set H3-06, Terminal A3 Function Selection, to 2 (Auxiliary Frequency Reference 1) when setting terminal A3 analog input to Multi-Step Speed 2.
Set H3-06 to F (Through mode) when setting d1-02, Frequency Reference 2, to Multi-Step Speed 2.

- Multi-Step Speed 3

Set H3-10, Terminal A2 Function Selection, to 3 (Auxiliary Frequency Reference 2) when setting terminal A2 analog input to Multi-Step Speed 3.
Set H3-10 to F (Through mode) when setting d1-03, Frequency Reference 3, to Multi-Step Speed 3.
Set H3-09 to 0 and set DIP switch S1 on the control circuit terminal board to V (voltage) when inputting 0 to 10 V to terminal A2 analog input.
Select the different speed references as shown in Table 4.12. Figure 4.23 illustrates the multi-step speed selection.
Table 4.12 Multi-Step Speed Reference and Terminal Switch Combinations

| Reference | Multi-Step Speed Reference H1- $\square$ = 3 | Multi-Step Speed Reference 2 H1-ㅁㅁ $=4$ | Multi-Step Speed Reference 3 H1- $\square \square=5$ | Multi-Step Speed Reference 4 H1- $\square$ = 32 | Jog Reference Selection H1-पロ = 6 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency Reference 1 (set in b1-01) | OFF | OFF | OFF | OFF | OFF |
| Frequency Reference 2 <br> (d1-02 or input terminal A1, A2, A3) | ON | OFF | OFF | OFF | OFF |
| Frequency Reference 3 <br> (d1-03 or input terminal A1, A2, A3) | OFF | ON | OFF | OFF | OFF |
| Frequency Reference 4 (d1-04) | ON | ON | OFF | OFF | OFF |
| Frequency Reference 5 (d1-05) | OFF | OFF | ON | OFF | OFF |
| Frequency Reference 6 (d1-06) | ON | OFF | ON | OFF | OFF |
| Frequency Reference 7 (d1-07) | OFF | ON | ON | OFF | OFF |
| Frequency Reference 8 (d1-08) | ON | ON | ON | OFF | OFF |
| Frequency Reference 9 (d1-09) | OFF | OFF | OFF | ON | OFF |
| Frequency Reference 10 (d1-10) | ON | OFF | OFF | ON | OFF |
| Frequency Reference 11 (d1-11) | OFF | ON | OFF | ON | OFF |
| Frequency Reference 12 (d1-12) | ON | ON | OFF | ON | OFF |
| Frequency Reference 13 (d1-13) | OFF | OFF | ON | ON | OFF |
| Frequency Reference 14 (d1-14) | ON | OFF | ON | ON | OFF |
| Frequency Reference 15 (d1-15) | OFF | ON | ON | ON | OFF |
| Frequency Reference 16 (d1-16) | ON | ON | ON | ON | OFF |
| Jog Frequency Reference (d1-17) ${ }^{<1>}$ | - | - | - | - | ON |

$<1>$ The Jog frequency overrides all other frequency references.

Figure 4.23 Preset Reference Timing Diagram

## E1-01: Input Voltage Setting

Adjusts the levels of some protective features of the drive (overvoltage, Stall Prevention, etc.). Set this parameter to the nominal voltage of the AC power supply.
NOTICE: Set parameter E1-01 to match the input voltage of the drive. Drive input voltage (not motor voltage) must be set in E1-01 for the protective features to function properly. Failure to set the correct drive input voltage will result in improper drive operation.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| E1-01 | Input Voltage Setting | 155 to $255 \mathrm{~V}^{<1>}$ | $230 \mathrm{~V}^{<1>}$ |

$<1>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.

## E1-01 Related Values

The input voltage setting determines the overvoltage and undervoltage detection levels, the operation levels of the braking transistor, the KEB function, and the overvoltage suppression function.

| Voltage | Setting Value <br> of E1-01 | ov Detection Level/Dynamic <br> Braking Transistor Detection <br> Level | (Approximate Values) <br> (rr Detection Level) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Desired DC Bus Voltage <br> during KEB (L2-11) | ov Suppression / <br> Stall Prevention Level <br> (L3-17) |  |  |  |
| 200 V <br> Class | All settings | $410 \mathrm{~V} / 394 \mathrm{~V}$ | 190 V | 260 V | 375 V |
| 400 V <br> Class | setting $\geq 400 \mathrm{~V}$ | setting <400 V | $820 \mathrm{~V} / 788 \mathrm{~V}$ | $380 \mathrm{~V} / 788 \mathrm{~V}$ | 350 V |
| 600 V <br> Class | All settings | $1178 \mathrm{~V} / 1132 \mathrm{~V}$ | 475 V | 400 V | 750 V |

$<1>$ The braking transistor operation levels are valid for the drive internal braking transistor. When using a CDBR braking unit, refer to instruction manual TOBPC72060000 or TOBPC72060001.

## V/f Pattern Settings (E1-03)

The drive uses a V/f pattern to adjust the output voltage relative to the frequency reference. There are 15 different predefined V/f patterns (setting 0 to E) from which to select, each with varying voltage profiles, saturation levels (frequency at which maximum voltage is reached), and maximum frequencies. Additionally, one custom V/f pattern is available (setting F) that requires the user to create the pattern using parameters E1-04 through E1-10.

## E1-03: V/f Pattern Selection

Selects the V/f pattern for the drive and motor from 15 predefined patterns or creates a custom V/f pattern.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| E1-03 | V/f Pattern Selection | 0 to $\mathrm{F}^{<2>}$ | $\mathrm{F}<1>$ |

$<1>$ Parameter is not reset to the default value when the drive is initialized using A1-03.
$<2>$ Settings 0 through E are not available when $\mathrm{A} 1-02=2,3,5,6$, or 7 .

## Setting a Predefined V/f Pattern (Setting 0 to E)

Choose the V/f pattern that best meets the application demands from Table 4.13. These settings are available only in V/f Control modes. Set the correct value to E1-03. Parameters E1-04 to E1-13 can only be monitored, not changed.

Note: 1. Setting an improper V/f pattern may result in low motor torque or increased current due to overexcitation.
2. Drive initialization does not reset parameter E1-03.

Table 4.13 Predefined V/f Patterns

| Setting | Specification | Characteristic | Application |
| :---: | :---: | :---: | :---: |
| 0 | 50 Hz | Constant torque | For general purpose applications. Torque remains constant regardless of changes to speed. |
| 1 | 60 Hz |  |  |
| 2 | 60 Hz (with 50 Hz base) |  |  |
| 3 | 72 Hz (with 60 Hz base) |  |  |
| 4 | 50 Hz , Variable torque 1 | Variable torque | For fans, pumps, and other applications where the required torque changes as a function of the speed. |
| 5 | 50 Hz , Variable torque 2 |  |  |
| 6 | 60 Hz , Variable torque 1 |  |  |
| 7 | 60 Hz , Variable torque 2 |  |  |
| 8 | 50 Hz , mid starting torque | High starting torque | Select high starting torque when: <br> - Wiring between the drive and motor exceeds 150 m . <br> - A large amount of starting torque is required. <br> - An AC reactor is installed. |
| 9 | 50 Hz , high starting torque |  |  |
| A | 60 Hz , mid starting torque |  |  |
| B | 60 Hz , high starting torque |  |  |
| C | 90 Hz (with 60 Hz base) | Constant output | Output voltage is constant when operating at greater than 60 Hz . |
| D | 120 Hz (with 60 Hz base) |  |  |
| E | 180 Hz (with 60 Hz base) |  |  |
| $\underset{\text { ¢ }}{\text { F }}$ | 60 Hz | Constant torque | For general purpose applications. Torque remains constant regardless of changes to speed. |

$<1>$ Setting F enables a custom V/f pattern by changing parameters E1-04 to E1-13. When the drive is shipped, the default values for parameters E1-04 to E1-13 are the same as those of setting 1.

## Predefined V/f Patterns for Models 2A0004 to 2A0021 (HD), 2A0004 to 2A0018 (ND), 4A0002 to 4A0011 (HD), 4A0002 to 4A0009 (ND), 5A0003 to 5A0009 (HD), and 5A0003 to 5A0006 (ND)

The following tables show details on predefined V/f patterns.
The voltage values in the following graphs are specific to 200 V class drives. Double the values for 400 V class drives. Multiply the values by 2.875 for 600 V drives.

Table 4.14 Constant Torque Characteristics, Settings 0 to 3, F

| Setting $=0 \quad 50 \mathrm{~Hz}$ | Setting = 1, F $\quad 60 \mathrm{~Hz}$ | Setting = 2060 Hz | Setting $=3 \quad 72 \mathrm{~Hz}$ |

## Setting a Custom V/f Pattern (Setting F: Default)

Setting parameter E1-03 to F allows the user to set up a custom V/f pattern by changing parameters E1-04 to E1-13.

## - V/f Pattern Settings E1-04 to E1-13

Set E1-03 $\leq \mathrm{E}$ to monitor, but not change, the V/f pattern using parameters E1-04 to E1-13. To create a new V/f pattern, set E1-03 to F. Refer to V/f Pattern on page 151 for an example custom V/f pattern.

Note: Certain E1- $\square \square$ parameters might not be visible depending on the control mode. Refer to Parameter List on page 249 for details.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| E1-04 | Maximum Output Frequency | 40.0 to $400.0 \mathrm{~Hz}^{<1>}$ | <2> <3> |
| E1-05 | Maximum Voltage | 0.0 to $255.0 \mathrm{~V}^{<4>}$ | <2> |
| E1-06 | Base Frequency | 0.0 to [E1-04] | <2> <3> |
| E1-07 | Middle Output Frequency | 0.0 to [E1-04] | <2> |
| E1-08 | Middle Output Frequency Voltage | 0.0 to $255.0 \mathrm{~V}^{<4>}$ | <2> |
| E1-09 | Minimum Output Frequency | 0.0 to [E1-04] ${ }^{<1>}$ | <2> <3> |
| E1-10 | Minimum Output Frequency Voltage | 0.0 to $255.0 \mathrm{~V}^{<4>}$ | <2> |
| E1-11 | Middle Output Frequency 2 | 0.0 to [E1-04] | $0.0 \mathrm{~Hz}^{<6>}$ |
| E1-12 | Middle Output Frequency Voltage 2 | 0.0 to $255.0 \mathrm{~V}^{<4>}$ | $0.0 \mathrm{~V}^{<5>}<6>$ |
| E1-13 | Base Voltage | 0.0 to $255.0 \mathrm{~V}^{<4>}$ | $0.0 \mathrm{~V}^{<5>}<7>$ |

$<1>$ Default setting is determined by E5-01 in OLV/PM. When E5-01 is set to FFFF the setting range for E1-04 and E1-06 is 10.0 to 400.0 Hz and the setting range for E1-09 is 0.0 to 400.0 Hz .
$<2>$ Default setting is determined by the control method, drive model, and drive duty rating.
$<3>$ When using PM motors, the default setting is determined by the motor code set to E5-01.
$<4>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<5>$ The drive changes these settings when Auto-Tuning is performed (Rotational Auto-Tuning, Stationary Auto-Tuning 1, 2).
<6> Parameter ignored when E1-11 and E1-12 are set to 0.0.
$<7>$ E1-13 and E1-05 are set to the same value when Auto-Tuning is performed.

Figure 4.24 V/f Pattern
Note: 1. The following condition must be true when setting up the V/f pattern: E1-09 $\leq \mathrm{E} 1-07<\mathrm{E} 1-06 \leq \mathrm{E} 1-11 \leq \mathrm{E} 1-04$
2. To make the $\mathrm{V} / \mathrm{f}$ pattern a straight line below E1-06, set E1-09 equal to E1-07. In this case the E1-08 setting is disregarded.
3. E1-03 is unaffected when the drive is initialized, but E1-04 through E1-13 return to their default values.
4. Only use E1-11, E1-12, and E1-13 to fine-tune the V/f pattern in the constant output range. These parameters rarely need to be changed.

## E2-01: Motor Rated Current

Provides motor control, protects the motor, and calculates torque limits. Set E2-01 to the full load amps (FLA) stamped on the motor nameplate. If Auto-Tuning completes successfully, the value entered to T1-04 will automatically be saved to E2-01.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| E2-01 | Motor Rated Current | $10 \%$ to $200 \%$ of the drive <br> rated current $<1>$ | Determined by <br> C6-01 and o2-04 |

$<1>$ Display is in the following units: 2A0004 to 2A0040, 4A0002 to 4A0023, and 5A0007 to 5A0017: 0.01 A units. 2A0056 to 2A0415, 4A0031 to 4A0675, and 5A0022 to 5A0242: 0.1 A units. 4A0930 and 4A1200: 1 A units.

Note: An oPE02 error will occur if E2-01 $\leq$ E2-03. Set E2-03 correctly to prevent this error.

## - H1-01 to H1-08: Functions for Terminals S1 to S8

These parameters assign functions to the multi-function digital inputs. The various functions and settings are listed in Table 4.26 .

| No. | Parameter Name | Setting <br> Range | Default |
| :---: | :--- | :--- | :--- |
| H1-01 | Multi-Function Digital Input Terminal S1 Function Selection | 1 to 9 F | $40(\mathrm{~F})^{<1>}:$ Forward Run Command (2-Wire sequence) |
| H1-02 | Multi-Function Digital Input Terminal S2 Function Selection | 1 to 9 F | $41(\mathrm{~F})^{<1>}:$ Reverse Run Command (2-Wire sequence) |
| H1-03 | Multi-Function Digital Input Terminal S3 Function Selection | 0 to 9 F | $24:$ External Fault |
| H1-04 | Multi-Function Digital Input Terminal S4 Function Selection | 0 to 9 F | $14:$ Fault Reset |
| H1-05 | Multi-Function Digital Input Terminal S5 Function Selection | 0 to 9 F | $3(0)^{<1>}:$ Multi-Step Speed Reference 1 |
| H1-06 | Multi-Function Digital Input Terminal S6 Function Selection | 0 to 9 F | $4(3)^{<1>}:$ Multi-Step Speed Reference 2 |
| H1-07 | Multi-Function Digital Input Terminal S7 Function Selection | 0 to 9 F | $6(4)^{<1>}:$ Jog Reference Selection |
| H1-08 | Multi-Function Digital Input Terminal S8 Function Selection | 0 to 9 F | $8:$ External Baseblock Command |

$<1>$ Number appearing in parenthesis is the default value after performing a 3 -Wire initialization (A1-03 $=3330$ ).
Table 4.26 Multi-Function Digital Input Terminal Settings

| Setting | Function | Page | Setting | Function | Page |

## Setting 0: 3-Wire Sequence

The digital input programmed for 3-Wire control becomes the forward/reverse directional input, S1 becomes the Run command input, and S2 becomes the Stop command input.
The drive starts the motor when the input S 1 set for the Run command closes for longer than 2 ms . The drive stops the operation when the Stop input S2 is released. When the digital input programmed for a forward/reverse operation is open, the drive is set for forward operation. When the digital input is closed, the drive is set for reverse operation.

Note: Input the Run and Stop commands via S1 and S2 when selecting a 3-Wire sequence.

Figure 4.25 3-Wire Sequence Wiring Diagram

Figure 4.26 3-Wire Sequence
Note: 1. The Run command must be closed for more than 2 ms .
2. If the Run command is active at power up and bl-17 $=0$ (Run command at power up not accepted), the Run LED will flash to indicate that protective functions are operating. If required by the application, set b1-17 to 1 to automatically issue the Run command upon drive power up.
WARNING! Sudden Movement Hazard. Ensure start/stop and safety circuits are wired properly and in the correct state before applying power to the drive. Failure to comply could result in death or serious injury from moving equipment.

WARNING! Sudden Movement Hazard. The drive may start unexpectedly in reverse direction after power up if it is wired for 3-Wire sequence but set up for 2 -Wire sequence (default). Make sure b1-17 is set to " 0 " (drive does not accept a Run command active at power up). When initializing the drive use 3-Wire initialization. Failure to comply could result in death or serious injury from moving equipment.

## H2-01 to H2-03: Terminal M1-M2, M3-M4, and M5-M6 Function Selection

The drive has three multi-function output terminals. Table 4.27 lists the functions available for theses terminals using H2-01, H2-02, and H2-03.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H2-01 | Terminal M1-M2 Function Selection (relay) | 0 to 192 | 0 : During run |
| H2-02 | Terminal M3-M4 Function Selection (relay) | 0 to 192 | 1: Zero Speed |
| H2-03 | Terminal M5-M6 Function Selection (relay) | 0 to 192 | 2: Speed agree 1 |

Table 4.27 Multi-Function Digital Output Terminal Settings

| Setting | Function | Page | Setting | Function | Page |

$<1>$ Not available in models CIMR-A口4A0930 amd 4A1200.
<2> Not available in models CIMR-AD2A0169 to 2A0415 and 4A0088 to 4A1200.

## Setting 2: Speed Agree 1 ( $\mathbf{f}_{\text {ref }} / f_{\text {out }}$ Agree 1)

Closes when the actual output frequency or motor speed (CLV, CLV/PM) is within the Speed Agree Width (L4-02) of the current frequency reference regardless of the direction.

| Status | Description |
| :---: | :--- |
| Open | Output frequency or motor speed is outside the range of frequency reference $\pm \mathrm{L} 4-04$. |
| Closed | Output frequency or motor speed is within the range of frequency reference $\pm \mathrm{L} 4-02$. |

Note: Detection works in forward and reverse.

Figure 4.27 Speed Agree 1 Time Chart

## Setting 3: User-Set Speed Agree 1 ( $\mathrm{f}_{\text {ref }} / \mathrm{f}_{\text {set }}$ Agree 1)

Closes when the actual output frequency or motor speed (CLV, CLV/PM) and the frequency reference are within the speed agree width (L4-02) of the programmed speed agree level (L4-01).

| Status | Description |
| :---: | :--- |
| Open | Output frequency or motor speed and frequency reference are not both within the range of L4-01 $\pm \mathrm{L} 4-02$. |
| Closed | Output frequency or motor speed and the frequency reference are both within the range of L4-01 $\pm \mathrm{L} 4-02$. |

Note: Frequency detection works in forward and reverse. The value of L4-01 is used as the detection level for both directions.

Figure 4.28 User Set Speed Agree 1 Time Chart

## H3-01: Terminal A1 Signal Level Selection

Selects the input signal level for analog input A1.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-01 | Terminal A1 Signal Level Selection | 0 to 1 | 0 |

## Setting 0: $\mathbf{0}$ to $\mathbf{1 0 ~ V d c ~}$

The input level is 0 to 10 Vdc . The minimum input level is limited to $0 \%$, so that a negative input signal due to gain and bias settings will be read as $0 \%$.

## Setting 1: -10 to $\mathbf{1 0 ~ V d c ~}$

The input level is -10 to 10 Vdc . If the resulting voltage is negative after being adjusted by gain and bias settings, then the motor will rotate in reverse.

## ■ H3-02: Terminal A1 Function Selection

Selects the input signal level for analog input A1.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-02 | Terminal A1 Function Selection | 0 to 32 | 0 |

### 4.6 Basic Drive Setup Adjustments

## H3-03, H3-04: Terminal A1 Gain and Bias Settings

Parameter $\mathrm{H} 3-03$ sets the level of the selected input value that is equal to 10 Vdc input at terminal A 1 (gain). Parameter H3-04 sets the level of the selected input value that is equal to 0 V input at terminal A1 (bias).
Use both parameters to adjust the characteristics of the analog input signal to terminal A1.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-03 | Terminal A1 Gain Setting | -999.9 to $999.9 \%$ | $100.0 \%$ |
| H3-04 | Terminal A1 Bias Setting | -999.9 to $999.9 \%$ | $0.0 \%$ |

## Setting Examples

- Gain H3-03 $=200 \%$, bias H3-04 $=0$, terminal A1 as frequency reference input $(\mathrm{H} 3-02=0)$ :

A 10 Vdc input is equivalent to a $200 \%$ frequency reference and 5 Vdc is equivalent to a $100 \%$ frequency reference. Since the drive output is limited by the maximum frequency parameter (E1-04), the frequency reference will be equal to E1-04 above 5 Vdc.

Figure 4.29 Frequency Reference Setting by Analog Input with Increased Gain

- Gain H3-03 $=100 \%$, bias H3-04 $=-25 \%$, terminal A1 as frequency reference input:

An input of 0 Vdc will be equivalent to a $-25 \%$ frequency reference.
When parameter $\mathrm{H} 3-01=0$, the frequency reference is $0 \%$ between 0 and 2 Vdc input.
When parameter $\mathrm{H} 3-01=1$, the motor will rotate in reverse between -10 and 2 Vdc input.

Figure 4.30 Frequency Reference Setting by Analog Input with Negative Bias

## H3-05: Terminal A3 Signal Level Selection

Selects the input signal level for analog input A3.
Be sure to set DIP switch S4 on the terminal board accordingly for multi-function analog input or PTC input. Also Refer to Terminal A3 Analog/PTC Input Selection on page 113.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-05 | Terminal A3 Signal Level Selection | 0,1 | 0 |

## Setting 0: $\mathbf{0}$ to $\mathbf{1 0 ~ V d c ~}$

The input level is 0 to 10 Vdc . See the explanation provided for H3-01. Refer to Setting 0: 0 to 10 Vdc on page 155.

## Setting 1: -10 to 10 Vdc

The input level is -10 to 10 Vdc . See the explanation provided for H3-01. Refer to Setting 1: -10 to 10 Vdc on page 155.

## H3-06: Terminal A3 Function Selection

Determines the function assigned to analog input terminal A3.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-06 | Terminal A3 Function Selection | 0 to 32 | 2 |

## H3-07, H3-08: Terminal A3 Gain and Bias Setting

Parameter $\mathrm{H} 3-07$ sets the level of the selected input value that is equal to 10 Vdc input at terminal A 3 (gain).
Parameter $\mathrm{H} 3-08$ sets the level of the selected input value that is equal to 0 V input at terminal A3 (bias).

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-07 | Terminal A3 Gain Setting | -999.9 to $999.9 \%$ | $100.0 \%$ |
| H3-08 | Terminal A3 Bias Setting | -999.9 to $999.9 \%$ | $0.0 \%$ |

## - H3-09: Terminal A2 Signal Level Selection

Selects the input signal level for analog input A2. Set DIP switch S1 on the terminal board accordingly for a voltage input or current input.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-09 | Terminal A2 Signal Level Selection | 0 to 3 | 2 |

## Setting 0: $\mathbf{0}$ to $\mathbf{1 0 ~ V d c ~}$

The input level is 0 to 10 Vdc . Refer to Setting 0: 0 to 10 Vdc on page 155.

## Setting 1: 0 to 10 Vdc Bipolar

The input level is -10 to 10 Vdc. Refer to Setting 1: -10 to 10 Vdc on page 155.

## Setting 2: $\mathbf{4}$ to $\mathbf{2 0 ~ m A}$

The input level is 4 to 20 mA . Negative input values by negative bias or gain settings will be limited to $0 \%$.

## Setting 3: $\mathbf{0}$ to $\mathbf{2 0 ~ m A}$

The input level is 0 to 20 mA . Negative input values by negative bias or gain settings will be limited to $0 \%$.

## ■ H3-10: Terminal A2 Function Selection

Determines the function assigned to analog input terminal A2.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-10 | Terminal A2 Function Selection | 0 to 32 | 0 |

## H3-11, H3-12: Terminal A2 Gain and Bias Setting

Parameter H3-11 sets the level of the input value selected that is equal to 10 Vdc input or 20 mA input to terminal A2. Parameter H3-12 sets the level of the input value selected that is equal to $0 \mathrm{~V}, 4 \mathrm{~mA}$ or 0 mA input at terminal A2.

Use both parameters to adjust the characteristics of the analog input signal to terminal A2. The setting works in the same way as parameters H3-03 and H3-04 for analog input A1.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-11 | Terminal A2 Gain Setting | -999.9 to $999.9 \%$ | $100.0 \%$ |
| H3-12 | Terminal A2 Bias Setting | -999.9 to $999.9 \%$ | $0.0 \%$ |

## H4-01, H4-04: Multi-Function Analog Output Terminal FM, AM Monitor Selection

Sets the desired drive monitor parameter UD-D to output as an analog value via terminal FM and AM. Refer to U1: Operation Status Monitors on page 320 for a list of all monitors. The "Analog Output Level" column indicates whether a monitor can be used for analog output.

Example: Enter "103" for U1-03.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H4-01 | Multi-Function Analog Output Terminal FM Monitor Selection | 000 to 999 | 102 |
| H4-04 | Multi-Function Analog Output Terminal AM Monitor Selection | 000 to 999 | 103 |

A setting of 031 or 000 applies no drive monitor to the analog output. With either of these settings, the output level of the terminals FM and AM can be set by a PLC via a communication option or MEMOBUS/Modbus (through mode).

## H4-02, H4-03: Multi-Function Analog Output Terminal FM Gain and Bias H4-05, H4-06: Multi-Function Analog Output Terminal AM Gain and Bias

Parameters H4-02 and H4-05 set the terminal FM and AM output signal level when the value of the selected monitor is at $100 \%$. Parameters H4-03 and H4-06 set the terminal FM and AM output signal level when the value of the selected monitor is at $0 \%$. Both are set as a percentage, where $100 \%$ equals 10 Vdc or 20 mA analog output and $0 \%$ equals 0 V or 4 mA . The output voltage of both terminals is limited to $+/-10 \mathrm{Vdc}$.
The output signal range can be selected between 0 to +10 Vdc or -10 to +10 Vdc , or 4 to 20 mA using parameter $\mathrm{H} 4-07$ and H4-08. Figure 4.31 illustrates how gain and bias settings work.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H4-02 | Multi-Function Analog Output Terminal FM Gain | -999.9 to $999.9 \%$ | $100.0 \%$ |
| H4-03 | Multi-Function Analog Output Terminal FM Bias | -999.9 to $999.9 \%$ | $0.0 \%$ |
| H4-05 | Multi-Function Analog Output Terminal AM Gain | -999.9 to $999.9 \%$ | $50.0 \%$ |
| H4-06 | Multi-Function Analog Output Terminal AM Bias | -999.9 to $999.9 \%$ | $0.0 \%$ |

## Using Gain and Bias to Adjust Output Signal Level

The output signal is adjustable while the drive is stopped.

## Terminal FM

1. View the value set to $\mathrm{H} 4-02$ (Terminal FM Monitor Gain) on the digital operator. A voltage equal to $100 \%$ of the parameter being set in $\mathrm{H} 4-01$ will be output from terminal FM .
2. Adjust $\mathrm{H} 4-02$ viewing the monitor connected to the terminal FM .
3. View the value set to $\mathrm{H} 4-03$ on the digital operator; terminal FM will output a voltage equal to $0 \%$ of the parameter being set in $\mathrm{H} 4-01$.
4. Adjust $\mathrm{H} 4-03$ viewing the output signal on the terminal FM .

## Terminal AM

1. View the value set to $\mathrm{H} 4-05$ (Terminal AM Monitor Gain) on the digital operator. A voltage equal to $100 \%$ of the parameter being set in $\mathrm{H} 4-04$ will be output from terminal AM.
2. Adjust $\mathrm{H} 4-05$ viewing the monitor connected to the terminal AM .
3. View the value set to $\mathrm{H} 4-06$ on the digital operator; terminal AM will output a voltage equal to $0 \%$ of the parameter being set in $\mathrm{H} 4-04$.
4. Adjust $\mathrm{H} 4-06$ viewing the output signal on the terminal AM .

Figure 4.31 Analog Output Gain and Bias Setting Example 1 and 2
Set $\mathrm{H} 4-03$ to $30 \%$ for an output signal of 3 V at terminal FM when the monitored value is at $0 \%$.

Figure 4.32 Analog Output Gain and Bias Setting Example 3

## H4-07, H4-08: Multi-Function Analog Output Terminal FM, AM Signal Level Selection

Sets the voltage output level of U parameter (monitor parameter) data to terminal FM and terminal AM using parameters H4-07 and H4-08.

Set jumper S5 on the terminal board accordingly when changing these parameters. Refer to Terminal AM/FM Signal Selection on page 113 for details on setting S5.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H4-07 | Multi-Function Analog Output Terminal FM <br> Signal Level Selection | 0 to 2 | 0 |
| H4-08 | Multi-Function Analog Output Terminal AM <br> Signal Level Selection | 0 to 2 | 0 |

Setting 0: 0 to 10 V
Setting 1: -10 V to 10 V
Setting 2: 4 to 20 mA

## - L3-01: Stall Prevention Selection during Acceleration

Stall Prevention during acceleration prevents tripping with overcurrent (oC), motor overload (oL1), or drive overload (oL2) faults common when accelerating with heavy loads.
L3-01 determines the type of Stall prevention the drive should use during acceleration.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-01 | Stall Prevention Selection during Acceleration | 0 to $2^{<1>}$ | 1 |

$<1>$ Setting 2 is not available for OLV/PM.

## Setting 0: Disabled

No Stall Prevention is provided. If the acceleration time is too short, the drive may not be able to get the motor up to speed fast enough, causing an overload fault.

## Setting 1: Enabled

Enables Stall Prevention during acceleration. Operation varies depending on the control mode.

- V/f Control, V/f Control with PG, and Open Loop Vector Control:

Acceleration is reduced when the output current value exceeds $85 \%$ of the level set to parameter L3-02 for a longer than the time set to L3-27. The acceleration stops when the current exceeds L3-02. Acceleration continues when the current falls below L3-02 for longer than the time set to L3-27.
The Stall Prevention level is automatically reduced in the constant power range. Refer to L3-03: Stall Prevention Limit during Acceleration on page 161.

### 4.6 Basic Drive Setup Adjustments

Figure 4.33 Stall Prevention During Acceleration for Induction Motors

- Open Loop Vector Control for PM:

Acceleration stops when the output current reaches the level set to parameter L3-02. When the time set to parameter L3-27 passes, the drive decelerates using the deceleration time set to L3-22. Deceleration stops when the current falls below $85 \%$ of L3-02,. The drive will attempt to reaccelerate after the time set to L3-27.

Figure 4.34 Stall Prevention During Acceleration for Permanent Magnet Motors

## Setting 2: Intelligent Stall Prevention

The drive disregards the selected acceleration time and attempts to accelerate in the minimum time. The acceleration rate is adjusted so the current does not exceed the value set to parameter L3-02.

## L3-02: Stall Prevention Level during Acceleration

Sets the output current level at which the Stall Prevention during acceleration is activated.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-02 | Stall Prevention Level during Acceleration | 0 to $150 \%<1>$ | $<1>$ |

$<1>$ The upper limit and default value is determined by the duty rating and the carrier frequency derating selection (C6-01 and L8-38 respectively).

- Lower L3-02 if stalling occurs when using a motor that is relatively small compared to the drive.
- Also set parameter L3-03 when operating the motor in the constant power range.

## L3-03: Stall Prevention Limit during Acceleration

The Stall Prevention level is automatically reduced when the motor is operated in the constant power range. L3-03 sets the lower limit for this reduction as a percentage of the drive rated current.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-03 | Stall Prevention Limit during Acceleration | 0 to $100 \%$ | $50 \%$ |

Figure 4.35 Stall Prevention Level and Limit During Acceleration

## - L3-04: Stall Prevention Selection during Deceleration

Stall Prevention during deceleration controls the deceleration based on the DC bus voltage and prevents an overvoltage fault caused by high inertia or rapid deceleration.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-04 | Stall Prevention Selection During Deceleration | 0 to $5^{<1>}$ | 1 |

$<1>$ Settings 3 through 5 are not available in OLV/PM. Settings 2 through 5 are not available in AOLV/PM and CLV/PM.
Setting 3 is not available in models 4A0930 or 4A1200.

## Setting 0: Disabled

The drive decelerates according to the set deceleration time. With high inertia loads or rapid deceleration, an overvoltage fault may occur. If an overvoltage fault occurs, use dynamic braking options or switch to another L3-04 selection.

## Setting 1: General-purpose Stall Prevention

The drive tries to decelerate within the set deceleration time. The drive pauses deceleration when the DC bus voltage exceeds the Stall Prevention level and then continues deceleration when the DC bus voltage drops below that level. Stall Prevention may be triggered repeatedly to avoid an overvoltage fault. The DC bus voltage level for Stall Prevention depends on the input voltage setting E1-01.

| Drive Input Voltage | Stall Prevention Level during Deceleration |
| :---: | :---: |
| 200 V Class | 377 Vdc |
| 400 V Class | 754 Vdc |
| 600 V Class | 1084 Vdc |

Note: 1. Do not use this setting in combination with a Dynamic Braking Resistor or other dynamic braking options. If Stall Prevention during deceleration is enabled, it will be triggered before the braking resistor option can operate.
2. This method may lengthen the total deceleration time compared to the set value. If this is not appropriate for the application consider using a dynamic braking option.
Figure 4.36 illustrates the function of Stall Prevention during deceleration.

Figure 4.36 Stall Prevention During Deceleration

## Setting 2: Intelligent Stall Prevention

The drive adjusts the deceleration rate to maintain the DC bus voltage at the level set to parameter L3-17. The drive ignores the selected deceleration time and uses the shortest possible deceleration time that will not cause the motor to stall.
This function uses the following parameters for adjusting the deceleration rate:

- DC bus voltage gain (L3-20)
- Deceleration rate calculations gain (L3-21)
- Inertia calculations for motor acceleration time (L3-24)
- Load inertia ratio (L3-25)

Note: The deceleration time is not constant. Do not use Intelligent Stall Prevention in applications where stopping accuracy is a concern. Use dynamic braking options instead.

## Setting 3: Stall Prevention with Dynamic Braking Option

Enables the Stall Prevention function while using a dynamic braking resistor. Overvoltage problems in the DC bus can occur if Stall Prevention during deceleration is disabled (L3-04) in OLV and a dynamic braking option is installed. Set L3-04 to 3 to remedy this situation.

## Setting 4: Overexcitation Deceleration 1

Decelerates with the set deceleration rate in an overexcitation state (increasing the motor flux). The motor will decelerate when Stall Prevention is disabled (L3-04). Setting 4 changes the selected decel time and functions to provide protection from an overvoltage trip.

## Setting 5: Overexcitation Deceleration 2

Overexcitation Deceleration 2 slows down the motor while trying to maintain the DC bus voltage at the level set to parameter L3-17. This function shortens the achievable deceleration time more than by using Overexcitation Deceleration 1. Setting 5 will shorten/lengthen the decel time to maintain the L3-17 bus level.

## - L3-05: Stall Prevention Selection during Run

Determines how Stall Prevention works during Run. Stall Prevention during run prevents the motor from stalling by automatically reducing the speed when a transient overload occurs while the motor is running at constant speed.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-05 | Stall Prevention Selection During Run | 0 to 2 | 1 |

Note: 1. This parameter is available in V/f, V/f w/PG, and OLV/PM.
2. Stall Prevention during run is disabled when the output frequency is 6 Hz or lower regardless of the L3-05 and L3-06 settings.

## Setting 0: Disabled

Drive runs at the set frequency reference. A heavy load may cause the motor to stall and trip the drive with an oC or oL fault.

## Setting 1: Decelerate Using C1-02

If the current exceeds the Stall Prevention level set in parameter L3-06, the drive will decelerate at decel time 1 (C1-02). When the current level drops below the value of L3-06 minus $2 \%$ for 100 ms , the drive accelerates back to the frequency reference at the active acceleration time.

## Setting 2: Decelerate Using C1-04

Same as setting 1 except the drive decelerates at decel time 2 (C1-04).

## L3-06: Stall Prevention Level during Run

Sets the current level to trigger Stall Prevention during run. Depending on the setting of parameter L3-23, the level is automatically reduced in the constant power range (speed beyond base speed). A setting of $100 \%$ is equal to the drive rated current.
The Stall Prevention level can be adjusted using an analog input.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-06 | Stall Prevention Level During Run | 30 to $150 \%<1>$ | $<1>$ |

$<1>$ The upper limit and default for this setting is determined by C6-01 and L8-38.

## L7-01 to L7-04: Torque Limits

These parameters set the torque limits in each quadrant.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L7-01 | Forward Torque Limit | 0 to $300 \%$ | $200 \%$ |
| L7-02 | Reverse Torque Limit | 0 to $300 \%$ | $200 \%$ |
| L7-03 | Forward Regenerative Torque Limit | 0 to $300 \%$ | $200 \%$ |
| L7-04 | Reverse Regenerative Torque Limit | 0 to $300 \%$ | $200 \%$ |

Note: If the multi-function analog input is programmed for "10: Forward torque limit", "11: Reverse torque limit", "12: Regenerative torque limit", or "15: General torque limit", the drive uses the lowest value from L7-01 through L7-04, or analog input torque limit.

Figure 4.37 Torque Limit Parameters and Analog Input Settings

### 4.7 Auto-Tuning

## Types of Auto-Tuning

The drive offers different types of Auto-Tuning for induction motors and permanent magnet motors. The type of Auto-Tuning used differs further based on the control mode and other operating conditions. Refer to the tables below to select the type of Auto-Tuning that bests suits the application. Refer to Start-Up Flowcharts on page 127 for directions on executing AutoTuning.

Note: The drive will only show Auto-Tuning parameters that are valid for the control mode that has been set in A1-02. If the control mode is for an induction motor, the Auto-Tuning parameters for PM motors will not be available. If the control mode is for a PM motor, the AutoTuning parameters for induction motors will not be available. Inertia Tuning and ASR Gain Tuning parameters and setting options will be visible only when the drive is set for operation with CLV or CLV/PM.

## Auto-Tuning for Induction Motors

 an induction motor. Additionally, the feature also sets some F1- $\square \square$ parameters for speed feedback detection in Closed Loop Vector.

Table 4.28 Types of Auto-Tuning for Induction Motors

| Type | Setting | Application Conditions and Benefits | Control Mode |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | V/f | $\begin{aligned} & \hline \text { V/f w/ } \\ & \text { PG } \end{aligned}$ | OLV | CLV |
| Rotational AutoTuning | $\mathrm{T} 1-01=0$ | - Motor can be decoupled from the load and rotate freely while Auto-Tuning is performed. <br> - Motor and load cannot be decoupled but the motor load is below $30 \%$. <br> - Rotational Auto-Tuning gives the most accurate results, and is recommended if possible. | - | - | YES | YES |
| Stationary Auto-Tuning 1 | $\mathrm{T} 1-01=1$ | - Motor and load cannot be decoupled and the load is higher than $30 \%$. <br> - A motor test report listing motor data is not available. <br> - Automatically calculates motor parameters needed for vector control. | - | - | YES | YES |
| Stationary Auto-Tuning 2 | T1-01 $=4$ | - Motor and load cannot be decoupled and the load is higher than $30 \%$. <br> - A motor test report is available. After entering the noload current and the rated slip, the drive calculates and sets all other motor-related parameters. | - | - | YES | YES |
| Stationary AutoTuning for Line-toLine Resistance | $\mathrm{T} 1-01=2$ | - The drive is used in V/f Control and other AutoTuning selections are not possible. <br> - Drive and motor capacities differ. <br> - Tunes the drive after the cable between the drive and motor has been replaced with a cable over 50 m long. Assumes Auto-Tuning has already been performed. <br> - Should not be used for any vector control modes unless the motor cable has changed. | YES | YES | YES | YES |
| Rotational AutoTuning for $V / f$ Control | $\mathrm{T} 1-01=3$ | - Recommended for applications using Speed Estimation Speed Search or using the Energy Saving function in V/f Control. <br> - Assumes motor can rotate while Auto-Tuning is executed. Increases accuracy for certain functions like torque compensation, slip compensation, Energy Saving, and Speed Search. | YES | YES | - | - |
| Stationary Auto-Tuning 3 | $\mathrm{T} 1-01=5$ | - A motor test report listing motor data is not available. <br> - Motor can be driven with a normal duty mode after Auto-Tuning. A trial run is performed after AutoTuning to automatically calculate motor parameters needed for vector control. | - | - | YES | YES |

Table 4.29 lists the data that must be entered for Auto-Tuning. Make sure this data is available before starting Auto-Tuning. The necessary information is usually listed on the motor nameplate or in the motor test report provided by the motor manufacturer. Refer to Subchart A-1: Simple Motor Setup Using V/f Control on page 129 and Refer to Subchart A-2: High Performance Operation Using OLV or CLV on page 130 for details on Auto-Tuning processes and selections.

Table 4.29 Auto-Tuning Input Data

| Input Value | Input <br> Parameter | Unit | Tuning Type (T1-01) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 0 <br> Standard | $\stackrel{1}{\text { Stationary } 1}$ | 2 <br> Line-to-Line Resistance | 3Rotational for <br> V/f Control | 4 <br> Stationary 2 | $5$ <br> Stationary 3 |
| Control Mode | A1-02 | - | 2, 3 | 2, 3 | 0, 1, 2, 3 | 0, 1 | 2, 3 | 2, 3 |
| Motor rated power | T1-02 | kW | YES | YES | YES | YES | YES | YES |
| Motor rated voltage | T1-03 | Vac | YES | YES | - | YES | YES | YES |
| Motor rated current | T1-04 | A | YES | YES | YES | YES | YES | YES |
| Motor rated frequency | T1-05 | Hz | YES | YES | - | YES | YES | YES |
| Number of motor poles | T1-06 | - | YES | YES | - | YES | YES | YES |
| Motor rated Speed | T1-07 | $\mathrm{r} / \mathrm{min}$ | YES | YES | - | YES | YES | YES |
| PG Number of pulses per revolution | T1-08 | - | YES ${ }^{<1>}$ | YES ${ }^{\text {<1> }}$ | - | - | YES ${ }^{\text {<1> }}$ | YES ${ }^{\text {<1> }}$ |
| Motor no-load current | T1-09 | A | - | YES ${ }^{<2>}$ | - | - | YES | YES |
| Motor rated Slip | T1-10 | Hz | - | - | - | - | YES | - |
| Motor iron loss | T1-11 | W | - | - | - | YES | - | - |

$<1>$ Input data is needed for CLV/PM only.
$<2>$ Motor no-load current is required. If the no-load current is not shown on the motor nameplate, use the default value. The default value is set for Yaskawa standard motors.

## Auto-Tuning for Permanent Magnet Motors

Automatically sets the V/f pattern and motor parameters E1-DD and E5-DD when a PM motor is used. Additionally, the feature also sets some F1-DI parameters for speed feedback detection in Closed Loop Vector.

Table 4.30 Types of Auto-Tuning for Permanent Magnet Motors

| Type | Setting | Application Conditions and Benefits | Control Mode |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | OLV/PM | AOLV/PM | CLV/PM |
| PM Motor Parameter Settings | T2-01 $=0$ | - Motor does not rotate during Auto-Tuning. <br> - Motor data similar to Table 4.31 are available from test report or motor nameplate. | YES | YES | YES |
| PM Stationary AutoTuning | T2-01 = 1 | - A motor test report listing motor data is not available. <br> - Drive automatically calculates and sets motor parameters. | YES | YES | YES |
| PM Stationary AutoTuning for Stator Resistance | T2-01 $=2$ | - Useful to tune the drive when the motor data were set up manually or by motor code and the cable is longer than 50 m. <br> - Should also be performed if the cable length has changed after prior tuning. | YES | YES | YES |
| Z Pulse Offset Tuning | T2-01 $=3$ | - PG encoder has been replaced. Calculates the Z Pulse offset. <br> - Requires the motor to rotate with no load or very low load. | - | - | YES |
| Back EMF Constant Tuning | $\mathrm{T} 2-01=11$ | - Use when a motor test is not available. <br> - Tunes the motor induction voltage only. <br> - Should be performed after motor data are set and the encoder offset is adjusted. <br> - The motor must be uncoupled from the mechanical system (remove loads). | - | - | YES |
| High Frequency Injection Parameter Tuning | $\mathrm{T} 2-01=13$ | - Perform High Frequency Injection Parameter Tuning after setting motor parameters. Refer to Auto-Tuning for Permanent Magnet Motors on page 165 for details. <br> - The motor rotated in reverse or STo fault (Motor Step-Out) occurred at startup in OLV/PM. <br> - Low speed and insufficient or no torque after activating the high frequency injection control ( n 8 -57 = 1) in AOLV/ PM. <br> Note: High Frequency Injection cannot be used with an SPM motor. | - | YES | YES |

| Type | Setting | Application Conditions and Benefits | Control Mode |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | OLV/PM | AOLV/PM | CLV/PM |
| PM Rotational AutoTuning | $\mathrm{T} 2-01=14$ | - A motor test report listing motor data is not available. <br> - Motor can be decoupled from the load and rotate freely while Auto-Tuning is performed. Drive automatically calculates and sets motor parameters. <br> - PM Rotational Auto-Tuning gives more accurate results than Stationary Auto-Tuning. | YES | YES | YES |

Table 4.31 lists the data that must be entered for Auto-Tuning. Make sure the data is available before starting Auto-Tuning. The necessary information is usually listed on the motor nameplate or in the motor test report provided by the motor manufacturer. Refer to Subchart A-3: Operation with Permanent Magnet Motors on page 131 for details on the Auto-Tuning process and selection.

$<1>$ Input the motor code when using a Yaskawa motor. Select "FFFF" when using a motor from another manufacturer.
$<2>$ Input data is needed for CLV/PM only.
$<3>$ Dependent upon T2-13 setting.

## Inertia Tuning and Speed Control Loop Auto-Tuning

Inertia Tuning can be performed when the drive is using CLV control for either IM or PM motors. Inertia Tuning automatically calculates load and motor inertia, and optimizes settings related to the KEB Ride-Thru function (KEB 2) and Feed Forward control.

ASR Gain Auto-Tuning performs the same operation as Inertia Tuning, while also optimizing speed control loop settings.
Table 4.32 Inertia and Speed Control Loop Tuning

| Type | Setting |  | Control Mode | Application Conditions and Benefits |
| :---: | :---: | :---: | :---: | :---: |
| Inertia Tuning | IM Motor | T1-01 $=8$ | CLV | Allows the motor to rotate at a certain speed and applies a test signal. The response to the test signal is analyzed and the necessary adjustments are made to parameters controlling the Feed Forward and KEB Ride-Thru functions (KEB 2, L2-29 = 1). |
|  | PM Motor | T2-01 $=8$ | CLV/PM |  |
| ASR Gain AutoTuning | IM Motor | $\mathrm{T} 1-01=9$ | CLV | Performs the same operation as Inertia Tuning, while also adjusting the ASR gain according to the test signal response. |
|  | PM Motor | T2-01 $=9$ | CLV/PM |  |

Note: Inertia Tuning and ASR Gain Auto-Tuning may not be available when gears are between the machine and the motor shaft.
Table 4.33 explains the data that must be entered to perform the Inertia Tuning and ASR Gain Auto-Tuning. Refer to AutoTuning for Permanent Magnet Motors on page 165 for details.

Table 4.33 Auto-Tuning Input Data

| Input Value | Input Parameter | Unit | Tuning Type (T1-01 or T2-01) |  |
| :--- | :---: | :---: | :---: | :---: |

## Auto-Tuning Interruption and Fault Codes

If tuning results are abnormal or the STOP key is pressed before completion, Auto-Tuning will be interrupted and a fault code will appear on the digital operator.

### 4.7 Auto-Tuning

## Auto-Tuning Operation Example

The following example demonstrates Rotational Auto-Tuning when using OLV (A1-02 = 2) and CLV (A1-02 = 3).

## Selecting the Type of Auto-Tuning

| Step |  | Display/Result |  |
| :---: | :---: | :---: | :---: |
| 1. | Turn on the power to the drive. The initial display appears. | $\rightarrow$ |  |
| 2. | Press $\Lambda$ or $\quad \mathrm{until}$ the Auto-Tuning display appears. | $\rightarrow$ | - MODE - PRG <br> AULO-TUNing <br> AUTO S <br> HELP FWD DAIA |
| 3. | Press to begin setting parameters. | $\rightarrow$ | - A.TUNE - PRG Rdy <br> Tuning Mode Sel <br> T1--01= $=0$ o- <br> StandardTuning <br> ESC FWD DATA |
| 4. | Press $\frac{J}{\text { enter }}$ to display the value for T1-01. $<1>$ | $\rightarrow$ |  |
| 5. | Save the setting by pressing Enter | $\rightarrow$ | Entry Accepted |
| 6. | The display automatically returns to the display shown in Step 3. | $\rightarrow$ |  |

$<1>$ T1-00 will appear on the display when one of the multi-function inputs has been set to switch between motor 1 and motor 2 (H1- $\square \square=16$ ).

## Enter Data from the Motor Nameplate

After selecting the type of Auto-Tuning, enter the data required from the motor nameplate.
Note: These instructions continue from Step 6 in "Selecting the Type of Auto-Tuning".

| Step |  |  | Display/Result |
| :---: | :---: | :---: | :---: |
| 5. | The display automatically returns to the display in Step 1. | $\rightarrow$ | - A.TUNE - PRG Rdy <br> Mtr Reted Power <br> T1-0.-02- 0.4 kW <br> $(0.00-650.00)$ <br> " 0.7 FWW " <br> ESC FWD <br> DATA |
| 6. | Repeat Steps 1 through 5 to set the following parameters: <br> - T1-03, Motor Rated Voltage <br> - T1-04, Motor Rated Current <br> - T1-05, Motor Base Frequency <br> - T1-06, Number of Motor Poles <br> - T1-07, Motor Base Frequency <br> - T1-09, Motor No-Load Current (Stationary Auto-Tuning 1 or 2 only) <br> - T1-10, Motor Rated Slip (Stationary Auto-Tuning 2 only) | $\rightarrow$ |  |

Note: To execute Stationary Auto-Tuning for line-to-line resistance only, set parameters T1-02 and T1-04.

## Starting Auto-Tuning

WARNING! Sudden Movement Hazard. The drive and motor may start unexpectedly during Auto-Tuning, which could result in death or serious injury. Ensure the area surrounding the drive motor and load are clear before proceeding with Auto-Tuning.

WARNING! Electrical Shock Hazard. High voltage will be supplied to the motor when Stationary Auto-Tuning is performed even with the motor stopped, which could result in death or serious injury. Do not touch the motor until Auto-Tuning has been completed.

NOTICE: Rotational Auto-Tuning will not function properly if a holding brake is engaged on the load. Failure to comply could result in improper operation of the drive. Ensure the motor can freely spin before beginning Auto-Tuning.

Enter the required information from the motor nameplate. Press

to proceed to the Auto-Tuning start display.
Note: These instructions continue from Step 6 in "Enter Data from the Motor Nameplate".

| Step |  | Display/Result |  |
| :---: | :---: | :---: | :---: |
| 1. | After entering the data listed on the motor nameplate, press $\lambda$ to confirm. | $\rightarrow$ | - A.TUNE - DRV Rdy <br> Auto-uning <br> -0.00 Hzl $0.00 A$ <br> Tuning Ready? <br> Press RUN key <br> ESC FWD |
| 2. | Press $\diamond$ RUN to activate Auto-Tuning. DRV flashes. The drive begins by injecting current into the motor for about 1 min , and then starts to rotate the motor. <br> Note: $\quad$ The first digit on the display indicates which motor is undergoing Auto-Tuning (motor 1 or motor 2). The second digit indicates the type of Auto-Tuning being performed. | $\rightarrow$ |  |
| 3. | Auto-Tuning finishes in approximately one to two minutes. | $\rightarrow$ | -MODE - DRV <br> End <br> Tune Successful <br> FWD RESETI |

### 4.8 No-Load Operation Test Run

## - No-Load Operation Test Run

This section explains how to operate the drive with the motor decoupled from the load during a test run.

## Before Starting the Motor

Check the following items before operation:

- Ensure the area around the motor is safe.
- Ensure external emergency stop circuitry is working properly and other safety precautions have been taken.

## During Operation

Check the following items during operation:

- The motor should rotate smoothly (i.e., no abnormal noise or oscillation).
- The motor should accelerate and decelerate smoothly.

## No-Load Operation Instructions

The following example illustrates a test run procedure using the digital operator.
Note: Before starting the motor, set the frequency reference d1-01 to 6 Hz .

|  | Step |  | Display/Result |
| :---: | :---: | :---: | :---: |
| 1. | Turn on the power to the drive. The initial display appears. | $\rightarrow$ |  |
| 2. | $\text { Press } \frac{\frac{10}{R E}}{} \text { to select LOCAL. The LO/RE light will turn on. }$ | $\rightarrow$ |  |
| 3. | Press $\triangle$ RUN to give the drive a Run command. RUN will light and the motor will rotate at 6 Hz . | $\rightarrow$ |  |
| 4. | Ensure the motor is rotating in the correct direction and that no faults or alarms occur. | $\rightarrow$ |  |
| 5. | If there is no error in step 4, press $\Lambda$ to increase the frequency reference. Increase the frequency in increments of 10 Hz , verifying smooth operation at all speeds. For each frequency, check the drive output current using monitor U1-03. The current should be well below the motor rated current. | - | - |

### 4.8 No-Load Operation Test Run

### 4.9 Test Run with Load Connected

## - Test Run with the Load Connected

After performing a no-load test run, connect the motor and proceed to run the motor and load together.

## Precautions for Connected Machinery

WARNING! Sudden Movement Hazard. Clear all personnel from the drive, motor, and machine area before applying power. System may start unexpectedly upon application of power, causing death or serious injury.

WARNING! Sudden Movement Hazard. Always check the operation of any fast stop circuits after they are wired. Fast stop circuits are required to provide safe and quick shutdown of the drive. Prepare to initiate an emergency stop during the test run. Operating a drive with untested emergency circuits could result in death or serious injury.

- The motor should come to a complete stop without problems.
- Connect the load and machinery to the motor.
- Fasten all installation screws properly and check that the motor and connected machinery are held in place.

## ■ Checklist Before Operation

- The motor should rotate in the proper direction.
- The motor should accelerate and decelerate smoothly.

## - Operating the Motor under Loaded Conditions

Test run the application similarly to the no-load test procedure when connecting the machinery to the motor.

- Monitor U1-03 for overcurrent during operation.
- If the application permits running the load in the reverse direction, change the motor direction and the frequency reference while watching for abnormal motor oscillation or vibration.
- Correct any problems that occur with hunting, oscillation, and other control-related issues.

### 4.10 Test Run Checklist

Review the checklist before performing a test run. Check each item that applies.

| $\square$ | No. | Checklist | Page |
| :---: | :---: | :--- | :---: |
| $\square$ | 1 | Thoroughly read the manual before performing a test run. | - |
| $\square$ | 2 | Turn the power on. | 133 |
| $\square$ | 3 | Set the voltage for the power supply to E1-01. | 147 |
| $\square$ | 4 | Select the correct duty rating (C6-01) for the application. | - |

Check the items that correspond to the control mode being used.
WARNING! Sudden Movement Hazard. Ensure start/stop and safety circuits are wired properly and in the correct state before energizing the drive. Failure to comply could result in death or serious injury from moving equipment. When programmed for 3-Wire control, a momentary closure on terminal S1 may cause the drive to start.

| $\square$ | No. | Checklist | Page |
| :---: | :---: | :---: | :---: |
| V/f Control (A1-02 = 0) and V/f Control with PG (A1-02 = 1) |  |  |  |
| $\square$ | 5 | Select the best V/f pattern according to the application and motor characteristics. | - |
| $\square$ | 6 | Perform Rotational Auto-Tuning for V/f Control if using Energy Saving functions. | 164 |
| V/f Control with PG (A1-02 = 1) |  |  |  |
| $\square$ | 7 | Set up the PG feedback parameters correctly and make sure the encoder pulse counting direction is correct. | - |
| $\square$ | 8 | Set the proportional gain for ASR speed control to C5-01 and the integral time to C5-02. | - |
| Open Loop Vector Control ( $\mathrm{A} 1-02=2$ ) or Closed Loop Vector Control ( $\mathrm{A} 1-02=3$ ) |  |  |  |
| $\square$ | 9 | Decouple motor shafts and machines when performing Rotational Auto-Tuning. | 164 |
| $\square$ | 10 | Set the Auto-Tuning mode to T1-01 (0 for Rotational Auto-Tuning). | 164 |
| $\square$ | 11 | Enter the following data according to the information listed on the motor nameplate: <br> - Motor rated power to T1-02 (kW) <br> - Motor rated voltage to T1-03 (V) <br> - Motor rated current to T1-04 (A) <br> - Motor base frequency to T1-05 (Hz) <br> - Number of motor poles to T1-06 <br> - Motor base speed to $\mathrm{T} 1-07(\mathrm{r} / \mathrm{min})$ | 164 |
| Closed Loop Vector Control ( $\mathrm{A} 1-02=3$ ) |  |  |  |
| $\square$ | 12 | Set F1-01 and F1-05. | - |
| $\square$ | 13 | Set ASR proportional gain to C5-01 and ASR integral time to C5-02. Perform ASR Tuning if possible. | - |
| Open Loop Vector Control for PM (A1-02 = 5) |  |  |  |
| $\square$ | 14 | Perform Auto-Tuning as described. | 164 |
| Advanced Open Loop Vector Control for PM ( $\mathrm{A} 1-02=6$ ) |  |  |  |
| $\square$ | 15 | Perform Auto-Tuning as described. | 164 |
| $\square$ | 16 | Set the proportional gain for ASR speed control to C5-01 and the integral time to C5-02. | - |
| Closed Loop Vector Control for PM (A1-02 = 7) |  |  |  |
| $\square$ | 17 | Set PM motor data using E5-पロ parameters. | 164 |
| $\square$ | 18 | Set ASR proportional gain to C5-01 and ASR integral time to C5-02. Perform ASR Tuning if possible. | - |
| $\square$ | 19 | Set F1-01 and F1-05. | - |
| $\square$ | 20 | Set the offset between the rotor magnetic axis and the Z-pulse of the connected encoder to E5-11. | - |
| $\square$ | 21 | The DRV should be displayed on the LCD operator after giving a Run command. | - |
| $\square$ | 22 | To give Run command and frequency reference from the digital operator, press "LO/RE" key to set to LOCAL. | 126 |
| $\square$ | 23 | If the motor rotates in the opposite direction during test run, switch two of U/T1, V/T2, W/T3, or change b1-14. | 133 |
| $\square$ | 24 | In accordance with load condition, set Heavy Duty or Normal Duty mode using parameter C6-01. Normal Duty is the default setting. | - |

| $\square$ | No. | Checklist | Page |  |
| :---: | :---: | :--- | :---: | :---: |
| $\square$ | 25 | Set motor rated current (E2-01, E4-01, E5-03) and motor protection (L1-01) values for motor thermal protection. | - |  |
| $\square$ | 26 | Set the drive for REMOTE when control circuit terminals provide the Run command and frequency reference. | 126 |  |
| $\square$ | 27 | If the control circuit terminals should supply the frequency reference, select the correct voltage input signal level <br> (0 to 10 V or -10 to +10 V) or the correct current input signal level (4 to 20 mA or 0 to 20 mA). | 136 |  |
| $\square$ | 28 | Apply the proper signal level to terminals A1 and A3 (0 to 10 V or -10 to +10 V). | 136 |  |
| $\square$ | 29 | Apply the proper signal level (-10 to +10 V, 4 to 20 mA or 0 to 20 mA) to terminal A2. | 136 |  |
| $\square$ | 30 | When current input is used, switch the built-in DIP switch S1 from the V-side to I-side. Set the level for current signal <br> used to H3-09 (set "2" for 4 to 20 mA, or "3" for 0 to 20 mA). | 136 |  |
| $\square$ | 31 | Set DIP Switch S1 on the drive to "I" when using terminal A2 as current input. <br> Set DIP Switch S1 on the drive to "V" when using terminal A2 as voltage input. | - |  |
| $\square$ | 32 | If an analog input supplies the frequency reference, make sure it produces the desired frequency reference. Make the <br> following adjustments if the drive does not operate as expected: <br> Gain adjustment: Set the maximum voltage/current signal and adjust the analog input gain (H3-03 for A1, H3-11 for A2, <br> H3-07 for A3) until the frequency reference value reaches the desired value. <br> Bias adjustment: Set the minimum voltage/current signal and adjust the analog input bias (H3-04 for A1, H3-12 for A2, <br> H3-08 for A3) until the frequency reference value reaches the desired minimum value. | - | - |
| $\square$ |  |  |  |  |

### 5.1 Drive Alarms, Faults, and Errors

## Types of Alarms, Faults, and Errors

Check the digital operator for information about possible faults if the drive or motor fails to operate. Refer to Using the Digital Operator on page 120.
If problems occur that are not covered in this manual, contact Yaskawa or a Yaskawa representative with the following information:

- Drive model
- Software version
- Date of purchase
- Description of the problem

Table 5.1 contains descriptions of the various types of alarms, faults, and errors that may occur while operating the drive.
Table 5.1 Types of Alarms, Faults, and Errors

| Type | Drive Response |
| :---: | :---: |
| Faults | When the drive detects a fault: <br> - The digital operator displays text indicating the specific fault and the ALM indicator LED remains lit until the fault is reset. <br> - The fault interrupts drive output and the motor coasts to a stop. <br> - Some faults allow the user to select the stopping method when the fault occurs. <br> - Fault output terminals MA-MC will close, and MB-MC will open. <br> The drive will remain inoperable until the fault is cleared. Refer to Fault Reset Methods on page 211. |
| Minor Faults and Alarms | When the drive detects an alarm or a minor fault: <br> - The digital operator displays text indicating the specific alarm or minor fault, and the ALM indicator LED flashes. <br> - The drive continues running the motor, although some alarms allow the user to select a stopping method when the alarm occurs. <br> - A multi-function contact output set to be tripped by a minor fault $(\mathrm{H} 2-\square \square=10)$ closes. If the output is set to be tripped by an alarm, the contact will not close. <br> - The digital operator displays text indicating a specific alarm and the ALM indicator LED flashes. Remove the cause of the problem to reset a minor fault or alarm. |
| Operation Errors | An operation error occurs when parameter settings conflict or do not match hardware settings (such as with an option card). When the drive detects an operation error: <br> - The digital operator displays text indicating the specific error. <br> - Multi-function contact outputs do not operate. <br> The drive will not operate the motor until the error has been reset. Correct the settings that caused the operation error to clear the error. |
| Tuning Errors | Tuning errors occur while performing Auto-Tuning. When the drive detects a tuning error: <br> - The digital operator displays text indicating the specific error. <br> - Multi-function contact outputs do not operate. <br> - Motor coasts to stop. <br> Remove the cause of the error and repeat the Auto-Tuning process. |
| Copy Function Errors | Copy Function Errors occur when using the digital operator or the USB Copy Unit to copy, read, or verify parameter settings. <br> - The digital operator displays text indicating the specific error. <br> - Multi-function contact outputs do not operate. <br> Pressing any key on the digital operator will clear the fault. Investigate the cause of the problem (such as model incompatibility) and try again. |

### 5.2 Fault Detection

## Fault Displays, Causes, and Possible Solutions

Faults are detected for drive protection, and cause the drive to stop while toggling the form-C output associated with terminals MA-MB-MC. Remove the cause of the fault and manually clear the fault before attempting to run the drive again.

Table 5.2 Detailed Fault Displays, Causes, and Possible Solutions

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| Loi | boL | Braking Transistor Overload Fault |
|  |  | The braking transistor reached its overload level. |
| Digital Operator Display |  | Fault Name |
| bu5 | bUS | Option Communication Error |
|  |  | - The connection was lost after establishing initial communication. <br> - Only detected when the run command frequency reference is assigned to an option card. |
| Cause |  | Possible Solution |
| No signal was received from the PLC |  | - Check for faulty wiring. |
| Faulty communications wiring or an existing short circuit |  | - Correct the wiring. <br> - Check for disconnected cables and short circuits and repair as needed. |
| Communication data error occurred due to noise |  | - Check the various options available to minimize the effects of noise. <br> - Counteract noise in the control circuit, main circuit, and ground wiring. <br> - Ensure that other equipment such as switches or relays do not cause noise. Use surge absorbers if necessary. <br> - Use only recommended cables or other shielded line. Ground the shield on the controller side or the drive input power side. <br> - Separate all communication wiring from drive power lines. Install an EMC noise filter to the drive power supply input. |
| The option card is damaged |  | Replace the option card if there are no problems with the wiring and the error continues to occur. |
| The option card is not properly connected to the drive |  | - The connector pins on the option card do not line up properly with the connector pins on the drive. <br> - Reinstall the option card. |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| $\Gamma$ | CE | MEMOBUS/Modbus Communication Error |
|  |  | Control data was not received for the CE detection time set to H5-09. |
| Cause |  | Possible Solution |
| Faulty communications wiring or an existing short circuit |  | - Check for faulty wiring. <br> - Correct the wiring. <br> - Check for disconnected cables and short circuits and repair as needed. |
| Communication data error occurred due to noise |  | - Check the various options available to minimize the effects of noise. <br> - Counteract noise in the control circuit, main circuit, and ground wiring. <br> - Use only recommended cables or other shielded line. Ground the shield on the controller side or the drive input power side. <br> - Ensure that other equipment such as switches or relays do not cause noise. Use surge suppressors if required. <br> - Separate all communication wiring from drive power lines. Install an EMC noise filter to the drive power supply input. |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| EF | CF | Control Fault |
|  |  | The torque limit was reached continuously for three seconds after the Stop command was input and deceleration was not possible in OLV Control. |
| Digital Operator Display |  | Fault Name |
| Cor | CoF | Current Offset Fault |
|  |  | Drive starts operation while the current-detection circuit failure, or the induced voltage remains in the motor (coasting and after rapid deceleration). |

### 5.2 Fault Detection

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
|  | CPF11 to CPF14 CPF16 to CPF19 | Control Circuit Error |
| Cause |  | Possible Solution |
| There is a self-diagnostic error in the control circuit |  | - Cycle power to the drive. <br> - If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa representative for instructions on replacing the control board. |
| Connector on the operator is damaged |  | Replace the operator. |
| Digital Operator Display |  | Fault Name |
| [9\%0J | CPF02 | A/D Conversion Error |
|  |  | An A/D conversion error or control circuit error occurred. |
| Cause |  | Possible Solution |
| Control circuit is damaged |  | - Cycle power to the drive. <br> - If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa representative for instructions on replacing the control board. |

| Digital Operator Display |  | Fault Name |
| :--- | :--- | :--- |
| Cause | EEPROM Memory Data Error |  |
|  | Error in the data saved to EEPROM |  |
| There is an error in EEPROM control circuit |  |  |
| The power supply was switched off while <br> parameters were being saved to the drive | Turn off the power and check the connection between the control board and the drive. <br> - If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa <br> representative for instructions on replacing the control board. |  |

| Digital Operator Display |  | Fault Name |  |  |  |
| :---: | :---: | :--- | :---: | :---: | :---: |
| Cause |  | CPF07 |  |  |  |
| Terminal Board Connection Error |  |  |  |  |  |
| CPF08 |  |  |  |  | Possible Solution |
| There is a faulty connection between the <br> terminal board and the control board | - Turn off the power and reconnect the terminal board. <br> - If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa <br> representative for instructions on replacing the control board. |  |  |  |  |

| Digital Operator Display |  | Fault Name |
| dEu | dEv | Speed Deviation (for Control Mode with PG and AOLV/PM without PG) |
|  |  | The deviation between the speed reference and speed feedback is greater than the setting in F1-10 for longer than the time set to F1-11. |
| du ${ }^{\text {a }}$ | dv1 | Z Pulse Fault (CLV/PM control mode only) |
|  |  | The motor turned one full rotation without the Z Pulse being detected. |
| duc' | dv2 | Z Pulse Noise Fault Detection (CLV/PM control mode only) |
|  |  | The Z Pulse is out of phase by more than 5 degrees for 10 consecutive revolutions. |
| du3 | dv3 | Inversion Detection (CLV/PM control mode only) |
|  |  | The torque reference and acceleration are in opposite directions and the speed reference and actual motor speed differ by more than $30 \%$ for the number of times set to F1-18. |
| ロu4 | dv4 | Inversion Prevention Detection (CLV/PM control mode only) |
|  |  | Pulses indicate that the motor is rotating in the opposite direction of the speed reference. Set the number of pulses to trigger inverse detection to F1-19. |
|  |  | Note: Set F1-19 to 0 to disable inverse detection in applications where the motor may rotate in the opposite direction of the speed reference. |
| ${ }_{\substack{1 \\ 40 \\<1\rangle}}$ | dv7 | Initial Polarity Estimation Timeout |

$<1>$ Available in drive software versions PRG: 1015 and later.

| diLu'il | dWAL | DriveWorksEZ Fault |
| :---: | :---: | :---: |
| diulfi | dWFL | DriveWorksEZ Fault |
| Digital Operator Display |  | Fault Name |
| duul : | dWF1 | EEPROM Memory DriveWorksEZ Data Error |
|  |  | There is an error in the DriveWorksEZ program saved to EEPROM. |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :--- |
| $E 5$ | MECHATROLINK Watchdog Timer Error |  |
|  | The watchdog timed out. |  |
| Cause |  | Possible Solution |
| Data has not been received from the PLC | Execute DISCONNECT or ALM CLR, then issue a CONNECT command or SYNC_SET command and <br> proceed to phase 3. Refer to the SI-T3 Option Technical Manual for more details on troubleshooting. |  |

| Digital Operator Display |  | Fault Name |
| :--- | :--- | :--- |
| EF0 | Option Card External Fault |  |
|  | An external fault condition is present. |  |
| Cause |  | Possible Solution |
| An external fault was received from the PLC <br> and F6-03 is set to a value other than 3. | • Remove the cause of the external fault. |  |
| Problem with the PLC program | Remove the external fault input from the PLC. |  |

| Digital Operator Display |  | Fault Name |
| :--- | :---: | :--- |
| $E F_{i}$ | EF1 | External Fault (input terminal S1) |
|  | External fault at multi-function input terminal S1. |  |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| $E F=$ | EF2 | External Fault (input terminal S2) |
|  |  | External fault at multi-function input terminal S2. |
| E15 | EF3 | External Fault (input terminal S3) |
|  |  | External fault at multi-function input terminal S3. |
| EFU | EF4 | External Fault (input terminal S4) |
|  |  | External fault at multi-function input terminal S4. |
| E15 | EF5 | External Fault (input terminal S5) |
|  |  | External fault at multi-function input terminal S5. |
| EFG | EF6 | External Fault (input terminal S6) |
|  |  | External fault at multi-function input terminal S6. |
| EFT | EF7 | External Fault (input terminal S7) |
|  |  | External fault at multi-function input terminal S7. |
| E1G | EF8 | External Fault (input terminal S8) |
|  |  | External fault at multi-function input terminal S8. |
| Cause |  | Possible Solution |
| An external device tripped an alarm function |  | Remove the cause of the external fault and reset the fault. |
| Wiring is incorrect |  | - Properly connect the signal lines to the terminals assigned for external fault detection ( $\mathrm{H} 1-\mathrm{\square} \square=20$ to 2B). <br> - Reconnect the signal line. |
| Multi-function contact input setting is incorrect |  | - Check for unused terminals set for H1-पロ = 20 to 2B (External Fault). <br> - Change the terminal settings. |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| Err | Err | EEPROM Write Error |
|  |  | Data cannot be written to the EEPROM |
| Cause |  | Possible Solution |
| Noise has corrupted data while writing to the EEPROM |  | - Press "ENTER" on the digital operator. <br> - Correct the parameter setting. <br> - Cycle power to the drive. <br> - If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa representative for instructions on replacing the control board. |
| Hardware probl |  | If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa representative for instructions on replacing the control board. |

| Digital Operator Display |  | Fault Name |
| :--- | :--- | :--- |
| FRn |  | Internal Fan Fault |
|  | Fause | Possible Solution |
| Internal cooling fan has malfunctioned |  | - Cycle power to the drive. <br> - Check for fan operation. <br> - Verify the cumulative operation time of the fan with monitor U4-03, and verify the cumulative operation <br> time of the fan maintenance timer with U4-04. <br> - If the cooling fan has exceeded its expected performance life or is damaged in any other way, replace <br> the fan. |
| Fault detected in the internal cooling fan or <br> magnetic contactor to the power supply. | - Cycle power to the drive. <br> - If the fault continues to occur, replace the power board/gate drive board or the entire drive. <br> - Contact Yaskawa or a Yaskawa representative for instructions on replacing the power board/gate drive <br> board. |  |

### 5.2 Fault Detection

| Digital Operator Display |  |  | Fault Name |
| :---: | :---: | :---: | :---: |
| Fロッ | FbH | Excessive PID Feedback |  |
|  |  | PID feedback input is greater than the lev to 2 or 5 to enable fault detection. | set to b5-36 for longer than the time set to b5-37. Set b5-12 |
| Cause |  |  | Possible Solution |
| Parameters are set inappropriately |  | Check b5-36 and b5-37 settings. |  |
| Incorrect PID feedback wiring |  | Correct the wiring. |  |
| There is a problem with the feedback sensor |  | - Check the sensor on the control side. <br> - Replace the sensor if damaged. |  |

| Digital Operator Display |  |  |
| :---: | :---: | :---: |
| Fbi | FbL | PID Feedback Loss |
|  |  | PID feedback loss detection is programm is below the detection level set to b5-13 |
| Cause |  |  |
| Parameters are set inappropriately |  | Check b5-13 and b5-14 settings. |
| Incorrect PID feedback wiring |  | Correct the wiring. |
| There is a problem with the feedback sensor |  | - Check the sensor on the control side. <br> - Replace the sensor if damaged. |

|  | Ground Fault |
| :---: | :---: |
| E.1) GF | - A current short to ground exceeded $50 \%$ of rated current on the output side of the drive. <br> - Setting L8-09 to 1 enables ground fault detection. |
| Cause | Possible Solution |
| Motor insulation is damaged | - Check the insulation resistance of the motor. <br> - Replace the motor. |
| A damaged motor cable is creating a short circuit | - Check the motor cable. <br> - Remove the short circuit and reapply power to the drive |
|  | - Check the resistance between the cable and the ground terminal $\Theta$. <br> - Replace the cable. |
| Excessive leakage current at the drive output | - Reduce the carrier frequency. <br> - Reduce the amount of stray capacitance. |
| The drive performed a current offset adjustment while the motor was rotating | - The set value exceeds the allowable setting range while the drive automatically adjusts the current offset. This generally only happens when attempting to restart a PM motor that is coasting to stop. <br> - Set b3-01 to 1 to enable Speed Search at Start. <br> - Perform Speed Search 1 or $2(\mathrm{H} 1-\square \square=61$ or 62$)$ via one of the external terminals. <br> Note: Speed Searches 1 and 2 are the same when using OLV/PM. |
| Hardware problem | If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa representative for instructions on replacing the control board. |

| Digital Operator Display | Fault Name |
| :---: | :---: |
|  | Output Phase Loss |
| L.F LF | - Phase loss on the output side of the drive. <br> - Setting L8-07 to 1 or 2 enables Phase Loss Detection. |
| Cause | Possible Solution |
| The output cable is disconnected | - Check for wiring errors and properly connect the output cable. <br> - Correct the wiring. |
| The motor winding is damaged | - Check the resistance between motor lines. <br> - Replace the motor if the winding is damaged. |
| The output terminal is loose | - Apply the tightening torque specified in this manual to fasten the terminals. Refer to Main Circuit Wire Gauges and Tightening Torques on page 94 for details. |
| The rated current of the motor being used is less than $5 \%$ of the drive rated current | Check the drive selection and motor capacities. |
| An output transistor is damaged | If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa representative for instructions on replacing the control board. |
| A single-phase motor is being used | The drive cannot operate a single phase motor. |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
|  | LF2 | Output Current Imbalance |
|  |  | One or more of the phases in the output current are lost. |
| Cause |  | Possible Solution |
| Phase loss has occurred on the output side of the drive |  | - Check for faulty wiring or poor connections on the output side of the drive. <br> - Correct the wiring. |
| Terminal wires are loose on the output side of the drive |  | Apply the tightening torque specified in this manual to fasten the terminals. Refer to Main Circuit Wire Gauges and Tightening Torques on page 94 for details. |
| The output circuit is damaged |  | If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa representative for instructions on replacing the control board. |
| Motor impedance or motor phases are uneven |  | - Measure the line-to-line resistance for each motor phase. Ensure all values match. <br> - Replace the motor. |
| Digital Operator Display |  | Fault Name |
| $i_{\langle 1\rangle}$ | LF3 | Power Unit Output Phase Loss 3 |
|  |  | - Phase loss occurred on the output side <br> - Setting L8-78 to 1 enables Power Unit Output Phase Loss Protection |
| Cause |  | Possible Solution |
| The gate drive board in the power unit is damaged. |  | Cycle the power supply. If the fault continues to occur, replace the gate drive board or the drive. Contact Yaskawa or a Yaskawa representative for instructions on replacing the gate drive board. |
| Cable to the current detection circuit in the power unit is damaged or not connected properly. |  | Check for incorrect wiring and correct any wiring mistakes. |
| Cable between the output rector and the power unit is loose or not connected. |  | Contact Yaskawa or your nearest sales representative for instructions. |

$<1>$ Detected in models 4A0930 and 4A1200.

$<1>$ This function prevents continuous operation in reverse when using high frequency injection ( $\mathrm{n} 8-57=1$ ) in AOLV/PM (A1-02 $=6$ ) with a motor for which no motor code has been entered (it does not only prevent reverse operation). Set L8-93, L8-94, and L8-95 to low values within range of erroneous detection to quickly detect undesirable reverse operation.

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| n5E | nSE | Node Setup Error |
|  |  | A terminal assigned to the node setup function closed during run. |
| Cause |  | Possible Solution |
| Overcurrent occurred during Overexcitation Deceleration. |  | Reduce the overexcitation deceleration gain (n3-13). |
| The node setup terminal closed during run. |  | Stop the drive when using the node setup function. |
| A Run command was issued while the node setup function was active. |  |  |

### 5.2 Fault Detection

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| -1' | oC | Overcurrent |
|  |  | Drive sensors detected an output current greater than the specified overcurrent level. |
| Cause |  | Possible Solution |
| The motor has been damaged due to overheating or the motor insulation is damaged |  | - Check the insulation resistance. <br> - Replace the motor. |
| One of the motor cables has shorted out or there is a grounding problem |  | - Check the motor cables. <br> - Remove the short circuit and reapply power to the drive. |
|  |  | - Check the resistance between the motor cables and the ground terminal $\Theta$. <br> - Replace damaged cables. |
| The drive is damaged |  | - Check the drive output side short circuit for a broken output transistor B 1 and $\mathrm{U} / \mathrm{T} 1, \mathrm{~V} / \mathrm{T} 2, \mathrm{~W} / \mathrm{T} 3$ - and U/T1, V/T2, W/T3 <br> - Contact your Yaskawa representative or nearest Yaskawa sales office. |
| The load is too heavy |  | - Measure the current flowing into the motor. <br> - Replace the drive with a larger capacity drive if the current value exceeds the rated current. <br> - Determine if there is sudden fluctuation in the current level. <br> - Reduce the load to avoid sudden changes in the current level or switch to a larger drive. |
| The acceleration or deceleration times are too short |  | Calculate the torque needed during acceleration relative to the load inertia and the specified acceleration time. If it is not possible to set the proper amount of torque, make the following changes: <br> - Increase the acceleration time (C1-01, C1-03, C1-05, C1-07) <br> - Increase the S-curve characteristics (C2-01 through C2-04) <br> - Increase the capacity of the drive. |
| The drive is attempting to operate a specialized motor or a motor larger than the maximum size allowed |  | - Check the motor capacity. <br> - Ensure that the rated capacity of the drive is greater than or equal to the capacity rating found on the motor nameplate. |
| Magnetic contactor (MC) on the output side of the drive has turned on or off |  | Set up the operation sequence so the MC does not trip while the drive is outputting current. |
| V/f setting is not operating as expected |  | - Check the ratios between the voltage and frequency. <br> - Set parameters E1-04 through E1-10 appropriately (E3-04 through E3-10 for motor 2). <br> - Lower the voltage if it is too high relative to the frequency. |
| Excessive torque compensation |  | - Check the amount of torque compensation. <br> - Reduce the torque compensation gain (C4-01) until there is no speed loss and less current. |
| Drive fails to operate properly due to electrical signal interference |  | - Review the possible solutions provided for handling electrical signal interference. <br> - Review the section on handling noise interference and check the control circuit lines, main circuit lines, and ground wiring. |
| Overexcitation gain is set too high |  | - Check if the fault occurs simultaneously with overexcitation function operation. <br> - Consider motor flux saturation and reduce the value of n3-13 (Overexcitation Deceleration Gain). |
| Run command was applied while motor was coasting |  | - Set b3-01 to 1 to enable Speed Search at Start. <br> - Program the Speed Search command input through one of the multi-function contact input terminals (H1-पロ = 61 or 62). |
| The wrong motor code has been entered for OLV/PM (Yaskawa motors only) or the motor data are wrong |  | - Enter the correct motor code to E5-01. <br> - Set E5-01 to FFFF if using a non-Yaskawa PM motor. Set the correct motor data to the E5parameters or perform Auto-Tuning. |
| The overcurrent level has exceeded the value set to L8-27 (PM control modes) |  | Correct the value set to overcurrent detection gain (L8-27). |
| The motor control method and motor do not match |  | - Check the control mode. <br> - For IM motors, set A1-02 to $0,1,2$, or 3 . <br> - For PM motors, set A1-02 to 5,6 , or 7 . |
| The rated output current of the drive is too small |  | Use a larger drive. |
| Digital Operator Display |  | Fault Name |

| Digital Operator Display |  | Fault Name |
| OH | oH | Heatsink Overheat |
|  |  | The heatsink temperature exceeded the overheat pre－alarm level set to L8－02．The default value for L8－02 is determined by drive model selection（o2－04）． |
| Cause |  | Possible Solution |
| Surrounding temperatu | is too high | －Check the temperature surrounding the drive．Verify temperature is within drive specifications． <br> －Improve the air circulation within the enclosure panel． <br> －Install a fan or air conditioner to cool the surrounding area． <br> －Remove anything near the drive that might be producing excessive heat． |
| Load is too heavy |  | －Measure the output current． <br> －Decrease the load． <br> －Lower the carrier frequency selection（C6－02）． |

### 5.2 Fault Detection

| Digital Operator Display | Fault Name |
| :--- | :--- |
| Internal cooling fan is stopped | - Replace the cooling fan. |
|  | - After replacing the cooling fan, set parameter $04-03$ to 0 to reset the cooling fan maintenance. |

| Digital Operator Display | Fault Name |
| :---: | :---: |
|  | Overheat 1 (Heatsink Overheat) |
| 口Hi orlo | The heatsink temperature exceeded the drive overheat level. Overheat level is determined by drive capacity (o2-04). |
| Cause | Possible Solution |
| Surrounding temperature is too high | - Check the temperature surrounding the drive. <br> - Improve the air circulation within the enclosure panel. <br> - Install a fan or air conditioner to cool the surrounding area. <br> - Remove anything near the drive that might be producing excessive heat. |
| Load is too heavy | - Measure the output current. <br> - Lower the carrier frequency selection (C6-02). <br> - Reduce the load. |

| Digital Operator Display |  | Fault Name |
| :--- | :--- | :--- |
| ロ43 | oH3 | Motor Overheat Alarm (PTC Input) |
|  |  |  |

| 8 HC | oH4 | Motor Overheat Fault (PTC Input) |
| :---: | :---: | :---: |
|  |  | - The motor overheat signal to analog input terminal A1, A2, or A3 exceeded the fault detection level. <br> - Detection requires setting multi-function analog inputs H3-02, H3-10, or H3-06 to E. |
| Cause |  | Possible Solution |
| Motor has overheated |  | - Check the size of the load, the accel/decel times, and the cycle times. <br> - Decrease the load. <br> - Increase the acceleration and deceleration times (C1-01 through C1-08). |
|  |  | - Adjust the preset V/f pattern (E1-04 through E1-10) by reducing E1-08 and E1-10. <br> - Do not set E1-08 and E1-10 too low. This reduces load tolerance at low speeds. |
|  |  | - Check the motor rated current. <br> - Enter the motor rated current to parameter E2-01 as indicated on the motor nameplate. <br> - Ensure the motor cooling system is operating normally. <br> - Repair or replace the motor cooling system. |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| - H5 | OH5 | Motor Overheat (NTC Input) |
| <1> |  | The motor temperature exceeded the level set to L1-16 (or L1-18 for motor 2) |
| Cause |  | Possible Solution |
| Motor has overheated |  | - Reduce the load. <br> - Check the ambient temperature. |

[^1]| Digital Operator Display | Fault Name |
| :---: | :---: |
| -1 oL1 | Motor Overload |
| - | The electronic motor overload protection tripped |
| Cause | Possible Solution |
| Load is too heavy | Reduce the load. |
|  | Note: $\quad$ Reset oL1 when the U4-16 value falls below $100.0 \%$. U4-16 value must be less than $100.0 \%$ before oL1 can be reset. |
| Cycle times are too short during acceleration and deceleration | Increase the acceleration and deceleration times (C1-01 through C1-08). |
| A general-purpose motor is driven below the rated speed with a high load | - Reduce the load. <br> - Increase the speed. <br> - If the motor is supposed to operate at low speeds, either increase the motor capacity or use a motor specifically designed to operate in the desired speed range. |
| V/f characteristics (voltage and frequency) are not suitable | Set the V/f pattern setting parameters (E1-04 to E1-10) to match the motor characteristics. |
| The wrong motor rated current is set to E2-01 | - Check the motor-rated current. <br> - Enter the motor rated current to parameter E2-01 as indicated on the motor nameplate. |
| Multiple motors are running off the same drive | Set L1-01 to 0 to disable the motor protection function and then install a thermal relay to each motor. |
| The electrical thermal protection characteristics and motor overload characteristics do not match | - Check the motor characteristics. <br> - Correct the type of motor protection that has been selected (L1-01). <br> - Install an external thermal relay. |
| The electrical thermal relay is operating at the wrong level | - Check the current rating listed on the motor nameplate. <br> - Check the value set for the motor rated current (E2-01). |
| Motor overheated by overexcitation operation | - Overexcitation increases the motor loss and the motor temperature. Excessive duration of overexcitation may cause motor damage. Prevent excessive overexcitation operation or apply proper cooling to the motor. <br> - Reduce the excitation deceleration gain (n3-13). <br> - Set L3-04 (Stall Prevention during Deceleration) to a value other than 4. <br> - Set n3-23 (Overexcitation Operation Selection) to 0 (disabled). |
| Parameters related to Speed Search are set incorrectly | - Check values set to Speed Search related parameters. <br> - Adjust the Speed Search current and Speed Search deceleration times (b3-02 and b3-03 respectively). <br> - After Auto-Tuning, set b3-24 to 1 to enable Speed Estimation Speed Search. |
| Output current fluctuation due to power supply loss | Check the power supply for phase loss. |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| OLこ | oL2 | Drive Overload |
|  |  | The thermal sensor of the drive triggered overload protection. |
| Cause |  | Possible Solution |
| Load is too heavy |  | Reduce the load. |
| Acceleration or deceleration time is too short |  | Increase the settings for the acceleration and deceleration times (C1-01 through C1-08). |
| V/f characteristics (voltage) are not suitable |  | Set the V/f pattern setting parameters (E1-04 to E1-10) to match the motor characteristics. |
| Drive capacity is too small |  | Replace the drive with a larger model. |
| Overload occurred when operating at low speeds |  | - Reduce the load when operating at low speeds. <br> - Replace the drive with a model that is one frame size larger. <br> - Lower the carrier frequency (C6-02). |
| Excessive torque compensation |  | Reduce the torque compensation gain in parameter C4-01 until there is no speed loss but less current. |
| Parameters related to Speed Search are set incorrectly |  | - Check the settings for all Speed Search related parameters. <br> - Adjust the current used during Speed Search (b3-03) and the Speed Search deceleration time (b3-02). <br> - After Auto-Tuning, set b3-24 to 1 to enable Speed Estimation Speed Search. |
| Output current fluctuation due to input phase loss |  | Check the power supply for phase loss. |

### 5.2 Fault Detection

| Digital Operator Display |  | Fault Name |
| :--- | :--- | :--- |
| oL3 | Overtorque Detection 1 | The current has exceeded the value set for Torque Detection Level 1 (L6-02) for longer than the allowable <br> time (L6-03). |
|  | Cause |  | Possible Solution |
| Parameter settings are not appropriate for the <br> load | Check L6-02 and L6-03 settings. |  |
| Fault on the machine side (e.g., machine is <br> locked up) | Check the status of the load. Remove the cause of the fault. |  |

| ロL4 | oL4 | Overtorque Detection 2 |
| :--- | :--- | :--- |
|  |  |  |

| 015 | oL5 | Mechanical Weakening Detection 1 |
| :---: | :---: | :---: |
|  |  | Overtorque occurred, matching the conditions specified in L6-08. |
| 017 | oL7 | High Slip Braking oL |
|  |  | The output frequency stayed constant for longer than the time set to n3-04 during High Slip Braking. |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| Qrior | oPr | External Digital Operator Connection Fault |
|  |  | The external operator has been disconnected from the drive. <br> Note: An oPr fault will occur when all of the following conditions are true: <br> - Output is interrupted when the operator is disconnected $(02-06=1)$. <br> - The Run command is assigned to the operator (b1-02 $=0$ and LOCAL has been selected). |
| Cause |  | Possible Solution |
| External operator is not properly connected to the drive |  | - Check the connection between the operator and the drive. <br> - Replace the cable if damaged. <br> - Turn off the drive input power and disconnect the operator. Reconnect the operator and reapply drive input power. |

| 05 | oS | Overspeed |
| :--- | :--- | :--- |
|  |  |  |

|  | Overvoltage |
| :---: | :---: |
| Qu ov | Voltage in the DC bus has exceeded the overvoltage detection level. <br> - For 200 V class drives: approximately 410 V <br> - For 400 V class drives: approximately $820 \mathrm{~V}(740 \mathrm{~V}$ when E1-01 is less than 400$)$ <br> - For 600 V class drives: approximately 1040 V |
| Cause | Possible Solution |
| Deceleration time is too short and regenerative energy is flowing from the motor into the drive | - Increase the deceleration time (C1-02, C1-04, C1-06, C1-08). <br> - Install a dynamic braking resistor or a dynamic braking resistor unit. <br> - Set L3-04 to 1 to enable stall prevention during deceleration. Stall Prevention is enabled as the default setting. |
| Fast acceleration time causes the motor to overshoot the speed reference | - Check if sudden drive acceleration triggers an overvoltage alarm. <br> - Increase the acceleration time. <br> - Use longer S-curve acceleration and deceleration times. <br> - Enable the Overvoltage Suppression function (L3-11 = 1). <br> - Lengthen the S-curve at acceleration end. |
| Excessive braking load | The braking torque was too high, causing regenerative energy to charge the DC bus. Reduce the braking torque, use a dynamic braking option, or lengthen decel time. |
| Surge voltage entering from the drive input power | Install a DC link choke. <br> Note: Voltage surge can result from a thyristor convertor and phase advancing capacitor using the same input power supply. |
| Ground fault in the output circuit causes the DC bus capacitor to overcharge | - Check the motor wiring for ground faults. <br> - Correct grounding shorts and reapply power. |
| Improper parameters related to Speed Search (including Speed Search after a momentary power loss and after a fault restart) | - Check the settings for Speed Search-related parameters. <br> - Enable Speed Search restart function (b3-19 greater than or equal to 1 , up to 10 ). <br> - Adjust the current level during Speed Search and the deceleration time (b3-02 and b3-03 respectively). <br> - Perform Stationary Auto-Tuning for line-to-line resistance and then set b3-14 to 1 to enable Speed Estimation Speed Search. |
| Drive input power voltage is too high | - Check the voltage. <br> - Lower drive input power voltage within the limits listed in the specifications. |
| The braking transistor or braking resistor are wired incorrectly | - Check braking transistor and braking resistor wiring for errors. <br> - Properly rewire the braking resistor device. |
| PG cable is disconnected | Reconnect the cable. |
| PG cable wiring is wrong | Correct the wiring. |
| Electrical signal interference along the PG encoder wiring | Separate the wiring from the source of the electrical signal interference. Often, the source is the output lines from the drive. |
| Drive fails to operate properly due to electrical signal interference | - Review the list of possible solutions provided for controlling electrical signal interference. <br> - Review the section on handling electrical signal interference and check the control circuit lines, main circuit lines, and ground wiring. |
| Load inertia is set incorrectly | - Check the load inertia settings when using KEB, overvoltage suppression, or Stall Prevention during deceleration. <br> - Adjust the load inertia ratio in L3-25 to better match the load. |
| Braking function is being used in OLV/PM | Connect a braking resistor. |
| Motor hunting occurs | - Adjust the parameters that control hunting. <br> - Set the gain for Hunting Prevention (n1-02). <br> - Adjust the AFR time constant (n2-02 and n2-03). <br> - Adjust the speed feedback detection suppression gain for PM motors (n8-45) and the time constant for pull-in current (n8-47). |

### 5.2 Fault Detection

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| Pr | PF | Input Phase Loss |
|  |  | Drive input power has an open phase or has a large imbalance of voltage between phases. Detected when L8-05 is set 1 (enabled). |
| Cause |  | Possible Solution |
| There is phase loss in the drive input power |  | - Check for wiring errors in the main circuit drive input power. <br> - Correct the wiring. |
| There is loose wiring in the drive input power terminals |  | - Ensure the terminals are tightened properly. <br> - Apply the tightening torque as specified in this manual. Refer to Main Circuit Wire Gauges and Tightening Torques on page 94 for details. |
| There is excessive fluctuation in the drive input power voltage |  | - Check the voltage from the drive input power. <br> - Review the possible solutions for stabilizing the drive input power. |
| There is poor balance between voltage phases |  | Stabilize drive input power or disable phase loss detection. |
| The main circuit capacitors are worn |  | - Check the maintenance time for the capacitors (U4-05). <br> - Replace the main capacitor(s) if U4-05 is greater than $90 \%$. For instructions on replacing the capacitor(s), contact Yaskawa or a Yaskawa representative. |
|  |  | Check for problems with the drive input power. If drive input power appears normal but the alarm continues to occur, replace either the control board or the entire drive. For instructions on replacing the control board, contact Yaskawa or a Yaskawa representative. |
| Digital Operator Display |  | Fault Name |
| PGO | PGo | PG Disconnect (for any control modes using a PG option card) |
|  |  | No PG pulses are received for longer than the time set to F1-14. |
| P60゙ | PGoH | PG Hardware Fault (detected when using a PG-X3 option card) |
|  |  | PG cable is not connected properly. |
| Digital Operator Display |  | Fault Name |
| -F | rF | Braking Resistor Fault |
|  |  | The resistance of the braking resistor is too low. |
| Cause |  | Possible Solution |
| The proper braking resistor option has not been installed |  | Select a braking resistor option that it fits the drive braking transistor specification. |
| A regenerative converter, regenerative unit, or braking unit is being used and the $\oplus 1$ or $\oplus 3$ terminal is connected to $\ominus$ terminal |  | Set L8-55 to 0 to disable the braking transistor protection selection. |

| -H |  | rH | Braking Resistor Overheat |
| :---: | :---: | :---: | :---: |
|  |  | Braking resistor protection Fault detection is enabled |
| Cause |  |  | Possible Solution |
| Deceleration time is too short and excessive regenerative energy is flowing back into the drive |  |  | - Check the load, deceleration time, and speed. <br> - Reduce the load inertia. <br> - Increase the deceleration times (C1-01 to C1-08). <br> - Replace the dynamic braking option with a larger device that can handle the power that is discharged. |
| The duty cycle is too high |  |  | Check the duty cycle. Maximum of $3 \%$ duty cycle is available when $\mathrm{L} 8-01=1$. |
| Excessive braking inertia |  |  | Recalculate braking load and braking power. Reduce the braking load by adjusting braking resistor settings. |
| The braking operation duty cycle is too high |  |  | Check the braking operation duty cycle. Braking resistor protection for ERF-type braking resistors $(\mathrm{L} 8-01=1)$ allows a braking duty cycle of maximum 3\%. |
| The proper braking resistor has not been installed |  |  | - Check the specifications and conditions for the braking resistor device. <br> - Select the optimal braking resistor. |
| Note: $\quad$ The magnitude of the braking load trips the braking resistor overheat alarm, NOT the surface temperature. Using the braking resistor more frequently than its rating permits will trip the alarm even when the braking resistor surface is not very hot. |  |  |  |

| Digital Operator Display |  |  |
| :---: | :---: | :--- |
| $r^{*}$ | rr | Dynamic Braking Transistor |
|  | The built-in dynamic braking transistor failed. |  |

$<1>$ Available in drive software versions PRG: 1015 and later.

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| $5 E_{r}$ | SEr | Too Many Speed Search Restarts |
|  |  | The number of Speed Search restarts exceeded the value set to b3-19. |
| Cause |  | Possible Solution |
| Parameters related to Speed Search are set to the wrong values |  | - Reduce the detection compensation gain during Speed Search (b3-10). <br> - Increase the current level when attempting Speed Search (b3-17). <br> - Increase the detection time during Speed Search (b3-18). <br> - Repeat Auto-Tuning. |
| The motor is coasting in the opposite direction of the Run command |  | Set b3-14 to 1 to enable Bi-Directional Speed Search. |
| 510 | STo | Pull-Out Detection |
|  |  | Motor pull out or step out has occurred. Motor has exceeded its pull-out torque. |
| SuE | SvE | Zero Servo Fault |
|  |  | Position deviation during zero servo. |
| $\begin{gathered} \text { 「HO } \\ \substack{1 l} \end{gathered}$ | THo | Thermistor Disconnect |
|  |  | The thermistor that detects motor temperature has become disconnected. |

$<1>$ Detected in models 4A0930 and 4A1200.

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| iit 3 | UL3 | Undertorque Detection 1 |
|  |  | The current has fallen below the minimum value set for Torque Detection Level 1 (L6-02) for longer than the allowable time (L6-03). |
| Cause |  | Possible Solution |
| Parameter settings are not appropriate for the load |  | Check the settings of parameters L6-02 and L6-03. |
| There is a fault on the machine side |  | Check the load for any problems. |
| Digital Operator Display |  | Fault Name |
| $1 i 14$ | UL4 | Undertorque Detection 2 |
|  |  | The current has fallen below the minimum value set for Torque Detection Level 2 (L6-05) for longer than the allowable time (L6-06). |
|  |  |  |
| iit 5 | UL5 | Mechanical Weakening Detection 2 |
|  |  | The operation conditions matched the conditions set to L6-08. |
| $\underset{\substack{\text { Uindi } \\<1>}}{ }$ | UnbC | Current Unbalance |
|  |  | Current flow has become unbalanced. |

$<1>$ Detected in models 4A0930 and 4A1200.

## 5．2 Fault Detection

| Digital Operator Display | Fault Name |
| :---: | :---: |
|  | DC Bus Undervoltage |
| ひいi Uv1 | One of the following conditions occurred while the drive was running： <br> －Voltage in the DC bus fell below the undervoltage detection level（L2－05）． <br> －For 200 V class drives：approximately 190 V <br> －For 400 V class drives：approximately 380 V （ 350 V when E1－01 is less than 400） <br> －For 600 V class drives：approximately 475 V <br> The fault is output only if L2－01 is set to 0 or 1 and the DC bus voltage has fallen below the level set to L2－05 for longer than the time set to L2－02． |
| Cause | Possible Solution |
| Input power phase loss | －The main circuit drive input power is wired incorrectly． <br> －Correct the wiring． |
| One of the drive input power wiring terminals is loose | －Ensure there are no loose terminals． <br> －Apply the tightening torque specified in this manual to fasten the terminals．Refer to Main Circuit Wire Gauges and Tightening Torques on page 94 for details． |
| There is a problem with the voltage from the drive input power | －Check the voltage． <br> －Correct the voltage to be within the range listed in drive input power specifications． <br> －If there is no problem with the power supply to the main circuit，check for problems with the main circuit magnetic contactor． |
| The power has been interrupted | Correct the drive input power． |
| The main circuit capacitors are worn | －Check the maintenance time for the capacitors（U4－05）． <br> －Replace either the control board or the entire drive if U4－05 exceeds $90 \%$ ．For instructions on replacing the control board，contact Yaskawa or a Yaskawa representative． |
| The relay or contactor on the soft－charge bypass relay is damaged | －Cycle power to the drive and see if the fault reoccurs． <br> －Check monitor U4－06 for the performance life of the soft－charge bypass relay． <br> －Replace either the control board or the entire drive if U4－06 exceeds $90 \%$ ．For instructions on replacing the control board，contact Yaskawa or a Yaskawa representative． |

| Digital Operator Display | Fault Name |
| :---: | :---: |
| リココ Uv2 | Control Power Supply Voltage Fault |
| Hol U | Voltage is too low for the control drive input power． |
| Cause | Possible Solution |
| In drive models 2A0004 to 2 A 0056 or 4 A 0002 to 4A0031，L2－02 was changed from its default value without installing a Momentary Power Loss Ride－Thru unit | Correct the setting to L2－02 or install an optional Momentary Power Loss Ride－Thru unit． |
| Control power supply wiring is damaged | －Cycle power to the drive．Check if the fault reoccurs． <br> －If the problem continues，replace the control board，the entire drive，or the control power supply．For instructions on replacing the control board，contact Yaskawa or a Yaskawa representative． |
| Internal circuitry is damaged | －Cycle power to the drive．Check if the fault reoccurs． <br> －If the problem continues，replace either the control board or the entire drive．For instructions on replacing the control board，contact Yaskawa or a Yaskawa representative． |

| Digital Operator Display |  | Fault Name |
| :--- | :--- | :--- |
| Uv3 | Undervoltage 3（Soft－Charge Bypass Relay Fault） |  |
|  | The soft－charge bypass relay failed． |  |
| Cause |  |  |
| The relay or contactor on the soft－charge <br> bypass relay is damaged Solution | －Cycle power to the drive and see if the fault reoccurs． <br> －Check monitor U4－06 for the performance life of the soft－charge bypass relay． <br> －Replace either the control board or the entire drive if U4－06 exceeds $90 \%$ ．For instructions on replacing <br> the control board，contact Yaskawa or a Yaskawa representative． |  |

|  | Uv4 | Gate Drive Board Undervoltage |
| :---: | :---: | :---: |
|  |  | Voltage drop in the gate drive board circuit |

[^2]| Digital Operator Display |  | Fault Name |
| :--- | :--- | :--- |
| voF | Output Voltage Detection Fault |  |
|  |  | Problem detected with the voltage on the output side of the drive. |
| Cause |  | Possible Solution |
| Hardware is damaged. Internal drive module <br> MC / FAN overheat protection circuit board is <br> due to abnormal ambient operating power. | Lower ambient temperature. <br> l |  |
| Replace the control board or the entire drive. For instructions on replacing the control board, contact <br> Yaskawa or a Yaskawa representative. |  |  |

### 5.3 Alarm Detection

## - Alarm Codes, Causes, and Possible Solutions

Alarms are drive protection functions that do not necessarily cause the drive to stop. After removing the cause of an alarm, the drive will return to the same status is was before the alarm occurred.
When an alarm has been triggered, the ALM light on the digital operator display blinks and the alarm code display flashes. If a multi-function output is set for an alarm ( $\mathrm{H} 2-\square \square=10$ ), that output terminal will be triggered.

Note: If a multi-function output is set to close when an alarm occurs $(\mathrm{H} 2-\square \square=10)$, it will also close when maintenance periods are reached, triggering alarms LT-1 through LT-4 (triggered only if H2- $\square \square=2 \mathrm{~F}$ ).

Table 5.3 Alarm Codes, Causes, and Possible Solutions

| Digital Operator Display |  | Minor Fault Name |
| :---: | :---: | :---: |
| RET | AEr | Station Address Setting Error (CC-Link, CANopen, MECHATROLINK) |
|  |  | Option card node address is outside of the acceptable setting range. |

| bb | Bbaseblock |
| :--- | :--- | :--- |
|  | Drive output interrupted as indicated by an external baseblock signal. |

| Digital Operator Display | Minor Fault Name |
| :--- | :--- |
| boL | Braking Transistor Overload Fault |
|  | The braking transistor in the drive has been overloaded. |
| Cause |  |
| The proper braking resistor has not been <br> installed. | Select the proper braking resistor. |
| Use a regen converter, regen unit, braking <br> unit, or other device to connect the +1 or +3 <br> terminal to the - terminal. | Set L8-55 to 0 to disable Internal Braking Transistor Protection. |
| The use rate of the braking transistor is high <br> (i.e., the regen converter is large or the <br> repetition frequency is high). | - Change to a CDBR type braking unit. <br> The braking transistor inside the drive is <br> faulty. |

| Digital Operator Display |  | Minor Fault Name |
| :---: | :---: | :---: |
| ［最： | CALL | Serial Communication Transmission Error |
|  |  | Communication has not yet been established． |
| Cause |  | Possible Solutions |
| Communications wiring is faulty，there is a short circuit，or something is not connected properly． |  | －Check for wiring errors． <br> －Correct the wiring． <br> －Check for disconnected cables and short circuits．Repair as needed． |
| Programming error on the master side． |  | Check communications at start－up and correct programming errors． |
| Communications circuitry is damaged． |  | －Perform a self－diagnostics check． <br> －If the problem continues，replace either the control board or the entire drive．For instructions on replacing the control board，contact Yaskawa or a Yaskawa representative． |
| Termination resistor setting is incorrect． |  | Install a termination resistor at both ends of a communication line．Set the internal termination resistor switch correctly on slave drives．Place DIP switch S2 to the ON position． |

| Digital Operator Display |  |
| :--- | :--- |
| LE | Minor Fault Name |
| Cause | MEMOBUS／Modbus Communication Error |
|  | Control data was not received correctly for two seconds． |
| Possible Solutions |  |
| A data error occurred due to noise． | －Check options available to minimize the effects of noise． <br> －Take steps to counteract noise in the control circuit wiring，main circuit lines，and ground wiring． <br> －Reduce noise on the controller side． <br> －Use surge absorbers for the magnetic contactors or other components that may be causing the disturbance． <br> －Use only recommended shielded line．Ground the shield on the controller side or on the drive input power <br> side． |
| －Separate all wiring for communication devices from drive input power lines．Install an EMC noise filter |  |
| to the drive input power supply． |  |

| Digital Operator Display |  | Minor Fault Name |
| :---: | :---: | :---: |
| Er 5ir | CrST | Cannot Reset |
| Cause |  | Possible Solutions |
| Fault reset was being executed when a Run command was entered． |  | －Ensure that a Run command cannot be entered from the external terminals or option during fault reset． <br> －Turn off the Run command． |
| ［4i | CyC | MECHATROLINK Comm．Cycle Setting Error |
|  |  | Comm．Cycle Setting Error was detected． |
| dEu | dEv | Speed Deviation（when using a PG option card and AOLV／PM without PG） |
|  |  | The deviation between the speed reference and speed feedback is greater than the setting in F1－10 for longer than the time in F1－11． |

| Digital Operator Display |  | Minor Fault Name |  |
| :--- | :--- | :--- | :--- |
| dnE | dnE | Drive Disabled | Possible Solutions |
| Cause |  |  |  |
| ＂Drive Enable＂is set to a multi－function <br> contact input（H1－ロロ＝6A）and that <br> signal was switched off． | Check the operation sequence． |  |  |

### 5.3 Alarm Detection

| Digital Operator Display |  | Minor Fault Name |
| :---: | :---: | :--- |
| $E F$ | EF | Forward/Reverse Run Command Input Error    <br>     <br> Cause  Both forward run and reverse run closed simultaneously for longer than 0.5 s. <br> Sequence error Check the forward and reverse command sequence and correct the problem. <br> Note: $\quad$ When minor fault EF detected, motor ramps to stop. |

| Digital Operator Display |  |
| :--- | :--- |
| EF0 | Option Card External Fault |
|  | An external fault condition is present. |
| Cause |  |
|  |  |
| An external fault was received from the <br> PLC with F6-03 set to 3, which allows the <br> drive to continue running after an external <br> fault occurs. | • Remove the cause of the external fault. |
| Remere is a problem with the PLC program. | Check the PLC program and correct problems. |

| EFi | EF1 | External Fault (Input Terminal S1) |
| :---: | :---: | :---: |
|  |  | External fault at multi-function input terminal S1. |
| $E F E$ | EF2 | External fault (input terminal S2) |
|  |  | External fault at multi-function input terminal S2. |
| EF3 | EF3 | External fault (input terminal S3) |
|  |  | External fault at multi-function input terminal S3. |
| EFU | EF4 | External fault (input terminal S4) |
|  |  | External fault at multi-function input terminal S4. |
| EF5 | EF5 | External fault (input terminal S5) |
|  |  | External fault at multi-function input terminal S5. |
| EFG | EF6 | External fault (input terminal S6) |
|  |  | External fault at multi-function input terminal S6. |
| $E F T$ | EF7 | External fault (input terminal S7) |
|  |  | External fault at multi-function input terminal S7. |
| EFG | EF8 | External fault (input terminal S8) |
|  |  | External fault at multi-function input terminal S8. |

| F只 | FAn | Internal Fan Fault |
| :---: | :---: | :---: |
|  |  | Fan or magnetic contactor failure (detected when L8-32 $=3$ or 4) |
| Cause |  | Possible Solution |
| Internal cooling fan has malfunctioned |  | - Cycle power to the drive. <br> - Check for fan operation. <br> - Verify the cumulative operation time of the fan with monitor U4-03, and verify the cumulative operation time of the fan maintenance timer with U4-04. <br> - If the cooling fan has exceeded its expected performance life or is damaged in any other way, replace the fan. |
| Fault detected in the internal cooling fan or magnetic contactor to the power supply. |  | - Cycle power to the drive. <br> - If the fault continues to occur, replace the power board/gate drive board or the entire drive. <br> - Contact Yaskawa or a Yaskawa representative for instructions on replacing the power board/gate drive board. |

| Digital Operator Display |  | Minor Fault Name |
| :--- | :--- | :--- |
| Fbir | FbH | Excessive PID Feedback |
|  | The PID feedback input is higher than the level set to b5-36 for longer than the time set to b5-37, and b5-12 <br> is set to 1 or 4. |  |
| Cause |  | Possible Solutions |
| Parameter settings for b5-36 and b5-37 are <br> incorrect. | Check parameters b5-36 and b5-37. |  |
| PID feedback wiring is faulty. | Correct the wiring. |  |

| Digital Operator Display |  | Minor Fault Name |
| :---: | :---: | :---: |
| Feedback sensor has malfunctioned． |  | Check the sensor and replace it if damaged． |
| Feedback input circuit is damaged． |  | Replace either the control board or the entire drive．For instructions on replacing the control board，contact Yaskawa or a Yaskawa representative． |
| Digital Operator Display |  | Minor Fault Name |
| Fbi | FbL | PID Feedback Loss |
|  |  | The PID feedback input is lower than the level set to b5－13 for longer than the time set to b5－14． |
| Cause |  | Possible Solutions |
| Parameter settings for b5－13 and b5－14 are incorrect． |  | Check parameters b5－13 and b5－14． |
| PID feedback wiring is faulty． |  | Correct the wiring． |
| Feedback sensor has malfunctioned． |  | Check the sensor and replace it if damaged． |
| Feedback input circuit is damaged． |  | Replace either the control board or the entire drive．For instructions on replacing the control board，contact Yaskawa or a Yaskawa representative． |

| H60 | Hbb | Safe Disable Signal Input |
| :---: | :---: | :---: |
|  |  | Both Safe Disable Input channels are open． |
| H6ロF | HbbF | Safe Disable Signal Input |
|  |  | One Safe Disable channel is open while the other channel is closed． |
| H2斤 | HCA | Current Alarm |
|  |  | Drive current exceeded overcurrent warning level（150\％of the rated current）． |
| Digital Operator Display |  | Minor Fault Name |
| 1！－i | LT－1 | Cooling Fan Maintenance Time |
|  |  | The cooling fan has reached its expected maintenance period and may need to be replaced． <br> Note：The signal closes when the maintenance period ends if $\mathrm{H} 2-\square \square=2 \mathrm{~F}$ ．The signal will not close if $\mathrm{H} 2-\square \square=10$ ． |
| Cause |  | Possible Solutions |
| The cooling fan has reached $90 \%$ of its expected performance life． |  | Replace the cooling fan and set o4－03 to 0 to reset the Maintenance Monitor． |

| Digital Operator Display |  | Minor Fault Name |  |  |
| :---: | :---: | :---: | :---: | :---: |
| டூ－を | LT－2 | Capacitor Maintenance Time |  |  |
|  |  | The main circuit and control circuit capacitors are nearing the end of their expected performance life． <br> Note：The signal closes when the maintenance period ends if $\mathrm{H} 2-\square \square=2 \mathrm{~F}$ ．The signal will not close if $\mathrm{H} 2-\mathrm{\square}=10$ ． |  |  |
| Cause |  | Possible Solutions |  |  |
| The main circuit and control circuit capacitors have reached $90 \%$ of their expected performance lives． |  | Replace the drive． |  |  |
| Digital Operator Display |  | Minor Fault Name |  |  |
| 15－3 | LT－3 | Soft Charge Bypass Relay Maintenance Time |  |  |
|  |  | Note： | The signal closes when the maintenance period ends if $\mathrm{H} 2-\mathrm{\square} \square=2 \mathrm{~F}$ ．The signal will not close if $\mathrm{H} 2-\square \mathrm{D}=10$ ． |  |
| Cause |  | Possible Solutions |  |  |
| The DC bus soft charge relay has reached $90 \%$ of expected performance life． |  | Replace the drive． |  |  |

### 5.3 Alarm Detection

| Digital Operator Display |  | Minor Fault Name |
| :---: | :---: | :---: |
| 6-4 | LT-4 | IGBT Maintenance Time (50\%) |
|  |  | IGBTs have reached $50 \%$ of their expected performance life. |
|  |  | Note: The signal closes when the maintenance period ends if $\mathrm{H} 2-\mathrm{\square}=2 \mathrm{~F}$. The signal will not close |
| Cause |  | Possible Solutions |
| IGBTs have reached $50 \%$ of their expected performance life. |  | Check the load, carrier frequency, and output frequency. |
| Digital Operator Display |  | Minor Fault Name |
| - ${ }^{\text {H }}$ | oH | Heatsink Overheat |
|  |  | The temperature of the heatsink exceeded the overheat pre-alarm level set to $\mathrm{L} 8-02\left(90-100^{\circ} \mathrm{C}\right)$. Default value for L8-02 is determined by drive model selection (o2-04). |
| Cause |  | Possible Solutions |
| Surrounding temperature is too high |  | - Check the surrounding temperature. <br> - Improve the air circulation within the enclosure panel. <br> - Install a fan or air conditioner to cool surrounding area. <br> - Remove anything near drive that may cause extra heat. |
| Internal cooling fan has stopped. |  | - Replace the cooling fan. <br> - After replacing the drive, set parameter 04-03 to 0 to reset the cooling fan operation time. |
| Airflow around the drive is restricted. |  | - Provide proper installation space around the drive as indicated in the manual. Refer to Installation Orientation and Spacing on page 28 for details. <br> - Allow for the proper space and ensure that there is sufficient circulation around the control panel. |
|  |  | - Check for dust or other foreign materials clogging the cooling fan. <br> - Clear debris caught in the fan that restricts air circulation. |
| -H2 | oH2 | Heatsink Overheat Warning |
|  |  | "Heatsink Overheat Warning" was input to a multi-function input terminal, S1 through S8 (H1-ם口= B). |
|  | oH3 | Motor Overheat |
|  |  | The motor overheat signal entered to a multi-function analog input terminal exceeded the alarm level (H3-02, $\mathrm{H} 3-06$ or $\mathrm{H} 3-10=\mathrm{E}$ ). |
| - ${ }_{\text {a }}^{17}$ | oH5 | Motor Overheat (NTC Input) |
|  |  | The motor temperature exceeded the level set to L1-16 (or L1-18 for motor 2) |

$<1>$ Detected in models 4A0930 and 4A1200.

| 0.3 | oL3 | Overtorque 1 |
| :---: | :---: | :---: |
|  |  | Drive output current (or torque in OLV, CLV, AOLV/PM, and CLV/PM) was greater than L6-02 for longer than the time set to L6-03. |
| 024 | oL4 | Overtorque 2 |
|  |  | Drive output current (or torque in OLV, CLV, AOLV/PM, CLV/PM) was greater than L6-05 for longer than the time set to L6-06. |
| 0.5 | oL5 | Mechanical Weakening Detection 1 |
|  |  | Overtorque occurred, matching the conditions specified in L6-08. |
| 05 | oS | Overspeed |
|  |  | The motor speed feedback exceeded the F1-08 setting. |
| ou | ov | DC Bus Overvoltage |
|  |  | The DC bus voltage exceeded the trip point. <br> - For 200 V class drives: approximately 410 V <br> - For 400 V class drives: approximately 820 V ( 740 V when E1-01 is less than 400 ) <br> - For 600 V class drives: approximately 1040 V |

| Digital Operator Display |  | Minor Fault Name |
| :--- | :--- | :--- |
| PAS5 |  | PASS |
| Cause |  | MEMOBUS／Modbus Comm．Test Mode Complete |
| MEMOBUS／Modbus test has finished Solutions <br> normally． | This verifies that the test was successful． |  |

| 90 | PGo | PG Disconnect（for Control Mode with PG） |
| :---: | :---: | :---: |
|  |  | Detected when no PG pulses are received for a time longer than setting in F1－14． |
| Pロ品 | PGoH | PG Hardware Fault（detected when using a PG－X3 option card） |
|  |  | PG cable has become disconnected． |
| rin | rUn | Motor Switch during Run |

### 5.3 Alarm Detection

| Digital Operator Display |  | Minor Fault Name |
| :---: | :---: | :---: |
|  |  | Undervoltage |
| Uu | Uv | One of the following conditions was true when the drive was stopped and a Run command was entered: <br> - DC bus voltage dropped below the level specified in L2-05. <br> - Contactor to suppress inrush current in the drive was opened. <br> - Low voltage in the control drive input power. This alarm outputs only if L2-01 is not 0 and DC bus voltage is under L2-05. |
| Cause |  | Possible Solutions |
| Phase loss in the drive input power. |  | Check for wiring errors in the main circuit drive input power. Correct the wiring. |
| Loose wiring in the drive input power terminals. |  | - Ensure the terminals have been properly tightened. <br> - Apply the tightening torque to the terminals as specified. Refer to Main Circuit Wire Gauges and Tightening Torques on page 94. |
| There is a problem with the drive input power voltage. |  | - Check the voltage. <br> - Lower the voltage of the drive input power so that it is within the limits listed in the specifications. |
| Drive internal circuitry is worn. |  | - Check the maintenance time for the capacitors (U4-05). <br> - Replace either the control board or the entire drive if U4-05 exceeds $90 \%$. For instructions on replacing the control board, contact Yaskawa or your nearest sales representative. |
| The drive input power transformer is too small and voltage drops when the power is switched on. |  | - Check for an alarm when the magnetic contactor, line breaker, and leakage breaker are closed. <br> - Check the capacity of the drive input power transformer. |
| Air inside the drive is too hot. |  | Check the temperature inside the drive. |
| The CHARGE light is broken or disconnected. |  | Replace either the control board or the entire drive. For instructions on replacing the control board, contact Yaskawa or your nearest sales representative. |
| -1\% | voF | Output Voltage Detection Fault |
|  |  | There is a problem with the output voltage. |

### 5.4 Operator Programming Errors

## - Operator Programming Error Codes, Causes, and Possible Solutions

An Operator Programming Error (oPE) occurs when a contradictory parameter is set or an individual parameter is set to an inappropriate value.
The drive will not operate until the parameter or parameters causing the problem are set correctly. An oPE, however, does not trigger an alarm or fault output. If an oPE occurs, investigate the cause and refer to Table 5.4 for the appropriate action. When oPE02 or oPE08 appear on the operator display, press the ENTER button to view U1-18 and see which parameter is causing the oPE.

Table 5.4 oPE Codes, Causes, and Possible Solutions

| OPEO | oPE01 | Drive Capacity Setting Fault |
| :---: | :---: | :---: |
|  |  | Drive capacity and the value set to o2-04 do not match. |
| OPE03 | oPE02 | Parameter Range Setting Error |
|  |  | Use U1-18 to find parameters set outside the range. |
| OP603 | oPE03 | Multi-Function Input Selection Error |
|  |  | A contradictory setting is assigned to multi-function contact inputs H1-01 to H1-08. |
| QPED4 | oPE04 | Initialization Required |
| OPE05 | oPE05 | Run Command/Frequency Reference Source Selection Error |
| 09605 | oPE06 | Control Method Selection Error |
|  |  | Correct the setting for the control method. |
| OPE07 | oPE07 | Multi-Function Analog Input Selection Error |
|  |  | A contradictory setting is assigned to multi-function analog inputs H3-02, H3-10, or H3-06 and PID functions conflict. |
| OP608 | oPE08 | Parameter Selection Error |
|  |  | A function has been set that cannot be used in the motor control method selected. |
| OP609 | oPE09 | PID Control Selection Fault |
|  |  | PID control function selection is incorrect. Requires that PID control is enabled (b5-01 = 1 to 4 ). |
| OPE IS | oPE10 | V/f Data Setting Error |
|  |  | One or more of the parameters listed below are not set according to the formula: <br> - E1-09 $\leq \mathrm{E} 1-07<\mathrm{E} 1-06 \leq \mathrm{E} 1-11 \leq \mathrm{E} 1-04$ <br> - E3-09 $\leq$ E3-07 $<$ E3-06 $\leq$ E3-11 $\leq$ E3-04 |
| OPE i | oPE11 | Carrier Frequency Setting Error |
|  |  | Correct the setting for the carrier frequency. |
| OPE 13 | oPE13 | Pulse Monitor Selection Error |
|  |  | Incorrect setting of monitor selection for pulse train (H6-06). |
| OPE 15 | oPE15 | Torque Control Setting Error |
|  |  | Parameter settings that are not allowed in combination with Torque Control have been set. |
| OPE IS | oPE16 | Energy Savings Constants Error |
| OPE IS | oPE18 | Online Tuning Parameter Setting Error |
|  |  | Parameters controlling online tuning are not set correctly. |

### 5.4 Operator Programming Errors

| oPE20 | PG-F3 Setting Error |
| :--- | :--- | :--- |
|  | The encoder signal frequency is too high. |

## - Causes and Possible Solutions for a Blank and Unresponsive Digital Operator

Table 5.5 Causes and Possible Solutions for a Blank and Unresponsive Digital Operator

| Cause | Possible Solutions |
| :--- | :--- |
| A short circuit between $+\mathrm{V},-\mathrm{V}$, and AC terminals. | Correct wiring |
| Control circuit terminal overload. | Check the resistance and wiring for the frequency setting potentiometer, etc. <br> Check that the current for terminals +V and -V is 20 mA or less. |
| The short circuit bar between terminals +1 and +2 in the main circuit has <br> been removed. | Attach the short circuit bar. |
| Braking unit terminals P and N are connected in reverse. | - Check the Braking unit wiring including cables connected to the Braking <br> unit and relay terminals. <br> - Replace the drive. |
| Control power circuit failure | Charge indicator is lit: <br> - Replace the digital operator <br> - Replace the drive control board. <br> Charge indicator is not lit: |
| - Check the input power supply voltage |  |
| - Replace the drive. |  |

### 5.5 Auto-Tuning Fault Detection

Auto-Tuning faults in this section are displayed on the digital operator and will cause the motor to coast to a stop. Auto-Tuning faults do not trigger a multi-function digital output set for fault or alarm output.
An End $\square$ error on the digital operator display indicates Auto-Tuning has successfully completed with discrepancies in the calculations. Restart Auto-Tuning after fixing the cause of the End error.
The drive may be used in the application if no cause can be identified despite the existence of an End $\square$ error.
An Er $\square$ error indicates that Auto-Tuning has not completed successfully. Check for the cause of the error using the tables in this section, and perform Auto-Tuning again after fixing the cause.

## - Auto-Tuning Codes, Causes, and Possible Solutions

Table 5.6 Auto-Tuning Codes, Causes, and Possible Solutions

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| End ' | End1 | Excessive V/f Setting (detected only during Rotational Auto-Tuning and displayed after Auto-Tuning is complete) |
| Cause |  | Possible Solutions |
| The torque reference exceeded $20 \%$ during Auto-Tuning. |  | - Prior to Auto-Tuning, verify the information on the motor nameplate. <br> - Enter proper values from motor nameplate to parameters T1-03 to T1-05 and repeat Auto-Tuning. |
| The results from Auto-Tuning the no-load current exceeded $80 \%$. |  | - If possible, disconnect the motor from the load and perform Auto-Tuning. If the load cannot be uncoupled, use the current Auto-Tuning results. |

| Digital Operator Display |  |
| :--- | :--- |
| End2 | Motor Iron-Core Saturation Coefficient (detected only during Rotational Auto-Tuning and displayed after <br> Auto-Tuning is complete) |
| Cause |  |
| Motor data entered during Auto-Tuning <br> was incorrect. | - Make sure the data entered to the T1 parameters match the information written on the motor nameplate. <br> - Restart Auto-Tuning and enter the correct information. |
| Results from Auto-Tuning are outside the <br> parameter setting range, assigning the iron- <br> core saturation coefficients (E2-07 and <br> E2-08) to temporary values. | • Check and correct faulty motor wiring. |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| End3 |  | Rated Current Setting Alarm (displayed after Auto-Tuning is complete) |
| Cause |  | Possible Solutions |
| The correct current rating printed on the <br> motor nameplate was not entered into <br> T1-04. | • Check the setting of parameter T1-04. <br> • |  |

| Digital Operator Display |  | End4 |
| :--- | :--- | :--- |
| End |  | Adjusted Slip Calculation Error |
| Cause |  |  |
| The calculated slip is outside the allowable <br> range. | Make sure the data entered for Auto-Tuning is correct. <br> M |  |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| End5 |  | Resistance Tuning Error |
| Cause |  |  |
| The calculated resistance value is outside Solutions <br> the allowable range. | • Double-check the data entered for the Auto-Tuning process. <br> • Check the motor and motor cable connection for faults. |  |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| End6 |  | Leakage Inductance Alarm |
| Cause |  |  |
| A1-02 setting error. | • Double-check the data entered for the Auto-Tuning process. | Check the setting of A1-02. <br> • Check the control mode and repeat Auto-Tuning. |

### 5.5 Auto-Tuning Fault Detection

| Digital Operator Display |  |
| :--- | :--- |
| End7 | No-Load Current Alarm |
| Cause |  |
| The entered no-load current value was <br> outside the allowable range. | Check and correct faulty motor wiring. |
| Auto-Tuning results were less than 5\% of <br> the motor rated current. | Double-check the data entered for the Auto-Tuning process. |

| Digital Operator Display | Error Name |
| :---: | :---: |
| Er-昌i $\quad$ Er-01 | Motor Data Error |
| Cause | Possible Solutions |
| Motor data or data entered during Auto-Tuning was incorrect | - Check that the motor data entered to T1 parameters matches motor nameplate input before Auto-Tuning. <br> - Restart Auto-Tuning and enter the correct information. |
| Motor rated power and motor-rated current settings (T1-02 and T1-04) do not match. | - Check the drive and motor capacities. <br> - Correct the settings of parameters T1-02 and T1-04. |
| Motor rated current and detected no-load current are inconsistent. | - Check the motor rated current and no-load current. <br> - Correct the settings of parameters T1-04 and E2-03. |
| Base frequency and motor rated speed (T1-05 and T1-07) do not match. | - Correct the settings of parameters T1-05 and T1-07. <br> - Check that the correct number of poles were entered to T1-06. |

| Digital Operator Display |  |
| :--- | :--- |
| Cause | Er-02 |
| Minor Fault |  |
| An alarm was triggered during Auto- <br> Tuning. | Exit the Auto-Tuning menu, check the alarm code, remove the alarm cause, and repeat Auto-Tuning. |
| Motor data entered during Auto-Tuning <br> was incorrect. | - Check that the motor data entered matches the motor nameplate input before performing Auto-Tuning <br> (T1-02 to T1-07). <br> - Restart Auto-Tuning and enter the correct information. |
| Faulty cable connection <br> The load is too heavy | - Check and correct faulty motor wiring. <br> - Check the vicinity of the machine. <br> - Check the load conditions. <br> - Investigate and correct the cause and then reset the fault. |

| Digital Operator Display |  | Error Name |
| :--- | :---: | :--- |
| $E_{r}-\Pi \Xi$ | Er-03 | STOP Button Input |
| Cause |  | Possible Solutions |
| Auto-Tuning canceled by pressing STOP <br> button. | Auto-Tuning did not complete properly. Restart Auto-Tuning. |  |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| Cause | Er-04 | Line-to-Line Resistance Error |
| Cossible Solutions |  |  |
| Motor data entered during Auto-Tuning <br> was incorrect. | • Make sure the data entered to the T1 parameters match the information written on the motor nameplate. <br> - | Restart Auto-Tuning and enter the correct information. |
| Results from Auto-Tuning are outside the <br> parameter setting range or the tuning <br> process took too long. | Check and correct faulty motor wiring. |  |
| Faulty motor cable or cable connection. |  |  |

| Digital Operator Display |  |
| :--- | :--- |
| Er-05 | No-Load Current Error |
| Cause |  |
| Error Name |  |
| Motor data entered during Auto-Tuning <br> was incorrect. | - Make sure the data entered to the T1 parameters match the information written on the motor nameplate. <br> - Restart Auto-Tuning and enter the correct information. |
| Results from Auto-Tuning are outside the <br> parameter setting range or the tuning <br> process took too long. | - Check and correct faulty motor wiring. <br> - Perform Rotational Auto-Tuning. |
| The load was too high during Rotational <br> Auto-tuning. | - Disconnect the motor from machine and restart Auto-Tuning. If motor and load cannot be uncoupled make <br> sure the load is lower than 30\%. |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er-00 | Er-08 | Rated Slip Error |
| Cause |  | Possible Solutions |
| Motor data entered during Auto-Tuning was incorrect. |  | - Make sure the data entered to the T1 parameters match the information written on the motor nameplate. <br> - Restart Auto-Tuning and enter the correct information. |
| Results from Auto-Tuning are outside the parameter setting range or the tuning process took too long. |  | - Check and correct faulty motor wiring. <br> - Perform Rotational Auto-Tuning. |
| The load was too high during rotational Auto-tuning. |  | - Disconnect the motor from machine and restart Auto-Tuning. If motor and load cannot be uncoupled make sure the load is lower than $30 \%$. <br> - If a mechanical brake is installed, make sure it is fully lifted during tuning. |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| Cause | Acceleration Error |  |
| Er-09 |  |  |
| The motor did not accelerate for the <br> specified acceleration time. | - Increase the acceleration time (C1-01). <br> - |  |
| Torque limit when motoring is too low <br> (L7-01 and L7-02). | - Check L7-01 and L7-02 settings. <br> - Increase the setting. |  |
| The load was too high during Rotational <br> Auto-Tuning. | - Disconnect the motor from machine and restart Auto-Tuning. If motor and load cannot be uncoupled make <br> sure the load is lower than 30\%. |  |

| Digital Operator Display |  |
| :--- | :--- |
| Er- | Error Name |
| Cause | Motor Direction Error |
| The encoder signal lines are not properly <br> connected to the drive. | Check and correct wiring to the PG encoder. |
| Motor direction and PG direction are <br> opposite. | Check the motor speed monitor U1-05 while manually turning the motor forward. If the sign displayed is <br> negative, change the setting of parameter F1-05. |
| The load pulled the motor in the opposite <br> direction of the speed reference and the <br> torque exceeded $100 \%$. | Uncouple the motor from the load and restart Auto-Tuning. |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| $E_{r-}-i i^{\|c\|}$ Er-11 | Motor Speed Error |  |
| Cause |  |  |
| Torque reference is too high. | • Increase the acceleration time 1 (C1-01). <br> • Disconnect the machine from the motor if possible. |  |

### 5.5 Auto-Tuning Fault Detection

| Digital Operator Display |  |
| :--- | :--- |
| Cause | Er-12 |
| Current Detection Error Name |  |
| One of the motor phases is missing: <br> (U/T1, V/T2, W/T3). | Check motor wiring and correct any problems. |
| The current exceeded the current rating of <br> the drive. | - Check motor wiring for a short between motor lines. <br> - Close any magnetic contactors used between motors. <br> Replace the control board or the entire drive. For instructions on replacing the control board, contact <br> Yaskawa or a Yaskawa representative. |
| The current is too low. | Connect the motor and restart Auto-Tuning. |
| Attempted Auto-Tuning without motor <br> connected to the drive. | Replace the control board or the entire drive. For instructions on replacing the control board, contact Yaskawa <br> or a Yaskawa representative. |
| Current detection signal error. | - |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| $E_{r-1}-1 亏$ | Er－13 | Leakage Inductance Error |
| Cause |  |  |
| Drive was unable to complete tuning for <br> leakage inductance within 300 seconds． | • Check all wiring and correct any mistakes． <br> • Check the motor rated current value written on the motor nameplate and enter the correct value to T1－04． |  |

| Digital Operator Display |  | Er－14 |  |
| :--- | :--- | :--- | :--- |
| Cause | Motor Speed Error 2 | Possible Solutions |  |
| Caurer |  |  |  |
| The motor speed exceeded twice the <br> amplitude of speed reference during Inertia <br> Tuning． | Reduce the ASR gain set to C5－01． |  |  |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| Er－15 |  | Torque Saturation Error |
| Cause |  |  |
| The output torque reached the torque limit Solutions <br> set in L7－01 through L7－04 during Inertia <br> Tuning． | Increase the torque limits in L7－01 through L7－04 within reasonable limits． <br> Reduce the test signal frequency in T3－01 and restart Auto－Tuning．If necessary，reduce the test signal <br> amplitude（T3－02）and restart Auto－Tuning． |  |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er－is | Er－16 | Inertia ID Error |
| Cause |  | Possible Solutions |
| The inertia identified by the drive was abnormally small or abnormally large during Inertia Tuning． |  | －Reduce the test signal frequency in T3－01 and restart Auto－Tuning．If necessary，reduce the test signal amplitude（T3－02）and restart Auto－Tuning． <br> －Check the basic motor inertia value entered to T3－03． |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er－in | Er－17 | Reverse Prohibited Error |
| Cause |  | Possible Solutions |
| Drive is prohibited from rotating the motor in reverse while attempting to perform Inertia Tuning． |  | －Inertia Auto－Tuning cannot be performed if the drive is restricted from rotating in reverse． <br> －Assuming it is acceptable for the application to rotate in reverse，set b1－04 to 0 and then perform Inertia Tuning． |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| $E r-i \square$ | Er－18 | Induction Voltage Error |
| Cause |  | Possible Solutions |
| The result of Back EMF Constant Tuning <br> （induced voltage）exceeds the allowable <br> setting range． | Double－check the data entered to the T2－ם口 parameters and restart Auto－Tuning． |  |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| $E_{-}-19$ | Er－19 | PM Inductance Error |
| Cause |  | Possible Solutions |
| The induced voltage constant attempted to <br> set a value to E5－08 or E5－09 that is outside <br> the allowable range． | Double－check the data entered to the T2－ロロ parameters and restart Auto－Tuning． |  |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er－TO | Er－20 | Stator Resistance Error |
| Cause |  | Possible Solutions |
| Stator resistance tuning attempted to set a value to E5－06 that is outside the allowable setting range． |  | Double－check the data entered to the T2－D］parameters and restart Auto－Tuning． |

### 5.5 Auto-Tuning Fault Detection

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er-こ! | Er-21 | Z Pulse Correction Error |
| Cause |  | Possible Solutions |
| Motor was coasting when Auto-Tuning was performed. |  | Make sure the motor comes to a complete stop. Repeat Auto-Tuning. |
| Either the motor or the PG encoder on the motor are not properly wired. |  | Check the wiring for the motor and the PG encoder. Restart Auto-Tuning. |
| The direction for the PG encoder is set incorrectly, or the number of pulses set for the PG encoder is wrong. |  | Check the direction and number of pulses set for the PG encoder. Restart Auto-Tuning. |
| PG encoder is damaged. |  | Check the signal output from the PG encoder attached to the motor. Replace the PG if damaged. |
| Motor inertia is large. |  | Increase the setting of n8-02 (Pole Attraction Current). |
| Z-Pulse Offset Tuning was performed when b1-04 was set to 1 . |  | - Z-Pulse Offset Tuning cannot be performed for a machine with reverse operation prohibited. <br> - If the machine allows reverse operation, set b1-04 to 0 to enable Reverse Operation Selection and then perform Z-Pulse Offset Tuning. |
| Motor vibrates during tuning. |  | - Increase the setting of n8-03, Current Startup Time, and n8-04, Pole Attraction Time. <br> - Decrease the setting of n8-02, Pole Attraction Current. |
| Digital Operator Display |  | Error Name |
| Er-25 | Er-25 | High Frequency Injection Parameter Tuning Error |
| Cause |  | Possible Solutions |
| Motor data was incorrect. |  | Perform Stationary Auto-Tuning and then perform High Frequency Injection Parameter Tuning again. If the problem continues, high frequency injection control might not be possible with that motor. <br> Note: Auto-Tuning is not applicable for SPM motors. |

## 5．6 Copy Function Related Displays

## Tasks，Errors，and Troubleshooting

The table below lists the messages and errors that may appear when using the Copy function．
When executing the tasks offered by the Copy function，the operator will indicate the task being performed．When an error occurs，a code appears on the operator to indicate the error．Note that errors related to the Copy function do not trigger a multi－ function output terminal that has been set up to close when a fault or alarm occurs．To clear an error，simply press any key on the operator and the error display will disappear．
Table 5.7 lists the corrective action that can be taken when an error occurs．
Note：1．Whenever using the copy function，the drive should be fully stopped．
2．The drive will not accept a Run command while the Copy function is being executed．
3．Parameters can only be saved to a drive when the voltage class，capacity，control mode，and software version match．
Table 5．7 Copy Function Task and Error Displays

| Digital Operator Display |  | Task |
| :---: | :---: | :---: |
| CoTu | CoPy | Writing Parameter Settings（flashing） |
| CPEr | CPEr | Control Mode Mismatch |
| CPUE | CPyE | Error Writing Data |
| ［5Er | CSEr | Copy Unit Error |
| dF95 | dFPS | Drive Model Mismatch |
| End | End | Task Complete |
| HEr | iFEr | Communication Error |
| ndini | ndAT | Model，Voltage Class，Capacity Mismatch |
| rotr | rdEr | Error Reading Data |
| r明 | rEAd | Reading Parameter Settings（flashing） |
| UREr | vAEr | Voltage Class，Capacity Mismatch |
| いFUE | vFyE | Parameter settings in the drive and those saved to the copy function are not the same |
| いだ「 | vrFy | Comparing Parameter Settings（flashing） |

## Fault Reset Methods

When a fault occurs，the cause of the fault must be removed and the drive must be restarted．The table below lists the different ways to restart the drive．

| After the Fault Occurs | Procedure |  |
| :---: | :---: | :---: |
| Fix the cause of the fault，restart the drive，and reset the fault | Press on the digital operator when the error code is displayed． |  |
| Resetting via Fault Reset Digital Input S4 | Close then open the fault signal digital input via terminal S4．S4 is set for＂Fault Reset＂as default （ $\mathrm{H} 1-04=14$ ）． |  |

### 5.6 Copy Function Related Displays

## After the Fault Occurs Procedure

Turn off the main power supply if the above methods do not reset the fault. Reapply power after the digital operator display has turned off.

Note: If the Run command is present, the drive will disregard any attempts to reset the fault. Remove the Run command before attempting to clear a fault situation.

## Periodic Inspection \& Maintenance

This chapter describes the periodic inspection and maintenance of the drive to ensure that it receives the proper care to maintain overall performance.
6.1 INSPECTION ..... 214
6.2 PERIODIC MAINTENANCE ..... 217
6.3 DRIVE REPLACEMENT ..... 219

### 6.1 Inspection

Power electronics have limited life and may exhibit changes in characteristics or performance deterioration after years of use under normal conditions. To help avoid such problems, it is important to perform preventive maintenance and periodic inspection on the drive.
Drives contain a variety of power electronics such as power transistors, semiconductors, capacitors, resistors, fans, and relays. The electronics in the drive serve a critical role in maintaining proper motor control.
Follow the inspection lists provided in this chapter as a part of a regular maintenance program.
Note: The drive will require more frequent inspection if it is placed in harsh environments, such as:

- High ambient temperatures
- Frequent starting and stopping
- Fluctuations in the AC supply or load
- Excessive vibrations or shock loading
- Dust, metal dust, salt, sulfuric acid, chlorine atmospheres
- Poor storage conditions.

Perform the first equipment inspection one to two years after installation.

## Recommended Daily Inspection

Table 6.1 outlines the recommended daily inspection for Yaskawa drives. Check the following items on a daily basis to avoid premature deterioration in performance or product failure. Copy this checklist and mark the "Checked" column after each inspection.

Table 6.1 General Recommended Daily Inspection Checklist

| Inspection Category | Inspection Points | Corrective Action | Checked |
| :---: | :---: | :---: | :---: |
| Motor | Inspect for abnormal oscillation or noise coming from the motor. | - Check the load coupling. <br> - Measure motor vibration. <br> - Tighten all loose components. |  |
| Cooling | Inspect for abnormal heat generated from the drive or motor and visible discoloration. | Check for the following: <br> - Excessive load. <br> - Loose connections. <br> - Dirty heatsink or motor. <br> - Ambient temperature. |  |
|  | Inspect drive cooling fan and circulation fan operation. | Check for the following: <br> - Clogged or dirty fan. <br> - Correct Fan operation parameter setting. |  |
| Environment | Verify the drive environment complies with the specifications listed in Installation Environment on page 28. | Eliminate the source of contaminants or correct poor environment. |  |
| Load | The drive output current should not be higher than the motor or drive rating for an extended period of time. | Check for the following: <br> - Excessive load. <br> - Correct motor parameter settings. |  |
| Power Supply Voltage | Check main power supply and control voltages. | - Correct the voltage or power supply to within nameplate specifications. <br> - Verify all main circuit phases. |  |

## Recommended Periodic Inspection

Table 6.2 outlines the recommended periodic inspections for Yaskawa drive installations. Although periodic inspections should generally be performed once a year; the drive may require more frequent inspection in harsh environments or with rigorous use. Operating and environmental conditions, along with experience in each application, will determine the actual inspection frequency for each installation. Periodic inspection will help to avoid premature deterioration in performance or product failure. Copy this checklist and mark the "Checked" column after each inspection.

## Periodic Inspection

WARNING! Electrical Shock Hazard. Do not inspect, connect, or disconnect any wiring while the power is on. Failure to comply can result in serious personal injury. Before servicing, disconnect all power to the equipment. The internal capacitor remains charged even after the power supply is turned off. The charge indicator LED will extinguish when the DC bus voltage is below 50 Vdc . To prevent electric shock, wait for at least the time specified on the warning label; after all indicators are OFF, measure for unsafe voltages to confirm the drive is safe prior to servicing.

Table 6.2 Periodic Inspection Checklist

| Inspection Area | Inspection Points | Corrective Action | Checked |
| :---: | :---: | :---: | :---: |
| Main Circuit Periodic Inspection |  |  |  |
| General | - Inspect equipment for discoloration from overheating or deterioration. <br> - Inspect for damaged or deformed parts. | - Replace damaged components as required. <br> - The drive has few serviceable parts and may require complete drive replacement. |  |
|  | Inspect for dirt, foreign particles, or dust collection on components. | - Inspect enclosure door seal if used. <br> - Remove foreign particles and dust with a vacuum cleaner to avoid touching parts. <br> - Replace components if cleaning is not possible. |  |
| Conductors and Wiring | - Inspect wiring and connections for discoloration, damage, or heat stress. <br> - Inspect wire insulation and shielding for wear. | Repair or replace damaged wiring. |  |
| Terminals | Inspect terminals for stripped, damaged, or loose connections. | Tighten loose screws and replace damaged screws or terminals. |  |
| Relays and Contactors | - Inspect contactors and relays for excessive noise during operation. <br> - Inspect coils for signs of overheating such as melted or cracked insulation. | - Check coil voltage for overvoltage or undervoltage conditions. <br> - Replace damaged removable relays, contactors, or circuit board. |  |
| Electrolytic Capacitor | - Inspect for leaking, discoloration, or cracks. <br> - Check if the cap has come off, for any swelling, or if the sides have burst open. | The drive has few serviceable parts and may require complete drive replacement. |  |
| Diode, IGBT (Power Transistor) | Inspect for dust or other foreign material collected on the surface. | Remove foreign particles and dust with a vacuum cleaner to avoid touching parts. |  |
| Motor Periodic Inspection |  |  |  |
| Operation Check | Check for increased vibration or abnormal noise. | Stop the motor and contact qualified maintenance personnel as required. |  |
| Control Circuit Periodic Inspection |  |  |  |
| General | - Inspect terminals for stripped, damaged, or loose connections. <br> - Make sure all terminals have been properly tightened. | - Tighten loose screws and replace damaged screws or terminals. <br> - If terminals are integral to a circuit board, then board or drive replacement may be required. |  |
| Circuit Boards | Check for any odor, discoloration, and rust. Make sure connections are properly fastened and that no dust or oil mist has accumulated on the surface of the board. | - Fix any loose connections. <br> - If an antistatic cloth or vacuum plunger cannot be used, replace the board. <br> - Do not use any solvents to clean the board. <br> - Remove foreign particles and dust with a vacuum cleaner to avoid touching parts. <br> The drive has few serviceable parts and may require complete drive replacement. |  |
| Cooling System Periodic Inspection |  |  |  |
| Cooling Fan, Circulation Fan, Control Board Cooling Fan | - Check for abnormal oscillation or unusual noise. <br> - Check for damaged or missing fan blades. | Replace as required. |  |
| Heatsink | Inspect for dust or other foreign material collected on the surface. | Remove foreign particles and dust with a vacuum cleaner to avoid touching parts. |  |

| Inspection Area | Inspection Points | Corrective Action | Checked |  |  |  |
| :--- | :--- | :--- | :--- | :---: | :---: | :---: |
| Air Duct | Inspect air intake and exhaust openings. They must be <br> free from obstruction and properly installed. | • Visually inspect the area. <br> • Clear obstructions and clean air duct as required. |  |  |  |  |
| Display Periodic Inspection |  |  |  |  |  |  |
| Digital Operator | - Make sure data appears on the display properly. <br> - Inspect for dust or other foreign material that may have <br> collected on surrounding components. | •Contact the nearest sales office if there is any <br> trouble with the display or keypad. <br> Clean the digital operator. |  |  |  |  |

## Storage Guidelines

The drive contains electrolytic capacitors and fine electronic parts that undergo chemical changes. Observe the following precautions to help maintain the expected performance life and reliability during long-term storage.

## Storage Location

## Temperature and Humidity

Store the drive in a location that is between -10 and $+40^{\circ} \mathrm{C}$ with a relative humidity of $95 \%$ or less. Do not store the drive in direct sunlight or where condensation or ice will form.
Storage temperatures between -20 to $+60^{\circ} \mathrm{C}$ are allowed when storing the drive for approximately one month.
Note: Package and store the drive during shipping to protect it from vibration and shock.

## Dust and Oil Mist

Do not store the drive in a dusty location or a location subject to oil mist.

## Corrosive Gas

Do not store the drive in a location subject to corrosive gas.

## Salt Damage

Do not store the drive in a location subject to salt damage, such as near the ocean.
Do not store the drive in adverse environments. Store all drives in storage rooms that are not subjected to adverse environmental elements.

## Periodic Power Application

Yaskawa recommends applying power to the drive once per year for at least 30 minutes to prevent the capacitors from deteriorating.
When applying power after power has not been applied for more than two years, Yaskawa recommends using a variable power source and gradually increasing the power from 0 V to the rated drive voltage over a period of 2 to 3 minutes. Apply power for at least 1 hour with no load to age the main circuit electrolytic capacitor.
Wire the drive normally and check for drive faults, overcurrents, motor vibration, speed fluctuations, and other abnormalities during operation after performing the above procedure.

Figure 6.1 Power Distribution Method

### 6.2 Periodic Maintenance

The drive has Maintenance Monitors that keep track of component wear. This feature provides advance maintenance warning and eliminates the need to shut down the entire system for unexpected problems. The drive allows the user to check predicted maintenance periods for the components listed below.

- Cooling Fan, Circulation Fan, Control Board Cooling Fan
- Electrolytic Capacitors
- Inrush Prevention Circuit
- IGBTs

For replacement parts, contact the distributor where the drive was purchased or contact Yaskawa directly.

## Replacement Parts

Table 6.3 contains the estimated performance life of components that require replacement during the life of the drive. Only use Yaskawa replacement parts for the appropriate drive model and revision.

Table 6.3 Estimated Performance Life

| Component | Estimated Performance Life |
| :---: | :---: |
| Cooling Fan, Circulation Fan | 10 years |
| Electrolytic Capacitors | 10 years $<1>$ |

$<1>$ Electrolytic capacitors cannot be replaced on some lower capacity models. Complete drive replacement may be required for these models.
NOTICE: Estimated performance life based on specific usage conditions. These conditions are provided for the purpose of replacing parts to maintain performance. Some parts may require more frequent replacement due to poor environments or rigorous use. Usage conditions for estimated performance life:
Ambient temperature: Yearly average of $40^{\circ} \mathrm{C}$ (IP20/IP00 enclosure)
Yearly average of $30^{\circ} \mathrm{C}$ (side-by-side mounting/NEMA 1, UL type 1 enclosure drive or external heatsink installation)

## Performance Life Monitors Maintenance Monitors

The drive calculates the maintenance period for components that may require replacement during the life of the drive. A percentage of the maintenance period is displayed on the digital operator by viewing the appropriate monitor parameter. When the maintenance period reaches $100 \%$, there is increased risk that the drive may malfunction. Yaskawa recommends checking the maintenance period regularly to ensure maximum performance life.
Set parameters L8-12 (Ambient Temperature Setting) and L8-35 (Installation Method Selection) for use with the installation environment when using maintenance monitors.
Refer to Recommended Periodic Inspection on page 215 for details.
Table 6.4 Performance Life Monitors Used for Component Replacement

| Parameter | Component |  |
| :---: | :--- | :--- |
| U4-03 | Cooling Fan <br> Circulation Fan <br> Control Board Cooling <br> Fan | Displays the accumulated operation time of the fan from 0 to 99999 hours. This value is automatically reset to <br> 0 after it reaches 99999. |
|  | Displays the accumulated fan operation time as a percentage of the specified maintenance period. |  |
| U4-04 | DC Bus Capacitors | Displays the accumulated time the capacitors are used as a percentage of the specified maintenance period. |
| U4-06 | Pre-charge Circuit | Displays the number of times the drive is powered up as a percentage of the performance life of the inrush <br> circuit. |
| U4-07 | IGBT | Displays the percentage of the maintenance period reached by the IGBTs. |

## Alarm Outputs for Maintenance Monitors

An output can be set up to inform the user when a specific components has neared its expected performance life.
When one of multi-function digital output terminals has been assigned the maintenance monitor function ( $\mathrm{H} 2-\square \square=2 \mathrm{~F}$ ), the terminal will close when the cooling fan, DC bus capacitors, or DC bus pre-charge relay reach $90 \%$ of the expected performance life, or when the IGBTs have reached $50 \%$ of their expected performance life. Additionally the digital operator will display an alarm like shown in Table 6.5 to indicate the specific components that may need maintenance.

Table 6.5 Maintenance Alarms

| Digital Operator Alarm Display |  | Function | Corrective Action |
| :---: | :---: | :---: | :---: |
| ! $\Gamma^{-}$- <l> | LT-1 | The cooling fans have reached $90 \%$ of their designated life time. | Replace the cooling fan. |
| $\left\langle 斤-e^{<1>}\right.$ | LT-2 | The DC bus capacitors have reached $90 \%$ of their designated life time. | Contact a Yaskawa representative or the nearest Yaskawa sales office on possible drive replacement. |
| [ 1 - 3 <l> | LT-3 | The pre-charge circuit has reached $90 \%$ of its designated life time. | Contact a Yaskawa representative or the nearest Yaskawa sales office on possible drive replacement. |
| [ $¢$ - $-4<1>$ | LT-4 | The IGBTs have reached $50 \%$ of their designated life time. | Check the load, carrier frequency, and output frequency. |
| FrPC ${ }^{\text {c }}$ | TrPC | The IGBTs have reached $90 \%$ of their designated life time. | Contact a Yaskawa representative or the nearest Yaskawa sales office on possible drive replacement. |

$<1>$ This alarm message will be output only if the Maintenance Monitor function is assigned to one of the digital outputs ( $\mathrm{H} 2-\mathrm{\square} \mathrm{\square}=2 \mathrm{~F}$ ). The alarm will also trigger a digital output that is programmed for alarm indication ( $\mathrm{H} 2-\mathrm{\square} \square=10$ ).
$<2>$ This alarm message will always be output, even if the Maintenance Monitor function is not assigned to any of the digital outputs ( $\mathrm{H} 2-\square \square=2 \mathrm{~F}$ ). The alarm will also trigger a digital output that is programmed for alarm indication $(\mathrm{H} 2-\square \square=10)$.

## Related Drive Parameters

Use parameters o4-03, o4-05, o4-07, and o4-09 to reset a Maintenance Monitor to zero after replacing a specific component. Refer to Parameter List on page 249 for details on parameter settings.
NOTICE: If these parameters are not reset after the corresponding parts have been replaced, the Maintenance Monitor function will continue to count down the performance life from the value that was reached with the old part. If the Maintenance Monitor is not reset, the drive will not have the correct value of the performance life for the new component.

### 6.3 Drive Replacement

## Replacing the Drive

WARNING! Electrical Shock Hazard. Do not connect or disconnect wiring while the power is on. Failure to comply can result in serious personal injury. Before servicing the drive, disconnect all power to the equipment. The internal capacitor remains charged even after the power supply is turned off. After shutting off the power, wait for at least the amount of time specified on the drive before touching any components.

WARNING! Electrical Shock Hazard. Do not allow unqualified personnel to perform work on the drive. Failure to comply could result in serious injury. Installation, maintenance, inspection and servicing must be performed only by authorized personnel familiar with installation, adjustment and maintenance of AC drives.
NOTICE: Observe proper electrostatic discharge procedures (ESD) when handling the drive and circuit boards. Failure to comply may result in ESD damage to the drive circuitry.
The following procedure explains how to replace a drive.
This section provides instructions for drive replacement only.
To install option boards or other types of options, refer to the specific manuals for those options.
NOTICE: When transferring a braking transistor, braking resistor, or other type of option from a damaged drive to a new replacement drive, make sure it is working properly before reconnecting it to the new drive. Replace broken options to prevent immediate breakdown of the replacement drive.

1. Remove the terminal cover.

Figure 6.2 Remove the Terminal Cover
2. Loosen the screws holding the terminal board in place. Remove the screw securing the bottom cover and remove the bottom cover from the drive.

Note: IP00/Open Type enclosure drives do not have a bottom cover or conduit.

Figure 6.3 Unscrew the Terminal Board and Remove the Bottom Cover
3. Slide the terminal board as illustrated by the arrows to remove it from the drive along with the bottom cover.

Figure 6.4 Remove the Terminal Board

Figure 6.5 Disconnected Removable Terminal Board
4. Disconnect all option cards and options, making sure they are intact before reusing.
5. Replace the drive and wire the main circuit.

## Installing the Drive

1. After wiring the main circuit, connect the terminal block to the drive as shown in Figure 6.6. Use the installation screw to fasten the terminal block into place.

Figure 6.6 Install the Terminal Board
2. Reconnect options for the new drive the same way the options were connected in the old drive. Connect option boards to the same option ports in the new drive that were used in the old drive.
3. Replace the terminal cover.
4. After powering on the drive, all parameter settings are transferred from the terminal board to the drive memory. If an oPE04 error occurs, load the parameter settings saved on the terminal board to the new drive by setting parameter A1-03 to 5550. Reset the Maintenance Monitor function timers by setting parameters 04-01 through o4-12 to 0 , and parameter 04-13 to 1 .

## Peripheral Devices \& Options

This chapter explains option installation procedures for the drive.

### 7.1 OPTION CARD INSTALLATION. .222

### 7.1 Option Card Installation

This section provides instructions on installing option cards.

## Prior to Installing the Option

Prior to installing the option, wire the drive, make necessary connections to the drive terminals, and verify that the drive functions normally without the option installed.
Table 7.1 below lists the number of options that can be connected to the drive and the drive ports for connecting those options.
Table 7.1 Option Installation

| Option | Port/Connector | Number of Options Possible |
| :--- | :---: | :---: |
| PG-B3, PG-X3 | CN5-C (CN5-B) ${ }^{<1>}$ | $2^{<1>}$ |
| PG-F3 $<2><3>$, PG-RT3 $<2><3>$ | CN5-C | 1 |
| AO-A3, DO-A3 | CN5-A, B, C | 1 |
| SI-B3, SI-C3, SI-EN3, SI-EM3, SI-EP3, SI-ES3, <br> SI-ET3, SI-N3, SI-P3, SI-S3, SI-T3, SI-W3, AI-A3${ }^{4>}$, DI-A3 ${ }^{<4>}$ | CN5-A | 1 |

$<1>$ When connecting only one PG option card, use the CN5-C connector. When connecting two PG option cards, use both CN5-B and CN5-C.
$<2>$ Not available for the application with Motor 2 Selection.
<3> Not available with models 4A0930 and 4A1200.
$<4>$ When using AI-A3 and DI-A3 as monitors, the card can be connected to any of CN5-A, CN5-B or CN5-C. The input status of AI-A3 can then be viewed using U1-21, U1-22, and U1-23, and the input status of DI-A3 can then be viewed using U1-17.
Figure 7.1 shows an exploded view of the drive with the option and related components for reference.

A - Drive front cover
H - Drive grounding terminal (FE)
B - Digital operator
C - LED label (for communication options)
D - Drive terminal cover
E-Removable tabs for wire routing
F - Included screws
G - Ground wire

I - Connector CN5-C
J - Connector CN5-B
K - Connector CN5-A
L - Insertion point for CN5 connector
M-Option

Figure 7.1 Drive Components with Option

## PG Option Installation Example

Remove the front covers of the drive before installing the option. PG options can inserted into the CN5-B or CN5-C connectors located on the drive control board.

1. Shut off power to the drive, wait the appropriate amount of time for voltage to dissipate, then remove the digital operator (B) and front covers (A, D). Front cover removal varies by model.

DANGER! Electrical Shock Hazard. Do not connect or disconnect wiring while the power is on. Failure to comply will result in death or serious injury. Before installing the option, disconnect all power to the drive. The internal capacitor remains charged even after the power supply is turned off. The charge indicator LED will extinguish when the DC bus voltage is below 50 Vdc . To prevent electric shock, wait at least five minutes after all indicators are off and measure the DC bus voltage level to confirm safe level.
NOTICE: Damage to Equipment. Observe proper electrostatic discharge procedures (ESD) when handling the option, drive, and circuit boards. Failure to comply may result in ESD damage to circuitry.

Figure 7.2 Remove the Front Covers and Digital Operator
2. Insert the option (M) into the CN5-B or CN5-C connector (I, J) located on the drive and fasten it using one of the included screws ( F ). Use the CN5-C connector when connecting only one PG option. Refer to Option Card Installation on page 222 for more information.

Figure 7.3 Insert the Option
3. Connect the ground wire $(\mathrm{G})$ to the ground terminal $(\mathrm{H})$ using one of the remaining provided screws ( F ). Connect the other end of the ground wire $(G)$ to the remaining ground terminal and installation hole on the option (M) using the last remaining provided screw $(F)$ and tighten both screws to $0.5 \sim 0.6 \mathrm{~N} \mathrm{~m}$ or ( $4.4 \sim 5.3$ in lbs).

Figure 7.4 Connect the Ground Wire
Note: 1. The option package includes two ground wires. Use the longer wire when plugging the option into connector CN5-C on the drive side. Use the shorter wire when plugging the option into connector CN5-B. Refer to the Option Installation manual for more information.
2. There are two screw holes on the drive for use as ground terminals $(\mathrm{H})$. When connecting three options, two ground wires will need to share the same drive ground terminal.
4. Prepare and connect the wire ends as shown in Figure 7.5 and Figure 7.6. Refer to Wire Gauges and Tightening Torques of PG-X3 Option on page 230 or Refer to Wire Gauges and Tightening Torques of PG-X3 Option on page 230 to confirm that the proper tightening torque is applied to each terminal. Take particular precaution to ensure that each wire is properly connected and that wire insulation is not accidentally pinched into electrical terminals.

WARNING! Fire Hazard. Tighten all terminal screws according to the specified tightening torque. Loose electrical connections could result in death or serious injury by fire due to overheating electrical connections. Tightening screws beyond the specified tightening torque may result in erroneous operation, damage to the terminal block, or cause a fire.
NOTICE: Heat shrink tubing or electrical tape may be required to ensure that cable shielding does not contact other wiring. Insufficient insulation may cause a short circuit and damage the option or drive.

Figure 7.5 Preparing Ends of Shielded Cable

Figure 7.6 Preparing and Connecting Cable Wiring
5. Wire the motor PG encoder to the terminal block on the option. Refer to Figure 7.7 and Figure 7.11 for wiring instructions.
Refer to PG-B3 Option Terminal Functions on page 226 for a detailed description of the option terminal functions.

## PG-B3 Parameter Settings

- Connecting a Single-Pulse Encoder in V/f with PG Control Mode: Connect the pulse output from the PG to the option and set F1-21 to 0 .
- Connecting a Two-Pulse Encoder: Connect the A and B pulse outputs on the PG to the option and set F1-21 to 1.

When using a two-pulse encoder in CLV control mode, connect pulse outputs A and B from the encoder to the corresponding terminals on the option.

- Connecting a Two-Pulse Encoder with Z Marker Pulse: Connect the A, B, and Z pulse outputs to the corresponding terminals on the option.

| Control Method | V/f with PG |  | Closed Loop Vector |  |
| :---: | :---: | :---: | :---: | :---: |
| No. of Encoders | $1(\mathrm{CN} 5-\mathrm{C})$ | $2(\mathrm{CN} 5-\mathrm{B})$ | $1(\mathrm{CN} 5-\mathrm{C})$ | $2(\mathrm{CN} 5-\mathrm{B})$ |
| Single Pulse (A) | F1-21 $=0$ | F1-37 $=0$ | N/A | N/A |
| Two Pulse (AB <br> Quadrature) | F1-21 $=1$ | F1-37 $=1$ | No setting required | No setting required |
| Two Pulse with Marker <br> (ABZ) | F1-21 $=1$ | F1-37 $=1$ | No setting required | No setting required |

PG-B3 Connection Diagram
Refer to PG-B3 Option Terminal Functions on page 226 for a detailed description of the option board terminal functions.
Refer to Wire Gauges and Tightening Torques of PG-B3 Option on page 227 for information on making cables.

Figure 7.7 PG-B3 Option and Encoder Connection Diagram
$<1>$ Ground the shield on the PG side and the drive side. If electrical signal interference problems arise in the PG signal, remove the shield ground from one end of the signal line or remove the shield ground connection on both ends.

Note: The PG-B3 option reads a maximum input frequency of 50 kHz from the PG encoder. Select a PG encoder with an output pulse frequency of maximum 50 kHz when operating at maximum speed.
Take the following steps to prevent erroneous operation caused by noise interference:

- Use shielded wire for the PG encoder signal lines.
- Limit the length of all motor output power cables to less than 100 m . Limit the length of open-collector output lines to less than 50 m .
- Use separate conduit or cable tray dividers to separate option control wiring, main circuit input power wiring, and motor output power cables.

## PG-B3 Interface Circuit

Complementary Output

Figure 7.8 Complementary Outputs for the Interface Circuit

## Open-Collector Outputs

Figure 7.9 Open-Collector Outputs for the Interface Circuit

## PG-B3 Terminal Functions

Table 7.2 PG-B3 Option Terminal Functions

| Terminal Block |  | Terminal | Function | Description |
| :---: | :---: | :---: | :---: | :---: |
| TB2 |  | A+ | A+ pulse signal input |  |
|  |  | A- | A- pulse signal input | Pulse signal inputs from the $P G$ |
|  |  | B+ | B+ pulse signal input | collector outputs |
|  | TB1 | B- | B- pulse signal input | - Signal level |
|  |  | Z+ | Z+ pulse signal input | H level: 8 to 12 V |
|  |  | Z- | Z- pulse signal input |  |
|  |  | SD | NC pin (open) | For use when cables shields should not be grounded |
|  |  | FE | Ground | Used for grounding shielded lines |
|  |  | IP | PG power supply | - Output voltage: $12.0 \mathrm{~V} \pm 5 \%$ |
|  |  | IG | PG power supply common | - Max output current: $200 \mathrm{~mA}{ }^{<1>}$ |
|  |  | AO | A pulse monitor signal | - Outputs the monitor signal for the A, B, and Z |
|  | TB2 | BO | B pulse monitor signal | pulses from the PG speed control card |
|  |  | ZO | Z pulse monitor signal | For open collector outputs from the option |
|  |  | IG | Monitor signal common | - Max current: 30 mA |

$<1>$ A separate UL Listed class 2 power supply is necessary when the PG requires more than 200 mA to operate.

## PG-B3 Wire Gauges and Tightening Torques

Wire gauge and torque specifications are listed in Table 7.3. For simpler and more reliable wiring, use crimp ferrules on the wire ends. Refer to the option manuals for the wire size and torque specifications of other options.

Table 7.3 Wire Gauges and Tightening Torques of PG-B3 Option

| Terminal Signal | Screw Size | $\begin{aligned} & \text { Tightening } \\ & \text { Torque N } \cdot \mathrm{m} \\ & \text { (in } \cdot \mathrm{lb}) \end{aligned}$ | Bare Cable |  | Crimp Terminals |  | Wire Type |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Recomm. Gauge mm ${ }^{2}$ | Applicable Gauges mm ${ }^{2}$ | Recomm. Gauge mm ${ }^{2}$ | Applicable Gauges $\mathbf{m m}^{2}$ |  |
| $\begin{aligned} & \mathrm{A}+, \mathrm{A}-, \mathrm{B}+, \mathrm{B}-, \\ & \mathrm{Z}+, \mathrm{Z}-, \mathrm{FE}, \mathrm{IP}, \mathrm{IG} \end{aligned}$ | M2 | $\begin{gathered} 0.22 \text { to } 0.25 \\ (1.95 \text { to } 2.21) \end{gathered}$ | 0.75 (18 AWG) | Stranded wire: 0.25 to 1.0 ( 24 to 17 AWG) Solid wire: 0.25 to 1.5 (24 to 16 AWG) | 0.5 (20 AWG) | $\begin{gathered} 0.25 \text { to } 0.5 \\ \text { (24 to } 20 \text { AWG) } \end{gathered}$ | Shielded twisted pair, etc. |
| $\begin{gathered} \text { AO, IG, BO, IG, } \\ \text { ZO, IG } \end{gathered}$ |  |  |  |  |  |  | Shielded cable, etc. |

## PG-B3 Crimp Terminals

Yaskawa recommends using CRIMPFOX 6 by Phoenix Contact or equivalent crimp terminals with the specifications listed in Table 7.4 for wiring to ensure proper connections.

Note: Properly trim wire ends so loose wire ends do not extend from the crimp terminals.
Table 7.4 Crimp Terminal Sizes

|  | Wire Gauge $\mathrm{mm}^{2}$ | Phoenix Contact Model | L mm (in) | d1 mm (in) | d2 mm (in) |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0.25 (24 AWG) | AI 0.25-6YE | 10.5 (13/32) | 0.8 (1/32) | 2 (5/64) |
|  | 0.34 (22 AWG) | AI 0.34-6TQ | 10.5 (13/32) | 0.8 (1/32) | 2 (5/64) |
|  | 0.5 (20 AWG) | AI 0.5-6WH | 14 (9/16) | 1.1 (3/64) | 2.5 (3/32) |

## PG Encoder Cables for PG-B3 Option

Yaskawa recommends using a LMA-口ロB-S185Y (complementary output) for cables running between the option and the PG as shown in Figure 7.10.
Refer to PG-B3 Option Terminal Functions on page 226 for instructions on wiring the terminal block.

Figure 7.10 Wiring the PG Encoder Cable
Table 7.5 Connecting the PG Encoder Cable Specification

| Option Terminal | PG Encoder Cable |  |  |
| :---: | :---: | :---: | :---: |
|  | Wire | Color | Pin |
| IP | 1 | Blue | C |
| IG | 2 | White | H |
| A+ | 3 | Yellow | B |
| A- | 4 | White | G |
| B+ | 5 | Green | A |
| B- | 6 | White | F |
| FE | E | N/A (shield) | D |

Table 7.6 PG Encoder Cable Types

| Length | Type | Length | Type |
| :---: | :---: | :---: | :---: |
| $10 \mathrm{~m}(32 \mathrm{ft})$. | W 5010 | $50 \mathrm{~m}(164 \mathrm{ft})$. | W 5050 |
| $30 \mathrm{~m}(98 \mathrm{ft})$. | W 5030 | $100 \mathrm{~m}(328 \mathrm{ft})$. | W 5100 |

## PG-X3 Parameter Settings

- Connecting a Single-Pulse Encoder in V/f with PG Control Mode: Connect the pulse output from the PG to the option and set F1-21 to 0.
- Connecting a Two-Pulse Encoder: Connect the A and B pulse outputs on the PG to the option and set F1-21 to 1 .

When using a two-pulse encoder in CLV control mode, connect pulse outputs A and B from the encoder to the corresponding terminals on the option.

- Connecting a Two-Pulse Encoder with Z Marker Pulse: Connect the A, B, and Z pulse outputs to the corresponding terminals on the option.

| Control Method | V/f with PG |  | Closed Loop Vector |  |
| :---: | :---: | :---: | :---: | :---: |
| No. of Encoders | $1(\mathrm{CN} 5-\mathrm{C})$ | $2(\mathrm{CN} 5-\mathrm{B})$ | $1(\mathrm{CN} 5-\mathrm{C})$ | 2 (CN5-B) |
| Single Pulse (A) | F1-21 $=0$ | F1-37 $=0$ | N/A | N/A |
| Two Pulse (AB Quadrature) | F1-21 $=1$ | F1-37 $=1$ | No setting required | No setting required |
| Two Pulse with Marker (ABZ) | F1-21 $=1$ | F1-37 $=1$ | No setting required | No setting required |

## PG-X3 Connection Diagram

Refer to PG-X3 Option Terminal Functions on page 229 for a detailed description of the option board terminal functions.

Figure 7.11 PG-X3 Option and Encoder Connection Diagram
$<1>$ Ground the shield on the PG side and the drive side. If electrical signal interference problems arise in the PG signal, remove the shield ground from one end of the signal line or remove the shield ground connection on both ends.

Note: $\quad$ The PG-X3 option reads a maximum input frequency of 300 kHz from the PG encoder. Select a PG encoder with an output pulse frequency of maximum 300 kHz when operating at maximum speed.
Take the following steps to prevent erroneous operation caused by noise interference:

- Use shielded wire for the PG encoder signal lines.
- Use separate conduit or cable tray dividers to separate option control wiring, main circuit input power wiring, and motor output power cables.

## PG-X3 Interface Circuit

Figure 7.12 PG-X3 Interface Circuit

## PG-X3 Terminal Functions

Table 7.7 PG-X3 Option Terminal Functions

| Terminal Block |  | Terminal | Function | Description |
| :---: | :---: | :---: | :---: | :---: |
|  | TB1 | A+ | A pulse signal input | - Inputs for the A channel, B channel, and Z pulses from the PG encoder <br> - Signal level matches RS-422 |
|  |  | A- | A inverse pulse signal input |  |
|  |  | B+ | B pulse signal input |  |
|  |  | B- | B inverse pulse signal input |  |
|  |  | Z+ | Z pulse signal input |  |
|  |  | Z- | Z inverse pulse signal input |  |
|  |  | SD | NC pin (open) | Open connection port for use when cable shields should not be grounded |
|  |  | FE | Ground | Used as the shield ground termination point. |
|  |  | IP | PG encoder power supply | - Output voltage: $12.0 \mathrm{~V} \pm 5 \%$ or $5.5 \mathrm{~V} \pm$ |
|  |  | IG | PG encoder power supply common | 5\% <br> - Max. output current: $200 \mathrm{~mA}{ }^{<1>}$ |
|  |  | SG | Monitor signal common |  |
|  |  | a+ | A pulse monitor signal |  |
|  | TB2 | a- | A pulse inverse monitor signal | - Output signal for monitoring A channel, B |
|  |  | b+ | B pulse monitor signal | channel, and $Z$ pulses from the PG encoder |
|  |  | b- | B pulse inverse monitor signal | - Signal level matches RS-422 |
|  |  | Z ${ }^{+}$ | Z pulse monitor signal |  |
|  |  | z- | Z pulse inverse monitor signal |  |

$<1>$ A separate UL Listed class 2 power supply is necessary when the PG requires more than 200 mA to operate.

## PG Encoder Power Supply Voltage

For the PG-X3 option, set the voltage for the PG encoder power supply using jumper CN3 located on the option. Position the jumper as shown in Table 7.8 to select the voltage level.
NOTICE: The positioning of jumper CN3 selects the PG encoder power supply voltage ( 5.5 V or 12 V ). Select the voltage level for the PG encoder connected to the option and motor. If the wrong voltage is selected, the PG encoder may not operate properly or may become damaged as a result.

Table 7.8 Setting the PG Encoder Power Supply Voltage (IP) with Jumper CN3

| Voltage Level | $5.5 \mathrm{~V} \pm 5 \%$ (default) | $12.0 \mathrm{~V} \pm 5 \%$ |
| :---: | :---: | :---: |
| Jumper CN3 |  |  |

## PG-X3 Wire Gauges and Tightening Torques

Wire gauge and torque specifications are listed in Table 7.9. For simpler and more reliable wiring, use crimp ferrules on the wire ends. Refer to the option manuals for the wire size and torque specifications of other options.

Table 7.9 Wire Gauges and Tightening Torques of PG-X3 Option

| Terminal Signal | Screw Size | $\begin{aligned} & \text { Tightening } \\ & \text { Torque N•m } \\ & \text { (in } \cdot \mathrm{lb}) \end{aligned}$ | Bare Cable |  | Crimp Terminals |  | Wire Type |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Recomm. Gauge mm ${ }^{2}$ | Applicable Gauges mm² | Recomm. Gauge mm ${ }^{2}$ | Applicable Gauges mm² |  |
| $\begin{gathered} \text { A+, A-, B+, B- }, \\ \text { Z+, Z-, SD, FE, } \\ \text { IP, IG } \\ \hline \end{gathered}$ | M2 | $\begin{gathered} 0.22 \text { to } 0.25 \\ (1.95 \text { to } 2.21) \end{gathered}$ | 0.75 (18 AWG) | Stranded wire: 0.25 to 1.0 (24 to 17 AWG) Solid wire: 0.25 to 1.5 (24 to 16 AWG) | 0.5 (20 AWG) | $\begin{gathered} 0.25 \text { to } 0.5 \\ (24 \text { to } 20 \text { AWG) } \end{gathered}$ | Shielded twisted pair, etc. |
| $\begin{gathered} \mathrm{a}+, \mathrm{a}-, \mathrm{b}+, \mathrm{b-}, \mathrm{z}^{+}, \\ \mathrm{z}-, \mathrm{SG} \end{gathered}$ |  |  |  |  |  |  | Shielded cable, etc. |

## PG-X3 Crimp Terminals

Yaskawa recommends using CRIMPFOX 6 by Phoenix Contact or equivalent crimp terminals with the specifications listed in Table 7.10 for wiring to ensure proper connections.

Note: Properly trim wire ends so loose wire ends do not extend from the crimp terminals.
Table 7.10 Crimp Terminal Sizes

|  | Wire Gauge mm ${ }^{2}$ | Phoenix Contact Model | L mm (in) | d1 mm (in) | d2 mm (in) |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0.25 (24 AWG) | AI 0.25-6YE | $10.5(13 / 32)$ | $0.8(1 / 32)$ | $2(5 / 64)$ |
|  | 0.34 (22 AWG) | AI 0.34-6TQ | $10.5(13 / 32)$ | $0.8(1 / 32)$ | $2(5 / 64)$ |
|  | 0.5 (20 AWG) | AI 0.5-6WH | $14(9 / 16)$ | 1.1 (3/64) | $2.5(3 / 32)$ |

## Replacing the Drive Covers and Digital Operator and Checking for Proper Motor Rotation

1. Route the option wiring.

Depending on the drive model, some drives may require routing the wiring through the side of the front cover to the outside to provide adequate space for the wiring. In these cases, using diagonal cutting pliers, cut out the perforated openings on the left side of the drive front cover. Sharp edges along the cut out should be smoothed down with a file or sand paper to prevent any damage to the wires.
Route the communication wiring inside the enclosure for drives that do not require routing through the front cover. Refer to Table 7.11 and Figure 7.13 to determine the proper wire routing by drive model.

Table 7.11 Communication Wire Routing Selection

| Drive Series | Model | Wire Routing <1> |  |
| :---: | :--- | :---: | :---: |
|  | Through Front <br> Cover | Inside Drive |  |
| A1000 | Models 2A0004 to 2A0040; <br> 4A0002 to 4A0023; <br> 5A0003 to 5A0011; | Figure 7.13 (A) | - |
| A1000 | Models 2A0056 and above; <br> 4A0031 and above; <br> 5A0023 and above | - | Figure 7.13 (B) |

<1> Refer to Figure 7.13 for examples of the different wire routing techniques.

## A - Route wires through the openings provided on the left side of the front cover. <1>

$B$ - Use the open space provided inside the drive to route option wiring.

Figure 7.13 Wire Routing Examples
$<1>$ The drive will not meet NEMA 1, UL Type 1 requirements if wiring is exposed outside the enclosure.
2. Replace and secure the front covers of the drive ( $A, D$ ) and replace the digital operator ( $B$ ).

Figure 7.14 Replace the Front Covers and Digital Operator
Note: Take proper precautions when wiring the option so that the front covers will easily fit back onto the drive. Make sure no cables are pinched between the front covers and the drive when replacing the covers.
3. Set drive parameters for proper motor rotation. (Refer to A1: Initialization on page 250 and Refer to F1: PG Speed Control Card (PG-B3, PG-X3, PG-RT3, PG-F3) on page 278 for details on parameter settings) With a two-pulse or three-pulse PG encoder, the leading pulse determines the motor rotation direction. A PG encoder signal with leading A pulse is considered to be rotating forward (counterclockwise when viewing rotation from motor load side).

The A pulse leads, followed

Figure 7.15 Displacement of $A$ and $B$ Pulses
After connecting the PG encoder outputs to the option, apply power to the drive and manually rotate the motor and check the rotation direction by viewing monitor U1-05 on the digital operator.
Reverse motor rotation is indicated by a negative value for U1-05; forward motor rotation is indicated by a positive value.

If monitor U1-05 indicates that the forward direction is opposite of what is intended, set F1-05 or F1-32 to 1 or reverse the two A pulse wires with the two B pulse wires on option terminal TB1 as shown in Figure 7.16.

Figure 7.16 A Channel and B Channel Wire Switching
Please note that when the drive is initialized using A1-03 $=1110,2220,3330$, the value for $\mathrm{F} 1-05 / \mathrm{F} 1-32$ will reset to factory default and the parameter will need to be readjusted to switch the direction.

## Appendix: A

## Specifications

A. 1 HEAVY DUTY AND NORMAL DUTY RATINGS ..... 234
A. 2 POWER RATINGS ..... 235
A. 3 DRIVE SPECIFICATIONS ..... 244
A. 4 DRIVE WATT LOSS DATA ..... 246

## A. 1 Heavy Duty and Normal Duty Ratings

The capacity of the drive is based on two types of load characteristics: Heavy Duty (HD) and Normal Duty (ND). Refer to the following table for the differences between HD and ND.

Table A. 1 Selecting the Appropriate Load Rating

| Setting Parameter <br> C6-01 | Rated Output Current | Overload Tolerance | Default Carrier Frequency |
| :---: | :--- | :--- | :--- |
| $0:$ Heavy Duty | HD Rating varies by model $<1>$ | $150 \%$ rated output current for 60 s | 2 kHz |
| 1: Normal Duty <br> (default) | ND Rating varies by model $<1>$ | $120 \%$ rated output current for 60 s varies by model | 2 kHz, Swing PWM |

$<1>$ Refer to Power Ratings on page 235 for information on rating changes based on drive model.

- HD and ND: HD refers to applications requiring constant torque output, while ND refers to applications with variable torque needs. The drive allows the user to select HD or ND torque depending on the application. Fans, pumps, and blowers should use ND $(\mathrm{C} 6-01=1)$, and other applications generally use $\mathrm{HD}(\mathrm{C} 6-01=0)$.
- Swing PWM: Swing PWM equivalent to a 2 kHz audible noise. This function turns the motor noise into a less obtrusive white noise.
Note: Differences between HD ratings and ND ratings for the drive include rated input and output current, overload capacity, carrier frequency, and current limit. The default setting is for ND $(\mathrm{C} 6-01=1)$.

## A. 2 Power Ratings

## - Three-Phase 200 V Class Drive Models 2A0004 to 2A0030

Table A. 2 Power Ratings (Three-Phase 200 V Class)

| Item |  |  | Specification |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Drive Model |  |  | 2A0004 | 2A0006 | 2A0008 | 2A0010 | 2A0012 | 2A0018 | 2A0021 | 2A0030 |
| Maximum Applicable Motor Capacity (HP) ${ }^{<1>}$ |  | ND Rating | 0.75 | 1 | 2 | 3 | 3 | 5 | 7.5 | 10 |
|  |  | HD Rating | 0.75 | 1 | 2 | 2 | 3 | 3 | 5 | 7.5 |

|  |  | HD Rating | 2.9 | 5.8 | 7 | 7.5 | 11 | 15.6 | 18.9 | 28 |
| Input | Rated Voltage Rated Frequency |  | Three-phase 200 to $240 \mathrm{Vac} 50 / 60 \mathrm{~Hz} / 270$ to $340 \mathrm{Vdc}{ }^{<3>}$ |  |  |  |  |  |  |  |
|  | Allowable Voltage Fluctuation |  | -15 to 10\% |  |  |  |  |  |  |  |
|  | Allowable Frequency Fluctuation |  | $\pm 5 \%$ |  |  |  |  |  |  |  |
|  | Input Power (kVA) | ND Rating | 1.8 | 3.3 | 4.0 | 4.9 | 6.4 | 8.5 | 11 | 17 |
|  |  | HD Rating | 1.3 | 2.7 | 3.2 | 3.4 | 5.0 | 7.1 | 8.6 | 13 |
| Output | Rated Output Capacity$(\mathbf{k V A})^{<4>}$ | ND Rating ${ }^{<5>}$ | 1.3 | 2.3 | 3 | 3.7 | 4.6 | 6.7 | 8 | 11.4 |
|  |  | HD Rating ${ }^{\text {<6> }}$ | 1.2 | 1.9 | 2.6 | 3 | 4.2 | 5.3 | 6.7 | 9.5 |
|  | Rated Output Current (A) | ND Rating ${ }^{<5>}$ | 3.5 | 6 | 8 | 9.6 | 12 | 17.5 | 21 | 30 |
|  |  | HD Rating ${ }^{<6>}$ | 3.2 | 5 | 6.9 | 8 | 11 | 14 | 17.5 | 25 |
|  | Overload Tolerance |  | ND Rating: $120 \%$ of rated output current for 60 s <br> HD Rating: $150 \%$ of rated output current for 60 s <br> ating may be required for applications that start and stop frequently) |  |  |  |  |  |  |  |
|  | Carrier Frequency |  | User adjustable between 1 and 15 kHz |  |  |  |  |  |  |  |
|  | Maximum Output Voltage (V) |  | Three-phase 200 to 240 V (proportional to input voltage) |  |  |  |  |  |  |  |
|  | Maximum Output Frequency (Hz) |  | 400 Hz (user-set) |  |  |  |  |  |  |  |

$<1>$ The motor capacity (HP) refers to a NEC rated 4-pole motor. The rated output current of the drive output amps should be equal to or greater than the motor current. Select the appropriate capacity drive if operating the motor continuously above motor nameplate current.
$<2>$ Assumes operation at the rated output current. Input current rating varies depending on the power supply transformer, input reactor, wiring connections, and power supply impedance.
$<3>$ DC input is not available for UL standards.
$<4>$ Rated motor capacity is calculated with a rated output voltage of 220 V .
$<5>$ Carrier frequency is set to 2 kHz . Current derating is required in order to raise the carrier frequency.
$<6>$ Carrier frequency can be increased to 8 kHz while keeping this current derating. Higher carrier frequency settings require derating..

## Three-Phase 200 V Class Drive Models 2A0040 to 2A0211

$<6>$ Carrier frequency can be increased to 5 kHz while keeping this current derating. Higher carrier frequency settings require derating.

## A. 3 Drive Specifications

Note: 1. Perform rotational Auto-Tuning to obtain the performance specifications given below.
2. For optimum performance life of the drive, install the drive in an environment that meets the required specifications.

| Item |  | Specification |
| :---: | :---: | :---: |
| Control Characteristics | Control Method | The following control methods can be set using drive parameters: <br> - V/f Control (V/f) <br> - V/f Control with PG (V/f w/PG) <br> - Open Loop Vector Control (OLV) <br> - Closed Loop Vector Control (CLV) <br> - Open Loop Vector Control for PM (OLV/PM) <br> - Advanced Open Loop Vector Control for PM (AOLV/PM) <br> - Closed Loop Vector Control for PM (CLV/PM) |
|  | Frequency Control Range | 0.01 to 400 Hz |
|  | Frequency Accuracy (Temperature Fluctuation) | Digital input: within $\pm 0.01 \%$ of the max output frequency $\left(-10\right.$ to $\left.+40^{\circ} \mathrm{C}\right)$ Analog input: within $\pm 0.1 \%$ of the max output frequency $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$ |
|  | Frequency Setting Resolution | Digital inputs: 0.01 Hz <br> Analog inputs: $1 / 2048$ of the maximum output frequency setting ( 11 bit plus sign) |
|  | Output Frequency Resolution | 0.001 Hz |
|  | Frequency Setting Signal | Main speed frequency reference: DC -10 to $+10 \mathrm{~V}(20 \mathrm{k} \Omega)$, DC 0 to $+10 \mathrm{~V}(20 \mathrm{k} \Omega)$, 4 to $20 \mathrm{~mA}(250 \Omega), 0$ to $20 \mathrm{~mA}(250 \Omega)$ Main speed reference: Pulse train input (max. 32 kHz ) |
|  | Starting Torque | V/f, V/f w/PG: $150 \%$ at 3 Hz OLV: $200 \%$ at $0.3 \mathrm{~Hz}<1>$ CLV, AOLV/PM, CLV/PM: $200 \%$ at $0.0 \mathrm{r} / \mathrm{min}^{<1>}$ OLV/PM: $100 \%$ at 3 Hz |
|  | Speed Control Range | V/f, V/f w/PG: $1: 40$ OLV: 1:200 CLV, CLV/PM: $1: 1500$ OLV/PM: 1:20 AOLV/PM: $1: 100^{<2>}<3><4>$ |
|  | Speed Control Accuracy | $\begin{aligned} & \text { OLV: } \pm 0.2 \%\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right) \\ & \mathrm{CLV}: \pm 0.02 \%\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)<5> \end{aligned}$ |
|  | Speed Response | OLV, OLV/PM, AOLV/PM: $10 \mathrm{~Hz}\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\left(77{ }^{\circ} \mathrm{F} \pm 50^{\circ} \mathrm{F}\right)\right)$ <br> CLV, CLV/PM: $50 \mathrm{~Hz}\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\left(77^{\circ} \mathrm{F} \pm 50^{\circ} \mathrm{F}\right)\right)$ |
|  | Torque Limit | Parameter settings allow separate limits in four quadrants (OLV, CLV, AOLV/PM, CLV/PM) |
|  | Accel/Decel Time | 0.0 to $6000.0 \mathrm{~s} \mathrm{(4} \mathrm{selectable} \mathrm{combinations} \mathrm{of} \mathrm{independent} \mathrm{acceleration} \mathrm{and} \mathrm{deceleration} \mathrm{settings)}$ |
|  | Braking Torque | Approx. 20\% (approx. $125 \%$ when using braking resistor) ${ }^{<6>}$ <br> - Short-time decel torque ${ }^{<7>}$ : over $100 \%$ for $0.4 / 0.75 \mathrm{~kW}$ motors, over $50 \%$ for 1.5 kW motors, and over $20 \%$ for 2.2 kW and above motors ${ }^{<8>}$ (overexcitation/High Slip Braking: approx. 40\%) <br> - Continuous regenerative torque: approx. $20 \%^{<8>}$ (approx. $125 \%$ with dynamic braking resistor option ${ }^{<6>}: 10 \%$ ED, 10s) |
|  | Braking Transistor | Models 2A0004 to 2A0138, 4A0002 to 4A0072, and 5A0003 to 5A0052 have a built-in braking transistor. |
|  | V/f Characteristics | User-selected programs and V/f preset patterns possible |
|  | Main Control Functions | Torque Control, Droop Control, Speed/torque Control Switching, Feed Forward Control, Zero Servo Function, Momentary Power Loss Ride-Thru, Speed Search, Overtorque/Undertorque Detection, Torque Limit, 17 Step Speed (max), Accel/decel Switch, S-curve Accel/decel, 3-wire Sequence, Auto-tuning (rotational, stationary tuning), Dwell, Cooling Fan on/off Switch, Slip Compensation, Torque Compensation, Frequency Jump, Upper/lower Limits for Frequency Reference, DC Injection Braking at Start and Stop, Overexcitation Braking, High Slip Braking, PID Control (with sleep function), Energy Saving Control, MEMOBUS/Modbus Comm. (RS-422/RS-485 max, 115.2 kbps ), Fault Restart, Application Presets, DriveWorksEZ (customized function), Removable Terminal Block with Parameter Backup Function, Online Tuning, KEB, Overexcitation Deceleration, Inertia (ASR) Tuning, Overvoltage Suppression, High Frequency Injection. |

| Item |  | Specification |
| :---: | :---: | :---: |
| Protection Functions | Motor Protection | Electronic thermal overload relay |
|  | Momentary Overcurrent Protection | Drive stops when output current exceeds 200\% of Heavy Duty Rating |
|  | Overload Protection | Drive stops after 60 s at $150 \%$ of rated Heavy Duty output current ${ }^{<9>}$ |
|  | Overvoltage Protection | 200 V class: Stops when DC bus voltage exceeds approx. 410 V 400 V class: Stops when DC bus voltage exceeds approx. 820 V 600 V class: Stops when DC bus voltage exceeds approx. 1040 V |
|  | Undervoltage Protection | 200 V class: Stops when DC bus voltage falls below approx. 190 V 400 V class: Stops when DC bus voltage falls below approx. 380 V 600 V class: Stops when DC bus voltage falls below approx. 475 V |
|  | Momentary Power Loss Ride-Thru | Immediately stop after 15 ms or longer power loss. ${ }^{<10>}$ Continuous operation during power loss than 2 s (standard) ${ }^{<11>}$ |
|  | Heatsink Overheat Protection | Thermistor |
|  | Braking Resistor Overheat Protection | Overheat input signal for braking resistor (Optional ERF-type, 3\% ED) |
|  | Stall Prevention | Stall Prevention is available during acceleration, deceleration, and during run. |
|  | Ground Protection | Electronic circuit protection ${ }^{<12>}$ |
|  | DC Bus Charge LED | Remains lit until DC bus voltage falls below 50 V |
| Environment | Area of Use | Indoors |

| Protection Design |  | IP00/Open Type enclosure, IP20/NEMA 1, UL Type 1 enclosure ${ }^{\text {<14> }}$ |

$<1>$ Select control modes in accordance with drive capacity.
$<2>$ High-frequency current superposition (n8-57=1) is available.
$<3>$ Perform Rotational Auto Tuning.
$<4>$ Contact Yaskawa or your nearest sales representative if using a PM motor other than Super Energy-saving Motors manufactured by Yaskawa Motor Co., Ltd. (SSR1 series and SST4 series with standard specifications).
<5> The accuracy of these values depends on motor characteristics, ambient conditions, and drive settings. Specifications may vary with different motors and with changing motor temperature. Contact Yaskawa for consultation.
$<6>$ Disable Stall Prevention during deceleration (L3-04 = 0) when using a regenerative converter, a regenerative unit, a braking resistor or the Braking Resistor Unit. The default setting for the Stall Prevention function will interfere with the braking resistor.
$<7>$ Instantaneous average deceleration torque refers to the torque required to decelerate the motor (uncoupled from the load) from the rated motor speed down to zero in the shortest time.
$<8>$ Actual specifications may vary depending on motor characteristics.
$<9>$ Overload protection may be triggered when operating with $150 \%$ of the rated output current if the output frequency is less than 6 Hz .
$<10>$ May be shorter due to load conditions and motor speed.
$<11>$ A separate Momentary Power Loss Ride-Thru Unit is required for models 2A0004 to 2A0056 and 4A0002 to 4A0031 if the application needs to continue running for up to 2 seconds during a momentary power loss.
$<12>$ Ground protection is triggered when a ground short circuit occurs while the drive is running. The ground protection cannot be provided when the impedance of the ground fault path is too low, or when the drive is powered up while a ground fault is present at the output.
$<13>$ Models 4A0930 and 4A1200 are rated at $5.9 \mathrm{~m} / \mathrm{s}^{2}$.
$<14>$ Removing the top protective cover or bottom conduit bracket from an IP20/NEMA 1, UL Type 1 enclosure drive voids NEMA 1, UL Type 1 protection while maintaining IP20 conformity. This is applicable to models 2A0004 to 2A0211, 4A0002 to 4A0165, and 5A0003 to 5A0242.

## Appendix: B

## Parameter List

This appendix contains a full listing of all parameters and settings available in the drive.
B. 1 A: INITIALIZATION PARAMETERS ..... 250
B. 2 B: APPLICATION ..... 252
B. 3 C: TUNING ..... 260
B. 4 D: REFERENCES ..... 266
B. 5 E: MOTOR PARAMETERS ..... 271
B. 6 F: OPTION SETTINGS. ..... 278
B. 7 H PARAMETERS: MULTI-FUNCTION TERMINALS ..... 288
B. 8 L: PROTECTION FUNCTION ..... 299
B. 9 N: SPECIAL ADJUSTMENT ..... 308
B. 10 O: OPERATOR-RELATED SETTINGS ..... 312
B. 11 DRIVEWORKSEZ PARAMETERS ..... 315
B. 12 T: MOTOR TUNING ..... 316
B. 13 U: MONITORS. ..... 320

## B． 1 A：Initialization Parameters

Table B． 1 Symbols and Icons Used in Parameter Descriptions

| Symbol | Description |
| :---: | :---: |
| Sman | Parameter can be changed during run． |
| Motor 2 | Refers to a second motor when the drive is operating two motors．Use multi－function input terminals to switch between motors． |

The A parameter group creates the operating environment for the drive．This includes the parameter Access Level，Motor Control Method，Password，User Parameters and more．

$<1>$ Parameter setting value is not reset to the default value when the drive is initialized.
$<2>$ Setting range is 0 to 7 in models 4A0930 and 4A1200.
$<3>$ Default setting value is determined by he Application Preset selected in parameter A1-06.

## A2: User Parameters

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- | :--- |
| A2-01 to <br> A2-32 <br> $(0106$ to <br> $0125)$ | User Parameters 1 to 32 | User Param 1-32 | Recently edited parameters are listed here. The user can also <br> select parameters to appear here for quicker access. | Default: $<1>$ <br> Range: b1-01 to <br> o4-13 | - |
|  |  | User Parms Sel <br> A2-33 <br> $(0126)$ | User Parameter <br> Automatic Selection <br> $0:$ Disabled <br> $1:$ Enabled | 0: Parameters A2-01 to A2-32 are reserved for the user to create <br> a list of User Parameters. <br> 1: Save history of recently viewed parameters. Recently edited <br> parameters will be saved to A2-17 through A2-32 for quicker <br> access. | Default: $1<2>$ <br> Range: 0,1 |

$<1>$ Default setting value is determined by the Application Preset selected in parameter A1-06.
$<2>$ Default setting value is determined by parameter A1-06. Default is 0 when A1-06 $=0$, and 1 when A1-06 $\neq 0$.

## B. 2 b: Application

Application parameters configure the source of the Run command, DC Injection Braking, Speed Search, timer functions, PID control, the Dwell function, Energy Savings, and a variety of other application-related settings.

## b1: Operation Mode Selection

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { b1-17 } \\ \text { (01C6) } \end{gathered}$ | Run Command at Power Up | Run Cmd @ Pwr On 0: Cycle Ext Run <br> 1: Accept Ext Run | 0: Disregarded. A new Run command must be issued after power up. <br> 1: Allowed. Motor will start immediately after power up if a Run command is already enabled. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { b1-21 } \\ & (0748) \\ & <2> \end{aligned}$ | Start Condition <br> Selection at Closed Loop <br> Vector Control | PG Start Sel <br> 0: RejectRunCmd <br> 1: AcceptRunCmd | Selects a condition to start CLV control. There is normally no need to change this parameter from the default value. <br> 0 : Run command is not accepted when <br> b2-01 $\leq$ motor speed $<$ E1-09 <br> 1: Run command is accepted when b2-01 $\leq$ motor speed $<$ E1-09 <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0 <br> Range: 0,1 | - |

$<1>$ Setting range is $0,1,3$ in CLV, OLV/PM, AOLV/PM, and CLV/PM control modes.
$<2>$ Available in drive software versions PRG: 1018 and later.

## b2: DC Injection Braking and Short Circuit Braking

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { b2-01 } \\ & (0189) \end{aligned}$ | DC Injection Braking Start Frequency | DCInj Start Freq | Sets the frequency at which DC Injection Braking starts when "Ramp to stop" (b1-03 $=0)$ is selected. | Default: <1> <br> Min.: 0.0 Hz <br> Мах.: 10.0 Hz | 141 |
| $\begin{gathered} \text { b2-02 } \\ (018 \mathrm{~A}) \end{gathered}$ | DC Injection Braking Current | DCInj Current | Sets the DC Injection Braking current as a percentage of the drive rated current. <br> Note: This parameter is not available in AOLV/PM in models 4A0930 and 4A1200. | $\begin{aligned} & \text { Default: } 50 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 100 \end{aligned}$ | - |
| $\begin{gathered} \text { b2-03 } \\ (018 \mathrm{~B}) \end{gathered}$ | DC Injection Braking Time at Start | DCInj Time@Start | Sets DC Injection Braking (Zero Speed Control when in CLV and CLV/PM) time at start. Disabled when set to 0.00 seconds. <br> Note: $\quad$ This parameter is not available in AOLV/PM in models 4A0930 and 4A1200. | Default: 0.00 s <br> Min.: 0.00 <br> Мах.: 10.00 | - |
| $\begin{gathered} \text { b2-04 } \\ (018 \mathrm{C}) \end{gathered}$ | DC Injection Braking Time at Stop | DCInj Time@Stop | Sets DC Injection Braking (Zero Speed Control when in CLV and CLV/PM) time at stop. <br> Note: This parameter is not available in AOLV/PM in models 4A0930 and 4A1200. | Default: <1> <br> Min.: 0.00 s <br> Max.: 10.00 s | - |
| $\begin{aligned} & \text { b2-08 } \\ & (0190) \end{aligned}$ | Magnetic Flux <br> Compensation Value | Field Comp | Sets the magnetic flux compensation as a percentage of the noload current value (E2-03). | $\begin{aligned} & \text { Default: } 0 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 1000 \end{aligned}$ | - |
| $\begin{gathered} \text { b2-12 } \\ (01 \mathrm{BA}) \end{gathered}$ | Short Circuit Brake <br> Time at Start | SC Brake T@Start | Sets the time for Short Circuit Braking operation at start. ${ }^{<2>}$ | $\begin{aligned} & \text { Default: } 0.00 \mathrm{~s} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 25.50 \end{aligned}$ | - |
| $\begin{gathered} \text { b2-13 } \\ (01 \mathrm{BB}) \end{gathered}$ | Short Circuit Brake Time at Stop | SC Brake T@Stop | Sets the Short Circuit Braking operation time at stop. ${ }^{<2>}$ | Default: 0.50 s <br> Min.: 0.00 <br> Max.: 25.50 | - |
| $\begin{aligned} & \text { b2-18 } \\ & (0177) \end{aligned}$ | Short Circuit Braking Current | Shrt Cir Brk I | Determines the current level for Short Circuit Braking. Set as a percentage of the motor rated current. | $\begin{aligned} & \text { Default: } 100.0 \% \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 200.0 \end{aligned}$ | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ A coasting motor may require a braking resistor circuit to bring the motor to a stop in the required time.

## b b3: Speed Search

| No. <br> (Addr <br> Hex.) | Name | LCD Display | Description | Values | Page |
| :--- | :--- | :--- | :--- | :--- | :---: |
| b3-01 <br> $(0191)$ | Speed Search Selection <br> at Start | SpdSrch at Start <br> 0: Disabled <br> 1: Enabled | 0: Disabled <br> 1: Enabled | Default: $<1>$ <br> Range: 0,1 | 142 |
| b3-02 <br> $(0192)$ | Speed Search <br> Deactivation Current | SpdSrch DeactCur | Sets the current level at which the speed is assumed to be <br> detected and Speed Search is ended. Set as a percentage of the <br> drive rated current. | Default: $<1>$ <br> Min.: $0 \%$ <br> Max.: $200 \%$ | - |

| No. (Addr Hex.) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { b3-03 } \\ (0193) \end{gathered}$ | Speed Search <br> Deceleration Time | SpdSrch Dec Time | Sets output frequency reduction time during Speed Search. | Default: 2.0 s <br> Min.: 0.1 <br> Max.: 10.0 | - |
| $\begin{aligned} & \text { b3-04 } \\ & (0194) \end{aligned}$ | V/f Gain during Speed Search | SpdSrch V/f | Determines how much to lower the V/f ratio during Speed Search. <br> Output voltage during Speed Search equals the V/f setting multiplied by b3-04. <br> Note: Available control mode for parameter b3-04 varies by drive model: <br> Models 2A0004 to 2A0415, 4A0002 to 4A0675, <br> and 5A0003 to 5A0242: <br> Available when A1-02 $=0$ <br> Models 4A0930 and 4A1200: Available when $\mathrm{A} 1-02=0,2$ | Default: <2> <br> Min.: 10\% <br> Max.: 100\% | - |
| $\begin{aligned} & \text { b3-05 } \\ & (0195) \end{aligned}$ | Speed Search Delay Time | Search Delay | When using an external contactor on the output side, b3-05 delays executing Speed Search after a momentary power loss to allow time for the contactor to close. | $\begin{aligned} & \text { Default: } 0.2 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 100.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { b3-06 } \\ & (0196) \end{aligned}$ | Output Current 1 during Speed Search | Srch Im Lvl1 | Sets the current injected to the motor at the beginning of Speed Estimation Speed Search. Set as a coefficient for the motor rated current. | Default: <br> Min.: 0.0 <br> Max.: 2.0 | - |
| $\begin{aligned} & \text { b3-07 } \\ & (0197) \end{aligned}$ | Output Current 2 during Speed Search (Speed Estimation Type) | Srch Im Lvl2 | Sets the amount of output current during Speed Estimation Speed Search as a coefficient for the no-load current. <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: <2> <br> Min.: 0.0 <br> Max.: 5.0 | - |
| $\begin{aligned} & \text { b3-08 } \\ & (0198) \end{aligned}$ | Current Control Gain during Speed Search (Speed Estimation Type) | Srch ACR P Gain | Sets the proportional gain for the current controller to adjust responsiveness during Speed Estimation Speed Search. There is normally no need to change this parameter from the default setting. | Default: <3> <br> Min.: 0.00 <br> Max.: 6.00 | - |
| $\begin{aligned} & \text { b3-09 } \\ & (0199) \end{aligned}$ | Current Control Integral <br> Time during Speed Search (Speed Estimation Type) | Srch ACR I Time | Sets the integral time for the current controller during to adjust responsiveness during Speed Estimation Speed Search. <br> There is normally no need to change this parameter from the default value. | Default: <1> <br> Min.: 0.0 ms <br> Max.: 1000.0 ms | - |
| $\begin{gathered} \text { b3-10 } \\ (019 \mathrm{~A}) \end{gathered}$ | Speed Search Detection Compensation Gain | Srch Detect Comp | Sets the gain which is applied to the speed detected by Speed Estimation Speed Search before the motor is reaccelerated. Increase this setting if ov occurs when performing Speed Search after a relatively long period of baseblock. | Default: 1.05 <br> Min.: 1.00 <br> Max.: 1.20 | - |
| $\begin{gathered} \text { b3-12 } \\ (019 \mathrm{C}) \end{gathered}$ | Minimum Current Detection Level during Speed Search | Srch I Deadband | Sets the minimum current detection level during Speed Search. <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: 6.0 <br> Min.: 2.0 <br> Max.: 10.0 | - |
| $\begin{gathered} \text { b3-14 } \\ (019 \mathrm{E}) \end{gathered}$ | Bi-Directional Speed Search Selection | Bidir Search Sel <br> 0: Disabled <br> 1: Enabled | 0 : Disabled (uses the direction of the frequency reference) <br> 1: Enabled (drive detects which way the motor is rotating) | Default: <1> <br> Range: 0,1 | - |
| $\begin{aligned} & \text { b3-17 } \\ & \text { (01F0) } \end{aligned}$ | Speed Search Restart Current Level | SrchRestart Lvl | Sets the Speed Search restart current level as a percentage of the drive rated current. | Default: 150\% <br> Min.: 0 <br> Max.: 200 | - |
| $\begin{gathered} \text { b3-18 } \\ (01 \mathrm{~F} 1) \end{gathered}$ | Speed Search Restart Detection Time | SrchRestart Time | Sets the time to detect Speed Search restart. | Default: 0.10 s <br> Min.: 0.00 <br> Max.: 1.00 | - |
| $\begin{aligned} & \text { b3-19 } \\ & \text { (01F2) } \end{aligned}$ | Number of Speed Search Restarts | Num of SrchRestr | Sets the number of times the drive can attempt to restart when performing Speed Search. | Default: 3 <br> Min.: 0 <br> Max.: 10 | - |
| $\begin{gathered} \text { b3-24 } \\ (01 \mathrm{C} 0) \end{gathered}$ | Speed Search Method Selection | SpdSrch Method 0: CurrentDetection 1: Speed Estimation | 0: Current Detection 1: Speed Estimation | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { b3-25 } \\ (01 \mathrm{C} 8) \end{gathered}$ | Speed Search Wait Time | SpdSrch WaitTime | Sets the time the drive must wait between each Speed Search restart attempt. | Default: 0.5 s <br> Min.: 0.0 <br> Max.: 30.0 | - |
| $\begin{aligned} & \text { b3-26 } \\ & (01 \mathrm{C} 7) \end{aligned}$ | Direction Determining Level | Spd Search Meth | Sets the level that determines the direction of motor rotation. <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: <2> <br> Min.: 40 <br> Max.: 60000 | - |

| No. (Addr Hex.) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { b3-27 } \\ & (01 \mathrm{C} 9) \end{aligned}$ | Start Speed Search Select | SPD Search By AI <br> 0 : start from 0 <br> 1: start SPD | Selects a condition to activate Speed Search Selection at Start (b3-01) or External Speed Search Command 1 or 2 from the multi-function input. <br> 0 : Triggered when a Run command is issued (normal). <br> 1: Triggered when an external baseblock is released. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { b3-29 } \\ (077 \mathrm{C}) \\ <4> \end{gathered}$ | Speed Search Induced Voltage Level | SpdSrch Ind Vlvl | Performs Speed Search when the motor induced voltage exceeds the set level. <br> There is normally no need to change this parameter from the default value, but if changes are necessary, try lowering this value in small increments. When set too low, the drive will not perform Speed Search. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 10\% <br> Min.: 0 <br> Max.: 10 | - |
| $\begin{gathered} \text { b3-33 } \\ (0 \mathrm{~B} 3 \mathrm{~F}) \\ <5> \end{gathered}$ | Speed Search Selection when Run Command is Given during Uv | SpdSrch Start UV <br> 0: Disabled <br> 1: Enabled | Activates and deactivates Speed Search at start in accordance with whether a Run command was issued during an undervoltage (Uv) condition. Function is active when a momentary power loss (L2-01 = 1 or 2), Speed Search at start (b3-01 $=1$ ), and coasting to a stop $(\mathrm{b} 1-03=1)$ are enabled. <br> 0: Disabled <br> 1: Enabled <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0 <br> Range: 0,1 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ Default setting is determined by parameter o2-04, Drive Model Selection.
$<3>$ Default setting is determined by parameters A1-02, Control Method Selection, and o2-04, Drive Model Selection.
$<4>$ Available in drive software versions PRG: 1018 and later.
<5> Available in drive software versions PRG: 1019 and later.

## - b4: Timer Function

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { b4-01 } \\ (01 \mathrm{~A} 3) \end{gathered}$ | Timer Function On- Delay Time Delay Time | Delay-ON Timer | Sets the on-delay and off-delay times for a digital timer output (H2-पロ = 12). <br> The output is triggered by a digital input programmed to H1- पᄆ = 18). | Default: 0.0 s Min.: 0.0 Max.: 3000.0 | - |
| $\begin{gathered} \text { b4-02 } \\ (01 \mathrm{~A} 4) \end{gathered}$ | Timer Function OffDelay Time | Delay-OFF Timer |  | $\begin{aligned} & \text { Default: } 0.0 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 3000.0 \end{aligned}$ | - |
| $\begin{gathered} \text { b4-03 } \\ (0 \mathrm{~B} 30) \\ <1> \end{gathered}$ | H2-01 ON Delay Time | H2-01 ON Delay | Sets the length of the delay time for contact outputs to open or close for the related functions set in $\mathrm{H} 2-\square \square$. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0 ms <br> Min.: 0 <br> Мах.: 65535 | - |
| $\begin{gathered} \text { b4-04 } \\ \text { (0B31) } \\ <1> \end{gathered}$ | H2-01 OFF Delay Time | H2-01 OFF Delay |  |  |  |
| $\begin{gathered} \text { b4-05 } \\ (0 \mathrm{~B} 32) \\ \langle\gg \end{gathered}$ | H2-02 ON Delay Time | H2-02 ON Delay |  |  |  |
| $\begin{gathered} \text { b4-06 } \\ \text { (0B33) } \\ <1> \end{gathered}$ | H2-02 OFF Delay Time | H2-02 OFF Delay |  |  |  |
| $\begin{gathered} \hline \text { b4-07 } \\ \text { (0B34) } \\ <1> \end{gathered}$ | H2-03 ON Delay Time | H2-03 ON Delay |  |  |  |
| $\begin{gathered} \mathrm{b} 4-08 \\ (0 \mathrm{~B} 35) \\ <1> \end{gathered}$ | H2-03 OFF Delay Time | H2-03 OFF Delay |  |  |  |

$<1>$ Available in drive software versions PRG: 1019 and later.

## b5: PID Control

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \mathrm{b} 5-01 \\ (01 \mathrm{~A} 5) \end{gathered}$ | PID Function Setting | PID Mode <br> 0: Disabled <br> Enabled D=Fdbk <br> Enabled D=Fdfwd <br> Fref+PID D=Fdbk <br> Fref+PID D=Fdfwd <br> Enabled D=Fdbk2 <br> 6: Enabled D=Fdfwd2 <br> 7: Fref+PID D=Fdbk2 <br> 8: Fref <br> + PIDD $=$ Fdfwd2 | 0: Disabled <br> 1: Enabled (PID output becomes output frequency reference, deviation D controlled) <br> 2: Enabled (PID output becomes output frequency reference, feedback D controlled) <br> 3: Enabled (PID output added to frequency reference, deviation D controlled) <br> 4: Enabled (PID output added to frequency reference, feedback D controlled) <br> 5: Mode compatible with setting 1 of similar products from a previous product line <br> 6: Mode compatible with setting 2 of similar products from a previous product line <br> 7: Mode compatible with setting 3 of similar products from a previous product line <br> 8: Mode compatible with setting 4 of similar products from a previous product line <br> Note: <br> 1. If the drive is replaced with Varispeed F7 drive or a similar product from a previous product line, use settings 5 to 8 instead of settings 1 to 4 . <br> 2. Settings 5 to 8 are not available in models 4A0930 and 4A1200. | $\begin{aligned} & \text { Default: } 0^{<1>} \\ & \text { Range: } 0 \text { to } 8 \\ & <2> \end{aligned}$ | - |
| $\begin{gathered} \text { b5-02 } \\ (01 \mathrm{~A} 6) \\ \square \text { ®uw } \end{gathered}$ | Proportional Gain Setting (P) | PID Gain | Sets the proportional gain of the PID controller. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 25.00 | - |
| $\begin{gathered} \text { b5-03 } \\ (01 \mathrm{~A} 7) \\ \text { © } \mathrm{sum} \end{gathered}$ | Integral Time Setting (I) | PID I Time | Sets the integral time for the PID controller. | Default: 1.0 s <br> Min.: 0.0 <br> Max.: 360.0 | - |
| $\begin{gathered} \text { b5-04 } \\ (01 \mathrm{~A} 8) \\ \hline \Delta \text { RuN } \end{gathered}$ | Integral Limit Setting | PID I Limit | Sets the maximum output possible from the integrator as a percentage of the maximum output frequency. | Default: 100.0\% <br> Min.: 0.0 <br> Max.: 100.0 | - |
| $\begin{gathered} \text { b5-05 } \\ (01 \mathrm{~A} 9) \\ 0 \text { RuN } \end{gathered}$ | Derivative Time (D) | PID D Time | Sets D control derivative time. | Default: 0.00 s <br> Min.: 0.00 <br> Max.: 10.00 | - |
| $\begin{gathered} \text { b5-06 } \\ (01 \mathrm{AA}) \\ \underset{\Delta \text { RuN }}{ } \end{gathered}$ | PID Output Limit | PID Limit | Sets the maximum output possible from the entire PID controller as a percentage of the maximum output frequency. | Default: 100.0\% <br> Min.: 0.0 <br> Max.: 100.0 | - |
| $\begin{gathered} \text { b5-07 } \\ (01 \mathrm{AB}) \end{gathered}$ | PID Offset Adjustment | PID Offset | Applies an offset to the PID controller output. Set as a percentage of the maximum output frequency. | Default: 0.0\% <br> Min.: -100.0 <br> Max.: 100.0 | - |
| $\begin{gathered} \mathrm{b} 5-08 \\ (01 \mathrm{AC}) \\ 0 \text { ®aun } \end{gathered}$ | PID Primary Delay Time Constant | PID Delay Time | Sets a low pass filter time constant on the output of the PID controller. | Default: 0.00 s <br> Min.: 0.00 <br> Max.: 10.00 | - |
| $\begin{gathered} \text { b5-09 } \\ (01 \mathrm{AD}) \end{gathered}$ | PID Output Level Selection | Output Level Sel 0: Normal Character 1: Rev Character | 0: Normal output (direct acting) <br> 1: Reverse output (reverse acting) | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { b5-10 } \\ (01 \mathrm{AE}) \end{gathered}$ | PID Output Gain Setting | Output Gain | Sets the gain applied to the PID output. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 25.00 | - |

| $\begin{gathered} \text { b7-01 } \\ (01 \mathrm{CA}) \end{gathered}$ | Droop Control Gain | DROOP Quantity | Sets the speed reduction gain applied at a torque reference of $100 \%$. Set as a percentage of motor base speed. | Default: 0.0\% <br> Min.: 0.0 <br> Max.: 100.0 | - |
| $\begin{gathered} \mathrm{b} 7-02 \\ (01 \mathrm{CB}) \\ (\Delta \text { вuм } \end{gathered}$ | Droop Control Delay Time | DROOP Delay Time | Adjusts the responsiveness of Droop Control. | Default: 0.05 s <br> Min.: 0.03 <br> Max.: 2.00 | - |
|  | Droop Control Limit Selection | Droop Limit Sel <br> 0: Disabled <br> 1: Enabled | 0: Disabled <br> 1: Enabled | Default: 1 <br> Range: 0,1 | - |

$<1>$ Available in drive software versions PRG: 1015 and later.
b8: Energy Saving

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { b8-01 } \\ (01 \mathrm{CC}) \end{gathered}$ | Energy Saving Control Selection | Energy Save Sel <br> 0: Disabled <br> 1: Enabled | 0: Disabled <br> 1: Enabled | Default: <1> <br> Range: 0,1 | - |
| $\begin{gathered} \hline \text { b8-02 } \\ (01 \mathrm{CD}) \end{gathered}$ | Energy Saving Gain | Energy Save Gain | Sets the gain used for Energy Saving. | $\left\lvert\, \begin{aligned} & \text { Default:<1> } \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 10.0 \end{aligned}\right.$ | - |
| $\begin{gathered} \text { b8-03 } \\ (01 \mathrm{CE}) \end{gathered}$ | Energy Saving Control Filter Time Constant | Energy Save F.T | Sets a time constant for Energy Saving. | Default: <2> Min.: 0.00 s Max.: 10.00 s | - |

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { b8-04 } \\ (01 \mathrm{CF}) \end{gathered}$ | Energy Saving Coefficient Value | Energy Save COEF | Determines the level of maximum motor efficiency. Setting range is 0.0 to 2000.0 for drives 3.7 kW and smaller. The display resolution depends on the rated output current after the Drive Duty has been set in parameter C6-01. | Default: <3> <4> <br> Min.: 0.00 <br> Max.: 655.00 | - |
| $\begin{gathered} \text { b8-05 } \\ \text { (01D0) } \end{gathered}$ | Power Detection Filter Time | kW Filter Time | Sets a time constant filter for output power detection. | $\begin{aligned} & \text { Default: } 20 \mathrm{~ms} \\ & \text { Min.: } 0 \\ & \text { Max.: } 2000 \end{aligned}$ | - |
| $\begin{gathered} \text { b8-06 } \\ \text { (01D1) } \end{gathered}$ | Search Operation Voltage Limit | Search V Limit | Sets the limit for the voltage search operation as a percentage of the motor rated voltage. | $\begin{aligned} & \text { Default: 0\% } \\ & \text { Min.: 0 } \\ & \text { Max.: } 100 \end{aligned}$ | - |
| $\begin{gathered} \text { b8-16 } \\ (01 \mathrm{~F}) \\ <5> \end{gathered}$ | Energy Saving <br> Parameter (Ki) for PM <br> Motors | PM Enrgy Save Ki | Coefficient to adjust torque linearity. <br> Set to the Ki value on the motor nameplate. <br> When parameter E5-01, Motor Code Selection (for PM <br>  calculated value will be set. This set value cannot be changed. | Default: 1.00 <br> Min.: 0.00 <br> Max.: $3.00^{<6>}$ | - |
| $\begin{gathered} \text { b8-17 } \\ (01 \mathrm{~F} 9) \\ <5> \end{gathered}$ | Energy Saving <br> Parameter (Kt) for PM <br> Motors | PM Enrgy Save Kt | Coefficient to adjust torque linearity. <br> Set to the Kt value on the motor nameplate. <br> When parameter E5-01, Motor Code Selection (for PM <br> Motors), is set to $1 \square \square \square$ or 2Пロप, the automatically <br> calculated value will be set. This set value cannot be changed. | Default: 1.00 <br> Min.: 0.00 <br> Max.: $3.00^{<6>}$ | - |
| $\begin{gathered} \text { b8-27 } \\ \text { (0B52) } \end{gathered}$ | q-Axis Current Compensation Method when Output Voltage is Limited | Iq Comp Method 0 : Priority OutVolt 1: Priority Iq | Sets a compensation method for the q -Axis current when output voltage is limited. <br> There is normally no need to change this parameter from the default value. <br> 0: Output Voltage Limit Priority <br> 1: q-Axis Current Priority <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0 <br> Range.: 0,1 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ Default setting is determined by parameters A1-02, Control Method Selection, and o2-04, Drive Model Selection.
$<3>$ Default setting is determined by parameters o2-04, Drive Model Selection, and C6-01, Drive Duty Selection.
$<4>$ Parameter value changes automatically if E2-11 is manually changed or changed by Auto-Tuning.
<5> Available in drive software versions PRG: 1015 and later.
<6> The maximum value is 2.00 in drive software versions PRG: 1018 and earlier.

## - b9: Zero Servo

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- | :--- |
| b9-01 <br> (01DA) | Zero Servo Gain | Zero Servo Gain | Sets the position loop gain for the Zero Servo function. | Default: 5 <br> Min.: 0 <br> Max.: 100 | - |
| b9-02 <br> $(01 D B)$ | Zero Servo Completion <br> Width | Zero Servo Count | Sets the range to trigger an output terminal set for "Zero Servo <br> Complete" during Zero Servo operation. | Default: 10 <br> Min.: 0 <br> Max.: 16383 | - |

## B. 3 C: Tuning

C parameters are used to adjust the acceleration and deceleration times, S-curves, torque compensation, and carrier frequency selections.

## C1: Acceleration and Deceleration Times

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { C1-01 } \\ (0200) \\ 0 \text { RUN } \end{gathered}$ | Acceleration Time 1 | Accel Time 1 | Sets the time to accelerate from 0 to maximum frequency. | Default: 10.0 s <br> Min.: 0.0 | 143 |
|  | Deceleration Time 1 | Decel Time 1 | Sets the time to decelerate from maximum frequency to 0 . | $\operatorname{Max}_{<l>} \text {.: } 6000.0$ | 143 |
| $\begin{aligned} & \text { C1-03 } \\ & (0202) \\ & \stackrel{\rightharpoonup}{\text { R BuN }} \end{aligned}$ | Acceleration Time 2 | Accel Time 2 | Sets the time to accelerate from 0 to maximum frequency. | Default: 10.0 s <br> Min.: 0.0 | 143 |
| $$ | Deceleration Time 2 | Decel Time 2 | Sets the time to decelerate from maximum frequency to 0 . | $\underset{\langle 1\rangle}{\operatorname{Max} .: ~} 6000.0$ | 143 |
| $\begin{aligned} & \mathrm{C} 1-05 \\ & (0204) \\ & \left(\begin{array}{l} \text { RUNN } \end{array}\right. \end{aligned}$ | Acceleration Time 3 (Motor 2 Accel Time 1) | Accel Time 3 | Sets the time to accelerate from 0 to maximum frequency. | Default: 10.0 s <br> Min.: 0.0 | 143 |
| $\begin{gathered} \text { C1-06 } \\ (0205) \\ \text { (RUN } \end{gathered}$ | Deceleration Time 3 <br> (Motor 2 Decel Time 1) | Decel Time 3 | Sets the time to decelerate from maximum frequency to 0 . | $\underset{\langle l>}{\operatorname{Max} .: ~} 6000.0$ | 143 |
| $\begin{gathered} \text { C1-07 } \\ (0206) \\ \hline \boxtimes \text { RuN } \end{gathered}$ | Acceleration Time 4 (Motor 2 Accel Time 2) | Accel Time 4 | Sets the time to accelerate from 0 to maximum frequency. | Default: 10.0 s <br> Min.: 0.0 | 143 |
| $\begin{aligned} & \mathrm{C} 1-08 \\ & (0207) \\ & \underbrace{}_{\text {RuN }} \end{aligned}$ | Deceleration Time 4 (Motor 2 Decel Time 2) | Decel Time 4 | Sets the time to decelerate from maximum frequency to 0 . | $\operatorname{Max}_{<l>}: 6000.0$ | 143 |
|  | Fast Stop Time | Fast Stop Time | Sets the time for the Fast Stop function. | $\begin{aligned} & \text { Default: } 10.0 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 6000.0 \\ & \ll> \end{aligned}$ | - |
| $\begin{aligned} & \text { C1-10 } \\ & (0209) \end{aligned}$ | Accel/Decel Time Setting Units | Acc/Dec Units 0: 0.01 Seconds 1: 0.1 Seconds | $\begin{aligned} & \text { 0: } 0.01 \mathrm{~s}(0.00 \text { to } 600.00 \mathrm{~s}) \\ & 1: 0.1 \mathrm{~s}(0.0 \text { to } 6000.0 \mathrm{~s}) \end{aligned}$ | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { C1-11 } \\ & (020 \mathrm{~A}) \end{aligned}$ | Accel/Decel Time Switching Frequency | Acc/Dec SW Freq | Sets the frequency to switch between accel/decel time settings | Default: 0.0 Hz <br> Min.: 0.0 <br> Max.: 400.0 | - |

$<1>$ Setting range value is determined by parameter C1-10, Accel/Decel Time Setting Units. When C1-10 $=0$ (units of 0.01 seconds), the setting range becomes 0.00 to 600.00 seconds.

## C2: S-Curve Characteristics

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \mathrm{C} 2-01 \\ (020 \mathrm{~B}) \end{gathered}$ | S-Curve Characteristic at Accel Start | SCrv Acc @ Start | The S-curve can be controlled at the four points shown below. | $\begin{aligned} & \text { Default: } 0.20 \mathrm{~s} \\ & <1> \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 10.00 \end{aligned}$ | - |
| $\begin{aligned} & \text { C2-02 } \\ & (020 \mathrm{C}) \end{aligned}$ | S-Curve Characteristic at Accel End | SCrv Acc @ End |  | $\begin{aligned} & \text { Default: } 0.20 \mathrm{~s} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 10.00 \end{aligned}$ | - |
| $\begin{gathered} \text { C2-03 } \\ (020 \mathrm{D}) \end{gathered}$ | S-Curve Characteristic at Decel Start | SCrv Dec @ Start |  | $\begin{aligned} & \text { Default: } 0.20 \mathrm{~s} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 10.00 \end{aligned}$ | - |
| $\begin{gathered} \mathrm{C} 2-04 \\ (020 \mathrm{E}) \end{gathered}$ | S-Curve Characteristic at Decel End | SCrv Dec @ End |  | $\begin{aligned} & \text { Default: } 0.00 \mathrm{~s} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 10.00 \end{aligned}$ | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.

## C3: Slip Compensation

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { C3-01 } \\ & (020 \mathrm{~F}) \\ & \Delta_{\text {BuN }} \end{aligned}$ | Slip Compensation Gain | Slip Comp Gain | Sets the gain for the motor slip compensation function used for motor 1 . | Default: <1> <br> Min.: 0.0 <br> Max.: 2.5 | - |
| $\begin{aligned} & \hline \text { C3-02 } \\ & (0210) \\ & \Delta_{\text {BuN }} \end{aligned}$ | Slip Compensation Primary Delay Time | Slip Comp Time | Adjusts the slip compensation function delay time used for motor 1. | Default: <1> <br> Min.: 0 ms <br> Max.: 10000 ms | - |
| $\begin{aligned} & \text { C3-03 } \\ & (0211) \end{aligned}$ | Slip Compensation Limit | Slip Comp Limit | Sets an upper limit for the slip compensation function as a percentage of motor rated slip for motor 1 (E2-02). | $\begin{aligned} & \text { Default: } 200 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 250 \end{aligned}$ | - |
| $\begin{aligned} & \mathrm{C} 3-04 \\ & (0212) \end{aligned}$ | Slip Compensation Selection during Regeneration | Slip Comp Regen | 0: Disabled. <br> 1: Enabled above 6 Hz . <br> 2: Enabled whenever slip compensation is possible. | Default: 0 <br> Range: 0 to 2 | - |
| $\begin{aligned} & \text { C3-05 } \\ & (0213) \end{aligned}$ | Output Voltage Limit Operation Selection | Output V Lim Sel | 0: Disabled. <br> 1: Enabled. Automatically decreases motor flux when output voltage saturation is reached. <br> Note: The available control modes for parameter C3-05 vary by drive model: Models 2A0004 to 2A0415, 4A0002 to 4A0675, and 5A0003 to 5A0242: <br> Available when A1-02 $=2,3$. <br> Models 4A0930 and 4A1200: Available when $\mathrm{A} 1-02=2,3,6,7$. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { C3-16 } \\ & (0261) \end{aligned}$ | Output Voltage Limit Operation Start Level (Percentage Modulation) | Output V Lim Sta | Sets the output voltage limit operation start level (percentage modulation) when C3-05 is enabled. <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: 85.0\% <br> Min.: 70.0 <br> Max.: 90.0 | - |
| $\begin{aligned} & \text { C3-17 } \\ & (0262) \end{aligned}$ | Maximum Output Voltage Limit Level (Percentage Modulation) | Output V Lim Max | Sets the output voltage limit operation determined by C3-18 (percentage modulation) when C3-05 is enabled. <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: 90.0\% <br> Min.: 85.0 <br> Max.: 100.0 | - |
| $\begin{aligned} & \text { C3-18 } \\ & (0263) \end{aligned}$ | Output Voltage Limit Level | Output V Lim lev | Sets the maximum percentage of output voltage reduction when C3-05 is enabled. <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: 90.0\% <br> Min.: 30.0 <br> Мах.: 100.0 | - |
| $\begin{aligned} & \text { C3-21 } \\ & (033 \mathrm{E}) \\ & \hline \text { RUN } \end{aligned}$ | Motor 2 Slip Compensation Gain | SlpCmp Gain Mtr2 | Sets the slip compensation gain used for motor 2 . | Default: <2> <br> Min.: 0.0 <br> Max.: 2.5 | - |

## B. 3 C: Tuning

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- | :--- |
| C3-22 <br> $(0241)$ <br> © RuN | Motor 2 Slip <br> Compensation Primary <br> Delay Time | Slip Comp Time 2 | Sets the slip compensation delay time used for motor 2. | Default: $<2>$ <br> Min.: 0 ms <br> Max.: 1000 ms | - |
| C3-23 <br> $(0242)$ | Motor 2 Slip <br> Compensation Limit | Silp Comp Limit2 | Sets the upper limit for the slip compensation function for <br> motor 2. Set as a percentage of the motor rated slip (E4-02). | Default: $200 \%$ <br> Min.: 0 <br> Max.: 250 | - |
| C3-24 <br> (0243) | Motor 2 Slip <br> Compensation Selection <br> During Regeneration | RegenSlpComp2 <br> 0: Disabled <br> 1: Above 6 Hz <br> 2: Lowst possbl spd | 0: Disabled. <br> 1: Enabled above 6 Hz. <br> 2: Enabled whenever slip compensation is possible. | Default: 0 <br> Range: 0 to 2 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ Default setting is determined by parameter E3-01, Motor 2 Control Mode Selection.

## C4: Torque Compensation

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { C4-01 } \\ & (0215) \\ & \hline \Delta \text { RUN } \end{aligned}$ | Torque Compensation Gain | Torq Comp Gain | Sets the gain for the automatic torque (voltage) boost function and helps to produce better starting torque. Used for motor 1. | Default: <1> <br> Min.: 0.00 <br> Max.: 2.50 | - |
| $\begin{aligned} & \mathrm{C} 4-02 \\ & (0216) \\ & \hline \diamond \text { RuN } \end{aligned}$ | Torque Compensation Primary Delay Time 1 | Torq Comp Time | Sets the torque compensation filter time. | Default: <2> <br> Min.: 0 ms <br> Max.: 60000 ms | - |
| $\begin{aligned} & \mathrm{C} 4-03 \\ & (0217) \end{aligned}$ | Torque Compensation at Forward Start | F TorqCmp@start | Sets torque compensation at forward start as a percentage of motor torque. | Default: $0.0 \%$ <br> Min.: 0.0 <br> Max.: 200.0 | - |
| $\begin{aligned} & \mathrm{C} 4-04 \\ & (0218) \end{aligned}$ | Torque Compensation at Reverse Start | R TorqCmp@start | Sets torque compensation at reverse start as a percentage of motor torque. | $\begin{aligned} & \text { Default: } 0.0 \% \\ & \text { Min.: -200.0 } \\ & \text { Max.: } 0.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { C4-05 } \\ & (0219) \end{aligned}$ | Torque Compensation Time Constant | TorqCmp Delay T | Sets the time constant for torque compensation at forward start and reverse start (C4-03 and C4-04). | Default: 10 ms <br> Min.: 0 <br> Max.: 200 | - |
| $\begin{aligned} & \text { C4-06 } \\ & (021 \mathrm{~A}) \end{aligned}$ | Torque Compensation Primary Delay Time 2 | Start Torq Time | Sets the torque compensation time 2. | Default: 150 ms <br> Min.: 0 <br> Max.: 10000 | - |
| $\begin{aligned} & \text { C4-07 } \\ & (0341) \\ & \hline \text { RUN } \end{aligned}$ | Motor 2 Torque Compensation Gain | TrqCmp Gain Mtr2 | Sets the torque compensation gain used for motor 2. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 2.50 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ Default setting is determined by parameters A1-02, Control Method Selection, and o2-04, Drive Model Selection.

- C5: Automatic Speed Regulator (ASR)

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |

Integral functions are always enabled for motor 2, during accel/decel and during constant speed. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { C5-37 } \\ & (0278) \end{aligned}$ | Motor 2 Inertia | Motor Inertia 2 | Sets the inertia of motor 2 alone without the load. This value is automatically set during ASR or Inertia Auto-Tuning. | Default: <3> <4> <br> Min.: 0.0001 <br> $\mathrm{kgm}^{2}$ <br> Max.: 600.00 <br> $\mathrm{kgm}^{2}$ | - |

## B. 3 C: Tuning

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { C5-38 } \\ & (0279) \end{aligned}$ | Motor 2 Load Inertia Ratio | Load Inertia 2 | Sets the ratio between the motor 2 and machine inertia. This value is automatically set during ASR or Inertia Auto-Tuning. | Default: 1.0 <br> Min.: 0.0 <br> Мах.: 6000.0 | - |
| $\begin{aligned} & \text { C5-39 } \\ & (030 \mathrm{D}) \end{aligned}$ | ASR Primary Delay Time Constant 2 | ASR Delay Time 2 | Sets the filter time constant in seconds for the time from the speed loop to the torque reference output when the Power KEB Ride-Thru is enabled (L2-29=1). <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0.000 s <br> Min.: 0.000 <br> Мах.: 0.500 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ The setting range is 1.00 to 300.00 in CLV and AOLV/PM control modes.
$<3>$ Default setting is dependent on parameter E5-01, Motor Code Selection.
$<4>$ Default setting is dependent on parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<5>$ Default setting is determined by parameter E3-01, Motor 2 Control Mode Selection.

## C6: Carrier Frequency

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |

$<1>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<2>$ Parameter setting value is not reset to the default value when the drive is initialized.
$<3>$ Default setting is determined by parameters A1-02, Control Method Selection, C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<4>$ Default setting is determined by parameter E5-01, Motor Code Selection.
$<5>$ In OLV/PM, setting range varies according to the motor code entered to E5-01. The setting range is 0.0 to 400.0 Hz when E5-01 is set to FFFF.
$<6>$ When E1-13, Base Voltage, is set to 0.0 , output voltage is controlled with E1-05, Maximum Voltage, $=$ E1-13. When Auto-Tuning is performed, E1-05 and E1-13 are automatically set to the same value.
$<7>$ Parameter ignored when E1-11 (Motor 1 Mid Output Frequency 2) and E1-12 (Motor 1 Mid Output Frequency Voltage 2) are set to 0.0.

## E2: Motor 1 Parameters

| No. <br> (Addr. <br> Hex) | Name | LCD Display |  | Description | Values |
| :--- | :--- | :--- | :--- | :--- | :--- | Page

$<1>$ Default setting is dependent on parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<2>$ Display is in the following units:
2A0004 to 2A0040, 4A0002 to 4A0023, and 5A0007 to 5A0017: 0.01 A units.
2A0056 to 2A0415, 4A0031 to 4A0675, and 5A0022 to 5A0242: 0.1 A units.
4A0930 and 4A1200: 1 A units.

## B. 5 E: Motor Parameters

## E3: V/f Pattern for Motor 2

These parameters are hidden when a PM motor control mode has been selected for motor 1 ( $\mathrm{A} 1-02=5,6,7$ ).

| $\begin{gathered} \text { E3-11 } \\ (0345) \\ <3> \end{gathered}$ | Motor 2 Mid Output Frequency 2 | Mid Frequency B |  | Default: 0.0 Hz <br> Min.: 0.0 <br> Max.: E3-04 | - |
| $\begin{aligned} & \text { E3-12 } \\ & (0346) \end{aligned}$ | Motor 2 Mid Output Frequency Voltage 2 | Mid Voltage B |  | $\begin{aligned} & \text { Default: } 0.0 \mathrm{~V} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 255.0^{<2>} \end{aligned}$ | - |
| $\begin{aligned} & \text { E3-13 } \\ & (0347) \\ & \langle 4\rangle \end{aligned}$ | Motor 2 Base Voltage | Base Voltage |  | Default: 0.0 V $<4>$ Min.: 0.0 Max.: $255.0^{<2>}$ | - |

$<1>$ Default setting is determined by parameter E3-01, Motor 2 Control Mode Selection. The value shown here is for V/f Control (0).
$<2>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<3>$ Ignored when E3-11, Motor 2 Mid Output Frequency 2, and E3-12, Motor 2 Mid Output Frequency Voltage 2, are set to 0.
$<4>$ When E3-13, Motor 2 Base Voltage, is set to 0.0 , output voltage is controlled with E3-05, Motor 2 Maximum Voltage, = E3-13. When Auto-Tuning is performed, E3-05 and E3-13 are automatically set to the same value.

## E4: Motor 2 Parameters

These parameters are hidden when a PM motor control mode has been selected for motor 1 ( $\mathrm{A} 1-02=5,6,7$ ).

| No. <br> (Addr. <br> Hex) | Name | LCD Display |  | Description | Values |
| :--- | :--- | :--- | :--- | :--- | :--- | Page

$<1>$ Default setting is determined by parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<2>$ Display is in the following units:
2A0004 to 2A0040, 4A0002 to 4A0023, and 5A0007 to 5A0017: 0.01 A units.
2A0056 to 2A0415, 4A0031 to 4A0675, and 5A0022 to 5A0242: 0.1 A units.
4A0930 and 4A1200: 1 A units.

## B. 5 E: Motor Parameters

## E5: PM Motor Settings

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |

| $\begin{aligned} & \text { E5-04 } \\ & (032 \mathrm{C}) \end{aligned}$ | Number of Motor Poles (for PM Motors) | PM Motor Poles | Sets the number of motor poles. | Default: <br> Min.: 2 <br> Max.: 48 | - |
| $\begin{gathered} \text { E5-05 } \\ (032 \mathrm{D}) \\ <1> \end{gathered}$ | Motor Stator Resistance (for PM Motors) | PM Mtr Arm Ohms | Set the resistance for each motor phase. | Default: <4> Min.: $0.000 \Omega$ Max.: $65.000 \Omega$ | - |
| $\begin{gathered} \mathrm{E} 5-06 \\ (032 \mathrm{E}) \\ <1> \end{gathered}$ | Motor d-Axis Inductance (for PM Motors) | PM Mtr d Induct | Sets the d-Axis inductance for the PM motor. | Default: <4> <br> Min.: 0.00 mH <br> Max.: 300.00 mH | - |
| $\begin{gathered} \text { E5-07 } \\ (032 \mathrm{~F}) \\ \langle 1\rangle \end{gathered}$ | Motor q-Axis Inductance (for PM Motors) | PM Mtr q Induct | Sets the q-Axis inductance for the PM motor. | Default: <4> <br> Min.: 0.00 mH <br> Max.: 600.00 mH | - |
| $\begin{gathered} \text { E5-09 } \\ (0331) \\ <1> \end{gathered}$ | Motor Induction Voltage Constant 1 (for PM Motors) | PM Mtr Ind V 1 | Sets the induced phase peak voltage in units of $0.1 \mathrm{mV} /(\mathrm{rad} / \mathrm{s})$ [electrical angle]. Set this parameter when using a Yaskawa SSR1-Series PM motor with derated torque, or a Yaskawa SST4-Series motor with constant torque. Set E5-24 to 0 when setting this parameter. | Default: <4> <br> Min.: 0.0 <br> $\mathrm{mV} /(\mathrm{rad} / \mathrm{s})$ <br> Max.: 2000.0 <br> $\mathrm{mV} /(\mathrm{rad} / \mathrm{s})$ | - |
| $\begin{gathered} \text { E5-11 } \\ (0333) \end{gathered}$ | Encoder Z Pulse Offset (for PM Motors) | Enc Z-Pulse Offs | Sets the offset between the rotor magnetic axis and the Z Pulse of an incremental encoder during $Z$ Pulse offset tuning. | Default: 0.0 deg <br> Min.: - 180 <br> Max.: 180 | - |
| $\begin{gathered} \text { E5-24 } \\ (0353) \\ <1> \end{gathered}$ | Motor Induction Voltage Constant 2 (for PM Motors) | PM Mtr Ind V 2 | Sets the induced phase-to-phase rms voltage in units of $0.1 \mathrm{mV} /$ $(\mathrm{r} / \mathrm{min})$ [mechanical angle]. Set this parameter when using a Yaskawa SMRA-Series SPM motor. | Default: <4> <br> Min.: 0.0 <br> $\mathrm{mV} /(\mathrm{r} / \mathrm{min})$ <br> Мах.: 6500.0 <br> $\mathrm{mV} /(\mathrm{r} / \mathrm{min})$ | - |
| $\begin{aligned} & \text { E5-25 } \\ & (035 \mathrm{E}) \end{aligned}$ | Polarity Switch for Initial Polarity Estimation Timeout (for PM Motors) | RotPolarityInvrs <br> 0 : Disabled <br> 1: Enabled | Switches polarity for initial polarity estimation. <br> 0: Disabled <br> 1: Enabled <br> There is normally no need to change this parameter from the default value. <br> If " $\mathrm{Sd}=1$ " is listed on the nameplate or in a test report for a Yaskawa motor, this parameter should be set to 1 . <br> Note: Available control mode varies by drive model: 2A0004 to 2A0415 and 4A0002 to 4A0675: Available when A1-02 $=6,7$ <br> 4A0930 and 4A1200: <br> Available when A1-02 $=5,6$, or 7 . | Default: 0 <br> Range: 0,1 | - |

$<1>$ Setting value is not reset to the default when drive is initialized.
$<2>$ Default setting is determined by parameters A1-02, Control Method Selection, 02-04, Drive Model Selection, and C6-01, Drive Duty Selection.
$<3>$ Selections may vary depending on the motor code entered to E5-01.
$<4>$ Default setting is determined by parameter E5-01, Motor Code Selection.
$<5>$ Display is in the following units:
2A0004 to 2A0040, 4A0002 to 4A0023, and 5A0007 to 5A0017: 0.01 A units. 2A0056 to 2A0415, 4A0031 to 4A0675, and 5A0022 to 5A0242: 0.1 A units. 4A0930 and 4A1200: 1 A units.

## B. 6 F: Option Settings

F parameters program the drive for PG feedback from the motor and to function with option cards.

- F1: PG Speed Control Card (PG-B3, PG-X3, PG-RT3, PG-F3)

Parameters F1-01, F1-05, F1-06, F1-12, F1-13, and F1-18 through F1-21 include "PG 1" in the parameter name and are used to set up a PG option card plugged into option port CN5-C of the drive.

Parameters F1-31 through F1-37 include "PG 2" in the parameter name and are used to set up a PG option card plugged into option port CN5-B of the drive.
Other parameters in the F1 group are used to set operation for PG options plugged into port CN5-C and CN5-B.

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { F1-01 } \\ & (0380) \end{aligned}$ | PG 1 Pulses Per Revolution | PG1 Pulses/Rev | Sets the number of PG (pulse generator or encoder) pulses. Sets the number of pulses per motor revolution. <br> Note: $\quad$ Setting range is 0 to 15000 ppr when A1-02 $=7$ (CLV/PM control mode). | Default: 1024 ppr <br> Min.: 1 <br> Мах.: 60000 | - |
| $\begin{aligned} & \text { F1-02 } \\ & (0381) \end{aligned}$ | Operation Selection at PG Open Circuit (PGo) | PG Fdbk Loss Sel 0: Ramp to Stop <br> 1: Coast to Stop <br> 2: Fast-Stop <br> 3: Alarm Only <br> 4: Not Detect | ```0 Ramp to stop. $<1>$ Cycle power for setting changes to take effect.
$<2>$ If F7-13 is set to 0 , then all IP Addresses (as defined with parameters F7-01 to F7-04) must be unique.

## B. 7 H Parameters: Multi-Function Terminals

H parameters assign functions to the multi-function input and output terminals.

## - H1: Multi-Function Digital Inputs

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \mathrm{H} 1-01 \\ & (0438) \end{aligned}$ | Multi-Function Digital Input Terminal S1 Function Selection | Term S1 Func Sel | Assigns a function to the multi-function digital inputs. Refer to pages 288 to 291 for descriptions of setting values. <br> Note: $\quad$ Set unused terminals to $F$. | $\begin{aligned} & \text { Default: } 40 \text { (F) } \\ & <1> \\ & \text { Min.: } 1 \\ & \text { Max.: 9F } \end{aligned}$ | 152 |
| $\begin{gathered} \mathrm{H} 1-02 \\ (0439) \end{gathered}$ | Multi-Function Digital Input Terminal S2 Function Selection | Term S2 Func Sel | Assigns a function to the multi-function digital inputs. Refer to pages 288 to 291 for descriptions of setting values. <br> Note: Set unused terminals to F. | $\begin{aligned} & \text { Default: } 41 \text { (F) } \\ & <1> \\ & \text { Min.: } 1 \\ & \text { Max.: } 9 \mathrm{~F} \end{aligned}$ | 152 |
| $\begin{aligned} & \mathrm{H} 1-03 \\ & (0400) \end{aligned}$ | Multi-Function Digital Input Terminal S3 Function Selection | Term S3 Func Sel | Assigns a function to the multi-function digital inputs. Refer to pages 288 to 291 for descriptions of setting values. Note: Set unused terminals to F. | Default: 24 <br> Min.: 0 <br> Max.: 9F | 152 |
| $\begin{aligned} & \mathrm{H} 1-04 \\ & (0401) \end{aligned}$ | Multi-Function Digital Input Terminal S4 Function Selection | Term S4 Func Sel | Assigns a function to the multi-function digital inputs. Refer to pages 288 to 291 for descriptions of setting values. Note: Set unused terminals to F. | Default: 14 <br> Min.: 0 <br> Max.: 9F | 152 |
| $\begin{aligned} & \mathrm{H} 1-05 \\ & (0402) \end{aligned}$ | Multi-Function Digital Input Terminal S5 Function Selection | Term S5 Func Sel | Assigns a function to the multi-function digital inputs. Refer to pages 288 to 291 for descriptions of setting values. Note: Set unused terminals to F. | $\begin{aligned} & \text { Default: } 3(0)^{<1>} \\ & \text { Min.: } 0 \\ & \text { Max.: 9F } \end{aligned}$ | 152 |
| $\begin{aligned} & \mathrm{H} 1-06 \\ & (0403) \end{aligned}$ | Multi-Function Digital Input Terminal S6 Function Selection | Term S6 Func Sel | Assigns a function to the multi-function digital inputs. Refer to pages 288 to 291 for descriptions of setting values. <br> Note: Set unused terminals to F. | $\begin{aligned} & \text { Default: } 4(3)^{<1>} \\ & \text { Min.: } 0 \\ & \text { Max.: } 9 \text { F } \end{aligned}$ | 152 |
| $\begin{aligned} & \mathrm{H} 1-07 \\ & (0404) \end{aligned}$ | Multi-Function Digital Input Terminal S7 Function Selection | Term S7 Func Sel | Assigns a function to the multi-function digital inputs. Refer to pages 288 to 291 for descriptions of setting values. <br> Note: $\quad$ Set unused terminals to $F$. | $\begin{aligned} & \text { Default: } 6(4)^{<1>} \\ & \text { Min.: } 0 \\ & \text { Max.: } 9 \text { F } \end{aligned}$ | 152 |
| $\begin{aligned} & \mathrm{H} 1-08 \\ & (0405) \end{aligned}$ | Multi-Function Digital Input Terminal S8 Function Selection | Term S8 Func Sel | Assigns a function to the multi-function digital inputs. Refer to pages 288 to 291 for descriptions of setting values. Note: Set unused terminals to F. | Default: 8 <br> Min.: 0 <br> Max.: 9F | 152 |

$<1>$ Value in parenthesis is the default setting when a 3-Wire initialization is performed (A1-03 $=3330$ ).

| H1 Multi-Function Digital Input Selections |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| H1-पロ Setting | Function | LCD Display | Description | Page |
| 0 | 3-Wire sequence | 3-Wire Control | Closed: Reverse rotation (only if the drive is set up for 3-Wire sequence) Terminals S1 and S2 are automatically set up for the Run command and Stop command. | 153 |
| 1 | LOCAL/REMOTE selection | Local/Remote Sel | Open: REMOTE (parameter settings determine the source of the frequency Reference 1 or 2 (b1-01, b1-02 or b1-15, b1-16) <br> Closed: LOCAL, Frequency reference and Run command are input from the digital operator. | - |
| 2 | External reference $1 / 2$ selection | Ext Ref Sel | Open: Run command and frequency reference source 1 (determined by b1-01 and b1-02) Closed: Run command and frequency reference source 2 (determined by b1-15 and b1-16) | - |
| 3 | Multi-Step Speed Reference 1 | Multi-Step Ref 1 | When input terminals are set to Multi-Step Speed References 1 through 3, switching combinations of those terminals will create a multi-step speed sequence using the frequency references set in d1-01 through d1-08. | - |
| 4 | Multi-Step Speed Reference 2 | Multi-Step Ref 2 | When input terminals are set to Multi-Step Speed References 1 through 3, switching combinations of those terminals will create a multi-step speed sequence using the frequency references set in d1-01 through d1-08. | - |
| 5 | Multi-Step Speed Reference 3 | Multi-Step Ref 3 | When input terminals are set to Multi-Step Speed References 1 through 3, switching combinations of those terminals will create a multi-step speed sequence using the frequency references set in d1-01 through d1-08. | - |
| 6 | Jog reference selection | Jog Freq Ref | Closed: Jog frequency reference (d1-17) selected. Jog has priority over all other reference sources. | - |

| H1 Multi－Function Digital Input Selections |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| H1－पロ Setting | Function | LCD Display | Description | Page |
| 7 | Accel／decel time selection 1 | Multi－Acc／Dec 1 | Used to switch between accel／decel time 1 （set in C1－01，C1－02）and accel／ decel time 2 （set in C1－03，C1－04）． | － |
| 8 | Baseblock command （N．O．） | Ext BaseBlk N．O． | Closed：No drive output | － |
| 9 | Baseblock command （N．C．） | Ext BaseBlk N．C． | Open：No drive output | － |
| A | Accel／decel ramp hold | Acc／Dec RampHold | Open：Accel／decel is not held Closed：The drive pauses during acceleration or deceleration and maintains the output frequency． | － |
| B | Drive overheat alarm （oH2） | OH2 Alarm Signal | Closed：Closes when an oH2 alarm occurs | － |
| C | Analog terminal input selection | Term A2 Enable | Open：Function assigned by H3－14 is disabled． Closed：Function assigned by H3－14 is enabled． | － |
| D | PG encoder disable | PG Fdbk Disable | Open：Speed feedback for V／f Control with PG is enabled． Closed：Speed feedback disabled． | － |
| E | ASR integral reset | ASR Intgrl Reset | Open：PI control Closed：Integral reset | － |
| F | Through mode | Term Not Used | Select this setting when the terminal is not used or when using the terminal in the pass－through mode．The terminal does not trigger a drive function， but can be used as digital input for the controller to which the drive is connected． | － |
| 10 | Up command | Up Command 1 | The drive accelerates when the Up command terminal closes，and decelerates when the Down command closes．When both terminals are closed or both are open，the drive holds the frequency reference．The Up and Down commands must always be used in conjunction with one another． | － |
| 11 | Down command | Down Command 1 | The drive accelerates when the Up command terminal closes，and decelerates when the Down command closes．When both terminals are closed or both are open，the drive holds the frequency reference．The Up and Down commands must always be used in conjunction with one another． | － |
| 12 | Forward Jog | Forward Jog | Closed：Runs forward at the Jog frequency d1－17． | － |
| 13 | Reverse Jog | Reverse Jog | Closed：Runs reverse at the Jog frequency d1－17． | － |
| 14 | Fault reset | Fault Reset | Closed：Resets faults if the cause is cleared and the Run command is removed． | － |
| 15 | Fast Stop（N．O．） | Fast－Stop N．O． | Closed：Decelerates at the Fast Stop time set to C1－09． | － |
| 16 | Motor 2 selection | Motor 2 Select |  | － |
| 17 | Fast Stop（N．C．） | Fast－Stop N．C． | Open：Decelerates to stop at the Fast Stop time set to C1－09． | － |
| 18 | Timer function input | Timer function | Triggers the timer set up by parameters b4－01 and b4－02．Must be set in conjunction with the timer function output（ $\mathrm{H} 2-\mathrm{\square D}=12$ ）． | － |
| 19 | PID disable | PID Disable | Open：PID control enabled Closed：PID control disabled | － |
| 1A | Accel／decel time selection 2 | Multi－Acc／Dec 2 | Used in conjunction with an input terminal set for＂Accel／decel time selection 1＂ <br> （H1－प्व＝7），and allows the drive to switch between accel／decel times 3 and 4. | － |
| 1B | Program lockout | Program Lockout | Open：Parameters cannot be edited． <br> Closed：Parameters can be edited and saved． | － |
| 1E | Reference sample hold | Ref Sample Hold | Closed：Samples the analog frequency reference and operates the drive at that speed． | － |

| 30 | PID integral reset | PID Intgrl Reset | Closed: Resets the PID control integral value. | - |
| 31 | PID integral hold | PID Intgrl Hold | Open: Performs integral operation. <br> Closed: Maintains the current PID control integral value. | - |
| 32 | Multi-Step Speed Reference 4 | Multi-Step Ref 4 | Used in combination with input terminals set to Multi-Step Speed Reference 1, 2, and 3. Use parameters d1-09 to d1-16 to set reference values. | - |
| 34 | PID soft starter cancel | PID SFS Cancel | Open: PID soft starter is enabled. Closed: Disables the PID soft starter b5-17. | - |
| 35 | PID input level selection | PID Input Invert | Closed: Inverts the PID input signal. | - |
| 40 | Forward run command (2-Wire sequence) | FwdRun 2Wire Seq | Open: Stop <br> Closed: Forward run <br> Note: Cannot be set together with settings 42 or 43. | - |
| 41 | Reverse run command (2-Wire sequence) | RevRun 2WireSeq | Open: Stop <br> Closed: Reverse run <br> Note: Cannot be set together with settings 42 or 43. | - |
| 42 | Run command (2-Wire sequence 2 ) | Run/Stp 2WireSeq | Open: Stop <br> Closed: Run <br> Note: Cannot be set together with settings 40 or 41. | - |
| 43 | FWD/REV command (2-Wire sequence 2) | FWD/REV 2WireSeq | Open: Forward <br> Closed: Reverse <br> Note: Determines motor direction, but does not issue a Run command. Cannot be set together with settings 40 or 41. | - |
| 44 | Offset frequency 1 | Offset Freq 1 | Closed: Adds d7-01 to the frequency reference. | - |
| 45 | Offset frequency 2 | Offset Freq 2 | Closed: Adds d7-02 to the frequency reference. | - |
| 46 | Offset frequency 3 | Offset Freq 3 | Closed: Adds d7-03 to the frequency reference. | - |
| 47 | Node setup | CanOpenNID Setup | Closed: Node setup for SI-S3 enabled. | - |
| 60 | DC Injection Braking command | DCInj Activate | Closed: Triggers DC Injection Braking. | - |
| 61 | External Speed Search command 1 | Speed Search 1 | Closed: Activates Current Detection Speed Search from the maximum output frequency (E1-04). | - |

| H1 Multi-Function Digital Input Selections |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| H1-पㅁ Setting | Function | LCD Display | Description | Page |
| 62 | External Speed Search command 2 | Speed Search 2 | Closed: Activates Current Detection Speed Search from the frequency reference. | - |
| 63 | Field weakening | Field Weak | Closed: The drive performs Field Weakening control as set for d6-01 and d6-02. | - |
| 65 | KEB Ride-Thru 1 (N.C.) | KEB Ridethru NC | Open: KEB Ride-Thru 1 enabled. | - |
| 66 | $\begin{aligned} & \begin{array}{l} \text { KEB Ride-Thru } 1 \\ \text { (N.O.) } \end{array} \\ & \hline \end{aligned}$ | KEB Ridethru NO | Closed: KEB Ride-Thru 1 enabled. | - |
| 67 | Communications test mode | Comm Test Mode | Tests the MEMOBUS/Modbus RS-422/RS-485 interface. Displays "PASS" if the test completes successfully. | - |
| 68 | High Slip Braking (HSB) | HighSlipBraking | Closed: Activates High Slip Braking to stop the drive during a Run command. | - |
| 6A | Drive enable | Drive Enable | Open: Drive disabled. If this input is opened during run, the drive will stop as specified by b1-03. <br> Closed: Ready for operation. | - |
| 71 | Speed/Torque control Sswitch | Spd/Trq Ctl Chng | Open: Speed Control Closed: Torque Control | - |
| 72 | Zero servo | Zero Servo Cmd | Closed: Zero Servo enabled | - |
| 75 | Up 2 command | Up Command 2 | Used to control the bias added to the frequency reference by the Up/Down 2 function. The Up 2 and Down 2 commands must always be used in conjunction with one another. | - |
| 76 | Down 2 command | Down Command 2 | Used to control the bias added to the frequency reference by the Up/Down 2 function. The Up 2 and Down 2 commands must always be used in conjunction with one another. | - |
| 77 | ASR gain switch | ASR Gain Switch | Open: ASR proportional gain 1 (C5-01) Closed: ASR proportional gain 2 (C5-03) | - |
| 78 | External torque reference polarity inversion | Tref Sign Change | Open: Forward torque reference. Closed: Reverse polarity. | - |
| 7A | KEB Ride-Thru 2 (N.C.) | KEB Ridethru2NC | Open: KEB Ride-Thru 2 enabled. Drive disregards L2-29 and performs Single Drive KEB Ride-Thru 2. | - |

| H2-02 <br> $(040 C)$ | Terminal M3-M4 <br> function selection <br> (relay) | M3/M4 Func Sel |  | Default: 1 <br> Range: 0 to 192 | 153 |
| H2-03 <br> $(040 D)$ | Terminal M5-M6 <br> function selection <br> (relay) | M5/M6 Func Sel |  | Default: 2 <br> Range: 0 to 192 | 153 |

## B. 7 H Parameters: Multi-Function Terminals

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { H2-06 } \\ & (0437) \end{aligned}$ | Watt Hour Output Unit Selection | Pwr Mon Unit Sel | Sets the output units for the watt hours when Watt Hour Pulse Output is selected as the digital output (H2-01, $\mathrm{H} 2-02$, or H2-03 $=39$ ). <br> Outputs a 200 ms pulse signal when the watt hour counter increases by the units selected. <br> 0: 0.1 kWh units <br> 1: 1 kWh units <br> 2: 10 kWh units <br> 3: 100 kWh units <br> 4: 1000 kWh units | Default: 0 <br> Range: 0 to 4 | - |
| $\begin{gathered} \mathrm{H} 2-07 \\ (0 \mathrm{~B} 3 \mathrm{~A}) \\ <1> \end{gathered}$ | MEMOBUS Register 1 Address Select | MFDO Regs1 Addr | Sets the addresses of the MEMOBUS/Modbus registers from which data will be sent to contact outputs 62 and 162 . <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 1 <br> Range: 1 to 1FFF | - |
| $\begin{aligned} & \text { H2-08 } \\ & \text { (0B3B) } \\ & <1> \end{aligned}$ | MEMOBUS Register 1 Bit Select | MFDO Regs1 Bit | Sets the bits for the MEMOBUS/Modbus registers from which data will be sent to contact outputs 62 and 162 . <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0 <br> Range: 0 to FFFF | - |
| $\begin{gathered} \text { H2-09 } \\ (\underset{<1>}{\mathrm{H} 3 \mathrm{~B} 3 \mathrm{C}}) \end{gathered}$ | MEMOBUS Register 2 Address Select | MFDO Regs2 Addr | Sets the addresses of the MEMOBUS/Modbus registers from which data will be sent to contact outputs 63 and 163 . <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 1 <br> Range: 1 to 1FFF | - |
| $\begin{gathered} \text { H2-10 } \\ \substack{\text { (0B3D } \\ <1>} \end{gathered}$ | MEMOBUS Register 2 Bit Select | MFDO Regs2 Bit | Sets the bits for the MEMOBUS/Modbus registers from which data will be sent to contact outputs 63 and 163 . <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0 <br> Range: 0 to FFFF | - |

$<1>$ Available in drive software versions PRG: 1019 and later.

| H2 Multi-Function Digital Output Settings |  |  |  |  |
| :---: | :--- | :--- | :--- | :--- | :--- |
| H2- $\square \square$ Setting | Function | LCD Display | Description | Page |
| 0 | During run | During RUN 1 | Closed: A Run command is active or voltage is output. | - |
| 1 | Zero speed | Zero Speed | Open: Output speed is greater than or equal to the value of E1-09 <br> (Minimum Output Frequency) or b2-01 (DC Injection Braking Start <br> Frequency). <br> Closed: Output frequency is less than the value ofE1-09 (Minimum Output <br> Frequency) or b2-01 (DC Injection Braking Start Frequency). | - |
| 2 | Speed agree 1 | Fref/Fout Agree1 | Closed: Output frequency equals the speed reference (plus or minus the <br> hysteresis set to L4-02). | 154 |
| 3 | User-set speed agree 1 | Fref/Set Agree 1 | Closed: Output frequency and speed reference equal L4-01 (plus or minus <br> the hysteresis set to L4-02). | 155 |
| 4 | Frequency detection 1 | Freq Detect 1 | Closed: Output frequency is less than or equal to the value in L4-01 with <br> hysteresis determined by L4-02. | - |
| 5 | Frequency detection 2 | Freq Detect 2 | Closed: Output frequency is greater than or equal to the value in L4-01 <br> with hysteresis determined by L4-02. | - |
| 6 | Drive ready | Drive Ready | Closed: Power up is complete and the drive is ready to accept a Run <br> command. | - |
| 7 | DC bus undervoltage | DC Bus Undervolt | Closed: DC bus voltage is below the Uv trip level set in L2-05. | - |
| 8 | During baseblock <br> (N.O.) | BaseBlk 1 | Closed: Drive has entered the baseblock state (no output voltage). | - |
| 9 | Frequency reference <br> source | Ref Source | Open: External Reference 1 or 2 supplies the frequency reference (set in <br> b1-01 or b1-15). <br> Closed: Digital operator supplies the frequency reference. | - |
| A | Run command source | Run Cmd Source | Open: External Reference 1 or 2 supplies the Run command (set in b1-02 <br> or b1-16). <br> Closed: Digital operator supplies the Run command. | - |
| B | Torque detection 1 <br> (N.O.) | Trq Det 1 N.O. | Closed: An overtorque or undertorque situation has been detected. | - |
| C | Frequency reference <br> loss | Loss of Ref | Closed: Analog frequency reference has been lost. <br> Frequency reference loss is detected when the frequency reference drops <br> below 10\% of the reference within 400 ms. | - |

| H2 Multi－Function Digital Output Settings |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| H2－पロ Setting | Function | LCD Display | Description | Page |
| D | Braking resistor fault | DB Overheat | Closed：Braking resistor or transistor is overheated or faulted out． <br> Note：$\quad$ This setting is not available in models 4A0930 and 4A1200． | － |
| E | Fault | Fault | Closed：Fault occurred（this excludes CPF00 and CPF01）． | － |
| F | Through mode | Not Used | Select this setting when the terminal is not used or when using the terminal in the pass－through mode． | － |
| 10 | Minor fault | Minor Fault | Closed：An alarm has been triggered，or the IGBTs have reached $90 \%$ of their expected life span． | － |
| 11 | Fault reset command active | Reset Cmd Active | Closed：The drive has received a reset command from the multi－function input terminals or from a serial network，or the RESET key on the digital operator has been pressed． | － |
| 12 | Timer output | Timer Output | Closed：Timer output． | － |
| 13 | Speed agree 2 | Fref／Fout Agree2 |  | － |
| 14 | User－set speed agree 2 | Fref／Set Agree 2 | Closed：When the drive output frequency is equal to the value in L4－03 $\pm$ L4－04． | － |
| 15 | Frequency detection 3 | Freq Detect 3 | Closed：When the drive output frequency is less than or equal to the value in L4－03 $\pm$ L4－04． | － |
| 16 | Frequency detection 4 | Freq Detect 4 | Closed：When the output frequency is greater than or equal to the value in L4－03 $\pm$ L4－04． | － |
| 17 | Torque detection 1 （N．C．） | Trq Det 1 N．C． | Open：Overtorque or undertorque has been detected． |  |
| 18 | Torque detection 2 （N．O．） | Trq Det 2 N．O． | Closed：Overtorque or undertorque has been detected． |  |
| 19 | Torque detection 2 （N．C．） | Trq Det 2 N．C． | Open：Overtorque or undertorque has been detected． | － |
| 1A | During reverse | Reverse Dir | Closed：Drive is running in the reverse direction． | － |
| 1B | $\begin{array}{\|l} \hline \text { During baseblock } \\ \text { (N.C.) } \end{array}$ | BaseBlk 2 | Open：Drive has entered the baseblock state（no output voltage）． | － |
| 1C | Motor 2 selection | Motor 2 Selected | Closed：Motor 2 is selected by a digital input（H1－पロ＝16） | － |
| 1D | During regeneration | Regenerating | Closed：Motor is regenerating energy into the drive． | － |
| 1E | Restart enabled | Dur Flt Restart | Closed：An automatic restart is performed | － |
| 1F | Motor overload alarm （oL1） | Overload（OL1） | Closed：oL1 is at $90 \%$ of its trip point or greater．An oH3 situation also triggers this alarm． | － |
| 20 | Drive overheat pre－ alarm（ oH ） | OH Prealarm | Closed：Heatsink temperature exceeds the parameter L8－02 value． | － |
| 22 | Mechanical weakening detection | MechFatigue（OL5） | Closed：Mechanical weakening detected． | － |
| 2F | Maintenance period | Maintenance | Closed：Cooling fan，electrolytic capacitors，IGBTs，or the soft charge bypass relay may require maintenance． | － |
| 30 | During torque limit | Torque Limit | Closed：When the torque limit has been reached． | － |
| 31 | During speed limit | Speed Limit | Closed：Speed limit has been reached． | － |
| 32 | During speed limit in Torque Control | Spd Lim＠T Cont | Closed：Speed limit has been reached while using Torque Control． | － |
| 33 | Zero Servo complete | Zero Servo End | Closed：Zero Servo operation has finished． | － |
| 37 | During frequency output | During RUN 2 | Open：No frequency output from drive if stopped with baseblock，DC injection braking during initial excitation，or short－circuit braking． Closed：Drive is outputting a frequency． | － |
| 38 | Drive enabled | Drive Enable | Closed：Multi－function input set for＂Drive enable＂is closed（H1－पロ＝ 6A） | － |
| 39 | Watt hour pulse output | Watt－hour Pulse | Output units are determined by H2－06．Outputs a pulse every 200 ms to indicate the kWh count． | － |
| 3C | LOCAL／REMOTE status | Local | Open：REMOTE Closed：LOCAL | － |
| 3D | During speed search | During SpdSrch | Closed：Speed Search is being executed． | － |
| 3E | PID feedback low | PID Feedback Low | Closed：PID feedback level is too low． | － |

## B． 7 H Parameters：Multi－Function Terminals

| H2 Multi－Function Digital Output Settings |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| H2－पロ Setting | Function | LCD Display | Description | Page |
| 3F | PID feedback high | PID FeedbackHigh | Closed：The PID feedback level is too high． | － |
| 4A | During KEB Ride－ Thru | During KEB | Closed：KEB Ride－Thru is being performed． | － |
| 4B | During short circuit braking | During SC Brake | Closed：Short Circuit Braking is active． | － |
| 4C | During fast stop | During Fast Stop | Closed：A Fast Stop command has been entered from the operator or input terminals． | － |
| 4D | oH Pre－alarm time limit | OH Pre－Alarm | Closed：oH pre－alarm time limit has passed． | － |
| 4E | Braking transistor fault （rr） | Brk Trans Fault | Closed：The built－in dynamic braking transistor failed． <br> Note：This setting is not available in models 2A0169 to 2A0415 and 4A0088 to 4A1200． | － |
| 4F | Braking resistor overheat（ oH ） | BrkResistOvHeat | Closed：The dynamic braking resistor has overheated． <br> Note：$\quad$ This setting is not available in models 2A0169 to 2A0415 and 4A0088 to 4A1200． | － |
| 60 | Internal cooling fan alarm | Fan Alrm Det | Closed：Internal cooling fan alarm | － |
| 61 | Rotor position detection complete | RotPosDetCmpIt | Closed：Drive has successfully detected the rotor position of the PM motor． | － |
| $62^{<1>}$ | MEMOBUS Register 1 （Selected with H2－07 and H2－08） | Memobus Regs1 | The contact output is closed when any of the bits specified by H2－08 for the MEMOBUS／Modbus register address set in H2－07 turn on． <br> Note：This setting is not available in models 4A0930 and 4A1200． | － |
| $63^{<1>}$ | MEMOBUS Register 2 （Selected with H2－09 and H2－10） | Memobus Regs2 | The contact output is closed when any of the bits specified by H2－10 for the MEMOBUS／Modbus register address set in H2－09 turn on． <br> Note：$\quad$ This setting is not available in models 4A0930 and 4A1200． | － |
| 90 to 92 | DriveWorksEZ digital outputs 1 to 3 | － | Reserved for DWEZ digital output functions． | － |
| 100 to 192 | Function 0 to 92 with inverse output | ！Function | Inverts the output switching of the multi－function output functions． Set the last two digits of 1ロロ to reverse the output signal of that specific function． | － |

$<1>$ Available in drive software versions PRG： 1019 and later．

| H4-08 <br> $(0424)$ | Multi-Function Analog <br> Output Terminal AM <br> Signal Level Selection | Term AM Lvl Sel <br> $0: 0-10 \mathrm{VDC}$ <br> $1:-10+10 \mathrm{VDC}$ <br> $2: 4-20 \mathrm{~mA}$ | $0: 0$ to 10 V <br> $1:-10$ to 10 V <br> $2: 4$ to 20 mA | Default: 0 <br> Range: 0 to 2 | 159 |

## H5: MEMOBUS/Modbus Serial Communication

Note: Restart the drive to enable MEMOBUS/Modbus communication settings.

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \mathrm{H} 5-01 \\ & (0425) \\ & \ll 1> \end{aligned}$ | Drive Node Address | Serial Comm Adr | Selects drive station node number (address) for MEMOBUS/ Modbus terminals R+, R-, S+, S-. Cycle power for the setting to take effect. | $\begin{aligned} & \text { Default: 1F (Hex) } \\ & \text { Min.: 0 } \\ & \text { Max.: FF } \end{aligned}$ | - |
| $\begin{aligned} & \mathrm{H} 5-02 \\ & (0426) \end{aligned}$ | Communication Speed Selection | Serial Baud Rate <br> $0: 1200 \mathrm{bps}$ <br> 1: 2400 bps <br> 2: 4800 bps <br> 3: 9600 bps <br> 4: 19.2 kbps <br> 5: 38.4 kbps <br> 6: 57.6 kbps <br> 7: 76.8 kbps <br> 8: 115.2 kbps | $\begin{array}{\|l\|} \hline 0: 1200 \mathrm{bps} \\ 1: 2400 \mathrm{bps} \\ \text { 2: } 4800 \mathrm{bps} \\ 3: 9600 \mathrm{bps} \\ \text { 4: } 19200 \mathrm{bps} \\ 5: 38400 \mathrm{bps} \\ \text { 6: } 57600 \mathrm{bps} \\ 7: 76800 \mathrm{bps} \\ \text { 8: } 115200 \mathrm{bps} \\ \text { Note: Cycle power for the setting to take effect. } \end{array}$ | Default: 3 <br> Range: 0 to 8 | - |
| $\begin{aligned} & \mathrm{H} 5-03 \\ & (0427) \end{aligned}$ | Communication Parity Selection | Serial Com Sel 0 : No Parity <br> 1: Even Parity <br> 2: Odd Parity | 0: No parity <br> 1: Even parity <br> 2: Odd parity <br> Note: Cycle power for the setting to take effect. | Default: 0 <br> Range: 0 to 2 | - |
| $\begin{aligned} & \mathrm{H} 5-04 \\ & (0428) \end{aligned}$ | Stopping Method after Communication Error (CE) | Serial Fault Sel <br> 0: Ramp to Stop <br> 1: Coast to Stop <br> 2: Fast-Stop <br> 3: Alarm Only | 0: Ramp to stop <br> 1: Coast to stop <br> 2: Fast Stop <br> 3: Alarm only | Default: 3 <br> Range: 0 to 3 | - |
| $\begin{aligned} & \mathrm{H} 5-05 \\ & (0429) \end{aligned}$ | Communication Fault Detection Selection | Serial Flt Dtct 0: Disabled 1: Enabled | 0: Disabled <br> 1: Enabled. If communication is lost for more than two seconds, <br> a CE fault will occur. | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { H5-06 } \\ & (042 \mathrm{~A}) \end{aligned}$ | Drive Transmit Wait Time | Transmit WaitTIM | Set the wait time between receiving and sending data. Note: Cycle power for the setting to take effect. | Default: 5 ms <br> Min.: 5 <br> Max.: 65 | - |
| $\begin{aligned} & \mathrm{H} 5-07 \\ & (042 \mathrm{~B}) \end{aligned}$ | RTS Control Selection | RTS Control Sel 0: Disabled <br> 1: Enabled | 0 : Disabled. RTS is always on. <br> 1: Enabled. RTS turns on only when sending. <br> Note: Cycle power for the setting to take effect. | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \mathrm{H} 5-09 \\ & (0435) \end{aligned}$ | CE Detection Time | CE Detect Time | Sets the time required to detect a communications error. Adjustment may be needed when networking several drives. | Default: 2.0 s <br> Min.: 0.0 <br> Max.: 10.0 | - |
| $\begin{aligned} & \mathrm{H} 5-10 \\ & (0436) \end{aligned}$ | Unit Selection for MEMOBUS/Modbus Register 0025H | $\begin{aligned} & \text { CommReg 25h Unit } \\ & 0: 0.1 \mathrm{~V} \\ & 1: 1 \mathrm{~V} \end{aligned}$ | 0: 0.1 V units 1:1 V units | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \mathrm{H} 5-11 \\ & (043 \mathrm{C}) \end{aligned}$ | Communications ENTER Function Selection | Enter CommandSel 0: Enter Required 1: No EnterRequired | 0: Drive requires an Enter command before accepting any changes to parameter settings. <br> 1: Parameter changes are activated immediately without the Enter command (same as V7). | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { H5-12 } \\ & (043 \mathrm{D}) \end{aligned}$ | Run Command Method Selection | Run CommandSel 0 : FWD Run \&REV Run <br> 1: Run \& FWD/REV | 0: FWD/Stop, REV/Stop <br> 1: Run/Stop, FWD/REV | Default: 0 <br> Range: 0,1 | - |

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { H5-17 } \\ & (11 \mathrm{~A} 1) \\ & <2> \end{aligned}$ | Operation Selection when Unable to Write into EEPROM | Busy Enter Sel 0: No ROM Enter 1: RAM Enter | Selects operation when an attempt is made to write data into EEPROM via MEMOBUS/Modbus communications and writing into EEPROM is not possible. <br> There is normally no need to change this parameter from the default value <br> 0: Cannot write into EEPROM <br> 1: Write in RAM only | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \mathrm{H} 5-18 \\ & (11 \mathrm{~A} 2) \end{aligned}$ | Filter Time Constant for Motor Speed Monitoring | MtrSpd Monitor T | Sets the filter time constant for monitoring the motor speed from MEMOBUS/Modbus communications and communication options. <br> Applicable MEMOBUS/Modbus registers are: 3EH, 3FH, $44 \mathrm{H}, \mathrm{ACH}$, and ADH <br> Note: Parameter is not available in models 4A0930 and 4A1200. | Default: 0 ms <br> Min.: 0 <br> Max.: 100 | - |

$<1>$ If this parameter is set to 0 , the drive will be unable to respond to MEMOBUS/Modbus commands.
$<2>$ Available in drive software versions PRG: 1018 and later.
$<3>$ Available in drive software versions PRG: 1019 and later.

## H6: Pulse Train Input/Output

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \mathrm{H} 6-01 \\ & (042 \mathrm{C}) \end{aligned}$ | Pulse Train Input <br> Terminal RP Function <br> Selection | Term RP Func Sel <br> 0 : Frequency Ref <br> 1: PID Feedback <br> 2: PID Set Point <br> 3: PG Feedback | 0 : Frequency reference <br> 1: PID feedback value <br> 2: PID setpoint value <br> 3: V/f Control with Simple PG feedback (possible only when using motor 1 in V/f Control) | Default: 0 <br> Range: 0 to 3 | - |
| $\begin{aligned} & \hline \text { H6-02 } \\ & (042 \mathrm{D}) \\ & \triangle \text { RUN } \end{aligned}$ | Pulse Train Input Scaling | Term RP Scaling | Sets the terminal RP input signal frequency that is equal to $100 \%$ of the value selected in $\mathrm{H} 6-01$. | Default: 1440 Hz <br> Min.: 100 <br> Max.: 32000 | - |
|  | Pulse Train Input Gain | Terminal RP Gain | Sets the level of the value selected in H6-01 when a frequency with the value set in H6-02 is input. | Default: 100.0\% <br> Min.: 0.0 <br> Max.: 1000.0 | - |
| $\begin{aligned} & \hline \text { H6-04 } \\ & (042 \mathrm{~F}) \\ & 0 \mathrm{D}_{\text {BuN }} \end{aligned}$ | Pulse Train Input Bias | Terminal RP Bias | Sets the level of the value selected in $\mathrm{H6} 601$ when 0 Hz is input. | Default: 0.0\% <br> Min.: -100.0 <br> Мах.: 100.0 | - |
| $\begin{aligned} & \text { H6-05 } \\ & (0430) \\ & \text { © } \end{aligned}$ | Pulse Train Input Filter Time | Term RP Flt Time | Sets the pulse train input filter time constant. | $\begin{aligned} & \text { Default: } 0.10 \mathrm{~s} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 2.00 \end{aligned}$ | - |
| $\begin{aligned} & \text { H6-06 } \\ & (0431) \\ & \square \text { هии } \end{aligned}$ | Pulse Train Monitor Selection | Term MP Func Sel | Select the pulse train monitor output function (value of the $\square-\square \square$ part of UD-ロロ). <br> For example, enter "501" for U5-01. | Default: 102 <br> Range: 000 to 809 | - |
| $\begin{aligned} & \mathrm{H} 6-07 \\ & (0432) \end{aligned}$ | Pulse Train Monitor Scaling | Term RP Scaling | Sets the terminal MP output signal frequency when the monitor value is $100 \%$. <br> For example, to have the pulse train monitor output equal the output frequency, set H6-06 to 102 and H6-07 to 0 . | Default: 1440 Hz <br> Min.: 0 <br> Max.: 32000 | - |
| $\begin{aligned} & \text { H6-08 } \\ & (043 \mathrm{~F}) \end{aligned}$ | Pulse Train Input Minimum Frequency | MP Lower Limit | Sets the minimum frequency for the pulse train input to be detected. Enabled when $\mathrm{H} 6-01=0$, 1 , or 2 . | $\begin{aligned} & \text { Default: } 0.5 \mathrm{~Hz} \\ & \text { Min.: } 0.1 \\ & \text { Max.: } 1000.0 \end{aligned}$ | - |

## B. 8 L: Protection Function

L parameters provide protection to the drive and motor, including control during momentary power loss, stall prevention, frequency detection, fault restarts, overtorque and undertorque detection, and other types of hardware protection.

## L1: Motor Protection

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { L1-01 } \\ & (0480) \end{aligned}$ | Motor Overload Protection Selection | Mtr OL Charact <br> 0: OL1 Disabled <br> 1: VT Motor <br> 2: CT Motor <br> 3: Vector Motor <br> 4: PM Motor <br> 5: Constant Torque <br> 6: 50 Hz VT Motor | 0: Disabled <br> 1: General purpose motor (standard fan cooled) <br> 2: Drive dedicated motor with a speed range of $1: 10$ <br> 3: Vector motor with a speed range of $1: 100$ <br> 4: PM motor with variable torque <br> 5: PM motor with constant torque control <br> 6: General purpose motor ( 50 Hz ) <br> The drive may not be able to provide protection when using multiple motors, even if overload is enabled in L1-01. Set L1-01 to 0 and install separate thermal relays to each motor. | Default: <1> <br> Range: 0 to 6 | - |
| $\begin{aligned} & \text { L1-02 } \\ & (0481) \end{aligned}$ | Motor Overload Protection Time | MOL Time Const | Sets the motor thermal overload protection (oL1) time. | Default: 1.0 min <br> Min.: 0.1 <br> Max.: 5.0 | - |
| $\begin{gathered} \text { L1-03 } \\ (0482) \end{gathered}$ | Motor Overheat Alarm Operation Selection (PTC input) | Mtr OH Alarm Sel <br> 0 : Ramp to Stop <br> 1: Coast to Stop <br> 2: Fast-Stop <br> 3: Alarm only | Sets operation when the motor temperature analog input <br> (H3-02, H3-10, or H3-06 = E) exceeds the oH3 alarm level. <br> 0 : Ramp to stop <br> 1: Coast to stop <br> 2: Fast Stop (decelerate to stop using the deceleration time in C1-09) <br> 3: Alarm only ("oH3" will flash) | Default: 3 <br> Range: 0 to 3 | - |
| $\begin{gathered} \text { L1-04 } \\ (0483) \end{gathered}$ | Motor Overheat Fault Operation Selection (PTC input) | Mtr OH Fault Sel <br> 0 : Ramp to Stop <br> 1: Coast to Stop <br> 2: Fast-Stop | Sets stopping method when the motor temperature analog input (H3-02, H3-10, or H3-06 = E) exceeds the oH4 fault level. <br> 0: Ramp to stop <br> 1: Coast to stop <br> 2: Fast Stop (decelerate to stop using the deceleration time in C1-09) | Default: 1 <br> Range: 0 to 2 | - |
| $\begin{aligned} & \text { L1-05 } \\ & (0484) \end{aligned}$ | Motor Temperature Input Filter Time (PTC input) | Mtr Temp Filter | Adjusts the filter for the motor temperature analog input (H3-02, H3-10, or H3-06 = E). | Default: 0.20 s <br> Min.: 0.00 <br> Max.: 10.00 | - |
| $\begin{gathered} \text { L1-08 } \\ (1103) \\ <2> \end{gathered}$ | oL1 Current Level | OL1 current lv11 | Sets the reference current for motor thermal overload detection for motor 1 in amperes. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0.0 A Min.: 10\% of drive rated current Max.: $150 \%$ of drive rated current ${ }^{\text {<3> }}$ | - |
| $\begin{gathered} \text { L1-09 } \\ (1104) \\ <2> \end{gathered}$ | oL1 Current Level for Motor 2 | OL1 current lv12 | Sets the reference current for motor thermal overload detection for motor 2 in amperes. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0.0 A Min.: $10 \%$ of drive rated current Max.: $150 \%$ of drive rated current ${ }^{<3>}$ | - |
| $\begin{gathered} \text { L1-13 } \\ (046 \mathrm{D}) \end{gathered}$ | Continuous <br> Electrothermal <br> Operation Selection | Mtr OL Mem Sel <br> 0: Disabled <br> 1: Enabled | 0: Disabled <br> 1: Enabled | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L1-15 } \\ & (0440) \end{aligned}$ | Motor 1 Thermistor Selection (NTC) | M1 OH5 Fault Sel | 0: Disabled <br> 1: Enabled <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L1-16 } \\ & (0441) \end{aligned}$ | Motor 1 Overheat Temperature | M1 OH5 level | Sets the temperature for motor 1 that triggers an overheat fault (oH5). <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: $120^{\circ} \mathrm{C}$ <br> Min.: 50 <br> Max.: 200 | - |

## B. 8 L: Protection Function

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { L1-17 } \\ & (0442) \end{aligned}$ | Motor 2 Thermistor Selection (NTC) | M2 OH5 Fault Sel | 0: Disabled <br> 1: Enabled <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L1-18 } \\ & (0443) \end{aligned}$ | Motor 2 Overheat Temperature | M2 OH5 level | Sets the temperature for motor 1 that triggers an overheat fault (oH5). <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: $120^{\circ} \mathrm{C}$ <br> Min.: 50 <br> Max.: 200 | - |
| $\begin{aligned} & \text { L1-19 } \\ & (0444) \end{aligned}$ | Operation at Thermistor Disconnect (THo) (NTC) | Tho Stop sel | Determines drive response when a thermistor disconnect fault (THo) occurs. <br> 0 : Ramp to stop <br> 1: Coast to stop <br> 2: Fast Stop (decelerate to stop using the deceleration time set to C1-09) <br> 3: Alarm only ("THo" will flash) <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: 3 <br> Range: 0 to 3 | - |
| $\begin{aligned} & \text { L1-20 } \\ & (0445) \end{aligned}$ | Operation at Motor Overheat (oH5) | OH5 Stop sel | Determines drive response when a motor overheat fault (oH5) occurs. <br> 0 : Ramp to stop <br> 1: Coast to stop <br> 2: Fast Stop (decelerate to stop using the deceleration time set to C1-09) <br> 3: Alarm only ("oH5" will flash) <br> Note: This parameter is only available in models 4A0930 and 4A1200. | Default: 1 <br> Range: 0 to 3 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ Available in drive software versions PRG: 1019 and later.
$<3>$ Display is in the following units:
2A0004 to 2A0040, 4A0002 to 4A0023, and 5A0007 to 5A0017: 0.01 A units.
2A0056 to 2A0415, 4A0031 to 4A0675, and 5A0022 to 5A0242: 0.1 A units.

## - L2: Momentary Power Loss Ride-Thru

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { L2-01 } \\ & (0485) \end{aligned}$ | Momentary Power Loss Operation Selection | PwrL Selection <br> 0 : Disabled <br> 1: Enbl with Timer <br> 2: Enbl whl CPU act <br> 3: KEB Mode <br> 4: KEB Stop Mode <br> 5: KEB Decel to Stp | 0: Disabled. Drive trips on Uv1 fault when power is lost. <br> 1: Recover within the time set in L2-02. Uv1 will be detected <br> if power loss is longer than L2-02. <br> 2: Recover as long as CPU has power. Uv1 is not detected. <br> 3: KEB deceleration for the time set to L2-02. <br> 4: KEB deceleration as long as CPU has power. <br> 5: KEB deceleration to stop. | Default: 0 <br> Range: 0 to 5 | - |
| $\begin{aligned} & \text { L2-02 } \\ & (0486) \end{aligned}$ | Momentary Power Loss Ride-Thru Time | PwrL Ridethru t | Sets the Power Loss Ride-Thru time. Enabled only when L2-01 $=1$ or 3 . | Default: <1> <br> Min.: 0.0 s <br> Max.: 25.5 s | - |
| $\begin{aligned} & \text { L2-03 } \\ & (0487) \end{aligned}$ | Momentary Power Loss Minimum Baseblock Time | PwrL Baseblock t | Sets the minimum wait time for residual motor voltage decay before the drive output reenergizes after performing Power Loss Ride-Thru. <br> Increasing the time set to L2-03 may help if overcurrent or overvoltage occur during Speed Search or during DC Injection Braking. | Default: <1> <br> Min.: 0.1 s <br> Max.: 5.0 s | - |
| $\begin{aligned} & \text { L2-04 } \\ & (0488) \end{aligned}$ | Momentary Power Loss Voltage Recovery Ramp Time | PwrL V/F Ramp t | Sets the time for the output voltage to return to the preset V/f pattern during Speed Search. | Default: <1> <br> Min.: 0.0 s <br> Max.: 5.0 s | - |
| $\begin{aligned} & \text { L2-05 } \\ & (0489) \end{aligned}$ | Undervoltage Detection Level (Uv1) | PUV Det Level | Sets the DC bus undervoltage trip level. | Default: 190 <br> $\mathrm{Vdc}{ }^{<2>}<3>$ <br> Min.: 150 Vdc <br> $\underset{\langle 3>}{\text { Max.: }} 210$ Vdc | - |

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { L2-06 } \\ & \text { (048A) } \end{aligned}$ | KEB Deceleration Time | KEB Decel Time | Sets the time required to decelerate from the speed when KEB was activated to zero speed. | Default: 0.00 s <br> Min.: 0.00 <br> Max.: $6000.0^{<4>}$ | - |
| $\begin{aligned} & \text { L2-07 } \\ & (048 \mathrm{~B}) \end{aligned}$ | KEB Acceleration Time | KEB Accel Time | Sets the time to accelerate to the frequency reference when momentary power loss is over. If set to 0.0 , the active acceleration time (C1-01, C1-03, C1-05, or C1-07) is used. | Default: 0.00 s <br> Min.: 0.00 <br> Max.: $6000.0^{<4>}$ | - |
| $\begin{aligned} & \text { L2-08 } \\ & (048 \mathrm{C}) \end{aligned}$ | Frequency Gain at KEB Start | KEB Freq Red | Sets the percentage of output frequency reduction at the beginning of deceleration when the KEB Ride-Thru function is started. <br> Reduction $=($ slip frequency before KEB $) \times($ L2-08/100 $) \times 2$ | Default: 100\% <br> Min.: 0 <br> Max.: 300 | - |
| $\begin{aligned} & \text { L2-10 } \\ & (048 \mathrm{E}) \end{aligned}$ | KEB Detection Time (Minimum KEB Time) | KEB Detect Time | Sets the time to perform KEB Ride-Thru. | Default: 50 ms <br> Min.: 0 <br> Max.: 2000 | - |
| $\begin{aligned} & \text { L2-11 } \\ & (0461) \end{aligned}$ | DC Bus Voltage Setpoint during KEB | KEB DC Bus Level | Sets the desired value of the DC bus voltage during KEB RideThru. | Default: <2> <br> Min.: 150 Vdc <br> Max.: 400 Vdc <5> | - |
| $\begin{aligned} & \text { L2-29 } \\ & (0475) \end{aligned}$ | KEB Method Selection | KEB Mode Sel 0: Single Mode KEB1 <br> 1: Single Mode KEB2 <br> 2: System Mode KEB1 <br> 3: System Mode KEB2 | 0: Single Drive KEB Ride-Thru 1 <br> 1: Single Drive KEB Ride-Thru 2 <br> 2: System KEB Ride-Thru 1 <br> 3: System KEB Ride-Thru 2 | Default: 0 <br> Range: 0 to 3 | - |

$<1>$ Default setting is determined by parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<2>$ Default setting is determined by parameter E1-01, Input voltage Setting.
$<3>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<4>$ Setting range value is dependent on parameter C1-10, Accel/Decel Time Setting Units. When C1-10 $=0$ (units of 0.01 seconds), the setting range becomes 0.00 to 600.00 seconds.
$<5>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives, but set the value below 1040 Vdc (overvoltage protection level).

## - L3: Stall Prevention

| $\begin{gathered} \text { L3-24 } \\ (046 \mathrm{E}) \end{gathered}$ | Motor Acceleration Time for Inertia Calculations | Mtr Accel Time | Sets the time needed to accelerate the uncoupled motor at rated torque from stop to the maximum frequency. | Default: ${ }^{<5><6 \gg}$ <7 Min: 0.001 s Max: 10.000 s | - |
| $\begin{aligned} & \text { L3-25 } \\ & (046 \mathrm{~F}) \end{aligned}$ | Load Inertia Ratio | Load Inertia Rat | Sets the ratio between the motor and machine inertia. | Default: 1.0 <br> Min.: 1.0 <br> Max.: 1000.0 | - |
| $\begin{aligned} & \text { L3-26 } \\ & (0455) \end{aligned}$ | Additional DC Bus Capacitors | ExtDC busCapSize | When DC bus capacitors have been added externally, be sure to add those values to the internal capacitor table for proper DC bus calculations. | Default: $0 \mu \mathrm{~F}$ Min: 0 Max: 65000 | - |
| $\begin{aligned} & \text { L3-27 } \\ & (0456) \end{aligned}$ | Stall Prevention Detection Time | Stl Prev DetTime | Sets the time the current must exceed the Stall Prevention level to activate Stall Prevention. | Default: 50 ms <br> Min.: 0 <br> Мах.: 5000 | - |

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { L3-34 } \\ & (016 \mathrm{~F}) \end{aligned}$ | Torque Limit Delay Time | TRQ Dly Filter T | Sets the filter time constant in seconds for the torque limit value to return to set value when the Power KEB Ride-Thru is enabled ( $\mathrm{L} 2-29=1$ ). If oscillation occurs during Power KEB RideThru, gradually increase this setting in increments of 0.010 s . <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: <9> <br> Min.: 0.000 <br> Max.: 1.000 | - |
| $\begin{gathered} \text { L3-35 } \\ (0747) \\ <10> \end{gathered}$ | Speed Agree Width at Intelligent Stall Prevention during Deceleration | IntDecSpdAgrWdth | Sets the width of the speed agree when L3-04 $=2$ (Intelligent Stall Prevention during deceleration) in units of 0.01 Hz . There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0.00 Hz <br> Min.: 0.00 <br> Max.: 1.00 | - |

$<1>$ The default setting and upper limit are determined by C6-01, Drive Duty Selection, and L8-38, Frequency Reduction Selection.
$<2>$ The setting range is 0 to 2 in OLV/PM control mode. The setting range is 0 and 1 in CLV or AOLV/PM control modes.
$<3>$ Default setting is determined by parameter E1-01, Input voltage Setting.
$<4>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<5>$ Parameter value changes automatically if E2-11 is manually changed or changed by Auto-Tuning.
$<6>$ Default setting is determined by parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<7>$ Default setting is determined by parameter E5-01, Motor Code Selection.
$<8>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives, but set the value below 1040 Vdc (overvoltage protection level).
$<9>$ Default setting is determined by parameter A1-02, Control Method Selection.
When A1-02 $=6(\mathrm{AOLV} / \mathrm{PM})$, default is 0.2
When A1-02 $=7$ (CLV/PM), default is 0.02 .
$<10>$ Available in drive software versions PRG: 1018 and later.

## L4: Speed Detection

$<1>$ Default setting is determined by parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<2>$ Default setting is determined by parameter o2-04, Drive Model Selection.
$<3>$ Default setting is determined by parameters A1-02, Control Method Selection, and o2-04, Drive Model Selection.
$<4>$ Default setting is determined by parameter A1-02, Control Method Selection.

## L9: Drive Protection 2

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { L9-03 } \\ (0819) \\ <l> \end{gathered}$ | Carrier Frequency Reduction Level Selection | Fc ReductLvl Sel 0 : Disabled <br> 1: Enabled | Selects the level to start frequency reduction or to clear the current frequency level for automatic carrier frequency reduction. <br> There is normally no need to change this parameter from the default value. <br> 0 : Reduces the carrier frequency based on the drive rated current that is not derated. <br> 1: Reduces the carrier frequency based on the drive rated current that is derated by the carrier frequency and the temperature selected for C6-02. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0 <br> Range: 0,1 | - |

<1> Available in drive software versions PRG: 1018 and later.

## B. 9 n: Special Adjustment

The n parameters adjust more advanced performance characteristics such as Hunting Prevention, speed feedback detection, High Slip Braking, and Online Tuning for motor line-to-line resistance.

## n1: Hunting Prevention

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \mathrm{n} 1-01 \\ (0580) \end{gathered}$ | Hunting Prevention Selection | Hunt Prev Select 0: Disabled 1: Enabled | 0: Disabled <br> 1: Enabled | Default: 1 <br> Range: 0,1 | - |
| $\begin{gathered} \mathrm{n} 1-02 \\ (0581) \end{gathered}$ | Hunting Prevention Gain Setting | Hunt Prev Gain | If the motor vibrates while lightly loaded, increase the gain by 0.1 until vibration ceases. If the motor stalls, decrease the gain by 0.1 until the stalling ceases. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 2.50 | - |
| $\begin{aligned} & \text { n1-03 } \\ & (0582) \end{aligned}$ | Hunting Prevention Time Constant | Hunt Prev Time | Sets the time constant used for Hunting Prevention. | Default: <1> <br> Min.: 0 ms <br> Max.: 500 ms | - |
| $\begin{gathered} \mathrm{n} 1-05 \\ (0530) \end{gathered}$ | Hunting Prevention Gain while in Reverse | Hprev Gain@Rev | Sets the gain used for Hunting Prevention. If set to 0 , the gain set to n1-02 is used for operation in reverse. | Default: 0.00 <br> Min.: 0.00 <br> Max.: 2.50 | - |

$<1>$ Default setting is determined by parameter o2-04, Drive Model Selection.

## n2: Speed Feedback Detection Control (AFR) Tuning

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- | :--- |
| n2-01 <br> $(0584)$ | Speed Feedback <br> Detection Control (AFR) <br> Gain | AFR Gain | Sets the internal speed feedback detection control gain in the <br> automatic frequency regulator (AFR). <br> If hunting occurs, increase the set value. If response is low, <br> decrease the set value. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 10.00 | - |
| n2-02 <br> $(0585)$ | Speed Feedback <br> Detection Control (AFR) <br> Time Constant 1 | AFR Time | Sets the time constant used for speed feedback detection control <br> (AFR). | Default: 50 ms <br> Min.: 0 <br> Max.: 2000 | - |
| n2-03 <br> $(0586)$ | Speed Feedback <br> Detection Control (AFR) <br> Time Constant 2 | AFR Time 2 | Sets the AFR time constant to be used during Speed Search and <br> during regen. | Default: 750 ms <br> Min.: 0 <br> Max.: 2000 | - |

## n3: High Slip Braking (HSB) and Overexcitation Braking

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { n3-01 } \\ & (0588) \end{aligned}$ | High-Slip Braking Deceleration Frequency Width | HSB DecStepWidth | Sets the output frequency reduction step width for when the drive stops the motor using HSB. Set as a percentage of the maximum output frequency. Increase this setting if overvoltage occurs during HSB. | $\begin{aligned} & \text { Default: 5\% } \\ & \text { Min.: } 1 \\ & \text { Max.: } 20 \end{aligned}$ | - |
| $\begin{aligned} & \text { n3-02 } \\ & (0589) \end{aligned}$ | High-Slip Braking Current Limit | HSB Current Lim | Sets the current limit during HSB as a percentage of the motor rated current. | Default: <1> <br> Min.: 100\% <br> Max.: <1> | - |
| $\begin{gathered} \text { n3-03 } \\ (058 \mathrm{~A}) \end{gathered}$ | High-Slip Braking Dwell Time at Stop | HSB DwelTim@Stp | Sets the time the drive will run with minimum frequency (E1-09) at the end of deceleration. If this time is set too low, the machine inertia can cause the motor to rotate slightly after HSB. | Default: 1.0 s <br> Min.: 0.0 <br> Max.: 10.0 | - |
| $\begin{gathered} \text { n3-04 } \\ (058 \mathrm{~B}) \end{gathered}$ | High-Slip Braking Overload Time | HSB OL Time | Sets the time required for an HSB overload fault (oL7) to occur when the drive output frequency does not change during an HSB stop. This parameter does not typically require adjustment. | Default: 40 s <br> Min.: 30 <br> Max.: 1200 | - |
| $\begin{aligned} & \text { n3-13 } \\ & (0531) \end{aligned}$ | Overexcitation Deceleration Gain | Hflux Brake Gain | Sets the gain applied to the V/f pattern during Overexcitation Deceleration (L3-04 = 4). | $\begin{aligned} & \text { Default: } 1.10 \\ & \text { Min.: } 1.00 \\ & \text { Max.: } 1.40 \end{aligned}$ | - |

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Values | Page |
| :--- | :--- | :--- | :--- | :--- | :--- |
| n3-14 <br> $(0532)$ | High Frequency <br> Injection during <br> Overexcitation <br> Deceleration | HarmInj@HiFlxBrk <br> 0: Disabled <br> 1: Enabled | 0: Disabled <br> 1: Enabled | Default: 0 <br> Range: 0,1 |  |
| n3-21 <br> (0579) | High-Slip Suppression <br> Current Level | Hflux I Supp Lvl | Sets output current level at which the drive will start reducing <br> the overexcitation gain in order to prevent a too high motor slip <br> during Overexcitation Deceleration. Set as a percentage of the <br> drive rated current. | - |  |
| Default: $100 \%$ <br> Min.: 0 <br> Max.: 150 | - |  |  |  |  |
| n3-23 <br> $(057 B)$ | Overexcitation <br> Operation Selection | Hflux Brake Sel <br> 0: Enabled-Both Dir <br> 1: Enabled-Fwd only <br> 2: Enabled-Rev only | 0: Enabled in both directions <br> 1: Enabled only when rotating forward <br> 2: Enabled only when in reverse | Default: 0 <br> Range: 0 to 2 | - |

$<1>$ The upper limit of the setting range and default setting are determined by parameters C6-01, Drive Duty Selection, and L8-38, Frequency Reduction Selection.

## - n5: Feed Forward Control

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { n5-01 } \\ \text { (05B0) } \end{gathered}$ | Feed Forward Control Selection | Feedfoward Sel <br> 0: Disabled <br> 1: Enabled | 0: Disabled <br> 1: Enabled | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { n5-02 } \\ (05 \mathrm{~B} 1) \end{gathered}$ | Motor Acceleration Time | Motor Accel Time | Sets the time required to accelerate the motor at the rated torque from stop to rated speed. | Default: <1> <2> <br> Min.: 0.001 s <br> Max.: 10.000 s | - |
| $\begin{gathered} \text { n5-03 } \\ (05 \mathrm{~B} 2) \end{gathered}$ | Feed Forward Control Gain | Feedfoward Gain | Sets the ratio between motor and load inertia. Lower this setting if overshoot occurs at the end of acceleration. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 100.00 | - |

$<1>$ Default setting is determined by parameter E5-01, Motor Code Selection.
$<2>$ Default setting is determined by parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
n6: Online Tuning

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- | :--- |
| n6-01 <br> $(0570)$ | Online Tuning <br> Selection | Online Tune Sel | 0: Disabled <br> 1: Line-to-line resistance tuning <br> 2: Voltage correction. Setting not possible when Energy Saving <br> is enabled (b8-01). | Default: 0 <br> Range: 0 to 2 | - |
| n6-05 <br> $(05 C 7)$ | Online Tuning Gain | R1 Comp Gain | Decrease this setting for motors with a relatively large rotor <br> time constant. | Default: 1.0 <br> Min.: 0.1 <br> Max.: 50.0 | - |

## n8: PM Motor Control Tuning

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- | :--- |
| n8-01 <br> $(0540)$ | Initial Rotor Position <br> Estimation Current | InitRotPosDetCur | Sets the current used for initial rotor position estimation as a <br> percentage of the motor rated current (E5-03). If the motor <br> nameplate lists an "Si" value, that value should be entered here. | Default: $50 \%$ <br> Min.: 0 <br> Max.: 100 | - |
| n8-02 <br> $(0541)$ | Pole Attraction Current | Pull-In Current | Sets the current during initial polar attraction as a percentage <br> of the motor rated current. <br> Note:This parameter is not available in models <br> 4A0930 and 4A1200 for CLV/PM.Default: $80 \%$ <br> Min.: 0 <br> Max.: 150 | - |  |

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \mathrm{n} 8-03 \\ & (0542) \end{aligned}$ | Current Startup Time | CurrentRampTime | Sets the current startup time to detect the rotor pole when tuning the phase-Z pulse position. Set this parameter to a large value if the motor vibrates when tuning the phase-Z pulse position. There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 1.5 <br> Min.: 1.5 <br> Max.: 5.0 | - |
| $\begin{aligned} & \mathrm{n} 8-04 \\ & (0543) \end{aligned}$ | Pole Attraction Time | Pull-In Time | Sets the pole attraction time to detect the rotor pole when tuning the phase-Z pulse position. Set this parameter to a large value if the motor vibrates when tuning the phase-Z pulse position. There is normally no need to change this parameter from the default value. <br> Note: $\quad \begin{aligned} & \text { This parameter is not available in models } \\ & 4 \mathrm{~A} 0930 \text { and 4A1200. }\end{aligned}$ | Default: 1.5 <br> Min.: 1.5 <br> Max.: 5.0 | - |
| $\begin{gathered} \mathrm{n} 8-11 \\ (054 \mathrm{~A}) \\ <1> \end{gathered}$ | Induction Voltage Estimation Gain 2 | InducedVEstGain2 | Sets the gain for estimating the speed. There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: <2> <br> Min.: 0.0 <br> Max.: 1000.0 | - |
| $\begin{gathered} \mathrm{n} 8-14 \\ (054 \mathrm{D}) \\ <1> \end{gathered}$ | Polarity Compensation Gain 3 | PoleComp Gain 3 | Sets the gain for estimating the speed. There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | $\begin{aligned} & \text { Default: } 1.000 \\ & \text { Min.: } 0.000 \\ & \text { Max.: } 10.000 \end{aligned}$ | - |
| $\begin{gathered} \mathrm{n} 8-15 \\ (054 \mathrm{E}) \\ <1> \end{gathered}$ | Polarity Compensation Gain 4 | PoleComp Gain 4 | Sets the gain for estimating the speed. There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0.500 <br> Min.: 0.000 <br> Мах.: 10.000 | - |
| $\begin{gathered} \text { n8-21 } \\ (0554) \\ <1> \end{gathered}$ | Motor Ke Gain | Back EMF Gain | Sets the gain for estimating the speed. There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 0.90 <br> Min.: 0.80 <br> Мах.: 1.00 | - |
| $\begin{aligned} & \mathrm{n} 8-35 \\ & (0562) \end{aligned}$ | Initial Rotor Position Detection Selection | Init Pole EstSel 0: Pull-In Method 1: Harm Inj Method <br> 2: Pulse Method | $\begin{aligned} & \text { 0: Pull-in } \\ & \text { 1: High frequency injection } \\ & \text { 2: Pulse injection } \end{aligned}$ | Default: 1 <br> Range: 0 to 2 | - |
| $\begin{gathered} \text { n8-36 } \\ (0563) \\ <1> \end{gathered}$ | High Frequency Injection Level | PM Harm Inj Freq | Sets the frequency in Hz for the superimposed signal used for superimposed harmonics. Enabled when n8-57 = 1 . There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 500 Hz <br> Min.: 200 <br> Max.: 1000 | - |
| $\begin{gathered} \text { n8-37 } \\ (0564) \\ <1> \end{gathered}$ | High Frequency Injection Amplitude | PM Harm Inj Amp | Sets the amplitude for High Frequency Injection as a percentage of the voltage when the voltage class base is $100 \%$ ( 200 V Class is $200 \mathrm{~V}, 400$ V Class is 400 V , and 600 V Class is 575 V ). Adjust this value when there is too much or too little current as a result of the settings assigned to motor parameters. Enabled when n8-57 $=1$. <br> There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 20.0\% <br> Min.: 0.0 <br> Max.: 50.0 | - |
| $\begin{gathered} \text { n8-39 } \\ (0566) \\ <1> \end{gathered}$ | Low Pass Filter Cutoff Frequency for High Frequency Injection | PM Harm LPF Freq | Sets the cutoff frequency of a low pass filter for high frequency injection. Enabled when n8-57 $=1$. <br> There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 50 Hz <br> Min.: 0 <br> Max.: 1000 | - |
| $\begin{aligned} & \text { n8-45 } \\ & (0538) \end{aligned}$ | Speed Feedback Detection Control Gain (for PM Motors) | PM Spd Fdbk Gain | Increase this setting if hunting occurs. Decrease to lower the response. | $\begin{array}{\|l\|} \hline \text { Default: } 0.80 \\ \text { Min.: } 0.00 \\ \text { Max.: } 10.00 \\ \hline \end{array}$ | - |

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \mathrm{n} 8-47 \\ (053 \mathrm{~A}) \end{gathered}$ | Pull-In Current Compensation Time Constant (for PM Motors) | PM Pull-in I Tc | Sets the time constant to make the pull-in current reference and actual current value agree. Decrease the value if the motor begins to oscillate, and increase the value if it takes too long for the current reference to equal the output current. | $\begin{aligned} & \text { Default: } 5.0 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 100.0 \end{aligned}$ | - |
| $\begin{gathered} \text { n8-48 } \\ (053 \mathrm{~B}) \end{gathered}$ | Pull-In Current (for PM Motors) | PM No-load Curr | Defines the d-Axis current reference during no-load operation at a constant speed. Set as a percentage of the motor rated current. Increase this setting if hunting occurs while running at constant speed. | $\begin{aligned} & \text { Default: } 30 \% \\ & \text { Min.: } 20 \\ & \text { Max.: } 200 \end{aligned}$ | - |
| $\begin{gathered} \text { n8-49 } \\ (053 \mathrm{C}) \end{gathered}$ | d-Axis Current for High Efficiency Control (for PM Motors) | EnergySav ID Lvl | Sets the d-Axis current reference when running a high load at constant speed. Set as a percentage of the motor rated current. | $\begin{aligned} & \text { Default:<3> } \\ & \text { Min.: }-200.0 \% \\ & \text { Max.: } 0.0 \% \end{aligned}$ | - |
| $\begin{gathered} \text { n8-51 } \\ (053 \mathrm{E}) \end{gathered}$ | Acceleration/ <br> Deceleration Pull-In Current (for PM Motors) | PM Pull-in I@Acc | Sets the d-Axis current reference during acceleration/ deceleration as a percentage of the motor rated current. Set to a high value when more starting torque is needed. | $\begin{aligned} & \text { Default: } 50 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 200 \end{aligned}$ | - |
| $\begin{gathered} \mathrm{n} 8-54 \\ (056 \mathrm{D}) \end{gathered}$ | Voltage Error Compensation Time Constant | PM V Error CompT | Adjusts the value when hunting occurs at low speed. If hunting occurs with sudden load changes, increase n8-54 in increments of 0.1 . Reduce this setting if oscillation occurs at start. Increase this setting if vibration occurs at start. | $\begin{aligned} & \text { Default: } 1.00 \mathrm{~s} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 10.00 \end{aligned}$ | - |
| $\begin{gathered} \text { n8-55 } \\ (056 \mathrm{E}) \end{gathered}$ | Load Inertia | PMLoad wk2 Ratio <br> 0 : Less than 1:10 <br> 1: $1: 10$ to $1: 30$ <br> 2: 1:30 to 1:50 <br> 3: More than 1:50 | Sets the ratio between motor and machine inertia. 0 0. Below $1: 10$ 1: Between $1: 10$ and $1: 30$ 2: Between $1: 30$ and $1: 50$ 3: Beyond $1: 50$ | Default: 0 <br> Min.: 0 <br> Max.: 3 | - |
| $\begin{aligned} & \text { n8-57 } \\ & (0574) \end{aligned}$ | High Frequency Injection | PM Harm Inj Sel 0: Disabled <br> 1: Enabled | 0 : Disabled. Disable when using an SPM motor. <br> 1: Enabled. Use this setting to enhance the speed control range when using an IPM motor. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { n8-62 } \\ (057 \mathrm{D}) \end{gathered}$ | Output Voltage Limit (for PM Motors) | PM Vout Limit | Prevents output voltage saturation. Should be set just below the voltage provided by the input power supply. | $\begin{aligned} & \text { Default: } 200.0 \mathrm{~V} \\ & <4> \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 230.0^{<4>} \end{aligned}$ | - |
| $\begin{gathered} \mathrm{n} 8-65 \\ (065 \mathrm{C}) \end{gathered}$ | Speed Feedback Detection Control Gain during ov Suppression | SFdbk G @OV Supp | Sets the gain used for internal speed feedback detection during ov suppression. | $\begin{aligned} & \text { Default: } 1.50 \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 10.00 \end{aligned}$ | - |
| $\begin{gathered} \mathrm{n} 8-69 \\ (065 \mathrm{D}) \end{gathered}$ | Speed Calculation Gain | SpdSrch Gain | Sets the proportional gain for PLL control of an extended observer. <br> There is normally no need to change this parameter from the default value. | Default: 1.00 Min.: 0.00 Max.: 20.00 | - |
| $\begin{gathered} \text { n8-72 } \\ (0655) \\ <1> \end{gathered}$ | Speed Estimation Method Selection | Spd Est method <br> 0 : Conventional <br> 1: A1000 method | Sets the method to be used for estimating the speed. <br> 0: Conventional method <br> 1: A1000 method <br> There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models 4A0930 and 4A1200. | Default: 1 <br> Range: 0,1 | - |
| $\begin{gathered} \mathrm{n} 8-84 \\ (02 \mathrm{D} 3) \end{gathered}$ | Initial Polarity <br> Estimation Timeout Current | Polarity Det Curr | Sets the current to determine polarity for the initial polarity calculation as a percentage of the motor rated current. $100 \%=$ Motor rated current <br> Note: If an "Si" value is listed on a Yaskawa motor nameplate, set n8-84 to "Si" value x 2 . | $\begin{aligned} & \text { Default: } 100 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 150 \end{aligned}$ | - |

$<1>$ Available in drive software versions PRG: 1018 and later.
$<2>$ Default setting is determined by parameter n8-72, Speed Estimation Method Selection.
When $\mathrm{n} 8-72=0$, default is 50.0
When $\mathrm{n} 8-72=1$, default is 150.0 .
$<3>$ Default setting is determined by parameter E5-01, Motor Code Selection.
$<4>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.

## B. 10 o: Operator-Related Settings

The o parameters set up the digital operator displays.

## - 01: Digital Operator Display Selection

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { o1-01 } \\ (0500) \\ 0 \text { ®RUN } \end{gathered}$ | Drive Mode Unit Monitor Selection | User Monitor Sel | Switches the display after the power has been turned on. When using an LED operator, pressing the up arrow key will display the following data: frequency reference $\rightarrow$ rotational direction $\rightarrow$ output frequency $\rightarrow$ output current $\rightarrow$ output voltage $\rightarrow$ U1- $\square \square$. <br> Note: Enter the "1-Dด" portion of "U1-पด" to view the monitor. Certain monitors are not available in all control modes. | Default: 106 (Monitor U1-06) Range: 104 to 813 | - |
| $\begin{gathered} \text { o1-02 } \\ (0501) \\ \hline \text { ©RUN } \end{gathered}$ | User Monitor Selection after Power Up | Power-On Monitor <br> 1: Frequency Ref <br> 2: FWD/REV <br> 3: Output Freq <br> 4: Output Current <br> 5: User Monitor | Selects the information displayed on the digital operator when the power is turned on. <br> 1: Frequency reference (U1-01) <br> 2: Direction <br> 3: Output frequency (U1-02) <br> 4: Output current (U1-03) <br> 5: User-selected monitor (set by o1-01) | Default: 1 <br> Range: 1 to 5 | - |
| $\begin{gathered} \text { o1-03 } \\ (0502) \end{gathered}$ | Digital Operator Display Selection | $\begin{aligned} & \text { Display Unit Sel } \\ & 0: 0.01 \mathrm{~Hz} \\ & 1: 0.01 \% \\ & 2: \mathrm{rmin} \\ & 3: \text { User Units } \end{aligned}$ | Sets the units the drive should use to display the frequency reference and motor speed monitors. <br> 0: 0.01 Hz <br> 1: $0.01 \%(100 \%=$ E1-04 $)$ <br> 2: $\mathrm{r} / \mathrm{min}$ (calculated using the number of motor poles setting in E2-04, E4-04, or E5-04) <br> 3: User-selected units (set by o1-10 and o1-11) | Default: <1> Range: 0 to 3 | - |
| $\begin{gathered} \text { o1-04 } \\ (0503) \end{gathered}$ | V/f Pattern Display Unit | V/f Ptrn Unit 0: Hertz <br> 1: RPM | $\begin{aligned} & \begin{array}{l} 0: \mathrm{Hz} \\ 1: \mathrm{r} / \mathrm{min} \end{array} \end{aligned}$ | Default: <1> <br> Range: 0,1 | - |
| $\begin{gathered} \text { o1-05 } \\ (0504) \\ \substack{\text { © RuN }} \\ <2> \end{gathered}$ | LCD Contrast Control | LCD Contrast | Sets the contrast of the LCD operator. | Default: 3 <br> Min.: 0 <br> Max.: 5 | - |
| $\begin{aligned} & \text { o1-10 } \\ & (0520) \end{aligned}$ | User-Set Display Units Maximum Value | UserDisp Scaling | These settings define the display values when ol-03 is set to 3 . o1-10 sets the display value that is equal to the maximum output frequency. <br> o1-11 sets the position of the decimal position. | $\begin{aligned} & \text { Default: <3> } \\ & \text { Range: } 1 \text { to } \\ & 60000 \end{aligned}$ | - |
| $\begin{gathered} \text { o1-11 } \\ (0521) \end{gathered}$ | User-Set Display Units Decimal Display | UserDisp Dec Sel |  | Default: <3> Range: 0 to 3 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ Available in drive software versions PRG: 1019 and later.
$<3>$ Default setting is determined by parameter o1-03, Digital Operator Display Selection.

## 02: Digital Operator Keypad Functions

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- | :--- |
| o2-01 <br> $(0505)$ | LO/RE Key Function <br> Selection | LO/RE Key <br> 0: Disabled <br> 1: Enabled | 0: Disabled <br> 1: Enabled. LO/RE key switches between LOCAL and <br> REMOTE operation. | Default: 1 <br> Range: 0,1 |  |
| o2-02 <br> $(0506)$ | STOP Key Function <br> Selection | Oper STOP Key <br> 0: Disabled <br> 1: Enabled | 0: Disabled. STOP key is disabled in REMOTE operation. <br> 1: Enabled. STOP key is always enabled. | Default: 1 <br> Range: 0,1 | - |
| o2-03 <br> $(0507)$ | User Parameter Default <br> Value | User Default Sel <br> $0:$ No Change <br> $1:$ Save User Init <br> 2: Clear User Init | 0: No change. <br> $1:$ Set defaults. Saves parameter settings as default values for <br> a User Initialization. <br> 2: Clear all. Clears the default settings that have been saved for <br> a User Initialization. | Default: 0 <br> Range: 0 to 2 | - |

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { o2-04 } \\ (0508) \end{gathered}$ | Drive Model Selection | Inverter Model \# | Enter the drive model. Setting required only if installing a new control board. | Default: <br> Determined by drive capacity | - |
| $\begin{aligned} & \text { o2-05 } \\ & (0509) \end{aligned}$ | Frequency Reference Setting Method Selection | Oper Ref Method <br> 0 : Disabled <br> 1: Enabled | 0 : ENTER key must be pressed to enter a frequency reference. 1: ENTER key is not required. The frequency reference can be adjusted using the up and down arrow keys only. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { o2-06 } \\ (050 \mathrm{~A}) \end{gathered}$ | Operation Selection when Digital Operator is Disconnected | Oper Discon Det <br> 0 : Disabled <br> 1: Enabled | 0 : The drive continues operating if the digital operator is disconnected. <br> 1: An oPr fault is triggered and the motor coasts to stop. | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { o2-07 } \\ & (0527) \end{aligned}$ | Motor Direction at Power Up when Using Operator | For/RevSel@PwrUp <br> 0: Forward <br> 1: Reverse | 0: Forward <br> 1: Reverse <br> This parameter requires assigning drive operation to the digital operator. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \hline \text { o2-09 } \\ (050 \mathrm{D}) \\ \hline \end{gathered}$ | - | - | Factory use. | - | - |
| $\underset{\langle l>}{\substack{\text { o2-19 } \\(061 F}}$ | Selection of Parameter Write during Uv | ParameterSet Sel <br> 0: Disabled <br> 1: Enabled | Selects whether parameter settings can be changed during a DC bus undervoltage condition. To be used with 24 V Power Supply option (PS-A10L, PS-A10H) revision B or later. <br> 0 : Disabled <br> 1: Enabled <br> Note: Enabling this function may trigger a CPF06 fault when used with a 24 V Power Supply option revision earlier than B , as the parameter changes might not occur correctly. | Default: 0 <br> Range: 0,1 | - |

$<1>$ Available in drive software versions PRG: 1019 and later.

## 03: Copy Function

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { o3-01 } \\ (0515) \end{gathered}$ | Copy Function Selection | COPY SELECT <br> 0: COPY SELECT <br> 1: INV $\rightarrow$ OP READ <br> 2: OP $\rightarrow$ INV WRITE <br> 3: OP $\longleftrightarrow$ INV <br> VERIFY | 0: Copy select <br> 1: INV $\rightarrow$ OP READ (Read parameters from the drive, saving them onto the digital operator). <br> 2: OP $\rightarrow$ INV WRITE (Copy parameters from the digital operator, writing them to the drive). <br> 3: OP $\rightarrow$ INV VERIFY (Verify that parameter settings match the data saved on the operator). <br> To read the drive parameter settings into the digital operator, set o3-02 to 1 (to allow reading). | Default: 0 <br> Range: 0 to 3 | - |
| $\begin{gathered} \text { o3-02 } \\ (0516) \end{gathered}$ | Copy Allowed Selection | Read Allowable <br> 0: Disabled <br> 1: Enabled | Selects whether the read operation (o3-01 = 1) is enabled or disabled. <br> 0: Read operation prohibited <br> 1: Read operation allowed | Default: 0 <br> Range: 0,1 | - |

## - 04: Maintenance Monitor Settings

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- | :--- |
| o4-01 <br> $(050 \mathrm{~B})$ | Cumulative Operation <br> Time Setting | DrvElapsTimeCnt | Sets the value for the cumulative operation time of the drive in <br> units of 10 h. | Default: 0 <br> Min.: 0 <br> Max.: 9999 | - |
| o4-02 <br> $(050 \mathrm{C})$ | Cumulative Operation <br> Time Selection | ElapsTimeCntSet <br> $0:$ Power-On Time <br> 1: Running Time | 0: Logs power-on time <br> $1:$ Logs operation time when the drive output is active (output <br> operation time). | Default: 0 <br> Range: 0,1 | - |
| o4-03 <br> $(050 \mathrm{E})$ | Cooling Fan Operation <br> Time Setting | FanElapsTimeCn | Sets the value of the fan operation time monitor U4-03 in units <br> of 10 h. | Default: 0 <br> Min.: 0 <br> Max.: 9999 | - |
| o4-05 <br> $(051 D)$ | Capacitor Maintenance <br> Setting | BusCap Maint Set | Sets the point at which the cumulative timing for the main <br> circuit capacitor maintenance starts. <br> View monitor U4-05 to determine when the capacitors may <br> require replacement. | Default: $0 \%$ <br> Min.: 0 <br> Max.: 150 | - |

## B. 10 o: Operator-Related Settings

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { o4-07 } \\ (0523) \end{gathered}$ | DC Bus Pre-Charge Relay Maintenance Setting | ChrgCircMaintSet | Sets the point at which the cumulative timing for the soft charge bypass relay maintenance starts. <br> View monitor U4-06 to determine when the bypass relay may require replacement. | Default: 0\% <br> Min.: 0 <br> Max.: 150 | - |
| $\begin{gathered} \text { o4-09 } \\ (0525) \end{gathered}$ | IGBT Maintenance Setting | IGBT Maint Set | Sets the point at which the cumulative timing for the IGBTs maintenance starts. <br> View monitor U4-07 to determine when the IGBTs may require replacement. | Default: 0\% <br> Min.: 0 <br> Max.: 150 | - |

## B. 12 T: Motor Tuning

Enter data into the following parameters to tune the motor and drive for optimal performance.

## T1: Induction Motor Auto-Tuning

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { T1-00 } \\ & (0700) \end{aligned}$ | Motor 1/Motor 2 Selection | Select Motor 1: 1st Motor 2: 2nd Motor |  | Default: 1 <br> Range: 1, 2 | - |
| $\left.\begin{array}{c} \text { T1-01 } \\ (0701) \\ <l> \end{array}\right)$ | Auto-Tuning Mode Selection | Tuning Mode Sel <br> 0 : Standard Tuning <br> 1: Tune-No Rotate 1 <br> 2: Term Resistance <br> 3: V/f Engy Sav Tun <br> 4: Tune-No Rotate2 <br> 5: Tune-No Rotate3 <br> 8: Inertia Tuning <br> 9: Tune ASR gain | 0: Rotational Auto-Tuning <br> 1: Stationary Auto-Tuning 1 <br> 2: Stationary Auto-Tuning for Line-to-Line Resistance <br> 3: Rotational Auto-Tuning for V/f Control (necessary for Energy Savings and Speed Estimation Speed Search) <br> 4: Stationary Auto-Tuning 2 <br> 5: Stationary Auto-Tuning $3^{<2>}$ <br> 8: Inertia Tuning (perform Rotational Auto-Tuning prior to Inertia Tuning) <br> 9: ASR Gain Tuning (perform Rotational Auto-Tuning prior to ASR Gain Auto-Tuning) <br> Note: 1. Setting 5 is not available in models 4A0930 and 4A1200. <br> 2. Settings 8 and 9 may not be available when gears are between the machine and the motor shaft. | Default: $0^{<3>}$ Range: 0 to 5; 8 , 9 | - |
| $\begin{aligned} & \text { T1-02 } \\ & (0702) \end{aligned}$ | Motor Rated Power | Mtr Rated Power | Sets the motor rated power as specified on the motor nameplate. <br> Note: Use the following formula to convert horsepower into kilowatts: $1 \mathrm{HP}=0.746 \mathrm{~kW} .$ | Default: <4> Min.: 0.00 kW Max.: 650.00 kW | - |
| $\begin{aligned} & \text { T1-03 } \\ & (0703) \end{aligned}$ | Motor Rated Voltage | Rated Voltage | Sets the motor rated voltage as specified on the motor nameplate. | Default: 200.0 V $<5>$ Min: 0.0 Max: $255.0^{<5>}$ | - |
| $\begin{aligned} & \text { T1-04 } \\ & (0704) \end{aligned}$ | Motor Rated Current | Rated Current | Sets the motor rated current as specified on the motor nameplate. | Default: <4> Min.: 10\% of drive rated current Max.: 200\% of drive rated current | - |
| $\begin{aligned} & \text { T1-05 } \\ & (0705) \end{aligned}$ | Motor Base Frequency | Rated Frequency | Sets the rated frequency of the motor as specified on the motor nameplate. | Default: 60.0 Hz <br> Min.: 0.0 <br> Max.: 400.0 | - |
| $\begin{aligned} & \text { T1-06 } \\ & (0706) \end{aligned}$ | Number of Motor Poles | Number of Poles | Sets the number of motor poles as specified on the motor nameplate. | Default: 4 <br> Min.: 2 <br> Max.: 48 | - |
| $\begin{aligned} & \text { T1-07 } \\ & (0707) \end{aligned}$ | Motor Base Speed | Rated Speed | Sets the rated speed of the motor as specified on the motor nameplate. | Default: 1750 <br> $\mathrm{r} / \mathrm{min}$ <br> Min.: 0 <br> Max.: 24000 | - |
| $\begin{aligned} & \text { T1-08 } \\ & (0708) \end{aligned}$ | PG Number of Pulses Per Revolution | PG Pulses/Rev | Sets the number of pulses per revolution for the PG being used (pulse generator or encoder). | Default: 1024 ppr <br> Min.: 1 <br> Max.: 60000 | - |
| $\begin{gathered} \text { T1-09 } \\ (0709) \end{gathered}$ | Motor No-Load Current (Stationary AutoTuning) | No-Load Current | Sets the no-load current for the motor. After setting the motor capacity to T1-02 and the motor rated current to T1-04, this parameter will automatically display the no-load current for a standard 4-pole Yaskawa motor. Enter the no-load current as indicated on the motor test report. | Default: - <br> Min.: 0 A <br> Max.: T1-04 | - |
| $\begin{gathered} \text { T1-10 } \\ (070 \mathrm{~A}) \end{gathered}$ | Motor Rated Slip (Stationary AutoTuning) | Motor Rated Slip | Sets the motor rated slip. After setting the motor capacity to T1-02, this parameter will automatically display the motor slip for a standard 4-pole Yaskawa motor. Enter the motor slip as indicated on the motor test report. | Default:- <br> Min.: 0.00 Hz <br> Max.: 20.00 Hz | - |

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :--- | :--- | :---: |
| T1-11 <br> (070B) | Motor Iron Loss | Mtr Iron Loss(W) | Sets the iron loss for determining the Energy Saving <br> coefficient. <br> The value is set to E2-10 (motor iron loss) set when the power <br> is cycled. If T1-02 is changed, a default value appropriate for <br> the motor capacity that was entered will appear. | Default: 14 W <br> $<6>$ <br> Min.: 0 <br> Max.: 65535 | - |

$<1>$ The availability of certain Auto-Tuning methods is determined by the control mode selected for the drive.
$<2>$ Available in drive software versions PRG: 1019 and later.
$<3>$ Default setting is determined by parameter A1-02, Control Method Setting.
$<4>$ Default setting is determined by parameter o2-04, Drive Model Selection.
$<5>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
<6> Default setting value differs depending on the motor code value and motor parameter settings.

## T2: PM Motor Auto-Tuning

| No. (Addr Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { T2-01 } \\ & (0750) \end{aligned}$ | PM Motor Auto-Tuning Mode Selection | PM Tuning Mode <br> 0 : Standard Tuning <br> 1: Tune-No Rotate <br> 2: Term Resistance <br> 3: Z-Pulse Tuning <br> 8: Inertia Tuning <br> 9: Tune ASR gain <br> 11: IndVoltConstTun <br> 13: High Freq Tun <br> 14: PM rotation tune | 0: PM Motor Parameter Settings <br> 1: PM Stationary Auto-Tuning <br> 2: PM Stationary Auto-Tuning for Stator Resistance <br> 3: Z Pulse Offset Tuning <br> 8: Inertia Tuning <br> 9: ASR Gain Auto-Tuning <br> 11: Back EMF Constant Tuning ${ }^{<2>}$ <br> 13: High Frequency Injection Parameter Tuning ${ }^{<3>}$ <br> 14: PM Rotational Auto-Tuning ${ }^{<4>}$ <br> Note: <br> 1. Settings 13 and 14 are not available in models 4A0930 and 4A1200. <br> 2. Settings 8 and 9 may not be available when gears are between the machine and the motor shaft. <br> 3. For special-purpose motors, Yaskawa recommends Back EMF Constant Tuning after performing Stationary Auto-Tuning. Back EMF Constant Tuning rotates the motor to measure the actual induction voltage constants, and allows for more accurate control than Stationary AutoTuning alone. | Default: 0 <br> Range: 0 to 3; <br> $8,9,11,13,14$ <br> <4> | - |
| $\begin{gathered} \text { T2-02 } \\ (0751) \end{gathered}$ | PM Motor Code Selection | PM Mtr Code Sel | Enter the motor code when using a Yaskawa PM motor. After entering the motor code, the drive automatically sets parameters T2-03 through T2-09. Set T2-10 through T2-14 from the values on the motor nameplate or from the motor test report. When using a motor without a supported motor code or a non-Yaskawa motor, set FFFF and adjust the other T2 parameters according to the motor nameplate or the motor test report. | Default: <5> <br> Min: 0000 <br> Max: FFFF | - |
| $\begin{aligned} & \text { T2-03 } \\ & (0752) \end{aligned}$ | PM Motor Type | PM Motor Type 0: IPM motor 1: SPM motor | 0: IPM motor 1: SPM motor. | Default: 1 <br> Range: 0,1 | - |
| $\begin{gathered} \text { T2-04 } \\ (0730) \end{gathered}$ | PM Motor Rated Power | Mtr Rated Power | Sets the motor rated power. <br> Note: Use the following formula to convert horsepower into kilowatts: $1 \mathrm{HP}=0.746 \mathrm{~kW}$ | Default: <6> <br> Min.: 0.00 kW <br> Max.: 650.00 kW | - |
| $\begin{aligned} & \text { T2-05 } \\ & (0732) \end{aligned}$ | PM Motor Rated Voltage | Rated Voltage | Enter the motor rated voltage as indicated on the motor nameplate. | $\begin{aligned} & \text { Default: } 200.0 \mathrm{~V} \\ & <7> \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 255.0^{<7>} \end{aligned}$ | - |

## B. 12 T: Motor Tuning

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { T2-06 } \\ & (0733) \end{aligned}$ | PM Motor Rated Current | Rated Current | Enter the motor rated current as indicated on the motor nameplate. | Default: <6> Min.: 10\% of drive rated current Max.: $200 \%$ of drive rated current | - |
| $\begin{aligned} & \text { T2-07 } \\ & (0753) \end{aligned}$ | PM Motor Base Frequency | Base Frequency | Enter the motor base frequency as indicated on the motor nameplate. | $\begin{aligned} & \text { Default: } 87.5 \mathrm{~Hz} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 400.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { T2-08 } \\ & (0734) \end{aligned}$ | Number of PM Motor Poles | Number of Poles | Enter the number of motor poles for the PM motor as indicated on the motor nameplate. | Default: 6 <br> Min.: 2 <br> Max.: 48 | - |
| $\begin{aligned} & \text { T2-09 } \\ & (0731) \end{aligned}$ | PM Motor Base Speed | Rated Speed | Enter the base speed for the PM motor as indicated on the motor nameplate. | Default: 1750 <br> $\mathrm{r} / \mathrm{min}$ <br> Min.: 0 <br> Max.: 24000 | - |
| $\begin{aligned} & \text { T2-10 } \\ & (0754) \end{aligned}$ | PM Motor Stator Resistance | Arm Resistance | Enter the rotor resistance for the PM motor as indicated on the motor nameplate. | Default: $<8>$ <br> Min.: $0.000 \Omega$ <br> Max.: $65.000 \Omega$ | - |
| $\begin{aligned} & \text { T2-11 } \\ & (0735) \end{aligned}$ | PM Motor d-Axis Inductance | d-Axis Induct | Enter the d-axis inductance for the PM motor as indicated on the motor nameplate. | $\begin{aligned} & \text { Default: }<8> \\ & \text { Min.: } 0.00 \mathrm{mH} \\ & \text { Max.: } 600.00 \\ & \mathrm{mH} \end{aligned}$ | - |
| $\begin{gathered} \text { T2-12 } \\ (0736) \end{gathered}$ | PM Motor q-Axis Inductance | q-Axis Induct | Enter the q -axis inductance for the PM motor as indicated on the motor nameplate. | Default: ${ }^{<8>}$ <br> Min.: 0.00 mH <br> Max.: 600.00 <br> mH | - |
| $\begin{aligned} & \text { T2-13 } \\ & (0755) \end{aligned}$ | Induced Voltage Constant Unit Selection | Iduct Volt Unit $0: \mathrm{mV} / \mathrm{RPM}$ 1: mV/(rad/sec) | $0: \mathrm{mV} /(\mathrm{r} / \mathrm{min})$. E5-09 will automatically be set to 0.0 , and E5-24 will be used. <br> 1: $\mathrm{mV} /(\mathrm{rad} / \mathrm{sec})$. E5-24 will automatically be set to 0.0 , and E5-09 will be used. | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { T2-14 } \\ & (0737) \end{aligned}$ | PM Motor Induced Voltage Constant | Induct Volt Coef | Enter the induced voltage coefficient for the PM motor as indicated on the motor nameplate. | Default: ${ }^{<8>}$ <br> Min.: 0.0 <br> Max.: 2000.0 | - |
| $\begin{aligned} & \text { T2-15 } \\ & (0756) \end{aligned}$ | Pull-In Current Level for PM Motor Tuning | Pull-In I Lvl | Sets the amount of pull-in current to use for Auto-Tuning as a percentage of the motor rated current. Increase this setting for high inertia loads. | Default: 30\% <br> Min.: 0 <br> Max.: 120 | - |
| $\begin{aligned} & \text { T2-16 } \\ & (0738) \end{aligned}$ | PG Number of Pulses Per Revolution for PM Motor Tuning | PG Pulses/Rev | Sets the number of pulses per revolution for the PG being used (pulse generator or encoder). | Default: 1024 ppr <br> Min.: 1 <br> Max.: 15000 | - |
| $\begin{aligned} & \text { T2-17 } \\ & (0757) \end{aligned}$ | Encoder Z-Pulse Offset | Z-Pulse Offset | Sets the offset between encoder offset and the rotor magnetic axis. | Default: 0.0 deg <br> Min.: -180.0 <br> Max.: 180.0 | - |

$<1>$ The availability of certain Auto-Tuning methods is determined by the control mode selected for the drive.
$<2>$ Available in drive software versions PRG: 1015 and later.
$<3>$ Available in drive software versions PRG: 1018 and later.
$<4>$ Available in drive software versions PRG: 1019 and later.
$<5>$ Default setting is determined by parameters A1-02, Control Method Selection, and o2-04, Drive Model Selection.
$<6>$ Default setting is determined by parameter o2-04, Drive Model Selection.
$<7>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<8>$ Default setting is determined by parameter T2-02, PM Motor Code Selection, and the drive capacity.

## T3: ASR and Inertia Tuning

| No. (Addr. Hex) | Name | LCD Display | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { T3-01 } \\ & (0760) \end{aligned}$ | Inertia Tuning Frequency Reference | Test Signal Freq | Sets the frequency of the test signal used during Inertia Tuning and ASR Gain Auto-Tuning. Reduce this value if the inertia is large or if a fault occurs. | Default: 3.0 Hz <br> Min.: 0.1 <br> Max.: 20.0 | - |
| $\begin{aligned} & \text { T3-02 } \\ & (0761) \end{aligned}$ | Inertia Tuning Reference Amplitude | Test Signal Ampl | Sets the amplitude of the test signal used during Inertia and ASR Gain Auto-Tuning. Reduce this value if the inertia is too large or if a fault occurs. | Default: 0.5 rad <br> Min.: 0.1 <br> Max.: 10.0 | - |
| $\begin{aligned} & \text { T3-03 } \\ & (0762) \end{aligned}$ | Motor Inertia | Motor Inertia | Sets the motor inertia. Default setting is the inertia of a Yaskawa motor. | $\begin{aligned} & \text { Default: <2> <3> } \\ & \text { Min.: } 0.0001 \\ & \text { kgm }^{2} \\ & \text { Max.: }^{2} 600.00 \\ & \mathrm{kgm}^{2} \end{aligned}$ | - |
| $\begin{aligned} & \text { T3-04 } \\ & (0763) \\ & \langle 1> \end{aligned}$ | ASR Response Frequency | System Resp Freq | Sets the response frequency of the mechanical system connected to the motor. Oscillation may result if set too high. | Default: 10.0 Hz <br> Min.: 0.1 <br> Max.: 50.0 | - |

$<1>$ Displayed only when performing Inertia Tuning or ASR Gain Auto-Tuning (T1-01 =8 or T2-01 $=9$ ).
$<2>$ Default setting is determined by parameter E5-01, Motor Code Selection.
$<3>$ Default setting is determined by parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.

## B. 13 U: Monitors

Monitor parameters allow the user to view drive status, fault information, and other data concerning drive operation.
U1: Operation Status Monitors

| No. (Addr. Hex) | Name |  | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { U1-01 } \\ & (0040) \end{aligned}$ | Frequency Reference | Frequency Ref | Monitors the frequency reference. Display units are determined by ol-03. | 10 V: Max frequency (-10 to $+10 \mathrm{~V})$ | 0.01 Hz |
| $\begin{aligned} & \text { U1-02 } \\ & (0041) \end{aligned}$ | Output Frequency | Output Freq | Displays the output frequency. Display units are determined by o1-03. | 10 V : Max frequency $(-10$ to $+10 \mathrm{~V})$ | 0.01 Hz |
| $\begin{aligned} & \text { U1-03 } \\ & (0042) \end{aligned}$ | Output Current | Output Current | Displays the output current. <br> Note: The unit is expressed in 1 A for models 4A0930 and 4A1200. | 10 V: Drive rated current | <1> <2> |
| $\begin{aligned} & \text { U1-04 } \\ & (0043) \end{aligned}$ | Control Method | Control Method | 0: V/f Control <br> 1: V/f Control with PG <br> 2: Open Loop Vector Control <br> 3: Closed Loop Vector Control <br> 5: Open Loop Vector Control for PM <br> 6: Advanced Open Loop Vector Control for PM <br> 7: Closed Loop Vector Control for PM | No signal output available | - |
| $\begin{aligned} & \text { U1-05 } \\ & (0044) \end{aligned}$ | Motor Speed | Motor Speed | Displays the motor speed feedback. Display units are determined by o1-03. | 10 V: Max frequency (-10 to $+10 \mathrm{~V})$ | 0.01 Hz |
| $\begin{aligned} & \text { U1-06 } \\ & (0045) \end{aligned}$ | Output Voltage Reference | Output Voltage | Displays the output voltage. | ${\underset{<3>}{ } 10 \mathrm{~V}: 200 \mathrm{Vrms}}^{2}$ | 0.1 Vac |
| $\begin{aligned} & \mathrm{U} 1-07 \\ & (0046) \\ & \hline \end{aligned}$ | DC Bus Voltage | DC Bus Voltage | Displays the DC bus voltage. | ${\underset{<3>}{10 \mathrm{~V}:} 400 \mathrm{~V}}^{2}$ | 1 Vdc |
| $\begin{aligned} & \text { U1-08 } \\ & (0047) \end{aligned}$ | Output Power | Output kWatts | Displays the output power (this value is calculated internally). | 10 V: Drive capacity (motor capacity) kW $(-10$ to $+10 \mathrm{~V})$ <4> | <4> |
| $\begin{aligned} & \text { U1-09 } \\ & (0048) \end{aligned}$ | Torque Reference | Torque Reference | Monitors the internal torque reference. | 10 V: Motor rated torque (-10 to $+10 \mathrm{~V})$ | 0.1\% |
| $\begin{aligned} & \text { U1-10 } \\ & (0049) \end{aligned}$ | Input Terminal Status | Input Term Sts | Displays the input terminal status. <br> U1-10=00000000 <br> ${ }^{-} 1$ Digital input 1 (terminal S1 enabled) <br> 1 Digital input 2 <br> (terminal S2 enabled) <br> 1 Digital input 3 <br> (terminal S3 enabled) <br> 1 Digital input 4 <br> (terminal S4 enabled) <br> 1 Digital input 5 <br> (terminal S5 enabled) <br> 1 Digital input 6 <br> (terminal S6 enabled) <br> 1 Digital input 7 <br> (terminal S7 enabled) <br> 1 Digital input 8 (terminal S8 enabled) | No signal output available | - |

| No. (Addr. Hex) | Name |  | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { U1-11 } \\ & \text { (004A) } \end{aligned}$ | Output Terminal Status | Output Term Sts | Displays the output terminal status. U1-11 = | No signal output available | - |
| $\begin{aligned} & \text { U1-12 } \\ & (004 \mathrm{~B}) \end{aligned}$ | Drive Status | Int Ctl Sts 1 | Displays the drive operation status. <br> U1-12=00000000 <br> $\llcorner 1$ During run 1 During zero-speed 1 During REV 1 During fault reset signal input 1 During speed agree 1 Drive ready 1 During alarm detection 1 During fault detection | No signal output available | - |
| $\begin{aligned} & \hline \text { U1-13 } \\ & (004 \mathrm{E}) \\ & \hline \end{aligned}$ | Terminal A1 Input Level | Term A1 Level | Displays the signal level to analog input terminal A1. | $\begin{aligned} & 10 \mathrm{~V}: 100 \% \\ & (-10 \text { to }+10 \mathrm{~V}) \end{aligned}$ | 0.1\% |
| $\begin{aligned} & \mathrm{U} 1-14 \\ & (004 \mathrm{~F}) \end{aligned}$ | Terminal A2 Input Level | Term A2 Level | Displays the signal level to analog input terminal A2. | $\begin{aligned} & \hline 10 \mathrm{~V}: 100 \% \\ & (-10 \text { to }+10 \mathrm{~V}) \end{aligned}$ | 0.1\% |
| $\begin{aligned} & \mathrm{U} 1-15 \\ & (0050) \end{aligned}$ | Terminal A3 Input Level | Term A3 Level | Displays the signal level to analog input terminal A3. | $\begin{aligned} & 10 \mathrm{~V}: 100 \% \\ & (-10 \text { to }+10 \mathrm{~V}) \end{aligned}$ | 0.1\% |
| $\begin{aligned} & \text { U1-16 } \\ & (0053) \end{aligned}$ | Output Frequency after Soft Starter | SFS Output | Displays output frequency with ramp time and S-curves. Units determined by o1-03. | 10 V : Max frequency $(-10$ to $+10 \mathrm{~V})$ | 0.01 Hz |
| $\begin{aligned} & \text { U1-17 } \\ & (0058) \end{aligned}$ | DI-A3 Input Status | DI Opt Status | Displays the reference value input from the DI-A3 option card. Display will appear in hexadecimal as determined by the digital card input selection in F3-01. <br> 3FFFF: Set ( 1 bit) $+\operatorname{sign}$ ( 1 bit) +16 bit | No signal output available | - |
| $\begin{aligned} & \text { U1-18 } \\ & (0061) \\ & \hline \end{aligned}$ | oPE Fault Parameter | OPE Error Code | Displays the parameter number that caused the oPE02 or oPE08 operation error. | No signal output available | - |
| $\begin{array}{r} \text { U1-19 } \\ (0066) \end{array}$ | MEMOBUS/Modbus Error Code | Transmit Err | Displays the contents of a MEMOBUS/Modbus error. U1-19=00000000 <br> ᄂ1 CRC Error 1 Data Length Error 0 Not Used 1 Parity Error 1 Overrun Error 1 Framing Error 1 Timed Out 0 Not Used | No signal output available | - |
| $\begin{aligned} & \hline \text { U1-21 } \\ & (0077) \end{aligned}$ | AI-A3 Terminal V1 Input Voltage Monitor | AI Opt Ch1 Level | Displays the input voltage to terminal V1 on analog input card AI-A3. | $\begin{aligned} & 10 \mathrm{~V}: 100 \% \\ & (-10 \text { to }+10 \mathrm{~V}) \end{aligned}$ | 0.1\% |
| $\begin{gathered} \text { U1-22 } \\ (072 \mathrm{~A}) \\ \hline \end{gathered}$ | AI-A3 Terminal V2 Input Voltage Monitor | AI Opt Ch2 Level | Displays the input voltage to terminal V2 on analog input card AI-A3. | $\begin{aligned} & 10 \mathrm{~V}: 100 \% \\ & (-10 \text { to }+10 \mathrm{~V}) \end{aligned}$ | 0.1\% |

| $\begin{gathered} \hline \text { U1-24 } \\ \text { (007D) } \\ \hline \end{gathered}$ | Input Pulse Monitor | Term RP Inp Freq | Displays the frequency to pulse train input terminal RP. | $\begin{aligned} & \text { Determined by } \\ & \text { H6-02 } \end{aligned}$ | 1 Hz |

## B. 13 U: Monitors

| No. (Addr. Hex) | Name |  |  | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \hline \mathrm{U} 1-25 \\ & (004 \mathrm{D}) \end{aligned}$ | Software Number (Flash) | CPU 1 SW Number | FLASH ID |  | No signal output available | - |
| $\begin{aligned} & \text { U1-26 } \\ & (005 \mathrm{~B}) \end{aligned}$ | Software No. (ROM) | CPU 2 SW Number | ROM ID |  | No signal output available | - |
| $\begin{aligned} & \text { U1-27 } \\ & \text { (07A8) } \end{aligned}$ | Message ID (OPR) | MessageID (OPR) | OPR ID |  | No signal output available | - |
| $\begin{aligned} & \text { U1-28 } \\ & \text { (07A9) } \\ & \hline \end{aligned}$ | Message ID (INV) | MessageID (INV) | INV ID |  | No signal output available | - |
| $\begin{gathered} \text { U1-29 } \\ (07 \mathrm{AA}) \end{gathered}$ | Software No. (PWM) | CPU 3 SW Number | PWM ID <br> Note: | This monitor is only displayed in models 4A0930 and 4A1200. | No signal output available | - |

$<1>$ Display is in the following units: 2A0004 to 2A0040, 4A0002 to 4A0023, and 5A0007 to 5A0017: 0.01 A units. 2A0056 to 2A0415, 4A0031 to 4A0675, and 5A0022 to 5A0242: 0.1 A units. 4A0930 and 4A1200: 1 A units.
$<2>$ The values of U1-03, U2-05, and U4-13 are displayed on the digital operator in units of amperes. When those monitors are checked using MEMOBUS/Modbus communications, the monitor values in MEMOBUS/Modbus communications are displayed as: numeric value $/ 8192 \times$ drive rated current (A) from the condition "192 (maximum value) = drive rated current (A)"
$<3>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<4>$ In V/f and V/f w/PG control modes, $10 \mathrm{~V}=$ drive capacity $(\mathrm{kW})$. In OLV, CLV, OLV/PM, AOLV/PM, and CLV/PM control modes, $10 \mathrm{~V}=$ motor rated power (E2-11) (kW).

## - U2: Fault Trace

| No. (Addr Hex) | Name | LCD Display | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { U2-01 } \\ & (0080) \end{aligned}$ | Current Fault | Current Fault | Displays the current fault. | No signal output available | - |
| $\begin{array}{r} \mathrm{U} 2-02 \\ (0081) \\ \hline \end{array}$ | Previous Fault | Last Fault | Displays the previous fault. | No signal output available | - |
| $\begin{aligned} & \text { U2-03 } \\ & (0082) \end{aligned}$ | Frequency Reference at Previous Fault | Frequency Ref | Displays the frequency reference at the previous fault. | No signal output available | 0.01 Hz |
| $\begin{aligned} & \hline \text { U2-04 } \\ & (0083) \\ & \hline \end{aligned}$ | Output Frequency at Previous Fault | Output Freq | Displays the output frequency at the previous fault. | No signal output available | 0.01 Hz |
| $\begin{aligned} & \text { U2-05 } \\ & (0084) \end{aligned}$ | Output Current at Previous Fault | Output Current | Displays the output current at the previous fault. <br> Note: $\quad$ The unit is expressed in 1 A for models 4A0930 and 4A1200. | No signal output available | <1> <2> |

Displayed as in U4-08. | No signal output available | $1{ }^{\circ} \mathrm{C}$ |
| $\begin{aligned} & \text { U2-27 } \\ & (07 \mathrm{FA}) \end{aligned}$ | Motor Temperature at Previous Fault (NTC) | Moter temp (NTC) | Displays the temperature of the motor when the most recent fault occurred. Displayed as in U4-32. |  | No signal output available | ${ }^{\circ} \mathrm{C}$ |
|  |  |  | Note | This monitor is only displayed in models 4A0930 and 4A1200. |  |  |
| $\begin{aligned} & \text { U2-28 } \\ & (07 \mathrm{FC}) \end{aligned}$ | Malfunctioned Module | Fault Axis | Display the module where the previous fault occurred at a decimal number. |  | No signal output available | - |
|  |  |  | Note: | This monitor is only displayed in models 4A0930 and 4A1200. |  |  |

$<1>$ Display is in the following units:
2A0004 to 2A0040, 4A0002 to 4A0023, and 5A0007 to 5A0017: 0.01 A units.
2A0056 to 2A0415, 4A0031 to 4A0675, and 5A0022 to 5A0242: 0.1 A units.
4A0930 and 4A1200: 1 A units.
$<2>$ The values of U1-03, U2-05, and U4-13 are displayed on the digital operator in units of amperes. When those monitors are checked using MEMOBUS/Modbus communications, the monitor values in MEMOBUS/Modbus communications are displayed as: numeric value / $8192 \times$ drive rated current (A) from the condition "192 (maximum value) = drive rated current (A)"

## - U3: Fault History

| No. (Addr. | Name | LCD Display | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { U3-01 to } \\ & \text { U3-04 } \\ & (0090 \text { to } \\ & 0093 \\ & (0800 \text { to } \\ & 0803)) \end{aligned}$ | 1st to 4th Most Recent Fault | Fault Message $\square$ | Displays the first to the fourth most recent faults. | No signal output available | - |
| $\begin{array}{\|c\|} \hline \text { U3-05 to } \\ \text { U3-10 } \\ \text { (0804 to } \\ 0809) \end{array}$ | 5th to 10th Most Recent Fault | Fault Message $\square$ | Displays the fifth to the tenth most recent faults. After ten faults, data for the oldest fault is deleted. The most recent fault appears in U3-01, with the next most recent fault appearing in U3-02. The data is moved to the next monitor parameter each time a fault occurs. | No signal output available | - |
| $\begin{array}{\|l} \text { U3-11 to } \\ \text { U3-14 } \\ (0094 \text { to } \\ 0097 \\ (080 \mathrm{~A} \text { to } \\ 080 \mathrm{D})) \\ \hline \end{array}$ | Cumulative Operation Time at 1st to 4th Most Recent Fault | Elapsed Time $\square$ | Displays the cumulative operation time when the first to the fourth most recent faults occurred. | No signal output available | 1 h |
| $\begin{array}{\|c\|} \hline \text { U3-15 to } \\ \text { U3-20 } \\ (080 \mathrm{E} \text { to } \\ 0813) \\ \hline \end{array}$ | Cumulative Operation Time at 5th to 10th Most Recent Fault | Elapsed Time $\square$ | Displays the cumulative operation time when the fifth to the tenth most recent faults occurred. | No signal output available | 1 h |

## U4: Maintenance Monitors

| No. <br> (Addr. <br> Hex) | Name | LCD Display |  | Analog <br> Output Level | Unit |
| :--- | :--- | :--- | :--- | :--- | :--- |
| U4-01 <br> (004C) <br> <1> | Cumulative Operation <br> Time | Drv Elapsed Time | Displays the cumulative operation time of the drive. The value <br> for the cumulative operation time counter can be reset in <br> parameter o4-01. Use parameter o4-02 to determine if the <br> operation time should start as soon as the power is switched on <br> or only while the Run command is present. The maximum <br> number displayed is 99999, after which the value is reset to 0. | No signal <br> output available | 1 h |
| U4-02 <br> (0075) | Number of Run <br> Commands | RUN Cmd Counter | Displays the number of times the Run command is entered. <br> Reset the number of Run commands using parameter o4-13. <br> This value will reset to 0 and start counting again after reaching <br> 65535. | No signal <br> output available | 1 Time |

| No. (Addr. Hex) | Name | LCD Display | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { U4-18 } \\ & \text { (07DA) } \end{aligned}$ | Frequency Reference Source Selection | Reference Source | Displays the source for the frequency reference as XY-nn. <br> X : indicates which reference is used: <br> $1=$ Reference 1 (b1-01) <br> $2=$ Reference 2 (b1-15) <br> $\mathrm{Y}-\mathrm{nn}$ : indicates the reference source <br> $0-01=$ Digital operator <br> 1-00 = Analog <br> 1-01 $=$ Analog (terminal A1) <br> 1-02 = Analog (terminal A2) <br> 1-03 = Analog (terminal A3) <br> 2-02 to $17=$ Multi-step speed (d1-02 to 17) <br> 3-01 = MEMOBUS/Modbus communications <br> 4-01 = Communication option card <br> $5-01=$ Pulse input <br> 7-01 = DWEZ <br> 9-01 $=$ Up/Down Command | No signal output available | - |

| $\begin{aligned} & \text { U4-37 } \\ & (1044) \end{aligned}$ | oH Alarm Location Monitor | OH Alarm Axis | Displays the module where the oH alarm occurred as a binary number. <br> Note: This monitor is only displayed in models 4A0930 and 4A1200. | No signal output available | - |
| $\begin{aligned} & \text { U4-38 } \\ & (1045) \end{aligned}$ | FAn Alarm Location Monitor | FAN Alarm Axis | Displays the module where the FAn alarm occurred as a binary number. <br> Note: This monitor is only displayed in models 4A0930 and 4A1200. | No signal output available | - |

| No. <br> (Addr. <br> Hex) | Name | LCD Display | Description | Analog <br> Output Level | Unit |
| :--- | :--- | :--- | :--- | :--- | :--- |
| U4-39 <br> $(1046)$ | voF Alarm Location <br> Monitor | VOF Alarm Axis | Displays the module where the voF alarm occurred as a binary <br> number. <br> Note: $\quad$This monitor is only displayed in models <br> 4A0930 and 4A1200. | No signal <br> output available | - |

$<1>$ The MEMOBUS/Modbus communications data is in 10 h units. If data in 1 h units are also required, refer to register number 0099 H .
$<2>$ The MEMOBUS/Modbus communications data is in 10 h units. If data in 1 h units are also required, refer to register number 009BH.
$<3>$ Display is in the following units:
2A0004 to 2A0040, 4A0002 to 4A0023, and 5A0007 to 5A0017: 0.01 A units.
2A0056 to 2A0415, 4A0031 to 4A0675, and 5A0022 to 5A0242: 0.1 A units.
4A0930 and 4A1200: 1 A units.
$<4>$ The values of U1-03, U2-05, and U4-13 are displayed on the digital operator in units of amperes. When those monitors are checked using MEMOBUS/Modbus communications, the monitor values in MEMOBUS/Modbus communications are displayed as: numeric value / $8192 \times$ drive rated current (A) from the condition "192 (maximum value) = drive rated current (A)"
$<5>$ When reading the value of this monitor via MEMOBUS/Modbus a value of 8192 is equal to $100 \%$ of the drive rated output current.

## U5: PID Monitors

| No. (Addr Hex) | Name | LCD Display | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \hline \text { U5-01 } \\ & (0057) \\ & \hline \end{aligned}$ | PID Feedback | PID Feedback 1 | Displays the PID feedback value. | $\begin{array}{\|l\|} \hline 10 \mathrm{~V}: 100 \% \\ (-10 \text { to }+10 \mathrm{~V}) \end{array}$ | 0.01\% |
| $\begin{aligned} & \hline \text { U5-02 } \\ & (0063) \\ & \hline \end{aligned}$ | PID Input | PID Input | Displays the amount of PID input (deviation between PID setpoint and feedback). | $\begin{aligned} & \begin{array}{l} 10 \mathrm{~V}: 100 \% \\ (-10 \text { to }+10 \mathrm{~V}) \end{array} \end{aligned}$ | 0.01\% |
| $\begin{aligned} & \hline \text { U5-03 } \\ & (0064) \end{aligned}$ | PID Output | PID Output | Displays PID control output. | $\begin{aligned} & 10 \mathrm{~V}: 100 \% \\ & (-10 \text { to }+10 \mathrm{~V}) \end{aligned}$ | 0.01\% |
| $\begin{aligned} & \hline \text { U5-04 } \\ & (0065) \end{aligned}$ | PID Setpoint | PID Setpoint | Displays the PID setpoint. | $\begin{array}{\|l} \hline 10 \mathrm{~V}: 100 \% \\ (-10 \text { to }+10 \mathrm{~V}) \end{array}$ | 0.01\% |
| $\begin{aligned} & \hline \text { U5-05 } \\ & \text { (07D2) } \\ & \hline \end{aligned}$ | PID Differential Feedback | PID Feedback 2 | Displays the 2nd PID feedback value if differential feedback is used (H3-पロ = 16). | $\begin{array}{\|l} \hline 10 \mathrm{~V}: 100 \% \\ (-10 \text { to }+10 \mathrm{~V}) \end{array}$ | 0.01\% |
| $\begin{aligned} & \text { U5-06 } \\ & \text { (07D3) } \end{aligned}$ | PID Adjusted Feedback | PID Diff Fdbk | Displays the difference of both feedback values if differential feedback is used (U5-01 - U5-05). If differential feedback is not used, then U5-01 and U5-06 will be the same. | $\begin{aligned} & 10 \mathrm{~V}: 100 \% \\ & (-10 \text { to }+10 \mathrm{~V}) \end{aligned}$ | 0.01\% |
| $\begin{gathered} \text { U5-21 } \\ (0872) \\ <1> \end{gathered}$ | Automatically Calculated Energy Saving Coefficient Ki Value | Ki Auto Cal Val | Displays the energy saving coefficient Ki value. | No signal output available | 0.01 |
| $\begin{gathered} \text { U5-22 } \\ (0873) \\ <1> \end{gathered}$ | Automatically Calculated Energy Saving Coefficient Kt Value | Kt Auto Cal Val | Displays the energy saving coefficient Kt value. | No signal output available | 0.01 |

$<1>$ Available in drive software versions PRG: 1015 and later.

## U6: Operation Status Monitors

| No. (Addr. Hex) | Name | LCD Display | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { U6-01 } \\ & (0051) \end{aligned}$ | Motor Secondary Current (Iq) | Mot SEC Current | Displays the value of the motor secondary current (Iq). Motor rated secondary current is $100 \%$. | 10 V: Motor secondary rated current $(-10 \text { to }+10 \mathrm{~V})$ | 0.1\% |
| $\begin{aligned} & \text { U6-02 } \\ & (0052) \end{aligned}$ | Motor Excitation Current (Id) | Mot EXC Current | Displays the value calculated for the motor excitation current (Id). Motor rated secondary current is $100 \%$. | 10 V : Motor secondary rated current $(-10 \text { to }+10 \mathrm{~V})$ | 0.1\% |

| No. (Addr. Hex) | Name | LCD Display | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { U6-03 } \\ & (0054) \end{aligned}$ | ASR Input | ASR Input | Displays the input and output values when using ASR control. | 10 V: Max frequency $(-10$ to $+10 \mathrm{~V})$ |  |
| $\begin{aligned} & \text { U6-04 } \\ & (0055) \end{aligned}$ | ASR Output | ASR Output |  | 10 V : Motor secondary rated current $(-10 \text { to }+10 \mathrm{~V})$ | 0.01\% |
| $\begin{aligned} & \text { U6-05 } \\ & (0059) \end{aligned}$ | Output Voltage <br> Reference (Vq) | Voltage Ref (Vq) | Output voltage reference (Vq) for the q-Axis. | $\begin{aligned} & 10 \mathrm{~V}: 200 \mathrm{Vrms} \\ & (-10 \text { to }+10 \mathrm{~V}) \\ & <1> \end{aligned}$ | 0.1 Vac |
| $\begin{aligned} & \text { U6-06 } \\ & \text { (005A) } \end{aligned}$ | Output Voltage <br> Reference (Vd) | Voltage Ref (Vd) | Output voltage reference (Vd) for the d-Axis. | $\begin{aligned} & 10 \mathrm{~V}: 200 \mathrm{Vrms} \\ & (-10 \text { to }+10 \mathrm{~V}) \\ & \langle l\rangle \end{aligned}$ | 0.1 Vac |
| $\begin{aligned} & \text { U6-07 } \\ & (005 \mathrm{~F}) \end{aligned}$ | q-Axis ACR Output | ACR(q) Output | Displays the output value for current control relative to motor secondary current (q-Axis). | $\begin{aligned} & 10 \mathrm{~V}: 200 \mathrm{Vrms} \\ & (-10 \text { to }+10 \mathrm{~V}) \\ & <1> \end{aligned}$ | 0.1\% |
| $\begin{aligned} & \text { U6-08 } \\ & (0060) \end{aligned}$ | d-Axis ACR Output | ACR(d) Output | Displays the output value for current control relative to motor secondary current (d-Axis). | $\begin{aligned} & \hline 110 \mathrm{~V}: 200 \\ & \text { Vrms } \\ & (-10 \text { to }+10 \mathrm{~V}) \\ & <1> \end{aligned}$ | 0.1\% |
| $\begin{aligned} & \text { U6-09 } \\ & (07 \mathrm{C} 0) \end{aligned}$ | Advance Phase Compensation ( $\Delta \theta$ ) | d-q Axis Comp | Displays the degree of forward phase correction after calculating the deviation of $\Delta \theta \mathrm{cmp}$. | $\begin{array}{\|l\|l\|} \hline 10 \mathrm{~V}: 180 \mathrm{deg} \\ -10 \mathrm{~V}:-180 \mathrm{deg} \\ (-10 \text { to }+10 \mathrm{~V}) \\ \hline \end{array}$ | 0.1 deg |
| $\begin{aligned} & \mathrm{U6}-10 \\ & (07 \mathrm{C} 1) \end{aligned}$ | Control Axis Deviation $(\Delta \theta)$ | d-q Axis Devt | Displays the amount of deviation between the actual d-Axis / q-Axis and the $\gamma$-Axis / $\delta$-Axis used for motor control. | $\begin{array}{\|l\|} \hline 10 \mathrm{~V}: 180 \mathrm{deg} \\ -10 \mathrm{~V}:-180 \mathrm{deg} \\ (-10 \text { to }+10 \mathrm{~V}) \\ \hline \end{array}$ | 0.1 deg |
| $\begin{gathered} \text { U6-13 } \\ \text { (07CA) } \end{gathered}$ | Flux Position Detection (sensor) | FluxPosition Fb | Monitors the value of the flux position detection (sensor). | $\begin{array}{\|l\|l} \hline 10 \mathrm{~V}: 180 \mathrm{deg} \\ -10 \mathrm{~V}:-180 \mathrm{deg} \\ (-10 \text { to }+10 \mathrm{~V}) \\ \hline \end{array}$ | 0.1 deg |
| $\begin{aligned} & \text { U6-14 } \\ & (07 \mathrm{CB}) \end{aligned}$ | Flux Position Estimation (observer) | FluxPosition Est | Monitors the value of the flux position estimation. | $\begin{array}{\|l\|} \hline 10 \mathrm{~V}: 180 \mathrm{deg} \\ -10 \mathrm{~V}:-180 \mathrm{deg} \\ (-10 \text { to }+10 \mathrm{~V}) \\ \hline \end{array}$ | 0.1 deg |
| $\begin{aligned} & \hline \text { U6-18 } \\ & \text { (07CD) } \\ & \hline \end{aligned}$ | Speed Detection PG1 Counter | PG1 CounterValue | Monitors the number of pulses for speed detection (PG1). | 10 V : 65536 | 1 pulse |
| $\begin{aligned} & \hline \text { U6-19 } \\ & \text { (07E5) } \\ & \hline \end{aligned}$ | Speed Detection PG2 Counter | PG2 CounterValue | Monitors the number of pulses for speed detection (PG2). | $10 \mathrm{~V}: 65536$ | 1 pulse |
| $\begin{aligned} & \hline \text { U6-20 } \\ & \text { (07D4) } \\ & \hline \end{aligned}$ | Frequency Reference Bias (Up/Down 2) | Up/Dn 2 Bias Val | Displays the bias value used to adjust the frequency reference. | 10 V: Max frequency | 0.1\% |
| $\begin{aligned} & \hline \text { U6-21 } \\ & \text { (07D5) } \\ & \hline \end{aligned}$ | Offset Frequency | Offset Frequency | Displays the total value of the offset frequencies d7-01, d7-02 and d7-03 selected with digital inputs 44 to 46. | 10 V: Max frequency | 0.1\% |
| $\begin{aligned} & \text { U6-22 } \\ & (0062) \end{aligned}$ | Zero Servo Pulse Movement | Zero Servo Pulse | Displays how far the rotor has moved from its last position in PG pulses (multiplied by 4). | 10 V : No. of pulses per revolution $(-10 \text { to }+10 \mathrm{~V})$ | 1 pulse |
| $\begin{aligned} & \text { U6-25 } \\ & (006 B) \end{aligned}$ | Feedback Control Output | ASR Out w/o Fil | Output monitor for the ASR speed loop. | 10 V : Motor secondary rated current $(-10 \text { to }+10 \mathrm{~V})$ | 0.01\% |
| $\begin{aligned} & \text { U6-26 } \\ & (006 \mathrm{C}) \end{aligned}$ | Feed Forward Control Output | FF Cont Output | Output monitor for Feed Forward control. | 10 V : Motor secondary rated current $(-10 \text { to }+10 \mathrm{~V})$ | 0.01\% |
| $\begin{aligned} & \text { U6-57 } \\ & (07 \mathrm{C} 4) \end{aligned}$ | Integrated Current Deviation during Judging Polarity | PoleDis IdDifVal | Displays the deviation from the integrated current when judging motor polarity. If this value is lower than 819 , then increase the value set to n 8 -84. The value 8192 is equivalent to the motor rated current. | No signal output available | 1 |
| $\begin{array}{\|c} \hline \text { U6-80 to } \\ \text { U6-83 } \\ \text { (07B0 to } \\ 07 \mathrm{~B} 3) \\ <2> \end{array}$ | Online IP Address | - | IP Address currently available; U6-80 is the most significant octet. | 0 to 255 | - |

## Appendix: C

## Standards Compliance

This appendix explains the guidelines and criteria for maintaining CE and UL standards.
C. 1 EUROPEAN STANDARDS ..... 330
C. 2 UL AND CSA STANDARDS ..... 340
C. 3 SAFE DISABLE INPUT FUNCTION ..... 352

## C. 1 European Standards

Figure C. 1 CE Mark
The CE mark indicates compliance with European safety and environmental regulations. It is required for engaging in business and commerce in Europe.
European standards include the Machinery Directive for machine manufacturers, the Low Voltage Directive for electronics manufacturers, and the EMC guidelines for controlling noise.
This drive displays the CE mark based on the EMC guidelines and the Low Voltage Directive.

- Low Voltage Directive: 2014/35/EU
- EMC Guidelines: 2014/30/EU

Devices used in combination with this drive must also be CE certified and display the CE mark. When using drives displaying the CE mark in combination with other devices, it is ultimately the responsibility of the user to ensure compliance with CE standards. After setting up the device, verify that conditions meet European standards.

## - CE Low Voltage Directive Compliance

This drive has been tested according to European standard IEC/EN 61800-5-1:2007, and it fully complies with the Low Voltage Directive.

To comply with the Low Voltage Directive, be sure to meet the following conditions when combining this drive with other devices:

## ■ Area of Use

Do not use drives in areas with pollution higher than degree 2 and overvoltage category 3 in accordance with IEC/EN 60664.

## Factory Recommended Branch Circuit Protection

Yaskawa recommends installing one of the following types of branch circuit protection to maintain compliance with UL508C. Semiconductor protective type fuses are preferred. Alternate branch circuit protection devices are also listed in Table C.1.
NOTICE: If a fuse is blown or a Ground Fault Circuit Interrupter (GFCI) is tripped, check the wiring and the selection of peripheral devices to identify the cause. Contact Yaskawa before restarting the drive or the peripheral devices if the cause cannot be identified.

Table C. 1 Factory Recommended Drive Branch Circuit Protection

| Drive Model | Fuse Type |  |  |  |
| :---: | :---: | :---: | :---: | :---: |

## C. 1 European Standards

| Drive Model | Fuse Type |  |  |
| :---: | :---: | :---: | :---: |
|  |  | Manufacturer: Bussmann |  |
|  | Model | Fuse Ampere Rating (A) |  |
| $\mathbf{5 A 0 1 2 5}$ | FWP-350A | 350 |  |
| $\mathbf{5 A 0 1 4 5}$ | FWP-350A | 350 |  |
| $\mathbf{5 A 0 1 9 2}$ | FWP-600A | 600 |  |
| $\mathbf{5 A 0 2 4 2}$ | FWP-600A | 600 |  |

## Grounding

The drive is designed to be used in T-N (grounded neutral point) networks. If installing the drive in other types of grounded systems, contact your Yaskawa representative for instructions.

## ■ CE Standards Compliance for DC Power Supply Input

Install the fuses in the following tables to meet CE standards.

Figure C. 2 Example of DC Power Supply Input (Two Drives Connected in Series)
Note: 1. When connecting multiple drives together, make sure that each drive has its own fuse. Replace all fuses when one fuse blows.
2. Refer to Standard Connection Diagram on page 80 for an AC power supply.
3. The recommended fuses and fuse holders are made by Fuji Electric.

Table C. 2200 V Class Fuses and Fuse Holders

$<1>$ Manufacturer does not recommend a specific fuse holder for this fuse. Contact Yaskawa or your nearest sales representative for fuse dimensions.

$<1>$ Manufacturer does not recommend a specific fuse holder for this fuse. Contact Yaskawa or your nearest sales representative for fuse dimensions.

## Guarding Against Harmful Materials

When installing IP00/Open Type enclosure drives, use an enclosure that prevents foreign material from entering the drive from above or below.

## ■ Grounding

The drive is designed to be used in T-N (grounded neutral point) networks. If installing the drive in other types of grounded systems, contact your Yaskawa representative for instructions.

## EMC Guidelines Compliance

This drive is tested according to European standards EN 61800-3:2004+A1:2012.

## EMC Filter Installation

The following conditions must be met to ensure continued compliance with guidelines. Refer to EMC Filters on page 337 for EMC filter selection.

## Installation Method

Verify the following installation conditions to ensure that other devices and machinery used in combination with this drive also comply with EMC guidelines.

1. Install an EMC noise filter to the input side specified by Yaskawa for compliance with European standards.
2. Place the drive and EMC noise filter in the same enclosure.
3. Use braided shield cable for the drive and motor wiring, or run the wiring through a metal conduit.
4. Keep wiring as short as possible. Ground the shield on both the drive side and the motor side.

A - Drive
B-10 m max cable length between drive and motor
D - Metal conduit
E - Ground wire should be as short as possible.
C - Motor

Figure C. 3 Installation Method
5. Make sure the protective earthing conductor complies with technical standards and local safety regulations.

WARNING! Electrical Shock Hazard. Because the leakage current exceeds 3.5 mA in models 4 A0414 to 4A1200, IEC/EN 61800-5-1 states that either the power supply must be automatically disconnected in case of discontinuity of the protective earthing conductor, or a protective earthing conductor with a cross-section of at least $10 \mathrm{~mm}^{2}(\mathrm{Cu})$ or $16 \mathrm{~mm}^{2}(\mathrm{Al})$ must be used. Failure to comply may result in death or serious injury.

D - Enclosure panel
E-Drive max. 10 m )
Figure C. 5 EMC Filter and Drive Installation for CE Compliance (Three-Phase $200 \mathrm{~V} / 400 \mathrm{~V}$ Class)

## EMC Filters

Install the drive with the EMC filters listed in Table C. 4 to comply with the IEC/EN 61800-3 requirements.
Table C. 4 IEC/EN 61800-3 Filters

| Drive Model | Type | Rated Current (A) | Weight (lb) | Dimensions [W x D x H] (in) | Y x X (in) | Figure |

| 4A0004 | 400 V Three-Phase Units | 3.2 A |
| UZDA-B | 28 mH |  |

Note: DC link chokes are not required for other models to comply with EMC.

## C. 2 UL and CSA Standards

## UL Standards Compliance

The UL/cUL mark applies to products in the United States and Canada. It indicates that UL has performed product testing and evaluation, and determined that their stringent standards for product safety have been met. For a product to receive UL certification, all components inside that product must also receive UL certification.

Figure C. 7 UL/cUL Mark
This drive is tested in accordance with UL standard UL508C and complies with UL requirements. The conditions described below must be met to maintain compliance when using this drive in combination with other equipment:

## Installation Area

Do not install the drive to an area greater than pollution degree 2 (UL standard).

## ■ Ambient Temperature

IP00/Open Type Enclosure: $-10^{\circ} \mathrm{C}$ to $+50^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F}\right.$ to $\left.122^{\circ} \mathrm{F}\right)$
IP20/UL Type 1 Enclosure: -10 to $+40^{\circ} \mathrm{C}\left(14{ }^{\circ} \mathrm{F}\right.$ to $\left.104^{\circ} \mathrm{F}\right)$
Finless Type: IP20/IP00 Enclosure: -10 to $+45^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F}\right.$ to $\left.113{ }^{\circ} \mathrm{F}\right)$

## Main Circuit Terminal Wiring

Yaskawa recommends using closed-loop crimp terminals on all drive models. To maintain UL/cUL approval, UL Listed closed-loop crimp terminals are specifically required when wiring the drive main circuit terminals on models 2A0110 to 2A0415, 4A0058 to 4A0675, (4A1200 series-dependent), and 5A0041 to 5A0242. Use only the tools recommended by the terminal manufacturer for crimping. Refer to Closed-Loop Crimp Terminal Recommendations on page 340 for closed-loop crimp terminal recommendations.

## Closed-Loop Crimp Terminal Recommendations

To maintain UL/cUL approval, UL Listed closed-loop crimp terminals are specifically required when wiring the drive main circuit terminals on models 2A0110 to 2A0415, 4A0058 to 4A1200, and 5A0041 to 5A0242. Use only the tools recommended by the terminal manufacturer for crimping. Yaskawa recommends UL Listed crimp terminals made by JST and Tokyo DIP (or equivalent) for the insulation cap. Table C. 6 matches the wire gauges and terminal screw sizes with Yaskawa-recommended crimp terminals, tools, and insulation caps. Refer to the appropriate Wire Gauge and Torque Specifications table for the wire gauge and screw size for your drive model. Place orders with a Yaskawa representative or the Yaskawa sales department. Wire gauge values shown in bold italic are the recommended values. Refer to local codes for proper selections.

|  | 300 | $\times 8 \mathrm{P}$ |  | 150 |  | TD-313 | TP-150 | 100-051-562 |

$<1>$ Codes refer to a set of three crimp terminals and three insulation caps. Prepare input and output wiring using two sets for each connection.
Example 1: Models with 300 kcmil for both input and output require one set for input terminals and one set for output terminals, so the user should order two sets of [100-051-272].
Example 2: Models with 4/0 AWG $\times 2 \mathrm{P}$ for both input and output require two sets for input terminals and two sets for output terminals, so the user should order four sets of [100-051-560].

Note: Use crimp insulated terminals or insulated shrink tubing for wiring connections. Wires should have a continuous maximum allowable temperature of $75^{\circ} \mathrm{C} 600$ Vac UL-approved vinyl-sheathed insulation.

## Factory Recommended Branch Circuit Protection for UL Compliance

NOTICE: If a fuse is blown or a Ground Fault Circuit Interrupter (GFCI) is tripped, check the wiring and the selection of the peripheral devices to identify the cause. Contact Yaskawa before restarting the drive or the peripheral devices if the cause cannot be identified.
Yaskawa recommends installing one of the following types of branch circuit protection to maintain compliance with UL508C. Semiconductor protective type fuses are preferred. Alternate branch circuit protection devices are also listed in the tables below.

Table C. 7 Factory Recommended Drive Branch Circuit Protection (Normal Duty)

| Drive Model | $\begin{array}{c}\text { Nominal } \\ \text { Output Power } \\ \text { HP }\end{array}$ | $\begin{array}{c}\text { AC Drive Input } \\ \text { Amps }\end{array}$ | $\begin{array}{c}\text { MCCB Rating } \\ \text { Amps } \\ \text { <1> }\end{array}$ | $\begin{array}{c}\text { Time Delay Fuse } \\ \text { Rating Amps }\end{array}$ | $\begin{array}{c}\text { Non-time Delay } \\ \text { Fuse Rating } \\ \text { Amps }\end{array}$ | $\begin{array}{c}\text { Bussmann Semi- } \\ \text { conductor Fuse } \\ \text { Rating (Fuse } \\ \text { Ampere) }\end{array}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |$]$

$<1>$ Maximum MCCB Rating is 15 A , or $200 \%$ of drive input current rating, whichever is larger. MCCB voltage rating must be 600 VAC or greater.
$<2>$ Maximum Time Delay fuse is $175 \%$ of drive input current rating. This covers any Class $\mathrm{CC}, \mathrm{J}$ or T class fuse.
$<3>$ Maximum Non-time Delay fuse is $300 \%$ of drive input current rating. This covers any CC, J or T class fuse.
$<4>$ When using semiconductor fuses, Bussman FWH and FWP are required for UL compliance. Select FWH for 200 V Class and 400 V Class models and FWP fuses for 600 V models.
$<5>$ Class L fuse is also approved for this rating.
Table C. 8 Factory Recommended Drive Branch Circuit Protection (Heavy Duty)

| 5A0242 | 200 | 228 | 400 | 350 | 600 | FWP-600A (600) |

$<1>$ Maximum MCCB Rating is 15 A , or $200 \%$ of drive input current rating, whichever is larger. MCCB voltage rating must be 600 VAC or greater.
$<2>$ Maximum Time Delay fuse is $175 \%$ of drive input current rating. This covers any Class CC, J or T class fuse.
$<3>$ Maximum Non-time Delay fuse is $300 \%$ of drive input current rating. This covers any CC, J or T class fuse.
$<4>$ Class L fuse is also approved for this rating.

## Wiring Fuses for Models 4A0930 and 4A1200

NOTICE: If a fuse is blown or an Ground Fault Circuit Interrupter (GFCI) is tripped, check the wiring and the selection of peripheral devices to identify the cause. Contact Yaskawa before restarting the drive or the peripheral devices if the cause cannot be identified.

Install a fuse on the input side to protect drive wiring and prevent other secondary damage. Wire the fuse so that leakage current in the upper controller power supply will trigger the fuse and shut off the power supply.
Select the appropriate fuse from Table 3.2.
Table C. 9 Input Fuses for Models 4A0930 and 4A1200

| Voltage Class | Model | Selection |  |  | Input Fuse (Example) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Low Voltage Wiring for Control Circuit Terminals

Wire low voltage wires with NEC Class 1 circuit conductors. Refer to national state or local codes for wiring. The external power supply shall be a UL Listed Class 2 power supply source or equivalent only.

Table C.10 Control Circuit Terminal Power Supply

| Input / Output | Terminal Signal | Power Supply Specifications |
| :--- | :---: | :--- |
| Open Collector Outputs | P1, P2, PC, DM+, DM- | Requires class 2 power supply |
| Digital inputs | S1 to S8, SC, HC, H1, H2 | Use the internal LVLC power supply of the drive. Use class <br> 2 for external power supply. |
| Analog inputs / outputs | $+\mathrm{V},-\mathrm{V}, \mathrm{A} 1, \mathrm{~A} 2, \mathrm{~A} 3, \mathrm{AC}, \mathrm{AM}, \mathrm{FM}$ | Use the internal LVLC power supply of the drive. Use class <br> 2 for external power supply. |

## Drive Short Circuit Rating

The drive is suitable for use on a circuit capable of delivering not more than 100,000 RMS symmetrical Amperes, 240 Vac maximum ( 200 V Class), 480 Vac maximum ( 400 V Class), and 600 Vac maximum ( 600 V Class) when protected by Bussmann Type FWH or FWP fuses as specified in Factory Recommended Branch Circuit Protection on page 330.

## CSA Standards Compliance

Figure C. 8 CSA Mark

## CSA for Industrial Control Equipment

The drive is CSA-certified as Industrial Control Equipment Class 3211.
Specifically, the drive is certified to: CAN/CSA C22.2 No. 04-04 and CAN/CSA C22.2 No.14-05.

## Drive Motor Overload Protection

Set parameter E2-01 (motor rated current) to the appropriate value to enable motor overload protection. The internal motor overload protection is UL Listed and in accordance with the NEC and CEC.

## E2-01: Motor Rated Current

Setting Range: Model-dependent

Default Setting: Model-dependent
Parameter E2-01 protects the motor when parameter L1-01 is not set to 0 . The default for L1-01 is 1 , which enables protection for standard induction motors.
If Auto-Tuning has been performed successfully, the motor data entered to T1-04 is automatically written to parameter E2-01. If Auto-Tuning has not been performed, manually enter the correct motor rated current to parameter E2-01.

## - L1-01: Motor Overload Protection Selection

The drive has an electronic overload protection function (oL1) based on time, output current, and output frequency that protects the motor from overheating. The electronic thermal overload function is UL-recognized, so it does not require an external thermal relay for single motor operation.
This parameter selects the motor overload curve used according to the type of motor applied.
Table C. 11 Overload Protection Settings

| Setting | Description |  |
| :---: | :--- | :--- |
| $\mathbf{0}$ | Disabled | Disabled the internal motor overload protection of the drive. |
| $\mathbf{1}$ | Standard fan-cooled motor (default) | Selects protection characteristics for a standard self-cooled motor with limited <br> cooling capabilities when running below the rated speed. The motor overload <br> detection level (oL1) is automatically reduced when running below the motor rated <br> speed. |
| $\mathbf{2}$ | Drive duty motor with a speed range of 1:10 | Selects protection characteristics for a motor with self-cooling capability within a <br> speed range of 10:1. The motor overload detection level (oL1) is automatically <br> reduced when running below 1/10 of the motor rated speed. |
| $\mathbf{3}$ | Vector motor with a speed range of 1:100 | Selects protection characteristics for a motor capable of cooling itself at any speed <br> including zero speed (externally cooled motor). The motor overload detection level <br> (oL1) is constant over the entire speed range. |
| $\mathbf{4}$ | Permanent Magnet motor with variable torque | Selects protection characteristics for a variable torque PM motor. The motor <br> overload detection level (oL1) is automatically reduced when running below the <br> motor rated speed. |
| $\mathbf{5}$ | Permanent Magnet motor with constant torque | Selects protection characteristics for a constant torque PM motor. The motor <br> overload detection level (oL1) is constant over the whole speed range. |
| $\mathbf{6}$ | Standard fan-cooled motor (50 Hz) | Selects protection characteristics for a standard self-cooled motor with limited <br> cooling capabilities when running below the rated speed. The motor overload <br> detection level (oL1) is automatically reduced when running below the motor rated <br> speed. |

When connecting the drive to more than one motor for simultaneous operation, disable the electronic overload protection $(\mathrm{L} 1-01=0)$ and wire each motor with its own motor thermal overload relay.
Enable motor overload protection (L1-01 = 1 to 6 ) when connecting the drive to a single motor, unless another motor overload preventing device is installed. The drive electronic thermal overload function causes an oL1 fault, which shuts off the output of the drive and prevents additional overheating of the motor. The motor temperature is continually calculated while the drive is powered up.

## ■ L1-02: Motor Overload Protection Time

Setting Range: 0.1 to 5.0 min
Factory Default: 1.0 min
Parameter L1-02 determines how long the motor is allowed to operate before the oL1 fault occurs when the drive is running a hot motor at 60 Hz and at $150 \%$ of the full load amp rating (E2-01) of the motor. Adjusting the value of L1-02 can shift the set of oL1 curves up the y axis of the diagram below, but will not change the shape of the curves.

Figure C. 9 Motor Overload Protection Time

## - Precautionary Notes on External Heatsink (IP00/Open Type Enclosure)

When using an external heatsink, UL compliance requires covering exposed capacitors in the main circuit to prevent injury to surrounding personnel.
The portion of the external heatsink that projects out can be protected with the enclosure or with the appropriate capacitor cover after completing drive installation. Use Table C. 12 to match drive models with available capacitor covers. Order capacitor covers from a Yaskawa representative or directly from the Yaskawa sales department.

Table C. 12 Capacitor Cover

| Drive Model | Code Number | Figure |

## C. 3 Safe Disable Input Function

## Specifications

| Inputs/Outputs |  | Two Safe Disable inputs and one EDM output according to ISO/EN 13849-1 Cat. 3 PLd, IEC/EN <br> 61508 SIL2. |
| :---: | :---: | :--- |
| Operation Time |  | Time from input open to drive output stop is less than 1 ms. |
| Failure Probability | Demand Rate Low | PFD $=5.15 \mathrm{E}^{-5}$ |
|  | Demand Rate High/ <br> Continuous | PFH $=1.2 \mathrm{E}^{-9}$ |
|  | Performance Level |  | The Safe Disable inputs satisfy all requirements of Performance Level (PL) d according to ISO/EN <br> $13849-1$ (DC from EDM considered). |

## Precautions

DANGER! Sudden Movement Hazard. Improper use of the Safe Disable function can result in serious injury or even death. Make sure the whole system or machinery in which the Safe Disable function is used complies with safety requirements. When implementing the Safe Disable function into the safety system of a machine, perform a thorough risk assessment for the entire system to assure compliance with relevant safety norms.

DANGER! Sudden Movement Hazard. When using a PM motor, even if the drive output is shut off by the Safe Disable function, a breakdown of two output transistors can cause current to flow through the motor winding, resulting in a rotor movement for a maximum angle of 180 degrees (electrically). Make sure such a situation would have no effect on the safety of the application when using the Safe Disable function.

DANGER! Sudden Movement Hazard. The Safe Disable function can switch off the drive output, but does not cut the drive power supply and cannot electrically isolate the drive output from the input. Always shut off the drive power supply when performing maintenance or installations on the drive input side as well as the drive output side.

WARNING! Sudden Movement Hazard. When using the Safe Disable inputs, make sure to remove the wire links between terminals H1, H2, and HC that were installed prior to shipment. Failing to do so will keep the Safe Disable circuit from operating properly and can cause injury or even death.
NOTICE: All safety features (including Safe Disable) should be inspected daily and periodically. If the system is not operating normally, there is a risk of serious personal injury.

NOTICE: Only a qualified technician with a thorough understanding of the drive, the instruction manual, and safety standards should be permitted to wire, inspect, and maintain the Safe Disable input.

NOTICE: From the moment terminal inputs H 1 and H 2 have opened, it takes up to 1 ms for drive output to shut off completely. The sequence set up to trigger terminals H 1 and H 2 should make sure that both terminals remain open for at least 1 ms in order to properly interrupt drive output.

NOTICE: The Safe Disable Monitor (output terminals DM+ and DM-) should not be used for any other purpose than to monitor the Safe Disable status or to discover a malfunction in the Safe Disable inputs. The monitor output is not considered a safe output.
NOTICE: When utilizing the Safe Disable function, an EMC filter must be used. Use only the EMC filters recommended in the drive Technical Manual.

## Using the Safe Disable Function

The Safe Disable inputs provide a stop function in compliance with "Safe Torque Off" as defined in the IEC/EN 61800-5-2. Safe Disable inputs have been designed to meet the requirements of the ISO/EN 13849-1, Category 3 PLd, and IEC/EN 61508, SIL2. The PDS intended use shall be in the first environment (EM).
A Safe Disable Status Monitor for error detection in the safety circuit is also provided.

## Safe Disable Circuit

The Safe Disable circuit consists of two independent input channels that can block the output transistors and provide a monitoring channel to indicate the status of those input channels.
The input can use the internal power supply of the drive or an external power supply and it will support Sink mode or Source mode. the mode selected for the digital input terminals S 1 to S 8 by switch S 3 will also be used for the Safe Disable inputs. Refer to Sinking/Sourcing Mode for Digital Inputs on page 110 for more information.
The Safe Disable Monitor uses a single channel photocoupler output. Refer to Output Terminals on page 106 for signal specifications when using this output.

Figure C. 12 Safe Disable Function Wiring Example (SINK Mode)

## Disabling and Enabling the Drive Output ("Safe Torque Off")

Figure C. 13 illustrates the Safe Disable input operation.

Figure C. 13 Safe Disable Operation

## Entering the "Safe Torque Off" State

Whenever either one Safe Disable input or both inputs open, the motor torque is shut off by switching off the drive output. If the motor was running before the Safe Disable inputs opened, then the motor will coast to stop, regardless of the stopping method set in parameter b1-03.
Notice that the "Safe Torque Off" state can only be achieved using the Safe Disable function. Removing the Run command stops the drive and shuts the output off (baseblock), but does not create a "Safe Torque Off" status.

Note: To avoid an uncontrolled stop during normal operation, make sure that the Safe Disable inputs are opened first when the motor has completely stopped.

## Returning to Normal Operation after Safe Disable

The Safe Disable function can only be deactivated when a Run command is not active.
If Safe Disable was activated during stop, turn on both Safe Disable inputs by deactivating "Safe Torque Off" to resume normal operation.
If Safe Disable was activated during run, remove the Run command then turn on the Safe Disable inputs before restarting the drive.

## Safe Disable Monitor Output Function and Digital Operator Display

Table C. 13 explains the drive output and Safe Disable monitor state depending on the Safe Disable inputs.

Table C. 13 Safety Input and EDM Terminal Status

| Safe Disable Input Status |  | Safe Disable Status Monitor, <br> DM+ DM- |  | Drive Output Status | Digital Operator <br> Display |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Input 1, H1-HC | Input 2, H2-HC | S6 Switch = "N.C." | S6 Switch = "N.O." | ON | Safely disabled, <br> "Safe Torque Off" |
| OFF | OFF | OFF | Hbb (flashes) |  |  |
| ON | OFF | ON | OFF | Safely disabled, <br> "Safe Torque Off" | HbbF (flashes) |
| OFF | ON | ON | OFF | Safely disabled, <br> "Safe Torque Off" | HbbF (flashes) |
| ON | ON | ON | OFF | Baseblock, <br> ready for operation | Normal display |

## Safe Disable Status Monitor

Slide Switch S6 controls the polarity of this signal. Refer to Table C. 13 for functionality.
With the Safe Disable monitor output (terminals DM + and DM-), the drive provides a safety status feedback signal. This signal should be read by the device that controls the Safe Disable inputs (PLC or a safety relay) in order to prohibit leaving the "Safe Torque Off" status in case the safety circuit malfunctions. Refer to the instruction manual of the safety device for details on this function.

## Digital Operator Display

When both Safe Disable inputs are open, "Hbb" will flash in the digital operator display.
If one Safe Disable channel is on while the other is off, "HbbF" will flash in the display to indicate that there is a problem in the safety circuit or in the drive. This display should not appear under normal conditions if the Safe Disable circuit is utilized properly. Refer to Alarm Codes, Causes, and Possible Solutions on page 196 to resolve possible errors.

## Revision History

The revision dates and the numbers of the revised manuals appear on the bottom of the back cover.

| Date of Publication | Revision Number | Section |  | Revised Content |
| :---: | :---: | :---: | :---: | :---: |
| August 2019 | <6> | All | Revision | Updated the information to reflect the compliance of 600 V models with the safe disable input and European standards. |
|  |  | Back Cover | Revision: | Address |
| April 2016 | <5> | Front Cover | Revision: | Revision: Format |
|  |  | All | Revision: | Reviewed and corrected entire documentation. <br> Upgraded drive software version to PRG: 1021, PRG: 1022, PRG: 1023, and PRG: 1024 |
|  |  | Back Cover | Revision: | Format and address |
| October 2013 | <4> | All | Revision: | Reviewed and corrected entire documentation. <br> Upgraded drive software version to PRG: 1018, PRG: 1019, and PRG: 1020 |
|  |  | Chapter 2 | Addition: | Addition: NEMA Type 1 and NEMA Type 12 External Heatsink Mounting data |
|  |  | Back Cover | Revision: | Address |
| May 2012 | <3> | Front Cover | Revision: | Format |
|  |  | Chapter 8 | Revision: | Factory Recommended Branch Circuit Protection data |
|  |  | Appendix A | Addition: | Single-Phase Derating data |
|  |  | Appendix D | Revision: | Factory Recommended Branch Circuit Protection data |
|  |  | All | Revision: | Reviewed and corrected entire documentation. <br> Upgraded drive software version to PRG: 1016 and PRG: 1017 |
|  |  | Back Cover | Revision: | Format and address |
| November 2010 | <2> | All | Addition: | Larger drive capacities added along with corresponding data. Three-Phase 600 V Class: 5A0125 to 5A0242 |
|  |  |  | Revision: | Reviewed and corrected documentation. |
| July 2010 | <1> | All | Addition: | Larger drive capacities added along with corresponding data. <br> Three-Phase 400 V Class: 4A0930 and 4A1200 <br> Three-Phase 600 V Class: 5A0041 to 5A0099 |
|  |  |  | Revision: | Reviewed and corrected entire documentation. Upgraded drive software version to PRG: 1015 |
| April 2010 | - | - | First Edition | This manual supports drive software versions VSA90504■ and VSA901014. |
