# YASKAWA AC Drive A1000 High Performance Vector Control Drive Safety Precautions 

Type: CIMR-AU $\square$ A
Models: 200 V Class: $3 / 4$ to 175 HP ND 400 V Class: $3 / 4$ to 1000 HP ND 600 V Class: 1 to 250 HP ND

To properly use the product, read these precautions and refer to the CD-ROM packaged with the product. Ensure the end user receives these precautions and the CD-ROM No. TOECC71061615.

No patent liability is assumed with respect to the use of the information contained herein. Moreover, because Yaskawa is constantly striving to improve its high-quality products, the information contained in this manual is subject to change without notice. Every precaution has been taken in the preparation of this manual. Yaskawa assumes no responsibility for errors or omissions. Neither is any liability assumed for damages resulting from the use of the information contained in this publication.

## A1000 Safety Precautions

This document provides essential safety information for the A1000 series AC drive.
Refer to the A1000 Quick Start Procedure TM.A1000.01 packaged with the drive to configure the drive for basic operation.
Refer to the CD-ROM packaged with the product for complete product instructions necessary for proper installation, set-up, troubleshooting and maintenance. CD part number TOECC71061615. The 1000 Series CD-ROM contains the A1000 Technical Manual No. SIEPC71061641 and additional 1000 Series manuals.

## Applicable Models

This Safety Precautions document applies to the drive models in Table i．1．
Table i． 1 Applicable Models

| Drive Series | Drive Model Number | Software Version |
| :---: | :--- | :---: |
| A1000 | CIMR－AU2ロロロロロ | All |
|  | CIMR－AU4ロロロロロ | All |
|  | CIMR－AU5ロロロロロ |  |

## Warranty Information

## Restrictions

The drive is not designed or manufactured for use in devices or systems that may directly affect or threaten human lives or health．
Customers who intend to use the product described in this manual for devices or systems relating to transportation，health care，space aviation，atomic power，electric power，or in underwater applications must first contact their Yaskawa representatives or the nearest Yaskawa sales office．
WARNING！Injury to Personnel．This product has been manufactured under strict quality－control guidelines．However，if this product is to be installed in any location where failure of this product could involve or result in a life－and－death situation or loss of human life or in a facility where failure may cause a serious accident or physical injury，safety devices must be installed to minimize the likelihood of any accident．

## i. 1 General Safety

## Supplemental Safety Information

## General Precautions

- The diagrams in this manual may be indicated without covers or safety shields to show details. Replace the covers or shields before operating the drive and run the drive according to the instructions described in this manual.
- Any illustrations, photographs, or examples used in this manual are provided as examples only and may not apply to all products to which this manual is applicable.
- The products and specifications described in this manual or the content and presentation of the manual may be changed without notice to improve the product and/or the manual.
- When ordering a new copy of the manual due to damage or loss, contact your Yaskawa representative or the nearest Yaskawa sales office and provide the manual number shown on the front cover.
- If nameplate becomes worn or damaged, order a replacement from your Yaskawa representative or the nearest Yaskawa sales office.

## A WARNING

Read and understand this manual before installing, operating or servicing this drive. The drive must be installed according to this manual and local codes.
The following conventions are used to indicate safety messages in this manual. Failure to heed these messages could result in serious or fatal injury or damage to the products or to related equipment and systems.

## ! DANGER

Indicates a hazardous situation, which, if not avoided, will result in death or serious injury.

## A WARNING

Indicates a hazardous situation, which, if not avoided, could result in death or serious injury.
WARNING! may also be indicated by a bold key word embedded in the text followed by an italicized safety message.

## A CAUTION

Indicates a hazardous situation, which, if not avoided, could result in minor or moderate injury.
CAUTION! may also be indicated by a bold key word embedded in the text followed by an italicized safety message.

## NOTICE

## Indicates a property damage message.

NOTICE: may also be indicated by a bold key word embedded in the text followed by an italicized safety message.

## Safety Messages

## ! DANGER

## Heed the safety messages in this manual.

Failure to comply will result in death or serious injury.
The operating company is responsible for any injuries or equipment damage resulting from failure to heed the warnings in this manual.

## ! DANGER

## Electrical Shock Hazard

Do not connect or disconnect wiring while the power is on.
Failure to comply will result in death or serious injury.
Before servicing, disconnect all power to the equipment. The internal capacitor remains charged even after the power supply is turned off. After shutting off the power, wait for at least the amount of time specified on the drive before touching any components.

## A WARNING

## Sudden Movement Hazard

System may start unexpectedly upon application of power, resulting in death or serious injury.
Clear all personnel from the drive, motor and machine area before applying power. Secure covers, couplings, shaft keys and machine loads before applying power to the drive.
When using DriveWorksEZ to create custom programming, the drive I/O terminal functions change from factory settings and the drive will not perform as outlined in this manual.
Unpredictable equipment operation may result in death or serious injury.
Take special note of custom I/O programming in the drive before attempting to operate equipment.

## Electrical Shock Hazard

Do not attempt to modify or alter the drive in any way not explained in this manual.
Failure to comply could result in death or serious injury.
Yaskawa is not responsible for any modification of the product made by the user. This product must not be modified.
Do not allow unqualified personnel to use equipment.
Failure to comply could result in death or serious injury.
Maintenance, inspection, and replacement of parts must be performed only by authorized personnel familiar with installation, adjustment and maintenance of AC drives.
Do not remove covers or touch circuit boards while the power is on.
Failure to comply could result in death or serious injury.
Make sure the protective earthing conductor complies with technical standards and local safety regulations.
Because the leakage current exceeds 3.5 mA in models 4A0414 and larger, IEC/EN 61800-5-1 states that either the power supply must be automatically disconnected in case of discontinuity of the protective earthing conductor or a protective earthing conductor with a cross-section of at least $10 \mathrm{~mm}^{2}(\mathrm{Cu})$ or $16 \mathrm{~mm}^{2}$ (Al) must be used. Failure to comply may result in death or serious injury.
Always use appropriate equipment for Ground Fault Circuit Interrupters (GFCIs).
The drive can cause a residual current with a DC component in the protective earthing conductor. Where a residual current operated protective or monitoring device is used for protection in case of direct or indirect contact, always use a type B GFCI according to IEC/EN 60755.

## Fire Hazard

Do not use an improper voltage source.
Failure to comply could result in death or serious injury by fire.
Verify that the rated voltage of the drive matches the voltage of the incoming power supply before applying power.
Install adequate branch circuit protection according to applicable local codes and this Installation Manual. Failure to comply could result in fire and damage to the drive or injury to personnel.
The device is suitable for use on a circuit capable of delivering not more than 100,000 RMS symmetrical amperes, 240 Vac maximum ( 200 V class) and 480 Vac maximum ( 400 V class), and 600 Vac maximum ( 600 V class) when protected by branch circuit protection devices specified in this document.

## A WARNING

## Crush Hazard

Do not use this drive in lifting applications without installing external safety circuitry to prevent accidental dropping of the load.
The drive does not possess built-in load drop protection for lifting applications.
Failure to comply could result in death or serious injury from falling loads.
Install electrical and/or mechanical safety circuit mechanisms independent of drive circuitry.

## A CAUTION

## Crush Hazard

Do not carry the drive by the front cover.
Failure to comply may result in minor or moderate injury from the main body of the drive falling.

## NOTICE

Observe proper electrostatic discharge procedures (ESD) when handling the drive and circuit boards.
Failure to comply may result in ESD damage to the drive circuitry.
Do not perform a withstand voltage test on any part of the drive.
Failure to comply could result in damage to the sensitive devices within the drive.
Do not operate damaged equipment.
Failure to comply could result in further damage to the equipment.
Do not connect or operate any equipment with visible damage or missing parts.
If a fuse is blown or a Ground Fault Circuit Interrupter (GFCI) is tripped, check the wiring and the selection of the peripheral devices.
Contact your supplier if the cause cannot be identified after checking the above.
Do not restart the drive immediately operate the peripheral devices if a fuse is blown or a GFCI is tripped.
Check the wiring and the selection of peripheral devices to identify the cause. Contact your supplier before restarting the drive or the peripheral devices if the cause cannot be identified.
Do not expose the drive to halogen group disinfectants.
Failure to comply may cause damage to the electrical components in the drive.
Do not pack the drive in wooden materials that have been fumigated or sterilized.
Do not sterilize the entire package after the product is packed.

## Periodic Maintenance Safety

WARNING! Electrical Shock Hazard. Capacitors in the drive do not immediately discharge after shutting off the power. Wait for at least the amount of time specified on the drive before touching any components after shutting off the power. Failure to comply may cause injury to personnel from electrical shock.

WARNING! Burn Hazard. Because the heatsink can get very hot during operation, take proper precautions to prevent burns. When replacing the cooling fan, shut off the power and wait at least 15 minutes to be sure that the heatsink has cooled down. Failure to comply may cause burn injury to personnel.

## Motor Application Safety

WARNING! Electrical Shock Hazard. When a drive is running a PM motor, voltage continues to be generated at the motor terminals after the drive is shut off while the motor coasts to stop. Take the precautions described below to prevent shock and injury:

- In applications where the machine can still rotate after the drive has fully stopped a load, install a switch to the drive output side to disconnect the motor and the drive.
- Do not allow an external force to rotate the motor beyond the maximum allowable speed or to rotate the motor when the drive has been shut off.
- Wait for at least the time specified on the warning label after opening the load switch on the output side before inspecting the drive or performing any maintenance.
- Do not open and close the load switch while the motor is running.
- If the motor is coasting, make sure the power to the drive is turned on and the drive output has completely stopped before closing the load switch.

NOTICE: Equipment Damage. A motor connected to a PWM drive may operate at a higher temperature than a utility-fed motor and the operating speed range may reduce motor cooling capacity. Ensure that the motor is suitable for drive duty and/or the motor service factor is adequate to accommodate the additional heating with the intended operating conditions.

## Insulation Tolerance

NOTICE: Consider motor voltage tolerance levels and motor insulation in applications with an input voltage of over 440 V or particularly long wiring distances.

## High-Speed Operation

NOTICE: Problems may occur with the motor bearings and dynamic balance of the machine when operating a motor beyond its rated speed. Contact the motor or machine manufacturer.

## Torque Characteristics

Torque characteristics differ compared to operating the motor directly from line power. The user should have a full understanding of the load torque characteristics for the application.

## Audible Noise

The audible noise of the motor varies based on the carrier frequency setting. However, drive current derating may be required. When using a high carrier frequency, audible noise from the motor is comparable to the motor noise generated when running from line power.

## Receiving Safety

## CAUTION

Do not carry the drive by the front cover or the terminal cover.
Failure to comply may cause the main body of the drive to fall, resulting in minor or moderate injury.

## NOTICE

Observe proper electrostatic discharge procedures (ESD) when handling the drive and circuit boards.
Failure to comply may result in ESD damage to the drive circuitry.

## Transporting the Drive

NOTICE: Never steam clean the drive. During transport, keep the drive from coming into contact with salts, fluorine, bromine, phthalate ester, and other such harmful chemicals.

## i. 2 Mechanical Installation Safety

## A WARNING

## Fire Hazard

Provide sufficient cooling when installing the drive inside an enclosed panel or cabinet.
Failure to comply could result in overheating and fire.
When multiple drives are placed inside the same enclosure panel, install proper cooling to ensure air entering the enclosure does not exceed $40^{\circ} \mathrm{C}$.

## Crush Hazard

Only allow qualified personnel to operate a crane or hoist to transport the drive.
Failure to comply may result in serious injury or death from falling equipment.
Use a dedicated lifter when transporting the drive by a lifter.
Failure to comply may result in serious injury or death from falling equipment.
Only use vertical suspension to temporarily lift the drive during installation to an enclosure panel. Do not use vertical suspension to transport the drive.
Failure to comply may result in serious injury or death from falling equipment.
Use screws to securely affix the drive front cover, terminal blocks, and other drive components prior to vertical suspension.
Failure to comply may result in serious injury or death from falling equipment.
Do not subject the drive to vibration or impact greater than $1.96 \mathbf{m} / \mathbf{s}^{\mathbf{2}}(\mathbf{0 . 2} \mathbf{G})$ while it is suspended by the cables. Failure to comply may result in serious injury or death from falling equipment.
Do not attempt to flip the drive over or leave the drive unattended while it is suspended by the wires. Failure to comply may result in serious injury or death from falling equipment.

## NOTICE

## Equipment Hazard

Prevent foreign matter such as metal shavings or wire clippings from falling into the drive during drive installation and project construction.
Failure to comply could result in damage to the drive. Place a temporary cover over the top during installation. Be sure to remove the temporary cover before start-up, as the cover will reduce ventilation and cause the unit to overheat.
Observe proper electrostatic discharge (ESD) procedures when handling the drive.
Failure to comply could result in ESD damage to the drive circuitry.
When the input voltage is 440 V or higher or the wiring distance is greater than 100 meters, pay special attention to the motor insulation voltage or use a drive-rated motor with reinforced insulation.
Failure to comply could lead to motor winding failure.
Never lift the drive up while the cover is removed.
This can damage the terminal board and other components.

## Installation Environment

Install the drive in an environment matching the specifications in Table $\mathbf{i . 2}$ to help prolong the optimum performance life of the drive.

Table i. 2 Installation Environment

| Environment | Conditions |
| :---: | :---: |
| Installation Area | Indoors |
| Ambient Temperature | IP20/NEMA Type 1 enclosure: $-10^{\circ} \mathrm{C}$ to $+40^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F}\right.$ to $\left.104{ }^{\circ} \mathrm{F}\right)$ <br> IP00/Open Type enclosure: $-10^{\circ} \mathrm{C}$ to $+50^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F}\right.$ to $\left.122^{\circ} \mathrm{F}\right)$ <br> Drive reliability improves in environments without wide temperature fluctuations. <br> When using the drive in an enclosure panel, install a cooling fan or air conditioner in the area to ensure that the air temperature inside the enclosure does not exceed the specified levels. <br> Do not allow ice to develop on the drive. |
| Humidity | $95 \% \mathrm{RH}$ or less and free of condensation |
| Storage Temperature | $-20^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}\left(-4{ }^{\circ} \mathrm{F}\right.$ to $\left.+104{ }^{\circ} \mathrm{F}\right)$ |
| Surrounding Area | Install the drive in an area free from: <br> - oil mist and dust <br> - metal shavings, oil, water, or other foreign materials <br> - radioactive materials <br> - combustible materials (e.g., wood) <br> - harmful gases and liquids <br> - excessive vibration <br> - chlorides <br> - direct sunlight. |
| Altitude | 1000 m ( 3281 ft .) or lower, up to 3000 m (9843 ft.) with derating |
| Vibration | 10 to 20 Hz at $9.8 \mathrm{~m} / \mathrm{s}^{2}\left(32.15 \mathrm{ft} / \mathrm{s}^{2}\right)^{<1>}$ <br> 20 to 55 Hz at $5.9 \mathrm{~m} / \mathrm{s}^{2}\left(19.36 \mathrm{ft} / \mathrm{s}^{2}\right)$ (Models 2A0004 to 2A0211, 4A0002 to 4A0165, and 5A0003 to 5A0099) or $2.0 \mathrm{~m} / \mathrm{s}^{2}\left(6.56 \mathrm{ft} / \mathrm{s}^{2}\right)$ (Models 2A0250 to 2A0415, 4A0208 to 4A1200, and 5A0125 to 5A0242) |
| Orientation | Install the drive vertically to maintain maximum cooling effects. |

$<1>$ Models 4A0930 and 4A1200 are rated at $5.9 \mathrm{~m} / \mathrm{s}^{2}\left(19.36 \mathrm{ft} / \mathrm{s}^{2}\right)$
NOTICE: Avoid placing drive peripheral devices, transformers, or other electronics near the drive as the noise created can lead to erroneous operation. If such devices must be used in close proximity to the drive, take proper steps to shield the drive from noise.

NOTICE: Prevent foreign matter such as metal shavings and wire clippings from falling into the drive during installation. Failure to comply could result in damage to the drive. Place a temporary cover over the top of the drive during installation. Remove the temporary cover before drive start-up, as the cover will reduce ventilation and cause the drive to overheat.

## Instructions on Installation Using the Eye Bolts

Eye bolts are used to install the drive or to temporarily lift the drive when replacing it. Using the eye bolts, the drive can be installed in an enclosure panel or on a wall. Do not leave the drive suspended by the wires in a horizontal or vertical position for long periods of time. Do not transport the drive over long distances. Read the following precautions and instructions before installing the drive.
WARNING! Crush Hazard. Observe the following instructions and precautions. Failure to comply could result in serious injury or death from falling equipment.
Only use vertical suspension to temporarily lift the drive during installation to an enclosure panel. Do not use vertical suspension to transport the drive.
Use screws to securely affix the drive front cover, terminal blocks, and other drive components prior to vertical suspension.

## Horizontal Suspension of Drive Models 2A0360, 2A0415, and 4A0250 to 4A0675

To make a wire hanger or frame for use when lifting the drive with a crane, lay the drive in a horizontal position and pass a wire through the holes of the four eye bolts.
NOTICE: Damage to Equipment. When lifting the drive, confirm that the spring washer is fully closed. Failure to comply may deform or damage the drive when lifted.

A - No space between drive and washer
B - Spring washer fully closed

C - Space between drive and washer D - Spring washer open

Figure i. 1 Spring Washer

## Vertical Suspension of Drive Models 2A0360, 2A0415, and 4A0250 to 4A1200

## Models 2A0360, 2A0415, and 4A0250 to 4A0675

When vertical suspension of the drive is required in an enclosure panel, change the orientation of the eye bolts for these models by turning the eye bolts counterclockwise 90 degrees.

Figure i. 2 Adjusting Angle of Eye Bolts

## Models 4A0930 and 4A1200

When suspending models 4A0930 or 4A1200 with wires, follow the procedure described below.

WARNING! Crush Hazard. Use an adequate length of wire to ensure a $50^{\circ}$ or wider suspension angle as illustrated in Figure i.4. The maximum allowable load of the eye bolts cannot be guaranteed when the drive is suspended with the wires at angles less than $50^{\circ}$. Failure to comply may result in serious injury or death from falling equipment.

1. Remove the four eye bolts from the drive side panels and fix them securely on the top panel.

Figure i. 3 Eye Bolt Repositioning
2. Pass wire through the holes of all four eye bolts.

## A - Eye bolt

 B - WiresC - Suspending angle: $50^{\circ}$ or greater

Figure i. 4 Suspension Wire Angle Example
3. Gradually take up the slack in the wires and hoist the drive after the wires are stretched tight.
4. Lower the drive when ready to install in the enclosure panel. Stop lowering the drive when it is near the floor then begin lowering the drive again very slowly until the drive is placed correctly.

## Installation Orientation and Spacing

Install the drive upright as illustrated in Figure i. 5 to maintain proper cooling.

Figure i. 5 Correct Installation Orientation
NOTICE: Install the drive upright as specified in the manual. Failure to comply may damage the drive due to improper cooling.
NOTICE: Install the drive upright as specified in the manual. Failure to comply may damage the drive due to improper cooling.

## Single Drive Installation

Figure i.6 shows the installation distance required to maintain sufficient space for airflow and wiring. Install the heatsink against a closed surface to avoid diverting cooling air around the heatsink.

A-50 mm minimum B-30 mm minimum

$$
\begin{aligned}
& \text { C - } 120 \mathrm{~mm} \text { minimum } \\
& \text { D - Airflow direction }
\end{aligned}
$$

Figure i. 6 Correct Installation Spacing

IP20/NEMA Type 1 enclosure and IP00/Open Type enclosure models require the same amount of space above and below the drive for installation.

## - Multiple Drive Installation (Side-by-Side Installation)

Models 2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032 can take advantage of Side-by-Side installation. When installing multiple drives into the same enclosure panel, mount the drives according to Figure i. 6 and set L8-35, Installation Method Selection, to 1 (Side-by-Side Mounting).
When mounting drives with the minimum clearance of 2 mm according to Figure i.7, set parameter L8-35 to 1 while considering derating.

Figure i. 7 Space Between Drives (Side-by-Side Mounting)
Note: Align the tops of the drives when installing drives of different heights in the same enclosure panel. Leave space between the tops and bottoms of stacked drives for easier cooling fan replacement.
Remove the top protective covers of all drives as shown in Figure i. $\boldsymbol{8}$ when mounting IP20/NEMA Type 1 enclosure drives side-by-side.

Figure i. 8 IP20/NEMA 1 Side-by-Side Mounting in Enclosure

## Drive Dimensions

## NOTICE

Refer to the A1000 Technical Manual SIEPC71061641 for IP20/NEMA Type 1, IP00/Open Chassis and Flange Type Enclosure (NEMA 12 Backside) drive dimensions.
The 1000 Series CD-ROM No. TOECC71061615, packaged with the drive contains the A1000 Technical Manual No. SIEPC71061641 and additional 1000 Series manuals.

## i. 3 Electrical Installation Safety

## NOTICE

Refer to the A1000 Technical Manual SIEPC71061641 on the CD-ROM packaged with the product for more information regarding the Electrical Installation and for complete product instructions necessary for proper installation, set-up, troubleshooting and maintenance. CD-ROM part number TOECC71061615.

## ! DANGER

## Electrical Shock Hazard

Do not connect or disconnect wiring while the power is on.
Failure to comply will result in death or serious injury.

## WARNING

## Electrical Shock Hazard

Make sure the protective earthing conductor complies with technical standards and local safety regulations.
Because the leakage current exceeds 3.5 mA in models 4A0414 and larger, IEC/EN 61800-5-1 states that either the power supply must be automatically disconnected in case of discontinuity of the protective earthing conductor or a protective earthing conductor with a cross-section of at least $10 \mathrm{~mm}^{2}(\mathrm{Cu})$ or $16 \mathrm{~mm}^{2}(\mathrm{Al})$ must be used. Failure to comply may result in death or serious injury.

## Always use appropriate equipment for Ground Fault Circuit Interrupters (GFCIs).

The drive can cause a residual current with a DC component in the protective earthing conductor. Where a residual current operated protective or monitoring device is used for protection in case of direct or indirect contact, always use a type B GFCI according to IEC/EN 60755.

## A WARNING

## Electrical Shock Hazard

## Do not operate equipment with covers removed.

Failure to comply could result in death or serious injury.
The diagrams in this section may show drives without covers or safety shields to show details. Be sure to reinstall covers or shields before operating the drives and run the drives according to the instructions described in this manual.
Always ground the motor-side grounding terminal.
Improper equipment grounding could result in death or serious injury by contacting the motor case.
Do not perform work on the drive while wearing loose clothing, jewelry or without eye protection.
Failure to comply could result in death or serious injury.
Remove all metal objects such as watches and rings, secure loose clothing, and wear eye protection before beginning work on the drive.
Do not remove covers or touch circuit boards while the power is on.
Failure to comply could result in death or serious injury.
Do not allow unqualified personnel to perform work on the drive.
Failure to comply could result in death or serious injury.
Installation, maintenance, inspection, and servicing must be performed only by authorized personnel familiar with installation, adjustment, and maintenance of AC drives.

## WARNING

## Do not touch any terminals before the capacitors have fully discharged.

Failure to comply could result in death or serious injury.
Before wiring terminals, disconnect all power to the equipment. The internal capacitor remains charged even after the power supply is turned off. After shutting off the power, wait for at least the amount of time specified on the drive before touching any components.

## Fire Hazard

## Tighten all terminal screws to the specified tightening torque.

Loose electrical connections could result in death or serious injury by fire due to overheating of electrical connections.
Do not use improper combustible materials.
Failure to comply could result in death or serious injury by fire.
Do not install the drive to a combustible surface. Never place combustible materials on the drive.
Do not use an improper voltage source.
Failure to comply could result in death or serious injury by fire.
Verify that the rated voltage of the drive matches the voltage of the incoming power supply before applying power.
When installing dynamic braking options, perform all wiring exactly as specified in the wiring diagrams provided.
Failure to do so can result in fire. Improper wiring may damage braking components.
Shut off the drive with a magnetic contactor (MC) when a fault occurs in any external equipment such as braking resistors. Failure to comply may cause resistor overheating, fire, and injury to personnel.

## A CAUTION

Do not carry the drive by the front cover or the terminal cover.
Failure to comply may cause the main body of the drive to fall, resulting in minor or moderate injury.

## NOTICE

Observe proper electrostatic discharge procedures (ESD) when handling the drive and circuit boards.
Failure to comply may result in ESD damage to the drive circuitry.
Never connect or disconnect the motor from the drive while the drive is outputting voltage.
Improper equipment sequencing could result in damage to the drive.
Do not use unshielded cable for control wiring.
Failure to comply may cause electrical interference resulting in poor system performance. Use shielded, twisted-pair wires and ground the shield to the ground terminal of the drive.
Do not allow unqualified personnel to use the product.
Failure to comply could result in damage to the drive or braking circuit.
Carefully review instruction manual TOBPC72060000 or TOBPC72060001 when connecting a dynamic braking option to the drive.
Do not modify the drive circuitry.
Failure to comply could result in damage to the drive and will void warranty.
Yaskawa is not responsible for any modification of the product made by the user. This product must not be modified.

## NOTICE

Check all the wiring to ensure that all connections are correct after installing the drive and connecting any other devices.
Failure to comply could result in damage to the drive.
Do not connect power supply lines to output terminals U/T1, V/T2, or W/T3. Failure to comply will destroy the drive. Be sure to perform a final check of all sequence wiring and other connections before turning on the power and also check for short circuits on the control terminals, which may damage the drive.
To get the full performance life out of the electrolytic capacitors and circuit relays, refrain from switching the drive power supply off and on more than once every 30 minutes. Frequent use can damage the drive. Use the drive to stop and start the motor.

## NOTICE

Install a fuse and a GFCI in models 4A0930 and 4A1200. Failure to comply may result in serious damage to the facilities if the drive is defective. Refer to Wiring Fuses for Models 4A0930 and 4A1200 on page 22 for details.

## Standard Connection Diagram

WARNING! Sudden Movement Hazard. Do not close the wiring for the control circuit unless the multifunction input terminal parameters are properly set. Improper sequencing of run/stop circuitry could result in death or serious injury from moving equipment.

WARNING! Sudden Movement Hazard. Ensure start/stop and safety circuits are wired properly and in the correct state before energizing the drive. Failure to comply could result in death or serious injury from moving equipment. When programmed for 3-Wire control, a momentary closure on terminal S1 may cause the drive to start.
WARNING! Sudden Movement Hazard. When using a 3-Wire sequence, set the drive to 3-Wire sequence prior to wiring the control terminals and set parameter b1-17 to 0 so the drive will not accept a Run command at power up (default). If the drive is wired for a 3-Wire sequence but set up for a 2-Wire sequence (default), and parameter b1-17 is set to 1 so the drive accepts a Run command at power up, the motor will rotate in reverse direction at drive power up and may cause injury.

WARNING! Sudden Movement Hazard. Confirm the drive I/O signals and external sequence before executing the application preset function. Executing the application preset function or setting A1-06 $=0$ will change the drive I/O terminal functions and may cause unexpected equipment operation. Failure to comply may cause death or serious injury.

NOTICE: When using the automatic fault restart function with wiring designed to shut off the power supply upon drive fault, make sure the drive does not trigger a fault output during fault restart ( $L 5-02=0$, default). Failure to comply will prevent the automatic fault restart function from working properly.

NOTICE: Inadequate wiring could result in damage to the drive. Install adequate branch circuit short circuit protection per applicable codes. The drive is suitable for circuits capable of delivering not more than 100,000 RMS symmetrical amperes, 240 Vac maximum (200 V class), 480 Vac maximum (400 V class), 600 Vac maximum ( 600 V class).

NOTICE: When the input voltage is 440 V or higher or the wiring distance is greater than 100 meters, pay special attention to the motor insulation voltage or use a drive duty motor. Failure to comply could lead to motor insulation breakdown.
NOTICE: Do not connect AC control circuit ground to drive enclosure. Improper drive grounding can cause control circuit malfunction.
NOTICE: Route motor leads U/T1, V/T2, and W/T3 separate from all other leads to reduce possible interference related issues. Failure to comply may result in abnormal operation of drive and nearby equipment.
NOTICE: Correctly set Sink/Source jumper S3 for internal power supply. Failure to comply may result in damage to the drive.
Note: The minimum load for the relay outputs M1-M2, M3-M4, M5-M6, and MA-MB-MC is 10 mA .

Figure i. 9 Drive Standard Connection Diagram (example: model 2A0040)
<1> Remove the jumper when installing a DC link choke. Models 2A0110 to 2A0415 and 4A0058 to 4A1200 come with a built-in DC link choke.
<2> Set L8-55 to 0 to disable the protection function of the built-in braking transistor of the drive when using an optional regenerative converter or dynamic braking option. Leaving L8-55 enabled may cause a braking resistor fault (rF). Additionally, disable Stall Prevention (L3-04 = 0) when using an optional regenerative converter, regenerative or braking units, or dynamic braking option. Leaving If L3-04 enabled may prevent the drive from stopping within the specified deceleration time.
<3> Supplying power to the control circuit separately from the main circuit requires 24 V power supply (option).
<4> This figure illustrates an example of a sequence input to S1 through S8 using a non-powered relay or an NPN transistor. Install the wire link between terminals SC-SP for Sink mode, between SC-SN for Source mode, or leave the link out for external power supply. Never short terminals SP and SN, as it will damage the drive.
<5> This voltage source supplies a maximum current of 150 mA when not using a digital input card DI-A3.
<6> The maximum output current capacity for the +V and -V terminals on the control circuit is 20 mA . Never short terminals $+\mathrm{V},-\mathrm{V}$, and AC, as it can cause erroneous operation or damage the drive.
<7> Slide switch S6 selects N.C. or N.O. as the state of the DM+ and DM- terminals for EDM output. Slide switch S6 is available on terminal board ETC74030ロ.
$<8>$ Set DIP switch S1 to select between a voltage or current input signal to terminal A2. The default setting is for current input.
<9> Set DIP switch S4 to select between analog or PTC input for terminal A3.
<10> Set DIP switch S2 to the ON position to enable the termination resistor in the last drive in a MEMOBUS/Modbus network.
<11> Use jumper S3 to select between Sink mode, Source mode, and external power supply for the Safe Disable inputs.
Note: Terminals $\mathrm{H} 1, \mathrm{H} 2, \mathrm{DM}+$, and DM - on 600 V class models are designed to the functionality, but are not certified to IEC/ EN61800-5-1, ISO/EN13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
<12> Disconnect the wire jumper between $\mathrm{H} 1-\mathrm{HC}$ and $\mathrm{H} 2-\mathrm{HC}$ when utilizing the Safe Disable input.
Note: Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to IEC/ EN61800-5-1, ISO/EN13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
<13> Monitor outputs work with devices such as analog frequency meters, ammeters, voltmeters, and wattmeters. They are not intended for use as a feedback-type signal.
$<14>$ Use jumper S5 to select between voltage or current output signals at terminals AM and FM. Set parameters H4-07 and H4-08 accordingly.
$<15>$ Self-cooling motors do not require the same wiring necessary for motors with cooling fans.

## Main Circuit Wiring

WARNING! Electrical Shock Hazard. Do not connect the AC power line to the drive output terminals U/T1, V/T2, and W/T3. Failure to comply could result in death or serious injury by fire as a result of drive damage from line voltage application to output terminals.

## NOTICE

Refer to the A1000 Technical Manual SIEPC71061641 on the CD-ROM packaged with the product for complete product instructions necessary for proper installation, set-up, troubleshooting and maintenance. CD part number TOECC71061615.

NOTICE: Route motor leads U/T1, V/T2, and W/T3 separate from all other leads to reduce possible interference related issues. Failure to comply may result in abnormal operation of drive and nearby equipment.
NOTICE: Do not use the negative DC bus terminal "-" as a ground terminal. This terminal is at high DC voltage potential. Improper wiring connections could damage the drive.

NOTICE: Do not solder the ends of wire connections to the drive. Soldered wiring connections can loosen over time. Improper wiring practices could result in drive malfunction due to loose terminal connections.

NOTICE: Do not switch the drive input to start or stop the motor. Frequently switching the drive on and off shortens the life of the DC bus charge circuit and the DC bus capacitors, and can cause premature drive failures. For the full performance life, refrain from switching the drive on and off more than once every 30 minutes.
NOTICE: When connecting the motor to the drive output terminals U/T1, V/T2, and W/T3, the phase order for the drive and motor should match. Failure to comply with proper wiring practices may cause the motor to run in reverse if the phase order is backward.

NOTICE: Do not connect phase-advancing capacitors or LC/RC noise filters to the output circuits. Failure to comply could result in damage to the drive, phase-advancing capacitors, LC/RC noise filters or ground fault circuit interrupters.

Note: $\quad$ Wire gauge recommendations based on drive continuous current ratings (ND) using $75^{\circ} \mathrm{C} 600 \mathrm{Vac}$ vinyl-sheathed wire assuming ambient temperature within $40^{\circ} \mathrm{C}$ and wiring distance less than 100 m .
Yaskawa recommends using closed-loop crimp terminals on all drive models. UL/cUL approval requires the use of closedloop crimp terminals when wiring the drive main circuit terminals on models 2 A 0110 to 2 A 0415 and 4 A 0058 to 4A1200. Use only the tools recommended by the terminal manufacturer for crimping.

## Main Circuit Terminal Functions

Table i. 3 Main Circuit Terminal Functions

| Terminal | Type |  |  |  | Function | Page |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Drive Model | $\begin{aligned} & \text { 2A0004 to } \\ & \text { 2A0081 } \end{aligned}$ | $\begin{aligned} & \text { 2A0110 to } \\ & \text { 2A0138 } \end{aligned}$ | $\begin{aligned} & \text { 2A0169 to } \\ & \text { 2A0415 } \end{aligned}$ | - |  |  |
|  | $\begin{aligned} & \text { 4A0002 to } \\ & \text { 4A0044 } \end{aligned}$ | 4A0058, 4A0072 | $\begin{aligned} & \text { 4A0088 to } \\ & \text { 4A0675 } \end{aligned}$ | $\begin{aligned} & \text { 4A0930 to } \\ & \text { 4A1200 } \end{aligned}$ |  |  |

| $\dagger$ |  | For 200 V class: $100 \Omega$ or less <br> For 400 V class: $10 \Omega$ or less <br> For 600 V class: $10 \Omega$ or less |  |  |  | Grounding terminal | 34 |

Note: Use terminals B1 and - when installing a CDBR-type braking unit on drives with built-in braking transistors (Models 2A0004 to 2A0138, 4A0002 to 4A0072, and 5A0003 to 5A0052).

## Wiring Fuses for Models 4A0930 and 4A1200

NOTICE: If a fuse is blown or an Ground Fault Circuit Interrupter (GFCI) is tripped, check the wiring and the selection of peripheral devices to identify the cause. Contact Yaskawa before restarting the drive or the peripheral devices if the cause cannot be identified.
Install a fuse on the input side to protect drive wiring and prevent other secondary damage. Wire the fuse so that leakage current in the upper controller power supply will trigger the fuse and shut off the power supply.
Select the appropriate fuse from Table i.4.
Table i. 4 Input Fuses for Models 4A0930 and 4A1200

| Voltage Class | Model | Selection |  |  | Input Fuse (Example) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Input Voltage | Current | Pre-arc $I^{2} t\left(A^{2} s\right)$ | Model | Manufacturer | Rating | Pre-arc $\mathrm{I}^{2} \mathrm{t}\left(\mathrm{~A}^{2} \mathrm{~s}\right)$ |
| ThreePhase 400 V Class | 4A0930 | 480 V | 1500 A | $\begin{gathered} 140000 \text { to } \\ 3100000 \end{gathered}$ | CS5F-1200 | Fuji Electric | AC500 V, 1200 A | 276000 |
|  |  |  |  |  | FWH-1200A | Bussman | AC500 V, 1200 A | - |
|  | 4A1200 | 480 V | 1500 A | $\begin{gathered} 320000 \text { to } \\ 3100000 \end{gathered}$ | CS5F-1500 | Fuji Electric | AC500 V, 1500 A | 351000 |
|  |  |  |  |  | FWH-1600A | Bussman | AC500 V, 1600 A | - |

## Main Circuit Wire Gauges and Tightening Torque

Use the tables in this section to select the appropriate wires and crimp terminals.
Gauges listed in the tables are for use in the United States.
Note: 1. Wire gauge recommendations based on drive continuous current ratings (ND) using $75^{\circ} \mathrm{C} 600$ Vac vinyl-sheathed wire assuming ambient temperature within $40^{\circ} \mathrm{C}$ and wiring distance less than 100 m .
2. Terminals $+1,+2,+3,-, B 1$ and $B 2$ are for connecting optional power devices. Use caution to connect only approved devices to the correct terminal(s).

- Consider the amount of voltage drop when selecting wire gauges. Increase the wire gauge when the voltage drop is greater than $2 \%$ of motor rated voltage. Ensure the wire gauge is suitable for the terminal block. Use the following formula to calculate the amount of voltage drop:
Line drop voltage $(\mathrm{V})=\sqrt{ } 3 \times$ wire resistance $(\Omega / \mathrm{km}) \times$ wire length $(\mathrm{m}) \times$ current $(\mathrm{A}) \times 10^{-3}$
- Refer to instruction manual TOBP C720600 00 for braking transistor option or braking resistor option wire gauges.
- Use terminals +1 and - when connecting a regenerative converter or a regen unit.

NOTICE: Do not connect a braking resistor to terminals +1 or - Failure to comply may cause damage to the drive circuitry.

- Use terminals B1 and - when installing a CDBR-type braking unit on drives with built-in braking transistors (models 2A0004 to 2A0138, 4A0002 to 4A0072, and 5A0003 to 5A0052).
NOTICE: Do not connect a braking resistor to terminals +1 or - . Failure to comply may cause damage to the drive circuitry.
- Refer to UL Standards Compliance on page 46 for information on UL compliance.

Yaskawa recommends using closed-loop crimp terminals on all drive models. UL/cUL approval requires the use of closedloop crimp terminals when wiring the drive main circuit terminals on models 2A0110 to 2A0415 and 4A0058 to 4A1200. Use only the tools recommended by the terminal manufacturer for crimping. Refer to Closed-Loop Crimp Terminal Size on page 30 for closed-loop crimp terminal recommendations.
The wire gauges listed in the following tables are Yaskawa recommendations. Refer to local codes for proper wire gauge selections.

■ Three-Phase 200 V Class
Table i. 5 Wire Gauge and Torque Specifications (Three-Phase 200 V Class)

| Drive Model | Terminal | Recomm. Gauge AWG, kcmil | Wire Range AWG, kcmil | Screw Size | Tightening Torque N•m (Ib.in.) |

$<1>$ Install an ELCB when using this wire gauge in accordance with IEC/EN61800-5-1. Refer to the Technical Manual section on EMC Filter Installation for details.
$<2>$ Install an ELCB, or use $10 \mathrm{~mm}^{2}$ (AWG 8) copper wire when using this wire gauge in accordance with IEC/EN61800-5-1.
Note: When connecting peripheral devices or options to terminals $-,+1,+3$, B1, and B2, refer to the instruction manual for each device. For more information, contact Yaskawa or your nearest sales representative.

Note: When connecting peripheral devices or options to terminals $-,+1,+3, \mathrm{~B} 1$, and B 2 , refer to the instruction manual for each device. For more information, contact Yaskawa or your nearest sales representative.
Closed-Loop Crimp Terminal Recommendations
Yaskawa recommends UL listed crimp terminals made by JST and Tokyo DIP (or equivalent) for the insulation cap. Table $\boldsymbol{i}$. $\boldsymbol{8}$ matches the wire gauges and terminal screw sizes with Yaskawa-recommended crimp terminals, tools, and insulation caps. Refer to the appropriate Wire Gauge and Torque Specifications table for the wire gauge and screw size for your drive model.
Place orders with a Yaskawa representative or the Yaskawa sales department.
The closed-loop crimp terminal sizes and values listed in Table i. 8 are Yaskawa recommendations.
Wire gauge values shown in bold italic are the recommended values. Refer to local codes for proper selections.

Table i. 8 Closed-Loop Crimp Terminal Size

|  | 300 | $\times 8 P$ |  |  |  | TD-313 | TP-150 | 100-051-562 |

$<1>$ Codes refer to a set of three crimp terminals and three insulation caps. Prepare input and output wiring using two sets for each connection.
Example 1: Models with 300 kcmil for both input and output require one set for input terminals and one set for output terminals, so the user should order two sets of [100-051-272].
Example 2: Models with $4 / 0 \mathrm{AWG} \times 2 \mathrm{P}$ for both input and output require two sets for input terminals and two sets for output terminals, so the user should order four sets of [100-051-560].
Note: Use crimp insulated terminals or insulated shrink tubing for wiring connections. Wires should have a continuous maximum allowable temperature of $75{ }^{\circ} \mathrm{C} 600 \mathrm{Vac}$ UL-approved vinyl-sheathed insulation.

## i. 3 Electrical Installation Safety

## Ground Wiring

Follow the precautions below when wiring the ground for one drive or a series of drives.
WARNING! Electrical Shock Hazard. Make sure the protective earthing conductor complies with technical standards and local safety regulations. Because the leakage current exceeds 3.5 mA in models $4 A 0414$ and larger, IEC/EN 61800-5-1 states that either the power supply must be automatically disconnected in case of discontinuity of the protective earthing conductor or a protective earthing conductor with a cross-section of at least $10 \mathrm{~mm}^{2}(\mathrm{Cu})$ or $16 \mathrm{~mm}^{2}(\mathrm{Al})$ must be used. Failure to comply may result in death or serious injury.

WARNING! Electrical Shock Hazard. Always use a ground wire that complies with technical standards on electrical equipment and minimize the length of the ground wire. Improper equipment grounding may cause dangerous electrical potentials on equipment chassis, which could result in death or serious injury.

WARNING! Electrical Shock Hazard. Be sure to ground the drive ground terminal ( 200 V class: ground to $100 \Omega$ or less; 400 V class: ground to $10 \Omega$ or less; 600 V class: ground to $10 \Omega$ or less). Improper equipment grounding could result in death or serious injury by contacting ungrounded electrical equipment.

NOTICE: Do not share the ground wire with other devices such as welding machines or large-current electrical equipment. Improper equipment grounding could result in drive or equipment malfunction due to electrical interference.

NOTICE: When using more than one drive, ground multiple drives according to instructions. Improper equipment grounding could result in abnormal operation of drive or equipment.
Refer to Figure i. 10 when using multiple drives. Do not loop the ground wire.

Figure i. 10 Multiple Drive Wiring

## Control Circuit Connections

Drive parameters determine which functions apply to the multi-function digital inputs ( S 1 to S 8 ), multi-function digital outputs (M1 to M6), multi-function analog inputs (A1 to A3), and multi-function analog monitor output (FM, AM). The default setting is listed next to each terminal in Figure i. 9 on page 19.
WARNING! Sudden Movement Hazard. Always check the operation and wiring of control circuits after being wired. Operating a drive with untested control circuits could result in death or serious injury.

WARNING! Sudden Movement Hazard. Confirm the drive I/O signals and external sequence before starting test run. Setting parameter A1-06 may change the I/O terminal function automatically from the factory setting. Failure to comply may result in death or serious injury.

## Terminal Configuration

The control circuit terminals are arranged as shown in Figure i.11.

Figure i. 11 Control Circuit Terminal Arrangement

## Control Circuit Input Terminals

Table i. 9 lists the input terminals on the drive. Text in parenthesis indicates the default setting for each multi-function input.
Table i. 9 Control Circuit Input Terminals

| Type | No. | Terminal Name (Function) | Function (Signal Level) Default Setting |
| :---: | :---: | :---: | :---: |
| Multi-Function Digital Inputs | S1 | Multi-function input 1 (Closed: Forward run, Open: Stop) | - Photocoupler <br> - $24 \mathrm{Vdc}, 8 \mathrm{~mA}$ <br> - Refer to Sinking/Sourcing Mode for Digital Inputs on page 40. |
|  | S2 | Multi-function input 2 (Closed: Reverse run, Open: Stop) |  |
|  | S3 | Multi-function input 3 (External fault, N.O.) |  |
|  | S4 | Multi-function input 4 (Fault reset) |  |
|  | S5 | Multi-function input 5 (Multi-step speed reference 1) |  |
|  | S6 | Multi-function input 6 (Multi-step speed reference 2) |  |
|  | S7 | Multi-function input 7 (Jog reference) |  |
|  | S8 | Multi-function input 8 (Baseblock command (N.O.)) |  |
|  | SC | Multi-function input common | Multi-function input common |
|  | SP | Digital input power supply +24 Vdc | 24 Vdc power supply for digital inputs, 150 mA max (only when not using digital input option DI-A3) <br> NOTICE: Do not jumper or short terminals SP and SN. Failure to comply will damage the drive. |
|  | SN | Digital input power supply 0 V |  |

$<1>$ Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to IEC/EN61800-5-1, ISO/EN13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.

## Control Circuit Output Terminals

Table i. 10 lists the output terminals on the drive. Text in parenthesis indicates the default setting for each multi-function output.
Table i. 10 Control Circuit Output Terminals

| Type | No. | Terminal Name (Function) | Function (Signal Level) Default Setting |
| :---: | :---: | :---: | :---: |
| Fault Relay Output | MA | N.O. output (Fault) | $30 \mathrm{Vdc}, 10 \mathrm{~mA}$ to $1 \mathrm{~A} ; 250 \mathrm{Vac}, 10 \mathrm{~mA}$ to 1 A Minimum load: $5 \mathrm{Vdc}, 10 \mathrm{~mA}$ |
|  | MB | N.C. output (Fault) |  |
|  | MC | Fault output common |  |
| Multi-Function Digital Output | M1 | Multi-function digital output (During run) | $30 \mathrm{Vdc}, 10 \mathrm{~mA}$ to $1 \mathrm{~A} ; 250 \mathrm{Vac}, 10 \mathrm{~mA}$ to 1 A Minimum load: $5 \mathrm{Vdc}, 10 \mathrm{~mA}$ |
|  | M2 |  |  |
|  | M3 | Multi-function digital output (Zero speed) |  |
|  | M4 |  |  |
|  | M5 | Multi-function digital output (Speed Agree 1) |  |
|  | M6 |  |  |
| Monitor Output | MP | Pulse train output (Output frequency) | 32 kHz (max) |
|  | FM | Analog monitor output 1 (Output frequency) | -10 to $+10 \mathrm{Vdc}, 0$ to +10 Vdc , or 4 to 20 mA . Refer to Terminal $\boldsymbol{A M} /$ FM Signal Selection on page 43 for details. |
|  | AM | Analog monitor output 2 (Output current) |  |
|  | AC | Monitor common | 0 V |
| Safety Monitor Output ${ }^{<2>}$ | DM + | Safety monitor output | Outputs status of Safe Disable function. Closed when both Safe Disable channels are closed. Up to +48 Vdc 50 mA |
|  | DM- | Safety monitor output |  |

$<1>$ Refrain from assigning functions to digital relay outputs that involve frequent switching, as doing so may shorten relay performance life. Switching life is estimated at 200,000 times (assumes 1 A , resistive load).
$<2>$ Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to IEC/EN61800-5-1, ISO/EN13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.

Connect a suppression diode as shown in Figure i. 12 when driving a reactive load such as a relay coil. Ensure the diode rating is greater than the circuit voltage.

A - External power, 48 V max.
C - Coil
B - Suppression diode
D - 50 mA or less

Figure i. 12 Connecting a Suppression Diode

## Serial Communication Terminals

Table i.11 Control Circuit Terminals: Serial Communications

| Type | No. | Signal Name | Function (Signal Level) |  |
| :---: | :---: | :---: | :---: | :---: |
| MEMOBUS/Modbus Communication ${ }^{<1>}$ | R+ | Communications input (+) | MEMOBUS/Modbus communication: Use an RS-422 or RS-485 cable to connect the drive. | RS-422/RS-485 MEMOBUS/Modbus communication protocol 115.2 kbps (max.) |
|  | R- | Communications input (-) |  |  |
|  | S+ | Communications output (+) |  |  |
|  | S- | Communications output (-) |  |  |
|  | IG | Shield ground | 0 V |  |

$<1>$ Enable the termination resistor in the last drive in a MEMOBUS/Modbus network by setting DIP switch S2 to the ON position. Refer to the manual section on Control I/O Connections for more information.

## Control Circuit Wire Size and Torque Specifications

Select appropriate wire type and gauges from Table i.12. For simpler and more reliable wiring, use crimp ferrules on the wire ends. Refer to the Technical Manual on the CD-ROM packaged with the drive for ferrule terminal types and sizes.

Table i. 12 Wire Gauges

| Terminal | Screw Size | Tightening Torque N•m (lb. in) | Bare Wire Terminal |  | Ferrule-Type Terminal |  | Wire Type |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | $\begin{aligned} & \text { Recomm. } \\ & \text { wire size } \\ & \mathrm{mm}^{2} \text { (AWG) } \end{aligned}$ | Applicable wire size $\mathbf{m m}^{2}$ (AWG) | Recomm. wire size $\mathrm{mm}^{2}$ (AWG) | Applicable wire size $\mathrm{mm}^{2}$ (AWG) |  |
| S1-S8, SC, SN, SP | M3 | $\begin{gathered} 0.5 \text { to } 0.6 \\ (4.4 \text { to } 5.3) \end{gathered}$ | 0.75 (18) | Stranded wire: 0.2 to 1.0 (24 to 16) Solid wire: 0.2 to 1.5 (24 to 16) | 0.5 (20) | $\begin{aligned} & 0.25 \text { to } 0.5 \\ & (24 \text { to } 20) \end{aligned}$ | Shielded wire, etc. |
| H1, H2, HC |  |  |  |  |  |  |  |
| $\begin{aligned} & \mathrm{RP}, \mathrm{~V}+, \mathrm{V}-, \mathrm{A} 1, \mathrm{~A} 2, \mathrm{~A} 3, \\ & \mathrm{AC} \end{aligned}$ |  |  |  |  |  |  |  |
| MA, MB, MC |  |  |  |  |  |  |  |
| M1-M6 |  |  |  |  |  |  |  |
| MP, FM, AM, AC |  |  |  |  |  |  |  |
| DM + , DM- |  |  |  |  |  |  |  |
| R+, R-, S+, S-, IG |  |  |  |  |  |  |  |

## Wiring the Control Circuit Terminal

This section describes the proper procedures and preparations for wiring the control terminals.
WARNING! Electrical Shock Hazard. Do not remove covers or touch the circuit boards while the power is on. Failure to comply could result in death or serious injury.

NOTICE: Separate control circuit wiring from main circuit wiring (terminals $R / L 1, S / L 2, T / L 3, B 1, B 2, U / T 1, V / T 2, W / T 3,-,+1,+2$ ) and other high-power lines. Improper wiring practices could result in drive malfunction due to electrical interference.

NOTICE: Separate wiring for digital output terminals MA, MB, MC, and M1 to M6 from wiring to other control circuit lines. Improper wiring practices could result in drive or equipment malfunction or nuisance trips.
NOTICE: Use a class 2 power supply when connecting to the control terminals. Improper application of peripheral devices could result in drive performance degradation due to improper power supply. Refer to NEC Article 725 Class 1, Class 2, and Class 3 Remote-Control, Signaling, and Power Limited Circuits for requirements concerning class 2 power supplies.

NOTICE: Insulate shields with tape or shrink tubing to prevent contact with other signal lines and equipment. Improper wiring practices could result in drive or equipment malfunction due to short circuit.

NOTICE: Connect the shield of shielded cable to the appropriate ground terminal. Improper equipment grounding could result in drive or equipment malfunction or nuisance trips.

NOTICE: Do not tighten screws beyond the specified tightening torque. Failure to comply may result in erroneous operation, damage to the terminal block, or cause a fire.

NOTICE: Use shielded twisted-pair cables as indicated to prevent operating faults. Improper wiring practices could result in drive or equipment malfunction due to electrical interference.
Wire the control circuit only after terminals have been properly grounded and main circuit wiring is complete. Refer to Terminal Board Wiring Guide on page 38 for details. Prepare the ends of the control circuit wiring as shown in Figure $\boldsymbol{i}$. 15. Refer to Wire Gauges on page 37.

Connect control wires as shown in Figure i. 13 and Figure i.14.

A - Loosen screw to insert wire. B - Single wire or stranded wire

C - Avoid fraying wire strands when stripping insulation from wire. Strip length 5.5 mm .
D - Blade depth of 0.4 mm or less
Blade width of 2.5 mm or less

Figure i. 13 Terminal Board Wiring Guide

Figure i.14 Terminal Board Location Inside the Drive
When setting the frequency by analog reference from an external potentiometer, use shielded twisted-pair wires (preparing wire ends as shown in Figure i.15) and connect the shield to the ground terminal of the drive.

$$
\begin{aligned}
& \text { A - Drive side } \\
& \text { B - Insulation } \\
& \text { C - Control device side }
\end{aligned}
$$

> D - Shield sheath (insulate with tape)
> E - Shield

Figure i. 15 Preparing the Ends of Shielded Cables
NOTICE: The analog signal wiring between the drive and the operator station or peripheral equipment should not exceed 50 meters when using an analog signal from a remote source to supply the frequency reference. Failure to comply could result in poor system performance.

## Switches and Jumpers on the Terminal Board

The terminal board is equipped with several switches used to adapt the drive I/Os to the external control signals. Figure $\boldsymbol{i}$. 16 shows the location of these switches.

Figure i. 16 Locations of Jumpers and Switches on the Terminal Board

## Sinking/Sourcing Mode for Digital Inputs

Use the wire jumper between terminals SC and SP or SC and SN to select between Sink mode, Source mode or external power supply for the digital inputs S1 to S8 as shown in Table i. 13 (Default: Sink mode, internal power supply).
NOTICE: Do not short terminals SP and SN. Failure to comply will damage the drive.
Table i. 13 Digital Input Sink/Source/External Power Supply Selection

## Sinking/Sourcing Mode Selection for Safe Disable Inputs

Note: Terminals H1, H2, DM+, and DM- on 600 V class models are designed to the functionality, but are not certified to IEC/EN61800-5-1, ISO/ EN13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
Use jumper S3 on the terminal board to select between Sink mode, Source mode or external power supply for the Safe Disable inputs H1 and H2 as shown in Table i. 14 (Default: Source mode, internal power supply).

Table i. 14 Safe Disable Input Sink/Source/External Power Supply Selection
Mode

## ■ Using External Power Supply (Sink Mode)

The high voltage level of the pulse output signal depends on the external voltage applied. The voltage must be between 12 and 15 Vdc . The load resistance must be adjusted so that the current is lower than 16 mA .

| External Power Supply (V) | Load Impedance (kQ) |
| :---: | :---: |
| 12 to $15 \mathrm{Vdc} \pm 10 \%$ | $1.0 \mathrm{k} \Omega$ or higher |

Figure i. 17 Pulse Output Connection Using External Voltage Supply

## - Terminal A2 Input Signal Selection

Terminal A2 can be used to input either a voltage or a current signal. Select the signal type using switch S1 as explained in Table i.15. Set parameter H3-09 accordingly as shown in Table i.16.

Note: If terminals A1 and A2 are both set for frequency bias ( $\mathrm{H} 3-02=0$ and $\mathrm{H} 3-10=0$ ), both input values will be combined to create the frequency reference.

Table i. 15 DIP Switch S1 Settings

| Setting | Description |
| :---: | :---: |
| V (left position) | Voltage input ( -10 to +10 V or 0 to 10 V ) |
| I (right position) | Current input (4 to 20 mA or 0 to 20 mA ): default setting |

Table i. 16 Parameter H3-09 Details

| No. | Parameter Name | Description | Setting <br> Range | Default <br> Setting |
| :---: | :--- | :--- | :---: | :---: |
| H3-09 | Terminal A2 signal level selection | Selects the signal level for terminal A2. <br> $0: 0$ to 10 Vdc <br> $1:-10$ to 10 Vdc <br> $2: 4$ to 20 mA <br> $3: 0$ to 20 mA | 0 to 3 |  |

## Terminal A3 Analog/PTC Input Selection

Terminal A3 can be configured either as multi-function analog input or as PTC input for motor thermal overload protection. Use switch S 4 to select the input function as described in Table i.17.

Table i. 17 DIP Switch S4 Settings

| Setting |  |
| :---: | :---: |
| AI (lower position) (default) | Analog input for the function selected in parameter H3-06 |
| PTC (upper position) | PTC input. Parameter H3-06 must be set to E (PTC input) |

## Terminal AM/FM Signal Selection

The signal type for terminals AM and FM can be set to either voltage or current output using jumper S 5 on the terminal board as explained in Table i.18. When changing the setting of jumper S5, parameters H4-07 and H4-08 must be set accordingly. The default selection is voltage output for both terminals.

Table i. 18 Jumper S5 Settings

| Terminal | Voltage Output | Current Output |
| :---: | :---: | :---: |
| Terminal AM |  |  |
| Terminal FM |  |  |

Table i. 19 Parameter H4-07 and H4-08 Details

| No. | Parameter Name | Description | Setting <br> Range | Default <br> Setting |
| :---: | :--- | :--- | :---: | :---: |
| H4-07 | Terminal AM signal level selection | $0: 0$ to 10 Vdc <br> $1:-10$ to 10 Vdc <br> $2: 4$ to 20 mA | 0 to 2 | 0 |
| H4-08 | Terminal FM signal level selection |  | 0 |  |

## MEMOBUS/Modbus Termination

This drive is equipped with a built-in termination resistor for the RS-422/485 communication port. DIP switch S2 enables or disabled the termination resistor as shown in Table i.20. The OFF position is the default. The termination resistor should be placed to the ON position when the drive is the last in a series of slave drives. Refer to Switches and Jumpers on the Terminal Board on page 39 to locate switch S2.

Table i. 20 MEMOBUS/Modbus Switch Settings

| S2 Position | Description |
| :---: | :---: |
| ON | Internal termination resistor ON |
| OFF | Internal termination resistor OFF (default setting) |

## i. 4 Troubleshooting

## NOTICE

Refer to the A1000 Technical Manual SIEPC71061641 on the CD-ROM packaged with the product for information on Troubleshooting and complete product instructions necessary for proper installation, set-up, troubleshooting and maintenance. CD part number TOECC71061615.

## A WARNING

## Electrical Shock Hazard

Do not connect or disconnect wiring while the power is on.
Failure to comply could result in death or serious injury.
Before servicing, disconnect all power to the equipment. The internal capacitor remains charged even after the power supply is turned off. The charge indicator LED will extinguish when the DC bus voltage is below 50 Vdc . To prevent electric shock, wait for at least the time specified on the warning label; after all indicators are OFF, measure for unsafe voltages to confirm the drive is safe prior to servicing.

## Do not operate equipment with covers removed.

Failure to comply could result in death or serious injury.
The diagrams in this section may illustrate drives without covers or safety shields to display details. Be sure to reinstall covers or shields before operating the drives and run the drives according to the instructions described in this manual.
Do not touch terminals before the capacitors have fully discharged.
Failure to comply could result in death or serious injury.
Before servicing, disconnect all power to the equipment. The internal capacitor remains charged even after the power supply is turned off. The charge indicator LED will extinguish when the DC bus voltage is below 50 Vdc . To prevent electric shock, wait for at least the time specified on the warning label; after all indicators are OFF, measure for unsafe voltages to confirm the drive is safe prior to servicing.
After blowing a fuse or tripping a GFCI, do not attempt to restart the drive or operate peripheral devices until five minutes pass and CHARGE lamp is OFF.
Failure to comply could result in death, serious injury, and damage to the drive.
Check wiring and peripheral device ratings to identify the cause of trips.
Contact your supplier if the cause cannot be identified.
Installation, maintenance, inspection and servicing must be performed only by authorized personnel familiar with installation, adjustment and maintenance of AC drives.
Do not perform work on the drive while wearing loose clothing, jewelry, or without eye protection.
Failure to comply could result in death or serious injury.
Do not remove covers or touch circuit boards while the power is on.
Failure to comply could result in death or serious injury.

## Fault Reset Methods

When a fault occurs, the cause of the fault must be removed and the drive must be restarted. The table below lists the different ways to restart the drive.

| After the Fault Occurs |  |
| :--- | :--- | :--- | :--- |
| Fix the cause of the fault, restart the drive, and <br> reset the fault | Press <br> is displayed. |
| Resetting via Fault Reset Digital Input S4 |  |
| Turn off the main power supply if the above methods do not reset the fault. Reapply power after the |  |
| digital operator display has turned off. |  |

Note: If the Run command is present, the drive will disregard any attempts to reset the fault. Remove the Run command before attempting to clear a fault situation.

## i. 5 UL and CSA Standards

## UL Standards Compliance

The UL/cUL mark applies to products in the United States and Canada. It indicates that UL has performed product testing and evaluation, and determined that their stringent standards for product safety have been met. For a product to receive UL certification, all components inside that product must also receive UL certification.

Figure i. 18 UL/cUL Mark
This drive is tested in accordance with UL standard UL508C and complies with UL requirements. The conditions described below must be met to maintain compliance when using this drive in combination with other equipment:

## Installation Area

Do not install the drive to an area greater than pollution degree 2 (UL standard).

## Ambient Temperature

IP20/NEMA Type 1 Enclosure: -10 to $+40^{\circ} \mathrm{C}$
IP00 Open Type Enclosure: -10 to $+50^{\circ} \mathrm{C}$

## Main Circuit Terminal Wiring

Yaskawa recommends using closed-loop crimp terminals on all drive models. To maintain UL/cUL approval, UL Listed closed-loop crimp terminals are specifically required when wiring the drive main circuit terminals on models 2A0110 to 2A0415, 4A0058 to 4A0675, (4A1200 series dependant), and 5A0041 to 5A0242. Use only the tools recommended by the terminal manufacturer for crimping. Refer to Closed-Loop Crimp Terminal section of the drive Technical Manual for closedloop crimp terminal recommendations.

## Wire Gauges and Tightening Torques

Refer to Main Circuit Wire Gauges and Tightening Torque on page 22.

## Closed-Loop Crimp Terminal Recommendations

Refer to Closed-Loop Crimp Terminal Recommendations on page 29.

## Factory Recommended Branch Circuit Protection for UL Compliance

NOTICE: If a fuse is blown or a Ground Fault Circuit Interrupter (GFCI) is tripped, check the wiring and the selection of the peripheral devices. Check the wiring and the selection of peripheral devices to identify the cause. Contact Yaskawa before restarting the drive or the peripheral devices if the cause cannot be identified.

Yaskawa recommends installing one of the following types of branch circuit protection to maintain compliance with UL508C. Semiconductor protective type fuses are preferred. Alternate branch circuit protection devices are also listed in the tables below.

Table i. 21 Factory Recommended A1000 AC Drive Branch Circuit Protection (Normal Duty)

| Drive Model | A1000 in Normal Duty Mode (C6-01 = 1) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

$<1>$ Maximum MCCB Rating is 15 A , or $200 \%$ of drive input current rating, whichever is larger. MCCB voltage rating must be 600 VAC or greater.
$<2>$ Maximum Time Delay fuse is $175 \%$ of drive input current rating. This covers any Class CC, J or T class fuse.
$<3>$ Maximum Non-time Delay fuse is $300 \%$ of drive input current rating. This covers any CC, J or T class fuse.
$<4>$ When using semiconductor fuses, Bussman FWH and FWP are required for UL compliance. Select FWH for 200 V Class and 400 V Class models and FWP fuses for 600 V models.
<5> Class L fuse is also approved for this rating.

| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Nominal <br> Output Power <br> HP | AC Drive Input <br> Amps | MCCB Rating <br> Amps <br> $<1>$ | Time Delay Fuse <br> Rating Amps $<2>$ | Non-time Delay <br> Fuse Rating <br> Amps $<3>$ | Bussman Semi- <br> conductor Fuse <br> Rating (Fuse <br> Ampere) $<4>$ |
|  | 200 | 228 | 400 | 350 | 600 | FWP-600A (600) |

$<1>$ Maximum MCCB Rating is 15 A , or $200 \%$ of drive input current rating, whichever is larger. MCCB voltage rating must be 600 VAC or greater.
$<2>$ Maximum Time Delay fuse is $175 \%$ of drive input current rating. This covers any Class CC, J or T class fuse.
$<3>$ Maximum Non-time Delay fuse is $300 \%$ of drive input current rating. This covers any CC, J or T class fuse.
$<4>$ Class L fuse is also approved for this rating.

## - Low Voltage Wiring for Control Circuit Terminals

Wire low voltage wires with NEC Class 1 circuit conductors. Refer to national state or local codes for wiring. The external power supply shall be a UL listed Class 2 power supply source or equivalent only.

Table i. 23 Control Circuit Terminal Power Supply

| Input / Output | Terminal Signal | Power Supply Specifications |
| :--- | :---: | :--- |
| Open Collector Outputs | P1, P2, PC, DM+, DM- | Requires class 2 power supply |
| Digital inputs | S1 to S8, SC, HC, H1, H2 | Use the internal LVLC power supply of the drive. Use class <br> 2 for external power supply. |
| Analog inputs / outputs | $+\mathrm{V},-\mathrm{V}, \mathrm{A} 1, \mathrm{~A} 2, \mathrm{~A} 3, \mathrm{AC}, \mathrm{AM}, \mathrm{FM}$ | Use the internal LVLC power supply of the drive. Use class <br> 2 for external power supply. |

## Drive Short Circuit Rating

The drive is suitable for use on a circuit capable of delivering not more than 100,000 RMS symmetrical Amperes, 240 Vac maximum ( 200 V Class), 480 Vac maximum ( 400 V Class), and 600 Vac maximum ( 600 V Class) when protected by Factory recommended branch circuit protection as specified in this document.

## CSA Standards Compliance

Figure i. 19 CSA Mark

## - CSA for Industrial Control Equipment

The drive is CSA-certified as Industrial Control Equipment Class 3211.
Specifically, the drive is certified to: CAN/CSA C22.2 No. 04-04 and CAN/CSA C22.2 No.14-05.

## Drive Motor Overload Protection

Set parameter E2-01 (motor rated current) to the appropriate value to enable motor overload protection. The internal motor overload protection is UL listed and in accordance with the NEC and CEC.

## E2-01: Motor Rated Current

Setting Range: Model-dependent
Default Setting: Model-dependent
Parameter E2-01 protects the motor when parameter L1-01 is not set to 0 . The default for L1-01 is 1 , which enables protection for standard induction motors.
If Auto-Tuning has been performed successfully, the motor data entered to T1-04 is automatically written to parameter E2-01. If Auto-Tuning has not been performed, manually enter the correct motor rated current to parameter E2-01.

## L1-01: Motor Overload Protection Selection

The drive has an electronic overload protection function (oL1) based on time, output current, and output frequency that protects the motor from overheating. The electronic thermal overload function is UL-recognized, so it does not require an external thermal relay for single motor operation.
This parameter selects the motor overload curve used according to the type of motor applied.
Table i. 24 Overload Protection Settings

| Setting | Description |  |
| :---: | :--- | :--- |
| $\mathbf{0}$ | Disabled | Disabled the internal motor overload protection of the drive. |
| $\mathbf{1}$ | Standard fan-cooled motor (default) | Selects protection characteristics for a standard self-cooled motor with limited cooling capabilities <br> when running below the rated speed. The motor overload detection level (oL1) is automatically <br> reduced when running below the motor rated speed. |
| $\mathbf{2}$ | Drive duty motor with a speed range of 1:10 | Selects protection characteristics for a motor with self-cooling capability within a speed range of <br> 10:1. The motor overload detection level (oL1) is automatically reduced when running below <br> $1 / 10$ of the motor rated speed. |
| $\mathbf{3}$ | Vector motor with a speed range of 1:100 | Selects protection characteristics for a motor capable of cooling itself at any speed including zero <br> speed (externally cooled motor). The motor overload detection level (oL1) is constant over the <br> entire speed range. |
| $\mathbf{4}$ | Permanent Magnet motor with variable <br> torque | Selects protection characteristics for a variable torque PM motor. The motor overload detection <br> level (oL1) is automatically reduced when running below the motor rated speed. |
| $\mathbf{5}$ | Permanent Magnet motor with constant <br> torque | Selects protection characteristics for a constant torque PM motor. The motor overload detection <br> level (oL1) is constant over the whole speed range. |
| $\mathbf{6}$ | Standard fan-cooled motor (50 Hz) | Selects protection characteristics for a standard self-cooled motor with limited cooling capabilities <br> when running below the rated speed. The motor overload detection level (oL1) is automatically <br> reduced when running below the motor rated speed. |

When connecting the drive to more than one motor for simultaneous operation, disable the electronic overload protection $(\mathrm{L} 1-01=0)$ and wire each motor with its own motor thermal overload relay.
Enable motor overload protection (L1-01 = 1 to 6 ) when connecting the drive to a single motor, unless another motor overload preventing device is installed. The drive electronic thermal overload function causes an oL1 fault, which shuts off the output of the drive and prevents additional overheating of the motor. The motor temperature is continually calculated while the drive is powered up.

## L1-02: Motor Overload Protection Time

## Setting Range: 0.1 to 5.0 min

## Factory Default: 1.0 min

Parameter L1-02 determines how long the motor is allowed to operate before the oL1 fault occurs when the drive is running a hot motor at 60 Hz and at $150 \%$ of the full load amp rating (E2-01) of the motor. Adjusting the value of L1-02 can shift the set of oL1 curves up the $y$ axis of the diagram below, but will not change the shape of the curves.

Figure i. 20 Motor Overload Protection Time

## Precautionary Notes on External Heatsink (IP00/Open Type Enclosure)

When using an external heatsink, UL compliance requires covering exposed capacitors in the main circuit to prevent injury to surrounding personnel.

## NOTICE

Refer to the A1000 Technical Manual SIEPC71061641 on the CD-ROM packaged with the product for more information regarding Precautionary Notes on External Heatsink and complete product instructions necessary for proper installation, set-up, troubleshooting and maintenance. CD part number TOECC71061615.

## Safe Disable Input Function

## NOTICE

Refer to the A1000 Technical Manual SIEPC71061641 on the CD-ROM packaged with the product for more information on the Safe Disable Input Function and complete product instructions necessary for proper installation, set-up, troubleshooting and maintenance. CD part number TOECC71061615.

## Specifications

| Inputs/Outputs |  | Two Safe Disable inputs and one EDM output according to ISO/EN13849-1 Cat. 3 PLd, IEC/ <br> EN61508 SIL2. $<1>$ |
| :--- | :--- | :--- |
| Operation Time |  | Time from input open to drive output stop is less than 1 ms. |
| Failure Probability | Demand Rate Low | PFD $=5.15 \mathrm{E}^{-5}$ |
|  | Demand Rate High/ <br> Continuous | PFH $=1.2 \mathrm{E}^{-9}$ |
|  | Performance Level |  | The Safe Disable inputs satisfy all requirements of Performance Level (PL) d according to ISO/ <br> EN13849-1 (DC from EDM considered). $<1>$ |

$<1>$ Terminals $\mathrm{H} 1, \mathrm{H} 2, \mathrm{DM}+$, and DM- on 600 V class models are designed to the functionality, but are not certified to IEC/EN61800-5-1, ISO/EN13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.

## Precautions

Note: Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to IEC/EN61800-5-1, ISO/ EN13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.

DANGER! Sudden Movement Hazard. Improper use of the Safe Disable function can result in serious injury or even death. Make sure the whole system or machinery in which the Safe Disable function is used complies with safety requirements. When implementing the Safe Disable function into the safety system of a machine, perform a thorough risk assessment for the entire system to assure compliance with relevant safety norms.

DANGER! Sudden Movement Hazard. When using a PM motor, even if the drive output is shut off by the Safe Disable function, a breakdown of two output transistors can cause current to flow through the motor winding, resulting in a rotor movement for a maximum angle of 180 degrees (electrically). Make sure such a situation would have no effect on the safety of the application when using the Safe Disable function.

DANGER! Sudden Movement Hazard. The Safe Disable function can switch off the drive output, but does not cut the drive power supply and cannot electrically isolate the drive output from the input. Always shut off the drive power supply when performing maintenance or installations on the drive input side as well as the drive output side.

WARNING! Sudden Movement Hazard. When using the Safe Disable inputs, make sure to remove the wire links between terminals H1, H2, and HC that were installed prior to shipment. Failing to do so will keep the Safe Disable circuit from operating properly and can cause injury or even death.

NOTICE: All safety features (including Safe Disable) should be inspected daily and periodically. If the system is not operating normally, there is a risk of serious personal injury.

NOTICE: Only a qualified technician with a thorough understanding of the drive, the instruction manual, and safety standards should be permitted to wire, inspect, and maintain the Safe Disable input.

NOTICE: From the moment terminal inputs H 1 and H 2 have opened, it takes up to 1 ms for drive output to shut off completely. The sequence set up to trigger terminals H 1 and H 2 should make sure that both terminals remain open for at least 1 ms in order to properly interrupt drive output.
NOTICE: The Safe Disable Monitor (output terminals DM+ and DM-) should not be used for any other purpose than to monitor the Safe Disable status or to discover a malfunction in the Safe Disable inputs. The monitor output is not considered a safe output.
NOTICE: When utilizing the Safe Disable function, an EMC filter must be used. Use only the EMC filters recommended in the drive Technical Manual.

## Safe Disable Digital Operator Display

When both Safe Disable inputs are open, "Hbb" will flash in the digital operator display.
If one Safe Disable channel is on while the other is off, "HbbF" will flash in the display to indicate that there is a problem in the safety circuit or in the drive. This display should not appear under normal conditions if the Safe Disable circuit is utilized properly.

## i. 6 European Standards

Figure i. 21 CE Mark
The CE mark indicates compliance with European safety and environmental regulations. It is required for engaging in business and commerce in Europe.
European standards include the Machinery Directive for machine manufacturers, the Low Voltage Directive for electronics manufacturers, and the EMC guidelines for controlling noise.
This drive displays the CE mark based on the EMC guidelines and the Low Voltage Directive.

- Low Voltage Directive: 2006/95/EC
- EMC Guidelines: 2004/108/EC

Devices used in combination with this drive must also be CE certified and display the CE mark. When using drives displaying the CE mark in combination with other devices, it is ultimately the responsibility of the user to ensure compliance with CE standards. After setting up the device, verify that conditions meet European standards.

## CE Low Voltage Directive Compliance

This drive has been tested according to European standard IEC/EN61800-5-1, and it fully complies with the Low Voltage Directive.
To comply with the Low Voltage Directive, be sure to meet the following conditions when combining this drive with other devices:

## Area of Use

Do not use drives in areas with pollution higher than severity 2 and overvoltage category 3 in accordance with IEC/EN664.
Factory Recommended Branch Circuit Protection for CE LVD Compliance

## NOTICE

Refer to the A1000 Technical Manual SIEPC71061641 on the CD-ROM No. TOECC71061615 packaged with the product; Chapter- Standards Compliance, Section-European Standards, for more information on Factory Recommended Branch Circuit Protection for CE Compliance.

## Grounding

The drive is designed to be used in T-N (grounded neutral point) networks. If installing the drive in other types of grounded systems, contact your Yaskawa representative for instructions.

## Guarding Against Harmful Materials

When installing IP00/Open Type enclosure drives, use an enclosure that prevents foreign material from entering the drive from above or below.

## EMC Guidelines Compliance

This drive is tested according to European standards IEC/EN 61800-3: 2004.

## EMC Filter and DC Link Chokes for IEC/EN 61000-3-2 Compliance

EMC filter and DC link choke requirements must be met to ensure continued compliance with CE guidelines.

## NOTICE

Refer to the A1000 Technical Manual SIEPC71061641 on the CD-ROM packaged with the product for more information on EMC Filter Installation and complete product instructions necessary for proper installation, set-up, troubleshooting and maintenance. CD part number TOECC71061615.

## - Drive Derating Data

## - Single-Phase Derating

A1000 drives are optimized and compatible for use with both three-phase and single-phase input power supplies. The A1000 output to the motor is fixed at three-phase.
A1000 output capacity to the motor is reduced or derated when single-phase input power is used.
Refer to the drive Technical Manual - Drive Derating Data section to assist in model selection when using the drive in single-phase input power applications.

## Rated Current Depending on Carrier Frequency

## Normal Duty Rating (ND)

Increasing the carrier frequency above 2 kHz will reduce the ND rated output current of the drive.

## Heavy Duty Rating (HD)

A carrier frequency setting of 8 kHz or lower is equal to the drive rated current shown on the drive nameplate. The factory default setting for carrier frequency in HD mode is 2 kHz . Increasing the carrier frequency above 8 kHz will reduce the HD rated output current of the drive.

## NOTICE

Refer to the A1000 Technical Manual - Drive Derating Data section to assist in model selection and adjustment when the application requires changing the drives carrier frequency from factory defaults.

## Temperature Derating

To ensure the maximum performance life, the drive output current must be derated as shown in Figure i. 22 when the drive is installed in areas with high ambient temperature or if drives are mounted side-by-side in a cabinet. In order to ensure reliable drive overload protection, set parameters L8-12 and L8-35 according to the installation conditions.

- Parameter Settings

| No. | Name | Description | Range | Def. |
| :---: | :--- | :--- | :---: | :---: |
| L8-12 | Ambient <br> Temperature Setting | Adjust the drive overload (oL2) protection level when the drive is installed <br> in an environment that exceeds its ambient temperature rating. | -10 to +50 | $+40^{\circ} \mathrm{C}$ |
| L8-35 | Installation Method <br> Selection | 0: IP00/Open-Chassis Enclosure <br> 1: Side-by-Side Mounting <br> 2: IP20/NEMA Type 1 Enclosure <br> 3: Finless Drive or External Heatsink Installation | 0 to 3 |  |

$<1>$ Default setting is determined by drive model.
Setting 0: (Models 2A0250 to 2A0415 and 4A0208 to 4A1200)
Setting 2: (Models 2A0004 to 2A0211, 4A0002 to 4A0165, and 5A0003 to 5A0242).

## Setting 0: IP00/Open-Chassis Enclosure

Drive operation between $-10^{\circ} \mathrm{C}$ and $+50^{\circ} \mathrm{C}$ allows $100 \%$ continuous current without derating.

## Setting 1: Side-by-Side Mounting

Drive operation between $-10^{\circ} \mathrm{C}$ and $+30^{\circ} \mathrm{C}$ allows $100 \%$ continuous current without derating. Operation between $+30^{\circ} \mathrm{C}$ and $+50^{\circ} \mathrm{C}$ requires output current derating.

## Setting 2: IP20/NEMA Type 1 Enclosure

Drive operation between $-10^{\circ} \mathrm{C}$ and $+40^{\circ} \mathrm{C}$ allows $100 \%$ continuous current without derating. Operation between $+40^{\circ} \mathrm{C}$ and $+50^{\circ} \mathrm{C}$ requires output current derating.

## Setting 3: External Heatsink Installation, Finless Drive

Drive operation between $-10^{\circ} \mathrm{C}$ and $+40^{\circ} \mathrm{C}$ allows $100 \%$ continuous current without derating. Operation between $+40^{\circ} \mathrm{C}$ and $+50^{\circ} \mathrm{C}$ requires output current derating.

Figure i. 22 Ambient Temperature and Installation Method Derating

## Altitude Derating

The drive standard ratings are valid for installation altitudes up to 1000 m . For installations from 1000 m to 3000 m , the drive rated voltage and the rated output current must be derated for $1 \%$ per 100 m .

Dimensions, Weight, Heat Loss

## NOTICE

Refer to the Mechanical Installation Chapter and the Specifications Chapter of the A1000 Technical Manual SIEPC71061641 which can be found on the CD-ROM packaged with the product.

|  | Humidity | $95 \mathrm{RH} \%$ or less (no condensation) |
|  | Storage Temperature | $-20^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$ (short-term temperature during transportation) |
|  | Altitude | Up to 1000 meters without derating, up to 3000 m with output current and voltage derating. |
|  | Vibration/Shock | 10 to $20 \mathrm{~Hz}: 9.8 \mathrm{~m} / \mathrm{s}^{2}<10>$ <br> 20 to $55 \mathrm{~Hz}: 5.9 \mathrm{~m} / \mathrm{s}^{2}$ (2A0004 to 2A0211, 4A0002 to 4A0165, and 5A0003 to 5A0099) $2.0 \mathrm{~m} / \mathrm{s}^{2}$ (2A0250 to 2A0415, 4A0208 to 4A1200, and 5A0125 to 5A0242) |
| Standard |  | - UL508C <br> - IEC/EN61800-3, IEC/EN61800-5-1 <br> - Two Safe Disable inputs and one EDM output according to ISO/EN13849-1 Cat. 3 PLd, IEC/ EN61508 SIL2 <br> - CSA $^{<11>}$ |
|  | Protection Design | IP00/Open Type enclosure, IP20/NEMA Type 1 enclosure ${ }^{\text {<12> }}$ |

$<1>$ Select control modes in accordance with drive capacity.
$<2>$ The accuracy of these values depends on motor characteristics, ambient conditions, and drive settings. Specifications may vary with different motors and with changing motor temperature. Contact Yaskawa for consultation.
$<3>$ Disable Stall Prevention during deceleration (L3-04 = 0) when using a regenerative converter, a regenerative unit, a braking resistor or the Braking Resistor Unit. The default setting for the Stall Prevention function will interfere with the braking resistor.
$<4>$ Instantaneous average deceleration torque refers to the torque required to decelerate the motor (uncoupled from the load) from the rated motor speed down to zero in the shortest time.
<5> Actual specifications may vary depending on motor characteristics.
$<6>$ Overload protection may be triggered when operating with $150 \%$ of the rated output current if the output frequency is less than 6 Hz .
$<7>$ May be shorter due to load conditions and motor speed.
<8> A separate Momentary Power Loss Ride-Thru Unit is required for models 2A0004 to 2A0056 and 4A0002 to 4A0031 if the application needs to continue running for up to 2 seconds during a momentary power loss.
$<9>$ Ground protection cannot be provided when the impedance of the ground fault path is too low, or when the drive is powered up while a ground fault is present at the output.
$<10>$ Models 4A0930 and 4A1200 are rated at $5.9 \mathrm{~m} / \mathrm{s}^{2}$.
$<11>$ Terminals $\mathrm{H} 1, \mathrm{H} 2, \mathrm{DM}+$, and $\mathrm{DM}-$ on 600 V class models are designed to the functionality, but are not certified to Insulation coordination: class 1.
$<12>$ Removing the top protective cover or bottom conduit bracket from an IP20/NEMA Type 1 enclosure drive voids NEMA Type 1 protection while maintaining IP20 conformity. This is applicable to models 2A0004 to 2A0211, 4A0002 to 4A0165, and 5A0003 to 5A0242.

## Parameter Setting Reference

Use the Verify Menu to determine which parameters have been changed from their original default settings
©ran below the parameter number indicates that the parameter setting can be changed during run.
Parameter names in bold face type are included in the Setup Group of parameters, which can be set by A1-06=0.
